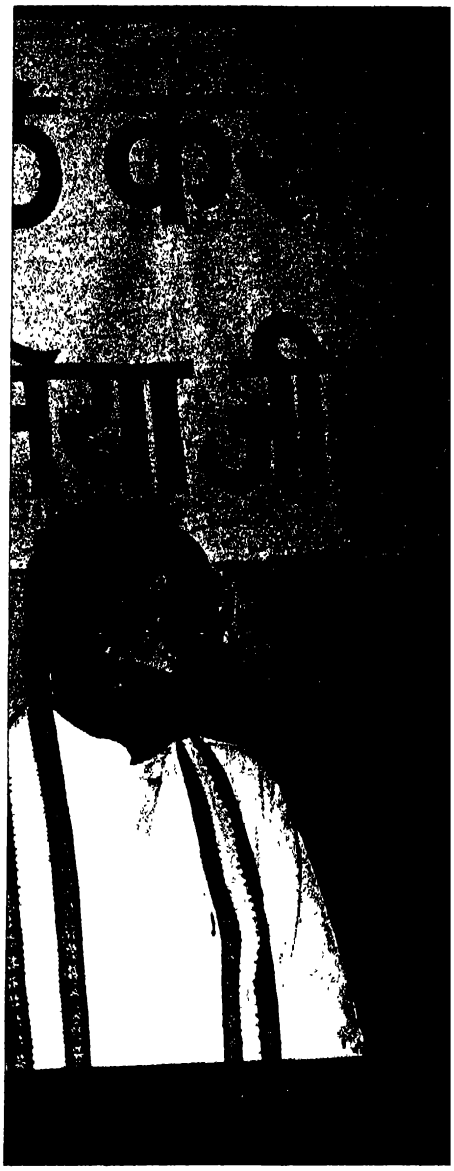
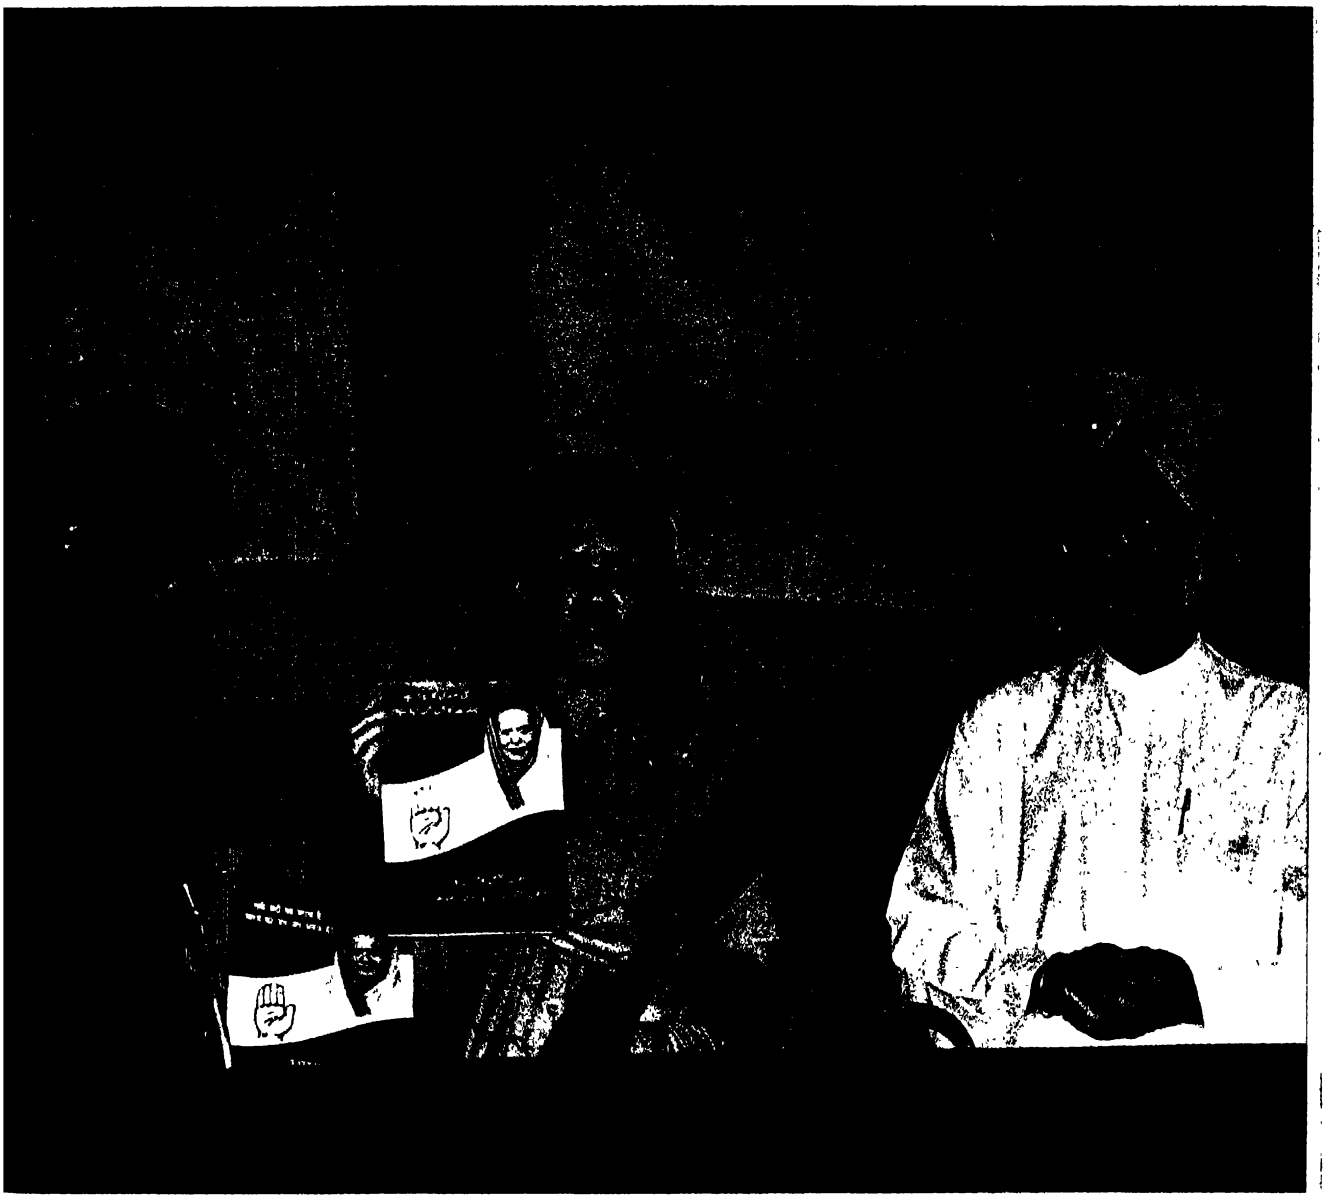
INTO BATTLE



As the Congress(I) under Sonia Gandhi launches itself on a tough campaign, keeping its options open in respect of its post-election leadership and possible coalitional arrangements, questions about the party's electoral fortunes loom large.

VENKITESH RAMAKRISHNAN
in New Delhi



ON August 19, an atmosphere of intense gloom, witnessed never before in the 17 months that Sonia Gandhi has been Congress(I) president, enveloped 24 Akbar Road in New Delhi, the headquarters of the All India Congress(I) Committee. Everyone present, from grassroots-level workers to middle-level leaders to senior members of the Congress(I) Working Committee, was in its spell. Huddled in groups inside and outside the AICC office were hundreds of them, discussing only one topic: the pointless and politically damaging hide-and-seek drama that had preceded Sonia Gandhi's filing of her nomination for the Lok Sabha election from Bellary in Karnataka the previous day. There was much loud tut-tutting and expressions of disbelief that their leader, whom they looked up to to lead the Congress(I) to the leading position in national politics, had exhibited political naivete and virtually advertised her electoral insecurities. Some even made bold to raise serious doubts about Sonia Gandhi's leadership qualities.

At one clumsy stroke, the Bellary episode had inflicted damage at several levels to the party and its organisational apparatus. It also sent out the message that the Congress(I) and its leader suffered extreme political diffidence in the run-up to the elections. By resorting to a hide-and-seek stratagem to try and keep her nomination from Bellary a secret, Sonia Gandhi had exposed her insecurity *vis-a-vis* the Congress(I)'s chances in the Lok Sabha elections. That the whole charade was intended to ensure that the leader, who was being projected as a tough-as-nails political battler, would have an easy passage into the Lok Sabha and not face a strong a challenge from the National Democratic Alliance (NDA) led by the Bharatiya Janata Party was not lost on anyone. Congress(I) workers were left wondering how their top leader could lead the party to victory if she was not sure of her own personal victory and was looking for weak opponents.

That the attempt to mislead media-persons and political opponents into believing that Sonia Gandhi would file her nomination for the Cuddappah Lok Sabha constituency in Andhra Pradesh had fooled nobody except Congress(I) workers all over the country too came as a setback. On August 17, Congress(I) leaders, including CWC members Pranab Kumar Mukherjee and Ghulam Nabi Azad, who had accompanied Sonia Gandhi to Hyderabad and later to Bellary, pointedly said that the Congress(I) president would contest from Cuddappah. If this feint was intended to throw the BJP off-track, it clearly failed. The BJP, which had evidently got wind of the Congress(I)'s ruse, despatched former Delhi Chief Minister Sushma Swaraj to Bellary in order to challenge Sonia Gandhi. Sushma Swaraj filed her nomination minutes after Sonia Gandhi did.

Congress(I) president Sonia Gandhi with party leaders (from right) Manmohan Singh, Shivraj Patil and Pranab Mukherjee at the release of the party's election manifesto in New Delhi on August 13. (Facing page) Filing her nomination in Bellary on August 18.

For Congress(I) workers, the inability of the party leadership to carry out a "secret mission" successfully was highly demoralising.

At another level, the fiasco showed up the party organisation in poor light. The script, including the plan to offer Cuddappah as a red-herring, was known only to a handful of people who are considered close to 10 Janpath: the majority of CWC members were themselves in the dark about it. This reinforced the message that had gone out on numerous occasions – that the party organisation was not overly important for Sonia Gandhi and that she continued with her "coterie politics" despite the criticism it had drawn in recent times.

Apart from all this, the Bellary misadventure has dealt a body blow to the Congress(I)'s claim that the party is undergoing a "great revival" in the North Indian States of Uttar Pradesh and Bihar. Party workers wondered how if Sonia Gandhi herself was not confident of contesting from Amethi in Uttar Pradesh, considered the pocketborough of the Nehru-Gandhi family and represented in the past by Rajiv Gandhi and Sanjay Gandhi, the party could talk of such a revival? Party workers, who had gathered at the AICC office on August 19, debated these questions over and over again and repeatedly gave expression to their extreme sense of dejection.

IN the wake of all this, Sonia Gandhi loyalists moved into the damage-control mode and promptly announced that she would contest from Amethi too. However, this announcement was not enough to clear the mood of despondency.

At a personal level, the Bellary episode eroded Sonia Gandhi's stature as a serious politician and the regard she received from associates and fellow politicians. Signals of this erosion were aplenty in the next few days. The Bihar Pradesh Congress(I) Committee virtually revolted against Sonia Gandhi when it said that the seat-sharing deal brokered by her with the Rashtriya Janata Dal (RJD) led by Laloo Prasad Yadav was not acceptable to it. This compelled Sonia Gandhi to go back on the word given to the RJD leadership and initiate fresh discussions on a seat-sharing

formula (see accompanying story on alliances).

More humiliation was in store for the party president. On August 22, the Congress(I)'s alliance partner in Tamil Nadu, the mercurial Jayalalitha, who was to have addressed a joint meeting with Sonia Gandhi in Villupuram, failed to turn up for the meeting. After being kept waiting for a while, Sonia Gandhi gamely addressed the meeting, son Rahul Gandhi by her side. No Congress(I) president, in particular one from the Nehru-Gandhi family, had been treated with such disdain by any fellow politician.

The Bellary episode also served to heighten the aura of secrecy and inaccessibility surrounding Sonia Gandhi and is certain to add to the swadeshi-vs-videshi slogan raised by the BJP and the Nationalist Congress Party (NCP). Such a campaign, which portrays Sonia Gandhi as a political entity who is not seriously committed enough to India's interests and causes, will place her in a position where she is the party's star campaigner and simultaneously a major political liability.

A CWC member who is known for his forthright views on party affairs told *Frontline* that the Bellary episode could prove a costly mistake in Sonia Gandhi's political career. Coming on top of a series of blunders since March, "it could even prove to be the proverbial last straw," he said. Another senior leader, who shared this perception, said that these "blunders" had first manifested themselves in the days following the first anniversary of Sonia Gandhi's takeover as party president and had progressively become more frequent and more grave. This leader pointed out that right up until the November 1998 Assembly elections in four States and Delhi, Sonia Gandhi had consistently said that she would not topple the BJP-led government but would instead concentrate on rebuilding the party machinery. "During the post-anniversary period," the leader said, "along with a plethora of mistakes there were some initiatives that seemingly sought to correct them. But their net result was not positive." There were several highs and lows during this period, all of which left the party disoriented: as one CWC member termed it, a "Trishanku feeling" existed in the party. Even so, there was the hope that the Congress(I) would still be able to get its act together ahead of the elections. However, the Bellary misadventure has dashed all such hopes.

The first of these mistakes, party leaders say, came immediately after the fall of

Questions of leadership

SUKUMAR MURALIDHARAN
in New Delhi

AN acute leadership deficit is an obvious reality of the election scene today. The Bharatiya Janata Party claims to be on a roll towards victory, and by its own admission made a serious error of judgment in seeking to recruit the authority of the armed forces commanders for its political campaign. What is most striking about this supposed error is the tacit acknowledgment that even a Prime Minister who has been anointed, in the imagination of his adoring flock, as a leader to be "trusted in war and peace", has to prop up his claims by invoking extraneous authorities.

Overlooking the glaring impropriety of press-ganging the military into a political campaign, the mural that provided the backdrop to Vajpayee's public meeting at Karnal, Haryana, on August 20 could be interpreted in different ways, none of which would do any credit to the government or the party he leads. It could be viewed as an effort by a political leadership that has presided over the erosion of various institutions to garner the vicarious benefit of identification with the armed forces. Among all the instrumentalities of the state, the armed forces today enjoy unprecedented public acclaim as a consequence of the war in Kargil. The mural depicting the three armed forces chiefs (as well as assorted objects including the Prithvi missile) either signified the recruitment of the military command as co-equals of the political leadership or, more alarmingly, as patrons and benefactors. Either way, the representation of the armed forces commanders at a political rally can only be construed as a serious embarrassment for a country that has always kept the military isolated from political partisanship and set great store by the principle of civilian control over the soldiers of the republic.

As in the case of the brutal manhandling by the police of a college girl at one of his election rallies in Muzaffarnagar in Uttar Pradesh, Vajpayee was quick to express his regret at the lapse. Under pressure from the Opposition, the BJP in its turn owned up to its mistake without further evasion or equivocation. But the admission of leadership infirmities has not been undone.

Within the Congress(I), occupation has often been considered the entire basis of legitimacy. P.V. Narasimha Rao could weather every manner of adversity during his tenure as Prime Minister and Congress(I) president without facing serious challenge from within the ranks of his party. It was, finally, judicial stricture and indictment in several cases of corruption that laid him low.

Even the less-than-compelling claims of Sitaram Kesri managed to pass internal scrutiny, including the first leadership contest in decades, although he plunged the party into one reckless misadventure after another without gaining for it any dividend. He was finally cast aside by the restoration of dynastic legitimacy. Evidently, dynasty is the only force that can overturn the legitimacy of occupation within the Congress(I).

DYNASTIC associations do not, however, confer an abundance of political discrimination or judgment. As the contest for the party ticket for the Lok Sabha elections sharpened, there were several people within the top hierarchical structure of the Congress(I) who were prepared to question the soundness of Sonia Gandhi's judgment. The buzz grew still louder after the grossly mismanaged drama of Bellary.

The Congress(I) strategy is premised upon a restoration of its role as the central pivot of Indian politics – the party that represents the nation in microcosm and is hence the presumptive party of governance. The absolutist claims of dynastic legitimacy mesh easily with this intent to restore single-party dominance in the Indian polity.

At the same time, there are queries about how credible a candidate for Prime Minister Sonia Gandhi really is. While a natural politician like Vajpayee revels on a public platform and finds himself most comfortable in addressing a large assembly extempore, Sonia Gandhi has to seek protection under layers of access control by her zealous followers and stick to carefully scripted speeches. A recent survey of the electorate found that more than her foreign origin, Sonia Gandhi's lack of political experience was perceived as the more serious disqualification as far as her credentials for high office were con-

SHIV KUMAR PUSHPAKAR

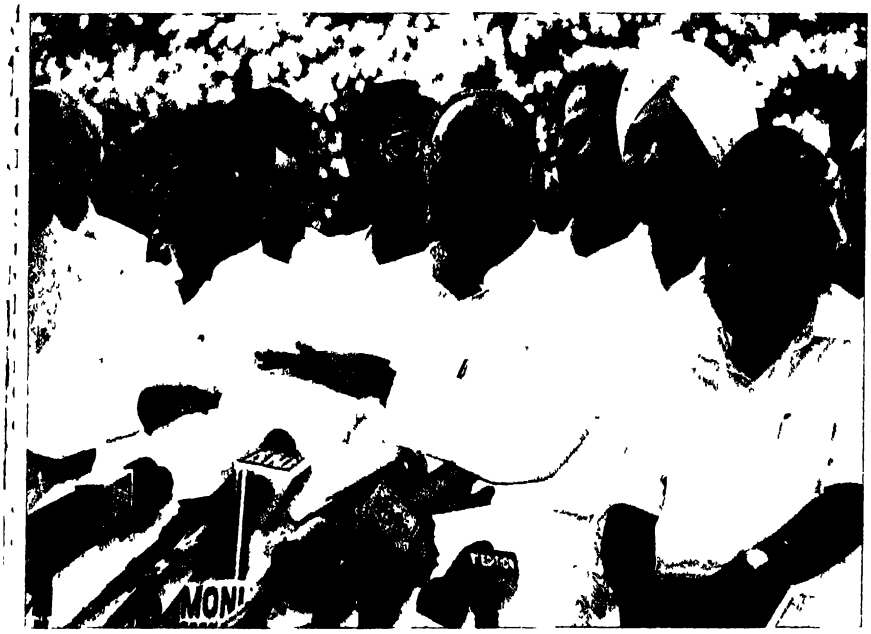
cerned.

For the Congress(I), the subtle projection of Manmohan Singh is an insurance against the miscarriage of the Sonia effect. The former Finance Minister serves a multitude of functions for the party. First, he is recognised as a reluctant politician, one who entered the hurly-burly only in order to revive an economy that seemed to be headed towards terminal illness. He introduced a deeply controversial package of policies without attracting any acrimony towards himself. In a milieu where political passions are often raised to fever pitch over marginal differences on substantive issues, Manmohan Singh seems to embody the virtue of bureaucratic neutrality. With politicians as a class generally being in disfavour with the general public, Manmohan Singh's special characteristics may well prove attractive.



Acknowledging the claims to leadership of the former Finance Minister – who has, incidentally, served in every senior official position connected to economic policy, from Chief Economic Adviser to the government to Governor of the Reserve Bank of India and Deputy Chairman of the Planning Commission – would involve certain hard choices for the Congress(I). First, it would institute a situation of dyarchy within, which has never served the party well. However ardent Manmohan Singh may be in expressions of loyalty to the Gandhi dynasty, occupation of high office is known to confer a certain self-belief that could run contrary to the absolutist principle on which the Congress(I) runs. This could threaten the secure hold of the dynasty on the party and make for a situation of endemic instability.

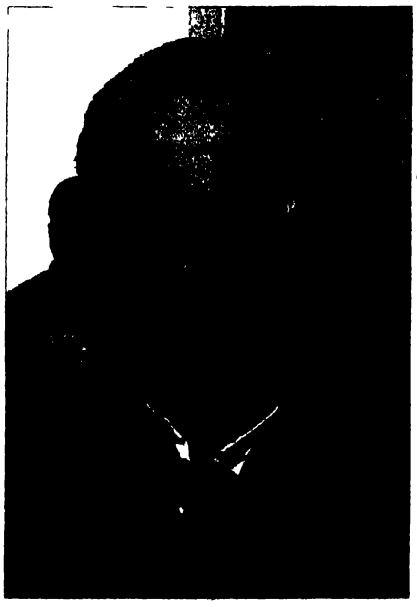
Sonia Gandhi's rather unequivocal disavowal of any intent to field either of her children as candidates for the Lok Sabha renders the family's hold just that bit more tenuous. There are expectations, however, that both Priyanka and Rahul Gandhi will go to work in the family's traditional constituencies of Rae Bareli and Amethi in Uttar Pradesh. They could involve themselves closely in the Congress(I) campaign from these constituencies, seeking to establish their credentials for a future contest.

THE thinking within the Congress(I) is that in the remote eventuality of the party gaining a near-majority in the Lok Sabha, Sonia Gandhi would be an axiomatic choice for Prime Minister. But if the Congress(I) falls well short and the rival BJP-led coalition is also unable to put together a viable government, then Manmohan Singh could become a pivotal figure in the construction of new alliances. Prospective allies may have reservations about Sonia Gandhi's leadership. But precisely because of his seeming bureaucratic neutrality, Manmohan Singh is expected to be a more agreeable figure across the political spectrum.

Even the Left parties could submerge their serious reservations about the economic philosophy that Manmohan Singh represents, in certain conditional assurances of support.

As always, the Congress(I) is far from being internally united on these strategic perspectives. There is a section within that which is dependent for its political sustenance on the patronage of the dynasty and may have reason to feel threatened by the emergence of alternative power centres. This section would have a vested interest in pre-empting the former Finance Minister by setting in motion the kind of inscrutable forces that have often in the past turned certain Congress(I) victory into ignominious defeat in particular constituencies. A Manmohan Singh who fails to gain entry into the Lok Sabha would hardly be a candidate for party leadership. His initial campaign appearances seem to indicate that the bureaucrat is beginning to find his political feet. But in the Byzantine inner processes of the Congress(I), there are enough instrumentalities available to cut the ground from under his feet. ■

SHANKER CHAKRAVARTY



Sharad Pawar with P.A. Sangma (right) and Tariq Anwar. The three were expelled from the Congress(I) after they questioned the appropriateness of Sonia Gandhi being projected as the party's prime ministerial candidate. (Below) Pranab Mukherjee and Arjun Singh, who pushed hard for the expulsion of Pawar and Co., who raised the issue of Sonia Gandhi's foreign origin.

the Atal Behari Vajpayee-led government when Sonia Gandhi claimed that her party had the support of 272 Lok Sabha members and would be able to form a minority government. The CWC member said: "It was this faux pas that upset the party's chances of being invited to form the government on the strength of its being the second largest party." Had Sonia Gandhi desisted from making this claim, the CWC member added, she would not have faced the ignominy of having to tell President K.R. Narayanan later that the Congress(I) did not have adequate support in the Lok Sabha and was giving up its claim.

In the perception of several leaders, these mistakes came about because Sonia Gandhi was misguided by a coterie in 10 Janpath, particularly former Union Minister Arjun Singh. Following growing criticism on this count within the CWC and elsewhere, Sonia Gandhi made some moves in late April and early May, evidently to send across the message that she was not bound by coterie politics. As part of these moves, leaders with a mass base, such as Sharad Pawar and A.K. Antony, were given a key role in party affairs. Pawar

SHANKER CHAKRAVARTY

SHANKER CHAKRAVARTY

Dr. Manmohan Singh has none of the trappings of a politician. His official residence at 19 Safdarjung Road, New Delhi, lacks the security paraphernalia that many politicians like to flaunt, and hence the former Finance Minister is one of the most accessible leaders around. As the Congress(I) candidate for the South Delhi parliamentary constituency, Manmohan Singh's campaign is also unique for its simplicity. Unlike the average Congress(I) candidate who would not set out for campaigning without a motorcade in tow, he starts off from his house in an Ambassador car that may or may not be joined by other vehicle-borne activists. Still his campaign has been deemed both by supporters and opponents as one of the most impressive in terms of popular response.

Venkitesh Ramakrishnan accompanied Manmohan Singh on one of his campaign trips on August 22, and in between meetings and mass contact programmes asked him questions on a variety of subjects including his chances of emerging as an alternative prime ministerial candidate. Although he negated such a possibility during the conversation, there are many people in the Congress(I) itself who perceive his new status as a mass leader as an indicator of his being positioned for the top job. Excerpts from the interview.

▶ *You have been perceived as an "intellectual politician" rather than one with mass appeal. As the Congress(I) candidate in South Delhi, how do you see your new experience in mass politics?*

When the party leadership said that I should fight for the Lok Sabha, I decided to abide by it. Personally too, I had thought that one day I should experience what it is like to go to the people directly. And I can say that this is a great education for me. I have come to understand the problems and aspirations of the people not merely from the macro level but from the micro level too. People hope that when politicians go to them some of their problems will be addressed. And these are serious and basic problems like that of shortage of power, of water, neglect of sewerage systems, public health and so on.

▶ *From these micro experiences, what is the macro solution that you see for these problems?*

I think that we need more active

'Seeking a vote for the Congress, not for a coalition'

involvement by the government in developing basic infrastructure. I do not think that this is a task which can be left entirely to market forces. When people are living on the edges of subsistence, market signals have no meaning for them. To address these issues satisfactorily, the face of our politics has to change. India needs a new type of politics. I think that politics has ceased to be a servant of social sympathies. It is no longer a creative mechanism to mediate between societal tensions. It has become too much of a preoccupation with self-preservation and self-promotion. And the state has become largely dysfunctional. Instrumentalities that could have given great potency to solve our problems have been used to promote partisan ends. The politicisation of the system in a perverse manner is a factor in corroding people's faith in politics as an instrument of purposeful social change.

▶ *But the Congress(I) has also contributed to this.*

Of course, the Congress(I) has been in power for so long that you can say that for anything which happens in the country. But the point is to look beyond that. As Karl Marx used to say, we have studied history for long but the challenge is to change it.

▶ *So the messiah of economic liberalisation is quoting Marx now...*

I have always admired Marx. There are a lot of good things in Marx too.

▶ *The perception is that you are being groomed as an alternative candidate for the Prime Minister's post in case the Congress(I) fails to get an absolute majority and seeks to depend on other parties for support.*

All this is media speculation. Hypothetical questions that exist in a vacuum.

▶ *There were reports that you had refused to contest if some of the accused in the 1984 anti-Sikh riots were given the ticket.*

These are all highly exaggerated reports that came in the media. Newspapers have invented discussions in the Congress Working Committee when there was no discussion at all.

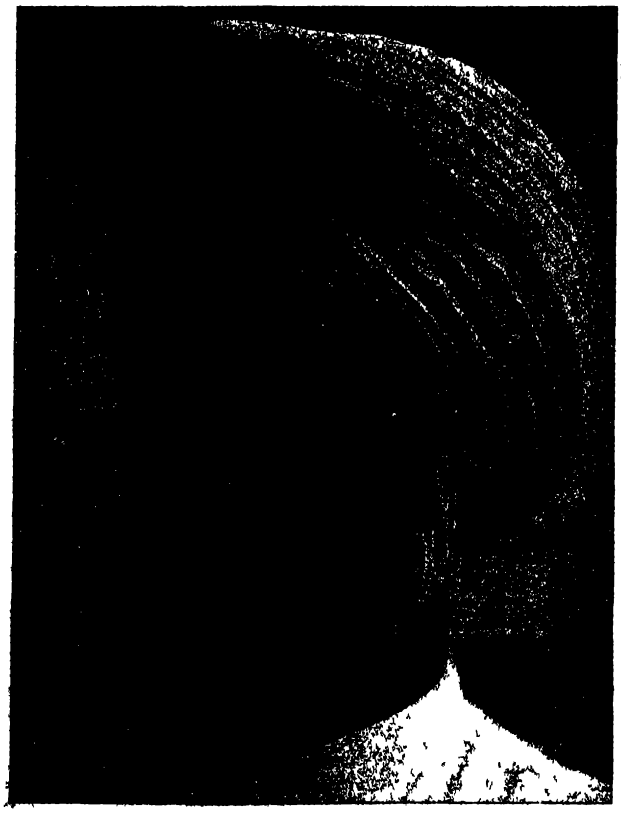
▶ *It is being said, even within the party, that the Congress(I) has committed a series of mistakes after the fall of the Vajpayee government, leading to a reversal of its fortunes. That while the Congress(I) was on a winning wicket during the November 1998 Assembly polls, it is no longer the case now.*

I do not think that there is a perception like this. I have not come across any of these things. In any case, the Congress(I) worker does not bring up this issue. He is concentrating on the administrative task of managing the elections now. It is another matter that he does talk about the euphoria of November 1998. But he also knows that this cannot last forever. The Congress(I) represented a new hope from the declining standards of governance that the BJP had provided till then. The Congress(I) organisation was facing its first major election under the leadership of Sonia Gandhi. And the party workers fought hard, knowing full well that they had a chance to wrest the administration from the BJP...

▶ *The contention is that it has all died down. And that the chances of the Congress(I) making it have receded.*

It is a different type of enthusiasm now. I do not think that the chances are any less now. The BJP might be harping on nationalism and the nationality issue. They could have created a different media atmosphere. But the people understand things in their totality.

▶ *Do you think that Kargil is the single most important issue in this election?*



People are certainly worried about Kargil. And also about the reasons behind it. It is not that people just accept whatever the BJP establishment is putting out. When we explain to them that these intruders had come many months ago and this government slept, people nod with approval.

▶ *But according to the BJP, it is the Congress(I)'s nationalism that is being questioned when the government is criticised on the Kargil issue.*

I have not come across any such thing. In fact, the common feeling is that the government needs to explain its conduct on the Kargil issue.

▶ *What about Sonia Gandhi's foreign origin? This issue has put the Congress(I) on the defensive.*

Nobody has brought up the nationality issue anywhere during my campaign. In fact, among the ordinary people there is a lot of sympathy and affection for Sonia Gandhi.

RAJEEV BHATT

▶ *There is the argument that the Congress(I)'s insistence on equating single-party rule with stability is counter-productive, especially in the context of the BJP's success in forming a formidable coalition.*

It is true that we are seeking a vote for the Congress(I), not for a coalition. We believe that single-party rule alone can provide the stability it needs. We are going to the people with that slogan. If the people endorse that, well and good, and if they do not, that will be a different situation. But what kind of stability has the formidable coalition of the BJP given in the last 17 months?

▶ *What would be the Congress(I) strategy if it does not get a chance to form a single-party government but can form a coalition Ministry?*

We will cross that bridge when we come to it. ■

Behind the scenes

VENKITESH RAMAKRISHNAN

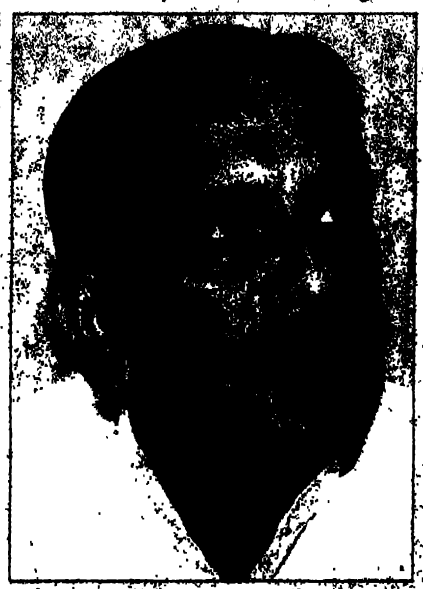
WHO exactly are Sonia Gandhi's advisers? This question had no clear answer until November last year, when as Congress(I) president she started a process of restructuring the party organisation and formed various task forces and committees for the purpose. It was already known that her personal assistant Vincent George and Congress Working Committee (CWC) member Arjun Singh had a special advisory role. During this phase, Sonia Gandhi apparently adopted a classical academic approach by entrusting specific jobs to various leaders on the basis of their interest and areas of specialisation. Thus Manmohan Singh was in charge of a committee to look into economic policy, P.A. Sangma and A.K. Antony had responsibility for a task force entrusted with the restructuring of the organisation, K. Karunakaran headed a committee to review the party constitution, and Sharad Pawar, then the party's leader in the Lok Sabha, had a role in parliamentary affairs.

However, after the November Assembly elections, in which the Congress(I) registered thumping victories in Madhya Pradesh, Rajasthan and Delhi, the priority shifted from restructuring to taking proactive measures against the Bharatiya Janata Party-led government. Realpolitik games were a natural part of these, and it is at this point that her set of advisers became more and more visible.

According to sources close to 10 Janpath, there are three layers of advisers around the Congress(I) president. The most proximate group is what is termed the gang of four, comprising Arjun Singh, former Minister M.L. Fotedar, Vincent George and former bureaucrat R.D. Pradhan. This group apparently handles day-to-day matters. There is no specific job description for any of them – they handle everything from correspondence to the formulation of political strategy.

The second layer essentially comprises CWC members R.K. Dhawan, Pranab Mukherjee and Ghulam Nabi Azad, who are supposed to organise special trouble-shooting operations. Dhawan and Azad performed similar jobs for former Congress(I) presidents P.V. Narasimha Rao and Sitaram Kesri. Sometimes this involved putting "troublesome" leaders such as Pawar, Rajesh Pilot, J.B. Patnaik and A.K. Antony in their place during crucial meetings or while deciding important issues.

The members of the third layer, consisting of K. Natwar Singh, Mani Shankar Aiyar and Jairam Ramesh, prepare speeches, articles and other policy documents. The one distinguishing characteristic that members of all three layers share is their lack of a mass base.



At the May 15 CWC meeting that paved the way for the expulsion of Pawar, Sangma and Tariq Anwar, Dhawan's trouble-shooting skills were in evidence. It was he who cut short the arguments of Pawar and Co. and made the suggestion that the CWC record its approval to making Sonia Gandhi the party's prime ministerial candidate.

Dhawan played his part in organising many of the dramatic scenes of agitation after Sonia Gandhi's resignation from presidentship following the Pawar-led revolt. Mukherjee handled the legal and constitutional issues involved in the expulsion of the rebels.

The first layer is the most influential one. Most of the problems that have faced the Congress(I) and its president recently can be traced to the members of this layer. The list starts with Sonia Gandhi's erroneous claim after the fall of the Vajpayee government that she had the support of 272 Lok Sabha members to form a minority Congress(I) government and includes the recent Bellary nomination fiasco. Many Congress(I) insiders say that it was Arjun Singh who gave the feedback to Sonia Gandhi, which made her stake her claim to form a government. Vincent George and Azad, the general secretary in charge of Karnataka, managed the Bellary expedition. The suggestion to file the nomination in stealth was reported to have come essentially from the duo and later approved by Arjun Singh and Pranab Mukherjee. The idea was to take the BJP by surprise so that it would not be able to field a strong candidate.

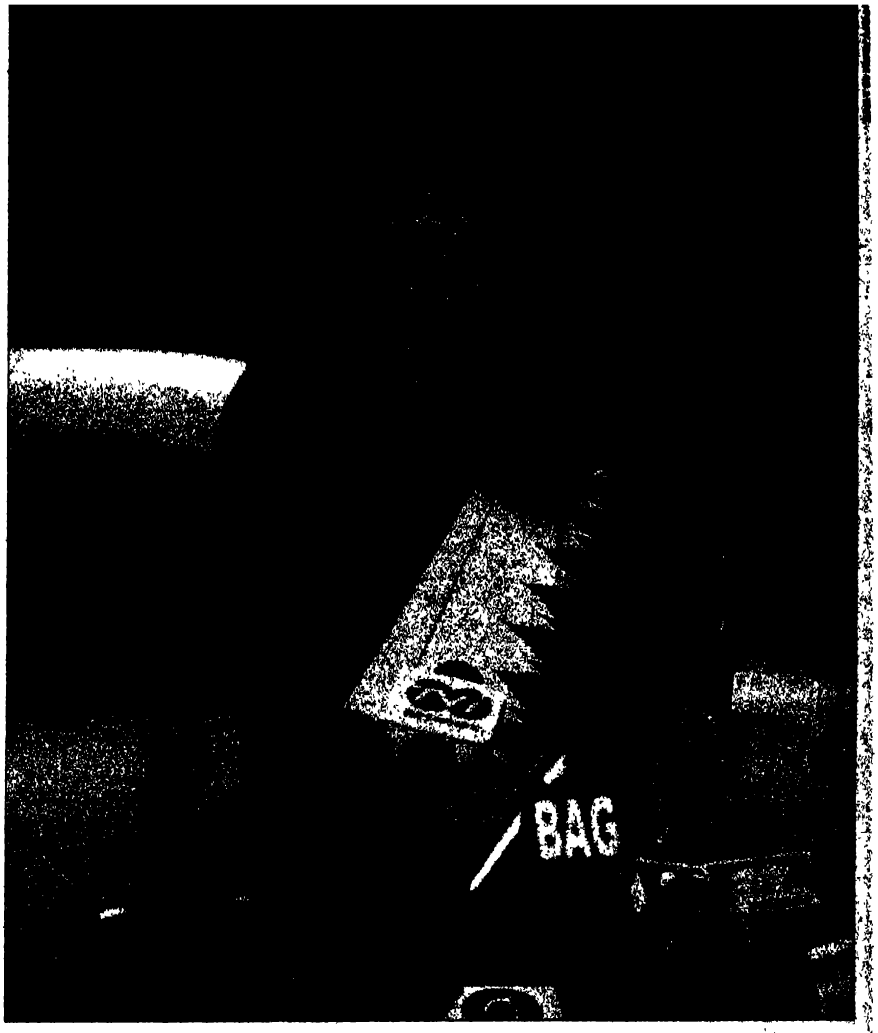
V.V. KRISHNAN

M.L. [illegible]

N. SRIDHARAN

R.K. Dhawan.

SHANKER CHAKRAVARTY



[illegible] Nath Azad.

Arjun Singh's role in messing up the efforts to form an alternative government after the fall of the Vajpayee Ministry had caused some Congress(I) allies to take a strong position against him. These included All India Anna Dravida Munnetra Kazhagam supremo Jayalalitha and Rashtriya Janata Dal leader Laloo Prasad Yadav. Consequently, Arjun Singh was not included in the team to negotiate electoral deals. Manmohan Singh and A.K. Antony were deputed to Tamil Nadu, and Madhavrao Scindia and Pranab Mukherjee were in charge of Bihar.

But the Arjun Singh-led group's influence in ticket distribution was evident in States such as Karnataka, Andhra Pradesh and Rajasthan and in Delhi. Even in a State like Kerala, where the Congress(I)'s organisational machinery almost matches that of the Left parties, Arjun Singh managed to nominate someone like M.P. Gangadharan, though the former State Minister has not been in active politics for quite some time. However, neither Arjun Singh nor the other members of the group were able to wield much influence in the selection of candidates in Madhya Pradesh and Punjab, where second-time Chief Minister Digvijay Singh and Pradesh Congress Committee president Amarinder Singh respectively called the shots.

The free hand given to leaders such as Digvijay Singh in the selection of candidates and certain developments before and after the Bellary fiasco have been interpreted by some Congress(I) insiders as a bid by Sonia Gandhi to free herself from the group's influence. The appointment of Ahamed Patel as a special authority at 10 Janpath and the diminution of R.D. Pradhan's role in policy discussions are seen as part of this effort.

There are also reports that Sonia Gandhi is increasingly consulting Dr. Manmohan Singh. How far this stage would last for Manmohan Singh is to be seen, especially in the background of Sonia Gandhi's own insecurity *vis-a-vis* leaders with a mass base. Incidentally, Pawar too had gone through a similar phase of increased proximity with the Congress(I) president before being overcome by the party. ■

Sonia Gandhi outside Rashtrapati Bhavan in April 1999, after she informed the President of her party's inability to form the government, after having first claimed that she had the numbers.

was appointed chairman of the election strategy committee and given the responsibility of negotiating alliances with the All India Anna Dravida Munnetra Kazhagam (AIADMK) in Tamil Nadu, the RJD in Bihar and the Bahujan Samaj Party (BSP) in Uttar Pradesh and Madhya Pradesh.

Then came the revolt by Pawar, P.A. Sangma and Tariq Anwar, who raised the issue of Sonia Gandhi's foreign origin, and once again Sonia Gandhi flipped. The theatrics that followed – Sonia Gandhi's resignation from the party president's post, her supporters' show of sycophancy which came in the form of self-immolation attempts and assaults on senior leaders such as Sitaram Kesri – did not go down well with the public, which found the events farcical. Her return as party president at the May 25 AICC session without much demur only served to heighten this perception, although she was able to assert her supreme control over the Congress(I).

The principal issue raised by Pawar and Co. was what they described as the inadvisability, owing to Sonia Gandhi's foreign origin, of projecting her as the Congress(I)'s prime ministerial candidate. With hindsight, many senior leaders point out that the party would not have been enfeebled by a split if the present decision not to project anyone as the prime ministerial candidate had been taken at that time. Sonia Gandhi loyalists such as Arjun Singh and Pranab Kumar Mukherjee pushed hard for the expulsion of the dissident leaders. Many in the party believe that the handling of the Pawar revolt was steamrolled by Arjun Singh and Mukherjee in order to settle scores with their opponents. Whatever the truth, the net result of the Pawar-led revolt is that the Congress(I), apart from being weakened in Maharashtra and the northeastern region, is now wary of projecting Sonia Gandhi as its prime ministerial candidate.

The Congress(I) was in much the same predicament ahead of the 1998 elec-

V SUDERSHAN

With physically handicapped children at her residence on August 20, the birth anniversary of Rajiv Gandhi.

tions, and this showed in the verdict: it won fewer seats than it had in the previous elections. As it did then, the Congress(I) leadership says that the party will decide on its choice for Prime Minister after the elections. Under normal circumstances there would have been no doubt on this score: Sonia Gandhi would have been the obvious choice. But the possibility of having to depend on pre- and post-election allies, if at all the party comes within striking distance of power, has compelled the Congress(I) to give up any idea of projecting her as its candidate. The decision to nominate former Finance Minister Manmohan Singh from the South Delhi constituency is significant in this connection (see separate story on the leadership question, and interview).

Some senior Congres(I) leaders have been critical also of Sonia Gandhi's responses to the Kargil crisis in its initial stages. Former vice-president Jitendra Prasada and others are reported to have said in private that Sonia Gandhi had rushed to criticise the government even as the war was on. According to sources close to Prasada, his view was that the party should have waited for the crisis to be resolved before questioning the government's failure to prevent the infiltration.

NOTWITHSTANDING all this, however, the party was able to formulate a well-conceived strategy to fight the elections. The strategy, which was evolved at the July 20-21 meeting of the CWC, focussed on four political-organisational tasks: 1. to expose as false the claims of the BJP and its allies on the government's role in the victory achieved by Indian soldiers in Kargil; 2. to project the Congress(I) as the only party equipped to form a stable government and emphasise the importance of a stable government in safeguarding national security; 3. to initiate moves to neutralise the organisational damage caused by the Pawar-led revolt and by faction feuds in various States; and 4. to finalise poll alliances and seat adjustments in regions where the party is weak.

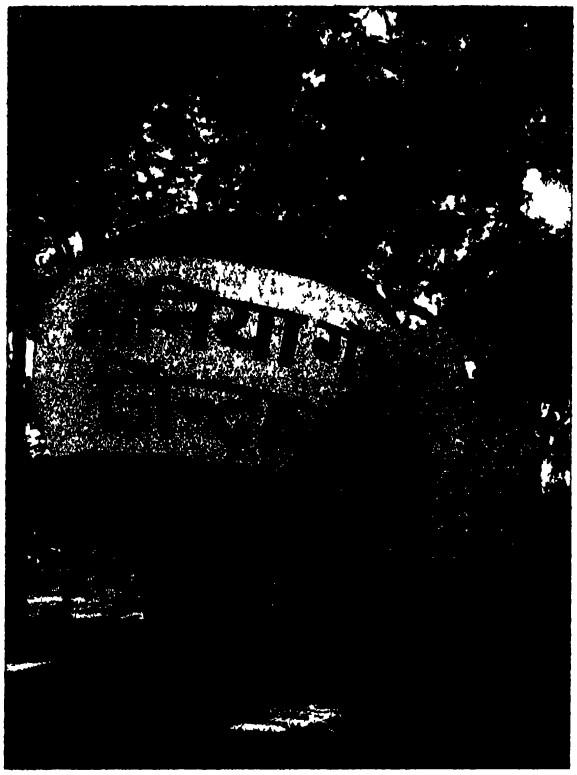
However, on each of these issues, the party was unable to match promise with performance. Its initiatives betrayed a lack of ideological and political cohesion and organisational integration. This was visible in almost all areas, barring the formulation of the election manifesto. What was particularly galling was its efforts to harmonise two concerns – of projecting the idea of single-party rule and of entering into alliances in States where it is organisationally weak such as Uttar Pradesh, Bihar and Tamil Nadu (see separate story on alliances).

Immediately after the CWC session of July 20 and 21, some efforts were made to expose the government's failure to prevent the infiltration in Kargil. On July 22, the party revealed, with documentary evidence, that the government had specific information about the intrusion in Kargil as early as August 1998. Party spokesperson Kapil Sibal disclosed the reference number of a letter written by the Brigadier who was in charge of the Kargil sector at that time, which talked about "enhanced threat perception" in the region. However, this initiative was not pressed further as the Army establishment denied the existence of the letter.

Similarly, the party backtracked on its pledge to streamline the organisational network. The process of choosing candidates was bogged down in the usual allegations of favouritism, nepotism and corruption. The AICC office witnessed protests by different groups, and also occasional fisticuffs, which were discounted as "not serious" in the charged election atmosphere. Protests by various groups, such as backward castes in Andhra Pradesh, the Youth Congress(I) in

Karnataka and a large section of the party in Uttar Pradesh, marked the selection process. In between all this, former Kerala Chief Minister K. Karunakaran, Punjab Congress(I) president Amarinder Singh, Uttar Pradesh Congress(I) president Salman Khurshid, Orissa Chief Minister Giridhar Gamang and former Union Minister K. Natwar Singh ensured that a few of their relatives were given the party ticket.

The special organisational plan that was to be implemented in areas such as Maharashtra, the northeastern region and certain parts of Rajasthan, where the NCP had dented the Congress(I)'s organisational structure, failed to take off. The selection process in the northeastern region was held up by allegations that some persons who sought the party ticket were mafia leaders. In the meantime, the NCP leadership tied up alliances with various Opposition groups and disgruntled sections within the Congress(I). Clearly, the Congress(I), which has traditionally won a sizable number of seats in the northeastern region, faces a challenge this time.



In Maharashtra too, insufficient attention was paid to the need to forge alliances with like-minded parties and select good candidates in order to counter the NCP's growing influence. An understanding was finalised with two groups of the Republican Party of India (RPI), but the method adopted by the Congress(I) in the allocation of seats to these parties led to strains. Many winnable seats were denied to alliance partners, and a section of the State party leadership felt that the entire exercise was self-defeating.

Party leaders complained that there was no effort to settle faction feuds and address other problems in the party units in Uttar Pradesh, Bihar, Rajasthan, Andhra Pradesh and Tamil Nadu. The most serious situation was in Rajasthan, where the Ashok Gehlot Ministry's failure to deliver on its promise to extend the benefits of reservation to the influential Jat community has led to an erosion in the party's support base.

AMIDST all these developments, there was one area where the Congress(I)'s campaign was elevated beyond the mundane level: the release of the manifesto by Sonia Gandhi on August 13. The manifesto, which was drawn up with the help of academicians after interactions with various sections of society, is quite a comprehensive document. It addresses vital questions in respect of the need for a stable government, the promotion and preservation of secularism, social justice, panchayati raj and fiscal discipline. In keeping with the line adopted at the CWC on July 20, the correlation between national security and stable governments was taken up as the central theme of the manifesto. As for the minorities, it promises constitutional changes to enable the establishment of a commission for minority educational institutions. The pledge to give 33 per cent reservation to women in legislative bodies is repeated.

A special feature of the function at which the manifesto was released was the manner in which Sonia Gandhi handled the media: she showed no signs of floundering and gave direct and bold replies to questions. Seasoned leaders of the party and many observers said that the manifesto and Sonia Gandhi's performance were a confidence-booster and an appropriate launch-pad for the party.

However, from all indications, it was one of Sonia Gandhi's statements at this function that was at the root of Jayalalitha's snub on August 22. Asked if the Congress(I) would form a coalition government if it did not get a majority on its own, Sonia Gandhi replied in the negative.

ANU PUSHKARNA

Outside the AICC(I) office in New Delhi.

With reverses being the order of the day and even allies playing oneupmanship games, the Congress(I) has moved far away from Sonia Gandhi's spirited statement of May 6, in which she said that "we are riding the wave of victory". Personally, she has come a long way since the time she was hailed – during the first anniversary of her elevation as party president – as the person who transformed the Congress(I) from a "moribund, non-creative, leaderless and directionless establishment into a vibrant organisation capable of leading the country on the right path by taking up important national and global concerns."

A leader close to former Prime Minister P.V. Narasimha Rao conceded that Sonia Gandhi's leadership had revived the party at the national level but said that the coterie around her had more or less frittered away any gains that may have accrued to the party. The Congress(I) organisational network has improved all over the country during the last 17 months and this has raised hopes that the party will improve its position in Madhya Pradesh, Gujarat, Uttar Pradesh, Karnataka, Punjab, Tamil Nadu and Kerala. But these gains may be more than offset by losses in Maharashtra, Rajasthan and the northeastern region, which accounted for 64 of the 141 seats won by the Congress(I) in the 1998 elections.

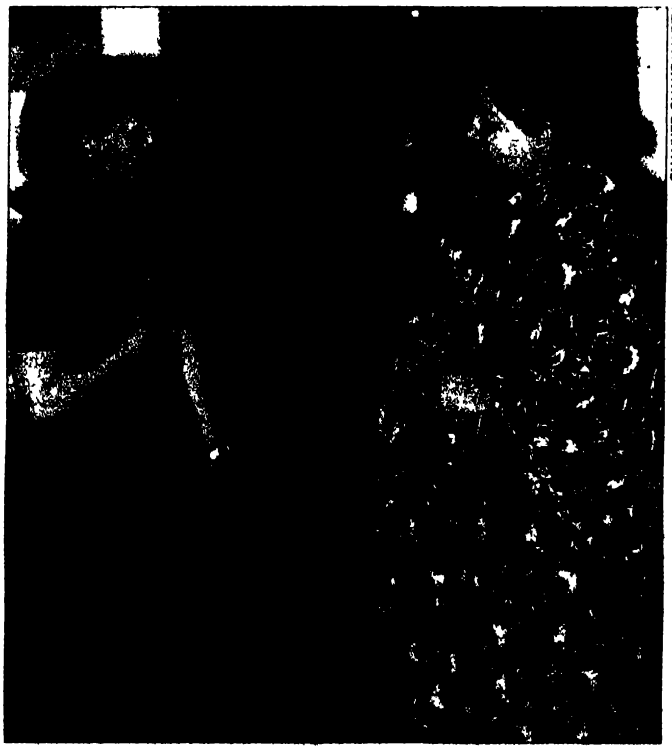
According to independent estimates by a group of party leaders, the party may gain an additional 45 seats in the seven States but lose between 30 and 35 seats in the other three regions. The net result may be that the party will make no significant gain despite the fact that a viable organisational machinery has been developed all over the country. And if misadventures like Bellary get repeated, the party's image will be dented further.

In this context, Sonia Gandhi's repeated assertions that the Congress(I) is well on the road to victory and is set to provide single-party rule do not sound plausible. The scene as it exists today leaves the Congress(I) with only two possibilities; either support the idea of a non-BJP coalition government or accept the role of a responsible Opposition party by conceding defeat to a BJP-led National Democratic Alliance (NDA) regime. The latter scene seems to be far more likely to unfold. ■

Alliance qualms

Innately uncomfortable with coalitions and electoral alliances, the Congress(I) struggles to come to terms with the new realities.

VENKITESH RAMAKRISHNAN



ALL through the recent years, the Congress(I) has been bogged down by a certain elemental flaw in its attempts to pursue coalition politics. This relates to its basic political slogan of stability, which the party argues can be attained only by single-party governance. The party leadership has found it difficult to suborn this idea to the essential need in the context of many States to form coalitions or reach an understanding with other parties. And even on occasions when the party has tried to do so, much of the time it has ended up without being able to forge an effective coalition or understanding.

The case this time is no different. The Congress(I) has functioning coalitions or understandings only in a few States such as Tamil Nadu, Punjab and Kerala. In Gujarat, the party was spared the trouble of forming a problematic alliance when former Chief Minister Shankarsinh Vaghela's Rashtriya Janata Party (RJP) merged with it. While proposed alliances with forces such as the Bahujan Samaj Party (BSP) have failed to materialise, those with the Rashtriya Janata Dal (RJD) and the Republican Party of India (RPI) have been stormy and ineffectual. This dismal show is all the more evident in the background of the Bharatiya Janata Party's success in firming up the National Democratic Alliance (NDA), notwithstanding that formation's many infirmities and woes, such as that relating to the entry of the Janata Dal (United) into the combine. Simply put, the BJP has adapted itself better to the era of coalitions.

In the Congress(I), such adaptability has been conspicuous by its absence. What has characterised the Congress(I)'s manoeuvres on this front since the fall of the Atal Behari Vajpayee government is a lack of clarity in analysing the party's own strengths and weaknesses, accompanied by a tendency to flip-flop. Thus one saw party leaders such as P. Shiv Shankar admitting after the dissolution of the Lok Sabha that the Congress(I) should have agreed to form a coalition government after the fall of the Vajpayee Ministry, and following up the statement with talk about pre-poll alliances on the basis of a common manifesto.

However, by the time the Congress(I) Working Committee held its first meeting in the context of the elections, all talk about alliances on the basis of a common manifesto had vanished. It had been replaced by the discourse on the "momentous" Pachmarhi declaration of September 1998. The Pachmarhi declaration had advanced a line against coalitions and made it clear that in special cases coalitions could be considered but only if the Congress(I) had supremacy within them. Protestations from leaders such as A.K. Antony, Sitaram Kesri and Rajesh Pilot that it would be unrealistic in the present context to hang on to the Pachmarhi declaration were brushed aside by Sonia Gandhi loyalists such as Arjun Singh, Pranab Kumar Mukherjee and R.K. Dhawan.

Much of the discussions on coalition formation was held in the background of this "ideological entanglement" within the party. The difference in the approach of individual leaders got reflected in these discussions. The Tamil Nadu-Pondicherry deal negotiated by pro-coalition CWC members Antony and Manmohan Singh resulted in an arrangement that involved the Congress(I) accepting 12 seats out of 40, leaving 23 to the dominant partner, the All India Anna Dravida Munnetra Kazhagam (AIADMK). In negotiating this deal, the Congress(I) gave up its Pachmarhi position that it would not accept the role of a junior partner. The deal reflected a realistic assessment of the party's present strength in Tamil Nadu.

SHANKER CHAKRAVARTY

Sonia Gandhi with AIADMK leader Jayalalitha in New Delhi on April 15, days before the Vajpayee government lost the confidence vote in the Lok Sabha.

BUT this was not the case during negotiations the Congress(I) had with the BSP and the RJD in Uttar Pradesh and Bihar respectively. In both cases, the local Congress(I) leaderships showed a tendency to overestimate their own strength and put forward unreasonable demands before alliance partners. When the negotiations with the BSP started, the Congress(I) demanded half of the 85 seats in Uttar Pradesh. The BSP, which secured 21 per cent of the popular vote in the State in the last elections as opposed to 6 per cent by the Congress(I), naturally would not agree. Claims about the Congress(I) having since undergone a revival were not acceptable to the BSP leadership. In particular, its vice-president and former Chief Minister Mayawati would have nothing of that kind.

When it became clear that the BSP would not offer more

RANJEET KUMAR

RJD president Laloo Prasad announcing details of the seat-sharing arrangement with the Congress(I) and other parties, in Patna on August 21.

than 25 seats, the Congress(I) steadily climbed down. Finally it accepted what was on offer. The Congress(I) also agreed without protest to other preconditions laid down by BSP supremo Kanshi Ram, such as the extension of the alliance to the Assembly polls and projection of Mayawati as the chief ministerial candidate.

However, the party did try to add one rider to the agreement: that the alliance should not be confined to Uttar Pradesh but should be extended to Madhya Pradesh. Clearly, the Congress(I) wanted to benefit even more from the potential of the BSP leadership to transfer its votes in any direction it deemed fit. This proposal, however, was not acceptable to the BSP, partly because its Madhya Pradesh unit had felt betrayed by the Congress(I) in the last Assembly polls. On that occasion, the BSP had supported the Congress(I) in more than half the seats in the State on the basis of an understanding that a leader from among the Scheduled Castes or the Scheduled Tribes would be considered for the position of either the Chief Minister or Deputy Chief Minister. After the elections, the Congress(I) failed to do this.

As the talks with the BSP failed, in Uttar Pradesh the Congress(I) was compelled to have a minimal understanding with Ajit Singh's Rashtriya Lok Dal (RLD). The RLD was given eight seats and the Congress(I) retained the remaining 77. Although this means that the Congress(I) gets to contest more seats, there is not much hope of winning most of them in the absence of an alliance with the BSP.

SIMILAR is the situation in Bihar, where at the beginning of seat negotiations with the RJD the Congress(I) demanded 25 of the 54 seats in the State, although the party had won only five seats and 7.27 per cent of the vote in the previous elections as compared to 17 seats and 26.58 per cent of the vote won by the RJD. Significantly, 10 Congress(I) candidates forfeited their deposit in the last polls.

RJD leader Laloo Prasad Yadav initially offered 11 seats. But the Congress(I) would have none of it. Finally, after repeated discussions involving CWC member Pranab Kumar Mukherjee and Communist Party of India (Marxist) general secretary Harkishan Singh Surjeet, the RJD leader offered the Congress(I) 13 seats. This was apparently acceptable to the Congress(I) central leadership, including Sonia Gandhi. However, following threats of a revolt in the State unit, Sonia Gandhi asked Laloo Prasad Yadav for more seats and the RJD leader agreed to add one more seat to the Congress(I)'s quota. Still the State unit of the Congress(I) held out, claiming that its level of popular support entitled it to a minimum of 17 seats. If this was not granted, they would leave the alliance, warned the Congress(I) State leadership. This has caused a deadlock in the Bihar alliance and created bad blood among the RJD cadre, whose wholehearted support is essential for the Congress(I) to be able to improve its position in the State. The RJD, on its part, is of the view that it has shown utmost flexibility in the interest of uniting the secular vote in the State and that the Congress(I)'s demand for 17 seats is unjustifiable. Whatever the outcome of this impasse, it is certain that secular unity has been impaired in the State, and that does not promise a better deal for the Congress(I).

IN Maharashtra, the Congress(I)'s refusal to accept the fact that its strength has diminished in the wake of the departure from the party of Sharad Pawar and his supporters has put its alliance with two groups of the Republican Party of India – the Prakash Ambedkar and Gavai groups – in jeopardy. Claiming to retain its strength despite the split, the Congress(I) has denied the RPI groups many seats including one in Nagpur, which has a high concentration of Dalits. Observers are of the view that such a stand would cost the party dear all over the State.

IN the midst of this dismal picture on the alliances front, the only sources for optimism for the Congress(I) are its time-tested coalition in Kerala and the new understanding reached with the Left parties in Punjab. In Kerala, the party was able to win back the Indian Union Muslim League (IUML), which had vacillated towards the CPI(M)-led Left Democratic Front initially, and complete the seat arrangements in quick time to get a head-start in the campaign. In Punjab, the understanding with the Left parties is working smoothly. This situation is bound to help the party in both the States.

However, in its proclivity to turn even favourable circumstances into a situation of adversity, the Congress(I) leadership, including party president Sonia Gandhi, has been making several mistakes that could impair the party's prospects even in these States. Sonia Gandhi's statement while releasing the party's manifesto to the effect that the Congress(I) has no plans to form a coalition government after the elections is a case in point. There are apprehensions within the Congress(I) that it would affect the party's chances in Tamil Nadu. For it is evident that AIADMK supremo Jayalalitha's basic purpose in forging an alliance with the Congress(I) was to get a share in power if and when the Congress(I) is in a position to attain it. So the party leadership has added an air of uncertainty even into an advantageous situation because it is unable to see the writing on the wall. ■

Unclear nuclear identity

The draft Indian Nuclear Doctrine proposed by the National Security Advisory Board is a remarkable document for the things unsaid and for the vague or confusing statements.

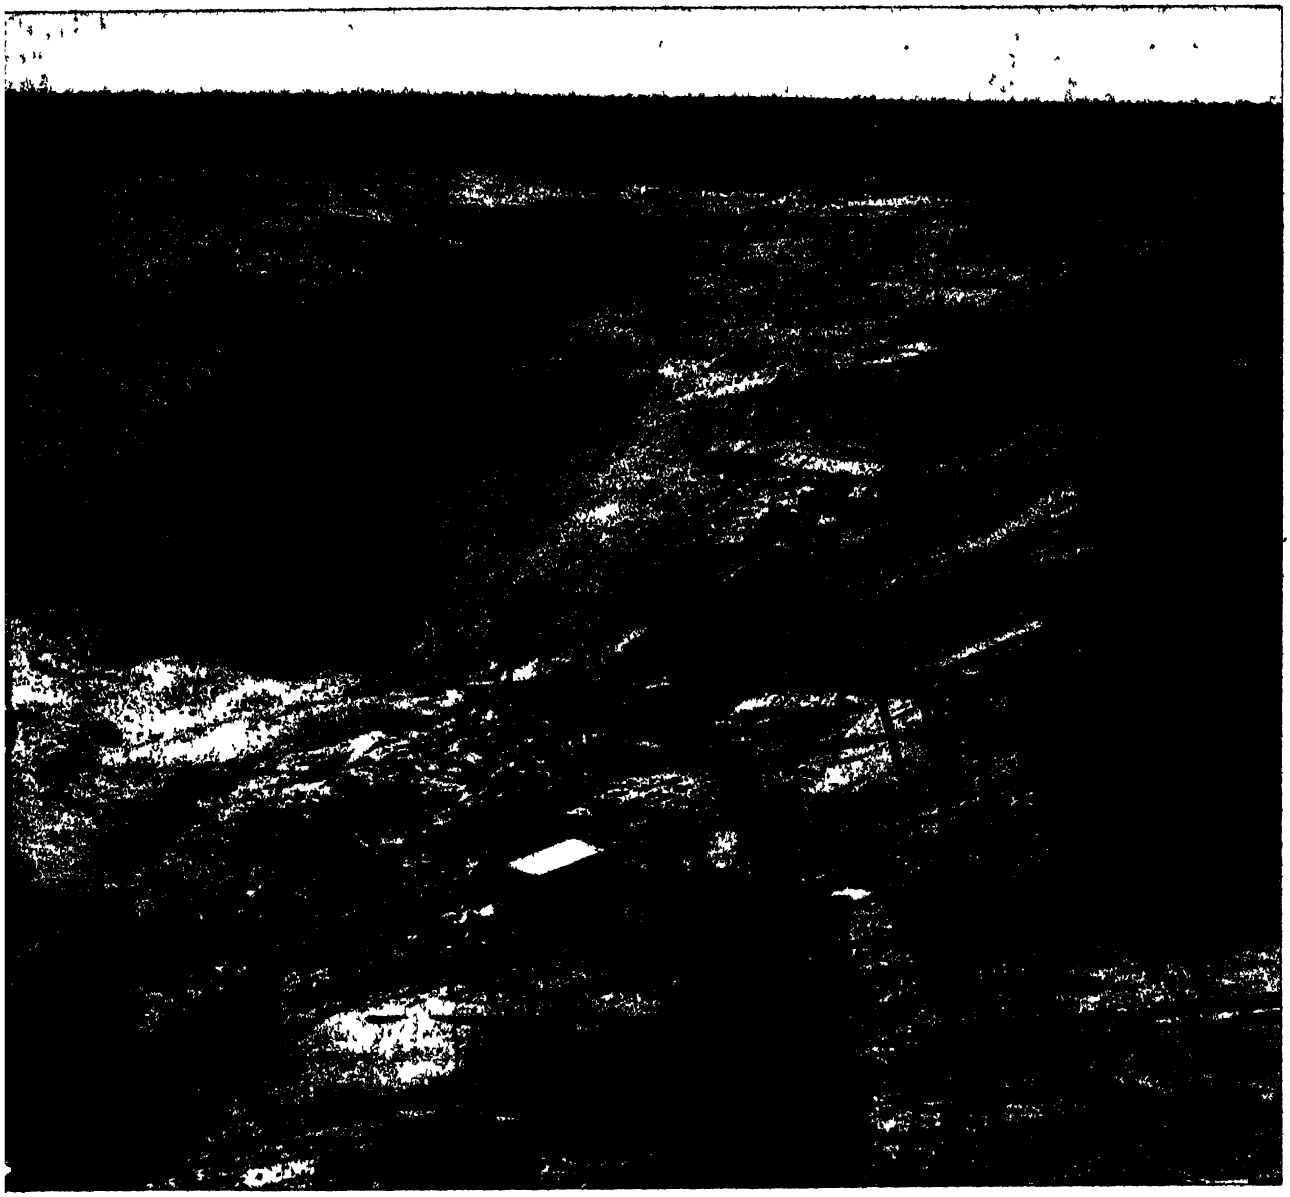
R. RAMACHANDRAN

AFTER months of deliberations, the 27-member National Security Advisory Board (NSAB), headed by defence analyst K. Subrahmanyam, has come out with a document, the Indian Nuclear Doctrine (IND) that is perhaps not worth the paper it is written on. The document, which was released on August 17 at a press conference by National Security Adviser Brajesh Mishra, in the presence of Subramanyam, was labelled as a "draft nuclear doctrine" pending discussion and approval by the National Security Council (NSC), a council of the key Cabinet Ministers concerned with national security.

According to Mishra, the document was being made public to show "greater transparency in decision making". When asked why the document did not spell out the specifics and why he was being secretive about it, he said it was for "reasons of security". The doctrine "is a step necessitated by the security environment", he said, adding quickly that it was "not country specific". As the doctrine was aimed at achieving "an element of strategic autonomy", he said that it was based on the concept of an "effective credible minimum deterrence". He emphasised that the policy of "no first use" was central to the doctrine and that it incorporated the "cardinal principle of civilian control" in the use of nuclear weapons.

On his part, Subrahmanyam asserted that it was a "consensus document" even though individual members of the NSAB might have disagreement on individual elements. A point which has not been highlighted sufficiently is that the NSAB is not a statutory body. Its term expires with the present government. The next government may not even have such an advisory body. Does it mean that national security ends with this draft on nuclear doctrine and the yet-to be-released document on national security strategy? Also, the document does not indicate the timeframe in which the nuclear force structures it has recommended are to be put in place.

The preamble says: "This document outlines the broad principles for the development, deployment and employment of nuclear forces. Details of policy strategy concerning force structures, deployment and employment of nuclear forces will flow from this framework and will be laid down separately and kept under constant review." This implies that a separate body – not identified in the draft doctrine – will have to go into these issues but given the vagueness and the general nature of the doctrine, which does not even address the issue of threat perceptions, arriving at a nuclear force structure based on this document would seem impossible and implementation could become arbitrary.



While the fact that a doctrine has been articulated would imply that the process of weaponisation is being carried forward beyond the claimed capabilities after the Pokhran nuclear tests in May 1998, the content of the draft leaves one in doubt whether any substantive thinking had gone into the making of the document, the credentials of the NSAB members notwithstanding. In substance, it goes slightly beyond Prime Minister Atal Behari Vajpayee's December 1998 statement on India's Nuclear Policy.

The Prime Minister's statement had pronounced the doctrine of "no first use" of nuclear weapons, which is the only clear-cut doctrinal element in this new document produced by the NSAB. The other clear-cut statement concerns the so-called "nuclear button" – the control of nuclear weapons will rest at the highest political level and the authority to release nuclear weapons for use will reside in civilian control in the person of the Prime Minister or "designated successor(s)". However, who these "designated successor(s)" may be is unclear.

At Pokhran, after the nuclear tests on May 11, 1998.

The document is remarkable for the things unsaid and for the vague or confusing, sometimes even contradictory, statements. The unqualified use of the phrase "effective credible minimum nuclear deterrence" might pass in the Prime Minister's policy statement, but not in the enunciation of a national nuclear doctrine. Unless qualified by appropriate quantitative elements including an assessment of the threat perceptions and the force numbers for an "adequate retaliatory" capacity (which in turn needs to be quantitatively defined in terms of a second strike or third strike capability), such a phrase carries no meaning for operational

significance or even evolving a nuclear strategy. Indeed, the concept itself is a dubious one and largely rhetorical.

Self-evidently, deterrence is no deterrence unless it is credible; in that sense, the use of this adjective is superfluous. Similarly, a deterrent force, by definition, has to be effective. As far as minimality of deterrence goes, it makes sense only against a quantitative assessment of the adversary's nuclear strike capacity. Moreover, no nuclear weapons power has ever admitted that its stockpile is more than the minimum level. What may be regarded as minimum by one may not be perceived as such by the adversary.

As General George Lee Butler, the former Commander of the U.S. Strategic Command, pointed out in a recent interview (*Frontline*, June 18), this is what makes deterrence a false notion that is conceptually flawed because "you will never know what the enemy is thinking".

Nuclear weaponisation requires a nuclear doctrine and a well thought out and formulated nuclear strategy (in military terms). As has been pointed out by the former Naval Chief, Admiral Ramdas (*Frontline*, July 17, 1998), the doctrine and the strategy should address the following questions: What are our threat perceptions? Are our nuclear adversaries regional or global? Under what set of circumstances or scenarios are the nuclear weapons to be deployed and employed? For the NSAB, it would seem, these issues are not important in arriving at a nuclear doctrine. A careful and rigorous analysis of an effective deterrence capability in the Indian context, as has been done by Dr.G. Balachandran, an independent analyst (*The Hindu*, February 15), shows that the existing capabilities in the nuclear field will not suffice to build such a nuclear deterrent capacity.

Equally significant is the document's silence on the expected costs of such a weaponisation programme. The draft document makes a general statement (Article 3.1) that "nuclear forces will be effective, enduring, diverse, flexible and responsive" and they will be "based on a triad of aircraft, mobile land-based missiles and sea-based assets" in keeping with the above objectives. Specifics, such as whether sea-based assets will include nuclear-capable submarines, are not spelt out but to a question Subrahmanyam replied that the "language of the doctrine allows it". If submarines do form part of some unwritten nuclear strategy, the cost of weaponisation will increase dramatically because of the high cost of submarines.

The document speaks of enhancing the "survivability of the forces" with a combination of multiple redundant sys-

National Security Adviser Brajesh Mishra addressing mediapersons in New Delhi on August 17 during the release of the draft document on India's nuclear doctrine.

JOHN CHERIAN
in New Delhi

THE release of the draft Indian Nuclear Doctrine was purposely timed by the Bharatiya Janata Party-led caretaker government to be as close to the general elections as possible. The document was reportedly cleared by the National Security Advisory Board (NSAB) about two months earlier. Obviously, the idea behind releasing it on August 17 was to put the nuclear issue back on top of the election agenda. Brajesh Mishra, Principal Secretary to the Prime Minister, told mediapersons that the document had no official validity as it had not been approved by the government. He said that the purpose was to place it "before the public for debate and discussion".

Brajesh Mishra said that India would pursue a policy of credible nuclear deterrence. India, according to the document, will use nuclear weapons only in retaliation for a first strike: "Any nuclear attack on India and its forces will result in punitive retaliation with nuclear weapons to inflict damage unacceptable to the aggressor." According to the draft, "India's peacetime posture aims at convincing any potential aggressor that any threat of use of nuclear weapons against India will invoke measures to counter the threat." He says that nuclear weapons will be under tight supervision and will be released with specific authorisation from the Prime Minister. There is no mention about the possibility of India signing either the Comprehensive Test Ban Treaty (CTBT) or the Nuclear Non-Proliferation Treaty (NPT).

The Opposition parties are furious at the caretaker government's decision to release the document at this juncture. The Congress(I) expressed the "apprehension" that the "irresponsible" observations contained in the document could spark an arms race. Party spokesman Pranab Mukherjee said that a caretaker government had "no business, politically and morally, to bring out a document of this nature which will affect the life of the entire subcontinent". The government was attempting to fool the people of India by talking of "credible deterrence", he said.

Mukherjee noted that established nuclear powers such as the United States, Russia and France had conduct-

tems, mobility, dispersion and deception. A survivable nuclear force itself has been defined (Article 4.3) as one that will be "designed and deployed to ensure survival against first strike and to endure repetitive attrition attempts with adequate retaliatory capabilities for a punishing strike which would be unacceptable to the aggressor". It also states (Article 2.3) that "survivabilty" is a dynamic concept related to strategic environment, technological imperatives and the needs of national security and that the "actual size, components, deployment and employment of nuclear forces will be decided in the light of these factors". A perfectly general premise that seems to defy a definition of "minimum deterrence" and ensure stockpile and attendant cost escalation.

It may be pertinent to highlight some of the ill-conceived elements of the doctrine. Consider Article 2.3 (a) which says "any threat of use of nuclear weapons against India shall invoke measures to counter the threat." What are these measures? With the "no first use" posture, and given the asymmetry of some nuclear weapon states not declaring a "no first use", what does this element of the doctrine mean? Article 2.5 says: "India will not resort to the use or threat of use of nuclear weapons against states which do not possess nuclear weapons or are not aligned with nuclear weapon powers." This a redundant statement given the "no first use" and "retaliation only" policy.

Mishra, while releasing the document, made a strange remark that he did not elaborate upon. He claimed the Kargil conflict and its resolution had vindicated India's nuclear deterrence policy. The question is how? In fact, it is clear that after it achieved nuclear parity with India, Pakistan could venture into a conflict with India and India's superior conventional force was not any more sufficient to deter Pakistan from military adventurism.

Article 2.7 is, further, contradictory. It says: "Highly effective conventional military capabilities shall be maintained to raise the threshold of outbreak both of conventional military conflict as well as that of threat or use of nuclear weapons."

Mishra made a strange remark that he did not elaborate upon. He claimed the Kargil conflict and its resolution had vindicated India's nuclear deterrence policy. The question is how?

Subrahmanyam clarified this point by saying that it implied greater expenditure on conventional forces. But it may be recalled that reduction in the expenditure in conventional military forces was given as a rationale for going nuclear. Now, with India hav-

Playing the nuclear card

ed a large number of tests before they could acquire "credible deterrence". He observed that Pakistan sent in troops to Kargil despite India having "credible nuclear deterrence". Mukherjee questioned the rationale behind bringing out a document when the Prime Minister had declared a moratorium on nuclear tests last year. Such an important issue, asserted Mukherjee, should have been first discussed in Parliament.

Former Prime Minister I.K. Gujral said that what the government did was "immoral" and that this instance was symptomatic of its unilateral way of formulating foreign policy. The BJP-led government, he said, had given up the tradition of having a national consensus on important foreign policy issues.

The Communist Party of India (Marxist) described the circulation of the draft Indian Nuclear Doctrine as an "illegitimate act". CPI(M) Polit Bureau member Prakash Karat said: "The caretaker government has no business to act on such a critical matter having serious implications for national and international security, just for petty electoral gains. This illegitimate nuclear doctrine must be rejected for what it is: nuclear sabre-rattling to garner votes for an irresponsible and jingoistic party."

According to Karat, the so-called nuclear doctrine advocates "full-fledged" nuclear weaponisation. "This is the real meaning of credible minimum nuclear deterrence," he said. As a result, there would be a nuclear arms race in the subcontinent and "the crushing burden of this nuclear adventurism will have to be borne by the ordinary people," he observed.

In a tit-for-tat response, Pakistan announced on August 19 that it was giving "final touches" to its own nuclear doctrine. Pakistan Foreign Minister Sartaj Aziz said that his government's nuclear doctrine would be based on the proposed strategic nuclear restraint regime discussed between India and Pakistan during the Secretary-level talks last year. Aziz said that the Pakistan government was studying the Indian document. Pakistani officials, however, accuse India of resorting to gamesmanship by trying to show the international community that India has developed its minimum nuclear deterrent as well as a command and control system. Pakistan's representative at the United Nations Conference on Disarmament in Geneva, Munir Akram, said that the draft "indicates that India is about to embark on further and even more dangerous escalation in the nuclear and conventional arms build-up".

Washington, which in recent months tilted towards New Delhi, was also quick to react. U.S. State Department officials have characterised India's move to develop a nuclear deterrent as "unwise". The U.S. spokesperson said that "nuclear weapons do not contribute to greater security in South Asia." He added that the draft document could be discussed when External Affairs Minister Jaswant Singh met U.S. Secretary of State Madeleine Albright in New York in September. Jaswant Singh will be in New York to attend the U.N. General Assembly session.

The Clinton administration seems to have adopted a tough stance on the issue. The U.S. spokesperson said that the possession of missiles and nuclear weapons would give India and Pakistan "less and not more security". "We don't think it is in the national interest or the security interest of these countries to develop nuclear weapons capability, to develop an elaborate doctrine, and then to encourage an arms race by both India and Pakistan." In the second week of August, President Bill Clinton wrote to the Indian and Pakistani Prime Ministers urging them to exercise restraint and resume the Lahore dialogue process.

The Clinton administration's stance is getting tougher by the day. U.S. State Department officials now say that the Indian nuclear doctrine is against the interests of global security. The U.S. spokesman dismissed out of hand India's contention that it needed a nuclear deterrent to avert "possible nuclear blackmail by China". The Clinton administration is still of the view that India's decision to go nuclear was based on other factors. The Pentagon spokesman was more specific, saying that a nuclear conflict was possible in the Indian subcontinent if tensions between India and Pakistan continued. "We have urged both sides to show restraint. It is an area where the damage would be extraordinary because of the large populations of the two countries," the Pentagon spokesperson said.

Other Group of Eight (G-8) member-countries have also reacted adversely to the draft Indian Nuclear Doctrine. The U.S. State Department once again reiterated the G-8's decision to continue to defer funding by international financial institutions of India's non-basic human needs.

China has expressed its misgivings about the nuclear policy document. A Chinese Foreign Ministry spokesperson "urged" India not to induct nuclear missiles into its arsenal and to renounce its nuclear weapons programme by implementing U.N. Security Council Resolution 1172 "in earnest and comprehensively". In his Independence Day speech, Prime Minister Atal Behari Vajpayee asserted that India would induct the Agni-II ballistic missile into its arsenal. The missile is capable of reaching many cities in China. The Chinese spokesperson said: "On the South Asian nuclear issue, the Security Council unanimously adopted by consensus Resolution 1172, which reflects the will and embodies the position of the international community." Among the permanent members of the Security Council, China is the only country that has consistently emphasised the need to abide by Resolution 1172. "This is conducive to the prevention of an arms race in the region and to maintain security and stability. This also serves the fundamental interests of the people of South Asia," the Chinese spokesperson asserted in the third week of August.

Reacting to mounting international criticism, Jaswant Singh, as was to be expected, discounted concerns about a possible India-Pakistan nuclear conflict. He has also insisted that India is not engaged in an arms race. At the same time, he has expressed his willingness to discuss the draft Nuclear Doctrine with U.S. officials when he visits New York. "I am fully confident that we will be able to assuage the concerns that have been expressed in Washington and Beijing," he told journalists. He also asserted, rather ingeniously, that the release of the document on the eve of the general elections was not a "politically contentious issue". He said that the document was not a National Security Council doctrine but a document of the National Security Advisory Board. He, however, admitted that the document said nothing new. It only reiterated what had been said earlier by Vajpayee and other senior officials, he said. ■

ing gone nuclear, the proposed doctrine advocates greater investment in conventional force structures "to raise the threshold of conflict".

The doctrine differentiates between "peace-time deployment" and "fully employable forces in the shortest possible time" without giving any measure of what this "shortest possible time" should be – a few hours, a few days, a few months? For example, coupled with the requirements of "safety" and "security" of the nuclear stockpile (Article 6), does the doctrine envisage that warheads will be kept separate from weapon systems and delivery vehicles that will be assembled in case of nuclear threats or attacks?

Security and safety for nuclear materials and nuclear weapons, during their manufacture, transportation and storage, have to be orders of magnitude more stringent than what is maintained for conventional forces. Even an agency like the Department of Atomic Energy (DAE), with years of experience with nuclear materials, does not have a grand track record of safety in civilian nuclear installations (*Frontline*, March 26). As Dr. A. Gopalakrishnan, the former chairman of the Atomic Energy Regulatory Board (AERB), commenting on safety issues has pointed out (*Frontline*, June 4, 1999) that in countries such as the United States, a defence nuclear facilities board for independent external overseeing of all nuclear weapon activities from the viewpoint of safety exists.

During his tenure, Gopalakrishnan highlighted the fact that even the R&D programme of the nuclear submarine or the Advanced Technology Vehicle (ATV) project, had been kept outside the purview of the AERB. In fact, in the Indian context, the AERB does not even have an entirely independent authority to regulate civilian nuclear activities. The Indian defence establishment, even the Defence Research and Defence Organisation let alone the Services, has absolutely no experience in handling nuclear activities. No agency has been or is being created for defence nuclear activities under the Ministry of Defence – unless, of course, the doctrine is envisaging the defence nuclear activities too to be managed by the DAE. The regulatory aspects of a nuclear weaponisation programme need to be addressed first before building up an arsenal. The pious statement in *Article 6.1 of IND will not suffice. Remember that in India nuclear training is imparted only within the DAE system.* So even for defence requirements, the nuclear posture will have to draw on personnel from the DAE or a new defence nuclear establishment, with an instituted recruitment and training programme, may have to be established.

Safety of nuclear weapons includes prevention of "inadvertent activation/use" and risks of accident therefrom or even accidental nuclear material dispersion from failed missile launches. One of the criteria of safety against accidental detonation that is used in the U.S. is that "one point safety criterion" and the U.S. conducted a series of "hydro-tests" of yields commensurate with such one-point detonation accidents to ensure safety. Does it mean that such low-yield tests will be carried out violating the moratorium on nuclear explosive testing that has been declared? Even within the civilian programme, elements such as risk assessment are not entirely public. In the defence context, it most certainly will not be. Similarly, the document speaks of "disaster control" and merely says, "India shall develop an appropriate disaster control system capable of handling the unique requirements of potential incidents involving nuclear weapons and materials" without giving an idea of how this is to be done.

Aspects of Command and Control (C&C) have also been dealt with rather superficially. In fact, Article 5.3 is not very clear and the clarification that Subrahmanyam gave at the press briefing is not of much help. The Article says: "For effective deployment, the unity of C&C of nuclear forces, including dual capable delivery systems, shall be ensured." In the context of nuclear forces, what does the term "dual capable" mean when, according to the document, nuclear forces will be based on a triad of force structures. Or does it mean that, for example, an aircraft will at the same time carry both conventional weapons and nuclear weapons? According to Subrahmanyam, however, this statement means that both conventional and nuclear force structures will be under the same C&C umbrella but with different operational ground rules and command chain. If so, the language used leaves much to be desired because it is confusing, to say the least.

Besides the political factors that may have tempted the government to make the document public now, the thinking perhaps is that with the articulation of a doctrine the world will be forced to recognise India as a nuclear weapons state.

Speaking of technological back-up to C&C structure, Article 5.6 says, "space based and other assets shall be created to provide early warning, communication, damage/detonation assessment." Does the last element mean that the retaliatory response will be a function of damage/detonation assessment and will be carried out only after such an assessment? Article 7 talks of the need to step up R&D efforts in the field "to keep up with technological advances in the field". Does it mean that the doctrine advocates the launch of an R&D programme like the Stockpile Stewardship Programme of the U.S.? And what kind of investment does the NSAB envisage for such continued R&D in nuclear weapons? For good measure, the doctrine speaks of Disarmament and Arms Control (Article 8) and, interestingly, seeks an international treaty banning first-use of nuclear weapons and internationally binding negative security assurances by nuclear weapon states to non-nuclear weapon states.

Besides the political factors that may have tempted the government to make the document public now, even though it had been submitted by the NSAB nearly a month ago, the thinking perhaps is that with the articulation of a doctrine the world will be forced to recognise India as a nuclear weapons state.

The Vajpayee government may feel that mere discussion of the doctrine by world nations – witness reactions from the U.S. – is tantamount to such recognition. It might also have been done to upstage Pakistan, which has refrained from declaring "no first use". Having come out with an apology of a doctrine, the government may turn around and say, "Look, we are a responsible nation."

What this draft nuclear doctrine does is to provide at best grist to a whole new series of seminars on India's nuclear posture. But it does little to clarify for the armed services, not to mention the public and the policy makers, what nuclear weaponisation entails. ■

Dreaming India's nuclear future

N. RAM

THE first significant act of the Bharatiya Janata Party (BJP)-led government after it came to power in March 1998 was to hijack India's independent, self-restrained and disarmament-oriented nuclear policy and twist it out of shape – rendering it a menace, first, to the people of India and, then, to peace and stability in the region. Perhaps the last significant act of the caretaker government that has, illegitimately and in an anti-democratic way, made several forays into substantive decision-making and policy-making is the unveiling of an open-ended, non-accountable, three-quarters-madcap, one-quarter-inhibited vision of India's nuclear weaponised future. The six-page draft Indian Nuclear Doctrine (dIND) presented as a 'consensus' document in the name of 27 members of the hawk-packed but largely amateur National Security Advisory Board (NSAB) is an egregious exercise of bomb-rattling without responsibility.

The manner and timing of its unveiling has been attacked in Opposition political circles and criticised in the press, but this must be recognised as being entirely in character. The dIND is a worthy follow-up to the authoritarian decision made by the Rashtriya Swayamsevak Sangh(RSS)-BJP high command to explode five nuclear devices in Pokhran on May 11 and May 13, 1998 and to weaponise the nuclear option, a decision made pre-emptively, in the utmost secrecy, in the name of 'national security' – targeting especially Pakistan and China – and 'shakti', without any objective review or democratic decision, in clear violation of the promises made in the National Agenda for Governance, in utter disregard for both the consequences for the region and the basic interests of the Indian people. It is significant that the only reference to the nuclear issue made in the 1999 manifesto of the National Democratic Alliance (NDA) is the promise that the recently established National Security Council will advise the government on "the establishment of a credible nuclear deterrent". However, as part of a motivated post-Kargil, pre-election exercise to boost Prime Minister Atal Behari Vajpayee's image as a great leader in war and peace, the Prime Minister's Office has put out a draft that was not preceded by the long-promised "strategic review" and was not discussed by the Cabinet. The adverse reaction the NSAB document has drawn in the Indian press, from Opposition parties, and internationally has made the Vajpayee government go instantly on the defensive. It has claimed that the dIND does not signal any real change in the nuclear weaponisation policy in place and, in any case, is meant to be debated before a final 'consensus' national decision is arrived at after the general elections.

A CLOSE study of the hawkish document reveals first its pretentious, confused character: this is unmistakably the work of amateurs (mostly self-proclaimed strategic affairs specialists) playing nuclear games and a bit of star wars as well, not anything that reflects professional military, or serious security, thinking. The exercise involves an attempt to cover all bases and, in aggressiveness, goes well beyond the doctrine of 'credible minimum nuclear deterrence' presented in outline by Prime Minister Vajpayee in his statement of December 15, 1998 in the Rajya Sabha. In that statement, Vajpayee indicated that the main features of the weaponising nuclear policy were as follows: (a) India will deploy its nuclear deterrent; (b) India's nuclear doctrine includes a policy of 'No-First-Use' and 'Non-use against non-nuclear weapons states'; (c) a policy of 'No-First-Use' with a minimum nuclear deterrent "implies deployment of assets in a manner that ensures survivability and capacity of an adequate response," in other words the development and deployment of a deterrent with a second-strike capability; (d) by way of meeting the concerns of the United States and its allies, India was willing to join the Comprehensive Test Ban Treaty (CTBT) and the Fissile Material Cutoff Treaty (FMCT)-to-come and to make its export control laws relating to "sensitive technologies" more stringent; and (e) India will continue its missile development programme and not accept "any restraints on the development of India's R&D capabilities".

The dIND is an attempt to seize the high ground of militarism in the Indian nuclear weaponisation debate. This is why it has assumed a significantly more aggressive posture than that indicated in Vajpayee's somewhat defensive statement made eight months earlier. The apologia of India's nuclear weapons programme being a minimal exercise in the development of instruments of self-defence forced by an insensitive world on a reluctant, peace-loving nation has been dispensed with. While paying lip-service to the formulation that "India shall pursue a doctrine of credible minimum nuclear deterrence", the dIND prescribes an open-ended, far-reaching programme of nuclear weaponisation with capabilities that will push the limits of the minimum.

The preambular section attempts to set out the context in which BJP-led India made its security-led choice: the continued reliance of the nuclear weapons states on their large nuclear arsenals; their proclaimed willingness to use nuclear weapons "even in a non-nuclear context"; their virtual abandonment of nuclear disarmament goals; and "the very existence of offensive doctrines pertaining to the first use of nuclear weapons and the insistence of some nuclear weapon states on the legitimacy of their use even against non-nuclear weapon countries." Out of such international threats to "peace, stability and sovereignty of states" sprang India's nuclear weaponisation. The job of the dIND, the Preamble explains, is to outline the broad principles for "the development, deployment and employment of India's nuclear forces".

The Objectives section leads off with the assertion that "India's *strategic* interests" (emphasis added) require in consequence "effective, credible nuclear deterrence and adequate retaliatory capability should deterrence fail" and it is even contended that the U.N. Charter allows such a course by sanctioning "the right of self-defence". Two things about this formulation are worth noting. The first is the reference to strategic – and not security – interests, a distinction that is of some importance. More important, it becomes clear that the grand inspiration for the dIND is deterrence theory.

The new-found official fascination

with the logic of deterrence marks a low point in the history of India's nuclear policy and indeed in the country's politics and international relations. It represents an abject acceptance of the cast-off intellectual rags of western nuclear weapons establishments at a time when the theory has been shown to be dangerously flawed and indeed false and when it has begun to be questioned by those (like Robert McNamara and General Lee Butler) who once held leadership roles in its practice. The lowest point perhaps came when Prime Minister Vajpayee, replying on March 15, 1999 to the Lok Sabha debate on the motion of thanks to the President, came up with his famous statement: "The nuclear weapon is not an offensive weapon. It is a weapon of self-defence. It is the kind of weapon that helps in preserving the peace. If in the days of the Cold War there was no use of force, it was because of the balance of terror." Not surprisingly, the dIND stands or falls by the theology of nuclear deterrence.

THE principal source of confusion in this document, its most damning failure, is the inability to answer in any rational, meaningful or logical fashion the questions: deterrence against whom? "Credible" or "minimum" or "effective" against whom? Driven partly by the reluctance to admit openly that the major preoccupation of the pro-nuclear weapons lobby is with Pakistan and China and driven partly by delusions of thermonuclear superpower status, the document presents the absurd proposition that India's nuclear weapons are directed against *all* possessors of nuclear weapons. To quote para 2.4 of the dIND: "The fundamental purpose of Indian nuclear weapons is to deter the use and threat of use of nuclear weapons by any State or entity against India and its forces."

The heart of the dIND is para 2.2, which is worth quoting in full: "The requirements of deterrence should be carefully weighed in the design of Indian nuclear forces and in the strategy to provide for a level of capability consistent with maximum credibility, survivability, effectiveness, safety and security." Although subsequently it is pleaded that the basic doctrine is one of "credible minimum nuclear deterrence" and "retaliation only", it is clear that the whole exercise is to raise the nuclear stakes by introducing the principle of maximising so-called minimum deterrence by emphasising second-strike (or even third-strike) capability and "survivability". It is this maximum and "dynamic" version of "credible minimum deterrence" directed against all nuclear weapons states (and their military allies), read along with the justification of the Indian misadventure in terms of a global rationale, that animates the open-ended, adventurist and unlimited programme of nuclear weaponisation recommended by the NSAB.

It is worth noting that the Objectives section of the dIND, while asserting the validity of the doctrine of deterrence, adds to the irrationality by emphasing the principle of "punitive retaliation to inflict damage unacceptable to the aggressor". The notion of unacceptable damage has often been promoted in the debate among Indian strategic affairs hawks, notably by K. Subrahmanyam, the conceptual father of the dIND, as a more rational basis for determining the size of India's nuclear arsenal than the principle of assured destruction. However, on closer examination, the principle of "unacceptable damage" turns out to be as nebulous as the notion of deterrence itself. In the first instance, just as in any other form of deterrence, the notion of unacceptable damage involves determining the state of mind of the adversary, a virtually impossible task as the history of nuclear deterrence shows. Secondly, the assertion that "the actual size, components, deployment and employment of nuclear forces", that is the nuclear force structure, will be aimed at "convincing any potential aggressor that... India... shall inflict damage unacceptable to the aggressor" sounds as absurdly non-credible as the boast made (in a May 17, 1998 press conference) by Dr. A.P.J. Abdul Kalam, Scientific Adviser to the Defence Minister and the key figure behind India's ballistic missile programme, that with Pokhran-II India had acquired the "capacity to vacate" any nuclear threat to itself. Does this mean that India will build a nuclear force able to retaliate and do unacceptable damage to the United States after a U.S. nuclear attack on India, as worst case analysis suggests? Since the threshold of unacceptable damage varies considerably between, say, Pakistan and the United States and given the all-embracing nature of the target of Indian nuclear deterrence, the notion of unacceptable damage to "any potential aggressor" is virtually useless. What is worse, this means that the *minimum* in the "credible minimum nuclear deterrent" has less and less meaning.

IN India, democratic and secular public opinion has always regarded nuclear weapons with horror, as weapons of mass destruction of a genocidal character. The hawks of the NSAB are quite aware that their doctrine, which seeks to legitimise and even glorify nuclear weapons as acceptable means of achieving strategic goals, runs directly into conflict with this sentiment. The dIND has no inhibition in identifying the building blocks of Indian nuclear deterrence: "sufficient, survivable and operationally prepared" nuclear forces; a "robust" command and control system; effective intelligence and early warning capabilities; comprehensive planning and training for "operations in line with the strategy"; and, perhaps most important, the politico-military "will to employ nuclear forces and weapons". In other words, no moral qualms, no squeamishness, no falling back on Gandhian or Nehruvian values, no peace-oriented value system that has underpinned the country's foreign and nuclear policies since Independence can be allowed to come in the way of fulfilling this madcap vision.

Underlining the dIND's militarist vision of India's future is the formulation in para 2.7 that requires the maintenance of a high level of conventional capabilities. The claim that this will raise "the threshold of... threat (of use) or use of nuclear weapons" is demonstrably false. In fact, the opposite is true, as Munir Akram, Pakistan's Ambassador at the Conference on Disarmament in Geneva, pointed out recently: "Thus, although the Indian document states the purpose of a conventional arms build-up is to raise the nuclear threshold, in fact the conventional build-up will further lower the nuclear threshold and bring closer the danger of nuclear use in the sub-continent." At any rate, if this is the adversary's perception, it is clear that Indian deterrence thinking has got it hopelessly wrong.

Sections 3, 4 and 5 of the dIND deal with nuclear forces, credibility and survivability, and command and control. In this hawkish vision, "minimum" virtually fades away and "credible", "effective", "enduring", "diverse", "flexible" and "responsive" take over in a way that suggests that no real limit will be placed on the Indian nuclear programme in quantity, scope and quality. Thus Indian nuclear forces, according to para 3.1, will be based on "a triad of aircraft, mobile land-based missiles and sea-based assets in keeping with the objectives outlined..." Although nuclear-powered submarines as carriers of nuclear-tipped missiles are not mentioned, this is primarily because official

Indian policy is not to talk about India's supposedly secret nuclear submarine programme; the whole dIND approach makes it clear that submarine-based assets, considered the least vulnerable but the most complex and expensive, are envisaged. Survivability of all these forces will be "enhanced" by a combination of "multiple redundant systems, mobility, dispersion and deception". Clearly, this encourages the adversary (who may be different at different points of time) to target Indian nuclear and other strategic assets in a far more comprehensive fashion. In the sub-continental nuclear standoff that is bound to follow should the dIND be accepted by the government, the elements of mobility, dispersion and deception will add substantially to the risk of an actual nuclear exchange.

A notably irresponsible and dangerous feature of the recommended doctrine is that it will push what is claimed to be a 'No-First-Use' policy towards "launch-on-warning" or "launch-under-attack". Para 3.2 of the dIND envisages "*assured* capability" (emphasis added) to "shift from peacetime deployment to fully employable forces in the *shortest possible* time" (emphasis added). Timeliness of response is re-emphasised in para 4.2 that speaks about the need to maximise the efficacy of India's nuclear deterrent "through synergy among all elements involving reliability, timeliness, accuracy and weight of the attack." The matter is clarified further in para 4.3(i), which, addressing the issue of survivability, states that "India's nuclear forces and their command and control shall be organised for very high survivability against surprise attacks and for *rapid punitive response*" (emphasis added). Precisely how rapid is the response to be? It is here that the ambiguity and confusion begin. Future interpretations of this formulation may extend to the position that Indian nuclear forces should launch either on warning or under attack. The building of such a capability will mean that India must undertake a nuclear weapons programme with all the associated assets that will approach the levels of the advanced nuclear powers. While all this may seem as grandiose and unreal as it is irresponsible and dangerous, it is very much the dream of the hawks of the NSAB, who will not let us forget for a moment that India must be ready to "effectively employ nuclear weapons".

The dIND vision is unmarred by any acknowledgement of the realities of Indian nuclear capabilities or of Indian S&T in general. Nuclear forces and command and control need to survive even "repetitive attrition attempts", meaning more than one strike [para 4.3(i)], demanding a capability that it is not clear even the advanced nuclear weapon powers possess in practice. The emphasis on timeliness of response will inevitably lead to India's nuclear weapons being on alert status of increasingly high levels. The option of India keeping the fissile material for its weapons separate from delivery systems, a possibility suggested by Jaswant Singh in his last round of talks with Strobe Talbott, is clearly at odds with the prescriptions of the dIND. The NSAB is either unaware of, or not bothered by, assessments that Indian nuclear weapons are not adequately safety-tested given the limited range of tests conducted at Pokhran-II. The only way that the 'safety' of Indian nuclear weapons can be ensured with current technical capabilities is to keep the fissile material separate from the warhead assembly and the delivery systems.

A notably irresponsible and dangerous feature of the recommended doctrine is that it will push what is claimed to be a 'No-First-Use' policy towards "launch-on-warning" or "launch-under-attack".

In keeping with its complete freedom from humanitarian concern, its total insensitivity to issues of economic, developmental and human security, the dIND does not even attempt a token discussion of a civil defence programme commensurate with the scale of nuclear weaponisation recommended. Nor has any economic cost consideration entered its ken. Earlier ballpark estimates by economists, notably the work of C. Rammanohar Reddy, suggested that the cost of India's "credible minimum nuclear deterrent" might run to Rs.50,000 crores over a ten year period. The open-ended, 'maximal' version of the nuclear deterrent proposed by the NSAB will render such numbers tremendous underestimates.

Indisputably, the dIND has caused deep anxiety and unease among India's neighbours and a tit-for-tat response from Pakistan seems guaranteed. In their enthusiasm for nuclear weapons, the confused luminaries of the NSAB have even amended official commitments, made for instance in the Prime Minister's December 15, 1998 statement in the Rajya Sabha, on non-use of India's nuclear weapons against "non-nuclear weapon states". The dIND, in a disturbingly ambiguous formulation, recommends that "India will not resort to the use or threat of use of nuclear weapons against States which do not possess nuclear weapons, *or are not aligned with nuclear weapon powers*" (emphasis added). As Admiral L. Ramdas, former Chief of the Naval Staff, puts it, what the dIND has done, for transparently partisan reasons, is to open "a Pandora's box to frighten the entire neighbourhood".

All this does not necessarily mean that the prescriptions of the dIND will remain unchanged when a new government takes over after the general elections. Nor does it follow that official nuclear policy has returned to a path of defiant independence. The essence of the strategy of the Hindu Right is to try and hang on to *de facto* nuclear weaponisation at any cost. Among other things, this will mean abandonment of the global nuclear disarmament agenda and all principled opposition to the discriminatory global nuclear order. As External Affairs Minister Jaswant Singh told Arun Shourie in a remark quoted proudly by the latter in the Rajya Sabha debate of December 15, 1998: "Look at it as a crowded railway compartment. When you are trying to come into it, your perspective is one. When you are in it, you want the rules that will keep you in and keep the others out." From a democratic standpoint, the pursuit of nuclear weaponisation while surrendering to the CTBT and the FMCT that is being negotiated and being co-opted into the discriminatory global nuclear order as a minor partner must be recognised as the worst possible course for India's nuclear policy. Meanwhile, the hawkishness that has underlain Pokhran-II, the subsequent articulations of official policy relating to nuclear weaponisation, the test-firing of the extended range Agni II intermediate range ballistic missile and the explicit linking of this to nuclear weaponisation is likely to be modulated in accordance with perceived short-term political exigencies and the twists and turns of the evolving regional and international situation. Everything except *de facto* nuclear weaponisation is bargainable; the limits of acceptance/non-acceptance by the United States and its allies can be probed and tested. The aggressive posture signalled by the dIND must be understood only in this context. ■

Resistance in the valley

Activists and supporters of the Narmada Bachao Andolan allege that by arresting the anti-dam satyagrahis the government tried to create a situation that it hoped would draw attention away from the Sardar Sarovar Project.

LYLA BAVADAM

ON August 10, satyagrahis at Domkhedi village watched a tree, which carried the pale blue flag of the Narmada Bachao Andolan (NBA), sink in the rising waters of the Narmada. That marked yet another stage in the NBA's 14 year-old struggle to prevent the construction of big dams on the Narmada.

Domkhedi in Maharashtra and Jalsindhi in Madhya Pradesh were chosen for the satyagraha as they would be submerged this monsoon. The waters rose to 127 metres at Rajghat bridge, upstream of Domkhedi, forcing the police to stop all traffic. At Domkhedi water entered the satyagraha hut and homes nearby. Across the river, at Jalsindhi, fields were submerged and waters entered the satyagraha hut.

The next day 61 satyagrahis, including NBA leader Medha Patkar, were arrested. "It was a test of our commitment," said Anita S. from Kerala who was among those arrested. Medha Patkar and three dam-affected people had started the satyagraha on June 20 after the Supreme Court revoked a four-year stay on the construction of the Sardar Sarovar dam, the largest among the 3,200 dams planned on the Narmada river. It is estimated that 2,500 families in nearly 60 villages in Maharashtra and Madhya Pradesh will be displaced when the dam height is raised by five metres as a consequence of the court order.

Heavy downpour in the upstream regions of the Narmada Valley, particularly Jabalpur and Mandla in Madhya Pradesh, caused the water level to rise further, beyond the submergence level. Near Hafeshwar, the nearest access point to the villages involved in the satyagraha, the level was around 98 m. The situation worsened when water was released from the three large dams upstream: 30,000 cusecs from Bargi, 28,000 cusecs from Tawa and 30,000 cusecs from Barna.

JACOB JOE

NBA leader Medha Patkar and other satyagrahis at Domkhedi as flood waters enter their hut.

Arundhati Roy, author and NBA supporter, said: "The sad thing is that it was an artificially induced flood, a man-made flood. They waited for the rally to leave and then released water from the Bargi, Tava and Barna dams. The only heavy rain that had been recorded was in Jabalpur." Arundhati Roy, who had visited the same site a week earlier as part of the Rally for the Valley (*Frontline*, August 23) in which more than 300 anti-dam protesters participated, returned to the satyagraha sites on August 12, the day after the satyagrahis were arrested.

She said that she was struck by the "poignancy of the half-submerged and half-dry fields" of Luwariyabhai – "added evidence that the flood was man-made" – and by the "upbeat mood" of the people. "There were the Nimadis and adivasis standing together," she said. According to her, there have been attempts by the government to drive a wedge in the anti-dam movement by pit-

An activist's account

LYLA BAVADAM

AN activist of the Swasraya Vypeen Group from Kochi in Kerala, Jacob Vadakkachery, was present during the slow submergence and was in the same hut as Medha Patkar, Dadlyabai, Devrambhai and Ranyabhai, who had pledged to stay at the satyagraha site regardless of the water level. The following is his account of the events of two days when the waters rose.

August 10: "The water began to rise in the afternoon and by 2 p.m. the tree with the NBA flag sank. The day before that a police team had been shouting to us from afar to move to a safer place but we shouted slogans in return and stayed where we were. On the night of the August 10, Medha had returned from a meeting. By then the water was lapping at the flag post near the satyagraha hut. Medha, Dadlyabai, Ranyabhai and Devrambhai had decided to die in the waters if it came to that. Please understand that this was not a *jal samarpan*. They were sitting in a satyagraha, and the basic idea of this is that you do not run away from the situation.

August 11: The water came into the hut at 2 a.m. It was about one-foot deep. Medha asked all the volunteers to leave but we refused. In the lantern light I could see that every 20 minutes the waters rose about nine inches. The other people of the village were in a larger shed on higher ground. They did not know of the decision of Medha and others to stay at the satyagraha point if the waters rose. We were eight persons in the hut. The mood was peaceful. Some people were crying softly. Medha sang satyagraha songs and bhajans. She wrote a letter (detailing the basic issues surrounding the damming of the Narmada).

At 6 a.m. on August 11, the water was at chest level. Adivasi women came into the hut and stood with Medha. She tried to send them away. There was the danger of the hut collapsing. The poles were weak, erected as they were in slushy ground. A large branch of the mahua tree had broken off during the night because of the flood. After 16 hours in the water we were shivering, but Medha and the three others were calm. Ranyabhai and Devrambhai wore impassive expressions. I saw the real face of Gandhian satyagraha.

At 10 a.m. a person from the village came with a piece of paper, which said that the Collector and the Superintendent of Police were arriving. At 3 p.m., about 50 uniformed men and the S.P. arrived by boat. They sat on some stones on higher ground and observed us standing chest deep in water. At about 6 p.m. six women police personnel, wearing salwar-kameez, arrived. Then the arrests began. Adivasi women surrounded Medha but they were pulled away and kicked by the police women. One old man was treated quite brutally. He kept shouting: "Remember, this is not the fate of the Narmada. It is the fate of the whole nation."

We were taken in an open truck to the S.P's office in Dedgaon and charged under Section 68 of the Bombay Police Act and released the next day under Section 69 of the same Act. I am not sure what happened after we left but I know that the arrests were anticipated and some satyagrahis hid themselves. When we were taken away they continued the satyagraha. After our release we demonstrated in front of the tahsildar's office demanding a survey of the losses incurred by the villagers. Then we all returned to Domkhedi. ■

ting the Nimadis, essentially wealthy farmers of the Nimar plains of the Narmada Valley, against the adivasis. Arundhati Roy's two-day visit bolstered the spirits of NBA supporters. Anita S. said: "Her coming was an affirmation of her integrity and commitment."

Activists of the NBA allege that the flood was caused deliberately by the government to create an emergency situation in order to break the satyagraha, which was once again drawing attention to the beleaguered Sardar Sarovar Project. The timing of the satyagrahis' arrest they argue, shows that the Government had planned the situation carefully. The police waited for three hours on high ground, some metres from the satyagraha hut, while the satyagrahis stood in chest-deep water. When it became clear that the water level had not risen in the three hours, the police moved in to arrest them.

The police presence was confined to Domkhedi and Jalsindhi. The act of 'rescuing' Patkar and other satyagrahis, according to NBA activists, was a ruse to avoid embarrassment and a public outcry. They wonder why the same 'concern' was not extended to the villages such as Pipalchip and Sikka, which were also affected by the flood. The flood submerged four houses in Pipalchip, two in Sikka and two in Bharad. The NBA is conducting a survey of the effects of the submergence.

IT is not known how many people will be displaced eventually by the 139-m Sardar Sarovar dam. Four years ago the NBA pointed out that even as the construction of the dam proceeded at a healthy pace the resettlement of the displaced people was neglected. The Supreme Court ordered a stay on the construction until the displaced persons were rehabilitated.

Activists of the NBA allege that the flood was caused deliberately by the government to create an emergency situation in order to break the satyagraha.

The NBA said that misrepresentations by the governments of Maharashtra, Madhya Pradesh and Gujarat on the extent of resettlement achieved had led to the latest court order, which lifted the ban on construction. The reality, they said, was that the families that had been displaced when the dam height was below 80 metres were yet to be resettled.

On June 1 and 2, people of the valley approached the Narmada Control Authority (NCA), the apex multi-State body that monitors the project, and questioned it on the availability of land and the claims made by the State governments that they were ready to carry out the resettlement.

It is clear that there is not enough land to resettle all the displaced people from the three States as per the directives of the Narmada Water Disputes Tribunal or the Supreme Court. For instance, the

The real story. Every time

A message of protest: "Our rule in our village."

Maharashtra Government claimed that only 220 families in the State would be affected by this monsoon; however, an NBA survey revealed that the number was 685. The State Government claimed that it had 456 hectares of land to resettle all the affected families. But the NBA found that only 285 ha was available – that too uncultivable land. In Rozwa and other areas, around 169 families, which had been shifted three or more years earlier to resettlement sites, had not been allotted land. Twenty-one families from Junane and Selagda villages returned home saying that they preferred to face submergence rather than stay at the resettlement sites.

In a suit filed in the Supreme Court, Madhya Pradesh has admitted that the quantum of power the State will receive from the project will be 23 per cent less than what was projected initially. New estimates for water availability reveal that the earlier estimate was higher by 18 per cent. Madhya Pradesh's suit has sought a new tribunal to re-evaluate and redesign the Sardar Sarovar dam.

Support for the NBA is growing in the valley and elsewhere. Residents of villages in the non-submergence zone came to the satyagraha site at Domkhedi and stayed there as the waters rose. Anita S. said: "Medha's strength comes from the people. They have given her strength and direction." The people have vowed to stay and fight.

Arundhati Roy said: "For them there are no options. They're not planning any move and they're very clear about that. All the confusion is outside (the area)." ■

A confrontation in the Kutch

The shooting down of a Pakistani maritime surveillance aircraft by the Indian Air Force escalates tensions between India and Pakistan to a new level.

JOHN CHERIAN

THE downing of a Pakistani maritime surveillance aircraft by a MiG-21 aircraft of the Indian Air Force over the Rann of Kutch on August 10 has exacerbated the tensions between New Delhi and Islamabad All 15 crew members on board the Pakistani plane died

According to IAF officials, at 10-51 a m on August 10, an IAF ground radar picked up an aircraft inside the Pakistani province of Sindh, approaching the international border on a south-easterly course The plane was moving at 370 kmph at a height of 900-1,050 metres After reaching the border at 10-54 a m , it carried out a series of manoeuvres over the area within or close to 10 km of the border This, IAF officials said, was a violation of a 1991 agreement between India and Pakistan on the prevention of airspace violations, which forbids combat flights by either side within 10 km of the international border

Officials of the IAF insist that the aircraft crossed the border initially at two points Two minutes after the aircraft violated Indian air space for the first time, two MiG-21 interceptors, which were kept in operational readiness at the IAF base at Naliya in the Kutch, were airborne, at 10-59 a m When the Pakistani plane entered Indian air space for the third time, at about 11-14 a m and penetrated 10 km into Indian territory, the MiGs went into action

The pilots of the MiGs sighted the intruding aircraft and identified it as a French-made Breguet Atlantique-1 One of the two MiGs, which had positioned itself between the intruder and the border then turned towards the plane to signal visually and if possible to communicate by radio asking it to land at the nearest IAF base According to the IAF, when the leader of the interceptors was jockeying into position, the Atlantique turned into it 'This," said a senior IAF official, was a hostile act As per international norms he ought to have maintained his course and height and in fact should have lowered his under-carriage as a sign of submission "

It was then that the MiG-21 fired an R-60 air to-air infra-red heat seeking missile The missile hit came at 11-17 a m. and, according to Indian authorities, the Pakistani plane was about 5 km south of

ZIA MAZHAR/AP

On the Pakistani side of the border, part of the wreckage of the Pakistani maritime reconnaissance plane that was shot down by fighter aircraft of the Indian Air Force on August 10.

ANU PUSHKARNA

the international border on the Indian side.

Ground radars of the IAF tracked the Atlantique for a while after it was shot: the aircraft headed 5 km inside Pakistani territory, turned left and approached the international border yet again before disappearing from the radar screen.

The Chief of the Air Staff, Air Marshal A.Y. Tipnis, who briefed mediapersons at the IAF base in Nalia on August 11, gave a blow-by-blow account of the downing of the Atlantique. He dismissed Pakistani claims that the plane had been on a training mission. Tipnis said that although the aircraft that was shot down was probably unarmed, the Atlantique had the capability to carry torpedoes, mines and sonobuoys. He described the downed plane as a "combat military aircraft" which had "no business" flying over Indian territory.

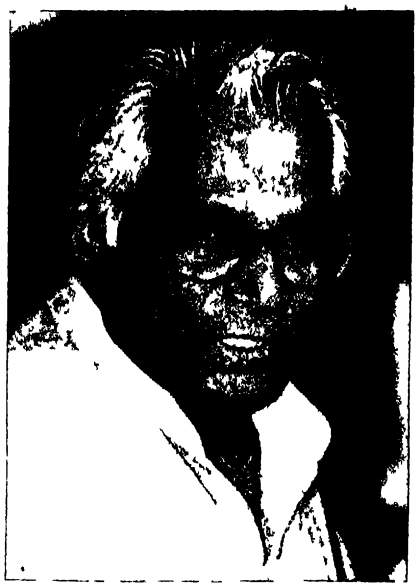
Officials of the IAF state that the Atlantique had operated for approximately 18 minutes in the earlier part of the sortie; according to these officials, this confirmed that the plane was not lost and that its violation of the border was not inadvertent. One of them said: "The possibility of the plane having been on a training mission is ruled out by the profile it followed." According to the official, the relevant fact is that the Pakistani plane was "a military combat aircraft" which entered Indian airspace illegally on an operations mission. The intruder complicated matters by acting in a hostile manner. "There was no alternative thereafter but to shoot down the Atlantique to prevent it from running away after being caught doing an illegal operational mission in Indian territory," the official said.

Islamabad, however, insists that the plane was on a routine training mission and well within Pakistani airspace when it was shot down. Much of the debris from the downed plane was found inside Pakistani territory.

PAKISTAN has been using the Atlantique and the United States-made U.S. P36 Orions mostly to keep tabs on the Indian Navy. Senior Navy officials say that the Pakistani side has regularly "buzzed" Indian ships. India uses Tu-142s, Il-38s, Dorniers and Sea Kings to shadow ships of the Pakistani Navy. But as such incidents took place at sea, things did not get out of hand. An aircraft such as the Atlantique, with its array of radars and electronic support measures (ESM), can be used to map enemy air defences.

Responding to the incident, Defence Minister George Fernandes said that the Pakistani plane was on a "spying mission". He added that India and Pakistan were "not on the brink of war" following the incident, but stated that India was "ready for any eventuality".

A Defence Ministry statement said that between May and July, there had been eight incidents in which Pakistani planes intruded into Indian airspace. A statement put out by the External Affairs Ministry said that the Atlantique was a "combat aircraft" in the context of the 1991 agreement and should therefore not have flown within 10 km of the border. It is nevertheless true that the air forces of both countries have not been strictly adhering to the agreement.



The Kargil conflict appears to have made the armed forces of both countries a trifle edgy, which has increased the possibility of their being involved in flashpoint situations. Early on in the Kargil conflict, Pakistani forces shot down two IAF fighter planes. The Indian side claims that its planes were shot down over Indian airspace. Senior IAF officials said that in late May an IAF Canberra reconnaissance plane was shot at in the Kargil sector, on the Indian side of the Line of Control but within the 10-km zone. The plane returned to base with only one engine functioning. However, IAF officials were quick to add that in the shooting incident over the Kutch, the Pakistani plane had intruded into Indian airspace, after crossing the 10-m buffer zone on the Pakistani side.

The shooting incident, however, raises some questions. The 1991 agreement stipulates that in the event of a violation, a prompt alert is to be sent through diplomatic channels to the headquarters of the other country's air force. Even if it is conceded that the Pakistani aircraft intruded into Indian airspace with devious intent, could it not have been forced to land, by firing a warning shot if necessary, considering that it was an unarmed and slow-moving plane? Tipnis told mediapersons that in such situations the reaction time was limited and decisions had to be taken "in a split second" as the pilot did not know whether the aircraft was armed or not. The general opinion voiced in the international community was that the plane should not have been shot down even if it had strayed into Indian airspace.

Defence Minister George Fernandes, and (right) Pakistan Foreign Minister Sartaj Aziz.

The Clinton administration urged both India and Pakistan to honour the 1991 agreement, which sets out specific guidelines and procedures for military flights near their common borders. Apportioning blame even-handedly, the U.S. State Department spokesman said that both countries had violated the agreement

China appealed to India and Pakistan to exercise restraint and urged the two countries to resume bilateral talks so as to avoid a worsening of the situation

United Nations Secretary-General Kofi Annan deplored the loss of life in the downing of the aircraft His spokesman said that Annan "is increasingly concerned at the repeated incidents between India and Pakistan and urges that the differences between them be resolved by peaceful means'

Pakistan Prime Minister Nawaz Sharif said that the shooting incident would further complicate" the tense situation between the two countries and set back the prospects for an early resumption of peace talks

THERE is no doubt about the fact that the shooting down of the Atlantique has worsened the situation A cycle of revenge attacks could follow along the long border that the two countries share The incident on August 11, in which an IAF helicopter carrying a media team to the site of the Atlantique wreckage was allegedly fired upon by Pakistani gunners (see box), is illustrative enough

India has rushed a large number of troops, including marine and army commandos, into the Rann of Kutch area to bolster the strength of the Border Security Force troops The Indian Navy has also increased its presence in the area The IAF has been placed on high alert

The Rann of Kutch area, rich in oil and gas deposits, is strategically important for India The area has seen military skirmishes between the two countries on earlier occasions The long-standing boundary dispute between the two coun-

A mid-air drama

JOHN CHERIAN

THIS correspondent was part of a media team from New Delhi that was taken by the Indian Air Force on August 11 to the marshy Rann of Kutch to have a look at the debris of the Pakistani maritime surveillance aircraft that had been downed the previous day. The mediapersons, who had to start on the journey at short notice, were told that there was a possibility of seeing some of the debris, which the IAF claimed was on the Indian side of the border. The day's newspapers carried reports of the shooting incident, but details about the location of the debris were sketchy.

The mediapersons were taken in three helicopters from the IAF base at Naliya. Two Mi-8s and an Mi-17 took off at around 4 p.m, flying in formation. Two MiG-29s gave the three helicopters air cover.

The helicopters turned northwest with the intention of flying within 1.5 km of the international boundary, from where the wreckage could be sighted. (Under the 1991 agreement between India and Pakistan on the prevention of airspace violations by the two sides, helicopters are allowed to fly up to 1 km of the international border.)

There were no signs of any trouble looming over the horizon. It was obvious that the IAF did not take seriously Islamabad's assertions that the plane had been shot down over Pakistani territory and that the IAF had "stolen" parts of the wreckage from the Pakistani side of the border. The helicopters were also getting close to the area where, Pakistan claimed, IAF planes had intruded. Pakistani troops had aimed small-arms fire at IAF helicopters that had been hovering near the site of the wreckage on August 10.

As the helicopter carrying the media team approached the site of the crash, one of the crew members told this correspondent that the debris would be visible in a minute's time. Suddenly, the three helicopters veered off-course and went into a steep, headlong dive. One of the helicopters virtually skimmed the waters. The helicopters banked sharply, taking a 180-degree turn to port.

None of the mediapersons could make out what was actually happening. When the media team returned to base, Group Captain P.B. Bhangu, Station Commander of Naliya, who was in one of the choppers, told the mediapersons that the helicopters had been fired upon by Pakistani troops. "We were approaching the crash site when a flash was spotted," Bhangu said.

The pilots had spotted a single flash, followed by a plume of smoke that had emanated from the Pakistani side of the border. An IAF official said that a single flash meant that in all likelihood a shoulder-held surface-to-air missile had been fired. He said that the missile was spotted about 400 metres away from the helicopters and in all probability exploded 400 metres away from the target. One mediaperson duly reported that he had been "only 0.25 seconds away from death".

Pakistan denied that its troops had fired on the helicopters carrying the media team. A Pakistani military spokesman said that Pakistani forces had fired a missile at two IAF fighters that had "intruded" into Pakistani airspace. ■

One of the three IAF helicopters carrying mediapersons, which allegedly came under attack by Pakistani troops near the site of the wreckage over the Rann of Kutch on August 11.

tries over the Sir Creek area in the region remains unresolved despite several rounds of talks (*Frontline*, December 4, 1998). In April 1965, the two countries waged a month-long battle in the Rann, following which a cease-fire agreement was signed in June 1965. Two months later a full-scale war erupted.

In the wake of the Kargil conflict, the Bharatiya Janata Party-led government has adopted a hardline stance *vis-a-vis* Pakistan, with an eye on the elections. And following the downing of the Atlantique, there has been a blatant display of triumphalism: pictures of Prime Minister A.B. Vajpayee posing with the debris of the downed Pakistani plane testified to this. Such displays, however, have a tendency to boomerang. The dispute over Sir Creek is now back in the limelight, and another area of conflict could once again be opened up. There are reports that Pakistan is planning a physical intrusion into the Sir Creek area to focus international attention on the territorial dispute. The shooting of the Atlantique could provide it with a pretext. ■

An aborted deal?

If an agreement between India and Pakistan to resolve the Kargil crisis as early as June 27 was indeed aborted, clearly, some people in New Delhi wanted to flourish a military victory for electoral ends, in preference to an early diplomatic solution.

A G NOORANI

WAS there indeed an Indo-Pakistan agreement to resolve the Kargil crisis which was upset' as a consequence of talks between India and the United States? On July 28, *The Hindu* published a brief excerpt from a report in *The News* a Lahore daily edited by Maleeha Lodhi about a four-point agreement which Prime Minister Nawaz Sharif was to sign with Prime Minister Atal Behari Vajpayee in New Delhi while the former was on his way back from Beijing *The News* wrote 'It was on the afternoon of June 27 that it all appeared to have been finalised On his way to Beijing Nawaz Sharif would fly over Indian territory While doing so he would send a goodwill message to his Indian counterpart In response to the Pakistani Prime Minister's message, Vajpayee would invite him to visit Delhi, to make a technical stop Responding to Vajpayee's invitation, Nawaz Sharif would stop in Delhi on his way back from China In Delhi the two Prime Ministers were to sign the four-point finalised agreement"

In fact, Sharif's emissary, Niaz Naik, came to New Delhi on June 26, so did Gibson Lanpher, the U S Deputy Assistant Secretary of State, after talks in Islamabad. In fact the quotation was from an article by a respected columnist, Nasim Zehra. Five days earlier *The Guardian* (of the United Kingdom) had published a report from Islamabad by a correspondent of repute, Suzanne Goldenberg India and Pakistan arrived at a secret deal to end the fighting in Kargil three weeks before their generals met (on July 11) to put peace in motion – a delay that cost hundreds of lives Mushahid Hussain Pakistan s Information Minister, told her that by the 19th or 20th, there were the makings of some sort of understanding"

SHANKER CHAKRAVARTY

Prime Minister Atal Behari Vajpayee, with Nawaz Sharif standing by, shakes hands with Niaz Naik at the Wagah border in February 1999.

It was arrived at in the back-channel' parleys of Niaz A Naik, former Foreign Secretary and High Commissioner to India and R K Mishra of *The Observer of Business and Politics*, with Vivek Katju, Joint Secretary, Ministry of External Affairs, to aid him

In order to appreciate the significance of these reports it is necessary to recall the background (vide the writer s article, Kargil diplomacy *Frontline*, August 13) Both countries were parleying with the U S also while their back channel was at work, and Nasim Zehra's and Suzanne Goldenberg s accounts vary on minor points. Nasim Zehra reports "The back channel collapsed in the last days of June when the identity of the secret negotiators was leaked to the Indian press' She alleges that it was New Delhi that inspired the disclosure by the Press Trust of India (PTI) from Islamabad

PTI revealed Naik's trip to India under an Islamabad, June 27, dateline "Stung by the U S pressure to pull out of Kargil, the Nawaz Sharif Government has despatched former Foreign Secretary Niaz Naik as its special emissary to India on a mission with a set of new proposals The mission, which the authorities wanted to keep secret, was leaked by elements in the establishment opposed to the U S pressure" Thus PTI attributed the leak to Pakistani sources But it strains ones credulity that

Pakistani sources would have recklessly compromised themselves by leaking to an Indian news agency when they could very well have used the Pakistani media for the same result.

On June 29, Pakistan confirmed the Naik visit but added that R. K. Mishra had been to Islamabad and met Nawaz Sharif and Foreign Secretary Shamshad Ahmed on June 18.

Niaz Naik's authoritative disclosure to the British Broadcasting Corporation (BBC) on June 29 removes all doubt. Even after the cover was blown, he was upbeat. "I think the situation will be resolved... We are trying to arrange the first meeting of what we call the Directors of Military Operations. The Prime Minister is up in China, he's coming back tomorrow (June 30) evening. I think things will start moving once he comes back to Islamabad." Nawaz Sharif cut short his trip to China on June 28 even as Vajpayee rushed back to Delhi on June 25 to meet Lanpher and Niaz Naik.

According to Nasim Zehra, around midday on June 27, Niaz Naik returned from New Delhi "with what was a finalised plan of action".

Both Brajesh Mishra and R. K. Mishra were present when Naik met Vajpayee earlier that day.

Nasim Zehra added: "Agreement was reached on four points: appropriate steps to be taken by both sides to mutually respect the LoC determined under the Simla Agreement of 1972; immediate resumption of the composite dialogue initiated under the Lahore process; Islamabad to use its influence on the Mujahideen to request them to disengage; find an expeditious solution to the Kashmir dispute within a specified timeframe. It was also agreed that following the agreement, Pak-India dialogue would resume involving the Foreign Ministers. For immediate military de-escalation, the Directors-General Military Operations of the two countries were to hold a meeting.

"The agreement on the text was evolved during the five R. K. Mishra's Pakistan trips (sic). Mishra would carry back and forth amendments in a draft form in which amendments were made based on input from both sides. As a special envoy of the Indian Prime Minister, the businessman R. K. Mishra met with the Pakistani Prime Minister during all his trips to Pakistan."

R. K. Mishra had visited Pakistan five times since June 1. Nasim Zehra adds: "The Americans were completely kept out of back-channel negotiations. Washington did not even know that any such negotiations were taking place until around late June, a senior Cabinet Minister in passing mentioned to the American Ambassador in Pakistan that contacts with Delhi had been established through a back channel."

Vajpayee was very much a party to the deal... He owes an explanation to the nation, and that duty is not discharged by bland denials such as the one by the official spokesman of the Ministry of External Affairs on August 19.

On June 27, around 5 p.m., the text of the proposed "goodwill message" from Sharif was faxed from Islamabad to New Delhi. Nasim Zehra wrote: "The return message was coming in later than expected. The Indians were requested to fax the message at the Prime Minister's Model Town residence. The message came at around 10 p.m. And like a bombshell, Vajpayee was not inviting Nawaz Sharif to visit Delhi. Instead he was asking to "withdraw" the intruders from Kargil so that bilateral dialogue could be resumed. Telephone contacts with the Indians at the highest level did not help. India's principal interlocutor blamed Delhi's going back on a 'done deal' first on some misunderstanding on what had been agreed but subsequently conceded that the hawks in the Indian establishment had won out. There was a sudden panic amongst those who were the principal actors of Pakistan's back-channel diplomacy. The trip to China had still to go ahead. However, a decision was taken to cut it short."

News of Niaz Naik's secret trip was leaked to the Islamabad-based correspondent of PTI by Indian hawks opposed to the deal, Nasim Zehra alleges. On some points, however, she skates on thin ice. The pro-Indian stand of the G-8 and the U.S. could not have contributed to the failure: nor Lanpher's trip to New Delhi as she suspects. There was at least one element in the deal which could have spelt its doom. That Vajpayee promised Niaz Naik that he would discuss Kashmir once Pakistan withdrew from Kargil is clear. The Lahore process would be "accelerated", Naik reported. "He twice used the word accelerated." But which Indian Prime Minister could or would possibly agree to "find an expeditious solution to the Kashmir dispute within a specified time-frame?"

The ground situation was tricky for both. Pakistan knew it would have to quit. India, while being confident of success, knew the price it would have to pay. On June 30, L. K. Advani talked of success only by September. Tiger Hill was retaken on July 4, the day Sharif met President Bill Clinton. The DGMOs wrapped up the deal concluded there only on July 11.

Bar that bit on a time-frame, the rest of the four points were unexceptionable. The time-frame stipulation could have been dropped on India's insistence, for it was an altogether new element. The deal would have survived, and its effect on the climate of opinion in both countries would have been dramatically sobering. Had the deal gone through on June 27, the result would have been vastly better than the one that came after July 11. Bilateralism would have received a powerful boost. Evidently, some people in New Delhi wanted to flourish a military victory for electoral ends, in preference to a diplomatic solution. Obviously the people who leaked Naik's visit to PTI on June 27 hoped to wreck the deal. Significantly, the leak was to the Indian, not Pakistani, press. His interview to the BBC on June 29 shows that it was still possible to salvage the deal. Pakistan has revealed the details of the negotiations with dates and the time. The Vajpayee government's silence is deafening – and eloquent.

Having refused to summon the Rajya Sabha, the least the government can do is to publish a White Paper on the diplomatic record, especially on the aborted deal of June 27.

Vajpayee was very much a party to that deal not only telephonically, as mentioned in this writer's earlier article, but also by fax. The Clinton-Sharif draft was faxed to him, and he returned it with his approval, adding the word 'sanctity' (in respect of the Line of Control) written in his own hand. The detail none could have invented and risked exposure (Amit Baruah, *The Hindu*, August 19). Vajpayee owes an explanation to the nation, and that duty is not discharged by bland denials such as the one by the official spokesman of the Ministry of External Affairs on August 19. It is too preposterous for words. ■

An Army caught napping

The minutes of a crucial meeting of the Unified Headquarters, the apex body of organisations managing security in Jammu and Kashmir, show why the initial stages of India's response to events in Kargil were confused and directionless.

PRAVEEN SWAMI

THE truth, like murder, will out, goes the maxim. Through the three months since the Kargil war began, military officials have insisted that they were prepared for Pakistan's aggression and that the campaign was conducted to a well-thought-through plan from its early stages. 15 Corps Commander Lieutenant-General Krishan Pal had, in an interview, even described the campaign as an example of "generalship unparalleled in the history of warfare". Now documents obtained by *Frontline* have disproved such claims. The Army knew next to nothing about the scale and character of the intrusion, even less about the structure of the war that was to follow, and it was entirely unprepared for a full-scale conflagration involving the Pakistan Army in Kargil.

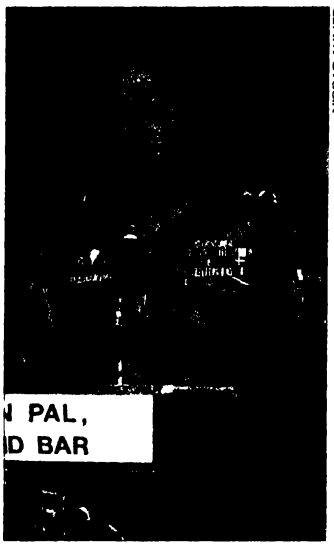
The minutes of the crucial first meeting on the Kargil war of the Unified Headquarters (UHQ), the apex body of organisations managing security in Jammu and Kashmir, cast light on events in the weeks that followed the detection on May 3 of Pakistan's aggression. Disturbed by the blase reaction of the Army at that meeting to the occupation of some 1,500 sq km of Indian territory by Pakistani regulars, Chief Minister Farooq Abdullah flew to New Delhi on May 24, accompanied by Chief Secretary Ashok Jaitley and Director-General of Police Gurbachan Jagat. There he discovered that Prime Minister Atal Behari Vajpayee and top government officials were unaware of the events unfolding on the Kargil heights. It was a day of desperate pleading before the Cabinet Committee on Security met on May 25. (This sequence of events was reported in *Frontline*'s July 2 issue.)

On May 19, a fortnight after Pakistan's intrusion was detected on the Batalik heights, the UHQ met in Srinagar. The emergency meeting was called to discuss the intrusion and, its minutes record, the "emerging security scenario". The UHQ is chaired by the Chief Minister. His Security Adviser, the 15 Corps Commander, could by custom chair UHQ meetings in the Chief Minister's absence, and thus he played a special role in its deliberations. That this meeting was an unusual one is evident from the fact that almost the entire security establishment in Srinagar attended it.

Farooq Abdullah was accompanied by Minister of State for Home Mushtaq Ahmed Lone, Chief Secretary Jaitley, Principal Secretary B.R. Singh, Principal Secretary (Home) C. Phunsog, Information Director S. Pandey, Divisional Commissioner Khurshid Ahmed Ganie and Srinagar Deputy Commissioner Tanveer Jahan. The Border Security Force sent two Inspectors-General, the Indo-Tibetan Border Police two Deputy Inspectors-General and the Central Reserve Police Force a Deputy Inspector-General and an Additional Deputy Inspector-General. The Director-General of Police led a team consisting of Additional Director-General R. Tikoo, three Inspectors-General and a Senior Superintendent of Police. The Intelligence Bureau (I.B.) Joint Director was present, as were a Commissioner and a Deputy Commissioner from the Research and Analysis Wing (RAW).

A.K. Chopra, Brigadier-General (Staff) of the 15 Corps, initiated the proceedings with a general briefing on the events in Kargil. The contents of the briefing are not recorded in the minutes, but officials who attended the meeting say that it was a sketchy account lasting only a few minutes, of the presence of infiltrators in the sector. Pal then took over from his subordinate. Paragraph 4 of the minutes record that he made six observations. The first two were routine. "The areas of infiltration were unheld ones," Pal said, "by both India and Pakistan and dominated by patrols and aerial surveillance by both sides, due to the rugged and extremely difficult high altitude terrain conditions." He then proceeded to outline the "sequence of infiltration in various subsectors and actions taken by the Army."

The term "dominated by patrols and aerial surveillance" passed unchallenged: no one at the UHQ apparently saw it fit to ask how thousands of infiltrators could thus enter and hold such an area. Pal pro-



Brigadier-General A.K. Chopra of the 15 Corps displays weapons seized from Pakistani infiltrators in June.

ceeded to make four assertions that proved even more damning. First, he insisted that "no voids were created in the CI (counter-insurgency) grid due to the movement of troops in Kargil Sector and deployment in the valley was fully balanced." The remark was intended to reassure security officials in the State who were disturbed by the gaps created in counter-insurgency deployments by the movements of troops to the borders. The Army, Pal's remarks make it clear, did not expect that events in Kargil would suck in larger numbers of troops from security duties in the State. This was a massive error of judgment, for by the end of the Kargil war, 58 battalions had been moved to guard the borders vacated by troops headed for Kargil.

But this error was the outcome of even larger errors of judgment. Paragraph 4(iv) of the minutes record Pal asserting that there was "no concentration of troops on the Pakistani side and no battle indicators of war or even limited skirmishes." The language used make at least two things clear. For one, the Army did not realise that there was already a concentration of Pakistani troops, from the Northern Light Infantry and Gilgit Scouts, pushing soldiers into Indian territory. Several additional brigades were to be used in the weeks to come. Pal himself is on record as claiming that Pakistan used upwards of 10 battalions, including units of its elite Special Services Group, in the Kargil War. Clearly, at this stage the Army had no idea of these deployments.

Even more serious, Paragraph 4(iv) leaves little room for doubt that the Kargil intrusion was not seen as a conventional military engagement at all. Pal's remark that there were "no battle indicators of war or even limited skirmishes" now seems absurd. The massive artillery exchanges that were under way through the Kargil sector, from the Mushkoh Valley in the west to Turtok in the east, were evidently misinterpreted as routine duels. By this time, Pakistan was funnelling entire brigades into Kargil, anticipating a massive Indian retaliation across the Line of Control. India, too, was to prepare for such a possibility, but at this stage its Army clearly had little idea of where the Kargil engagement was headed. The UHQ reports explain just why the initial stages of India's response to events in Kargil were confused and directionless.

Pal proceeded to underline his thesis that the intrusion would be contained with ease. Paragraph 4(v) notes his claim that the "situation was local and would be defeated locally". At least five brigades of the Indian Army, made up largely of troops from outside Jammu and Kashmir, had to be shipped in before containment was achieved. As such, Pal's assertion at the UHQ meeting illustrates a complete failure of comprehension. The 15 Corps Commander even seemed unaware of the threat to troop movements from Pakistan artillery fire on the Srinagar-Leh highway, directed by observation posts set up by infiltrators above Drass, notably on Tiger Hill and Tololing. "The Army convoys were moving unhindered," he noted, "and soon the civil convoy would also commence." It only started after the Pakistani withdrawal was near-complete.

NISSAR AHMED

Lt.- Gen. Krishan Pal, Commander of the 15 Corps.

HOW does one account for a spectacular misjudgment of the military character of the Kargil intrusion? It is important to note that these judgments were not just made by Pal, but the Army as a whole. Chief of the Army Staff General V.P. Malik, for one, saw no reason to cut short his week-long visit to Poland in May when he received news of the intrusion. One obvious possibility is that the Army did not have, as on May 19, a cogent picture of what was going on. But Pal himself has, in a tape-recorded interview to *Frontline*, ruled out that possibility. "Our final assessments were made when our frontline contacts and photo surveillance provided detailed inputs that tallied," he said. Those assessments were presumably made by May 17, when Pal claimed to have "a good degree of clarity about just what was going on." He added: "I distinctly remember making it clear when I first briefed the press in Srinagar on May 19 that the depth, extent, logistic support, fire support and magnitude left no doubt in my mind that it was a Pakistan Army-backed operation" (*Frontline*, August 27).

"Pakistan Army-backed operation" is the crucial phrase here. Army officials, the UHQ minutes make clear, may have understood that their Pakistani adversaries were supporting the intrusion, as they do through the Line of Control and the western international border. But the Kargil intrusion was clearly not understood as an Army-led conventional engagement. Others at the UHQ meeting disagreed, notably Farooq Abdullah. Paragraph 8(i) records his strong intervention. The Chief Minister argued that the "recent infiltration was not a short-term plan but a sinister design of Pakistan aimed to isolate certain areas and cut off Kargil-Leh from the valley as (was) being done in Rajouri-Poonch areas...He opined that these were not mere militants but supported by some Pakistani regulars too."

Farooq Abdullah's sources of information were presumably from his police force, whose warnings from mid-May about the presence of Gilgit Scouts and the Northern Light Infantry had generally been dismissed. Certainly, neither the Intelligence Bureau nor RAW did anything to dispel Pal's notions at the UHQ meeting. Paragraph 6 of the minutes record thus: "On being asked by the Chief Secretary about the intelligence input, Joint Director IB stated that since January this year it was reported that approximate(ly) 200 Al-Badr militants waiting in Kotli and Kel could not infiltrate due to effective counter-infiltration posture by the Army...'Accordingly, frustration had built up and thus possibly infiltration was effected in Kargil sector." Paragraph 7 notes that the RAW focussed, somewhat mystifyingly given the context of the meeting, on "activation of infiltration routes through Nepal and other areas".

Just why the I.B., in particular, chose to remain silent at the meeting is unclear. Its Joint Director must have been aware of reports coming from his Leh station since last October, reports which were made available to Frontline, warning that groups of Pakistani irregulars were being trained in Olthingthang with the express purpose of launching a thrust into Kargil this April. One possibility is that the I.B. chose to remain silent, leaving the job of engaging the 15 Corps Commander in argument to the Chief Minister. A second possibility is that his position, and for that matter Pal's stance, were not fully reflected in the minutes. But neither officer appears to have written to the UHQ Secretariat asking for the minutes to be modified, for no corrections were circulated to its members. As such, the min-

MINUTES OF UNIFIED HEADQUARTERS MEETING
HELD ON 19 MAY 1999 AT 1200 HRS

General

1 In view of the recent developments in Kargil Sector, resulting due to the infiltration by militants and the immediate action taken by the army against them, a meeting was convened on 19th May 1999 at 1200 Hrs under the Chairmanship of Hon'ble Chief Ministers of J&K Dr Farooq Abdullah, to review the emerging Security Scenario

2 Besides MOS (Home) Mr Mustaq Ahmed Lone, Chief Secretary J&K Mr Ashok Jaitly IAS Advisor Security Lt Gen Krishan Pal PVSM, VSM and BAR, Sri Girdharan Jaya IPS, DGP J&K, the meeting was attended by the following officers

Review of Situation by HQS 15 Corps

3 HQS 15 Corps gave a briefing regarding the situation [illegible] in the Kargil Sector which had developed over the past few days

Remarks of the Advisor Security

4 The Advisor Security apprised the members of the [illegible] mentioned

i The areas of infiltration were mainly [illegible] dominated by pure Muslim settlements. Both sides due to the terrain [illegible] extremely difficult [illegible] undertaken [illegible] sequence of infiltration [illegible]

ii No voids were created in the defences due to the movement of [illegible] Army Supply and deployment in the depth was [illegible]

iii It was a well planned operation by the Pakistan Army [illegible] in pursuance of a well laid out plan with Pakistan's [illegible]

iv The situation was fluid and would be determined by the [illegible]

v The Advisor Security remarked that the main objective behind this infiltration [illegible] remarked that the possible aim of Pakistan at macro level could be to internationalise the situation, create war like hysteria [illegible] Party mediation in the Kashmir problem. All operational details [illegible] would possibly aim at disrupting the vital lines of communication in this sector to Khalsi and Leh, also create disturbances in the depth areas

Intelligence Inputs

6 On being asked by the Chief Secretary about the intelligence input, Joint Director stated that since January this year it was reported that approximately 700 Al Badr militants waiting in Kashmir and Kel could not infiltrate due to the effective counter infiltration posture by the Army. Accordingly trusht had built up and thus possible infiltration was detected in Kargil Sector. He added that the operation of intelligence sources in the area would [illegible] however these have been launched and effective intelligence also be[illegible]

7 The Addl Commissioner SB and Joint Director IB also gave their intelligence assessments including [illegible] activities of infiltration routes through Nepal and other areas

Remarks by the Hon'ble Chief Minister

8 The Hon'ble Chief Minister [illegible] the following points

i According to him the recent infiltration was not a short term plan but a summer [illegible] of Pakistan [illegible] Valley [illegible] He opined that militants were mercenaries but still [illegible] by some Pakistani regulars too

ii While agreeing with the assessment of the Advisor Security he stated that [illegible] as Kosavo (sic) problem would be over Pakistan would attempt to bring Kashmir [illegible] into the international limelight. He added that the additional aim could also be to keep the Army committed in such inhospitable terrain conditions and extend the areas of their employment by opening up new fronts

iii During the [illegible] taken by the Army a large number of militants have been killed and [illegible] their actions under most difficult conditions

iv He considered the [illegible] frequent interaction between security [illegible] intelligence agencies and [illegible] administration

v All [illegible] and media reports to [illegible]

vi Human [illegible] have declined. However any such incident [illegible] and [illegible] will dealt with by concerned authorities

Sections from the minutes of the meeting of the Unified Headquarters.

utes appear to be a plausible narration of the meeting.

Interestingly, Pal's assessment of Pakistan's objectives in Kargil was remarkably coherent. "On being asked the main objective behind this infiltration," Paragraph 5 of the UHQ minutes records, "the Advisor Security remarked that the possible aim of Pakistan at the macro-level could be to internationalise the situation, create war-like hysteria and attempt to strengthen their case for third party intervention." But he appeared unable to comprehend that Pakistan could act not only by creating a war-like hysteria but actually going to war. The infiltrators' tactics were interpreted firmly in the light of the experience of insurgent tactics in Jammu and Kashmir. "At the operational level, these infiltrators would possibly aim at disrupting the vital lines of communication in this sector to Khalsi and Leh, as also create disturbances in the depth areas."

This position reflected institutional myopia born of the belief that nuclear weaponisation in South Asia precludes the possibility of conventional engagement. As Pal recently argued, the Army continues to believe, along with the Bharatiya Janata Party's defence establishment, that after "nuclear status was acquired, it stood to reason, both military and strategic reason, that any possibility of a conventional conflict will decline." From this premise, he proceeded to argue that the Kargil conflict had "nothing to do with the nuclear scenario". "Perhaps," Pal concluded, "the linkages are more with the proxy war it is waging in Kashmir... That seems to me to be more plausible. What has happened seems similar to what Pakistan did in 1947 and 1965 when it used the facade of Mujahideens and Kabailis. The tactics are identical, too with what was done in Afghanistan."

Chief Minister Farooq Abdullah.

This politically driven sundering o events in Jammu and Kashmir from those events set off by Pokhran-II and the entirely ahistorical comprehension of how the Kargil war came about may well force India to pay for the mistakes with the lives of its soldiers. Interestingly, Farooq Abdullah seems more perceptive than the party he supports in Parliament. Paragraph 8(ii) of the minutes outlines his belief that "as soon as the Kosavo (sic) problem would be over Pakistan would attempt to bring Kashmir into the international limelight...He added that the additional aim could also be to keep the Army committed in such inhospitable terrain conditions and extend the areas of their employment by opening up new fronts." The use of the plural form "fronts" is obviously relevant. The UHQ minutes expose the dishonesty of the Army leadership on its conduct of the Kargil war, and that of the political establishment which has sought to shield the Army leadership from public scrutiny.

Even more disturbing, it makes evident the poverty of the Indian defence establishment's conceptual and doctrinal thought. ■

Changing strategies

A bid by the Army to redefine the structure of counter-insurgency operations in Jammu and Kashmir sparks disputes within the security establishment.

PRAVEEN SWAMI
in Srinagar

THE end of the war on the Kargil heights has marked the beginning of a new phase in the larger war in Jammu and Kashmir. The week before this Independence Day saw a series of dramatic attacks on Indian forces through the State, the largest and most sustained offensive by terrorist groups in several years. The new offensive is certain to test the forces, thinned by the withdrawal of troops to secure the borders. When the Bharatiya Janata Party-led coalition government assumed power in New Delhi last year, Indian troops and police and paramilitary personnel in the State were taking the lives of six terrorists for each fatality they suffered. Last year that figure fell below five, and it has dropped to two this summer.

Now the Army, with the evident support of the Union government, is advocating new solutions to reorder the structure of anti-terrorist operations in the State. Rashtriya Rifles Director-General Avtar Gill, who took charge of the Army's counter-terrorist operations after 15 Corps Commander Lieutenant-General Krishan Pal asked to be relieved of this charge, has demanded at meetings of the Unified Headquarters (UHQ) in Srinagar that paramilitary organisations such as the Border Security Force (BSF) and the Central Reserve Police Force (CRPF) be placed under his operational command. But the move has sparked disputes within the security establishment, and could open the way for a disturbing transfiguration of the Army's relationship with civilian government.

The backdrop to Gill's demands is only too evident. The week preceeding August 15 was among the most bloody weeks in years. On June 6, terrorists occupied the village of Chak Nathusa in Kupwara and launched a massive assault on the nearby camp of 4 Rashtriya Rifles. Six terrorists and five soldiers were killed. A day later, 4 Rashtriya Rifles lost its commanding officer, Colonel Balbir Singh, in an ambush. Rockets fired on the Rashtriya Rifles encampment on June 7 claimed another life. Three Navy commandos were killed in an ambush near Bandipore on June 12, while a bomb went off at a BSF encampment in Tral killing one trooper. Yet another Rashtriya Rifles camp at Beerwah was attacked the next day and three soldiers were killed. Finally, on August 14, Rashtriya Rifles lost five personnel in attacks at Deewar-Lolab and Manasbal.

Neither the BSF nor the CRPF appear delighted with Gill's proposals. Highly placed sources told *Frontline* that BSF Director-General E.N. Ram Mohan had written to Union Home Secretary Kamal Pandey opposing the Army's proposals. Ram Mohan was stated to have argued that the move would disrupt the functional relationships among the security forces in the State, leading to an escalation of internecine feuds and rivalries. The Director-General said that Rashtriya Rifles, which is strictly not part of the Army, was in effect a central police organisation (CPO), just like the BSF and the CRPF. While BSF units deployed on the border are under the operational command of the Army, the organisation believes that the application of the same structure in the matter internal security duties would be inappropriate.

NISSAR AHMED

Lt.-Gen. Avtar Singh Gill, Director-General of Rashtriya Rifles.

Gill's proposals have their origin in a Concept Paper on administration in terrorist-affected States, including Jammu and Kashmir. (In a letter to *Frontline*, published in the issue of July 16, the Army denied the existence of the paper.)

"Management of Internal Conflict" is a 37-page document, illustrated with slides prepared by the Army Training Command in Shimla. It outlines proposals for drastic changes in the way Army deployments in terrorism-affected areas are carried out. Although the authors are not named in the document, it is learnt that the Concept Paper was prepared for presentation by Lieutenant-General Vijay Uberoi to Union Defence Minister George Fernandes on November 24, 1998.

The Concept Paper has five sections. It outlines perspectives on internal security, discusses the role of the Army in its maintenance, presents proposals for united action by security organisations and a recommended structure for managing internal security operations and finally gives a summary of the recommendations. The Concept Paper begins by fleshing out the thesis that insurgencies are the outcome of failures of governments, particularly State governments. It outlines existing and emerging threats in Jammu and Kashmir and the northeastern India as examples of these failures. The Army, the Concept Paper says on its very first page, has had to plough a "lone furrow" in ensuring peace where the State apparatus has failed.

There are more than a few curious conceptual elements in these assertions. For one, the authors of the Concept Paper do not see the Army as an instrument of government. Then the docu-

NISSAR AHMED

Army personnel with the bodies of seven militants killed in the first week of August in an encounter in Kupwara district.

ment fails to comprehend that terrorism is not the sole problem the Indian state has had to engage with, and that governments have without Army support dealt with class warfare, economic conflict and caste violence As important, the Army's successes and failures in those areas where it has played a key role have been no more or no less marked than those of other institutions in the State For example, the Army s successes in ending terrorism in Jammu and Kashmir and in northeastern India have not been recognisably greater than those of successive Central and State governments

One key component of the paper is the demand for special legal protection for the Army in all counter-insurgency operations where it is deployed Currently such protection is available only in some areas, and a welter of considerations come into play before the imposition of these special laws The Concept Paper argues on page 4 that it is imperative "from the point of view of morale as well as operational efficiency to protect the rights of soldiers" The sole means its authors can apparently envisage to do so is the promulgation of the Armed Forces Special Powers Act under the Disturbed Areas Act The imposition of these Acts where the Army is deployed in internal security operations, the paper claims, "becomes axiomatic".

The use of the term "axiomatic" is of some significance, suggesting as it does that an engagement with terrorism cannot be attempted without a generalised abrogation of democratic rights. While it is possible to argue coherently that such extraordinary laws are needed in some situations, the demand for blanket imposi tions reflects a lack of sensitivity to the political, cultural and even diplomatic considerations at play in counter-terrorist operations Nor is it clear that the Act pro tects soldiers from human rights prosecutions The example of the Kashmir Valley where the Act has long been in place makes clear it has neither ensured unqual ified operational efficiency nor protected soldiers from prosecution Interestingly, at BJP mobilisations in areas like Doda, before the party took power in Delhi the main demand was the imposition of the Special Powers Act

The paper points to the contrasting situations in Punjab and Jammu and Kashmir and makes a larger distinction between insurgencies where the Army acquired a primary role and those where other organisations predominate The paper argues that where the security environment can be contained by the police and the paramilitaries, the Army s role should only be "highly selective' Under whose command units would be placed in these circumstances, it does not mention But where the Army has what the Concept Paper describes as a 'lead role , a situation which would come about in the case of full-blown insurgencies or externally aided wars, the paper suggests that all other security organisations be placed under its operational command

What this would mean in practice is evident. Paramilitary forces are currently attached to local police units, a system that is meant to upgrade their operational abilities. The paper is bitterly critical of this system, arguing that these district level attachments mean senior CPO officials have no real responsibilities. How simply transferring these attachments to the Army will solve this perceived problem is not clear, but what such a proposal would ensure is that local police involvement in counter-terrorist work would be subverted Given the repeated assertion in the "Management of Internal Conflict" that the Army wishes to minimise its involvement in counter-terrorist work, the Army s determination to take exclusive command of such operations at the same time is more than mystifying

The most dangerous of all are the Concept Paper's expansionist claims on the civilian administration It ends with a demand for Army representation in new coordinating mechanisms to be set up at all levels of the administration, mechanisms that would create an interface between civilian officials, the police and the military 'A coordination apparatus must exist in States down to district and even tehsil levels, the Concept Paper asserts in its eighth recommendation on pages 36-37 The structure should provide for joint planning, decision making, directions coordination and control For the committee to function effectively, there is a need for co-location of headquarters the establishment of joint control rooms, direct communication and liaison and ensuring that the administrative boundaries of the civil administration the police and the military merge as a last resort

The implications of these proposals, which in effect advocate the imposition of near martial law in terrorism-affected States, are enormous For one, the language of the proposal, in particular the use of the plural form of "States", leaves it open to interpretation whether this system would operate only in areas where the Army has a "lead role", or in other areas where emerging threats are apparent as well The proposal will also subvert the principle of military non-involvement in civilian administration as well as legal requirements mandating police and administrative autonomy Nowhere does the Concept Paper spell out how the Army's involvement in civilian management would improve administrative functioning, even less does it engage with the extremely serious issues that would emerge from such an interface

IN some important senses, all that the paper serves to illustrate is the profound poverty of doctrinal thought in India's internal security establishment Demands for new powers and authoritarian systems

of command substitute for serious debate on how the Army and other security organisations including the police and the paramilitary forces must evolve and transform themselves to engage with a rapidly transforming security landscape. Before Pokhran-II, much of the Indian Army doctrine was premised on its conventional superiority, an advantage that now has little meaning since massed tanks are unlikely to sweep across Sindh without inviting nuclear retaliation. There has clearly been little reflection on how the Army must reshape its doctrine in order to engage effectively with low-intensity, localised conflicts.

Since Union Home Minister L.K. Advani announced a "pro-active" paradigm for Jammu and Kashmir, there have been few tangible gains in the fight against terrorism. Casualities among neither the security forces nor civilians have shown any significant decline; indeed, there is more than a little evidence that with increasing numbers of heavy weapons being brought in and trained insurgents entering Jammu and Kashmir, the Indian forces are being pushed into a defensive mode for the first time since 1996. Faced with these stark facts, authoritarian doctrine is proliferating. These modes of thought are mirrored by the flirtation of a section of the Army leadership with the Hindu Right. Witness the decision of Director-General of Military Intelligence N.C. Vij and Air Vice-Marshal S.K. Malik to brief the BJP National Executive on the Kargil events on May 6, or 3 Infantry Division commander Lieutenant-General V.N. Budhwar's endorsement of the Rashtriya Swayamsevak Sangh's Sindhu Darshan festival in Leh last month.

No one is certain where Avatar Gill's demands for new powers will head. For the moment, the State Government appears to have fought off the Army's efforts to place itself at the apex of the security establishment. Gill has replaced 15 Corps Commander Krishan Pal as Security Adviser to the HQ chairperson, the Chief Minister of Jammu and Kashmir. But, unlike Pal, he does not hold the right to chair over its meetings in Abdullah's absence. That prerogative has

Arrest of an ISI gang

PRAVEEN SWAMI

THERE is growing evidence that fundamentalist groups in Pakistan are preparing to set off a new wave of terror across India. The operational strategy seeks to exploit communal fissures: fissures that the Hindu Right has had not a little to do with creating in the first place.

On August 20, the Jammu and Kashmir Police announced the arrest of an 11-member Lashkar-e-Taiba cell, whose operatives were active in Jammu and Kashmir, Andhra Pradesh, Uttar Pradesh, Haryana and Delhi. Its top operative, Amir Khan, Pakistani national, was tasked to recruit Indians whose immediate family members had been killed in communal violence. At the time of his arrest, Khan was engaged in building a cover identity. Having obtained Indian educational documents and a driving licence from India, he planned to marry into a family living in Bhiwandi in Thane district of Maharashtra.

The Lashkar-e-Taiba cell was busted after the Jammu and Kashmir Police and 5 Grenadiers regiment picked up Islam-ud-Din, a resident of Tirwara Ka Nangla village in Gurgaon district of Haryana, on the Samba border in Jammu while waiting for key a Lashkar-e-Taiba operative, Abu Ilyas. Islam-ud-Din was not aware that Ilyas had been killed in an encounter while attempting to cross through Samba on July 31. Codenamed Abu Khalid, Islam-ud-Din told his interrogators that the cell had been ordered to carry out a series of explosions ahead of Independence Day.

Amir Khan's arrest, based on Islam-ud-Din's interrogation, rapidly led to the arrest of other members of the cell - the result of a coordinated operation between the State police and the Intelligence Bureau (I.B.). The most important operatives were based in Mumbai and Bhiwandi, places hit hard by Shiv Sena terror and anti-Muslim pogroms. Bhiwandi residents Usman Khan and Mohammad Ismail had obtained for Amir Khan educational documents and a driving licence and even loaned him an autorickshaw. Abdul Salam, Ismail's brother, arranged Khan's wedding through a local moulvi. Another Bhiwandi resident, Mohammad Mobin, was engaged in finding accommodation for Khan, without knowing his real identity. Funds for this cell were routed through Jamal Ahmad, a resident of Mumbai's Mazagaon areas.

The rest of Khan's recruits were scattered across the country. Abdul Adil, a resident of Kurnool in Andhra Pradesh, worked for the cell even as he studied at Jamia Milia Islamia in New Delhi. Muzaffarnagar resident Mohammad Mustafa and Baghpat resident Mohammad Mustafa were roped in too. Wali Mohammad Zahid, originally a resident of Islam-ud-Din's tehsil, was assigned the task of building a base for the group in Hyderabad, where he lived in the Qazi Gali area near the Golconda Fort. Zahid had been instructed to obtain fake travel documents to facilitate movement out of India when instructed to do so by the Lashkar-e-Taiba leadership. One of Zahid's recruits, Mohammad Sharif, had been arrested three months earlier.

Jammu and Kashmir Police officials say that Islam-ud-Din was trained at the Lashkar-e-Taiba's Abu Bashir camp in Bhawalpur, Pakistan. The Abu Bashir camp, one of five major Lashkar training centres, specialises in bomb-making. The Umar Kuka camp puts volunteers through a basic, three-month insurgency course, while the Abdullah bin Masood camp nearby offers more specialised training. The Taiba camp at Muridke engages in basic ideological indoctrination, after which recruits are sent for a rigorous six-month course, the Daura Khasta, in the mountains. Another Muridke camp, Aksa, focusses on training volunteers from several countries, including Afghanistan, Sudan, Nigeria and Pakistan, for the war in Jammu and Kashmir.

Islam-ud-Din left Pakistan in early 1999, with cash to help set up the cell. More money came from Ilyas. Both visited several cities to gather recruits, using the infrastructure of the revanchist religious organisation, the Tabligh-i-Jamaat. Islam-ud-Din also arranged for Khan to work at the clinic of a doctor in Punhana, Faqir-e-Alam, by introducing the Lashkar operative as his relative. Faqir-e-Alam, a recent migrant to Haryana from Bihar, did not know Khan's real identity.

The latest arrests affirm that the Lashkar-e-Taiba's pan-Indian network is exploiting Muslim insecurities fuelled by the rise of a regime with no commitment to secularism. In the March 26 issue, *Frontline* had reported on the arrests of several important members of the Lashkar's Abdul Karim 'Tunda' cell, including Pakistani nationals Mohammad Salim Junaid from Hyderabad and Abdul Sattar from Delhi along with Indian nationals Shoaib Alam, Mohammad Faisal Hussain and Aamer Hashim Kamran. Saifullah Chitrali, a top operative of the Harkat-ul-Mujahideen, and the Hizbul Mujahideen's Ali Mohammad Dar had also set up networks outside Jammu and Kashmir. Organisations such as the Jammu and Kashmir Islamic Front had even liaised with Abdul Razzak Memon, a key accused in the Mumbai serial bomb blasts.

The BJP's pro-active policy, an ill-conceived militarist response to growing violence in Jammu and Kashmir, fails to address the changing character of terrorism and the forces that drive it. As long as Hindu revanchism continues to fuel tensions in India, any number of soldiers will not be enough to engage with the Islamic Right. ■

been made over to Chief Secretary Ashok Jaitley. For the moment, civilian authority remains firmly in place. That in itself is not an adequate response to the larger challenges of discovering new means of engaging with terrorism, and ensuring peace. Sadly, no one in power seems interested in this larger issue.

The State Government celebrated Independence Day with a bright, film-star studded show on the banks of the Dal lake in Srinagar. Ironically closed to the public, the celebration was organised by Union Information and Broadcasting Minister Pramod Mahajan's son, Rahul Mahajan. Like the two chess-players who are the central characters in Satyajit Ray's masterpiece, *Shatranj ke Khiladi*, the Union and State governments seem supremely unconcerned about the violent events that surround them. ■

An exercise in illogic

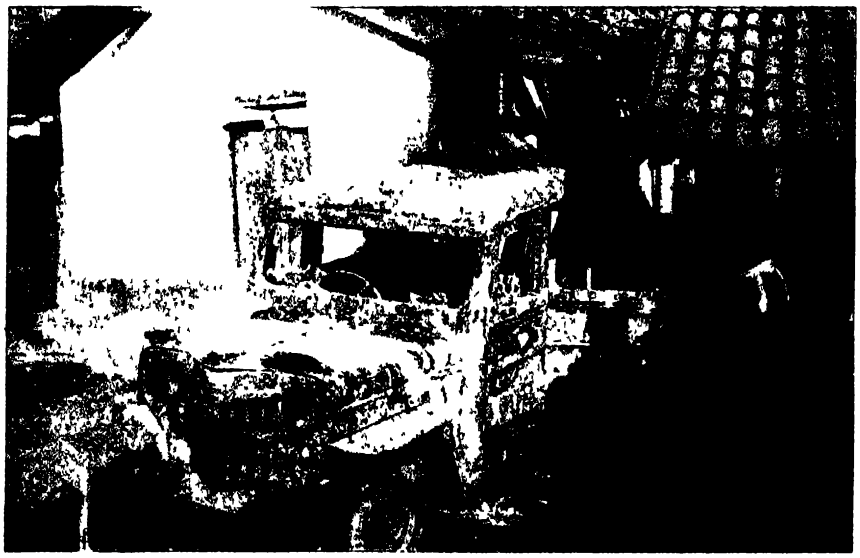
The report of the inquiry by the Wadhwa Commission into the murder of Australian missionary Graham Staines in Orissa shows little inclination to unravel the processes that drive social violence.

SUKUMAR MURALIDHARAN

AMONG the crowd that assembled at Ayodhya on December 6, 1992, presumably few people carried documents establishing their credentials. To be present and to participate in the demolition of a place of worship was in itself sufficient testimonial.

Likewise, the mob that assembled at Manoharpur village in Keonjhar district, Orissa, on the night of January 22, to visit a grisly death by fire on Australian missionary Graham Stewart Staines and his two young sons, wore no badges of allegiance to any cause. Their political affiliations, though, were clear from the background to the macabre incident, the manner in which it was conducted, and the slogans raised as the perpetrators melted away into the night.

Justice D.P. Wadhwa, a serving judge of the Supreme Court, was on January 29 appointed a one-man Commission of Inquiry into the Staines murder. In requisitioning his services, the government seemed anxious to send the appropriate signals of concern and sensitivity, especially in a context of adverse global reactions. The Wadhwa Commission subsequently went to work amid a few irritants over the failure of the government to provide sufficient staff and amenities. By a notification in March, the original two-month term of the Commission was extended by three months. The final report of the Commission was submitted to the Union Home Ministry on June 21. It was subsequently transmitted to the Parliament library, with a memorandum of action taken by the Union Government, on August 5.



The relative alacrity with which the report was placed in the public domain after official scrutiny, is a departure from established custom. This would be commendable were it not for the very obvious deficiencies of the report itself. In fact, it is absolutely evident that the only reason it was made public without great delay is its failure to tackle even remotely the social pathologies that were brutally manifested in the Staines murder.

Justice Wadhwa's discourse is a singularly unenlightened one, seemingly oblivious to contemporary realities. Chapter 13 of his report, for instance, deals with the inherent ironies of the slogans raised by the mob that killed Staines and his two young sons. "Bajrang Bali", says Justice Wadhwa, "is a great Hindu god revered and worshipped all over the country." He was, continues the Judge, "a great warrior, a great scholar, a sincere friend, minister, ambassador, as one who was wedded to truth and righteousness, a servant and outstanding devotee of Lord Rama." Indeed, Justice Wadhwa concludes that it would be extremely difficult to characterise the multi-faceted virtues of this mythological hero, "as described in the epic Ramayana and expounded before me by the learned counsel in their scholarly way." From all this, the Commission concluded that the mob which shouted slogans in praise of Bajrang Bali after accomplishing their heinous deed, committed a "sacrilegious act".

It does little good for public confidence in the rules of procedure framed by the Commission to know that counsel appearing before it were often engaged in commentaries on the virtues of a mythological character. Neither, indeed, does it speak very highly of the Commission's grasp of prevalent facts. Even a cursory familiarity with media reports on communal incidents over the last decade would show that slogans invoking the most hallowed figures of Hindu myth have been the staple of riotous mobs in all parts of the country.

Evidence available to the Wadhwa Commission has seemingly established, with little room for ambiguity, that Rabindra Kumar Pal from Etawah district in Uttar Pradesh – better known now by the assumed name of Dara Singh – was the principal instigator of the crime. Other material that was produced before the Commission, which includes the first information reports implicating Dara Singh in numerous petty crimes prior to the Staines murder, pointed virtually unanimously to his association with the Bajrang Dal – a militant organisation of rootless youth who won their dubious spurs in the Ayodhya agitation. A few of the FIRs also point to a link between Dara Singh and the Bharatiya Janata Party.

None of the police reports has conclusively established this point, merely

The jeep in which Staines and his sons were burnt alive.

because of procedural infirmities in criminal investigations. But cow protection and the prevention of religious conversions were principal among the causes that Dara Singh espoused as he set to work in the tribal districts of Orissa – and both these have strong resonances with the political project of the Bajrang Dal.

There are seven police investigations under way in Keonjhar district and four in Mayurbhanj, all implicating Dara Singh in various ways. In all the cases registered in Keonjhar, Dara Singh is quite explicitly identified, either by the admission of accomplices who have been arrested or by accounts available from eyewitnesses, as an activist of the Bajrang Dal.

Justice D.P. Wadhwa (right) in Bhubaneswar during the inquiry into the Staines murder.

Wadhwa also had a number of investigation reports from other agencies to draw upon, all of which pointed towards a definite political affiliation for the suspects in the Staines murder case. The Revenue Divisional Commissioner, Sambalpur, for instance, concluded that Dara Singh was quite clearly a "strong activist" of the BJP and that his associates were "most likely the supporters/activists of BJP/Bajrang Dal". Prakash Mishra, Deputy Inspector-General of Police in the Crime Branch, inferred similarly that a "Hindu fundamentalist group" under the leadership of Dara Singh was in all probability responsible for the murder. D.R. Karthikeyan, Director-General of the National Human Rights Commission, pointed to various "indications" that Dara Singh was a "sympathiser" of the Bajrang Dal. And finally, the National Commission for Minorities pointed to what seemed an indubitable fact: that Dara Singh's campaign for cow protection was linked in its inspiration to Bajrang Dal activities in various other parts.

Wadhwa passes over all these findings with little comment or elaboration, although he reserves a rather extraordinary rebuke for the Minorities Commission: "Although the recommendations made by the Minorities Commission appear to be well-founded, the findings arrived at by them do not seem accurate. In fact, subsequent inquiries and the evidence before this Commission lead one to the conclusion that the findings were not accurate and ought not to have been recorded without greater circumspection."

It is unusual for a Commission of Inquiry to censure a statutory body in this manner without caring to assign reasons. The conclusions of the Minorities Commission clearly do not depart significantly from those arrived at by various other investigations. For Wadhwa to single out this body for reproach betrays a certain negative predisposition, an element of bias that clearly has no place in the working of a judicial commission.

Interestingly, an investigation team appointed by the Wadhwa Commission had concluded that Dara Singh was "an activist/supporter of the Bajrang Dal", although there was admittedly no "documentary evidence to prove that he (was) a member or office-bearer". Later, in a supplementary report, the investigation team recorded that by his own avowal and the avowals of his associates, Dara Singh seemed clearly to be involved with the Bajrang Dal. But in a curious retraction at the conclusion, the team concluded that the available evidence did not "reveal the role of any organisation in the commission of the crime".

Substantively, Wadhwa relies upon this finding, as also the evidence rendered by two acknowledged leaders of the Bajrang Dal, in dismissing the notion that any organisation was involved in the murder. A State-level leader of the Bajrang Dal, for instance, was categorical in denying that Dara Singh ever had anything to do with his organisation. A local functionary of the Dal in Keonjhar admitted that he had met Dara Singh the day after the murder, when he was told enigmatically about a certain "job" having been accomplished. Specific details, however, were not revealed, nor asked for.

From these rather skimpy testimonies, Wadhwa concludes quite authoritatively that the "act of murdering Staines and his two children was inspired by Dara Singh and his clout and no authority, organisation or any other person played any role in or in connection with the killings."

Wadhwa's formulations occasionally confront the reader with befuddling problems of logical interpretation. An illustration would be the following characterisation of the motive behind the crime: "From the records, it appears that the motive for the crime was that there were conversions of illiterate and poor Hindu tribals to Christianity on certain premises but these conversions were not necessarily inspired by Staines."

The intent behind this rather complex formulation is to identify conversions as the underlying cause of social tensions leading to the murder of Staines, but to exonerate him individually of responsibility for them. Elsewhere in his report, Wadhwa betrays a certain aversion to the notion of religious conversions itself. The constitutional guarantee of the freedom to "propagate" one's religion does not extend to conversions, he asserts. Rather, it only means that an individual is at liberty to expound the basic tenets of his religion. The practice in Orissa, he noted with obvious disapproval, was for tribal people to change religious affiliation on vague and irrational expectations – improvements in health or material circumstances being the typical kinds of allurements. This, concludes Wadhwa, is repugnant to the freedom of conscience as guaranteed under the Constitution.

Yet the figures the Commission relies upon show that the phenomenon was at best marginal. Those who switched religion in the hope of material improvement were often found to return to the original fold on their expectations being belied. The picture that Wadhwa himself constructs on the basis of his inquiries is of a very insubstantial demographic impact from all these activities.

Further, there is a certain inattention to context apparent in the Commission's report. The Staines murder came as part of a cycle of violence against the Christian community which began almost immediately after the BJP-led government came to power at the Centre, an upsurge that involved regions as far-flung as Gujarat, Karnataka, Madhya Pradesh and Uttar Pradesh. In focussing on the Staines murder, Wadhwa does consider some proximate instances of inter-community strife, only to dismiss them as random manifes-

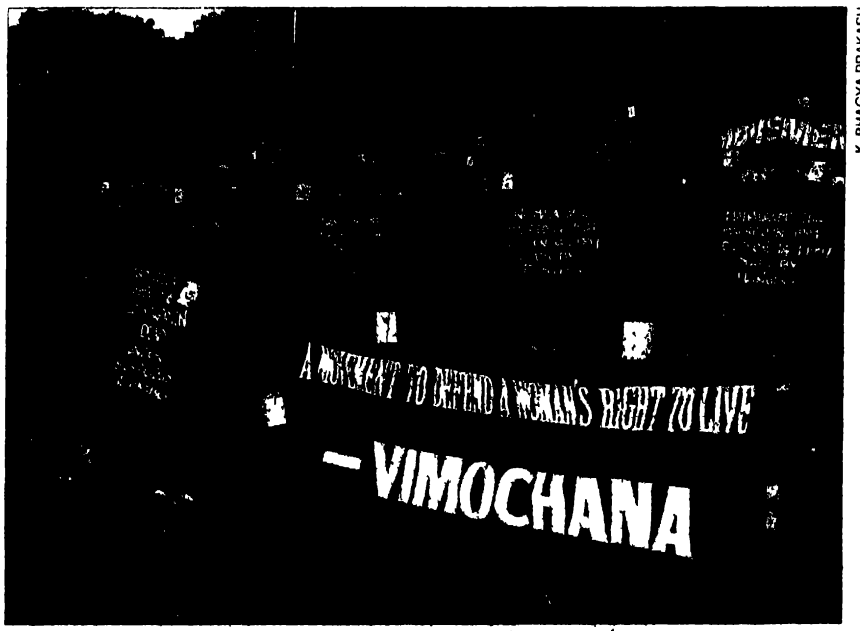
tations of personal animosities. In the process his attention is diverted from some very pertinent factors such as the growing collective hysteria over religious conversions that was being orchestrated by the ideological fraternity of the BJP and the deliberate targeting of Christian places of worship for vandalism and destruction. He also fails to consider the evasive response of the Union Government, the Prime Minister's suggestion that a "national debate" be conducted on religious conversions being a virtual abdication of responsibility.

Overlooking all this, Wadhwa turns his attention to the media, gratuitously advising restraint: "Reporting of communal strife should not be done without proper verification or an ordinary crime given a communal twist." The media have reason to be wary about this piece of advice since the notion of restraint that the Commission operates upon seems to verge on self-delusion. It is public knowledge that the Bajrang Dal is open for membership to any individual who shares its broad convictions, provided he is between 15 and 45 years of age. He would be liable to pay a token membership fee of Rs.5 a year, for which he would be issued a receipt. He would not, however, be given a membership card that will establish his credentials as a member of the Hindutva fraternity.

The Wadhwa Commission approaches this rather ambiguous reality with an excess of misplaced conviction. It takes at face value the disavowals of the Bajrang Dal activists, who have an obvious interest in concealing evidence of their culpability. It even refuses to go into the question of the Bajrang Dal's constitution, character and methods of operation. It is content to quote the affidavit filed by Pratap Chandra Sarangi, coordinator of the Bajrang Dal for Orissa: "Sarangi stated that Bajrang Dal is an independent forum associated with Vishwa Hindu Parishad. He described the objectives and activities of the Bajrang Dal. It is not necessary to go into that (sic) as Bajrang Dal is not an unlawful organisation."

The admission could not be more transparent in its cavalier disregard for the factual record. The Wadhwa Commission arrives at its rather infirm conclusions by suspending its critical faculties. An inquiry that was expected to answer troubling questions about a heinous crime has ended up being an exercise in illogic which shows little inclination to penetrate superficial appearances and unravel the processes that drive social violence. ■

Focus on domestic violence



A Truth Commission debates the findings about the high incidence of unnatural deaths of women in dowry-related incidents in Bangalore, and in this context the broader issue of domestic violence, and makes recommendations for tightening investigative and prosecution procedures.

PARVATHI MENON
in Bangalore

A THREE-DAY public hearing in Bangalore before a Truth Commission comprising a distinguished jury of political and social activists, lawyers and former judges revisited the issue of domestic violence against women, which was first raised by the women's movement in India 20 years ago. It was pressure from the women's movement in the early 1980s that resulted in the amendment of penal statutes to protect women against all forms of marital violence by broadening the definition of cruelty, providing for heavier penalties, and relaxing evidentiary requirements. Twenty years on, the problem of domestic violence, particularly dowry-related domestic violence, has escalated and assumed shocking proportions, both in its incidence and social spread, as a limited but thorough study-cum-campaign in Bangalore by the women's group Vimochana has shown (*Frontline*, August 27).

Organised by Vimochana in collaboration with the National Law School University of India, the Truth Commission, which sat for three days from August 15, was confronted with the contemporary face of domestic violence, its patterns and causes, and the limitations of investigative and justice-giving procedures that are in place to deal with it.

While it was the hope of speedy justice that brought the fifty-plus families before the Commission to depose, for Vimochana

Outside the venue of the Truth Commission's public hearing in Bangalore, Vimochana activists draw attention to a serious social issue.

T.L. PRABHAKAR

Relatives of a woman who died following dowry-related domestic violence depose before the Truth Commission.

the hearings marked a new phase in its ongoing campaign against dowry-related domestic violence. "The Truth Commission provided us the opportunity to take the issue of domestic violence to a more public and political level," Donna Fernandes of Vimochana told *Frontline*. "It marks for us the beginning of a new stage We intend to organise these commissions in the districts and also network with other organisations. The report has underscored the need for tighter monitoring of the investigative and prosecution processes. We have to push for acceptance of these findings at the political level."

The members of the commission sat in two juries and heard depositions. The terms of reference were: 1. to identify the shortcomings in police investigations, inquest, dying declarations, forensic science and prosecution; 2. to suggest improvements for better medical treatment for women who are victims of domestic violence; 3. to recommend measures and suggest appropriate institutional arrangements to provide adequate protection to women victims of violence; and 4. to help put in place a system that is accessible, transparent and accountable. One of the jury panels was headed by Justice H. Suresh, former Judge of the Bombay High Court, and included Justice Leila Seth, former Judge of the Delhi High Court and of the Himachal Pradesh High Court and now a member of the Law Commission of India; Brinda Karat, general secretary of the All India Democratic Women's Association; Padma Seth, former member of the National Commission for Women; and Flavia Agnes, lawyer and women's rights activist in Mumbai. The other jury was headed by N. Madhava Menon, former Director of the National Law School of India University and Law Commission member, and included Justice Sadashivaiah, former Judge of the Karnataka High Court; R. Venkatramani, senior advocate of the Supreme Court; Madhu Kishwar, editor of the women's journal *Manushi*; and Corinne Kumar, founder-member of Vimochana.

The jury panel led by Justice Suresh gave a set of specific suggestions on how each of the cases that came up before them at the public hearing could be followed up. It also gave a set of broader recommendations on how the investigative and prosecution procedures could be tightened. Of the 24 cases it heard, it found that in 12 cases reinvestigation and reframing of charges was called for owing to the failure of the police to assess the nature of the case. In addition, there were at least five more cases of police negligence. Thus, in 17 of the 24 cases, according to this jury, there was clear evidence of police culpability. In five of the cases, the post-mortem did not give the relevant details, and of these in three there were charges of corruption against the doctors concerned. The inquest proceedings in at least one-third of the cases were faulty. Of the 24 cases, the jury panel found that in eight cases there was evidence of lapses and bias in judicial procedure. Of these, three cases concerned the question of bail for the accused, two concerned irrational adjournment and delay of hearings, and three reflected judicial bias in the judgment, in the jury's opinion. It noted that families of victims did not in some cases have information on the status of the case. In 12 cases, the complainants had not been given copies of the First Information Report (FIR) and/or the post-mortem report and had no information on the progress of their cases. The jury also recommended, in four cases, the filing of appeals for child custody/maintenance/visiting rights. In all the cases, the natal families of the victims knew of the harassment of the woman prior to her death, and in many cases had sent the woman back to her husband's family with the advice that she should "adjust".

In this summation of cases lies a picture of shoddy investigation, lack of transparency and information, the utter lack of accountability of the various arms of the investigative machinery, and the ignorance of the complainant who is sent from pillar to post with little or no idea of the law or where the case stands. The large number of acquittals in such cases is not surprising given the flaws in the initial investigation process.

All the members of the Truth Commission made special mention of the lack of support that harassed, and often battered, daughters received from their natal families. "By asking her to return to her husband's family, parents have unwittingly signed their daughter's death warrant," noted Brinda Karat.

This jury also gave specific recommendations with respect to some of the crucial elements of the investigative process. It stressed the importance of the correct filing of the FIR, upon which is based all subsequent investigation. It noted that many police doctors and Special Executive Magistrates do not follow the basic rules in the recording of the dying declaration and the inquest proceedings. The jury also recommended that as far as possible the inquest should be conducted in the presence of the victim's family.

Vimochana's study shows that 70 per cent of cases of suspicious deaths of women were closed and the deaths recorded in the Unnatural Death Register (UDR). On this important issue, the jury said that all cases of deaths of married women within seven years of marriage should, as the law provides, be actively investigated. "The police practice of adding a dowry section to every death seems to have boomeranged and has resulted in many acquittals," the jury noted. "Violence against women should be viewed within a wider perspective rather than the narrow scope of 'dowry death'. We need changes in sections which deal with violence against women

so that their scope is not narrowed down merely to violence due to dowry. Another automatic presumption of the police in cases of hanging, in particular, or of cases of death due to poison is that of suicide. All investigations are conducted within this framework. This often converts what in reality is a murder case under Section 302 to suicide and abetment to suicide. In our findings in 24 cases, there are as many as 11 cases where the wrong sections have been applied by the police due to these false premises."

The jury made some important recommendations on the role of the Public Prosecutor, a crucial agency responsible in bringing about convictions. It noted that most cases failed because of the "corruption, apathy and indifference of this agency". Although the panel did not have the opportunity to examine many judgments in dowry cases, the few it did contained judicial biases, according to the panel.

On the last day of the public hearing, each member of the jury offered his/her general comments and personal recommendations on the issue of marital violence and unnatural deaths of women. Madhava Menon was of the opinion that a jury of 12 citizens, of which half are women, should try such cases (as is the model in many countries of the West). This idea was opposed by Justice Suresh. Indeed, it is a viewpoint that women's groups and others disagree with. Juries can be influenced by social and ideological pressures that would prevent the unbiased application of law.

Brinda Karat noted several points of concern. The first was that one should not look at these cases as individual aberrations or in the framework of a man-woman relationship, but as reflecting a social trend that has enveloped all sections and communities. The social context of violence is closely related to the social processes spawned by the culture of economic liberalisation, she said. "The violation of the Line of Control and our territorial integrity brought forth national outrage, as it should have. But every day the LoC that preserves basic humanitarian concerns in interaction between human beings is violated, and we are silent." Her point that a society that perceives marriage as central to a woman's role and identity thereby circumscribes her choices was shared by other jury members, including Flavia Agnes and Padma Seth. Madhu Kishwar said that the lives of many women could have been saved if the natal families had extended them the support that they needed. ■

■ THE STATES

A militant upsurge

Secessionist militants in the northeastern States step up violence on the eve of Independence Day, targeting mainly the security forces and transport and communication systems.

KALYAN CHAUDHURI

INDEPENDENCE Day once again witnessed secessionist rebels of north-eastern India step up violence and trigger attacks on security forces in order to remind New Delhi that their "liberation struggle" would continue.

Several underground organisations gave a joint call for a boycott of Independence Day functions and a 24-hour general strike from the midnight of August 14-15. Describing August 15 as "Black Day", they charged the Union Government with suppressing the aspirations of the people of the States of Assam, Nagaland, Manipur and Tripura.

Army intelligence sources said that representatives of major rebel groups of the region, including the United Liberation Front of Asom (ULFA) and the Khaplang faction of the National Socialist Council of Nagaland (NSCN), met in July at a place in Myanmar close to the Manipur border to discuss a revival of the Indo-Burma Revolutionary Front (IBRF). The meeting drew up a plan to step up armed action against the security forces in the entire northeastern region and to target the transport and communication infrastructure, particularly the Railways, in the period leading up to August 15. The IBRF was inactive over the past few years owing to differences among the rebel groups. Arabindo Rajkowa, the ULFA chairman, and Ranjit Deb Burman, Tripura People's Democratic Front (TPDF) president, issued a statement on behalf of the rebel groups on August 6, calling the 24-hour strike. The groups stepped up violence, especially attacks on trains and road convoys of security forces, immediately after this.

In order to thwart the insurgents on August 15, Army helicopters were requisitioned and security personnel put on high alert in Assam, while a security blanket was thrown in the entire Kohima district of Nagaland. Roads and rail tracks were brought under surveillance and helicopters were pressed into service to patrol oil installations and pipelines, bridges and so on. Patrolling was intensified on the national highways, railway tracks and vital oil installations in Assam. Security measures were stepped up in Tripura too.

Celebrations in Assam, Nagaland and Manipur were confined to governmental functions. The official functions were seen through, with Chief Ministers hoisting the national flag in the State capitals and the ministers in the district headquarters amidst tight security. It was in this background that the Chief Ministers of Assam and Tripura, Prafulla Kumar Mahanta and Manik Sarkar respectively, once again appealed to the militants to come forward for peace talks.

The underground organisations that came out with a specific programme of organised attacks on security forces include the ULFA, the National Democratic Front of Bodoland (NDFB), both the Isaac-Muivah and Khaplang factions of the NSCN, the People's Liberation Army (PLA), the People's Revolutionary Party of Kengleipak (PREPAK), the United National Liberation Front (UNLF), and Kengleipak Communist Party (KCP) of Manipur, the National Liberation Front of Tripura (NLFT), the Tripura People's Democratic Front (TPDF), and the political wing of the underground All Tripura Tiger Force (ATTF). The NLFT threatened "death penalty" for those who "dare" to hoist the tricolour in Tripura's hill areas on August 15. The Kuki National Front (KNF), operating along the Nagaland-Manipur border, also called for a boycott of Independence Day celebrations.

The Bodo-dominated Lower Assam region remained strike-bound on August 15. In the evening of August 15, three Central Reserve Police Force (CRPF) personnel were killed when armed militants ambushed two vehicles of the 82

CRPF battalion at Khbirakpam in Manipur's Bishnupur district. Thirty-one others, including 17 CRPF personnel, were seriously injured. Earlier, on July 14, a junior commissioned officer was killed and seven jawans were injured when militants ambushed an Army convoy at Pungdongbam village in Imphal East district of Manipur. Army officials said that the assailants belonged to the PLA.

An attempt by ULFA to carry out subversive activities, including the blowing up of oil installations, was foiled on August 5 with the killing of a rebel in Guwahati. A huge quantity of RDX was seized.

Activists of the NDFB blew up an Army vehicle on August 12 in Sonitpur district of Assam. Three Army personnel were killed in the blast, which took place at Rajgarh on the Assam-Arunachal Pradesh border. On the same day, a CRPF convoy had a miraculous escape when ULFA militants triggered a high-power remote-controlled blast at Bilpara in Lower Assam's Nalbari district. The improvised explosive device planted underground, went off a few seconds after the convoy crossed the spot.

A possible case of "mistaken identity" saved the Guwahati-bound Rajdhani Express on August 10 as a goods train, 15 km ahead of it, took the impact of an explosion triggered by Bodo militants under a railway bridge in Lower Assam's Kokrajhar district. Militants also targeted the Arunachal Express but it escaped narrowly as the explosives, planted in a coach next to the engine, were detected and defused minutes before the trains arrived at Bongaigaon. Two Power Grid Corporation pylons collapsed in a blast on August 7 in Barpeta district, plunging the area into darkness.

An attempt by ULFA to carry out subversive activities, including the blowing up of oil installations, was foiled on August 5 with the killing of a rebel in Guwahati. A huge quantity of RDX (Research Department Explosive) was seized. The rebel was identified as Bablu Ingti, ULFA action group commander for Guwahati and Kamrup districts. "With his killing, we have busted ULFA's 'volcano unit', which was engaged in carrying out explosions," said State Inspector-General of Police (Operations) G.M. Srivastava.

Bodo militants blew up a portion of the broad gauge railway track between Barpeta Road and Sarupeta stations on August 4, and this caused the derailment of 10 wagons of a goods train and the disruption of rail communication to and from Assam.

A series of blasts in 10 days since August 1 prompted the railway authorities to suspend train services after sunset in Assam from August 11 to 15. Assam's Director-General of Police, P. V. Sumant said: "The Bodo militants simply want to make their might felt by repeatedly blowing up railway tracks. They know they can derive maximum mileage and grab headlines in the newspapers by destroying public property."

In Tripura, militants of the banned NLFT gunned down six non-tribal villages on August 12. As the rebel group entered Shibbari village in Dhalai district from the nearby Longtarai hill ranges, the residents tried to escape; however, they were sprayed with bullets from AK-47 rifles. In another incident on August 11, a police official was killed by NLFT militants. NLFT activists abducted Kshetra Mohan Debnath, father of Ranjit Debnath, senior Communist Party of India (Marxist) leader and former Transport Minister, from his Bangalipara residence in South Tripura. Militants belonging to the NSCN (Khaplang) gunned down five policemen on August 3 in an ambush in Karbi Anglong district of central Assam, bordering Nagaland.

The police arrested two "officers" of the Pakistani Inter-Services Intelligence (ISI) and two top Harkat-ul-Mujahideen militants from Guwahati on August 8. In a follow-up operation, the police nabbed 27 other members of various pro-Pakistan outfits. Chief Minister Mahanta said that documents found in the possession of the arrested persons proved their ISI links. Describing it as a "major breakthrough", Mahanta said that the two ISI officers and the Harkat-ul-Mujahideen activists had been deputed to carry out "specific anti-India operations". The task assigned to them was "to make use of ULFA and other local rebel outfits to create in Assam large-scale disturbances, including bomb blasts in public places, railway stations, railway tracks, market places and oil installations," Mahanta said.

The Chief Minister told *Frontline* that the arrested ISI officers had confessed that carrying out "high-intensity bomb explosions" was "one of their assignments". The blowing up of oil installations in Assam and the snapping of the Leh-Manali highway were top on their list of priorities. The Chief Minister quoted Mohammed Fasih Ullah Hussani, one of the arrested ISI officers, as saying that he and his colleague were "on a very important mission, the Assam Mission". They also disclosed that over 300 militants from Assam had received training in Pakistan over the past few years.

Srivastava said that the ISI officers had disclosed that they arrived in Dhaka from Karachi by Pakistan International Airlines flights on different dates in the third week of July. They stayed at two hotels in the Bangladesh capital, Timestar and Lucky Seven. "They met ISI agents based in Dhaka and asked them to arrange for the despatch of a consignment of explosives to Assam. Then they crossed the border by a boat somewhere near Karimganj. Finally they reached Guwahati and got in touch with their local contacts in ULFA and the Harkat-ul-Mujahideen," Srivastava said.

The Assam Police suspects that the militants expected the consignment of explosives from Dhaka but it got diverted to unknown destinations following the arrest of the ISI officers in Guwahati. Mahanta, in his Independence Day address, said that a combined police team of West Bengal and Assam had recently recovered 30 kg of RDX from suppliers in Rajsahi in Bangladesh during a raid inside Bangladesh territory on the basis of information from the ISI officers. West Bengal Home (Police) Minister Buddhadev Bhattacharya, however, denied any such raid in Bangladesh territory.

Informed sources said that the West Bengal Police believed that the explosives – 14.65 kg of ammonium nitrate mixed with fuel oil (AMFO), which was recovered from Platform No. 8 of Calcutta's Sealdah railway station on August 16 - was part of the main consignment from Bangladesh. The 6 kg of RDX, seized on August 16 in Phulbari in Jalpaiguri district of north Bengal, was also part of the consignment.

On Independence Day, over 200 ULFA and Bodo militants surrendered before the Army in different parts of Assam. They handed over arms which included AK-47 rifles, grenades and revolvers. ■

Smokers under siege

Smokers in Kerala come under pressure as a High Court judgment banning smoking in public places is enforced across the State.

ANAND PARTHASARATHY

THE second class chair car of the inter-city express train bound for Thiruvananthapuram witnessed an unusual sight recently. Soon after the train left Ernakulam, a passenger lighted a cigarette – not an unusual sight in Indian Railways. What was unusual was the reaction of his co-passengers. A woman in the adjacent seat requested him firmly to put out his cigarette. When he did not comply, four other travellers got up and surrounded the smoker. "This is Kerala," they said, 'Don't you read the newspapers? You can't smoke in public here. Either you put out your cigarette or we hand you over to the Railway Police."

Faced with this determined assault, the man threw away his cigarette, bemused at the reaction of his co-passengers. "Nobody minds in the North, it's not a big deal there," he grumbled. As many others like him have found out, smoking in public in Kerala these days can be a painful exercise. If you flourish a cigarette or a beedi in public places – bus stations, streets or railway platforms – the chances are that a policeman will nab you and issue a summons to appear before the local magistrate. If you resist or refuse to give a credible name and address, he could arrest you. The fine one has to pay for the pleasure of lighting up in public is anything between Rs.200 and Rs.500. If one refuses to pay or cannot afford to, it is one month behind bars.

What amazes visitors nowadays is that one cannot easily smoke in Kerala even if there are no policemen around. The members of the public will prevent you. This is one law the people have welcomed. Snap polls conducted by the media and some commercial organisations found that nearly 80 per cent of those interviewed were in favour of the ban.

The ban was imposed by Di[illegible]rict Collectors within days of a l[illegible]dmark judgment delivered by a Division Bench of the Kerala High Court on July 12. The judgment followed a petition filed earlier this year by two Keralites: Monamma Kokkad, mother of three children and a teacher of English Literature at BCM College, Kottayam, and K. Ramakrishnan, an advertising designer from Kozhikode who has since moved to Dubai. Monamma Kokkad used to commute by train between Kottayam and Ernakulam, and it was the hassle of having to put up with smokers on the journey that motivated her to move the courts.

A policeman forbidding a smoker from lighting up in Thiruvananthapuram, outside the State Secretariat.

When the case came up before a Division Bench consisting of Acting Chief Justice A.R. Lakshmanan and Justice K. Narayana Kurup, the judges took an unusual course of action. They enlarged the list of respondents from an original nine to 52, including every possible agency of government, the civil administration and the police. This ensured that any action that flowed from the judgment was swiftly executed.

BY SPECIAL ARRANGEMENT

Acting Chief Justice of the Kerala High Court Justice A.R. Lakshmanan and (right) Justice K. Narayana Kurup, who issued the landmark order.

The 48-page judgment – possibly the most detailed legal document on the subject of smoking hazards – drew on dozens of sources both Indian and international (articles and news items from *The Hindu* were cited). Around one million people die every year in India from tobacco-related diseases, according to the Indian Medical Association. Cigarette smokers have been proven to have a 70 per cent higher chance of dying earlier than non-smokers; in fact, half of these smokers will be dead before they

Smoke signals

ANAND PARTHASARATHY

THROUGH most of the 1990s, proceedings in tobacco-related cases in United States' courts followed a set pattern: the plaintiff, usually an individual or a social service organisation, took on the might of the tobacco industry, citing what often seemed damning medical evidence of harm done to smokers or to those forced to work in a smoke-laden environment.

After weeks of arguments and a procession of experts presented by both sides, the jury went into a brief huddle, only to come out to announce a verdict that favoured the defendant. The tobacco industry's attorney stepped outside the court, smirking in front of a battery of cameras. "We have a justice system that works," one of them said, "Our juries are intelligent. They are not conned by frivolous publicity-seeking plaintiffs. They have sent a clear message."

The first-ever such lawsuit against a tobacco company was filed in 1954 by a lung cancer victim in the U.S. It dragged on for 13 years before it was dropped. In 1964, the Surgeon General released a report that, for the first time, linked smoking with lung cancer. A year later, health warnings became mandatory on cigarette packets sold in the country – a requirement that was later imposed in dozens of other countries including India.

By 1971, airlines began segregating smokers in separate sections of the aircraft and the U.S. took the lead in banning broadcast advertisements for tobacco products. In the 1980s, the tobacco companies won dozens of lawsuits filed by smokers dying of lung diseases. In a bizarre case in 1983, a smoker, Rose Cipollone, dying of lung cancer, was ordered by a court to pay $40,000 in damages – a verdict that was later overturned. Rose died soon after and her son withdrew the case because he could no longer afford to keep it going.

This was a scene that was played out time and again. The tobacco companies had enormous financial clout which enabled them to drive its opponents to penury. In July 1997, U.S. based tobacco companies came to an agreement with the Attorneys General of 40 States, whereby they promised to pay over $200 billion over the next quarter century into a fund to cover medical costs, help people to quit smoking and pay damages to affected smokers. They also agreed to remove cigarette advertisements from hoardings, sporting events and supermarkets and shut down cigarette vending machines. The agreement shielded the companies from cases, but did not restrict individuals from suing them.

And that is what they faced in early 1999, when hearings began in a Miami court. Five of the largest companies were taken to court by the first-ever class action suit filed on behalf of 500,000 sick smokers in Florida suffering from lung cancer, emphysema and other diseases. On July 7, a jury found the five companies guilty of making a defective product and found them "engaged in extreme and outrageous conduct... with the intent to inflict severe emotional distress".

The jury agreed with the smokers on every count: that the industry deceived them about the dangers of smoking; suppressed research that would have produced safer cigarettes and targeted children with their advertisements. The final figure in punitive damages could well exceed the $200 billion settlement that the tobacco companies reached with the States – that is, if the jury verdict is not overturned in appeal. But the finding is still being seen as a startling reversal of a historical unchanging pattern. It was the first major defeat for tobacco companies.

Readers of John Grisham's thrillers might have felt a sense of *deja vu* while reading about the Miami court proceedings. His *The Runaway Jury* evoked a strikingly prescient scenario: a jury which for the first time returns a finding in favour of a dead smoker.

Meanwhile, a special federal court has been set up in the U.S. to hear cases filed by countries such as Guatemala, Nicaragua, Bolivia and Thailand against American cigarette manufacturers. And in mid-August, six smokers with lung cancer filed a class action suit in the Australian Federal Court on behalf of 40,000 fellow-smokers against the 'Big Three' cigarette manufacturers – Philip Morris, Wills and Rothmans.

Groups of sufferers from environmental smoke hazards – such as airline flight attendants forced to serve in the smoking areas of aircraft – have in the past sued cigarette manufacturers, with mixed success. But in the roster of legal moves in support of the innocent non-smoker, the recent Kerala court judgment has its own special place. It was the first instance when the judiciary has acted in favour of all passive smokers of a State without receiving a specific complaint against a tobacco manufacturer or trader. ■

turn 40, according to the judgment.

It devotes much space to documenting the hazards of passive smoking – what the medical profession now calls "environmental tobacco smoking (ETS)". This is a syndrome that is as yet not fully studied in India, but the statistics in the United States are striking. According to a 1998 report of the American Health Association, quoted by the judges, there are nearly 40,000 deaths caused by the effects of passive smoking in the U.S. every year. Even infants are in danger of contracting asthma and other lung diseases if their parents are heavy smokers.

In India, the Bench found, an indication of the dimensions of the hazard can be seen in the statistics of paediatric admissions in hospitals: one in four is the child of a smoker. After direct smoking and alcohol, concluded the judges, passive smoking is one of the biggest worldwide killers.

It is the interests of this section of the public which is subject to serious health risks for no fault of theirs that invite the court's concern. And, in an analysis which is a throwback to the judgment delivered by V.R. Krishna Iyer in the Ratlam Municipality case in 1980, the court found that "existing laws... are quite sufficient to safeguard the interests of the public against the wisp of environmental tobacco smoke."

This, said the court, is because smoking is a public nuisance as covered under Section 268 of the Indian Penal Code – it "causes any common injury, danger or annoyance to the public". Further, the court invokes another Section which concerns "making the atmosphere noxious to health" and says: "There can be no doubt that smoking in a public place will vitiate the atmosphere so as to make it noxious to the health of persons who happen to be there. Therefore smoking is an offence punishable under Section 278 of the IPC."

The judgment concluded: "Public smoking of tobacco in any form whether in the form of cigarettes, cigars, beedies or

otherwise, is illegal, unconstitutional and violative of Article 21 of the Constitution of India (which assures every citizen the right to life and liberty). We direct the District Collectors of all districts of the State of Kerala... to promulgate an order under Section 133 (a) CrPC, prohibiting public smoking within one month from today and direct the Director General of Police to issue instructions... to prosecute all persons found smoking in public places... by filing a complaint before the competent magistrate.. "

The judgment clarifies that "smoking in public places falls within the mischief of the penal provisions relating to public nuisance as contained in the Indian Penal Code and also the definition of air pollution contained in the statutes dealing with protection and preservation of the environment..." A footnote clarified what the judges considered a public place " all educational institutions, hospitals, shops, restaurants, commercial establishments, bars, factories, cinema theatres, parks, walkways, places of amusement, bus stops, bus stations, railway stations, railway compartments, and other public transport vehicles, highways, or other places where people congregate." This turned out to be the crucial and operative part of the court's orders: you cannot smoke on a road or within a restaurant – indeed any place where another member of the public has access.

EVERY District Collector acted within days of the judgment and well before the 30-day deadline. Smoking in public is a cognizable offence, that is, the police can make an arrest even without receiving a formal complaint. The Government now plans to send publicity vans equipped with loudspeakers to all towns and villages to broadcast details of the ban.

In the days following the judgment, the police picked up hundreds of smokers who attempted to smoke at bus stations, on railway platforms or in shopping centres. A pocket cartoon in *Mathrubhoomi*, the Malayalam daily, showed a policeman telling another: "No room in the lock-up for all the smokers, sir. Shall we let out the petty thieves and pickpockets?"

Old habits die hard, but faced with the hassle of having to appear in court and pay a fine of Rs.200 or more, many smokers have called it quits, at least in public. The foyers of cinema theatres which used to be normally enveloped in a cigarette-induced haze during the interval, were suddenly clear of smoke.

And 'no smoking signs' have sprung up in unlikely places, around places of worship, in local reading rooms and gymnasia. A day after the judgment was published, a heartfelt response was posted on the gates of a church in Champakkara near Kochi: "No smoking on these grounds." In smaller letters was a footnote in Malayalam: "High kodathi vidhikku nanni" (thanks for the High Court judgment).

Fifteen days after the court's order, cigarette majors reported a 30 per cent to 50 per cent drop in the offtake of tobacco products by the around two lakh retailers in the State. Officially the Government has accepted the judgment and will not appeal against it. But Chief Minister E.K. Nayanar, a former smoker, has assured smokers that they will not be unduly harassed by the police who would, however, strictly enforce the court orders.

Such compliance will cost the exchequer dear. Tobacco products used to provide Rs.200 crores every year by way of taxes. Kerala Dinesh Beedi, the largest cooperative tobacco venture in the State and an umbrella organisation for 22 primary societies and over 300 plants, will soon move an appeal in the High Court, citing the threat to the livelihood of 25,000 people who depend on the manufacture and sale of beedis.

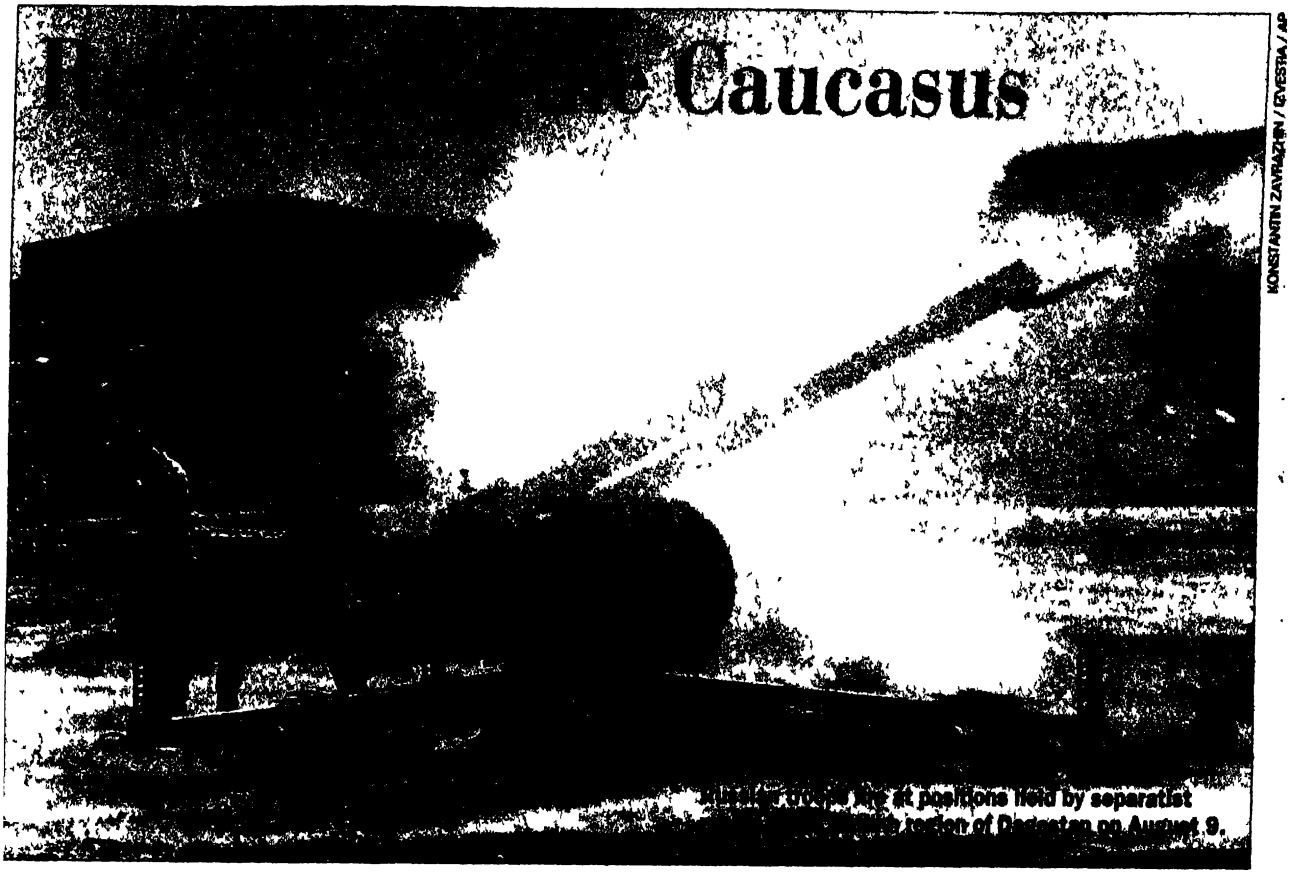
Legal experts do not see much hope for such appeals. Says P.B. Sahasranamam, an advocate at the High Court who specialises in environmental pollution law: "No review lies in the Kerala High Court unless it can be established that the judgment contains an error apparent on the face of the record." This is unlikely.

The only legal recourse open to those who may want to seek to reverse the judgment is to move the Supreme Court. And that would be a dicey option for the tobacco industry: if it loses its appeal in the apex court, it risks seeing the Kerala ban extended all over the country.

The media are already questioning why States such as Delhi, Haryana and Himachal Pradesh were tardy in enforcing laws banning public smoking. And within the last few weeks, anti-smoking activists are reported to have moved both the Madras and Karnataka High Courts, seeking a ban similar to that imposed in Kerala.

The hotel and restaurant industry which operates thousands of bars in Kerala has not yet reacted to the ban; but it is likely to feel the impact in the weeks ahead. Observers suggest that the industry may be forced to invest in a facility that is common in countries whose smoking laws are strictly enforced – lobbies for smokers.

The Supreme Court, meanwhile, is hearing a public interest case filed by Mumbai Congress leader Murli Deora against cigarette manufacturers, seeking Rs.500 crores on behalf of non-smokers and better control over the marketing, advertising and consumption of tobacco products.



It may well happen that the Kerala move triggered by a couple of public spirited citizens and articulated by an alert and sensitive judiciary, will create a nationwide focus on the dangers of tobacco to both active consumers and passive members of the public. That will bring India in line with dozens of other nations where the cigarette industry is under unprecedented pressure to mend the way it does business. As lighters go off all over Kerala it may yet be that smokers nationwide have taken their last nicotine-stained gasps – at least in public. ■

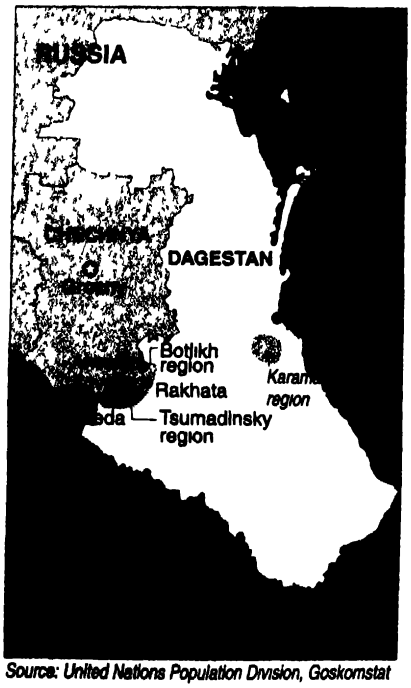
Designer beedis

FACED with tough competition from cigarette manufacturers, beedi-makers are seeking new pastures. Indian beedis in 'designer' flavours such as strawberry, grape and vanilla are all the rage in parts of the United States today.

As cigarettes become costlier, many young Americans have taken to the cheaper option of beedis from India. Beedis made their first appearance this year in Massachusetts and at least some school children who took to smoking flavoured beedis thought they were some kind of herbal cigarette sans tobacco.

Beedis available in some States such as California carry no health warnings. They are easily available and can even be ordered on the Internet. Health departments are now waking up to the hazards posed by these handrolled unfiltered tobacco products. Recently ABC TV reported that the Massachusetts Department of Health checked a batch of beedis and found that the amount of tar that they contained and carbon monoxide that they emitted was two to three times higher than in the case of cigarettes. And the nicotine per gram was seven times higher than that of regular cigarettes. ■

KONSTANTIN ZAVRAZHIN / IZVESTIA / AP



Separatists in Dagestan republic, near Chechnya, declare an independent republic, but President Boris Yeltsin's response – a military campaign and the appointment of a new Prime Minister – reflects an insensitivity to the problems of Caucasian republics.

ANURADHA M. CHENOY

IN early August, separatist rebels in the mountainous republic of Dagestan in the Northern Caucasus region of the Russian Federation seized several areas of the region and declared an independent Islamic republic of Dagestan. The separatists crossed over from the neighbouring republic of Chechnya and were led by Chechen rebel Shamil Basayev and others who have long fought Russian control, raising the banner of Islam. Chechnya had in 1994-95 witnessed a similar conflict that ultimately led to a war with Russia, followed by an agreement that gave Chechnya greater autonomy. The separatist fire that was ignited in Chechnya has now spread to Dagestan. If Moscow does not handle the matter with care, the entire Caucasus may flare up.

Moscow has reacted to this rebellion by sending in Russian forces to bomb the rebels in the mountains of Dagestan and in areas of Chechnya that are believed to be hideouts for the separatists. This has led to hundreds of casualties and set off streams of refugees from the trouble-torn villages in Dagestan and Chechnya. Rebels have long controlled the border between Dagestan and Chechnya. Given the nature of the territory, the rebels' determination, the ethnic and communal divide, the seriousness of economic problems, the breakdown of law and order and the possibility of support from Islamic mercenaries, a large-scale war is a distinct possibility.

Meanwhile, with Russian parliamentary and presidential elections approaching, President Boris Yeltsin once again shuffled his pack of executives. Prime Minister Sergei Stepashin and his entire Cabinet, appointed only in May, were dismissed on August 9 and former National Security Adviser Vladimir Putin was appointed Prime Minister. Although Yeltsin gave no reason for this

round of dismissals, Russian media analysts link it to the Dagestan conflict. The Communist Party and the Duma see little difference between the new Prime Minister and his sacked predecessor and are concerned primarily with how events will shape up in the Caucasus. Russia continues to face further instability.

The European Community and the United States have expressed concern over the escalation in the levels of violence, the ethnic conflicts and the violations of human rights in the Caucasus. The U.S. had in 1997 declared the Caucasus an "area of interest". This coincides with the North Atlantic Treaty Organisation's new doctrine of intervention in key geostrategic areas citing alleged human rights violations. Given the region's geostrategic importance, the oil resources in Chechnya, the oil pipeline routes, and the influence of local warlords and the mafia, the region makes for a heady mix of instability and international intrigue. This can once again threaten the sovereignty and territorial integrity of the Russian Federation.

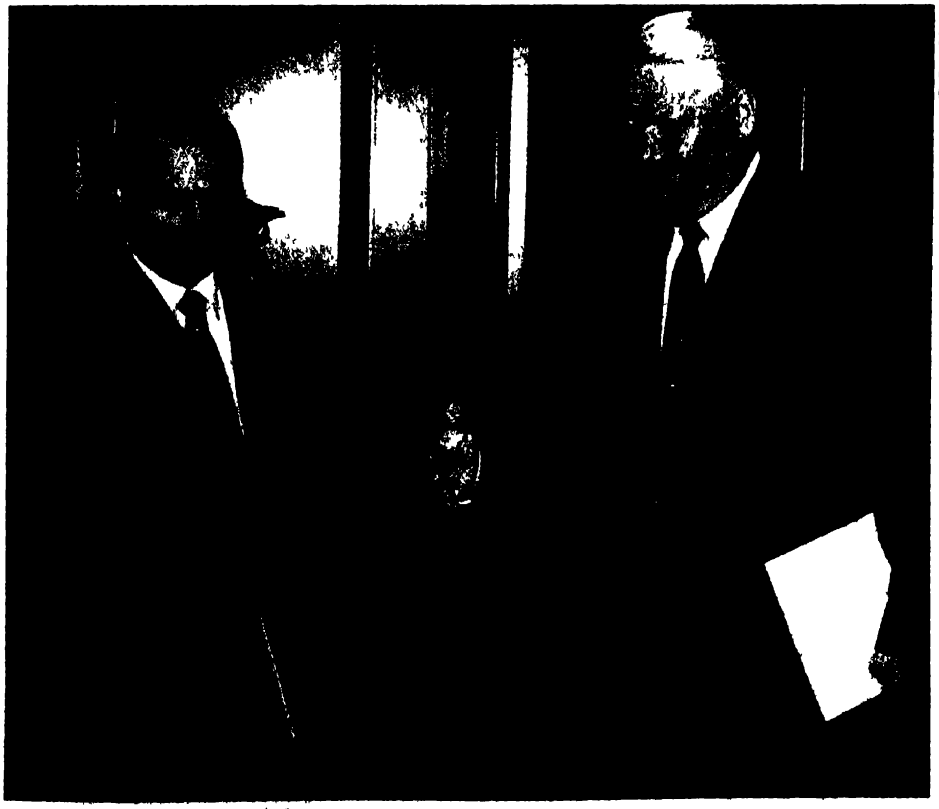
Russia's concern for territorial integrity is valid; however, its use of Su24 bombers on the Dagestan rebels can lead to significant civilian casualties. Some rebels have appealed for intervention by the United Nations; a large-scale war can invite international repercussions. The he[illegible] of the National Assembly of Dagestan, Mukhu Aliyev, has expressed allegiance to Moscow and has distanced himself from the rebels. Dagestan, unlike Chechnya, signed the Federal Treaty that made it part of the Russian Federation in 1992. In earlier presidential and parliamentary elections, the people of Dagestan have voted against Yeltsin and his supporters and have backed the Communist Party of the Russian Federation. These factors may make it easier for Moscow to rein in the rebels, because unlike in Chechnya, where the ruling regime led the insurgency, in Dagestan the elected regime is politically linked to Moscow.

An injured boy from a village affected by the fighting.

The Northern Caucasus is one of the most troubled regions in the Russian Federation. The problem of Dagestan and the Northern Caucasus dates back to the early 19th century when Russia invaded the Caucasus and handled the local clans with a heavy hand. The Caucasus region was home to four republics which were part of the former Soviet Union, seven autonomous republics and four autonomous regions. About 60 nationalities belonging to various linguistic groups and different denominations of Christianity and Islam live here. Dagestan has a mix of multiple nationalities, but the population is predominantly Muslim. Some ethnic groups in the Caucasus live in contiguous areas in two or more republics; these groups want borders to be redrawn in order to protect their ethnic unity. The political and administrative boundaries of these units were often changed, especially during the period from the 1920s to the 1950s. Many of the ethnic groups, including the Chechens and Dagestanis, were deported during the Stalin period and rehabilitated much later. Many of the demands made by the people of this

region seeking the reorganisation of administrative units reflect this past.

Dagestan's problems are not confined to ethnic and Islamic separatism. Like many of its neighbouring republics in the Caucasus, it is among the poorest regions in the Russian Federation. Not only does the region generate the lowest income in the Federation but it has the highest unemployment rate. The percentage of pensioners in the population is considerably more than in the rest of the country. All these republics have a corrupt power elite that has made personal gains through the privatisation of state industries and utilities. Moscow has supported this elite since it remains loyal to the centre. Further, Dagestan and the republics of Chechnya, Irkutsk and Tatarstan receive more from the common treasury than they contribute to it. Moscow has thus used its economic resources as levers to control this area. Dagestan's economic dependence on Moscow is another reason that will compel it to remain in the Federation. But Russia's economic crisis and Dagestan's low status have accentuated the problems in the region.



Separatism and ethnic and regional conflicts in the Russian Federation remain major problems. Ethnic mobilisation and separatism are not confined to Dagestan and Chechnya: among the other republics where the dominant nationalities have used this threat are North Ossetia, Ingushetia, Chuvashia, Tuva and Kabardino-Balkaria. Further, regions such as Kaliningrad and the Maritime Territories, Southern Sakhalin and the Kuriles, which are influenced by contiguous states, are susceptible to separatist tendencies. The economically more powerful republics such as Tatarstan, Bashkira and Yakutia have at various times used the bogey of ethnic separatism to threaten Moscow and to mobilise popular opinion in their own territories.

THE Dagestan problem is complex because it brings back the issue of Chechnya, where the rebels' ideology is based on Islam and an ultra-chauvinist militant nationalism used to construct a Chechen nationalism with a vision of a greater Chechen nation. The December 1995 agreement between Russia and the Chechen Government gave special status to Chechnya within the Federation. It provided for a treaty to delineate authority and powers between the two and to resolve conflicts through peaceful negotiations. Chechnya and a few other republics in the Caucasus have adopted laws that go against the grain of the Russian Constitution. Not only have the rights of Russian minorities in the Chechen Republic suffered, the republic has adopted the Shariat laws an established Shariat courts. Executions hav been carried out under this law, an women's rights remain curtailed.

Moscow has appealed to Chechn President Aslan Maskhadov to crac down on the rebels based in Chechny but the regime has little hold on rebe leaders and warlords. Russian troops fac further problems owing to poor coordi nation and distrust between the Interio Ministry and the Defence Ministry an are a demoralised force. Even if Moscow puts down the rebellion in Dagestan wit force, the victory will be a limited one The problem in the Caucasus needs long term structural solutions. The neglecte region is a cauldron of ethnic and cultur al contradictions. It needs patient han dling and economic development tha will ensure sustainable development.

The Caucasus has been a 'free-marke economy' where a corrupt local elite ha made gains at the expense of the people In addition, there has been mobilisatio on ethnic and religious lines, turning com munities against one another. Given th total breakdown of law and order and th lack of civil society, the vacuum has been filled by local warlords and gun-runner who use inter-clan rivalry to build thei support base. Moscow is seen as a soft tar get and most of the problems are conve niently blamed on it. Moscow' response – seeking to control th region through the corrupt elite, o in the event of a civil war through military intervention – further alienates the people of the region.

Russia has to rethink its strate gies if it wants to hold on to its dis tant regions and trouble-spots such as Dagestan and the rest of th Caucasus. For this, however, Russi needs a capable and far-sighte leadership. The Russian parliamen tary elections are due on Decembe 19 and the presidential elections i early 2000. Under th Constitution, Yeltsin, who ha served two terms as President, is no eligible for a third term. While h claims to be looking for a successor he might use the latest crisis t impose changes to extend his term or that of his coterie. It is evident that whatever the outcome of th Dagestan conflict, the crisis o Russia is far from over. ■

Re-enter Primakov

CELESTINE BOHLEN

THREE months after President Boris Yeltsin fired Yevgeny Primakov as Prime Minister, Primakov made a dramatic re-entry into Russian politics, this time as head of a new electoral alliance poised to assume a commanding lead in the parliamentary elections in December. The decision by Primakov has recast the shape of Russian public life as this vast country prepares for the post-Yeltsin era.

Shown in various opinion polls to be Russia's most trusted and respected politician, Primakov, 69, a former Foreign Minister, spymaster and wily survivor from the Soviet era, has been courted alternately by his former allies in the Communist Party and by a new centre-left coalition put together by Moscow's ambitious Mayor, Yuri Luzhkov.

On August 17, Primakov announced that he had agreed to head the Luzhkov team's list of candidates. With Primakov now firmly on board, the Fatherland-All Russia coalition could become an unstoppable force. But Primakov left unanswered the critical question of which of the two strong-willed, battle-hardened politicians who head the coalition – himself and Luzhkov – will emerge next year as Russia's leading presidential candidate. "We will agree," said Primakov with typical ambiguity, adding that his mind was not made up about a presidential bid in 2000.

Primakov's alliance with Luzhkov may only be temporary, designed to last long enough to push their joint coalition into a dominant position in the next Parliament. The two could pair up for the presidential elections, with Primakov, the more senior figure with more national experience, running for President, and Luzhkov waiting his turn to become either Prime Minister or to fill a newly proposed post of Vice-President – although such an arrangement strikes some experts as improbable.

With his stolid appearance and his experience as an expert on West Asia and as Cold War-era adviser to Soviet leaders, Primakov comes across as an elder statesman, an image that has broad appeal in Russia today, after a decade of political turbulence and discord. His guarded manner, and flashes of sly wit, contrast with Yeltsin's belligerent and bombastic populism, which has left people bitter and exhausted.

Primakov, who became Prime Minister in September 1998 in the wake of a devastating financial crisis, was credited with restoring political calm, largely by appeasing Yeltsin's Communist Opposition, and with arresting the economy's downward spiral. Critics argue that Primakov's Government did little more than mark time. Supporters say that the country needed the breathing spell he provided. Even after he left office and dropped from public sight, Primakov's popularity held steady. His popularity rating is not high, but against the backdrop of Russia's often sordid political scene, they are higher than anyone else's.

Sergei Stepashin, the man who succeeded Primakov as Prime Minister, is holding talks with leaders of Russia's cluster of centre-right parties, which include the once-mighty Our Home is Russia, headed by another former Prime Minister, Viktor Chernomyrdin, and parties headed by the economic reformers once favoured by Yeltsin and widely disliked by the public.

But most political experts agree that even if they unite, they will not be able to run ahead of Fatherland-All Russia, although they will probably get the 5 per cent of the popular vote required to qualify as a parliamentary faction.

In his prepared statement, Primakov stressed that he was not joining any party or movement, but had agreed to head the list of candidates put forward by the Fatherland-All Russia for elections to the 450-seat Duma. Describing the coalition as an "association of healthy centrist forces, open to all who wish Russia good", Primakov said his goal was to turn politics away from a debilitating cycle of intrigue, blackmail and back-biting, towards a more constructive debate. "We must move toward consensus in society," he said. "It is only through consensus that we can achieve stability and rescue our country from its troubles, its people from the poverty they do not deserve."

Walking with a cane that he has used since he underwent back surgery in Switzerland last year, Primakov appeared together with his new political allies who, besides Luzhkov, include Vladimir Yakovlev, Governor of St. Petersburg; Mintimer Shaimiyev, Governor of oil-rich Tatarstan; and Mikhail I. Lapshin, a leader of the Agrarian Party, which has traditionally been aligned with the Communists.

This group represents the backbone of the coalition whose emergence came as a direct challenge to Yeltsin, who has tried hard in recent months to disrupt and derail Luzhkov's political ambitions.

Primakov outlined specific goals for his new alliance, which would include making changes to the Russian Constitution and the structure of presidential system. He proposed reinstituting the position of Vice-President – a post abolished in 1993 after Yeltsin's first Vice-President tried to lead a mutiny against him – and a special law guaranteeing "full security and a worthy life" to Presidents after they leave office. This last pledge was an obvious olive branch to Yeltsin and his presidential administration, whose increasingly desperate battle to influence the choice of a presidential successor is widely thought to be driven by concern for their own future. The Kremlin in recent months has fought hard to keep a series of corruption investigations from focussing on members of the "family", as Yeltsin's inner circle is known.

"I will do everything possible to make sure that this bloc is not 'against' but 'for'," Primakov said. "Enough of strife, attacks on each other, threats to ban parties which are against somebody's liking, enough of mud-slinging."

Of buildings and blocks

The inauguration of a new European Parliament occasions some reflections on its directions and prospects.

GLYN FORD

SEEMINGLY after ages, the new European Parliament elected on June 13 met on July 20. More than half its members were new and almost all were lost, politically or geographically. The Christian Democrats (and the European Democrats, British Tories) offered a deal the Liberals could not refuse: vote for Nichole Fontaine, our French candidate for President now, and in two and a half years' time our block vote will fall behind your favourite son. Some Liberals were sceptical on political grounds, but were soon slapped down by those who had been waiting for a generation for some crumbs to fall from the political table and who were damned if political principles were going to stand in their way now. So the deed was done.

It was done in the infamous Parliament building in Strasbourg, which opened for this inaugural session. Round buildings are in themselves inherently confusing; throw in no exits to the ground floor, black and glass walls, a ten-metre 'firebreak' between buildings spanned by random bridges and lifts with a will of their own, and the result is chaos. The newly elected French President showed her confidence in French technology when she chose, immediately after her election, to climb nine floors to her office rather than venture into the lifts.

Yet much of the media criticism is nonsensical. The building's cost was a comparatively modest £250 million, for over 1,100 offices and meeting rooms plus a spectacular hemicycle that can hold 800 people. It compares very favourably with an identical cost for a mere 200 offices for MPs at Westminster, whose crowning glory is a £81,000 reception desk – which amount is equal to the price of two and a half terraced houses in most of Britain's northern cities.

Equally, you cannot complain about the cost and lack of facilities at the same time. If the members' offices are too small – and they are – making them larger would have increased the already "exorbitant" cost even further. Yet some journalists have trained themselves in intellectual acrobatics so as to hold both thoughts in their heads simultaneously without feeling confused.

THE stupidities of the geo-morphology of the European Union's institutions, scattered as they are across Belgium, Luxembourg and northeastern France, are not the fault of the buildings themselves, but rather of the politicians. It is another proof of Nietzsche's dictum that "madness is rare in individuals but common in parties, groups and organisations."

Not even a group of ten-year olds of average intelligence would want to perpetrate a system whereby 600 people meet three times a month in Brussels and once a month in Strasbourg, with filing cabinets, boxes and the rest being transported back and forth – I am surprised we are not sponsored by the Road Haulage Association – and with much of the secretariat located in Luxembourg. At one time, the European Parliament Library was in Luxembourg and books could not be taken out by post. Yet at the Edinburgh Summit in 1992, British Prime Minister John Major turned stupidity into farce by brokering an agreement. This agreement ensured that what had been a temporary arrangement until a single working place was agreed upon would become a permanent monument to collective madness.

The architects claim that the new building was designed to reflect European democracy at work: open, transparent and modern. It looks suspiciously enough like Breughel's Tower of Babel, which led some people to believe that an element of heavy irony was involved. But its design specifications by a group of Strasbourg-sceptic Members of the European Parliament (MEPs) some years ago may yet have an impact. The offices, that make rabbit hutches look spacious, may trigger a revolt when the MEPs start to seize back control of the issue of when and where they will meet, from the footnotes of Edinburgh and John Major.

After all, there is already the first flicker of revolt in Strasbourg amongst the new parliamentarians. The system is to "divvy up" the positions of responsibility within Parliament by party and country: a mechanism that does not lead to inspired leadership as successful candidates demonstrate their complete ignorance of their responsibilities and subjects. One member once thought Bangkok was the capital of the Philippines. Ignorance is every excuse. But when the Christian Democrats (and European Democrats) indicated that their candidate for the vice-president of the Citizens' Rights Committee was to be a Berlusconi man who was under investigation for mafia links, the limit of tolerance was passed. The members from the left, centre and even some from the right said no! So from that moment there is a Christian Democrat (and European Democrat) vacancy.

AS for the rest, it was business as usual. The European Parliament had no opinion on the Cologne Summit. The Centre-Right wanted to flex its political muscle by taking an independent critical line. They learnt again the lesson of the last Parliament: negative majorities are easier to obtain than positive ones. They lost by a score of votes and the other group's resolutions met the same fate. The only way for Parliament to speak with a voice anyone hears, let alone listens to, is when the vast majority of members are shouting the same message.

Finally, Parliament wound up with a Commission Statement on why the fine of £650 it imposed on the French football authorities for selling 600,000 tickets to French residents against European competition policy rules – which stipulate that you cannot discriminate among European Community nationals – would frighten future organising committees and prevent them from trying similar profit-maximising strategies.

Neil Kinnock made a stout defence of a bad case. But it would have proved easier to persuade the Saudi religious authorities of the medicinal benefits of pork in red wine than the MEPs of the Commission's astute handling of a question they tried so hard to avoid. ■

Glyn Ford is a Member of the European Parliament from the United Kingdom.

The long road to peace

The Colombian Government and the leftist guerilla groups would like to give peace a chance but the far-right paramilitary groups are trying to scuttle the peace process.

JOHN CHERIAN

THE election of Andres Pastrana as Colombia's President last year generated great expectations among the people. He had pledged to the electorate that he would bring to an end a long-running civil war. In the first few months of his Presidency he devoted most of his time to bring the two major guerilla groupings, the Revolutionary Armed Forces of Colombia (FARC) and the National Liberation Army (ELN), to the negotiating table. However, he has been successful only to a limited extent.

Both guerilla groups have begun talks with the Government but there is still a long way to peace. Colombian novelist Gabriel Garcia Marquez said earlier in the year that the peace initiative taken by the new President and the goodwill shown by both the FARC and the ELN were positive signals. "What is important for now is not peace but to be making it," said the Nobel laureate.

The Government and the leftist guerilla groups would like to give peace a chance but the far-right paramilitary groups, initially financed and nurtured by the Army and landlords, are trying to scuttle the peace efforts. The recent assassination of the country's favourite television comedian is a case in point. There are some renegade elements among the guerillas too, as the recent hijacking of a Venezuelan plane by an ELN faction illustrated. The plane and its passengers were subsequently released unharmed.

The new President of Venezuela, Hugo Chavez, is trying to persuade the the FARC and the ELN to arrive at a negotiated settlement. Chavez met the ELN leader, known by the *nom de guerre* Gabino, several times in Caracas. There is a danger of the civil war spilling over to Venezuela, which shares a long border with Colombia.

Chavez' progressive image has made him acceptable to the guerilla groups in Colombia, but influential sections of the Colombian establishment are suspicious of him. Some prominent right-wing Colombian politicians allege that Chavez has close links with the the FARC leadership. Another factor that complicates matters is the role played by the United States military in Colombia. Ostensibly, the U.S. military is engaged in a fight against drug production and the mafia cartels that control drug trafficking. Colombia is one of the biggest producers of narcotics and the U.S. the biggest consumer; most of the narcotics smuggled into the U.S. come from Colombia.

However, the dividing line between the anti-narcotics campaign and the anti-guerilla campaign is becoming increasingly indistinguishable. Only last month, a U.S. surveillance plane was shot down in the jungles of Colombia by left-wing rebels, killing five U.S. servicemen. Under the guise of anti-narcotics operations, the U.S. is providing logistical help to the Colombian Army in a big way. In the second week of August, Thomas Pickering, the U.S. Under Secretary of State, visited Bogota, the Colombian capital, to discuss the civil war and the drug trafficking. He was the highest-ranking U.S. official to visit the country in more than a decade. The media have gone to town with stories of an imminent U.S. military intervention to stop the guerillas from making any more territorial gains. There has also been talk about the U.S. organising a multinational Latin American intervention force for Colombia.

In 1998, the U.S. Congress passed a law that tripled the counter-narcotics assistance for Colombia to $289 million a year. In the last week of July this year, the Colombian Government asked for an additional $500 million for the next two years. The Clinton administration's top anti-narcotics official, Gen. Barry MacCaffrey, who visited Bogota in July, recommended that $1 billion be made available to Colombia and other U.S. allies in Latin America and the Caribbean as "emergency drug assistance". Colombia is now the largest recipient of U.S. assistance after Israel and Egypt. After the rebels made some military gains recently, President Bill Clinton said that the U.S.' vital interests were at stake in Colombia.

Colombia's neighbours have reacted with alarm at the prospect of a U.S. military intervention in the region. Soon after the intense rebel offensive in early July, the top brass of the Colombian Army rushed to Washington for consultations. In a series of raids, the FARC had attacked more than 20 towns, including one

President Andres Pastrana with U.S. Under Secretary of State Thomas Pickering in Bogota on August 10. There is some concern in Colombia over a possible U.S. intervention in the country's affairs.

Refugees return to their homes southwest of Bogota, on August 11 after the Army promised them safety from paramilitary groups. More than a million Colombians have been displaced by violence since 1980.

just 40 km from Bogota. The Government imposed a curfew on one-third of the country, and the military was put on a state of high alert.

The guerilla groups rely on a "tax" levied on coca producers to fund their operations. It is estimated that they thus earn more than $500 million annually. Almost all segments of Colombian society have been affected by the production and trafficking of cocaine and heroin. Drug trafficking has led to the existence of a parallel economy, which is equivalent to 35 per cent of the country's legal exports. The cocaine cartels have been acting hand in glove with politicians and the Army since the narcotics boom started in the mid-1980s. Pastrana's predecessor in office, Ernesto Samper, was not allowed to visit the U.S. on the grounds that his campaign for the presidency was funded by the Cali cartel. The town of Cali is the centre of operations of this drug cartel.

The civil war in Colombia has been going on for more than four decades. The FARC's origins can be traced to the struggle for land waged during the 1940s and 1950s. The FARC, the biggest and oldest of the guerilla organisations, was linked to Colombia's Communist Party in the 1960s but broke away in the 1980s to form its own political party, called the Patriotic Union. It did well in the 1986 elections but soon the right-wing paramilitaries started targeting its leaders, who had emerged from the underground. The group returned to guerilla activities. The FARC now appears to have become more flexible about ideology. The Cold War had ended. In the changed world situation, Cuba had stopped supporting left-wing insurgencies in Latin America.

THE FARC has an estimated 15,000 fighters, who have a strong presence in more than half of Colombia's municipalities. The FARC is particularly strong in the rural areas. In May, in an effort to kickstart the peace process, the Government agreed to the FARC's demand to withdraw the Army from a large area in southern Colombia and turn it into a "demilitarised zone". The ELN also demanded a similar concession, and when this was not forthcoming it embarked on a kidnapping spree. The most foolhardy of such acts involved the capture of 143 worshippers in a Catholic church in Cali in early June. Later, two senior ELN leaders reportedly went in person to the Vatican to apologise for the incident.

The ELN was founded in the early 1960s by radical students having strong links with the adherents of the liberation theology of the Catholic Church. The ELN has 3,000 to 4,000 fighters concentrated in the country's oil-rich north-east. The FARC and the ELN have over the past few years inflicted a series of defeats on the Colombian armed forces. On the other side of the spectrum are the right-wing paramilitary groups which have a membership of around 5,000. They have their own political agenda and have been demanding a part in the peace talks. They are backed by big farmers and businessmen and are known to have strong links with the drug-trafficking operations.

Most political killings in Colombia are carried out by the paramilitary groups. Approximately 10 Colombians are killed in politically-related violence every day. More than a million Colombians have been displaced by violence since 1980. One reason why the FARC is not willing to sit down for protracted negotiations is the Government's inability to control the paramilitary forces. Efforts to usher in peace are continuing but the momentum that was evident when Pastrana took over last year seems to have been lost. Today, the Government is in control of only half the country's territory. ■

The costs of sanctions

A survey of child and maternal mortality in Iraq shows up the human costs of the inhuman sanctions regime imposed on the country, and points to other disturbing aspects of the war of attrition.

SUKUMAR MURALIDHARAN

EARLY this year, United States Secretary of State Madeleine Albright was asked by a leading television network about the human costs of the sanctions policy against Iraq. The interviewer focussed in particular on the rising toll on children's health, of rampant malnutrition, infant mortality, of a generation of Iraqis being deprived of the basic rights of growing children. "Was it worth it?" he asked. Albright paused for a moment before responding. "Yes," she said, "I think it is worth it."

As Iraq was isolated after it invaded Kuwait in 1990, the U.S. (in the loyal company of the United Kingdom) today finds itself isolated in its insistence that a change of regime in Iraq must be effected before the crippling economic sanctions imposed nine years ago are removed. Now an authoritative survey of child and maternal mortality in Iraq – the first conducted since 1991 – shows what exactly the human costs of this inhuman policy are.

According to the survey conducted under the joint auspices of the United Nations Children's Fund (UNICEF) and the Iraqi Government, in the southern and central parts of the country children under five are dying at more than twice the rate they were ten years ago. These parts of the country, where over 85 per cent of the total population live, are still under the central authority of the Saddam Hussein regime.

The survey reveals that in southern and central Iraq the under-5 mortality rate (U5MR) more than doubled from 56 deaths per 1,000 live births between 1984 and 1989 to 131 per 1,000 live births between 1994 and 1999. The rate of infant mortality, that is, of children dying before they complete a year, increased from 47 per 1,000 live births to 108 per 1,000 live births within the same period.

Girls, the survey found, have a marginally higher rate of survival than boys. And the scourge of child mortality is more prevalent in rural areas as compared to the urban centres.

The survey also covered the northern region of Iraq, which was detached from the central authority of the Saddam Hussein Government by U.S. and U.K. forces immediately after the Gulf war concluded in 1991. In this region – inhabited predominantly by Iraqi Kurds – U5MR rose from 80 per 1,000 live births between 1984 and 1989, to 90 per 1,000 live births between 1989 and 1994. It then fell to 72 per 1,000 live births between 1994 and 1999. Infant mortality rates, it is learnt, also followed a broadly similar trend.

UNICEF has estimated that if Iraq had managed to sustain the rapid strides in child welfare it had achieved during the 1980s, then 500,000 fewer children under the age of five would have died between 1991 and 1999. That finally is the cost of the sanctions against Iraq – half a million dead babies.

RELEASING the results of the survey, UNICEF executive director Carol Bellamy noted that the situation in Iraq was a "humanitarian emergency". Although as a member of the U.N. family, UNICEF was obliged to accept the legitimacy of sanctions imposed ostensibly under the auspices of the Security Council, Bellamy was insistent that the international community should substantially and immediately increase its humanitarian funding for Iraq.

The Western media, which have to a great extent been complicit in the campaign against Iraq, seemed to have little use for these nuances. *The New York Times* blazoned the Iraqi regime's culpability in its headline: "UNICEF Survey Blames Saddam for Increased Child Mortality in Iraq". The basis for this rather extravagant interpretation was simple: areas administered by the Iraqi Government witnessed a rapid increase in child mortality, while the Kurdish areas where Western humanitarianism was in full play, saw an improvement in this indicator.

The cues for this interpretation were obviously received from officials of the U.S. administration. James Rubin, State Department spokesman, said that the government was "very concerned" about the death of children in Iraq. He added, however, in self-exculpation that the "bottom-line" of the situation was that Iraq was blocking aid available through the oil-for-food programme.

The "blame Saddam" game has obviously not exhausted its potential as far as the U.S. is concerned. But in this most

NOEL QUIDU/GAMMA

A mother and child in a hospital in Baghdad. Malnutrition as a consequence of the sanctions has so far claimed the lives of half a million babies in Iraq.

recent version, the alibis offered are very thin. It is, for instance, an acknowledged fact that international aid for the northern regions of Iraq began trickling in immediately after the Gulf war ended in 1991. The rest of Iraq had to wait for a satisfactory formula to be worked out under the "oil for food" programme before obtaining any kind of sustenance. And although the Iraqi regime has been blamed for whimsically delaying the initiation of the humanitarian programme until 1995, the reality is that the U.S. was insistent on hedging the programme around with a host of conditions which no sovereign government could have acceded to.

Since then, 35 per cent of the meagre revenues that Iraq has been able to pump out of its crippled petroleum industry has been reserved by the U.N. for war damages and the costs of administering its disarmament programme. Of what is left, 20 per cent goes towards humanitarian purchases for the northern region – a clearly disproportionate share for 15 per cent of the population. And since the administration in this region is under the direct control of the U.N., it faces none of the bureaucratic hurdles that the Iraqi Government encounters in purchasing basic humanitarian supplies.

The pattern of deliberate obstruction by U.S. and British officials in the U.N. sanctions committee is clear from the record. As Iraqi Health Minister Umid Medhat Mubarak pointed out, "Out of $1.029 billion worth of contracts to buy medical requirements over the first five phases of the oil-for-food deal, only $600 million worth have reached the country."

Few in the global community today remain willing to go along with the "blame Saddam" game, especially now that the human consequences of the sanctions have been brought home to them with devastating clarity. Within the Security Council, policy towards Iraq is rapidly becoming one of the most divisive and contentious issues. Russia, China and France are united in their demand for an immediate end to the sanctions, with Iraq's remaining disarmament obligations being conducted under an agreed regime of inspections and oversight. The U.S. and the U.K. are equally insistent that the elimination of all Iraqi weapons of mass destruction (WMD) has to be certified by a duly authorised body before sanctions can be removed.

AP/INA

Iraqi President Saddam Hussein.

Some of the underlying tensions boiled over recently in the form of an intemperate attack on U.N. Secretary-General Kofi Annan by Richard Butler, the discredited former chief of the U.N. Special Commission on Iraq (UNSCOM).

Since his term as executive chairman of UNSCOM ended in June, Butler has taken up a position at the Council on Foreign Relations, a New York-based policy advocacy group. His stock in the U.N., though, has been low since he lent his authority to a particularly brazen attempt by the U.S. and the U.K. to hold Iraq in breach of Security Council resolutions on WMD elimination. The report he submitted in December 1998 constituted the basis for a ferocious four-day-long aerial assault on Iraq by the Anglo-American axis.

On the strength of high-level information *The Washington Post* then reported that officials from the U.S. Government "played a direct role in shaping Butler's text during multiple conversations with him at secure facilities in the U.S. mission to the U.N." Following accepted norms of responsible journalism, the *Post* invited comments from both UNSCOM and the U.S. Government on these findings. Both declined to confirm or deny the substance of the report.

Evidence of Butler's sordid role in Iraq has mounted since then. In September 1998, Butler alleged that traces of the deadly nerve agent VX had been found on missile fragments recovered from Iraq. The discovery was "utterly unambiguous", he said, and pointed conclusively to Iraq's relentless pursuit of a programme of nerve warfare. Iraq then alleged that the U.S. laboratory's findings were doctored by bias. Later tests at Swiss and French laboratories returned negative results, casting grave doubts on Butler's integrity.

In June this year, the Iraqi Government lodged a complaint with the U.N. about samples of deadly chemical agents such as Sarin and VX found in the Baghdad premises that UNSCOM had abandoned just prior to last year's air strikes. Russian ambassador Sergei Lavrov, in a letter to the Security Council, requested an "urgent consultative meeting" to discuss the complaint. Late in July, the Russian Government accused UNSCOM of concealing seven vials of VX nerve gas in the Baghdad laboratory and asked the Security Council to authorise an independent investigation.

The impression was gaining ground that UNSCOM had in the guise of disarmament been engaged in a sordid game of planting evidence in Iraq. But Butler's patrons in Washington and London soon bailed him out. Other members of the Security Council abandoned this line of inquiry in the face of a veto threat.

JASSIM MOHAMMED/AP

PETER MORGAN/REUTERS

Prakash Shah, former special envoy to Iraq of U.N Secretary-General Kofi Annan. (Right) Richard Butler, former chief of the United Nations Special Commission on Iraq.

PRAKASH SHAH, the Indian diplomat who has functioned since March 1998 as Kofi Annan's special envoy to Iraq, was an immediate casualty of this episode. The U.S. demanded his recall for alleged bias in handling the dismantling of the UNSCOM facility in Baghdad. U.S. and British scientists, it alleged, had deliberately been kept out of the decommissioning exercise on Shah's Instructions. The

Indian diplomat, who served for long as the country's permanent representative in the U.N., took leave of his posting with the ironic comment that he represented the U.N. rather than the U.S. – the difference between the two lying in the small matter of 22 million non-combatant civilians who were suffering the worst of the economic sanctions against Iraq.

Butler now accuses Kofi Annan of seeking to "destroy UNSCOM". Butler's recent fulminations reflect the desperation of a man who would, devoid of the patronage of the global policeman, have little moral standing in the diplomatic community. His claims have expectedly been dismissed as "arrant nonsense" by spokesmen for the Secretary-General. In floating outrageous theories of complicity between Kofi Annan and Saddam Hussein, he evidently sees the opportunity to divert attention away from the manner in which he persistently allowed a multilateral mandate for disarming Iraq to be abused and corrupted.

Early in June, Annan said that there was some evidence that UNSCOM inspectors in Iraq were involved in espionage on behalf of the U.S. Government: "I think there was a measure of justification in those allegations and Washington never denied it." It was, he said a "worrisome" development, "because it not only undermined UNSCOM but it could undermine future disarmament regimes".

CLEARLY, Butler was no mere disarmament expert. In his functioning he showed all the proclivities of a ruthless hatchet-man, tasked with facilitating the long-term American agenda for the region – the elimination of the Saddam Hussein regime or the partition of Iraq. On the pretext of weapons inspection, UNSCOM was charged with collecting all details of Saddam's innermost security ring, in the long-term interests of hatching an assassination plot. That plan now presumably abandoned, the U.S. seems to have switched its focus to the alternative – the partition of Iraq.

U.S. and British warplanes have of late considerably stepped up their undeclared war of attrition against targets in northern and southern Iraq. The parallel objective, of mobilising Shia rebels in the south and Kurds in the north into offensive military formations and inducing them to stake out a territorial and political claim, remains. When, or if, it comes into play, the repercussions are unlikely to remain confined to Iraq. ■

An eventful period

The capture of the Kurdish leader Abdullah Ocalan and the results of the April general elections that followed that event mark a phase of transition in Turkey.

JOHN CHERIAN
recently in Istanbul

TURKEY has been in the limelight for various reasons over the past few months. The most important development, perhaps marking a defining moment for the nation, was the capture of Abdullah Ocalan, the leader of the Kurdistan Workers Party (PKK) (*Frontline*, July 30). The national euphoria that followed the arrest resulted in the pro-establishment parties, currently favoured by the country's all-powerful military, emerging victorious in the general elections held in April. The main Opposition party, the pro-Islamist Virtue Party (F.P.), saw its strength decimated in Parliament. (The Virtue Party is the successor of the Welfare Party. The Welfare Party, which was banned at the instigation of the military, and its leader Necmettin Erbakan have been barred from public life for five years.)

The True Path Party, the biggest secular party until recently, saw its support base shrink drastically. Most commentators have blamed its poor performance on the corruption by party members when it was in power under the leadership of Tansu Ciller. An electoral alliance with Erbakan added to its misfortune.

Today, the military and the civilian government under Prime Minister Bulen Ecevit share a cosy relationship. In fact, Turkey is sometimes described as a "military democracy". To the surprise of many people, Ecevit's left-of-centre Democratic Left Party emerged as the biggest gainer in Parliament, winning 22.19 per cent of the votes polled. The fact that Ecevit headed the country when Ocalan was captured, no doubt helped him at the hustings.

However, Ecevit presides over a coalition comprising two other right-wing parties. Ecevit, a Sanskrit scholar, did not have much of a choice. The avowedly secular Ecevit has been a supporter of the military's hardline stance against the

Abdullah Ocalan sits behind bullet-proof and bomb-proof glass during his trial in the prison island of Imrail on May 31.

Islamists. All the same it was a surprise to find Ecevit, a vociferous crusader for democracy and human rights, share power with the right-wing Nationalist Action Party (MHP). The other party in the coalition is the Motherland Party (ANAP).

Many of the DSP's members had voiced their disapproval of the political arrangement with the MHP and the ANAP. The differences over the issue reached an emotional pitch. According to reports appearing in the media, one of Ecevit's closest associates, Hikmet Ulugbay, the State Treasury Minister, even attempted suicide. Ulugbay is known for his integrity; the ANAP, under Prime Minister Mehmut Yilmaz, had during its stint in government scaled new heights of corruption.

Despite the fact that the Motherland Party's vote share came down by six percentage points, it managed to corner some major portfolios in the new government. The MHP, on the other hand, is known for its extreme nationalist views. It is backed by the "Gray Wolves", an armed vigilante group, which has the support of certain state organs. It has been in the forefront of the fight against Kurdish and left-wing groups in Turkey and northern Cyprus.

Together the present alliance has 350 seats in Parliament, enough to pass any bill. At the moment, the Opposition is weak, disunited and dispirited. The Virtue Party and the True Path Party are facing serious internal problems. The True Path Party is all set to throw out Tansu Ciller, while the Virtue Party, which lost its vote base by seven percentage points, is witnessing a battle between the old guard and younger elements. Erbakan, who has been in politics for four decades, is still trying to call the shots from outside.

The Virtue Party, like its predecessor, the Welfare Party, may also be served with a ban order by the government. The Constitutional Court is hearing a case relating to the issue. The Army's goal is to remove the Islamists from the country's politics. The military's argument is that the Constitution prohibits the creation of a party that was banned earlier. In late 1997, the military issued a warning that "giving freedom of movement to religious extremism and to the outlawed (PKK) in the context of democracy would be tantamount to the state committing suicide. There cannot be any such concept of democracy."

BURHAN OZBILICI/AP

Prime Minister Bulent Ecevit (foreground), and Navy commander Salim Dervisoglu (behind), with Army generals during a ceremony at the mausoleum of modern Turkey's founder Kemal Ataturk on August 2. Currently, the military and the civilian government share a cosy relationship.

The absence of an articulate Opposition in the present Parliament has created a vacuum in Turkish politics. This vacuum is currently filled by the trade unions. In the last week of July, protests were organised all over Turkey against the International Monetary Fund/World Bank-dictated economic policies that are being implemented by the new Government. The labour movement is angry about the Government's plans to pass a reform bill which would raise the retirement age of women employees to 58 and of men to 60. At present, the retirement age for women is 48 and for men 51.

The proposal to raise the retirement age would not have caused such an adverse reaction in most other countries. Unlike in most western European countries, Turkey's social security system does not provide an adequate safety net for the unemployed. There is no unemployment insurance. Besides, there is a ceiling of $200 a month on pension. The cost of living in Turkey is very high, given the current rate of inflation. Early retirement has given Turks an opportunity to explore new avenues of employment. This option will cease to exist if the retirement age is raised, for landing new jobs at 58 or 60 would be virtually impossible. The Government has also refused to compromise on its economic package.

The trade unions are threatening a nationwide strike. Ironically, at one time, Ecevit was a vociferous supporter of the trade union movement; many trade unions supported his party in the previous elections.

HOWEVER, it is the Kurd issue which is occupying centre-stage in Turkey. Ocalan's capture and subsequent trial left the nation spell-bound. Ocalan's call for reconciliation, made during his trial, seems to have struck a chord. Since early August, Ocalan has been issuing statements about the PKK's readiness to lay down arms if the government offers a general amnesty. In the first week of August, he asked his guerillas to give up the insurgency and withdraw from Turkish territory. In a statement issued in the second week of August, Ocalan said that the PKK was determined to abandon the armed struggle for Kurdish self-rule.

Fifteen million Kurds live in Turkey, accounting for 25 per cent of the population. In the unitary state founded by Kemal Ataturk after First World War, minorities were forcibly assimilated into the mainstream and everybody became a "Turk". Although the Kurds have revolted regularly against the central government, the Kurdish uprising assumed

serious proportions only after the PKK took control in 1982. It was only after the Gulf war that the Government gained the upper hand over the PKK.

Many people expected the PKK to fade away after the arrest of its supreme leader. However, the PKK has not given up the fight for greater cultural and political rights. Almost every day the Turkish media carry reports about clashes in the southeast between the security forces and the guerillas. A counter-insurgency programme launched by the Turkish military in the early 1990s razed some 3,000 villages and displaced about three million villagers. Because of incidents such as these, there is widespread sympathy at the grassroots level for the PKK in the region. Interestingly, public opinion in Turkey seems to be undergoing a change - the demand to carry out Ocalan's death sentence is getting fainter by the day. This can be attributed to Ocalan's performance during his trial. Ocalan came across as a leader intent on finding a peaceful solution to the Kurdish problem. His other main priority was saving his own life – he has been more than willing to reveal the names of those who backed him and the countries that provided him aid and refuge.

Many prominent Turks are urging the Government to start talks with the pro-Kurdish party, Hadep, which controls most of the municipalities in the southeast. The United States, which played an important role in the capture of Ocalan, is now urging the Turkish government to give "more freedom of expression to the southeast". A U.S. State Department official, who visited Turkey recently, said that the "United States has long maintained that there can be no military solution to Kurdish issues." But the Turkish Army has so far been dismissive of Ocalan's offer; it still favours a military solution.

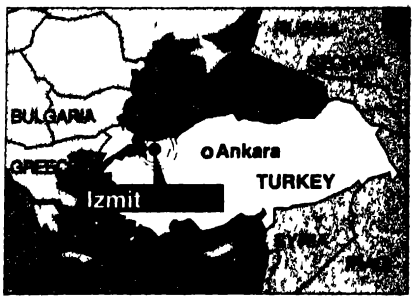
In the last week of July, Iran alleged that Turkish planes attacked a border post of the Islamic Revolutionary Guards killing five people and wounding 10. Iran also claimed that Turkish troops crossed into its territory. For its part, Turkey accused Iran of providing sanctuary to PKK guerillas. However, the Iranians have no love lost for the PKK and Kurd separatists. They have been waging a war of their own against various Iranian Kurd factions which want to secede. Iran is deeply suspicious of Turkey after Turkey worked out close relationship with Israel. Iran and many Arab countries are also wary of the military alliance between Washington, Tel Aviv and Ankara. ■

A night of destruction and death in Turkey

A powerful earthquake kills more than 2,000 people, leaves many more injured and renders many homeless.

EDMUND L. ANDREWS

MORE than 2,000 people were killed by an earthquake that struck northwest Turkey on August 17, destroying thousands of buildings. The quake, which struck at 3-02 a.m. and ripped through cities and villages, was by far the strongest on record in the area. Thousands were shaken out of their sleep to find walls collapsing, windows shattering and roofs tumbling down on them. Government officials said that nearly 11,000 people were injured and that they expected the death roll to rise.

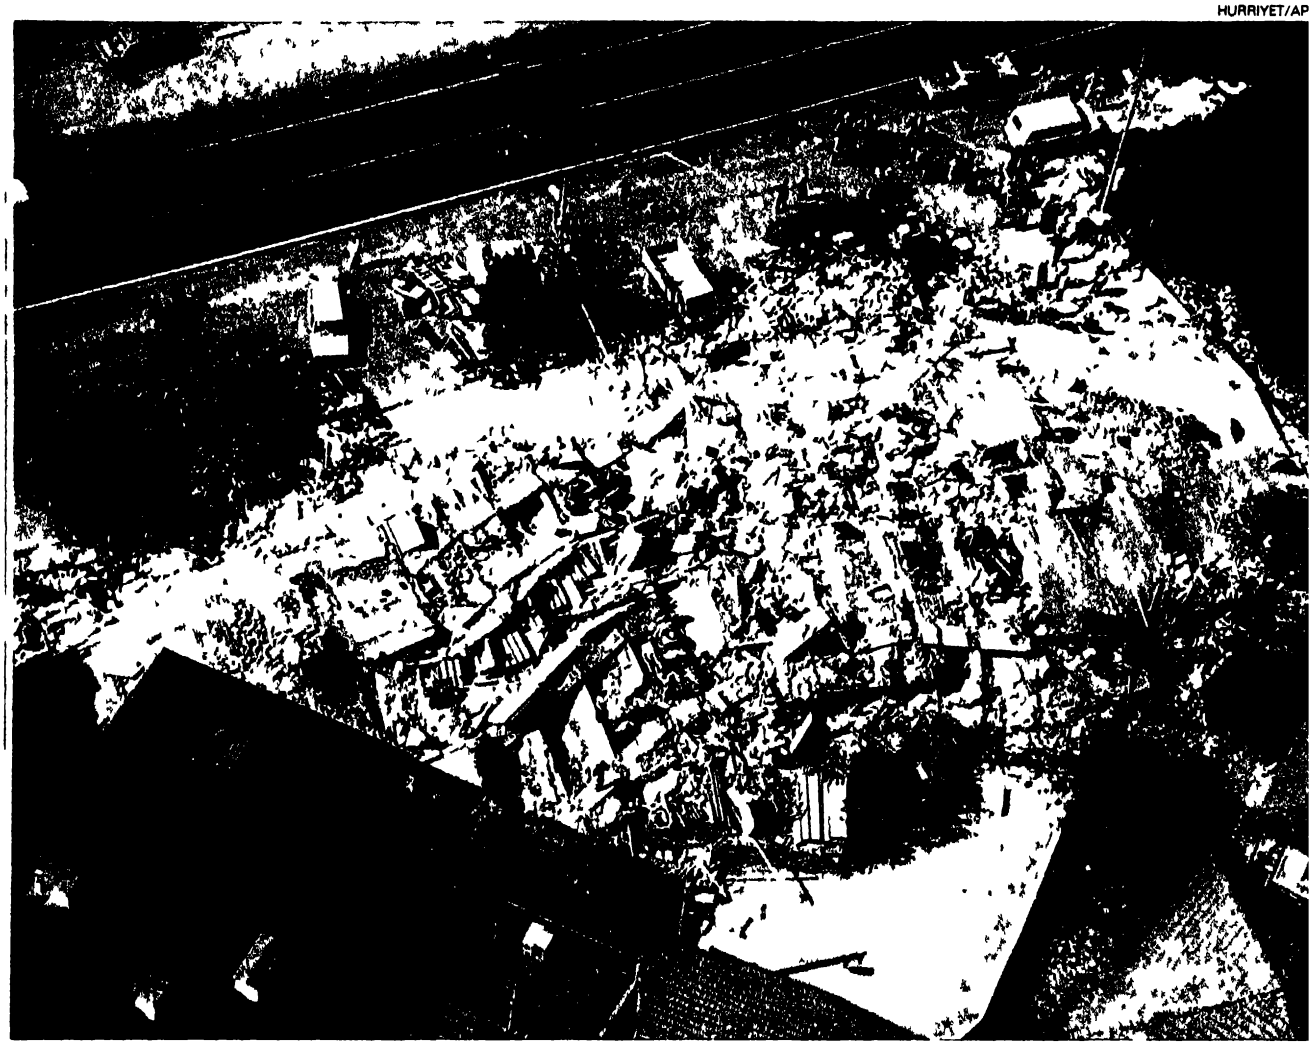


Countless bodies remained trapped under pulverised buildings in the early hours of August 18. The most passionate plea from Turkish Government officials to neighboring countries was for more digging equipment and trained dogs to help locate victims. "There are many people who are alive beneath collapsed buildings," Prime Minister Bulent Ecevit said on television.

The epicentre of the quake was near the industrial city of Izmit, where as many as 1,000 people were killed, most of them trapped inside huge apartment buildings that crumbled within seconds. In Golcuk, the site of a naval base on the southern coast of the Izmit Gulf, more than 248 sailors and naval officers were trapped under collapsed buildings. Scores of people were unaccounted for. In Istanbul, hundreds of buildings collapsed into dusty piles of concrete. In a frantic, endless and exhausting race to reach possible survivors, rescue crews dug into piles of debris 20 feet high with bulldozers, tower cranes, front-end loaders and jackhammers.

Despite the extraordinary destruction, most of Istanbul's stunning mosques and minarets survived and appeared to remain in fairly good condition. Even while the vast majority of apartment buildings were dark because of power failure, the mosques remained well-lit and eerily serene against the late summer sky. The treasured landmarks of the city, including the Blue Mosque, the Topkapi Palace and the Hagia Sophia, were spared of any visible damage.

On the night of August 17, Istanbul was transformed into a city of tents and lean-to shelters as hundreds of thousands of people camped out along highways, in parks and in parking lots. More than 250 aftershocks were reported.



Jusuf Sever, a 54-year-old high-school teacher in Avcilar, watched in shell-shocked dismay as soldiers and about 100 construction workers tried to

dig through the mountain of concrete that had been his apartment building. "I was fast asleep along with my wife and my daughter, when we woke up and found that the whole building was swaying back and forth," he said, pointing to what remained of his bed on the fringe of the rubble. "Suddenly, the ceiling was gone and we were looking at the stars in the sky." Sever's apartment was on the fourth floor of a six-storeyed building. The top two floors were ripped off the building, and that allowed the family to escape without injury before the rest of the building collapsed.

Similar scenes were played out in many places as the earthquake wielded a fearsome power across a wide area, including highly populated areas like Istanbul, with 12 million people, and Izmit, with a population of nearly one million.

HURRIYET/AP

BURHAN OZBILICI/AP

A building that collapsed in Izmit, the epicentre of the earthquake. (Left) A Turkish doctor treats a man who was rescued from his home.

In Izmit, medical workers smashed pharmacy windows to obtain supplies for hospitals swamped with injured people Many reas were without electricity and water. A large oil refinery not far from Izmit exploded and burned uncontrollably for hours, pouring black smoke over the area

In badly hit areas, many buildings with little visible damage stood side-by-side with others that were totally destroyed Questions were being raised about whether slipshod construction contributed to making a bad situation worse Most of the buildings along the main road through Avcilar were still standing, interspersed every few blocks by apartment buildings that were heaps of rubble

One relatively new five-storeyed apartment building with balconies and satellite dishes looked as if it had been pulled out of the ground. Each floor – from the front balconies to the rear-windows – remained parallel to the one above it, but was leaning at a 45-degree angle towards the ground. Ozgur Oztopcu, a chemical engineer, stood watching the diagonally-shifted balconies of his friend's apartment His friend had a wife and two daughters, one of whom was still missing "I don't think she is alive," Oztopcu said

AS news of the earthquake reached other countries, offers of help started pouring in European countries, the U S , Israel and Iran pledged to send medical supplies, equipment, rescue workers and other aid Even Greece, which has squabbled with Turkey for decades, offered condolences and indicated that it would send an airplane to help out

But as dust-caked soldiers and medical workers heaved slabs of rubble under the glare of spotlights throughout the night, thousands of people kept a weary vigil in the hope of finding friends and family members "It is the biggest natural disaster I have ever witnessed," Ecevit told the Turkish people. "May God help our state and our people." ■

New York Times Service

Exploding myths

New history textbooks in Israeli schools are closer to the truth with regard to the Palestinians and the 1948 war.

ETHAN BRONNER

FEW ideas are as deeply ingrained in Israeli culture as the one summed up by the Hebrew phrase, me'atim mul rabim, or "the few against the many". Schoolchildren have long been taught that the Jewish people have always been surrounded by enemies and that their victory over five Arab states in the 1948 War of Independence was a near miracle of David-and-Goliath proportions.

But the start of this school year marks a quiet revolution in the teaching of Israeli history to most Israeli pupils. New, officially approved textbooks make plain that many of the most common Israeli beliefs are as much myth as fact.

The new books say, for example, that it was the Israelis who had the military edge in the War of Independence. They say that many Palestinians left their land not – as has traditionally been taught – because they smugly expected the Arab states to sweep back in victoriously but because they were afraid and, in some cases, expelled by Israeli soldiers.

The books freely use the term "Palestinian" to refer to a people and a nationalist movement, unheard of in the previous texts. They refer to the Arabic name for the 1948 war – the Naqba, or catastrophe – and they ask the pupils to put themselves in the Arabs' shoes and consider how they would have felt about Zionism.

Finally, the books no longer separate Jewish and Israeli history from events around the world but weave them into a single tapestry. "Only 10 years ago much of this was taboo," reflected Eyal Naveh, a history Professor at Tel Aviv University and the author of one of the new ninth-grade textbooks on the 20th century. "We were not mature enough to look at these controversial problems. Now we can deal with this the way Americans deal with the Indians and black enslavement. We are getting rid of certain myths."

The "new history" approach that Naveh and other new textbook authors are using in their descriptions of the Israeli-Arab conflict is 10 or 15 years old. It has gained a growing following among academic scholars and then with a somewhat larger public after the 1993 Oslo peace accord between Israel and the Palestinians.

But while the publication of such revisionism by scholars is one thing, the inclusion of their perspective in school books is clearly something else. In all states, but especially new ones, school is typically viewed as a place not only to learn but to be imbued with civic and patriotic spirit.

The fact that these new books are currently being assigned and bought without advance publicity about the changes says something about Israel's sense of its own maturity. But it seems nonetheless likely that when, in the coming months, the books' contents become known, controversy will ensue.

"Why not just translate the Palestinian books for our children and be done with it?" fumed Aharon Megged, a novelist and outspoken critic of the new history, when he was read a passage from a new textbook. "This is an act of moral suicide that deprives our children of everything that makes people proud of Israel."

The passage to which Megged was reacting was from Naveh's book, on the War of Independence: "On nearly every front and in nearly every battle, the Jewish side had the advantage over the Arabs in terms of planning, organisation, operation of equipment and also in the number of trained fighters who participated in the battle."

The approach of earlier textbooks is typified by the following from a 1984 Education Ministry book on the years 1939 to 1949: "The numerical standoff

A class in progress in a school in the ultra-orthodox Mea Sahrin neighbourhood of Jerusalem. State-approved schools will switch to new history text books from this school year.

between the two sides in the conflict was horrifyingly unbalanced. The Jewish community numbered 650,000. The Arab states together came to 40 million. The chances of success were doubtful and the Jewish community had to draft every possible fighter for the defence of the community."

This shift in perspective is common to the work of the new historians who are relying on newly opened state archives and the emotional distance of a young generation.

Instead of portraying the early Zionists as pure, peace-loving pioneers who fell victim to Arab hatred, the new historians focus on the early leaders' machinations to build an iron-walled Jewish state regardless of the consequences for non-Jews living in the country.

The controversy that this narrative has generated mirrors the wider dispute in Israel between those who favour more concessions to the Arabs and those who fear that such concessions place Israel's legitimacy and its very existence at risk.

But the arrival of the new textbooks also mirrors the growing acceptance of some new history by Israelis. Last year, when the country marked its 50th birthday, a television series known as Tkuma, or rebirth, offered a more complex and less varnished version of Israeli history than had been typically shown. And a new military history book of Israel by a group of mainstream military historians has just been published that explodes several key myths about Israeli military feats.

MICHAEL YARON, who is in charge of the history curriculum at the Ministry of Education, says that the issue is one of historical accuracy; he calls the changes salutary. He took up his post five years ago, during the liberal administration of Prime Minister Yitzhak Rabin, and quietly continued his work after Benjamin Netanyahu, a conservative, was elected in 1996, finishing approval of the new books just as Ehud Barak, who is in Rabin's mould, was sworn in in July.

"We are beginning a new era in history teaching where, for the first time in Israeli textbooks, the picture is not black and white," Yaron said. "That was an important goal of mine when I came, to make sure the Palestinian perspective was included. My second goal was to end the practice of separately teaching Jewish and Israel history on the one hand and world histor[illegible]on the other. It was absurd. We used to spend one year teaching the Holocaust and the next teaching the Second World War. Now we will teach Jewish history in the larger context of other events. This doesn't minimise Zionism. It puts it in context."

Yaron's department began integrating Jewish and world history for middle school in its sixth grade textbooks several years ago and is finishing this project with the new ninth grade books that have just been printed. Since ninth grade history class is devoted to the 20th century, when Israel was formed, this is the year when controversy may be expected.

Israel has a number of state-approved school systems and the new books will only be used in the mainstream secular system that serves about 60 per cent of the population. The religious state system and the strictly-observant systems that operate with state approval and funds will not use the new books, meaning that the divisions between the various sectors may now be aggravated further.

There are three new competing ninth-grade history books for the secular system, one from the Ministry's own publishing division and two produced privately with Ministry approval. All three take a much broader, more textured approach to Israeli history than textbooks have done in the past.

New books for the 10th,11th and 12th grades are due in the coming year and all take the new approach of integrating Jewish history with world history. One ninth-grade book is *Passage to the Past* by Kezia Tabibyan, which not only mentions the 1948 massacre carried out by radical Zionist forces in the village of Deir Yassin, something Kezia Tabibyan says had never been done in a ninth-grade text before, but also engages in a kind of historiography by asking students to reflect on the use of myths in nation-building.

"If I want to educate the citizens of Israel after 2000 they must know that there is another point of view about things like our War of Independence," Kezia Tabibyan said. "They must deal with Deir Yassin. They must know that there was another people that had their life here."

The Ministry book, edited by Danny Jacoby, is in some ways the most radical of the three. Its discussion of why the Palestinians became refugees includes the sentence, "There were also localities in which the Jewish fighting forces conducted expulsion actions." The book also frankly discusses how Jews from North Africa and the Arab world felt mistreated by European Jews when they came to Israel.

Clearly, part of what is driving the change in history texts is the ongoing West Asian peace effort. The accords between the Israelis and Palestinians call on each side to fight racism and provocation and instruct their populations in coexistence.

Yet one of the issues that has troubled Israeli commentators most is the fact that the Palestinians are still using old Jordanian and Egyptian texts which never mention Israel and often portray Jews as evil and bloodthirsty.•

An Israeli group called Palestinian Media Watch recently published the findings of its study of Palestinian textbooks. In one textbook on Arab history, the group noted, is the sentence, "The best examples of racism and discrimination in the world are Nazism and Zionism." Another book, for sixth graders, says, "One must be careful around Jews because they are lying traitors." Khalil Mahshi, director of international relations at the Palestinian Education Ministry, said he was troubled by the anti-Semitism that appeared in the books used by Palestinians but noted that new books were being written.

"We are not rewriting our school history books," he said. "We are writing them for the first time. It will take a few more years because we are just forming committees to set up the guidelines." Asked if the new books would include Israeli perspectives on the dispute, Mahshi begged for indulgence, saying that while the Palestinians want to be treated as equals, their historical development has not been equal to that of the Jews.

"We are attempting to be as objective as possible," he said. "We should be living a new reality, taking a more mature view, but to do that means overcoming pain. To see the Zionist movement as having an equal right to our land as we do is to embark on a personal journey to history which is more complicated than most people realise.

"It took me a long time and even then I am not there. Israelis are changing because they can afford it. They are now so rich and powerful that they can afford to be magnanimous and say, 'OK, there are people here we haven't treated well.' But when you are still dealing with daily difficulties and view them as the fault of the people next door, can you afford to be so magnanimous?" ■

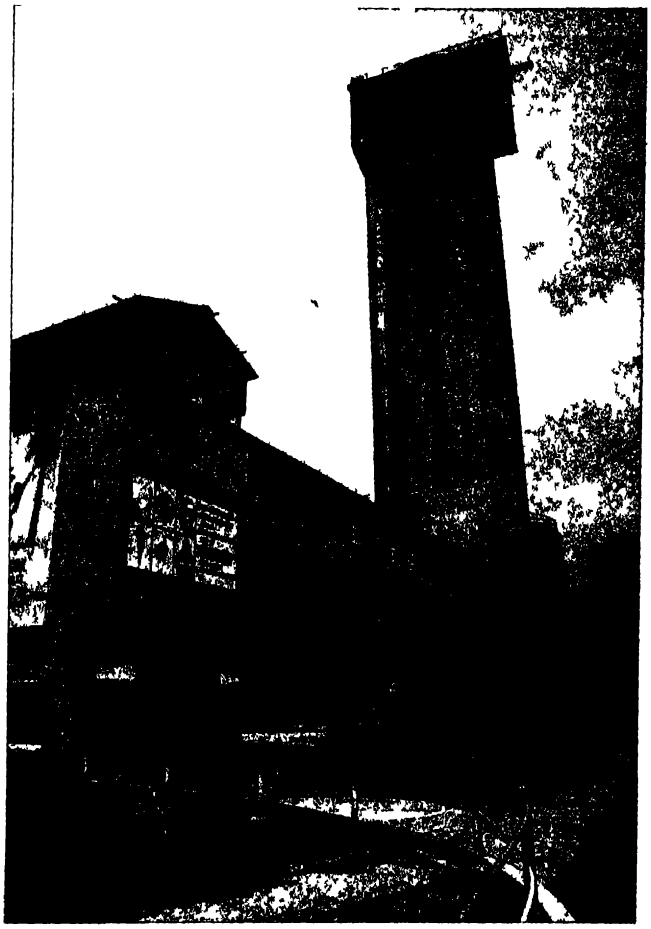
Pictures Sushanto Patronobish

NATURAL uranium converted into pellets is the vital fuel for eight nuclear reactors in the country, called Pressurised Heavy Water Reactors (PHWRs), two each at Rawatbhatta in Rajasthan Kalpakkam in Tamil Nadu Narora in Uttar Pradesh and Kakrapar in Gujarat Heavy water is both the moderator and the coolant in these reactors

The mining and milling (that is, processing) of uranium ore the first steps leading to nuclear power generation are undertaken in India by the public sector Uranium Corporation of India Limited (UCIL), which comes under the administrative control of the Department of Atomic Energy (DAE) UCIL itself was founded in 1967 with its headquarters at Jadugiida in east Singhbhum district of Bihar where the country s first underground uranium mine was established the same year UCIL manages the mining of uranium ore and its processing into uranium oxide concentrates, or yellow cake Yellow cake is sintered and made into fuel pellets at the Nuclear Fuel Complex, Hyderabad

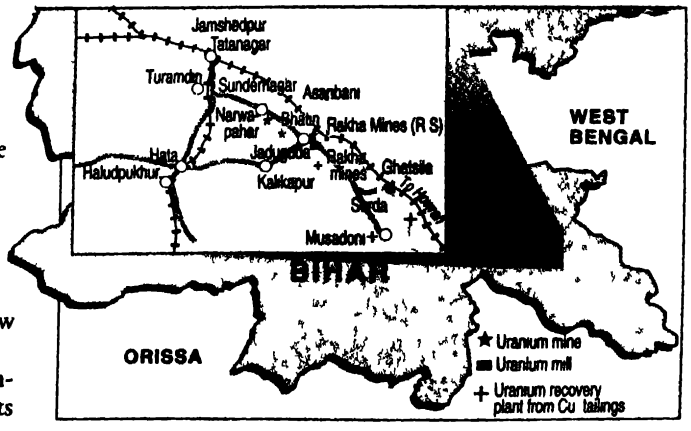
Uranium is found in nature in the form of minerals There are more than 100 such minerals present in almost all rocks The German scientist Martin Heinrich Klaproth isolated uranium in 1789 in a sample of pitchblende (It was only in 1896 that A H Becquerel discovered that uranium underwent radioactive decay The discovery of nuclear fission by Otto Hahn and F Strassmann in 1939 brought uranium into the limelight)



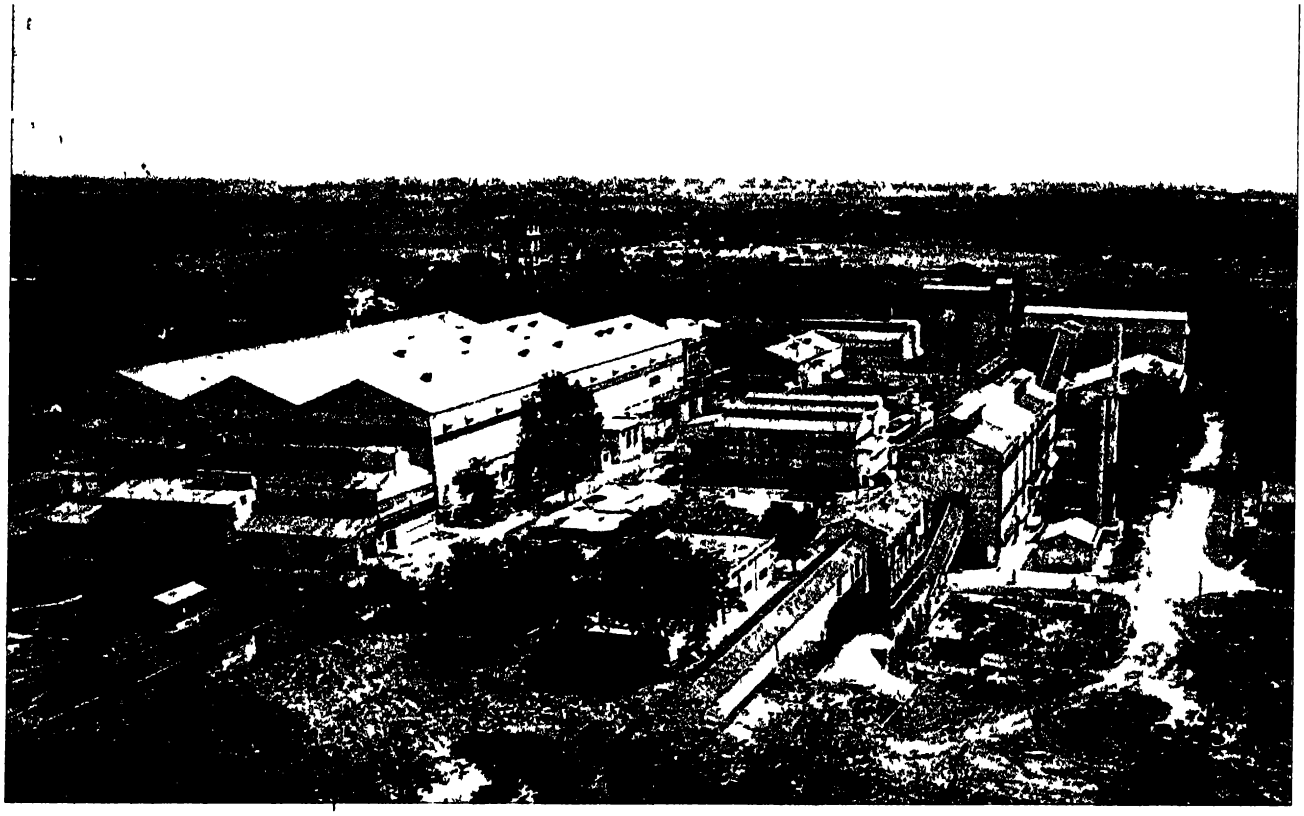
The Atomic Minerals Division of the DAE is responsible for uranium prospecting, UCIL mines and processes the ore Commercially exploitable levels of ore deposits were found at Jaduguda in 1950 and at nearby Bhatin and Narwapahar later in the 160-km-long and 2-km-wide Singhbhum thrust belt

Picturesque Jaduguda is 230 km from Calcutta and 24 km from Jamshedpur It is hemmed in by the Chhotanagpur hills The valley is awash with paddyfields The Subarnarekha flows nearby People belonging to the Santhal, Munda and Ho tribes live in the area

Although the ore is mined at all the three underground mines, all milling is carried out at Jaduguda Here the mine and the mill are next to each other



AS you step into the "cage' in the shaft and the switch is thrown, it is dark all around The lift speeds down In a couple of minutes, you step out – 605 metres below the surface of the earth, in an area that is well lit and ventilated Now you are in the heart of the Jaduguda mine



The tunnels go in different directions Occasionally, miners with their machinery appear. A conveyor belt transports

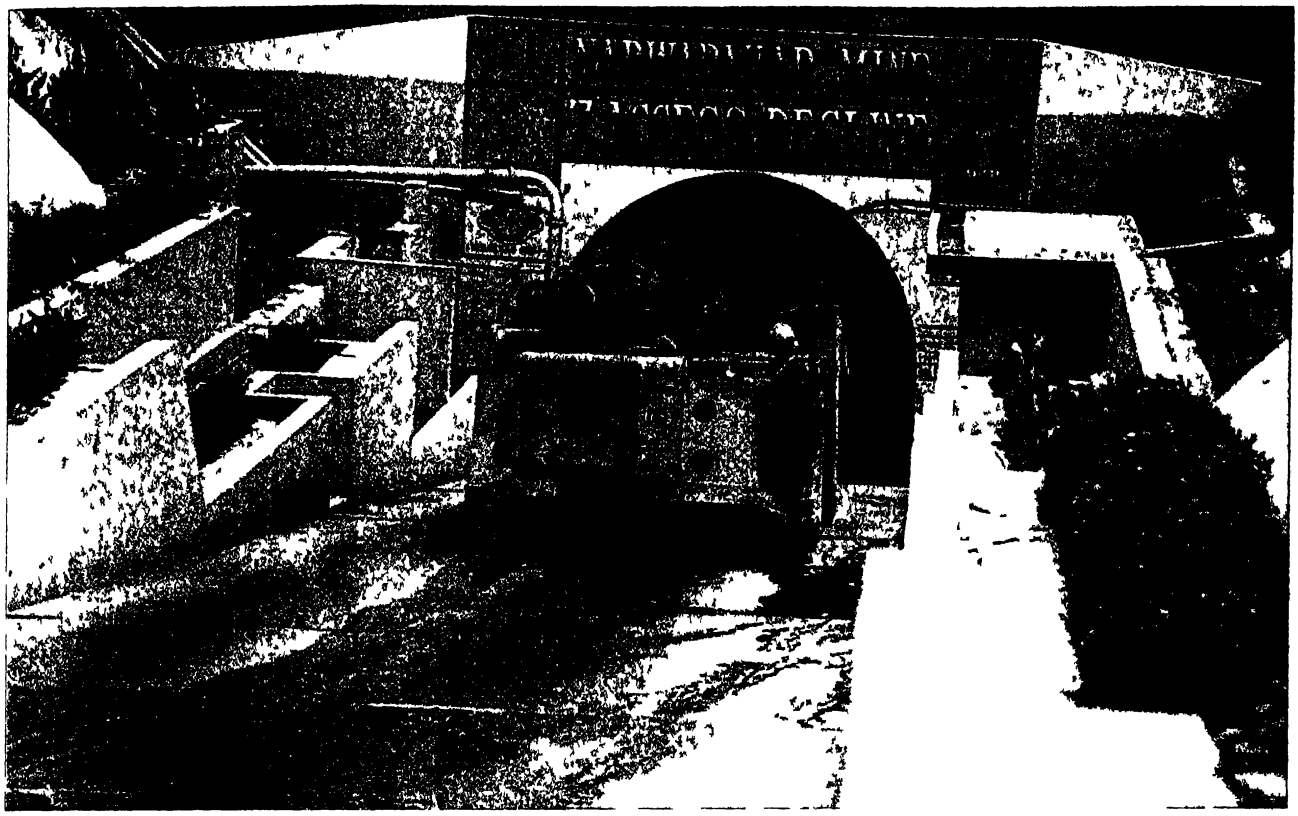
Rising over the underground mine shaft at Jaduguda, a 41-metre concrete tower housing equipment that enables the movement of men and materials through the shaft.

Mines and plants operated by UCIL

An overall view of the uranium processing mill and allied facilities in a verdant setting in the Chhotanagpur area. (Below) Uranium ore from the Jaduguda mine being transported by conveyor belt to the processing mill.

lumps of uranium ore into a measuring bin which, in turn, empties the ore into a skip The skip, a huge bucket, is hoisted and the ore is emptied on the surface

The circular, concrete-lined main mine shaft has a diameter of 5 metres and it is sunk to a depth of 640 m It was sunk in two stages – the first stage went to a depth of 315 m and the second stage from 315 m Later, an auxiliary third shaft to a further depth of 350 m was sunk The three shafts together go to a depth of 990 m



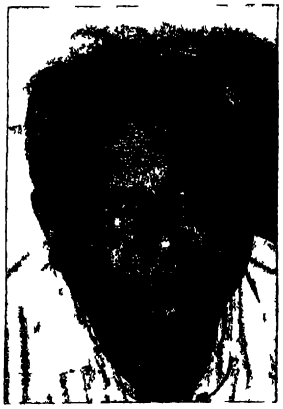
J L Bhasin who until his death on August 2 of a heart attack was the Chairman and Managing Director of UC II , was in charge of the design of the three shafts (Bhasin had briefed a group of visiting journalists on the activities of UCIL, just last month)

On top of the shaft and on the surface is a 41-m concrete tower that houses machinery Two multi-rope friction winders control the skip and the cage The skip can haul 5 tonnes of ore at a time from a loading station situated 605 m below the surface The cage has two decks to transport men and materials

As you go down the shaft, there is an operating level every 65 m, which is connected to the ore drives At every alternate level there is a pumping station

One sub-station with high tension lines of 6,600 volts could be spotted at a depth of 434 m Elsewhere, in a rock-cut "temple", is a control room with automatic panels.

S.C. Bhowmik, Mines Superintendent, explained how the uranium ore bodies are prised out. "Earlier, we used the hand-



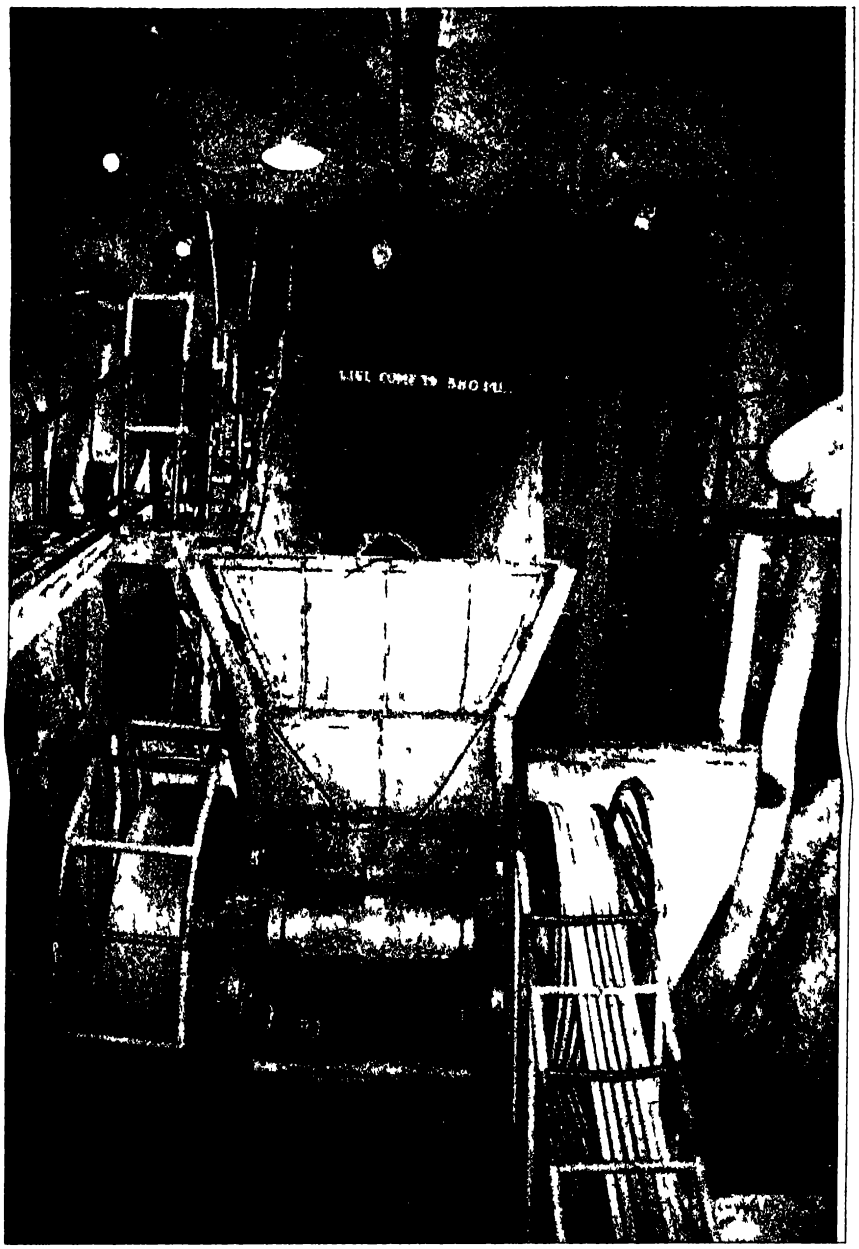
The Narwapahar mine, one of the most modern in the country, is the only underground mine in India where a ramp as well as a shaft is in use to go down the mine. A signalling system controls the traffic of trucks that go down hundreds of metres to transport mining personnel and the ore.

drill jack hammer Now we use electrically operated jumbo drills

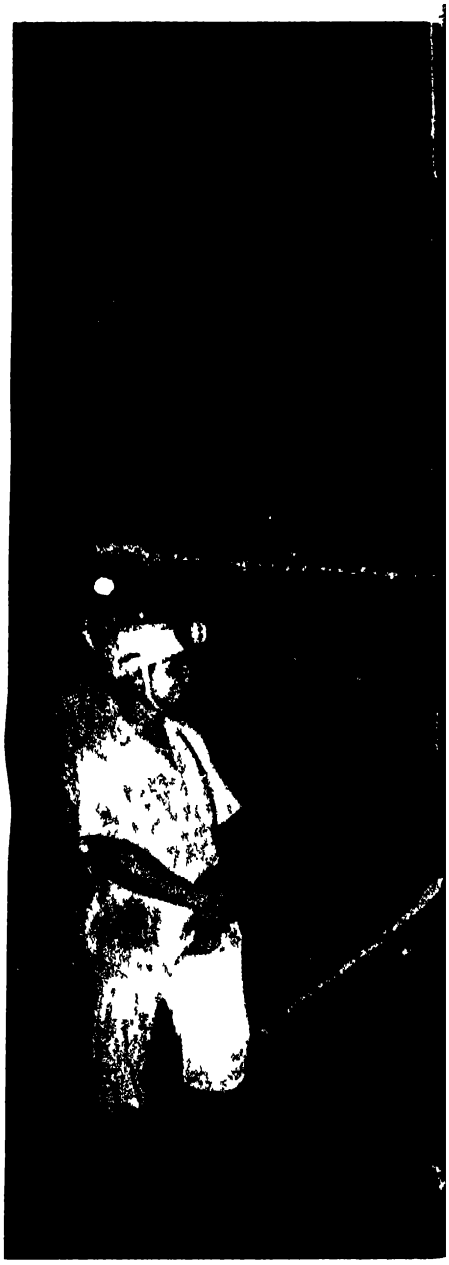
The ore extracted from different levels is collected in a central crushing station, 580 m below the ground The crushing is done in the mine itself At a nearby washing station, the rocks are sprayed with water Then a big jaw crusher breaks the ore lumps to a size of about 200 mm The crushed ore is stored in ore pockets below the crushing station at a depth of 605 m Here a conveyor belt loads the crushed ore into a measuring bin which, in turn, loads the ore into the skip The ore is finally hoisted to the surface in the skip This ore is transported to the mill About 750 tonnes of ore a day is extracted at Jaduguda

Bhasin stressed the importance given to the safety of the workers He said "We lay great emphasis on providing adequate ventilation in all the three mines The most effective way of controlling radon and airborne radioactive dust from the mine air is proper ventilation" At Jaduguda, the main shaft is used to supply fresh air There are also two exhaust fans, located on the surface of the eastern and western ends of the mine, which get rid of impure air

J.L. Bhasin, who was Chairman and Managing Director of UCIL. (Right) R.P. Sengupta, General Manager of the Narwapahar mine.



LOCATED 4 km west of Jaduguda is the much smaller Bhatin mine Entry into this mine, which goes to a depth of 135 m, is by means of an adit and two winzes Bhatin's uranium deposit is the western extension of the Jaduguda ore body This mine has been producing ore since 1986 87 and production now is around 150 tonnes a day This ore is transported to the Jaduguda mill

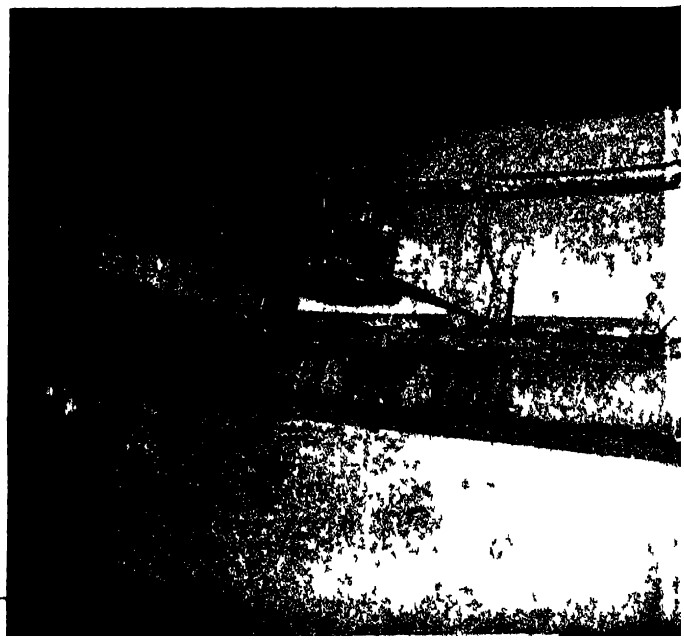


The Narwapahar mine is 12 km away from Jaduguda It is one of the most modern mines in the country Bhasin said state-of the art technology involving trackless mining with decline" and ramps in stopes was utilised here for ore extraction from depths of up to 140 m

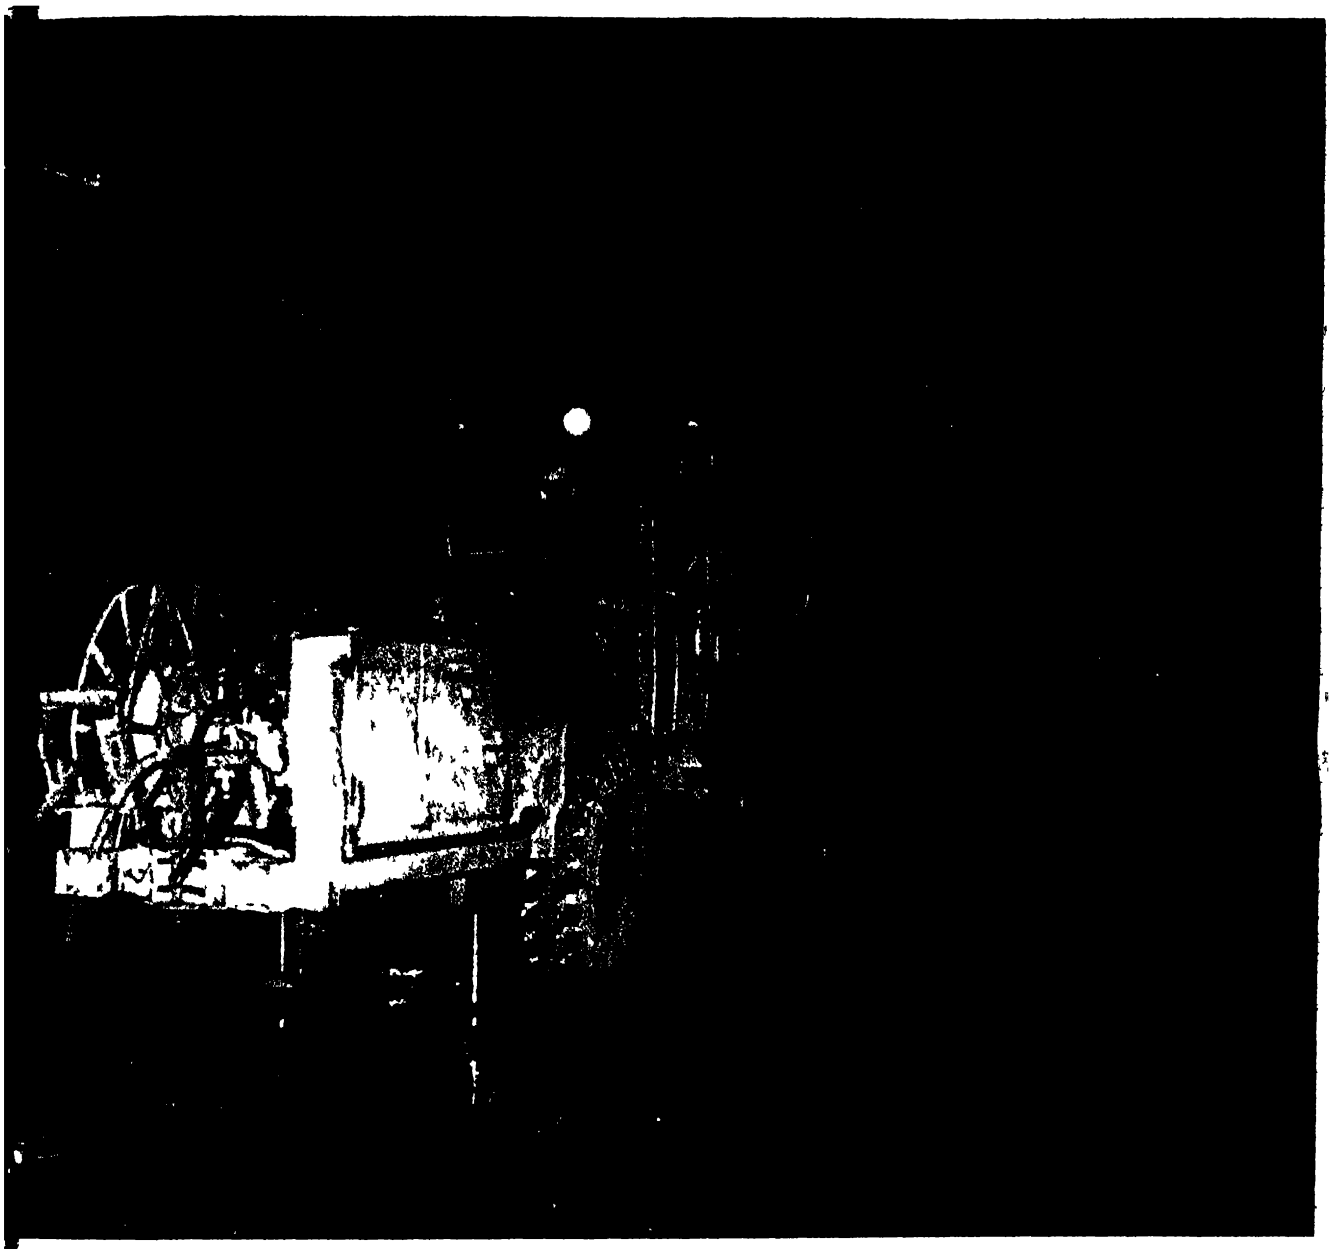
The Narwapahar mine is also an underground one, but the preferred entry here is down a ramp rather than through the shaft This is the only underground mine in India where such dual type access is possible At a production point, a jumbo drill bores into the rock that contains uranium ore Trucks transport the ore outside

The Narwapahar mine was set up at a cost of Rs 216 crores The 5-m diameter shaft here is sunk to a depth of 355 m The working level is up to 275 m The mine now produces about 650 tonnes of ore a day, it is planned to increase production to about 1,000 tonnes

According to R P Sengupta, General Manager of the Narwapahar mine, trackless mining equipment such as jumbo



Uranium ore being collected in bins at a depth of 580 metres. (Below right) Yellow cake, or magnesium diuranate, the end product of uranium processing, is sent to the Nuclear Fuel Complex in Hyderabad where it is sintered and made into fuel pellets which power Pressurised Heavy Water Reactors.



drill, low profile dump trucks and passenger carriers were introduced for the first time in the country here

D Acharya mine manager, said the jumbo drill used drill bits made of tungsten carbide As these drill bits cut into the rock, rock particles flew out

THE mill at Jaduguda is a modern complex with a massive chemical house It can process 1,000 tonnes of ore a day Here there is also a sulphuric acid manufacturing unit and a plant to recover byproducts

According to K K Beri, Director (Technical), UCIL, the processing is done in three stages crushing, grinding and leaching. The ore is crushed and ground and uranium leached into

A jumbo drill cuts the earth deep down the Narwapahar mine.

solution by sulphuric acid The solution is filtered, concentrated and purified, and uranium is precipitated in the form of magnesium diuranate, or yellow cake Crushing is done in stages in rollers with 4-inch-diameter iron rods and steel balls The rods and the steel balls impact on the ore, smashing it The smashed ore is sieved into 4-inch, 2.5-inch, and one-inch particles. The 4-inch and 2 5-inch particles are again crushed, to produce one-inch particles, which are mixed with water (to prevent dust formation) and ground.

The grinding produces a slurry which is 40 per cent solid; it is thickened into 60 per cent solid state This is filtered to 80 per cent solid state This ore pulp is dissolved in sulphuric acid in a process that lasts about 12 hours at a temperature of 40°to 50° C Thus, the uranium gets oxidised and dissolved The left-out solids are gangue minerals – waste products The uranium-bearing solution is filtered and purified by the ion exchange process of clarification Subsequently, the uranium is separated as magnesium diuranate after a reaction with magnesia slurry

A R Ray, General Manager (Electrical), UCIL, said that at a certain percentage of the hydrogen value, the uranium gets precipitated The yellow cake thus formed is sent to the NFC to be sintered into uranium bundles Once uranium is extracted, magnetite is recovered Magnetite has applications in the coal industry.

All the processes after leaching take place in the chemical house Double filtration is also done in the chemical house and its main purpose is to take out the uranium solution ■

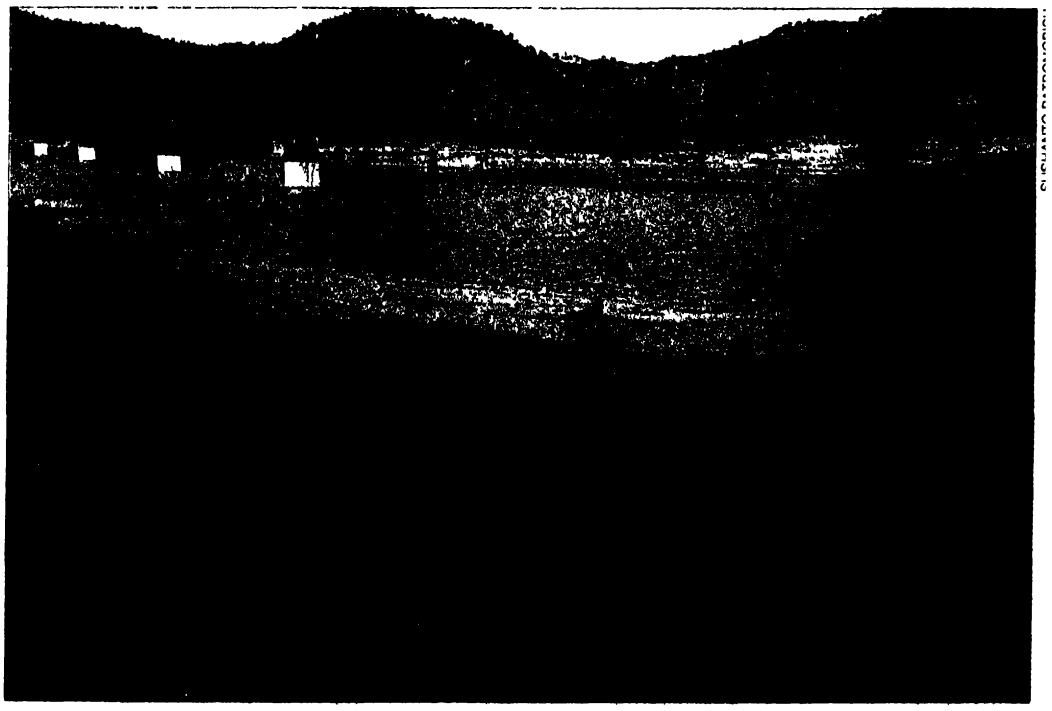
Villages and woes

Tribal people living near the uranium mining and processing facilities say they are the victims of radiation. But UCIL attributes their afflictions to other factors.

SUHRID SANKAR CHATTOPADHYAY
T.S. SUBRAMANIAN

URANIUM Corporation of India Limited (UCIL) is today at the centre of a controversy which relates to allegations that tribal people living near the three tailings ponds outside Jaduguda have become victims of radiation. Tailings are radioactive waste that is left behind during uranium processing. Villages such as Dungridih, Chatitocha, Tilaitand, Mechua and Matigora, are situated between 250 metres to 3.5 km from the UCIL facilities.

Ghanshyam Biruli, president of Jharkhand Organisation Against Radiation (JOAR), which leads a struggle on behalf of the tribal people, says that a survey conducted by the organisation in 1997 revealed that a large number of residents of the villages suffer from cancer, skin diseases, physical deformities, blindness, brain damage, disruption of menstrual cycle or loss of fertility. Children are the most affected, according to him. Biruli belongs to Tilaitand village.



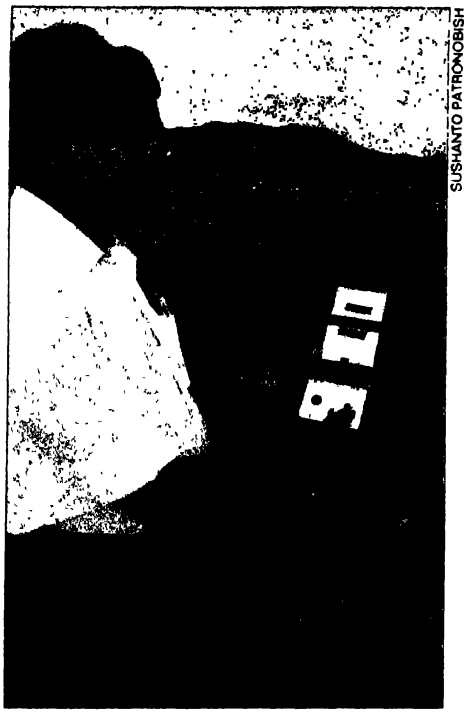
Top officials of UCIL and scientists of the Environmental Survey Laboratory (ESL), Jaduguda, which is under the Bhabha Atomic Research Centre (BARC), refute the allegations and cite a BARC committee report in support of their stand. The report, which was submitted in December 1998, says: "The team was convinced and unanimously agreed that the diseases pattern cannot be ascribed to radiation exposure in these areas."

Since uranium forms only 0.5 per cent of the ore, almost the entire bulk of the material handled is rejected as waste. The waste, however, contains all the radionuclides other than uranium that occur in the ore. It also carries additive chemicals such as manganese, sulphates and chlorides. As Radon-222, a kind of radiation, is emitted from the tailings, the waste has to be disposed of carefully. The tailings are neutralised with lime and carried from Jaduguda through pipelines to the tailings ponds. Clean water from the ponds comes out of decantation wells and is taken through a closed channel to an effluent treatment plant for the removal of radium and manganese. The solid tailings are retained in the ponds.

The ponds, situated about 2 km from Jaduguda, are engineered structures with massive bunds made of rocks and earth. These bunds/embankments are 125 metres wide at the base and 25 metres high.

When the controversy erupted in 1991, it was of a different nature. It began as an agitation against UCIL displacing local people in order to construct the third tailings pond. The tribal people who were threatened with displacement formed the Jharkand Adivasi Bistapit Nirojgar Sangh under Biruli's leadership. He told *Frontline*: "When UCIL started mining in Jaduguda our families gave away their lands. They have not received compensation for them. Our demands are that those who lost their land in recent times in the process of expansion of the company's activities should be employed in UCIL, given compensation based on the price of land, and provided with alternative land to set up their homesteads."

After several meetings with the organisation's leaders, UCIL agreed to allot 12 decimal of land at Do Vani village to 30 displaced villagers and pay a compensation of Rs.65,000 to each family to build a house. J.L. Bhasin, UCIL's Chairman and Managing Director, said: "We were willing to give compensation and employment to the displaced villagers but Biruli tried



A wide embankment under construction for the third tailings pond.

to coerce us into employing people of his choice. We were not ready to accept that."

However, UCIL's problems on this count were far from over. The Jharkhand Adivasi Bistapit Nirojgar Sangh transformed itself into the Jharkhand Organisation Against Radiation as its members felt that radiation from the ponds affected the inhabitants of the area.

In a report in CSE-*Down to Earth* Feature Service, entitled "A deformed existence" and dated June 4, 1999, Manish Tiwari quoted Biruli as saying, "Many women in the area complain of disrupted menstrual cycles. This area also has a high rate of either miscarriages or still-born babies... Biruli claims that nearly 30,000 people living in 15 villages in the five-km radius of the tailings ponds are exposed to radiation. 'Earlier, children were still-born. Now they die within few days of their birth,' he says. He also claims that nearly one-third of the women living in these areas are suffering from loss of fertility. Even animals such as cows and buffaloes are suffering from rare diseases."

SUSHANTO PATRONOBISH

A.H. Khan, scientific officer of the Jaduguda mine, measuring the radiation readings with the help of a dosimeter.

The JOAR found a friend in Medha Patkar, the anti-Narmada Valley Project activist, who visited the villages. According to Biruli, "her visit was a source of strength and support to the people."

Pano Majhi, a JOAR activist, told *Frontline* that "none of the doctors in the area could say for sure that radiation is the cause of the ailments, yet cases of tuberculosis, cancer and child mortality are high here." His father, an ex-UCIL employee, died of cancer at the age of 42. Dopan Majhi (65), pradhan of Tilaitand, said: "When UCIL started its operations, a lot of my contemporaries were employed there. They are all dead now."

According to Jyotsna Tirkey, a member of the Adivasi Mahila Manch, which works in close association with JOAR, it has been found that since 1990, more and more women are becoming barren in the villages situated near Jaduguda. Many of those who conceived gave birth to still-born or deformed babies. She said: "This has shattered the sociological pattern in the villages. More and more marriages are breaking up and the practice of bigamy is growing."

ASHOKE CHAKRABARTY

Ghanshyam Biruli, president of the Jharkand Organisation Against Radiation.

THE Bihar Government set up a committee of the Legislative Council (Rajya Vidhan Parishad Paryavaran Samiti) under the chairmanship of Gautam Sagar Rana to investigate the matter. The committee, in its report submitted in December 1998, said: "The waste material, which contains traces of radioactive materials, should be taken to the effluent treatment plants by pipes. It was noticed by the team that water from the dumping ground is returned by open drains. This may allow some of the radioactive materials to be absorbed by the soil, which may result in long-term radiation problems." The report said that there were traces of radiation, up to 0.2 millirem (mr) an hour, in the "flowing water exposed to the public".

The committee expressed concern about the safety aspect with regard to the tailings ponds. It said: "The people and cattle have free and unchecked access to the area around the mines. The dumping ponds are unfenced and there are no proper warning signs to restrict entry."

Bhasin said that the committee members "bulldozed the people" and did not have a medical practitioner on the panel. Biruli would just collect five people and declare that they suffered from the effects of radiation, he alleged. He added that Biruli did not associate himself with any committee. Bhasin said that the Legislative Council Committee report contained contradictions. The report noted that "none of them (affected tribal people) mentioned any problem relating to radiation hazard..." and that "the radiation was well within tolerance limits."

Bhasin said: "The report is ambiguous. It is in no way conclusive." On the one hand it says that the symptoms could be attributed to radiation while on the other hand it says that there is no proof that the local people had really been affected by radiation, he added.

The BARC committee came to Jaduguda in November 1998 at the request of the State Government. Its report, entitled "Medical Survey of Inhabitants Residing Within Two-Km Radius of the UCIL's Tailings Storage Pond", says: "In order to make a factual assessment regarding health impacts, if any, on account of radiation emission from the UCIL's tailings storage pond, a detailed medical survey was carried out by a team of doctors and scientists from BARC." The 11-member team consisted of Dr. S.S. Ali, medical officer-in-charge. Trombay Dispensary, and overall-in-charge, zonal dispensaries; Dr. L. Kasturi, head of the paediatric unit, BARC Hospital; Dr. M. Seshadri, Bio-Medical Group, and Dr. D.K. Ghosh. Besides, there were two doctors each from the Bihar Government and UCIL, two doctors, including a nuclear medicine specialist from the Tata Main Hospital, Jamshedpur, and a scientist from the ESL.

The BARC report says that the short-listed (doubtful) cases were examined in the hospital and the others at the villages. As most of the cases were of children, Dr. Kasturi "examined them in detail, reviewed the investigations, discussed with other team members... and concluded the opinion." Seshadri and Ghosh reviewed the monitoring levels provided by the ESL and personally verified them by doing the re-monitoring themselves.

The committee concluded: "The consensus of all the doctors was that the cases examined had congenital anomalies, diseases due to genetic abnormalities like thalassaemia major and retinitis pigmentosa, moderate to gross

splenomegaly due to chronic malarial infection (as this is hyperendemic area), malnutrition, post encephalitis, post head injury sequelae and certain habits (alcohol) and have no relation to radiation." Its report adds: "The team was convinced and unanimously agreed that the diseases' pattern cannot be ascribed to radiation exposure in any of these cases."

In addition to a process of case-by-case medical examination, two BARC committee members and a Bihar Government doctor measured the radiation level from the tailings ponds and the nearby areas on November 30, 1998. They were assisted by three scientific/technical members of the ESL. The instrument used was a dosimeter. The measurements were conducted one metre from the ground. These readings were compared with the readings taken between 1993 and 1997. The conclusion was that "the operations undertaken by the UCIL in the Jaduguda environment have not resulted in any increase in the natural background radiation levels prescribed by the Atomic Energy Regulatory Board (AERB)."

Bhasin said that malnutrition is the main cause of the high incidence of tuberculosis and child mortality and the low level of health among the tribal people. The men are generally healthy until the age of 27. He said that after that they took to drinking. This coupled with their poor economic background resulted in the deterioration of their health, he said.

ASHOKE CHAKRABARTY

ASHOKE CHAKRABARTY

Gandhar Karmakar of Mechua village and (below) Mithun Patra of Bhatin village, both seven years old, carried by their fathers. A BARC report survey found that crippling diseases among people in the villages near the tailings pond could not be ascribed to radiation.

TOP UCIL officials accompanied a team of journalists to the tailings ponds. The ponds are surrounded on three sides by verdant hills. In the valley there are paddy fields and the villages.

The ponds cover an area of 82.28 acres (32.9 hectares), 35 acres (14 hectares) and 76 acres (30.4 hectares) respectively. The first two have solid embankments as prescribed by the AERB. The bund for the third is under construction at a cost of Rs.2 crores.

At the first pond, saturated with tailings, A.H. Khan, scientific officer and officer-in-charge, ESL, measured the radiation readings with the help of the dosimeter. Inside the pond the device registered a radiation count of 0.75 microGray an hour, which is three times the permissible limit of 0.25 microGray an hour. However, the level started dropping as the meter was moved away from the pond. It read 0.2 microGray an hour on the embankment, 0.17 outside the bund, then 0.15 and 0.11 outside – all below the permissible limit. In the third pond, the reading on the bund was 0.14 microGray. Khan said: "If the radiation count just outside the tailings pond falls below the permissible limit, then it is obvious that in the nearby villages it is much lower." (These limits are set by the International Commission on Radiological Protection). He said that radiation from the ponds did not go beyond a few metres.

According to Khan, the local background radiation in the area is 0.15 microGray an hour. For the common man, the threshold limit is 0.25 microGray an hour. The annual limit is 1,000 microGray. One would receive this limit (of 1,000 microGray) only if one were to stand in the pond for four hours every day, 365 days of a year.

Khan, who has been on the International Atomic Energy Agency's (IAEA) technical/advisory committees, said: "In the last 33 years, there has been no significant impact on radiation because of the UCIL's operations." He said that while the limit was 20 millisieverts for a mine worker, the average radiation doses received by him in the last five years at Jaduguda, Bhatin and Narwapahar were eight, five and seven millisieverts respectively.

K.K. Beri, Director (Technical), UCIL, said: "We give all the information to the IAEA." He said that environmental gamma radiation measurements were done in 22 places up to a distance of 25 km (at Jamshedpur) and they indicated that UCIL's operations had virtually no impact on the environment. The places included the Jaduguda, Bhatin and Narwapahar mines, Dungridih north and south, Chatitocha, Tilaitand, Matigora and Jamshedpur. The natural background exposure level in this region varied from 782 to 1,586 microGray a year with an average of 1,106 microGray a year. In fact, the allowable gamma radiation level for exposure to the public from the nuclear industry was 1,000 microGray a year above the natural regional background level, Beri said.

Bhasin said that each UCIL worker was sent for medical examination every five years. They undergo breath examination regularly. While the worker kept the medical examination record, UCIL kept the radiation records. "Not a single worker has asked for the records, nor have I denied him these when asked," the CMD said. Between 1967 and 1994, 22 employees had been stricken with cancer, he said.

Bhasin said that UCIL wanted 15 families living near the first and third ponds to vacate. "That is not because there is a hazard of radiation but we want some elbow room." UCIL offered these families alternative sites in three places, levelled the land and offered to instalhandpumps.

The district administration is unable to shift them. Bhasin asked: "Why do they not shift?" Thus the stalemate continues. ■

INSIGHT

M.T. VASUDEVAN NAIR

A Malayalam story by the Jnanpith Award winner, translated by V. ABDULLA.

IT was wrong to have assumed that the news would not have reached here.

It was a habit with her to come on solitary visits to her home in the village once in a way. As such, no one wondered why she had come.

She had a bath, breakfasted and came and sat on the verandah. Her Amma (mother) came near her and started off without any preliminaries: "Sudha Kutty, is what we hear true?"

"What did you hear?" She looked straight at her mother, deliberating on how to build a wall of words around herself.

Amma closed her eyes and said in a low voice: "That you and Prabhakaran are separating..." Amma had this habit of closing her eyes when she had something embarrassing to say. Sudha decided to take an aggressive stance instead of giving a direct reply. "Who sends such telegraphic news over to you."

Amma sat down a little distance away and stretched her legs on the stone steps. "Sreedevi had come to Narayanan Kutty's place two days ago. Her Devoo's husband is in Madras, isn't he?"

Her younger sister's mother-in-law had the habit of broadcasting gossip to relatives.

"It was in Vishalam's letter also."

Once she got the news from her elder sister, Chandrie, the younger one, would also write and tell her mother.

Sudha stepped out into the open front yard. Although it was only ten o'clock in the morning, it was unpleasantly warm. She walked close to the shade of the wall. As she walked a little fast, her rubber slippers made a noise by tapping on her heels.

She came to this old house, where her mother stayed by herself for solace and quiet. There was no telephone to disturb her. She did not have to dress up and entertain guests. She did not have to keep awake until midnight with an artificial smile on her face, pretending to enjoy the jokes of Prabhakaran's executive colleagues. But then, to come down here, she would get permission only once in a while. That too, only for three or four days.

The first question Amma always asked was: "When do you have to go back?" She did not ask it this time. When she walked back and reached the verandah, Amma said: "People are saying all sorts of things. What did really happen?"

She did not reply.

"As far as I could make out..."

"It is true, Amma. It's better for us to separate."

Amma sat down, staring at the steps.

When the girl help in the kitchen came and asked for something, Amma got up and went inside.

Sudha had come on 15 days' leave from the Bank. Some people at the Bank had an inkling about what was happening. She spoke frankly only to the Cashier, Nirmala Srinivasan. It was Nirmala who fixed up a room for her at the YWCA.

Amma liked to live by herself. She never encouraged visits from relatives or friends. She had no complaints when the children did not visit her. Once a month she would write inland letters to her three childen, whether or not they replied. She would always have the help of some girl from the neighbouring house. On the last occasion Sudha came, Amma told her about the impending wedding of the girl who had been helping her until then. Amma presented the girl with a gold chain weighing one sovereign.

"All the three of you must try and help her out. You can send money orders in Kuttiraman's name. Or else you can send them in my name."

Vishaledathi and Chandrie were to give three hundred rupees each. Sudha was asked to give four hundred rupees. Two of them worked, and they had no children. In the case of Sudha, she had to pay a hundred rupees more.

When that girl went away on getting married, her younger sister came to help in the kitchen.

Vishaledathi was concerned that Amma lived alone. In Thiruvananthapuram she had a large house with a retinue of servants. And it was an occasion when all of them had gathered there. "There is not even a doctor nearby to see Amma when she falls ill," Vishaledathi complained.

"I will not fall ill," was Amma's reply.

A black fowl with her chicks came through a gap in the wall near the banana grove and hesitantly looked around the yard to peck for food.

"It is a wild fowl. It always comes at this time. God knows where it's from," Sudha heard Amma saying.

She looked at them with amused interest. The mother hen was frightened at seeing people around.

Hiding herself under the shadows, Sudha hesitantly moved forward to take a closer look. The mother hen clucked in fright and ran away, followed by the chicks.

Amma said nothing while they ate lunch.

IN the evening Sreedharettan, brother of her younger sister's husband, came. He was the headmaster of the local High School and one of the leaders of the community.

Sudha enquired about his family and bemoaned the absence of any breeze in that warm weather. She readied herself for a cross-examination by him on the basis of local gossip.

"How many days' leave do you have, Sudha Kutty?"

"One week."

Amma intervened: "I don't have milk to serve you tea."

Sreedharan said he did not want tea.

Sudha was at a loss when small talk gave out. But Sreedharan began talking of the oppressive heat in Madras, about the wealth reportedly amassed by Jayalalitha, about Karunanidhi's rule and so on while Sudha sat listening with nothing to add on her own. As the conversation petered out into nothing, he got up to leave.

She had heard that this man's name had also come up when marriage proposals for her were under discussion.

A SWARM of dragon flies started buzzing around as sunset approached. She had heard in her childhood that when dragon flies hovered low, it was the sign of approaching rain. She

wished it would rain. The heat of the Meenam summer here was no less than the Vaikashi summer in Madras. Because of a family dispute over who should spend the money for house repairs, there were no fans in the house.

"Sleep in the south room. There will be some breeze there," Amma said as she served dinner.

"I don't mind sleeping anywhere."

In Mother's room there was a rusty old table fan, which Father had bought years ago.

Sudha had not brought anything to read. Nor had she picked up anything on the way. Father's old books lay in a heap on the round table in Amma's room as she was in the habit of reading something for a while at night. But there were no new books there. Sudha took a look at the book Amma had kept on top of "World History". It was "Hima Giri Vihara" (Discourses from the Snowcapped Mountains).

A bed had been made in the south room. Sudha changed into a nightie. She looked at the time: Eight forty-five. In the city it would be time for Prabhakaran to have his two beers before getting home.

Amma walked in. She said: "If you want, bring that table fan here. It is noisy but it still works."

"No, there's no need."

To make Mother go away soon, she sat on the bed as if she was about to lie down.

"Even then –" Amma wanted to talk.

"You can speak out."

"If you want to separate after having lived together for five years...."

She kept silent

"What will people think when they hear of it?"

Sudha turned a little so that she could avoid seeing Mother's face.

With the relief of having got a topic, she suddenly asked: "How does one phone from here if there is a need?"

"Now there's a booth adjacent to the pharmacy. You can call anywhere you want."

Again words dried up.

"What have you decided to do?"

"I'm thinking it over."

"Should I come?" Amma said. "Should I speak to Prabhakaran?"

Sudha said hastily: "No, no."

Amma looked at her plaintively.

Suppressing her anger, Sudha said: "There's no need to bring about a compromise, Mother."

Amma went out.

Sudha knew Amma would never talk about this again. Silent acquiescence was second nature with her. Father had died after a paralytic stroke had confined him to bed for a year and a half. Amma never uttered to anyone a word of her suffering or the cruel blow of fate that she had been subjected to. Even when people murmured about the entire savings of the man having been grabbed by a step-sister, she was not known to have uttered a word of protest.

Next morning Amma told Sudha: "Your Valiamma from Cholayil sent word she would like to see you."

She hesitated a while.

"The old lady heard it from Janu, who gets milk for us from the neighbouring house."

"Hm... I'll visit her."

"Last time also you said you'd go but didn't."

"All right."

"She's eighty-four now. One doesn't know how long she'll last. She can't see a thing. Her eyes are gone. Otherwise she's quite fit."

Valiamma at Cholayil was Sudha's grandmother's elder sister. All the children called her Valiamma because Amma called her so. Valiamma used to come home to visit her younger sister. She was fond of doing Vishaledathi's hair in different ways. She would make the three children sit before her at sundown and teach *sandya vandanam*, to recite evening prayers correctly.

Grandmother would give the bed to Valiamma and sleep on the floor. Valiamma liked to tell stories to the children. She would get hold of Sudha Kutty for the purpose. Vishaledathi would dodge her and Chandrie's eyes would be heavy with sleep.

There was the fascinating story of how Palat Koman, the warrior in Vadakkan Pattu, was kept concealed behind the long, flowing tresses of Unniyamma while she bathed in a pond.

Silent acquiescence was second nature with her... Amma never uttered to anyone a word of her suffering or the cruel blow of fate that she had been subjected to. Even when people murmured about the entire savings of the man having been grabbed by a step-sister, she was not known to have uttered a word of protest.

Then there was the story of Kovalan and Kannagi. Later, when she first visited Madurai, she recalled the story Valiamma had narrated: In sheer anger, Kannagi plucked her breast and threw it into the city, which was soon engulfed in flames. Valiamma would describe it as if she was an eye-witness to the holocaust.

Back home, Sudha had decided to buy some gift for Valiamma. When she was about to go shopping, she picked a minor quarrel with Prabhakaran and lay down in her bed as a protest, refusing to go out. She got up only when it was time to leave for the railway station.

Sudha last saw Valiamma the day before her wedding. More than five years had gone by. Even when Grandmother was alive, she somehow liked Valiamma more. Yes, she came home seven times after the wedding. On two occasions Prabhakaran was also with her. Every time Valiamma would enquire after her. Her house was hardly three furlongs away. And yet she could not visit her, for one reason or the other.

The wild fowl and its chicks came to the yard that day also. They appeared to be less frightened than the previous day. She went a little closer. They were mother-hen and chicks all right. She watched as sunlight hit their smooth feathers and dispersed as blobs of light.

"You have some guests coming,' came a loud voice, hearing which the fowl and the chicks scurried away into hiding.

When she looked, it was Sreedevi Amma and her younger sister.

Amma observed the traditional courtesies and asked them to take their seats. She asked Janu to make tea.

Amma looked at Sudha a little uncomfortably and disappeared inside. Her glance was significant. "Hear your bellyful" was what it meant.

"Sudha, sit down. You mustn't take offence if I am a little outspoken."

She did not sit down. She failed in her attempt to laugh.

"You may speak."

"Why beat about the bush? I have to speak out. If what I've heard is correct, things are bad indeed."

Sudha somehow pretended to laugh. She said nonchalantly: "It's bad but there's no way out."

Sreedevi Amma's face darkened as she looked at her younger sister who took the hint and said: "There's something in what Narayanan Kutty has written. It brings shame to the family."

Sudha stood there, a silent listener.

"To live together for five years and then put an end..."

Sreedevi Amma looked at her sister as if asking her to proceed. "Faults and failures there would be, but one has to accept them. Married life involves that. How much your Mother suffered!"

Sudha attempted to laugh. First she had wanted to say "Sreedevi Amma, the fault is not Prabhakaran's but mine," but then decided to say nothing.

They went on talking. From childhood she had developed a surprising ability to shut her ears to unwanted talk and commotion. She had learnt to be deaf to questions regarding names, characters in novels, the topography of places seen during childhood, the faces of some of her classmates in the elementary school and so on.

As they got up to leave, Sreedevi Amma said: "Do you think I have talked at length to no purpose?"

Sudha laughed and replied, "No, not at all."

"Don't you think there's something in what I said?"

"Yes."

She sighed in relief. "What have you decided?"

Sudha said laughing: "Let me think it over."

With a wide grin denoting satisfaction at her mission having succeeded, Sreedevi Amma left, followed by her sister.

Amma asked: "When are you going to Cholayil to see Valiamma?"

"I shall go."

Valiamma would also be getting ready to pour forth advice.

At noon Sumathi, with whom she had been at the High School, came along with her three-year-old daughter. She used to wait for her every morning near Asari Valappu. The tiny wart below her nose seemed to have grown. She got married before she completed her tenth standard.

She would not sit down although Sudha pressed her to do so.

"Well, Sumathi, how are you?"

"Oh, getting along."

She wore a shining sari, coloured blue, violet and red. It must have been brought by her husband who was working in the Gulf. He would come home on a two-month leave every alternate year. Heady fragrance enveloped Sumathi. Her neck and arms were loaded with gold ornaments.

"Will you be here for some time?"

From childhood she had developed a surprising ability to shut her ears to unwanted talk and commotion. She had learnt to be deaf to questions regarding names, characters in novels, the topography of places seen during childhood, the faces of some of her classmates...

"Yes, for a few days."

Sumathi had built a house, and the house-warming was the following Monday.

"Sudha Kutty, you must come."

"Yes, I shall, if I am here."

She ran her fingers through the hair of the child who was tracing the flowers printed on her mother's sari. Sudha asked: "What's her name? I've forgotten."

"Karthika."

She tried to hold Karthika by the hand but the child resisted and stayed with her mother.

Sumathi moved a little closer to her and asked confidentially: "I heard there's some family quarrel."

"Oh, you've also heard of it?"

"I heard it from the wife of Shankerattan who came for the mosaic work. I couldn't believe it."

Sudha just nodded.

"Is it true, Sudha Kutty?"

She laughed. "Yes, in a way."

Sumathi's eyes widened in anxiety as she bent down, almost touching Sudha's forehead and whispered: "Don't think I'm giving advice to people who are more educated and know the world better. It's far better to get reconciled and decide to live together."

Sudha held her by the hand.

"Let me think it over."

"It was a mistake to have decided not to have children. Whether it's a boy or girl, such evil thoughts would not have crept in."

Sudha looked at Sumathi with some surprise. She had got a colloquial word of which she made a mental note: "evil thoughts".

Sumathi left.

In the evening, when Janu brought the milk, she said that Cholayil Valiamma had again enquired after her.

"You had better go," Amma said.

"Yes, I'll go tomorrow."

"There's no need to give any money. All the same, give her something. When Visalam went she gave her fifty rupees, the old lady kept telling all and sundry about it for days on end."

Amma was laughing as she said this. For the first time during this visit Sudha saw the gloom on her face disappearing.

Sudha wondered whether she should say that she would not compete with Visaledathi.

She decided she would leave on Monday. She did not want to wait for her two weeks' leave to be over. She had heard more than enough during her three days' stay.

Should she call Hyderabad? She had noted the mobile number in the notebook in her handbag. And she knew his direct office number.

There was no one to be sent to reserve her ticket. She could get into the ladies' compartment. After all, it was only a night's journey.

She had been told to ring up even when she went home.

But he had added, "If possible."

The next day, after breakfast, she said: "I shall go and see Valiamma."

"Take Janu with you."

"There's no need."

FIRST she went to the new house that had come up at Asari Parambu. Filled with excitement and happiness, Sumathi did not know how to welcome her. The windows were being put in under the supervision of Narayanan, the carpenter.

Sudha went round the inside of the house.

"Both bedrooms have attached bathrooms," Sumathi said with obvious pride.

Sudha had difficulty in refusing the invitation to have something to drink.

"There was a letter saying he's coming in July."

"Ask him to take you to Dubai. You should also see the place."

"That's seems out of the question. It is allowed only for persons with high salaries."

All the same Sumathi was a very happy person.

"Sumathi, I'll take leave of you. I want to step in at Valiamma's place."

"You remember what I told you?"

"Yes, of course."

She turned round and laughed.

WHEN she passed the bamboo cluster she saw the now-dried-up *chola*. There used to be green bramble bushes on either side. The channel used to be full

of water round the year. During the rains, water would overflow the bund and into the channel below which would form a minor tributary of the river.

The house was built by Valiachan, the great grandfather. In the place of the "gate house," there was a bamboo stile now. When she went up the steps and entered the front yard, there was no one there. Pepper had been spread out to dry on a bamboo mat. As she stood there hesitantly, she saw Thankedathi stepping into the verandah.

"Look, who's come. – Achamma complained even this morning that you'd go away without seeing her."

Thankedathi insisted on her sitting in the chair drawn up near the built-in bench with a back rest. She started talking of family matters. Her two sons were studying and had gone to their hostel because of practical examinations. The youngest, a girl, was in the ninth standard.

When their mother died, her younger sisters took their share and settled down in new houses built by their husbands. "This crumbling house was given as my share. There was no one to speak up for me."

Her voice broke as a customary tribute to the premature death of her husband. She wiped her eyes which were dry.

"Where is Valiamma?"

"She's in the north room. She cannot see anything. She doesn't like us to lead her by the hand. One day she might stumble and fall."

"No one will have any trouble on account of me," Valiamma's voice was heard from the door.

With her hand on the door-frame, she stepped on to the verandah with meticulous accuracy. Sudha hurriedly got up and went near her. Even at eighty-four, Valiamma stood erect with not a trace of any stoop. Her blouse and the upper-cloth covering her were pure white. She wore a bordered *mundu* (dhoti) which glistened with starch. Sudha stole a glance at Valiamma's head with its profusion of grey hair. When she had heard the story of how Komappan was hidden in the pond behind the loosened hair of Unniyamma, she had visualised the woman as Valiamma herself.

When Thankedathi started pulling up a chair, Valiamma told her: "I'll sit here. Sudha Kutty, sit down."

Valiamma's hand came towards her arm more or less correctly. She sat down on the bench near Valiamma.

"Sudha Kutty, you've put on a little weight?"

Looking at her arm, she agreed.

"Weren't you panting when you took four steps towards me? Even without seeing, I can understand by your breathing." Valiamma laughed.

Her grey eyes looked lifeless. But there were no wrinkles on her face though age had made furrows on her neck.

"Thankam, make some tea. If you have any jackfruit, fry some."

Sudha said: "Oh, I don't want anything. Just half a glass of tea, maybe."

Valiamma was waiting for Thankedathi to go to the kitchen.

"Child, what have you decided?" Valiamma's question came all of a sudden, leaving Sudha jittery.

"Don't be frightened. I asked this not to berate you or find fault with you. Isn't it more than four years since we met?"

She felt relieved.

"People here squirm when I speak out. They wonder what I can see with both my eyes clouded over with cataract. Can they see what I see?"

She had raised her voice a bit, perhaps for Thankedathi to hear her from the kitchen.

Valiamma again lowered her voice: "What have you decided?"

She felt disturbed. She began to breathe faster.

"If you feel you had enough of one another, it is time you put an end to it. Marriage is a personal matter. There is no point in enacting marriage as a sort of charade to satisfy people around you."

Sudha sighed, pulled up her legs and squatted on the bench facing Valiamma.

Valiamma moved her head closer to hers. "My first husband... none of you would have seen him."

"My mother did. A singer, wasn't he?"

"He was a music teacher. A Bhagavathar. That was the problem. He conducted music classes at Sharon House. He ate at our place. He was a fine singer. He wore silver ear rings studded with a red stone each. He always had sandal paste smeared on his forehead. Take it that I felt attracted to him."

Sudha forgot her own troubles and problems. These were pushed to the back of her mind. She waited to hear Valiamma's words with the pleasurable anticipation of her childhood.

Valiamma ran her fingers through her hair and chuckled.

"He left before a year was over."

"Amma has mentioned that."

"He didn't go of his own accord. I told him to go," Valiamma murmured.

Valiamma fixed her sightless gaze on some spot in the distance and smiled.

"He had nothing material to give me even for my bare needs. I could have overlooked that. But he would talk and behave like a woman with a girlish lisp and shyness to boot. There was nothing masculine about his appearance. I told him to his face that it was better to end our relationship. There was no other way."

Sudha had heard of Valiamma's first marriage to the Bhagavathar but did not know any details.

Then Grandfather came into the picture. He was working in the Salt Department. They had three children. Grandfather died. The three children soon followed him. Only Valiamma survived.

"Haven't you seen your Valiachan? He was not good-looking or handsome, was he?"

"I've seen him when I was just a child. He was then ill and confined to bed."

"There was no other personality like him in the entire village. During festivals he would head the procession. If an elephant was in musth only Madhavan Nair could control it. If they wanted fireworks with eighteen bursts of colour, he alone could manage it."

Thankedathi brought tea.

As long as she stood there, Valiamma sat in silent dignity. The moment she went in, Valiamma laughed once more.

"On the outside he had the appearance of an angry cobra. He would lose his temper and shout at people. But at heart he was soft and kind as I alone knew. I had to say I had a cold, to see his anxiety and concern."

Valiamma's laughter became louder.

Sudha forgot her own troubles and problems. These were pushed to the back of her mind. She waited to hear Valiamma's words with the pleasurable anticipation of her childhood.

"I had never been a domesticated person but an upheaval took place. It happened after I gave birth to Kuttyaranan. An obsession for a man took hold of me. Take it that

I felt attracted no end. I had to take firm control of myself and curse my abysmal stupidity. My willpower took charge and nothing came of it. But even then...."

Without completing her words Valiamma opened her mouth wide and laughed. I noticed that she had lost very few teeth.

"Then I was your age," Valiamma added, sighing.

"Valiamma, is that man still alive?"

"Gone. All are gone. I alone am left behind. I have to wait till the call comes for me. One is not allowed to go of one's own accord."

Valiamma shook her head as if she wanted to rid herself of something, slid back a little and reclined, with her back resting on the wall.

"The other person, who is it Sudha Kutty?"

Sudha gave a start. "What?"

"You saw a man. You liked him. You decided to live with him. Isn't that what happened?"

"Who told you this?"

Valiamma drew up her knees.

"No one has to say these things. Who is it, child?"

She found it difficult to control her embarrassment.

"Is he someone you work with?"

"No."

She would find it difficult to explain the circumstances. She met him at a dinner got up to bid farewell to the outgoing manager. Janardhana Rao, who claimed to be a singer, was singing a ghazal. The chief guest, the organisers and the invited clients were steeped in alcohol and small talk. He was standing at the other end of the room, a glass of orange juice in his hand. As she looked at him, he slowly edged his way towards her. Her mind was in a flutter as she said to herself:

"Oh God, these hesitant steps are coming right into my heart."

She felt happy when he told her that he was in Madras for ten days every month. As the guests approached them, he said in a low voice: "I can get you over the phone at the Bank, I suppose."

She nodded in affirmation. She could not ask him why, for what purpose, he wanted to call her.

Valiamma asked: "Is he married?"

"No."

"Does Prabhakaran know?"

She paused before saying: "Somewhat."

"Then the two of you should separate. He will soon get some other woman. That's not a serious issue. You must get separated."

Valiamma did not look satisfied at all. "True, if there are children, their maintenance and upkeep should be provided for. But why should the Judge interfere with persons who do not want to live together?"

Sudha was amused.

"Separation is not that easy these days, Valiamma."

"If you don't want each other, there's the end of it. Isn't that so?"

Sudha retrieved the confidence to explain the position with clarity. "It's not like that. The couple have to submit a joint petition. Six months later, the two of them would be summoned before the Judge and asked whether they still persisted in their desire to separate. If they confirm their decision, they have to wait for another six months."

She could see anger slowly spreading over Valiamma's face.

"If the two of them have agreed, does it require the Judge's consent?"

"That's the law, Valiamma."

Valiamma did not look satisfied at all. "True, if there are children, their maintenance and upkeep should be provided for. But why should the Judge interfere with persons who do not want to live together?"

"The law's like that."

"Law indeed! Don't provoke me to speak out my mind."

As Thankedathi came to remove the empty glasses, Valiamma was muttering soundlessly. Thankedathi said: "Till last year Achamma could see things like a kind of shadow. Even that's not there now."

Sudha said: "An operation will restore your vision. Many get it done even at this age. If you like I can take you to Madras."

Valiamma's laugh had a tinge of bitterness.

"No, no, why should I get back my vision? Haven't I seen enough, my child?"

Sudha got up to go.

Thankedathi said: "You can go after having food here."

"Oh, no, Amma would have cooked my meal by now."

"Rice is on the boil. Sudha Kutty, you must look in here when you come next."

"I shall come."

Thankedathi went inside.

Just then the fourteen-year-old who had just come was removing the bamboo stile to enter. Valiamma's eyes turned to the entrance. The girl removed her chappals, looked at Sudha and smiled. She lowered her head and noiselessly went towards the door leading inside. As she reached the door, Valiamma asked: "Where had you gone?"

The girl was shaking like a leaf.

"To the Sharon. To get a book from Sharada."

"Did you have to get dolled up in silk to go to the Sharon?"

The girl went pale. In fright, she managed to scurry inside.

Valiamma turned her face towards Sudha.

"Did she have a book in her hand?"

"Er... No."

"The moment I heard the rustle of the dress, I knew it was silk."

"After all, she's a child, Valiamma."

"Hm. The girl's quite grown up for her age. I'm able to sense things."

"Let me go."

Valiamma also stood up. Remembering what Amma told her, Sudha quietly opened the purse in her hand.

Valiamma said: "You are about to give me some money. No, no. Why does Valiamma require money?"

Stunned, Sudha hastily shut her purse.

"I shall come ... When I come..."

There was a break in Valiamma's voice.

"If I am alive, you must come and see me. That's all I ask for."

She saw Valiamma's lustreless eyes fill up. Uncontrollably her own were also filled with tears. She bent down and touched Valiamma's feet in respect. She recalled that she had done this five years ago.

Valiamma placed her hand on her head in blessings and said: "May it turn out well, this time at least."

When she went through the bazaar she saw the board of the STD booth from a distance.

She intoned to herself both the telephone numbers. She must make sure of the mobile number from her notebook. After finishing the call, if she hurried home she would not miss the sight of the wild fowl and chicks entering the yard.

She quickened her pace. ■

A secular expose

A. G. NOORANI

The Concerned Indian's Guide to Communalism edited by K. N. Panikkar; Viking, pages 252, Rs.395.

THE show of moderation is deceptive and is intended to deceive. Atal Behari Vajpayee does not enjoy command over the Bharatiya Janata Party. It suits its mentor, the Rashtriya Swayamsevak Sangh (RSS), to leave him alone till it is able to muster a solid majority in its own right. The allies will then be discarded – along with the mask of moderation. None should be surprised at the recent recruitments made to the BJP. Some joined it for the lure of power, others were closet Hindutva adherents anyway.

The situation lends added relevance to this collection of essays edited by an academic who combines scholarly pursuits with active espousal of causes he holds dear. Professor of Modern History at the Centre for Historical Studies at the Jawaharlal Nehru University, K. N. Panikkar has written extensively on the cultural and intellectual history of modern India.

An anguished concern at the present situation is reflected all over his incisive introduction. A religious concept of nationhood led to India's Partition. The two-nation theory was propounded by V. D. Savarkar in his book *Hindutva* in 1924. M. A. Jinnah began to advocate it from 1939 onwards. But as Nehru wrote in his *Autobiography*, "many a Congressman was a communalist under his nationalist cloak." Rajeshwar Dayal's memoirs, *A Life of Our Times* (1998), record how, as Chief Secretary of Uttar Pradesh, he found damning evidence of the RSS boss M. S. Golwalkar's complicity in a conspiracy to stage anti-Muslim pogroms but the man was protected by the Chief Minister, Govind Ballabh Pant, from arrest and prosecution. Pant foiled Nehru's and Patel's attempts to undo the forcible conversion of the Babri Mosque into a Hindu temple in the night on December 22/23, 1949.

Gandhi's assassination and Nehru's strong commitment kept the Hindutva forces at bay. The situation has "changed dramatically, particularly during the past two decades", Panikkar writes. Hindu communalism has spread its tentacles in civil society and also succeeded in gaining access to state power. In the process some of the vital principles and practices of a secular state and society have been either undermined or endangered. The essays collected in this volume seek "to join the public debate made imperative by the communal initiatives taken by the government led by the Bharatiya Janata Party" during its brief term and by the social and cultural interventions of the members of the Sangh Parivar, particularly the Vishwa Hindu Parishad (VHP), the RSS and the Bajrang Dal.

The contributors are writers of repute, each distinguished in his/her own intellectual discipline. It is only appropriate that historians should lead the charge against obscurantism. "For, the Hinduised history is a deliberate construction, which seeks to valourise the Hindu in the chequered history of the nation. It traces the lineage of the nation to the ancient Hindu past, claims the Hindu scriptures as the source of all knowledge, the Indian civilisation as superior to every other civilisation, and ancient India's achievement in science, mathematics and other branches of knowledge as unsurpassed by other civilisations. The political history of India is interpreted as a record of the heroic Hindu resistance against foreigners and the last one thousand years as a period of continuous conflict between the Hindus and Muslims."

Panikkar recalls that a Maharashtrian intellectual in the mid-19th century, Bhaskar Pandurang Tarkadkar, distinguished the Muslim rulers from the British. The only instance of foreign rule in India, he held, was British colonial rule. Although they ruled for about 200 years the British distanced themselves from Indian society. Unlike earlier rulers such as Mughals and Turks, they drained wealth out of India.

"The politics of Hindutva, as the essays in this volume bring out, is primarily engaged in defining the nation as Hindu through a process of cultural homogenisation, social consolidation and political mobilisation of the majority community and at the same time, by stigmatising the minorities as aliens and enemies."

The essays seek "to join the public debate made imperative by the communal initiatives taken by the government led by the Bharatiya Janata Party" during its brief term.

ROMILA THAPAR, one of India's foremost historians, metes out deserved justice to the communal interpretation of India's history, a subject on which she has written extensively. British contribution to the writing of India's history was baleful in its periodisation of Indian history as that of the Hindu, Muslim and British periods. Muslim and Hindu communalists took over and constructed two monolithic communities, uniformly hostile, utterly free from diversities, immune to interaction and indifferent to a nationalism transcending the communal divide.

Romila Thapar writes: "The tragedy is that actually the study of the past sends us very different messages but we choose not to read them. Indian society has always been a multi-religious, multicultural society where identities have inevitably been multiple. Such a society

is not in itself secular but is conducive to the evolving of a secular society protecting the civil and human rights of all its citizens. Our history in India has been very different from that projected in the two-nation theory and the Hindutva ideology. If we can read our history with more sensitivity and insight, it would contribute to avoiding a fascist future."

What Nehru wrote of the Hindu Mahasabha applies to the RSS and its political front, the BJP. Their communalism "masquerades under a nationalist cloak," he wrote, and added insightfully: "The test comes when a national and democratic solution happens to injure upper-class Hindu interests." It is a test in which the Mahasabha "repeatedly failed". So have the RSS and the BJP, repeatedly.

As Jayati Ghosh writes in her incisive analysis of the economic underpinnings, "In the Hindutva world view, the only internal enemies are those determined by social and cultural differences. There is no recognition of classes or even of domestic economic antagonisms in this perspective, and therefore no understanding of the constraining role on development which can be played by certain classes such as large landed interests and big capital." She points out that while the Hindutva brigade's rhetoric is majoritarian, "in actuality it represents the interests of a very small minority – typically male upper-class and upper caste – and even of a relatively small sub-section within that group."

Tanika Sarkar's essay exposes "the gender predicament of the Hindu Right" with a wealth of documentation carefully sourced. She points out a curious feature of its behaviour which has been overlooked. The Sangh Parivar consciously projects women to the forefront. But "the women who are thus exalted do not come from women's organisations, nor do they have prominent bases among the women of their own political clusters. They also are quite indifferent to women's issues, problems and demands."

Sumit Sarkar's essay on conversions records how the fight against Christian missionary activity was an early plank of the Jan Sangh. Even as Prime Minister, A.B. Vajpayee sees nothing wrong in sponsoring officially (January 10, 1999) a debate on the right to practise and propagate one's religion. Rajeev Dhavan's analysis of the constitutional implications of the secular credo rises far above the level of arid legalism common to most lawyers. His interests are wide and his research is extensive.

Siddharth Varadarajan caps the contributions with one of the ablest analyses of the role of the media yet written. He is one of the rare breed who can effortlessly glide from academia to journalism and back. The thesis is made good convincingly. "Mass media's tendency to fragment news serves to depoliticise the body politic... When combined with fragmentation, the immediacy of news generates individual passivity and a public sphere that is generally inert except when the mass media itself is used by power politics to mobilise it. In the context of communalism in India, the layers of combustible myths which accumulate around most riots as time passes make this kind of memoryless media all the more manipulatory and dangerous."

The Sangh Parivar projects women to the forefront. But "the women who are thus exalted do not come from women's organisations, nor do they have prominent bases among the women of their own political clusters."

Nuances and complexity are shunned in "junk food journalism, which one author has labelled 'News McNuggets'." Varadarajan's essay, the longest in the volume, briefly surveys the history of Indian journalism to show how the communal slant became pronounced over the years. "Most Indian newspapers in the latter part of the nineteenth century had internalised the colonial political culture to such an extent that even when colonialism was challenged or excoriated, it was often from a 'Hindu' or 'Muslim' point of view. Even language became a bone of contention. The Urdu-Hindi divide began shortly after the advent of British rule and was reflected in some newspapers using Devanagari and others the Persian script."

Some grave errors of lasting consequence were made by the Congress, not least, by Gandhi. His "tendency in his capacity as a Congress leader, to use 'we' and 'us' when referring to Hindus has also been criticised for its alienating effect on Muslims. See R. Palme Dutt, *Inside India Today*, London, 1940; page 326," a footnote points out.

Coming to present times, Siddharth Varadarajan discusses the role of the media during moments of trial – the Punjab crisis and the anti-Sikh riots; the Shah Bano case, the Ayodhya movement and the communal riots of which there seems to be no end. The Shah Bano case, for instance, was essentially a gender issue. The BJP made it a communal one. Large sections of the media played the same tune.

"As a manager of news, the BJP has proved to be much more skilful than the Congress or any other political formation in the country. In the run-up to the Ayodhya agitation, the party pioneered the use of press releases, leaks and press conferences, which took place on more or less a daily basis, thereby ensuring that the BJP and its activities and views received continuous and prominent coverage in the newspapers. According to the media analysts Charu Gupta and Mukul Sharma, the BJP's forte is the creation and management of the pseudo-event."

The print media is not the only culprit, Doordarshan and All India Radio played no mean role. Contrast Doordarshan's treatment of the film *Tipu Sultan* with its generosity towards *Ramayana* whose serialisation many now acknowledge was a mistake of great consequence.

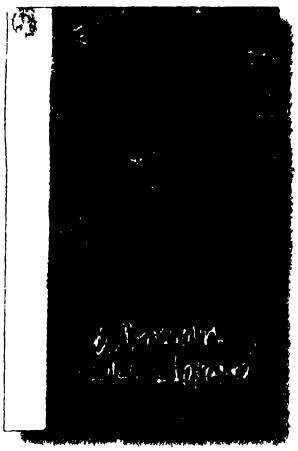
It is a very thought-provoking contribution, altogether. "Communalism in the media is a problem but it is only an instantiation of the largely undemocratic nature of the mass media. What we need, therefore, is journalism which raises the level of discussion in society by addressing the concerns of the people. In modern market economies, two obstacles need to be overcome. The first is the market mechanism itself."

The other is the stranglehold of the state. It is able to influence media coverage and mould public opinion. In India, for example, the police and paramilitaries are considered to be the authority on questions of law and order; the Reserve Bank of India, the Union Finance Ministry and investment banks on the economy; and the Defence Ministry and quasi-government think-tanks like the Institute for Defence Studies and Analyses, the last word on issues of defence and national security. Journalists looking for an objective assessment turn mostly to officials from institutions."

In bringing such a fine group of thinkers around the table for an informed discussion, Panikkar has rendered no small service. ■

The real and the mythical

K.N.PANIKKAR



Kesavante Vilapangal by M. Mukundan, D.C. Books, Kottayam; pages 206, Rs. 75.

THE latest novel by M. Mukundan, one of the progenitors of modernity in Malayalam literature, is intensely political like all his earlier works. His novels and short stories have been sensitive to the people's struggle for liberation from colonial domination, the post-colonial disappointment and frustration, and the brutalisation that slowly set in in Indian society. Thematic novelty and innovative craft are the hallmarks of his earlier works, which have earned him much literary recognition and acclaim. His recent novel, *Kesavante Vilapangal* (The Lamentations of Kesavan), which breaks new ground in both conception and composition, is likely to create considerable interest and even controversy.

The formation and articulation of the Left political consciousness in Kerala form the central theme of the novel, whose focus is on E.M.S. Namboodiripad, who, arguably, exercised the most decisive influence on its course. Yet this is not a work on or about EMS, despite such an impression that the copper plate etching of EMS embossed on the cover will possibly create.

It is neither a biographical account of EMS nor a representation, faithful or otherwise, of his social and political activism. The novel therefore escapes being a caricature of EMS, as in Arundhati Roy's *The God of Small Things* or in some Malayalam literary resurrections after his death. At the same time, the presence of EMS in the novel is overarching, almost divine and mythical, which mediates at every stage, decisively influencing its course.

Kesavante Vilapangal has a multi-layered structure with a complex narrative strategy that brings out a relationship, almost symbiotic in nature, between its two main strands. There are, in fact, two intertwined and complementary plots in the novel. The first is about the tensions and travails as well as the popular recognition involved in the production of a literary work, drawing upon contemporary political issues and leaders. This is exemplified by the experience of the protagonist of the novel, Kesavan, a fairly successful writer, who undertakes to compose a novel on EMS. The second is the novel so written by Kesavan in which EMS looms large through a mythic presence in the life of a boy named Appukuttan. In the course of the narrative the distinction between the narrator and the narrated is so blurred that the former becomes a victim of the fallout of his own creative effort.

The subtle and suggestive manner in which the novel underlines the relationship between the real and the mythical makes it an extremely complex work.

The myth takes shape in the life of Appukuttan while he was still in the cradle. Its beginning is marked by the inexplicable influence on the boy exercised by a photograph of EMS fixed on the wall by Appukuttan's uncle. He grows up in its enchanting presence and is enamoured of the leader's childlike smile and the red colour that embellished the portrait's background. The child, it appeared, was in constant communication with the photograph, so much so that he protested when his view was obstructed by a change in the position of the cradle. In due course the myth assumes dynamic qualities, directing the mental and physical world of the child. In a crowded fair he could, even when he was only three years old, lead his father to the place where the photograph of EMS was on sale along with those of innumerable gods and goddesses. Or is it that the photograph was drawing him towards it? The influence thus exercised was so overpowering that the child in Appukuttan was marginalised; he did not enjoy the company of his friends nor indulge in what children are normally fond of. His world was confined to EMS and to the possibilities inherent in the ideas that he represented. His sole ambition was to pursue the path charted out by EMS and to end up as a martyr for that cause. As a result he sought to fashion himself in the image of EMS, meticulously tried to follow and internalise the details of his life and to devote himself to the pursuit of the ideals set by him. Yet, EMS remained enigmatic and mythical – distant but intimate, elusive but accessible, and awe-inspiring but gentle. He had no opportunity to know the 'real' EMS – Mukundan's engagement is not with the real – but the myth is so firmly embedded in his mind that he effortlessly translates it into real politics.

The translation of the myth into the reality of politics is facilitated by the mediation of his school teacher, Aman Master, who transforms Appukuttan from a dull and indifferent student to a front-runner in the class. Aman Master envisions in him a future leader and, reminiscent of the role school teachers have played in the dissemination of Left influence in Kerala, guides him in that direction. To the dismay of his father, a disillusioned naxalite who sought solace in religion, Appukuttan, though only 15 years, associates himself with the Communist Party. His ambition always was to become a martyr which he ultimately becomes by killing another former naxalite who had turned an alcoholic and committed the 'sacrilege' of urinating on a photograph of EMS. Appukuttan is arrested and taken to jail where he finds fulfilment in the strong arms of EMS who descends from a red star in the sky surrounded by a red halo. Thus Kesavan's political choice is clearly delineated.

KESAVAN'S attempt to construct the myth of EMS elicits a variety of

responses. A Left-leaning intellectual and literary critic warns him that writing on a theme that he is ignorant of is not short of serious danger.

That he buttresses his arguments with quotations from *Living in Truth* by Vaclav Havel and *Reality Effect* by Ronald Barthes is possibly intended as a comment on the intellectual practice in Kerala.

However, when the novel was completed, the same critic writes a laudatory review and also offers to use his political influence to get Kesavan important positions in government-controlled academies. He also receives a lucrative offer from a commercial publisher. All of these Kesavan rejects with disdain. To him, the moment of fulfilment was beyond all these, when the myth he created turns real and EMS appears in person before him, though for a fleeting moment, to bless him and thus give recognition to his creative ability.

The opposition to and disapproval of Kesavan's work were equally sharp. They presumably came from the Hindu fundamentalist groups which sent him anonymous letters threatening him for writing on the present-day Sankaran and not on Adi Sankara. This is reminiscent of the tactics of Hindu communalists who threaten and intimidate the secular intelligentsia who are critical of their cultural and political projects. Kesavan ignored the threat and publicly denounced it, which led to his murder. The novel thus ends by underlying the ominous possibilities inherent in Hindu fundamentalism.

The Left intellectual and political life in Kerala was largely dependent upon the theoretical erudition and political acumen of EMS. For a long time he strode like a colossus, guiding and influencing its direction. EMS was not only a leader engaged in everyday politics, but was an effective communicator who took great care to disseminate his ideas in society and thus to intervene in the existing social and political consciousness and eventually to transform them. The myth that the novel so cleverly creates is actually a reflection of this reality. But then the foregrounding of the myth is in itself an attempt to explore the meaning of the real. The subtle and suggestive manner in which the novel underlines the relationship between the real and the mythical makes it an extremely complex work, compelling a critical introspection on how political ideals make or unmake the popular consciousness. ■

Understanding the cosmos

R. RAMACHANDRAN

Seven Wonders of the Cosmos by Jayant V. Narlikar; Cambridge University Press, U.K., 1999; pages 324, Rs.495.

THE British astrophysicist from Cambridge University, Sir Arthur Stanley Eddington, described the challenges facing the physicist in his endeavour to understand the universe thus: "Man in search of knowledge of the universe is like a potato bug in a sack lying in the hold of a ship, trying to discover, from the ship's motion, the nature of the vast sea." That indeed captures what the human intellect is up against – for the earth is not even a speck in the vast expanse of the observable universe whose range is about 14 million million million times the radius of the earth (6,400 km). This in itself is mind-boggling. It will be even more so if you consider all the varieties of matter in the form of stars, galaxies, their clusters and other peculiar stellar objects, the all-pervading radiation and the eternal processes that have been going on for about 10 billion years, not to speak of how all this came into existence. Did all this begin with a bang or was there a beginning at all? Ten billion years into the past is just not the span of time that astronomers are able to see with their myriad telescopes and other devices.

A cosmos of such dimensions can only be expected to throw up phenomena that are seemingly inexplicable to the human mind with its limited comprehending capability and intellect. As J.B.S. Haldane, the British scientist, said: "The universe is not only queerer than we suppose, it is queerer than we can suppose." Perhaps the greatest wonder of all is, as Jayant Narlikar says in his preface to the book, the success achieved by the methods of science in coming to grips with cosmic mysteries. "Why should scientific laws discovered over three centuries on this tiny planet apply to a history of billions of years of a vast universe. The existing fact is that they do." Is that not remarkable? "The most incomprehensible thing about the universe is that it is comprehensible," said Albert Einstein who produced the most powerful of all tools to enable a holistic comprehension of the universe, namely the General Theory of Relativity. (Actually, much of the comprehension of the universe that is possible today would have been impossible but for the genius of Einstein.)

Being a great populariser of science, Narlikar knows how to get across this thrill and excitement of a physicist to the public at large without invoking a maze of equations, symbols, numbers and technical jargon. Without resorting to them, he conveys the power of mathematics and logic inherent in a self-consistent theoretical premise such as cosmology. The book is pitched at the level of a high school student exposed to the basics of science and mathematics; it can also be enjoyed by those interested in the phenomena of the cosmos but lack exposure to science, if they put in a bit of effort and skip some details if that seem difficult. Narlikar may lack the skill to use flowery language or catchy phrases, but what he has to say is put across in a simple and lucid manner. The book should appeal to anyone interested in the mysteries of the universe; at the same time, it can serve as an excellent introduction for a student who wishes to make a career in astrophysics.

To take one through the cosmic journey, starting from the earth and the solar system to the farthest reaches of the universe from where instruments on the earth or near the earth (like the Hubble Space Teles-

cope or satellites) are able to receive electromagnetic signals, Narlikar has chosen the "queer" objects or phenomena, in the words of Haldane, at each level in the hierarchy of structures that make up the universe. Each level, in some sense, serves as a chapter in the book and through these seven wonders, and using them as the starting points, Narlikar is able to induce in the reader an interest in the fascinating discipline of astrophysics and related complex ideas that form the basis of cosmology today. This is something school- or college-level textbooks fail to do. One may ask why "seven wonders" and not more or fewer. That clearly is because on the earth one talks of only seven wonders. In that sense, the second chapter on "Giants and Dwarfs of the Stellar World" is not so much about any "wonder" or surprising phenomenon but an overview of stellar physics itself. It has gone into some remarkable concepts and ideas and is in that sense wondrous.

The book should appeal to anyone interested in the mysteries of the universe; at the same time, it can serve as an excellent introduction for a student who wishes to make a career in astrophysics.

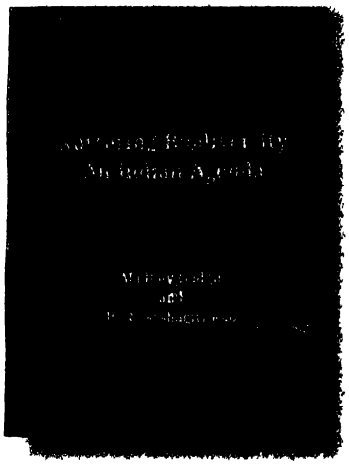
One commendable thing about the book is how Narlikar is able to link physical and mathematical concepts discussed in one chapter with topics in another chapter by not failing to recall and recount the relevant elements in them. While this makes reading easy in the sense that one does not have to keep flipping back and forth, it also serves to reiterate how the same basic ideas of physics in the small scale work in the large scale as well.

Chapter 6 is titled "Illusions in Space", but this motif is a thread running through the entire book; that is, what one sees or observes with telescopes or other instruments is not actually how things are now or at any given instant. The assumption of "seeing is believing" is too naive and simplistic in the cosmic scale. For example, a picture of the great galaxy Andromeda, which is about two million light years away, means that it is a picture of the galaxy as it was two million years ago. Even that is not quite true, because Andromeda stretches about 100,000 light years across. So light from different parts of Andromeda arriving on the earth had left the galaxy at different times in the past. At one extreme is the observation of twin images of galaxie[illegible]g out of lensing effect by intervening stellar mass whose gravitational influence on light from stellar objects behind them bends it much like a lens and creates images. At the other, is the clear evidence of the existence of black holes and dark matter in the universe, which exert enormous gravitational influence on the motion of nearby stellar objects but are themselves not visible.

The chapters on gravitation, "Illusions in Space" (about gravitational lensing) and the expanding universe are extremely well written for the average reader, though, expectedly, Narlikar's preference for steady-state cosmology comes across in the last chapter and he emphasises the fact that unambiguous evidence in support of a big bang cosmology is still lacking. Narlikar devotes an entire chapter to pulsars, and rightly so, because these time-keepers of the universe, with their extremely precise pulsations, are really enigmatic objects that can result in the evolution of stars under certain conditions. Indeed, Narlikar closes this chapter with the question whether pulsars can replace caesium clocks on the earth for accurate time-keeping – a distinct possibility. The question will be which of the pulsars discovered so far would one choose to be the time standard. One of the intriguing aspects of some of the short-period pulsars discovered is evidence of planetary structures around them which defies human understanding because pulsars result from violent explosive events, as in the case of the supernova, and such structures should have got blown away. So what are these? No one knows as yet.

The epilogue to the book highlights some unsolved problems of astrophysics and cosmology, such as the solar neutrino puzzle, the red shift puzzle, the formation of stars and galaxies. In his closing remarks, Narlikar says: "The human prejudice that whatever is known in the current epoch should be sufficient to understand all the mysteries of the universe resists new ideas. Despite this resistance, they do break in, in an unexpected fashion...The wonders that are unexpected are more wonderful than the wonders that are expected." There could be many more wonders in store for physicists of the future. Indeed, it would be disappointing if there is none. ■

■ BOOKS



ASHA KRISHNAMKUMAR

Nurturing Biodiversity – An Indian Agenda by Madhav Gadgil and P.R. Seshagiri Rao; Centre for Environment Education, Ahmedabad; pages 163, Special price Rs.95 ($21).

THERE has been an alarmingly rapid depletion in the bio-wealth of India, one of the 12 mega-diverse countries in the world in terms of bio-wealth. Urgent policy responses are essential if this trend is to be arrested. *The book Nurturing Biodiversity – An Indian Agenda* establishes that India's existing model of biodiversity management is fundamentally flawed and identifies the systemic problems; more important, it provides an alternative approach that would reverse the process of depletion. The book is the last one in a series on environment and development brought out by the Centre for Environment Education, Ahmedabad.

India's unique geographical positioning has contributed to its richness in bio-wealth. It is the meeting point of three of the eight major global bio-geographic realms – Eurasia (Palaeartic), South-East Asia (Indomalayan) and Africa (Afrotropical). India is home to over 125,000 species of living organisms, 8,000 of the 1.5 million described animal species and 15,000 of the 240,000 plant species. According to experts, at least 400,000 species found in India are waiting to be described.

India is also one of the centres of crop and livestock diversity; it has contributed 167 economic plants such as rice, sugarcane, millets and lentils; vegetables including brinjal and cucumber; and a number of medicinal and ornamental plants.

The biodiversity challenge

All this diversity of living forms, created over billions of years, has been preserved and nurtured by the people primarily because of the country's religious and cultural pluralism, with each diverse group adopting its own conservation methods. Unfortunately, these people are not at the core of the present conservation efforts. As the authors of the book put it: "The prevalent model of biodiversity management makes conservation a government initiative and treats local communities as a problem rather than the solution." Invariably, according to the authors, bio-management plans are predicated on inadequate data and often designed to serve vested interests.

Ecological degradation, the book argues, has been happening because major groups control and benefit from the state-sponsored flow of resources. It terms them "the iron triangle" and identifies them as forest-based industries, the bureaucracy and politicians.

This, the authors say, is a colonial legacy. For, as the Industrial Revolution reached the Indian shores and began to spread across the land in the second half of the 18th century, the traditional respect for ecological diversity started to wane. There followed large-scale destruction of forests and slaughter of wildlife until the 1860s when some laws were enacted to stop this trend. However, soon enough, loopholes were found in these laws, and the destruction of natural resources resumed. This goes on even today though there are some 200 Central and State laws to protect the country's biodiversity.

The situation has worsened in the wake of the liberalisation of the economy, which is being vigorously pushed even by State governments. For instance, the Orissa Government is going ahead with the construction of a fishing jetty in Bittarkanika even though environmentalists have warned that it might sound the death-knell of the Olive Ridley turtles that breed in large numbers on the State's coast every year. The Gujarat Government has denotified the Narayan Sarovar Sanctuary – the only natural home of the chinkara – to facilitate limestone mining. Eight companies are to start cement factories in the region. A private sector oil refinery is threatening the fragile Gulf of Kutch Marine National Park and Sanctuary, which has mangroves and coral reefs that are teeming with life and is rich in fish. All political parties in Rajasthan are pushing for the grant of permission to marble and dolomite mining in the Sariska Tiger Reserve.

The annual extraction of 7,000 tonnes of bamboo by the Madhya Pradesh Forest Department from the Achanakmar Wildlife Sanctuary for trade in violation of the Wildlife (Protection) Act has been going on for many years.

Such unabated exploitation since the 1960s has rendered 88 million hectares – or over two-thirds of the country's potentially productive land, which is not under cultivation or human settlement – into virtual wasteland. Some 10 per cent of India's wild flora and an even higher greater percentage of its wild fauna are on the endangered list. Many species are on the verge of extinction.

This ecological degradation, the book argues, has been happening because of the three major groups that control and benefit from the state-sponsored flow of resources. The book terms them "the iron triangle" and identifies them as forest-based industries, the bureaucracy which manages the resource flow and politicians. This system of control, which ignores the local people and their needs, is at the root of the inefficient management of natural resources and, hence, of their rapid depletion. Thus, in the last few decades India has lost 50 per cent of its forests, over 70 per cent of its waterbodies have become polluted, much of its grasslands has been built over or cultivated, and long stretches of its 1,000-km coastline degraded.

The book details a strategy to achieve value addition to biodiversity resources in the context of modern technological advances and new international regimes of intellectual property rights and each nation's sovereign rights over its biological resources.

IS there no hope? The book offers a detailed, integrated system to manage the country's natural resources. This model replaces the current fragmented (as in the case of the various government departments) and centralised bureaucratic regimes with a system that is decentralised and has the local communities in the vanguard. In this system, panchayati raj institutions have a central role. The authors emphasise all along the crucial role played by indigenous communities in preserving biodiversity and in the principle of equity in benefit-sharing.

The book outlines the approaches for biodiversity conservation – enhancing the information and education systems by maintaining and updating annually a biodiversity data bank and a 'People's Environment Register' in various localities; redefining the roles and powers of panchayats and government agencies; setting up a system of performance-linked rewards to local communities for maintaining and enhancing biodiversity resources; and harnessing practical ecological knowledge to meet the challenges posed by international trade agreements and global biodiversity conventions.

The book, which reproduces relevant portions of various international biodiversity conventions and agreements, details a strategy to achieve value addition to biodiversity resources in the context of modern technological advances and new international regimes of intellectual property rights and each nation's sovereign rights over its biological resources.

The alternative model of biodiversity management is India-specific and merits the consideration of policymakers. ■

A half-hearted critique of globalisation

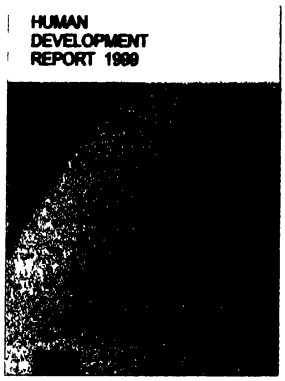
VENKATESH ATHREYA

HUMAN DEVELOPMENT REPORT (HDR) 1999 is the tenth in the annual series being brought out by the United Nations Development Programme (UNDP) since 1990. Dedicated to the memory of the late Professor Mahbub-ul-Haq, the originator of the HDR, the theme of *HDR 1999* is globalisation.

The Report documents, in considerable detail, the inequalities of globalisation. It calls for 'globalisation with a human face'. Its dramatic expose of the highly iniquitous nature of the ongoing processes of globalisation – both among nations and among social classes in most nations – and its occasional flourish of radical rhetoric would almost lead one to believe that the Report opposes the phenomenon of hegemonic globalisation. That is, however, not the case. The Report is marked, instead, by a contradictory mixture of celebration of globalisation and bemoaning of its iniquitous consequences, and by a complete absence of any attempt to study holistically the political economy of globalisation.

The Report systematically documents the growing inequality among nations and peoples in respect of several aspects of economic and social life:

★ The income gap between the fifth of the world's people living in the richest countries and the fifth in the poorest rose from 30 to 1 in 1960 to 60 to 1 in 1990, and further to 74 to 1 by 1997.



★ The richest fifth of the world's nations accounted for 86 per cent of world GDP while the bottom fifth accounted for just 1 per cent.

★ Corresponding figures for shares of export markets (82 per cent to 1 per cent), foreign direct investment (68 per cent to 1 per cent) and world's telephone lines (74 per cent to 1 per cent) confirm a scenario of staggering inequality.

★ The assets of the richest three individuals in the world exceeds the combined GDP of all least developed countries with a total population of 600 million people.

★ Globally, mass deprivation continues unabated with close to a billion adults either totally or functionally illiterate; a billion people cannot meet their basic consumption requirements; 340 million women are estimated to die before reaching the age of 40; more than 250 million children are working as labourers; and nearly 160 million children are malnourished.

The other side of this picture of stark inequality and deprivation is the enormous concentration of wealth, productive assets and economic power. This is especially striking in the leading industries of globalisation such as biotechnology, telecommunications and computers.

The Report is marked by a contradictory mixture of celebration of globalisation and bemoaning of its iniquitous consequences.

★ The shares of the global market of the top 10 corporations in 1998 in certain key industries were: pharmaceuticals – 35 per cent, computers – 70 per cent, telecommunications – 86 per cent.

★ Knowledge – a key productive asset – is very closely held. Industrial countries hold 97 per cent of all patents worldwide.

The Report highlights the role of two key technologies – information and communications technology (ICT) and biotechnology – as the 'drivers' of globalisation. It recognises that what it calls the 'new rules of globalisation' – namely, liberalisation, privatisation and tighter intellectual property rights (IPRs) – are 'creating new risks of marginalisation and vulnerability'. It lists the new negative features of these rules of the game:

★ '... for poor people, technological progress remains far out of reach.'

★ Tighter IPRs are blocking developing countries out of the dynamic knowledge sector.

★ New patent laws result in 'a silent theft of centuries of knowledge from developing to developed countries'.

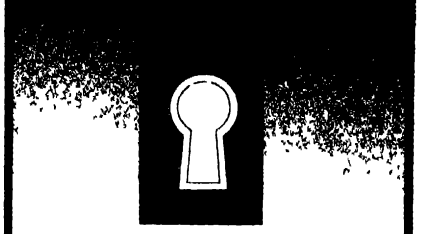
★ All research and development are skewed to serve the well-to-do. The pharmaceutical industry is a case in point: 'Of annual health-related research and development worldwide, only 0.2 per cent goes for pneumonia, diarrhoeal diseases and tuberculosis – yet these account for 18 per cent of the global disease burden'.

The Report documents instances of biopiracy and in a neat table (Table 6.71) demonstrates that it is mainly powerful transnational corporations which have 'real access to intellectual property claims'. It observes astutely and correctly that 'the attempt to create a global market in property rights imposes one conception of ownership and innovation on a culturally diverse reality, benefiting private industrial research but not public institutes or farming communities.' It even goes further to assert: 'The relentless march of intellectual property rights needs to be stopped and questioned'.

In an interesting discussion of the impact of globalisation on 'care and caring labour', *HDR 1999* recognises that the market does not reward activities pertaining to caring for fellow human beings and in fact penalises individuals who spend time in these activities, for they forgo income they could have earned in other activities that the market rewards.

Yet, at the end of its long and at times tellingly powerful critique of the key features of globalisation, the Report stops well short of questioning the basic tenets of hegemonic globalisation. Instead, it seeks to paint globalisation in rosy colours by referring to its alleged potential: 'Globalisation has swung open the door to opportunities in the world's markets.

The markets in today's global system are creating wonderful opportunities.' Its partial critique of globalisation is essentially from the standpoint of 'distribution' and 'inequality'. Consequently, it seeks to make globalisation work for human development by proposing well-meaning measures which, given the correlation of class forces nationally and globally, will at best remain a statement of good intentions.



That the Report ends up making only pious recommendations after voicing trenchant criticism of aspects of globalisation is not surprising. For its basic standpoint is that 'competitive markets may be the best instrument of efficient production' even if this is qualified by the addition of the phrase 'but not of human development'. The Report's underlying philosophy is that a capitalist economy is basically efficient and that it can be made to serve the ends of human development by rewriting the rules of governance. The Report perceives the challenge to be one of promoting the expansion of global markets, and simultaneously to find rules and institutions for stronger governance. Its ideological bias comes out sharply when it speaks of countries of Eastern Europe and the Commonwealth of Independent States (CIS) as making a 'dramatic transition from centrally planned economic systems to market democracies' (page 29). Its presumption that globalisation driven by commercial interests 'seeks to promote economic efficiency' betrays an implicit acceptance of conservative economic theory and its vacuous conception of 'efficiency'. Yet the evidence marshalled by the Report shows growing concentration and centralisation of capital and enhanced oligopoly/monopoly power of the big transnational corporations (misnamed 'multinational corporations' by the Report implying genuine multinationality of ownership).

TO be fair to the Report, it does recognise many negative features of globalisation. It does make a passionate plea for greater equity, for public provisioning for human development and for rules of ethics and global governance that would reduce inequality and provide for a more even sharing of the benefits of technological progress. Even in the midst of its espousal of proposals for 'globalisation with a human face', it allows reality to intrude when it admits that 'elite groups and other interest groups benefit from the present nature and structure of globalisation' (page 95).

Yet in the end its recommendations are quite tame and largely in line with prevailing orthodoxy. Neither the World Bank nor the International Monetary Fund (IMF) is likely to demur at the Report's assertion that the main policy components to generate growth are 'ensuring sound macro economic management and macro economic stability boosting domestic demand by appropriately adjusting real interest rates, adopting fiscal discipline, accelerating industrial production, reforming financial sector institutions and promoting good governance' (page 94). That the evidence on the economic growth of nations in the last two decades and more does not support this position, but in fact shows that the dominance of foot-loose finance capital makes all economies – including the G-7 economies – prone to deep recession and high levels of unemployment completely escapes the authors of the Report, even though elsewhere in the Report they document the facts of recession and unemployment. This is precisely because the theory to link the facts – the political economy of hegemonic globalisation under the dominance of large, foot-loose, transnational finance capital – is missing.

A consistent position would have to be one that is not merely against the negative inequalising features of globalisation but one which recognises these features as inherent in globalisation within a global capitalist system, sharply polarised between the imperial metropolitan countries and the Third World countries undergoing forcible integration into the system. It would have to reject the notion that new 'humane' rules of global governance will descend, like manna from heaven, to make capitalist globalisation serve human development. It would have to recognise, in particular, the legitimacy of the sovereignty of the Third World states as against the claims to global sovereignty of the transnational corporations and the G-7 which underlie the prattle about 'global governance'. It would have to reject the equating of the mythical 'free market' with democracy. It must instead work for a thoroughgoing democratisation of all aspects of global and national life – economic, political, social and cultural – by mobilising social classes to change the existing correlation of forces, and not by appealing to the loftier instincts of transnational corporations and the G-7 fraternity. ■

The real story. Every time

Conduct Rules and Fundamental Rights

Democracy is based on fair criticism; and freedom of speech and expression is highly protected by the Indian Constitution. A blanket prohibition of criticism of the policies of the Government is invalid and void, and it makes no difference if the person criticising happens to be a government servant or the employee of a public institution.

ALLADI KUPPUSWAMI

CAN the Government or any public institution prohibit an employee from criticising the policies of the Government or a public institution, as the case may be?

Under Article 19(1)(a) of the Constitution, all citizens have freedom of speech and expression. (Freedom of expression includes the right to write articles, speak on the radio and appear on television.) Article 19(1)(b) confers the right to assemble peacably and without arms. Under Article 19(1)(c), all citizens are guaranteed the right to form associations or unions. But these rights are subject to certain restrictions. The right of free speech and expression is subject to reasonable restrictions in the interests of the sovereignty and integrity of India, friendly relations with foreign states, public order, decency or morality, or in relation to contempt of court, defamation or incitement to an offence (Article 19(2)). The right of assembly is subject to reasonable restrictions in the interest of sovereignty and integrity of India, or public order (Article 19(3)). The right to form associations is subject to reasonable restrictions in the interests of sovereignty and integrity of India, public order or morality (Article 19(4)). Issues such as sovereignty and integrity of India, morality, and so on, are not particularly relevant for discussion, since most often the rule forbidding a government servant is sought to be justified on the ground that it is a reasonable restriction in the interest of public order. In most cases that have come up for consideration before the Supreme Court, the Court had to decide whether the restriction imposed can be said to be a reasonable restriction in the interest of public order. Hence, the discussion in this article is mainly confined ro restriction on that ground, although there is also a brief discussion of Article 19(1)(g) and Article 19(5).

In the light of illiberal restrictions on freedom of expression sought to be placed or enforced by scientific research institutions funded by the Department of Atomic Energy (DAE), the question has arisen: Can the Government or any public institution, through Conduct Rules, prohibit an employee from criticising the policies of the Government or a public institution? A distinguished jurist, **Alladi Kuppuswami**, retired Chief Justice of Andhra Pradesh, addresses this important question, basing himself on the Constitution, fundamental principles, and the law as expounded by the Supreme Court of India.

In *Kameswar Prasad vs. State of Bihar* (AIR 1962 SC 1166), the Supreme Court had to consider the validity of Rule 4A of the Bihar Government Service Conduct Rules which provided that no government servant shall participate in any demonstration in connection with any matter pertaining to his condition of service. The Supreme Court held that the prohibition of participation *in any demonstration* is invalid as violating Articles 19(1)(a) and 19(1)(b). It was sought to be argued that a person who voluntarily entered Government service must be deemed to have consented to such reasonable conditions as might be imposed for maintaining proper discipline in the service. Hence, the reasonableness and validity of the Government Servant Conduct Rules could not be tested solely by reference to the criteria laid down in Article 19. The Supreme Court rejected this contention, and held that, as Article 19 applies to all citizens, government servants in common with other citizens enjoy the protection of fundamental rights.

Further, Rule 4A was framed under Article 309 which enacts, "Subject to the Provisions of the Constitution, Acts of the appropriate legislature may regulate the recruitment and conditions of service of persons appointed to public service..." Hence, if an employee agrees to be subject to the rules framed by the Government, they agree to do so because the rules are subject to the provisions of the Constitution. In other words, by agreeing to abide by the rules of the Government, they do not surrender their fundamental rights.

Relying on an earlier decision of the Supreme court in Bala Kotiah's case (1958 SCR 1052) some have argued that since a person has no fundamental right to be a government servant, there is no question of violating his fundamental right if disciplinary action is taken against him for violating the Government Servant Conduct Rules. This reasoning is not sound. The point is not whether a person has a fundamental right to be a government servant. The point is whether a person exercising his fundamental right can be punished. Under Article 13, the state shall not make any law which takes away or abridges fundamental rights and any law made in contravention of this clause shall be void. Hence, if the restrictions imposed are not reasonable restrictions, then the rule contravenes Article 19(1)(a) and hence is void. No punishment can therefore be imposed under a void rule!

THE next question is whether a rule prohibiting a government servant from criticising the policies of the

At a rally by Central Government employees outside South Block in New Delhi. It is clear from various rulings of the Supreme Court that a blanket prohibition on criticism of the policies of the government is not valid, and it makes no difference if the person criticising happens to be a government servant.

Government imposes a reasonable restriction in the interest of public order within the meaning of Article 19(2). In (1960) 2 SCR 821 *Superintendent of Central Prison vs. Ram Manohar Lohia*, it was held that "public order is synonymous with public safety and tranquility. It is the absence of disorder involving breaches of local significance..." In Kameswar Prasad's case, the Court observed that there must be a proximate and reasonable nexus between the nature of the speech prohibited and public disorder. The connection has to be intimate, real and rational. After referring to the above observation, the Supreme Court in Kameswar Prasad's case considered whether the prohibition of demonstrations could be said to be a reasonable restriction in the interest of public order. As the rule lays a ban on every type of demonstration, however innocent and however incapable of causing a breach of public tranquility, and does not confine itself to those forms of demonstrations which may lead to that result, the Court held that the rule was invalid. It was argued that the maintenance of discipline among government servants is necessary to maintain public order. If government servants were indisciplined and allowed to agitate in a disorderly manner for the redress of their grievances, it would lead to a demoralisation of the public and would be reflected in the disappearance of public order. This contention was rejected by stating that threat to public order should arise from the nature of the demonstration prohibited. This decision was followed in *O.K. Ghosh vs. Joseph* (1963 SC 812) which had to deal with Rule 4 of the Central Services Conduct Rules prohibiting any form of demonstration. The Supreme Court had also to consider the validity of a rule prohibiting the right to form associations under certain circumstances. This was also held to be invalid as the restriction in that case could not be said to be in the interests of public order. It relied on the following observation of Justice Patanjali Sastri in *Rex vs. Basudev*: "The connection between the restriction and public order must be real and proximate, not far-fetched or problematical."

Although the Supreme Court in *Kedaranath vs State of Bihar* (AIR 1962 S C. 955) held that Section 124A of the Indian Penal Code does not infringe Article 19(1)(a) and is valid, *the reasoning in the judgment supports the view that freedom of expression can be restrained only if it results in public disorder.*

Section 124A of the IPC along with the explanatory clauses is in the following terms (note the unambiguous nature of explanations 2 and 3):

Whoever by words, either spoken or written or by signs or by visible representation or otherwise, brings or attempts to bring into hatred or contempt, or excites or attempts to excite disaffection towards the Government established by law in India shall be punished with transportation for life or another term to which fine may be added or with imprisonment which may extend to three years to which fine may be added, or with fine.

Explanation 1: The expression disaffection includes disloyalty and all feelings of enmity.

Explanation 2: Comments expressing disapprobation of the measures of the Government with a view to obtain their alteration by lawful means, without exciting or attempting to excite hatred, contempt or disaffection do not constitute an offence under this section.

Explanation 3: Comments expressing disapprobation of the administrative or other action of the Government without exciting or attempting to excite hatred, contempt or disaffection do not constitute an offence under this section.

In the course of the judgment, the Supreme Court observed: "... The provisions of the sections read as a whole, along with explanations, make it reasonably clear that the sections aim at rendering penal only such activities as would be intended or have a tendency, to create disorder or disturbance of public peace by resort to violence. As already pointed out, the explanations appended to the main body of the section make it clear that criticism of public measures or comment on government action, however strongly worded, would be within reasonable limits and would be consistent with the fundamental rights of freedom of speech and expression. It is only the words, written or spoken, etc., which have the pernicious tendency or intention of creating public disorder or disturbance of law and order that the law steps in to prevent such activities in the interest of public order..."

In 1998 (3) SCC *Devendrappa vs. Karnataka State Small Industries Development Corporation*, the Supreme Court was dealing with a case where the employee made allegations of corruption and maladministration, and expressed the hope that the Chairman of the Corporation be removed. In this particular case, the Court held that his conduct would not be in the interest of public order, as any action which would be detrimental to the interests or prestige of an employer clearly undermines discipline and the efficient performance of the organisation.

However, it cannot be said that every criticism of the policy of the Government would be detrimental to the interests and prestige of the Government and would undermine discipline and efficient performance of the Government! On the other hand, well-intentioned criticism may help in its efficient performance.

THE Supreme court also relied on Article 19(1)(g), which deals with the right of a person to carry on his occupation. Under Article 19(5), reasonable restrictions can be imposed on this right in the interests of the general public. The Court held that any rule that imposes such a restriction has to be read harmoniously with other freedoms such as the rights to freedom of speech and freedom to form associations. Service rules which are directly linked to and are essential for the duties of public office are protected by Article 19(1)(g) (read with Article 19(5)). The restrictions imposed by Article 19(5) cannot be questioned by exercise of freedom of speech. The Court, however, added, "Of course, the Courts will be vigilant to see that the code is not so widely framed as to unreasonably restrict fundamental freedoms."

There is no real and proximate connection between public order and criticism of the Government's policy. The reasoning that if every employee begins to criticise the policies of the Government, it will lead to indiscipline and affect public order is too far-fetched.

Certainly, a rule which places a blanket ban on criticism of the Government's policy is widely framed as to restrict freedom of speech unreasonably!

In view of the above discussion related to various decisions of the Supreme Court, it is clear that *a blanket rule that prohibits criticism of the policies of the Government is not a valid rule.* There is no real and proximate connection between public order and criticism of the Government's policy. The reasoning that if every employee begins to criticise the policies of the Government, it will lead to indiscipline and affect public order is too far-fetched. Criticising the policies of the Government is not equivalent to disobeying the orders of the Government. Democracy is based on fair criticism. That is why the freedom of speech and expression are protected. Day in and day out, parties in Opposition and other persons criticise the policies of the Government and yet they do not lead to public disorder. *It makes no difference if the person criticising happens to be a government servant.*

The same applies to employees of a public institution. Many such institutions are funded by the Government which also exercises control over the institutions. Such institutions have been held to be "States" within the meaning of Article 13. It has already been noticed that under Article 13(2), any law (law includes notifications, rules, and so on) made by a State in contravention of fundamental rights is void. Hence, a rule made by a public institution also, which is a State within the meaning of Part III (the chapter on Fundamental Rights), in contravention of fundamental rights is void. Thus, a general prohibition of an employee of a public institution criticising the policies of the institution or the Government is void. In this matter, there is no difference between the position of conduct rules made by the Government and conduct rules made by a public institution which is a "State" under Article 13.

It is also relevant to note the provisions of Article 33. Under this article, Parliament is empowered to modify, restrict or even abrogate any of the fundamental rights in their application to the armed forces, members of the forces charged with the maintenance of public order, persons employed in the intelligence department, or those employed in the telecommunication system set up for the purpose of any force. From this article it is clear that while Parliament is empowered to restrict or abrogate the fundamental rights of persons belonging to any of the above classes, no such power is conferred on Parliament to pass a law imposing restrictions on any other person or class of persons and any restriction on their fundamental rights must fall squarely within the terms of Article 19(2) to Article 19(5) of the Constitution.

Finally, the question which remains to be considered is: given that a person in service cannot be punished under a void rule (which prohibits him from criticising the policies of Government), can a person be prevented from being admitted as a government servant or a servant of a public institution under such a rule? It would logically follow that as the rule is void and therefore non-existent in the eye of the law, it cannot be relied on for refusing employment to a person who criticises the policies of the Government. But in practice, this is a matter difficult to prove unless it is noted in the records that his criticising the policies of the Government was the reason for refusing employment, though he is otherwise qualified! ■

This is an expanded (and updated) version of an article that appeared in The Hindu *a few months ago.*

A centre of hope

The T.T.K. Hospital in Chennai provides a fresh lease of life to many victims of substance abuse.

VINITA VISWANATHAN

"Trapped in a black hole,
Desperately trying to crush my soul,
My body is weak, my mind weaker,
As the hole encompasses me, I fall deeper
It's not my fault, I am not to blame,
For all this grief, pain and shame."

– Rahul, recovering alcoholic and drug addict in the US.

RAHUL is a friend one almost lost to drugs and alcohol. He was in the United States during the worst of his times. While visiting Rahul at a de-addiction centre in the U.S., one wondered about the kind of facilities available in India to help those in similar circumstances. The answer came during a visit to Chennai. One realised that people like Shanthi Ranganathan, the Founding Director and Honorary Secretary of the Chennai-based T.T. Ranganathan Clinical Research Foundation (T.T.K. Hospital) were there to provide care and hope for the Rahuls in India.

The T.T.K. Hospital, a pioneer in the field of rehabilitation, is one among the over 300 non-governmental organisations (NGOs) in the country working on anti-substance abuse programmes. The T.T.K. Hospital, which was established in 1980, was recently in the limelight: Shanthi Ranganathan received the first United Nations Vienna Civil Society Award for her "outstanding contributions in the fight against drug-abuse and crime" from United Nations Secretary-General Kofi Annan on July 19 (*Frontline*, August 13).

Shanthi Ranganathan started the specialised institution for rehabilitating alcoholics and drug addicts after she lost her husband to "the disease" (alcoholism) in 1979. "I did not know that alcoholism was a disease until my husband was taken to the U.S. for treatment," she said. After his death, Shanthi Ranganathan, who had a post-graduate degree in social service administration, besides experience in running a blood bank for five years, went to the U.S. and trained at the Hazeldon Institute in Minneapolis with the aim of setting up a similar de-addiction centre in India. "The common sentiment here (in India) is that alcoholism is one's own doing and is incurable," she said "But that is not so. It is a dreadful disease that has a cure and requires time, patience, understanding and cooperation from close associates of the victim, particularly the family."

The T.T.K. Hospital made a shift from the traditional "isolated psychiatric approach" to a more group-oriented form of treatment, and has, since its inception, treated about 11,000 patients, one-fifth of them free of cost. According to Shanthi Ranganathan, group activities enable the patients to realise that they are not alone in their battle. B. Mala, a psychologist at the de-addiction centre at the Voluntary Health Services (VHS), Chennai, shares this view. "Group therapy is definitely successful as the addicts share their experiences and are motivated by each other. Initially they have inhibitions but they gradually get over these," she said.

The T.T.K. Hospital, which started out as a small out-patient centre in Santhome, is now a 65-bed in-patient centre, located in a 41,000-sq ft premises in a calm and serene part of the city at Adyar. Initially the centre dealt with victims of alcoholism and in 1985 extended its services to drug-dependent persons. Patients are required to spend a month at the centre. Chronic addicts have the option of staying for an extended period of three months at the After Care Centre (ACC) that was established in 1989.

The centre was set up with a donation of Rs.1.1 crores from the T.T.K. group of industries. ACC has got funds also from the European Commission, the TVS group of companies and Birla Charities. The centre has a corpus fund of Rs.50 lakhs created by the T.T.K. group. It keeps increasing, with donations regularly pouring in from industries, individuals and organisations. Every year,

N. BALAJI

The T.T.K. Hospital in Chennai has played a pioneering role in anti-substance abuse programmes.

'To see a person recover completely is what is gratifying'

For **Shanthi Ranganathan**, awards are secondary. What makes her happy is the success in helping restore normalcy in the lives of those who come to her for help. To those undergoing treatment at the T.T.K. Hospital, she is "amma" or mother. "Amma gave us our lives back," they say. Shanthi Ranganathan spoke to **Vinita Viswanathan** on awards, addicts and more.

Excerpts from the interview:

▶ *First of all, congratulations on receiving the award. You must be an extremely happy person.*

Of course. I am delighted to be one of the first recipients (of the award). I knew I was one of the 100 or so nominees (Shanthi Ranganathan was nominated by the Indian government), but when I received the official letter from the U.N. office in Vienna, it came as a pleasant surprise.

▶ *What motivated you to set up the T.T.K. Hospital?*

When my husband was taken to the U.S. for treatment, I came to know that alcoholism was actually a disease and that it could be treated. His death affected us deeply. But instead of living in the past, I wanted to bring the knowledge available in the U.S. to India and implement it here. Initially, there was a lot of scepticism. Many said: 'Poor woman. She lost her husband at a young age, so she is trying to do something grand that will not work.' But we did not give up. We started small, but today we can look back in pride at our work.

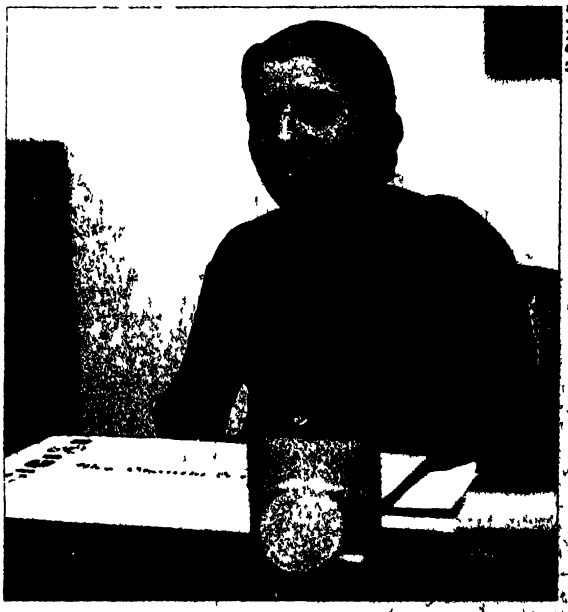
▶ *How do families react to alcoholism and are these reactions different in India and abroad?*

Families anywhere in the world are affected if any of their member is an alcoholic. They go through the same feelings and traumas of anger, shame and resentment. In India, I notice a change in the social attitude towards alcoholics. Earlier it was a taboo to be a drinker. Therefore, it was that much harder to identify victims of alcoholism as it was hushed up within the families. Whereas abroad, even in schools, children are educated on the ill-effects of alcohol and drugs and on various other issues. While this may not necessarily bring down the number of victims, at least they knew that help was available and whom they could contact and how to go about with the recovery process. There is a change for the better in India now as more people are open about their drinking. The priority has shifted: from not letting the neighbours know to getting affected family member cured.

▶ *What do you feel about the phenomenon of 'social drinking'?*

The average age of initiation to alcohol has gone down. Earlier, young people would have their first drink at college. Nowadays, they are initiated into drinking at parties held to celebrate the conclusion of board exams. Children say it is just for one night and that they will not get addicted. But addiction is a process that does not start with a warning. My personal opinion is, why have that drink? Can one not have fun and enjoy oneself without alcohol?

▶ *Has the T.T.K. Hospital done anything to prevent youngsters from indulging in drinking, particularly drinking binges?*



We have come out with two books that schools use. We hope they will be included as part of the curriculum. The books are designed and written in such a way as to appeal to youngsters. We have adopted a campaign similar to the 'Say No to Drugs', in the U.S. Ours is 'Alcohol - Not My Taste', where we tell children that there is no need to give in to peer pressure.

▶ *How different are the expectations of working with patients at the centre and working with those in villages?*

I think the success rate at the village camps is definitely higher than at the centre. For one thing, since we go through a host organisation, it is easy for us to win the trust of the people in villages in a short time. Once we have their trust, half the problem is solved. They give their complete attention and dedication to us and follow everything we say. Secondly, in case of a relapse, the whole village rallies behind the victim and supports him. This is because the village is a small community.

▶ *What has been the role of the government in your endeavour?*

The Central Government provides us with funds for bringing out our publications and the Ministry of Social Justice and Empowerment gives us grants for community projects. The government involves non-governmental organisations (NGOs) in many of its programmes.

▶ *The centre is soon to complete two decades. What is it that keeps you going?*

When a rehabilitated patient comes to me and says 'I have been sober for so many years', or 'I am happy now', it gives me the strength and the will to keep going. Awards and recognitions are good, but ultimately what is most gratifying is to see a patient recover completely and lead a normal, healthy life.

▶ *Do you have more plans for the centre?*

Our immediate plan is to teach patients two vocations, tailoring and repairing household appliances. These skills would be a source of employment for them once they leave the centre.

the centre incurs an expenditure of Rs.60 lakhs. Treatment, which includes counselling, accommodation at the centre (excluding food) and medicines, costs about Rs.5,000 a patient.

The first week of treatment comprises detoxification. Patients experience severe withdrawal symptoms during this period as they are required to abstain from consuming alcohol or drugs. The withdrawal symptoms can range from loss of appetite and insomnia to delirium tremens, a condition in which patients suffer bouts of disorientation, tremors and hallucinations. The patients are treated for these symptoms.

After detoxification, patients undergo a psychological therapy. Trained professionals conduct this programme, with a strong emphasis on improving the quality of life. According to Shanthi Ranganathan, "The basic idea underlying the psychological therapy programme is to allow the patients to return to normalcy and a routine."

N. BALAJI

A group counselling session for family members of persons undergoing rehabilitation. The centre is keen that family members of every patient take active part in the rehabilitation programme.

On a typical day at the centre, patients wake up at 6-30 a.m., wash themselves, listen to a lecture and reflect on it, take part in group discussions, undergo individual counselling peppered with recreational activities and have meals. The day ends with a meeting of the Alcoholics Anonymous (A.A.) or the Narcotics Anonymous (N.A.).

The A.A. and the N.A., which have chapters all over the world, are based on a non-sectarian spiritual programme; their central idea is that by helping others you help yourself. Past members of the group speak at these meetings and inspire patients to recover. Shanthi Ranganathan said: "Patients celebrate each year of sobriety as a new year of their life and continue to attend these meetings even after their stay at the centre ends."

Despite the excellent programme and efforts undertaken by the centre approximately 45 per cent of the patients end up in relapse. Dr. Anita Rao, Director of Medical Services at the centre said, "There is no single reason as to why a patient goes into relapse. A number of factors contribute to this phenomenon."

Raj has been seeking treatment from the centre for the past five years. His attempts at staying sober have been inconsistent. Raj attributed this primarily to "stress and frustrations at not being able to meet goals." Rachel George, a counsellor at the centre, said that a relapse does not occur overnight. It shows itself at first as craving. If help is sought, it can be prevented. Otherwise, it manifests itself as behavioural change. According to Rachel George, overconfidence, interaction with old drinking friends, refusal to change, grandiose, impulsive behaviour and workaholism are symptoms that can trigger a relapse.

After patients complete their treatment, they are asked to visit the centre on a regular basis. The number of visits come down as time passes. According to Dr. Anita Rao, "one of the steps taken to combat relapse is to prescribe a dose of disulfiram for recovering alcoholics and naltrexone for recovering drug addicts. These are medications that react violently with alcohol and drugs and cause adverse effects such as seizures and vomiting of blood, and serve as a deterrent to the consumption of alcohol or drugs."

In addition to the medication, the centre has a community support programme that involves a third party (other than the patient's immediate family) which alerts the centre in the event of a patient's relapse.

The centre is also a pioneer in Family Therapy Programme. Shanthi Ranganathan said: "While it appears as though the patient is the only affected person, one must remember that the family undergoes a similar, if not greater, trauma." The centre is strict in its insistence that the family of every patient takes part in the programme.

V. Thirumagal, Director of Quality Control and Patient Care, said: "The main focus of this programme is for family members to realise that their husband/son requires their complete support and understanding to recover, and for the family to maintain a normal routine." They are taught how to deal with an alcoholic and what to do when he goes into a relapse. The family members also meet with Al-Anon, a group that functions along similar lines of the A.A., but counsels family members and close associates of alcoholics.

Patients who approach the centre are first screened by the in-take counsellor. Thirumagal said: "If the patient has a severe medical condition that we are not equipped to handle then we refer him to another hospital. We take him after the condition has been brought under control." The centre admits about 900 patients a year. The patients are mostly men. The average age of alcoholics is around 35 years and that of drug addicts, between 25 and 35. The centre has also treated the odd female patient.

Shanthi Rang-anathan said: "While patients are brought here by their relatives or someone who has their best interests in mind, we don't accept anyone who comes here against his will." As is the case with almost all problems, the stepping stone to recovery is acceptance of the problem, she added.

Anand was a social drinker in college; gradually, his dependence on alcohol grew to unimaginable proportions. "I never thought I had a problem and always blamed external elements for my condi-

tion," he said. His job performance was at an ebb and he plunged into marriage in the hope that it would solve his problems. "After 22 years of addiction and four other centres, I came here in 1990. Today I have a new life and I repent for the pain I have caused to all those around me," he said.

Regret, remorse and a strong desire to make amends prevail among most patients at the centre. However, despite seeing some light at the end of the tunnel, they do not know how to get there. Keeping this in mind, the centre has a number of counsellors who provide individual attention to the patients and their families. All the counsellors hold post-graduate degrees in psychology and/or social work and devote themselves to the challenge of restoring stability to the shattered lives of families and patients.

N. BALAJI

At a counselling session.

The centre has, since 1986, conducted over 250 training programmes, 300 lectures and about 100 exhibitions for industries, medical staff and social workers throughout India. Among the industries and institutions that benefited from the programme are Tata Iron and Steel Company Ltd., Jamshedpur; Wheels India Ltd., Chennai; social workers and medical officers in Mumbai and Chennai; and the staff of the safety department of Southern Railway.

The T.T.K. Hospital is now working with two Chennai-based establishments to make them drug- and alcohol-free. It collaborates with the International Labour Organisation (ILO), which, along with the United Nations Drug Control Programme, started the "Developing Community Drug Rehabilitation and Work Place Prevention Project" in India in 1995. The programme, which covers nine cities and 12 establishments in India, was formulated in response to the problem of the rising number of drug addicts in the country. For this programme, the ILO selected nine host organisations, one in each city. These organisations are trained to work with local establishments. The T.T.K. Hospital has been selected to work with two establishments in Chennai – Kasturi and Sons Ltd. and Hindustan Motors, two organisations that volunteered to be part of the programme.

Kasturi and Sons Ltd and Hindustan Motors had been making efforts to create awareness among their employees about the ill-effects of substance abuse even before the start of this programme. When they got the opportunity to join forces with an international agency, the managements extended complete cooperation. According to Mukthiar Singh, the National ILO Project Co-ordinator for India, "it was largely because of the enthusiasm shown by the managements of the two companies that they were selected for the programme." The ILO's primary role in this programme is to "train the trainers", that is, local host organisations such as the T.T.K. Hospital. Among other things, the programme teaches volunteers to identify addicts, deal with them and to bring down absenteeism in the establishments. The T.T.K. Hospital conducts seminars, meetings and awareness programmes for the employees and the employers of the two establishments on a regular basis.

Malini Roberts, Medical Social Worker at The Hindu Employees' Health and Welfare Centre run by Kasturi and Sons Ltd, is satisfied with the programme and says, "the management's role is crucial for the success of the programme." Since 1983, even prior to the ILO programme, Kasturi and Sons Ltd was referring employees with substance abuse problems to the T.T.K. Hospital. The management of Kasturi and Sons Ltd shows its support to the recovering alcoholics by paying for the treatment and granting medical leave for the period of treatment. Those undergoing rehabilitation are seen as victims, rather than as culprits. As part of the ILO programme Kasturi and Sons Ltd has laid down a policy on substance abuse at the workplace.

About 26 employees of Hindustan Motors underwent rehabilitation and all of them have remained sober since then. P.R. Santhanakrishnan, Divisional Manager, Industrial Relations, Hindustan Motors, says: "The collaboration with the ILO and the T.T.K. Hospital has proved to be excellent. Instead of just concentrating on alcoholics requiring rehabilitation, we now pay heed to employees who are non-alcoholics, urging them to stay so." The stress is on the maxim 'Prevention is better than cure'. Since the implementation of the ILO programme, there have been no new cases of alcoholism in Hindustan Motors.

It is community service projects such as these that place the T.T.K. Hospital in a class of its own. "People need to be made aware that such de-addiction centres exist," said Shanthi Ranganathan, "and that it is possible to cure alcoholism and drug addiction."

Apart from catering to individuals and industries, the T.T.K. Hospital has an extensive community project that involves conducting camps on alcoholism in villages. Currently, the centre has adopted six areas in Tamil Nadu and conducts camps on a regular basis. To date, about 60 camps have been conducted. The duration of each camp is 15 days, and includes a doctor, a nurse and counsellors.

Assisted by a host organisation (any organisation within the village that has earned the trust of the people, such as a school or a government agency) that acts as a medium, the centre interacts with the villagers.

The T.T.K. Hospital is waging a relentless war against drug and alcohol abuse. It has extended its activities to other States and even other countries. It has conducted over 1,000 training programmes for medical and social workers in India. It has also trained a number of health and social workers from Sweden, Myanmar, Sri Lanka, Bangladesh, Nepal and Mongolia. Shanthi Ranganathan said: "We cannot reach out to everyone who needs our help. This is why we train people from various countries, particularly from the subcontinent." Shanthi Ranganathan and the T.T.K. Hospital are thus a great source of inspiration to other agencies and individuals all over the world in the battle against substance abuse. ■

Names of patients have been changed to maintain anonymity.

Wanted, bold decisions

India should accept that converting the Line of Control into an international border is the only solution to the Kashmir problem. It should ask the world to be firm with Pakistan for adopting fundamentalist Islam and sponsoring international terrorism.

B.G. DESHMUKH

THE Government of India has formed a Review Committee to look into what happened in Kargil, how and why it happened at all, what should be done and what remedial steps should be taken. No doubt the committee will do an excellent job, but I still think that it will not be able to tackle the basic issue, for which certain bold decisions will have to be taken by the government.

First, we must accept that Jammu and Kashmir is not a subject to be tackled by a single Ministry. At present the Jammu and Kashmir Cell in the Union Home Ministry looks after this, but even when I was in government I used to argue that this was not the correct approach. The Home Ministry is naturally concerned with the subject as it deals with all matters relating to States. There is also a tradition of Jammu and Kashmir being looked after by the Home Ministry. Years ago there used to be a Jammu and Kashmir Secretary whose sole responsibility and duty was to look after that State. But other Ministries are also vitally concerned with the subject: the Defence Ministry is concerned with it because of national security considerations; the External Affairs Ministry is concerned because a foreign country, namely Pakistan, is involved and there are international ramifications; the Finance Ministry is concerned because of huge financial outlays required to tackle the problem. Other Ministries are also concerned to a greater or lesser extent. I therefore used to argue that considering the multi-Ministry concern and the international importance of the subject, the Jammu and Kashmir problem should be handled by the Prime Minister's Office (PMO). This will ensure proper coordination among the Ministries and any step or decision taken will have the authority of the PMO behind it. The matter should be under the charge of a young and dynamic Minister of State or even a professional technocrat working as an adviser to the Prime Minister but with the status of a Minister of State. One argument against this suggestion was that this would give an unnecessarily high profile to the Jammu and Kashmir problem when we may not want to do so. But the fact is that whether we like it or not, Jammu and Kashmir is going to be a high-profile problem until it is fully resolved and especially when Pakistan will continue to do its utmost to highlight it on the international plane.

I HAD also seen that the Jammu and Kashmir problem was not handled by the government on the basis of continuity. No doubt there are sections in the Home Ministry and also in the External Affairs Ministry dealing with this matter. But owing to governmental practices, the officers in charge of these sections or divisions change periodically and this change affects the continuity of handling. This is apart from the political direction given by the party in power. I had therefore thought that the government should encourage establishing think tanks outside the government. I had in mind something like the Rand Corporation or the Brookings Institute in the United States. As Cabinet Secretary I called a meeting of important Ministries to discuss this subject in a general way. The Finance Ministry was supportive and as a matter of fact established and then continuously helped non-governmental autonomous bodies. Even the Defence Ministry supported the Institute for Defence Studies and Analyses and was prepared to accept the need for more such institutes. But the Home Ministry and the External Affairs Ministry were not prepared to consider the idea, especially in the case of Jammu and Kashmir and Pakistan. I still think that we should have established a think tank outside the government to study the Jammu and Kashmir problem and a think tank to deal with the country's relationship with Pakistan. Such a measure would have ensured continuity in handling the subject; it would also have ensured that bureaucratic or political baggage would not affect the study of this subject. These think tanks could have then highlighted continuously the interests and concerns of the country and put them up before the public. This would have ensured that everything is not left to the government or to the discretion of politicians. The External Affairs Ministry at that time did mention the unit established in the Jawaharlal Nehru University in Delhi to carry out studies about relations with Pakistan. But I was not very happy with this.

I was also not happy about the way the intelligence agencies were functioning (see the article "Central intelligence agencies – lack of standing coordinating mechanism" in my book *A Cabinet Secretary Looks Around*, 1993). At least when I was in government there was no standing coordinating mechanism to study, scrutinise and evaluate reports from all the intelligence agencies, civil and military. There was a Joint Intelligence Committee (JIC), but it just went into limbo after its first chairman was shifted. The chairmanship of the JIC was used more to accommodate police officers who either were not wanted elsewhere or for whom another slot could not be found. Our intelligence agencies also suffered from their usual inability to share intelligence with other agencies or share sources because of the risk of their disclosure. There was no coordinating mechanism that could assign jobs to these intelligence agencies. I had therefore at that time suggested something like an Intelligence Coordination Committee on the pattern available in the United Kingdom. This would be a committee presided over by the Cabinet Secretary, and the chairman of the JIC would be its secretary. As usual the military intelligence was lukewarm to this idea. If only such a committee had been set up, there would have been better scrutiny and utilisation of intelligence for national security. Now that the National

Security Council (NSC) has been set up, hopefully its secretariat would discharge such a function. Its job has been laid down and the JSC should start tackling it urgently. For example, India has launched satellites and some of them must be orbiting over the Jammu and Kashmir area. I am told that such satellites pass these areas at least once a day. It is reasonable to assume that the Defence Ministry is getting photographs from such satellites and this should have helped in keeping a watch over the Line of Control (LoC). If this has not been done so far, it should be done immediately. Another point for the NSC is that the Security Adviser will have to be a full-time Adviser and not somebody, as is the case now, who also holds another post. The present situation is thoroughly unsatisfactory as the Principal Secretary to the Prime Minister is, even otherwise, very busy as the head of the PMO.

WE are also very poor in projecting our case on Jammu and Kashmir on the international scene. We are always apologetic if not defensive. We should be bold and confident enough to tell the world that we are a mature working democracy while Pakistan is ruled in a dictatorial fashion by the Punjabi elite consisting of landlords, industrialists and a civilian-military complex. Such a government always needs an issue to divert public attention away from its dictatorial set-up. To achieve this there is no better way than India-bashing. The issue of Kashmir is not only emotion-charged as it is a Muslim-majority area which decided to remain in India; it is also a sensitive issue to the Punjabi military elite as it has suffered humiliating defeats in 1965 and 1971. India should be bold enough to tell the world that Pakistan cannot claim to be a protector of Muslims as it lost this claim when it butchered almost 18 lakh East Pakistani (now Bangladeshi) Muslims in the period up to 1970. What the Punjabi elite did to East Pakistani Muslims is as reprehensible as what Adolf Hitler did to the Jewish community. The East Pakistani population was very large compared to the West Pakistani population, especially its Punjabi component. On the basis of universal suffrage East Pakistanis should have therefore decided the choice of the Prime Minister. This idea was nullified by the Punjabi elite, and they therefore started butchering East Pakistani Muslims. They even boasted that they had created a generation of people of indeterminate parentage, who would serve the Punjabi elite in ruling East Pakistan. India should therefore make it clear to the Pakistanis that they had no case at all for being the champions of Muslims in India.

Not only that. They cannot even look after all Muslims in Pakistan. The predominant Sunni community is bent on subjugating the Shia minority. Other Islamic groups such as the Ahmedias are also marked out. India should therefore expose not only to the world but even to the Pakistani common man what a hollow claim Pakistan has for being the champion of Muslims in India. Mohammad Ali Jinnah, Pakistan's founder and first Governor-General, had declared in his address to the nation that "in Pakistan there are no Hindus or Muslims, they are all Pakistanis". I am told that these words have since been erased from his address. The minorities in Pakistan have now become second-class citizens. The number of Hindus now is one-tenth of what it was in 1947. The Punjabi elite has now embraced fundamentalist Islam to keep their grip on the people of Pakistan. It started with President Zia-ul-Haq in the 1980s. The final shape has now been given by Prime Minister Nawaz Sharif. Even the Opposition in Pakistan has exposed this hypocrisy and has been alleging that the Punjabi elite is using Islam only to perpetuate its rule in Pakistan. The various Provinces in Pakistan, such as Sindh and Baluchistan, are seething with discontent against the domination of the Punjabi elite. Zulfikar Ali Bhutto did try to destroy the stranglehold of this elite and render social justice to the common man but he was overthrown by this section. Unless, therefore, there rises a strong middle class in Pakistan, which will challenge the dictatorial authority of the Punjabi elite, I do not think that there will be any durable peace between India and Pakistan.

FORTUNATELY this process has already started, although only in a very small way, because of the tyranny and oppression of the ruling elite. The Pakistani newspapers somehow manage to give expression to this discontent. Of course, India cannot and should not be seen to be supporting this movement, but should somehow convey support to it. For this purpose, India should encourage people-to-people contacts and exchanges, allow more people to travel freely and have more cultural intercourse and more free trade. Hopefully, this should help the democratic movement in Pakistan.

The Punjabi elite, and especially its civilian-military component, fully exploited the war in Afghanistan. It allowed Pakistan to be used by the Americans as a conduit for funds and military hardware to set up resistance and insurgency against the Soviet Union in Afghanistan. The Inter-Services Intelligence (ISI) set up training camps for Afghan militants and also recruits from all over the world to fight the Soviet Union. It also managed to keep a substantial portion of the proceeds of the aid in Pakistan itself, hoodwinking the Americans. This was the beginning of the Taliban movement, which ultimately took over Afghanistan. But in this process the Punjabi elite has created a Frankenstein which is going to be a threat to it. The Taliban philosophy has taken deep roots in Pakistan itself; I was told that it had infiltrated the Pakistani armed forces and secured a firm foothold among the junior officer cadre. The Punjabi elite uses the Taliban philosophy and approach to send trained men as "Mujahideens" into Kashmir. Many of them are not Kashmiris but Afghans, tribal people from the Frontier Province and even recruits from West Asia and North Africa. India should make clear to the world the devastating implications of this action of Pakistan. Pakistan is encouraging the Taliban movement, which would not remain confined to Pakistan and Kashmir but would create disturbances in the whole of Central Asia and even in Iran and West Asia. Russia is already aware of this and is fighting this menace. China is becoming aware of this new danger in its Central Asian province. India should, therefore, ask the world to be firm with Pakistan for indulging in this kind of international terrorism. India should also try to dissuade the World Bank, the International Monetary Fund and the Group of 8 countries from giving financial help to Pakistan unless it changes its ways. A usual argument is that if such help is not given the Pakistani economy will collapse and there will be nothing but chaos and anarchy, which will benefit only the fundamentalists. But the fact is that the Punjabi elite is using this financial help not to improve the national economy but to perpetuate its grip over the country. If, therefore, such financial help is withheld, it could only result in helping the democratic forces in Pakistan.

India should take effective steps to educate Kashmiris on this situation. The Punjabi elite would like to have Kashmir but only as a fiefdom, as in the case of Sindh and Baluchistan. The Shia community in Kashmir would be gravely threatened by the Sunni community. Of course, minorities such as the Kashmiri Pandits would be almost wiped out. The history of terrorism indulged in by Pakistan should also be explained to

Kashmiris. In the beginning, Pakistan encouraged an autonomous, independent Kashmir for which the Jammu and Kashmir Liberation Front was fighting. Eventually, the Punjabi elite did not like the idea as it wanted Kashmir to be part of Pakistan. It therefore encouraged militant organisations such as the Hizbul Mujahideen and the Harkat-ul-Mujahideen, which wanted Kashmir to accede to Pakistan. Many of these organisations had a strong base in Kashmir, and Pakistan came to realise that this was not in its interest. By the end of 1988, the ISI had realised the potential of the Taliban philosophy and methodology. It, therefore, created militant groups outside Kashmir but firmly based in Pakistan, which were then used as Mujahideen groups to create insurgency in Kashmir. India should explain all this to the people of Kashmir, bringing out clearly the Pakistani strategy to capture Kashmir to make it a fiefdom of the Punjabi elite.

At the same time, India should accept that it has to do quite a lot in Kashmir. India should take immediate steps to give a clean, uncorrupt administration, which will really carry out poverty alleviation and other developmental schemes. It must be admitted that India has tolerated large-scale corruption in Kashmir. It has also misused its authority in certain cases. Putting Sheikh Abdullah in custody, the dismissal of Farooq Abdullah's Government in 1986, the rigging of elections in 1988, and again the dissolution of the State Assembly in 1990 are examples. India has also not handled the Kashmir problem imaginatively. It did not give funds to Farooq Abdullah to take over primary schools from the Jamaat-e-Islami in 1988-89. The funds needed were paltry, considering the importance of the step. I also wanted to introduce the system of leave-travel concession so that at least Kashmiri government servants and their families could come out of Kashmir once in three years and see what India is. But I could not push this through for lack of grants from Delhi. The unnecessary provocation of suggesting the abrogation of Article 370 should be avoided scrupulously. India must accept its responsibility for having created a fertile ground in Kashmir for Pakistan to launch successful operations of militancy and insurgency. This should not be lost sight of in the advocacy against the Pakistani proxy war.

Whether India must cross the LoC and destroy the bases and training camps of the militants in Pakistan-Occupied Kashmir (POK) has been under discussion for a very long time. But India should also admit that such a luxury is now available only to very strong nations. The Americans could do this when they blasted Osama bin Laden's base in Afghanistan or bombed a factory in Sudan. China could send its divisions into Vietnam to teach the latter a lesson. Theoretically, India also could have done so in POK but it missed the chance. It could not even undertake what is called hot pursuit. And now India and Pakistan being nuclear weapon states, this is just not possible. Pakistan considers Jammu and Kashmir a disputed territory but treats it as part of Pakistan. Any attack on POK will therefore be considered by it as an attack on Pakistan itself and it will retaliate accordingly. In the bargain, India would lose international sympathy and give Pakistan a chance almost to create a nuclear holocaust in the subcontinent. India should therefore forget about crossing the LoC into POK.

AT the same time, India should also finally accept that converting the LoC into an international border is the only solution to the problem. Indira Gandhi could not do so at Shimla in 1971, but that is history. No Indian political party, or for that matter no Pakistan political party, would say so on a public platform, but there is a very good chance of the international community standing by India in this regard. India may not directly approach any foreign nation or even the United Nations for this as its policy is to treat this problem as a bilateral issue based on the Simla Agreement. But then there is no objection if India informally briefs some countries and statesmen who are friendly to it to float this idea and give it a push on the international circuit. This is not interference or internationalising the issue. There is a good chance of this strategy succeeding, at least at the present juncture. These countries are beginning to realise, and if they have not India should make them realise, that the Pakistani strategy of encouraging fundamentalist Islam at home and exporting international terrorism is a powerful destabilising force not only in the Indian subcontinent but in the whole of the Central Asian heartland. There are therefore good prospects of India's objective of getting the LoC converted into an international border being achieved. Of course, for this purpose there will have to be a national consensus in India. Otherwise any party in power advocating this would suffer heavy flak from the Opposition parties.

While dealing with the Kashmir issue, one cannot and should not forget the large Muslim community in India. It has suffered the consequences of Partition in 1947. It is most unfair that many members of the Hindu community have come to look at this community with suspicion for no fault of its. These Muslims are Indians as much as any other Indian is and it is not doing them justice if they are asked to prove their loyalty to the Indian nation. Such steps would only alienate them. Therefore, when the Kashmir issue is discussed or when Pakistan tries to internationalise it by consciously and deliberately heightening the proxy war, many people in the Indian Muslim community became unsettled and uneasy. Many people say that if Kashmir is given to Pakistan, it will reopen the wounds of Partition and that may be unfair to the Muslims in India. India has been their homeland and they are not going to leave it, whatever the provocation and allegation. India should also ensure that no political party is allowed to propagate the philosophy of holding the present generation of Muslims responsible for what their forefathers might or might not have done. There should be a national consensus on how to deal with this so-called question of the Muslim community and especially as to how not to exploit them as mere vote banks. It should be especially ensured that the Kashmir issue is in no way linked to the loyalty and patriotism of the Muslim community in India.

Even if the Kashmir issue is resolved, there is no guarantee that there will be no tension between India and Pakistan. One of the prominent militant organisations in Pakistan, the Lashkar -e-Taiba, is on record as saying that it would like to have Kashmir as a base and then destabilise India by using the large Muslim minority in India. A military solution by India of breaking Pakistan is also not practical. It will only create more unstable countries in India's neighbourhood. It would be worse than the geo-political situation as it exists today.

India must therefore try to negotiate bilaterally with Pakistan and its objective should be to make the LoC the international border. India should also bring to the attention of the international community the dangerous game being played by Pakistan by adopting fundamentalist Islam and sponsoring international terrorism. But, a real, lasting peace is possible only if the Punjabi elite are removed and their place taken by a strong, vibrant middle class in Pakistan. India should do its best to help create such a situation. ■

B.G. Deshmukh is a former Cabinet Secretary, who has also served as Principal Secretary to the Prime Minister.

The myth of inflation control

The low rate of point-to-point inflation is not a reflection of the success of the BJP-led government's efforts at inflation control, but in large measure a result of its failure to control prices last year.

C.P. CHANDRASEKHAR

STATISTICALLY speaking, the Bharatiya Janata Party could not have had it any better. The annualised, point-to-point inflation rate, as measured by changes in the wholesale price index (WPI), touched a historic low of 1.2 per cent during the week ending July 24. The party's propaganda machine was quick to add this to its list of "achievements" to be flaunted before the electorate in the course of the election campaign. In his Independence Day address, caretaker Prime Minister Atal Behari Vajpayee did not fail to note that inflation in the country was at its lowest in 17 years at 1.3 per cent.

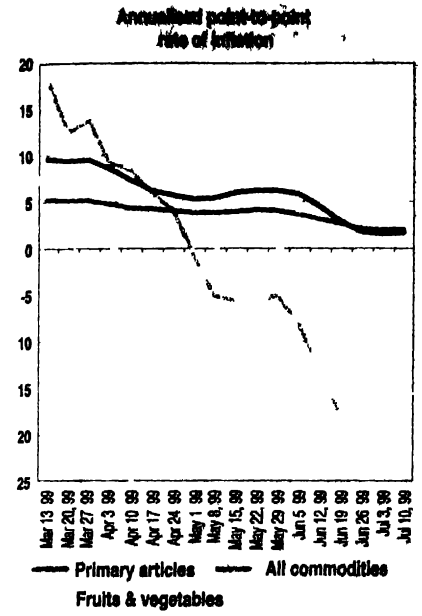
Vajpayee's claim is bound to carry some weight, given the veneer of precision associated with numerical economic indicators such as movements in the WPI. But given the perennial lack of correspondence between trends suggested by point-to-point inflation figures and 'felt realities' on the ground, a careful scrutiny of the claim is in order. An examination of point-to-point inflation rates indicates that the 1.2 per cent level was indeed the culmination of a medium-term decline in annualised rates of inflation from around 9 per cent in early November 1998 to 5 per cent in early February, 4 per cent at the end of April, 3 per cent in mid-June and 2 per cent in early July.

There are, however, a number of other noteworthy trends reflected by the evidence. To start with, while during the financial year 1998-99 a deceleration in the rate of increase of the prices of manufactured products played a role in dampening overall inflation, matters have since changed substantially. In recent weeks the rate of inflation for "all commodities" grouped together has fallen at a faster rate than that of manufactured products. This indicates that commodities other than manufactures have been responsible for the sharp decline (from 4 to 1.6 per cent) in the point-to-point inflation rate in the nine weeks starting with the one ending May 22, when the caretaker government was in place.

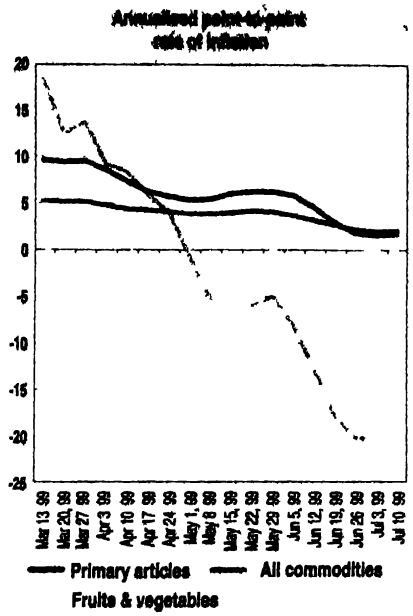
Second, the deceleration in the rate of overall inflation has occurred despite a stepwise rise in the rate of inflation in the Fuel, Power and Light group, where most prices are administered by the government. In other words, there have been other deflationary pressures at work in the economy, which have more than counteracted the inflationary impetus which is the usual byproduct of rises in the administered prices of essential and basic goods.

Third, it is the principal group "primary articles" which has (in the latest 14 weeks for which data is available) recorded an inflation trend very similar to the overall index of commodity prices. This makes it the principal contributor to the decline in the inflation rate. Within that group, the fruits and vegetables (F&V) subgroup has registered a dramatic decline in the rate of inflation from around 20 per cent on an annualised point-to-point basis in early March to -20 per cent in early July.

This suggests that a collapse in F&V prices explains the fall in the inflation rate. This is a collapse relative to the extremely high prices in this category which prevailed in these months of the previous year, so it reflects more of a reversion to the norm rather than a secular decline in the prices of these goods. For example, the index for vegetables during the week ended July 31 stood at 459.7, compared with 769 during the corresponding week of the previous year.



The implied role of the F&V subgroup in influencing price trends comes out more clearly from the evidence on trends in the monthly average wholesale price index for different groups and subgroups between March 1997 and April 1999. The All Commodities index is broken up into three principal groups: Primary Articles; Fuel, Power, Light and Lubricants; and Manufactured Products. Starting from March 1998, the movement of the WPI for All Commodities diverged noticeably from the trend warranted by movements in the indices for the Fuel, Power and Light and the Manufactured Products subgroup. This implies that the rise in the overall WPI as of March 1998 was substantially driven by increases in the index for Primary Articles.



However, when we examine the constituent elements of the primary articles group, we find that while there has been a steady rise in the WPI for foodgrains, the behaviour of the index for F&V has been volatile. Between March and October 1998, the WPI for F&V rose by 63 per cent. This was exceptional, since there was no such similar rise in the F&V index between March and November 1997, when the F&V index rose by just 1.1 per cent. The increase between March and October 1998 was basically the result of an unprecedented increase in the prices of a few items such as onions and potatoes, which was primarily not owing to supply shortages but driven by speculation.

It is indeed true that the F&V subgroup accounts only for a weight of 4.1 (out of 100) in the WPI, while primary articles as a group carry a weight of 32.3. But the sharp increase in F&V prices between March and November 1998 would itself have contributed to an increase of 8.1 per cent in the primary articles index. During this period, foodgrain prices rose by 8.7 per cent, which – given the weight of 7.92 commanded by this category – would have pushed up the primary articles index by 2.2 per cent.

Thus fruits, vegetable and foodgrains together contributed to a 10.9 per cent increase in the WPI for primary articles. The actual increase in the primary articles index between March and October 1998 was 13.2 per cent, indicating that fruits, vegetables and foodgrains accounted for more than four-fifths of the increase in the prices of primary articles.

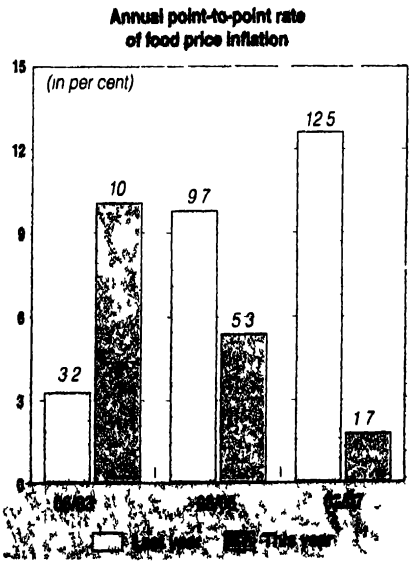
The significance of this comes through when we realise that the primary articles group contributed to a 4.3 per cent rise in the overall WPI, which rose by just 6.6 per cent during this period. Around two-thirds of the increase in the overall index during this period was owing to increases in the prices of fruits, vegetables and food-

grains

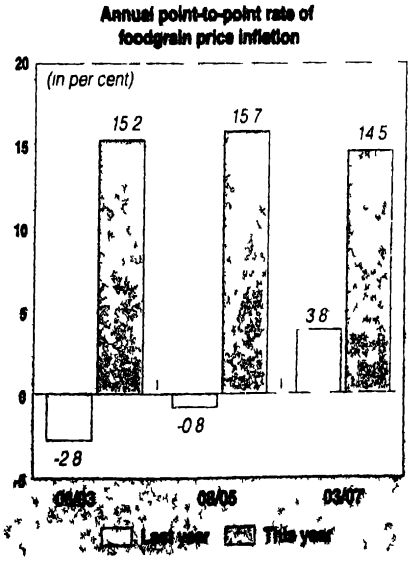
Given the unusual, dramatic and speculation-driven increase in F&V prices a correction was inevitable Starting November 1998, the WPI for the F&V subgroup virtually collapsed

This obviously affected the annualised rate of increase in the WPI for this subgroup as well, which came down sharply from 54 1 per cent in October 1998 to 6 7 per cent in April 1999 This was a period when the prices of both manufactured products and of fuel and so on were coming down as a result of the recessionary environment and because administered price hikes were limited As a result, the annual point-to point rate of inflation came down substantially and consistently during these months

There are a number of implications that follow from these trends To start with, declining rates of inflation in the prices of both manufactured products and primary articles appear to have played a role in reducing the point-to-point inflation rate, though primary product price trends have had a stronger effect The low rate of manufactured product price inflation is clearly the result of the recessionary environment created by the sluggishness of the domestic market and intense competition from abroad in the wake of economic liberalisation That is, the deceleration in the rate of manufacturing price inflation can hardly be attributed to any policy of the government specifically designed to moderate inflationary trends



However, the principal argument here is that even the deceleration in primary article inflation is surprisingly not the result of any state initiative but of past state failure The massive inflation in F&V prices in the early part of the BJP-led government s term was, it was widely accepted even then, the result of poor supply management on the one hand and the failure to come down heavily on speculators in the trading community, who constituted an influential vote bank of the BJP In fact leading figures in the government virtually washed their hands of the problem arguing that hoarding and speculation were not crimes but legitimate activities in a market economy



In the event the non-seasonal and high rate of inflation persisted for a long period till public opinion forced the government to act to roll back prices to levels warranted by costs and the supply-demand situation The fact that F&V prices were abnormally and excessively high during the first three-quarters of financial year 1998-99 obviously implies that once prices were restored to normal levels the point to point rate of inflation in the corresponding period of this financial year would be negative, given the high base value with which the comparison is being made In fact, the point-to-point rate of inflation has been consistently negative starting with the week ending May 1 1999 It is this negative rate of F&V price inflation that has brought the overall rate of inflation down to its present level of less than 2 per cent That is, the low point to point inflation rate is not a reflection of the success of the government's efforts at inflation control, but in large measure a result of its failure to control prices during the corresponding period last year

Going by the policy pronouncements of the government and the central bank, the principal instruments of inflation control in the post-reform environment are a curtailment of the fiscal deficit and a tight monetary policy In fact, policy on both these fronts has been particularly lax in recent times Not only was the fiscal deficit in 1998-99 high at close to 7 per cent of GDP, but the Reserve Bank of India has loosened controls on money supply to enhance liquidity in the system and bring down interest rates

While this suggests that the belief in a simple and direct relationship between the fiscal deficit and money supply increases on the one hand and price movements on the other is not warranted even on empirical, let alone theoretical, grounds, it also indicates that the government has not seriously pursued an agenda of inflation control

The evidence suggests that inflation control was not a priority objective for the

government. In fact, but for the collapse in F&V prices, it appears that the government's actions would have contributed to an acceleration of inflation. This comes through if we, for example, examine the point-to-point rate of inflation for three groups of commodities (all commodities, food articles and foodgrains) for three points of time during March-July 1999 and the corresponding points of time in 1998. Across these three points in time, the overall rate of inflation fell from 5.2 to 1.8 per cent during 1999, while it rose from 4.8 to 8.1 per cent in 1998. A similar trend prevailed in the case of food articles as a group, with the point-to-point inflation rate declining from 10.0 to 1.7 per cent in 1999 and rising from 3.2 to 12.5 per cent in 1998. In fact, as argued earlier, the trend in food prices as a whole was a major influence on the overall rate of inflation.

However, there is one subgroup included in the food articles group, namely, foodgrains, where these trends in inflation were not replicated. While the annual point-to-point rate of inflation of foodgrain prices was low or negative during March-July 1998, it was consistently high at around 15 per cent at all these points of time in 1999. The reason for this is that the government has in its procurement operations provided special bonuses above the support price recommended by the Commission for Agricultural Costs and Prices and backed them with rising issue prices for foodgrains distributed through the public distribution system. This has provided a high and rising floor for foodgrain prices, resulting in the trends observed.

Thus, if the sharp rise in 1998 and inevitable reversal in F&V price inflation had not occurred, and the industrial sector had not been mired in a recession because of appropriate state policy, we would in all likelihood have had a significantly high rate of inflation currently, driven by an engineered food price inflation and supported by buoyant manufacturing prices.

Clearly, therefore, the lull in the point-to-point rate of inflation is not an "achievement" of the BJP-led government, but a fortuitous consequence of its acts of omission and commission which in the first instance had deleterious consequences such as the speculative inflation in the early part of its term and the persistent recession right through its tenure. As is to be expected of a party that derives its sustenance from the rich, these acts have affected most adversely those commodities which dominate the consumption basket of the poor and the middle classes of the country. ■

■ COLUMN

A sordid record

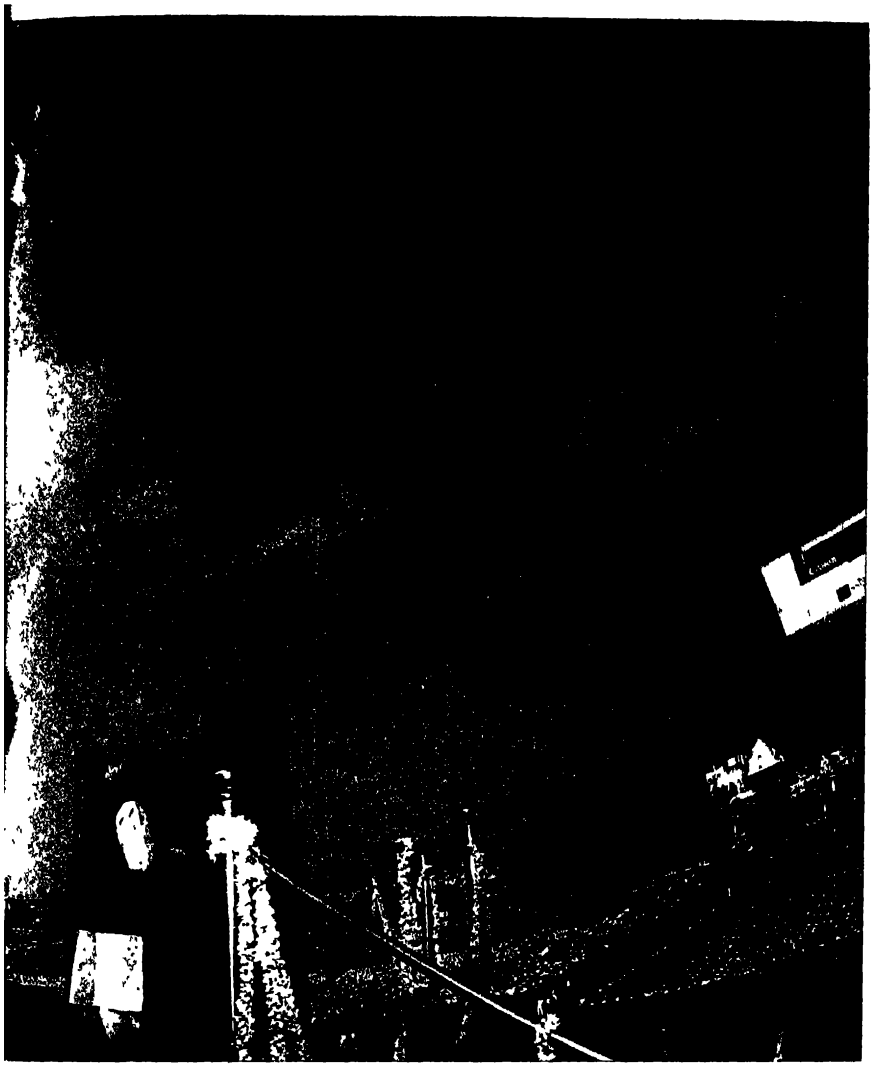
The BJP's electoral tactics are calculated to cover up its misgovernance and political disorientation. Its nuclear muscle-flexing represents dangerous adventurism.

ATAL BEHARI VAJPAYEE is the quintessential liberal, the soft, moderate, face of the Bharatiya Janata Party, whose natural instincts favour a consensual approach to contentious issues. He is not given to militant postures, or to war-mongering with neighbours. Domestically, he is loath to push the minorities into a corner. His real agenda is un-aggressive; it has nothing to do with reshaping and redefining Indian nationhood or promoting Hindutva. Vajpayee works at a high comfort level with his coalition partners. He inspires confidence among the larger public that the BJP is indeed a party that is "tried, tested and trusted".

Right? Wrong! Going by his Independence Day address, Vajpayee and his projected image could not be further apart. Despite the Election Commission's restrictions, Vajpayee went all out to project the BJP as a party that wants to alter the *status quo*, indulges in chauvinist drum-beating, plays up the "nation-in-peril" theme and lays claim to high "achievements", although these have little to do with its policies (for example, the 200 million tonnes grain output), or are otherwise questionable (for example, an inflation rate of 1.6 per cent). Kargil, *shaurya* and *parakrama* were central to his address. It was no aberration that Vajpayee played up Pokharan-II and announced that Agni-II would soon be inducted into India's arsenal.

This announcement was more an image-hardening exercise than something operationally significant. The Agni-II missile is nowhere near induction. If Agni-I, after three test-flights, was still considered a "technology demonstrator", not even a prototype, then Agni-II can hardly be characterised as something starkly different after one test. Usually, a missile goes through 10 to 20 tests before it can be declared operationally reliable.

This, typically, takes five to 10 years. Agni-II is not just a scaled-up, longer-range version of Agni-I. It uses a wholly different (solid) fuel in the second stage. Now, fuels usually require repeated testing because their performance has a serious bearing on the missile's range and accuracy.



Even more significant was the August 17 release of the National Security Advisory Board's (NSAB) draft nuclear doctrine. This could not have been done by Vajpayee's security adviser Brajesh Mishra without high-level clearance, probably from the Prime Minister himself. This document represents *a further hardening of India's nuclear stance* and an attempt to put the country on the course of induction and deployment of these mass-destruction weapons, while abandoning the goal of nuclear disarmament altogether. The draft introduces menacing terms like "punitive retaliation" which were *never part of India's strategic discourse*. The timing of its release, amidst elections, and its content, are a big setback to the cause of sanity.

Vajpayee's post-Kargil attempt to paint himself in the colours of the Warrior Prime Minister sits ill with what the BJP itself considers – and the Rashtriya Swayamsevak Sangh (RSS) concedes – as the source of his presumed appeal, namely the "soft" image of moderation. This image change would well cost the BJP many votes in the undecided floating part of the electoral spectrum. The militant rhetoric is, of course, guaranteed to please Hindutva hardlin-

■ BEYOND THE OBVIOUS

PRAFUL BIDWAI ■

Prime Minister A.B. Vajpayee at the Red Fort on August 15.

ers; but those are already with the party. The trick lies in attracting the uncommitted "middle ground". Whatever the recent highly upbeat opinion polls might claim on the basis of relatively small, unstratified samples, which lumped together "BJP & Allies" – even before the shape of the National Democratic Alliance (NDA) became clear – we do not really know how the floating voter will behave. On an intuitive basis, it still is hard to imagine that the BJP will significantly improve on its tally. Where might it be able to make up the likely loss of many of the 90 seats it last year won in Uttar Pradesh and Madhya Pradesh, where it is believed to have peaked? (These two States account for almost one-half its national tally.)

There are limits to how much the BJP can push and flog hardline themes like Kargil or the new nuclear doctrine. The shooting down of Pakistan's naval surveillance aircraft, Atlantique, has not gone down well. It now emerges that the plane was not even given a warning before being attacked (the Indian Air Force MiGs had only their radio channel working), and there may be some uncertainty about its precise location *vis-a-vis* Sir Creek, the disputed, still – undemarcated, maritime boundary – especially because the Creek has itself changed its course. (*The Telegraph*, Calcutta, August 14).

The fact that journalists flown from Delhi by the IAF to be shown the debris ultimately did not get to see it on the Indian side of the border speaks of bungling, which does not redound to India's credit. By several accounts (for example, Lt. Gen. V.R. Raghavan's), the IAF local units over-reacted. Even assuming that India was legally correct to shoot down the plane, the issue of *proportionality* of response to a violation of the 1991 airspace agreement is a nagging one. The incident reeks of post-Kargil arrogance.

As for convincing the domestic public that the Kargil crisis had nothing to do with gross intelligence and operational failures and strategic-political misjudgment at the very top (why was Gen. V. P. Malik on a "courtesy" visit to Poland even as Indian patrols were being killed?), the K. Subrahmanyam Committee is unlikely to be able to do the job. (*Frontline*, August 27). But such cover-up jobs seem to be part of a pattern with the BJP-led government.

The most glaring of these is the Wadhwa Commission report which all but gave the Sangh Parivar, especially its most lumpen formation, the Bajrang Dal, a clean chit as regards the burning alive of Graham Staines and his children. The report fails to link Dara Singh with any Sangh organisation, and his own action with the Orissa social context, defined by the Parivar's anti-Christian campaign. This, despite testimony from the Mayurbhanj and Keonjhar police that Dara Singh was an "active member of the Bajrang Dal", participated in RSS-run camps, and campaigned for the BJP in the 1998 Lok Sabha election.

The Commission ignored the statement of D.P. Mohapatra, Additional Director-General of Police (Intelligence), that "Dara Singh appears to be a supporter or fellow-traveller of the Bajrang Dal or even of the BJP though not a cardholder of these organisations". Remarkably, the Commission's own counsel, the highly regarded Gopal Subramaniam, himself noted: "There is sufficient evidence to suggest that Dara Singh's association with the RSS and the Bajrang Dal renders the matter open to further inquiry and investigation by the CBI..."

The Commission apparently launched into its investigation with an ant's eye view: looking at the event in a complete vacuum. It did not even bother to ask some obvious questions: What created the atmosphere, the political and social environment, in which communal passions could be so easily aroused? Why did anti-Christian prejudice become so vicious and *actively* vitriolic as to lead to the ghastly murder? What ideological and political influences impelled Dara Singh? The Commission brazenly ignored the testimony of Keonjhar Superintendent of Police Lalit Das who said: "Dara Singh's association with the BJP was so well-known that it was not necessary to inquire into his antecedents."

Amazingly, the report says that it could not find documentary proof of Dara Singh's membership of the Bajrang Dal, but that is such a literal interpreta-

tion of "membership" that it is laughable. And yet, the report also notes that anyone between 15 and 45 "can become a member of the Bajrang Dal with an annual fee of Rs. 5 but no membership card is issued..." (*The Indian Express*, New Delhi, August 15).

It is all very well for the BJP to shed tears for Staines, but the public is not likely to forget that it was Vajpayee himself who called for a "national debate" on religious conversions right in the middle of an anti-Christian pogrom in Gujarat – sending out the signal that his government has little respect for the constitutional right to the freedom to practise and propagate a faith of one's choice, and that it endorses, even if indirectly, "patriots" who brutalise the religious minorities. It is this kind of practised deception that marked the Sangh Parivar's campaign against the Babri mosque too, where it prevaricated, lied and told half-truths – to the people of Ayodhya, to Uttar Pradesh officials, to P.V. Narasimha Rao (who was only too willing to believe them), and to the highest court of the land.

The BJP-led government is again resorting to the worst forms of deception – not just through whitewash jobs *a la* Wadhwa and Subrahmanyam – but through open inducement and bribery, especially of the top echelons of the administration, and the media.

The BJP-led government is again resorting to the worst forms of deception – not just through whitewash jobs *a la* Wadhwa and Subrahmanyam – but through open inducement and bribery, especially of the top echelons of the administration, and the media. If you are one of 218 chosen journalists in U.P., you will be given posh bungalow lands at throwaway rates – at a hefty subsidy costing the near-bankrupt State Rs.1.09 crores. This violates all ethical codes and Election Commission directives. Then there is Pramod Mahajan who hardly conceals his intentions: he has just set up a 24-hour news channel on Doordarshan without Prasar Bharati authorisation and reportedly plans to offer favoured journalists a tidy Rs.1 lakh to do short Doordarshan interviews – a modest sum indeed! The BJP's media cell, run by people such as Ajay Singh and Sudhanshu Mittal, so openly interferes with Doordarshan's working, that the Prasar Bharati board had to pass a special resolution demanding that there be no direct "interface" between politicians and Doordarshan staff.

It is hard to see why the BJP would go to such absurd lengths in media rigging, and spend crores of rupees on advertising, if it were truly confident of winning the elections and had nothing to hide. But it does have a great deal to hide: incompetence, crony capitalism-style favouritism, promotion of communalism in education and culture, and stoking authoritarian tendencies and toxic forms of jingoism. The BJP has inflicted serious damage upon the statutory institutions by getting into a confrontation with the President (who had to intervene no fewer than 17 times to counsel restraint on the government), the higher judiciary (for example, questioning the High Court's authority over the telecom issue) and the Election Commission. It created contention and rancour where cooperation and restraint were all-important.

Perhaps the BJP's, or rather Vajpayee's, most deplorable action has been to create an extra-constitutional power centre in the form of the Prime Minister's Office (PMO), which bypasses the Cabinet and defies all accountability. The PMO has emerged not as a functional extension of the executive which supplements the Cabinet, but as a virtually *autonomous* decision-making caucus around one individual. Unlike in Indira Gandhi's time, it is run more by non-officials committed to Vajpayee than by regular civil servants. Today, a couple of persons who hold no positions in government operate with great clout out of the PMO and indulge in all manner of activity, from monitoring and bullying the media, to fixing steel prices, from organising extravaganzas to drafting disinformation reports and legal strategies.

The PMO today increasingly resembles its degenerate *avatar* during the notorious Emergency days. The difference is, Sanjay Gandhi then provoked anger and media revulsion, but Bhattacharya is sheltered by much of the media. The PMO now acts like a praetorian guard whose sole job is to defend and apologise for one *individual*. Its role has eroded the government's credibility and undermined the Cabinet system. In the long run, this does not bode well for Indian democracy. But in the short run, it cannot do the BJP much good either.

However, the BJP has again managed to inflict upon its coalition allies one of its pet agendas: an authoritarian proposal for a compulsory five-year term for Lok Sabha. The NDA has foolishly gone along with this without having considered the proposal's consequences for democratic accountability or the principle of representative government – just as the coalition did last year in the "National Agenda for Governance" on nuclear weapons and a review of the Constitution.

The NDA should know, if it has any sense, that the BJP is not an ordinary, "normal", party, with solely a parliamentary agenda. It is both a party *and* part of a social movement that challenges and seeks to redefine the very nature of Indian nationhood by giving primacy to just one of India's many, many communities. Its long-term goal is to transform this society along Hindutva lines. This totally violates the liberal-democratic, secular, federalist spirit of the Constitution and the foundational premises of our freedom struggle. The BJP resides in that twilight zone that lies between parliamentary democracy with its openness and pluralism, on the one hand, and parochial, paranoid, exclusivism, on the other. It has shown no signs of changing its character. This is unsurprising. Parties of its ilk do not change radically. They are not free to do so, being controlled from the outside.

The RSS-BJP link is not a marginal one, nor some kind of historic hangover. It is an organic, living connection. It is so intimate that the RSS could demand last year that all BJP State units be led by long-standing *pracharaks*. This was considered so "natural" that there was no fuss. It just won't do to pretend that the BJP under Vajpayee has evolved into a different party. For one, Vajpayee does not control the organisation; he ceded that function 15 years ago to others. And for another, he is not very different from Sangh hardliners on the core issues that matter. He is just a more shrewd, devious and manipulative – not "liberal" or pluralist – face of the Hindutva phenomenon, one that is more acceptable to our communalised upper class elite. ■

The G-15 and the WTO

There has been a singular lack of any concrete achievement at the Bangalore meeting.

THE meeting of the G-15 developing countries (which actually includes 17 countries from Asia, Africa and Latin America) that was held in Bangalore had a definite purpose. It was meant to work out a common strategy to present the interests of developing countries and force the agenda at the WTO Ministerial Meeting scheduled for November in Seattle, to consider more seriously their concerns.

Such an initiative is hardly new. Each of the previous WTO Ministerial Meetings has brought about such an attempt, and so far each of them has foundered in terms of achieving a common bargaining plank because of the remarkable ability of negotiators from industrial countries (especially the United States) to take advantage of differences amongst the developing countries.

But this time, it really looked for a while as if things could be different. The level of dissatisfaction of most developing countries with the functioning of the WTO and the skewed implementation of the Uruguay Round GATT accord has never been higher. World trade is on a major downslide: last year, world exports in volume terms increased by a paltry 3.5 per cent, while in terms of dollar values it actually fell, as international prices in all major categories of exports declined.

■ PREOCCUPATIONS

JAYATI GHOSH

The tentative and fragile recovery in the crisis-ridden East Asian region is not occurring on the basis of renewed export growth to the industrial countries but rather because of Keynesian style revival measures based on increased government spending and a large dose of Japanese aid through the Miyazawa Initiative. Indeed, exports from this region remain subdued and continue to face a range of barriers in the developed countries. Similarly, exports from most other developing countries have recently been at their lowest levels of the past decade.

Internationally, exports from developing countries remain constrained by large and growing problems of market access, despite the many declarations in the various Uruguay Round agreements. The most important sectors, such as textiles and garments and leather goods, suffer from continued protectionist policies in the North, while others like consumer electronics and office equipment face genuine problems of market saturation in the industrial world.

Meanwhile, developing countries which had opened up their markets in the hope of a *quid pro quo* in other sectors have found their expectations belied. Their ability to undertake domestic technological change is being severely curtailed by the TRIPS (Trade Related Intellectual Property Rights) agreement. Many of them have been forced to make major concessions in terms of opening up their financial and other services sectors. The groups of major food exporters (the Cairns Group) is agitated that the much promised liberalisation of trade and reduction of subsidies in Northern agriculture has yet to occur.

All this has made conditions particularly propitious for a genuine gathering of developing countries that could hope to evolve a common front for bargaining at the WTO. To add to this, the WTO itself seems particularly vulnerable at the moment. Not only has its authority been drastically undermined by the U.S. wilfully choosing to do whatever it wants in terms of unilateral trade actions, but it has been powerless to prevent an unseemly trade war between the U.S. and the European Union on even as trivial an issue as bananas. Most important, its manner of functioning has been such that even most developing country negotiators are convinced that it is being run as a rich man's club, where no more than lip-service is paid to the crucial interests of the majority of the developing countries.

And now, there is more than a whiff of scandal around the hosts of the November meeting in the city of Seattle, Washington. The members of the organising committee – co-chaired by such illustrious representatives of contemporary capitalism as Bill Gates of Microsoft and Phil Condit of Boeing – have been discovered with their hands in the till. They stand accused of offering large multinational companies access to the many government officials who will be present during the trade deliberations, in return for sponsorship money. The committee apparently hoped to raise as much as $9 million from this "innovative" scheme alone, along with other forms of sponsorship.

Private sponsorship of public and multilateral meetings is not new, especially in the U.S. where virtually everything is seen in terms of buying and selling. But this latest and most blatant instance of what would anywhere else be called corruption and lack of "governance", is likely to inflict further damage on the WTO's already battered reputation.

Even within the developed countries, more and more citizens have begun to realise that the supposed defender of free trade rules, that is the WTO, is disproportionately influenced by international corporations with very specific interests, rather than by the representatives of citizens in the member countries. This type of exercise not only confirms such a link, but even puts up price tags for the favours being offered to big business.

IN this background, it was to be expected that the Bangalore meeting would offer a major opportunity to the G-15 to seize upon the general sense of dissatisfaction and work out a joint approach and strategy that would force the important issues of common concern back on to the trade negotiating table. But somehow, despite the circumstances, this did not

happen. Instead, the meeting in Bangalore remained at the level of general complaint and platitude, and did not work out any specific bargaining points, much less a cohesive strategy.

A major reason for this failure must lie with the hosts of that meeting, the current Indian government. Commerce Minister Ramakrishna Hegde did indeed make a rambling speech in which he made the usual noises about the unequal manner of implementation of the GATT accord. Thus, he is reported to have said that "trade negotiations cannot continue to be an exercise in which we yield market access, even as access obtained by us is thwarted and undermined." He also dubbed the attempt to introduce into the WTO non-trade related issues, such as social clauses or clauses on governance, as "thinly disguised efforts to impede the free flow of trade" by erecting new barriers against products from developing countries.

But in terms of achieving some degree of coherence towards a common negotiating strategy, the Commerce Minister contributed effectively nothing. Indeed, his preference for generalities also meant that the entire meeting did very little in terms of planning concrete action, and became a harmless exercise in letting off steam that would certainly not cause any sleepless nights among developed country negotiators.

WHY should this have been the case? Some of the reason may lie in the actual agenda of the government, as opposed to its declared agenda on this particular occasion. The actions of the Commerce Ministry over the past 15 months have been remarkable for the way in which they have systematically furthered the interests of large multinational capital over those of domestic producers and workers.

Thus, the very sweeping import liberalisation – including in consumer goods – that has occurred so rapidly in the short tenure of this government, has taken place during a period of domestic industrial recession, and has allowed multinational penetration in a wide range of production activity, much of which has adversely affected small producers in particular. The measures supposedly designed to promote exports have created not a level playing field but a highly sloping one, in which domestic small entrepreneurs are practically being forced to fight gravity.

How much of this is inadvertent, and how much deliberate, can of course become a subject of fierce debate. But the effective implications of this strategy are less open to question, Thus, to take only one example, cuts in import duty on edible oils, in the context of the very low international prices that are currently reigning, have most certainly had a negative impact on the viability of the domestic edible oils industry. Similarly, the failure to increase the import duty on sugar at least to the levels common in almost every other country has meant that the domestic sugar industry is not only facing low prices but is being forced to hold large stocks while cheap sugar is being dumped from abroad.

But these decisions have simultaneously benefited some. These of course include traders who are making money at the expense of producers, but also consumers, among whom are large multinational companies, including Nestle, Levers, Coca-Cola and Pepsi, who are now large buyers of oil and sugar and are probably waiting to take over the domestic downstream industry once sickness drives them out of business. Such examples proliferate across the manufacturing sectors.

Of course, the Commerce Minister cannot be held solely responsible for what has been a remarkable feature of this government in general: the mouthing of "swadeshi" or nationalist slogans while simultaneously doing more than any government before it to promote the interests of foreign capital and to ignore the legitimate economic demands of the Indian citizenry. Given this overall tendency, the singular lack of any concrete achievement at the G-15 meting should come as no surprise. ■

The Ministerial Meeting of the G-15 in Bangalore remained at the level of general complaint and platitude, and did not work out any specific bargaining points, much less a cohesive strategy. A major reason for this failure must lie with the host, the current Indian government.

■ TRADE ISSUES

RAVI SHARMA
in Bangalore

FEW people expected the meeting of Trade Ministers and officials of a group of 17 developing countries – called the G-15 after the founding quorum of members – to produce a dramatic breakthrough in strategic perspectives. Meeting in Bangalore on August 17 and 18, the G-15 showed ample evidence of all the infirmities that it has been beset by since its founding, notably a conspicuous lack of shared trade interests which impede the evolution of a strategic consensus. Since it was expected to evolve a common developing country perspective for the third Ministerial Conference of the World Trade Organisation (WTO) to be held in Seattle, United States, between November 30 and December 4, the Bangalore meeting must count as an opportunity lost.

Given the differences in perception that emerged, observers were left in bleak contemplation of the possible impact that developing countries, whether individually or in blocs such as the G-15, would be able to make in Seattle. The stakes, undoubtedly, are high. The U.S. is leading the push towards a fresh round of global trade negotiations that will seek to open up unexplored vistas before the WTO. Several industrialised countries have generally lent their authority to this initiative, which could seek to put in place a regime of intrusive trade regulation by the WTO.

Reflecting the G-15's dilemma on what could be legitimately placed on the agenda in Seattle was the chairman's "summary of discussions" that was released after the Bangalore meeting. The summary ended up being just that – a statement of intentions rather than a united stand on issues. As Union Commerce Minister Ramakrishna Hegde, chair of the Bangalore Ministerial Meeting, said, it is "not a resolution, but a statement reflecting the views of various delegates".

It was evident from the chairman's statement and from conversations with delegates that the stands differed widely. Either individually or collectively, the member-countries of the G-15 forum took stands on specific issues that on various occasions identified them with the advanced countries.

Existing differences were neither

An opportunity lost

Evolving a common developing country perspective and approach ahead of the crucial Seattle Ministerial Meeting of the WTO proved an elusive dream at the Bangalore meeting of the G-15.

resolved nor mitigated Malaysia and Indonesia, members of both the G-15 and the Association of South East Asian Nations (ASEAN), are for example ready for a new round of discussions that would cover the reduction of industrial tariffs This position arises from their shared interest in lowering customs duties on consumer electronics in their major export markets Two G 15 countries, Argentina and Chile, both members of the Cairns Group of agricultural export ing countries – are open to negotiations on further liberalisation of trade in agri culture This is a position that puts them at odds with fellow G-15 countries, India and Egypt There are also differences on whether the WTO should be allowed to draw up a global pact on foreign invest ment While some of the G-15 countries, notably Brazil and Chile, are open to the idea, India and Egypt are against it

The Bangalore meeting reiterated the willingness of some members, notably the Latin American states, to enter into a new round of trade negotiations where all issues would be negotiated as part of one single undertaking This again is a view that is at variance with the current Indian position

As spelt out by Ramakrishna Hegde India is clearly opposed to any new round of all-encompassing trade talks India also holds the position that the Seattle meet ing should confine its attention to a review of the problems and unfulfilled promises of the Uruguay Round As far as negotiations are concerned India believes that only areas that have already been entrusted to the mandate of the WTO, such as agriculture and services, should be taken up for talks after Seattle

We have emphasised that promises made at the Uruguay Round should be fully and faithfully implemented, said Ramakrishna Hegde He added No purpose will be served by taking on new issues before that And we do not want to overload the agenda, since this only c ius es delay as happened in Uruguay

In a shift of emphasis, Ramakrishna Hegde made it clear that India would not oppose the introduction of new issues such as tariff reduction that may be brought for negotiations But he stressed caution Let us first review what resolu tions we have already adopted The touchstone of any agreement will be the extent of benefits developing and least developing countries have derived from so called free trade "

Despite the major differences, consensus was possible, though in limited spheres The chairman's statement in no uncertain terms stressed that the G-15 was totally opposed to any WTO talks that sought to link trade with core labour or environmental standards Consensus was also achieved over the need to oppose the introduction of issues such as national competition policies, electronic commerce and government procurement in the negotiating agenda of the WTO

There was unanimity also on the removal of inequities in the existing agreements and on the restoration of "the balance of rights and obligations forged in the Uruguay Round' Also arousing the unanimous concern of the G-15 was the non realisation of benefits by many developing countries in areas such as agriculture and textiles because of the failure of the developed countries to honour obligations in spirit and the non-implementation of special and differential provisions made during the Uruguay Round

The mood that permeated the meeting was not a new one a disappointment with the responses from the developed world to the problems and concerns of

T.L. PRABHAKAR

At the opening session of the Group of 15 Ministerial Meeting at the Vidana Soudha in Bangalore on August 17.

Against social clauses as a trade measure

Interview with Dr. Ahmed Goweily.

Coordinating a group as disparate and large as the G-15 can be a diplomatic nightmare. Attempting to do just this is Egypt's **Dr. Ahmed Goweily**, the current chairman of the G-15. Making the task even more challenging for Goweily is the fact that the third Ministerial Meeting of the World Trade Organisation in Seattle is coming up. The G-15's actions and responses are of crucial importance not only to its 17 members but to the developing world as a whole Goweily, who is Egypt's Minister for Trade and Supply, spoke to **Ravi Sharma** in Bangalore. Excerpts:

▶ *The Uruguay Round of discussions did not benefit the developing countries. What can the G-15 do to avoid a repetition of Uruguay as preparations begin for the third Ministerial Meeting of the WTO in Seattle?*

The Uruguay Round did not benefit the developing countries. What the G-15 has to do is to make a good review of the costs and benefits to the developing countries, analyse where we failed and prepare to face the new round of discussions and negotiations. The Bangalore meeting, where the agenda for Seattle is the main issue, is part of this plan.

▶ *What were the chief failures of the Uruguay Round?*

The chief failure – or shall we say shortcoming – has been the discrimination that has been practised by several developed countries to block the exports of developing countries. For example, if you look at textiles we have had anti-dumping cases against India, Egypt, China, Indonesia and Bangladesh. This anti-dumping (measure) has been applied in a very unfair manner. This affects our exports. There are other unfair and discriminatory practices as well. Now there is a move towards linking labour and environmental concerns with trade. We would like to see a review of the Uruguay Round agreements. Market access is the biggest problem for the developing countries, especially when you produce raw materials and consumer goods but have low market access.

▶ *The promises that the developed world made to the developing world have not been fulfilled.*

This is why the G-15 is saying that implementation (of promises) comes first, before any new issues are added for discussions. We feel that the implementation of the commitment of the developed countries to the developing countries isn't there, especially in the case of the LDCs (least developed countries).

The LDCs were promised several things, such as market access, cut in tariffs, more technical assistance, more financial resources... But these have not come. The LDCs have been left out of not only globalisation but also human development. These countries have become even more backward.

▶ *The developing world does not have a commonality of trade interests. In the G-15 there are sharp differences. How can the G-15 evolve a common approach to issues?*

It is not important to have a common agreement. The G-15 represents developing countries in three continents – Asia, Africa and Latin America – and each country has its own features. The Bangalore meeting is a coordinating meeting, where we exchange views. All the G-15 countries have firmly agreed, for example, upon the implementation (of unfulfilled promises). We have also agreed on a programme for the LDCs.

▶ *Differences persist in the G-15 with some countries being in favour of adding new issues to the Seattle agenda.*

Well, there are already lots of issues to be negotiated because implementation is very broad. We have agendas which include negotiations in agriculture, trade and services, revision of TRIPS... If you add more issues it will take longer and get complicated.

▶ *But all the member-countries do not feel this way.*

This is the general view, with a few exceptions.

▶ *Some G-15 countries not only are in favour of negotiations on further liberalisation of agriculture and services but welcome the framing of a WTO agreement on foreign investment. What is the G-15's position on foreign investment?*

Our position is that over 90 per cent of the investment in our countries is for developmental purposes rather than for trade. We feel that investment should not be discussed as a trade issue.

▶ *Many a time foreign investors' interests are out of step with the policies of the countries they operate in. How does the G-15 see this?*

We are against discrimination against foreigners or native persons who make investments within the boundaries of any country, but we are against forcing this from outside through a multilateral agreement.

▶ *What can the G-15 do to force the developed world to fulfil the unfulfilled promises of the Uruguay Round?*

We are the market (laughs). They will have to fulfil promises.

The earlier agreements were not finalised. Now they are coming to the negotiating table. The developed countries will have to listen. They know that today we are working in a highly liberalised world economy and that for global economic stability there has to be a more balanced situation between the developed and the developing world. For example, the economic crisis that affected South-East Asia, Russia and Brazil also affected growth in Europe and the United States.

▶ *How do you see the G-15 evolving?*

We would like to have more consultations, more exchange of meaningful notes and more programmes.

▶ *Many of the WTO-directed reforms are viewed in most if not all G-15 countries with a fair share of suspicion.*

In any country, whether it is a private economy like Egypt's or a market economy like India's, you have to be transparent while opening up the economy. There has to be the involvement of the people right from the beginning.

▶ *The developed countries want social and governance clauses introduced in the Seattle agenda.*

This is unfair. We are totally opposed to the use of a social clauses as a trade measure. Social clauses are to be addressed to the International Labour Organisation rather than to the WTO. They are developmental issues related to poverty, not trade issues. We reject as unfair any WTO talks that link trade with environment or trade with labour. ■

For strategic coordination

RAVI SHARMA

WITH the third Ministerial Meeting of the World Trade Organisation (WTO), to be held at Seattle in the United States, between November 30 and December 4, fast approaching, social organisations across the world are trying to influence the stand of the governments in their respective countries. A two-day conference of consumer groups, organised in Bangalore by the Jaipur-based civil society Consumer Unity and Trust Society (CUTS) on the occasion of the G-15 Ministerial Meeting, supported this strategy, and called for unity among the countries of the South (developing countries) in achieving their goal.

The message from the conference titled 'Southern Agenda for the Next Millennium: Role of the Civil Society' was primarily three-fold – oppose any new round of negotiations, discuss existing problems, and, most important, urge governments of the South to involve civil societies as they prepare for the Seattle Round.

The conference exhorted developing countries to coordinate strategically in order to identify common interests and negotiate collectively to advance them. It called upon the civil societies to ensure that equity and social justice are given priority at the negotiations and the interests of consumers, rural and urban workers, small farmers and other vulnerable groups are safeguarded. The conference asked governments of the South to encourage, support and collaborate with civil society organisations in their countries, and not to put issues such as investment and government procurement on the agenda of the WTO until existing and negotiated issues were resolved satisfactorily.

Pradeep Mehta, secretary-general of CUTS, said: "While civil societies in the North (developed world) are pushing issues, in India (as in other developing countries) the Government does not even want to acknowledge our presence. The U.S., for example, is encouraging trade unions to talk about social clauses. The Indian Government should want us to be part of the bandwagon opposing new WTO rounds like the Millennium Round, which is being advocated by some countries of the developed world. Civil society participation can help sharpen the Government's agenda on specific issues like environment, labour standards, investment policy, competition policy and government procurement – issues that are likely (disregarding the G-15 opposition to it) to be pushed at Seattle."

Delegates at the conference, such as former Foreign Secretary Muchkund Dubey, opined that developing countries should realise that "bargaining positions of countries are not equal". He cited the example of the U.S., which, because it was not pleased with the conclusions of the initial round of negotiations on telecom and financial services, saw to it that another round was held. This it did by first using the Association of Petroleum Exporting Countries (APEC) forum as a building block, getting APEC to endorse the need for a fresh round of negotiations. Subsequently, the U.S. stand was reaffirmed at the recent ARF Foreign Ministers' meeting in Singapore.

Dubey also felt that the G-15 would be unable to forestall the WTO sponsoring another round (the Millennium Round), of discussions which would in all probability take up such issues as e-commerce and investment. Dubey said: "For one thing the G-15 is not organised enough and for another, it is too vulnerable."

The conference also expressed the need for the governments of developing countries to be pragmatic – by refraining from saying 'no' for the sake of it, realising their positions, strengthening them and then bargaining effectively.

The message conveyed by the conference was that governments from developing countries should work at two levels – public posturing and private preparation. While a G-15 Ministerial Meeting can provide the public posturing, it was, according to Mehta, "equally important to put forward privately one's concerns and be prepared to negotiate them".

Mehta said that non-governmental organisations like CUTS could make effective contributions if they were allowed to participate in the negotiating process. "We are not asking for a seat at the negotiating table since the WTO is a contractual body. What we want is transparency. For example, we could be given the annotated agenda in time. This will help us talk to our governments and, through our sister organisations, to their governments." ■

he developing world, especially the least leveloped countries. As Ramakrishna Hegde said during a presentation by the Confederation of Indian Industry (CII) coinciding with the G-15 event, the experiences of the last two years had been that 'there was sympathy and plenty of crocodile tears for the developing world but no free access to the markets of the developed world".

The Bangalore meeting was a continuation of the process of consultations hat the G-15 started in Cairo in May 998, prior to the 1998 Geneva Ministerial Conference. Delegates of the G-15 countries had also met in a WTO-issues-related symposium in New Delhi in November 1998 and then again during the Ninth Summit of the Heads of State and Government of the G-15 in Montego Bay, Jamaica, in February 1999. With the third WTO Ministerial Conference in Seattle ahead, it was decided at Montego Bay that a G-15 Ministerial Meeting would be held before finalising a common stand on issues.

The G-15 countries account for more than 43 per cent of GDP of all developing countries, have an average per capita GDP of $2,116 and is home to 30 per cent of the world's population. But its large size could be the grouping's biggest stumbling block. Perceptions, needs and responses are as large and as varied.

Curiously, despite all the hype on the importance of the G-15 standing together and straining every sinew if it is to prevent a repeat of the raw deal handed down to the developing countries at the Uruguay Round, only eight of the G-15's 17 members decided to depute a Minister – among whom three were junior Ministers – for the Bangalore meeting. Worse still, many of the representatives did not quite seem to be in tune with all the intricacies of processes of the WTO. ■

An astronomical event

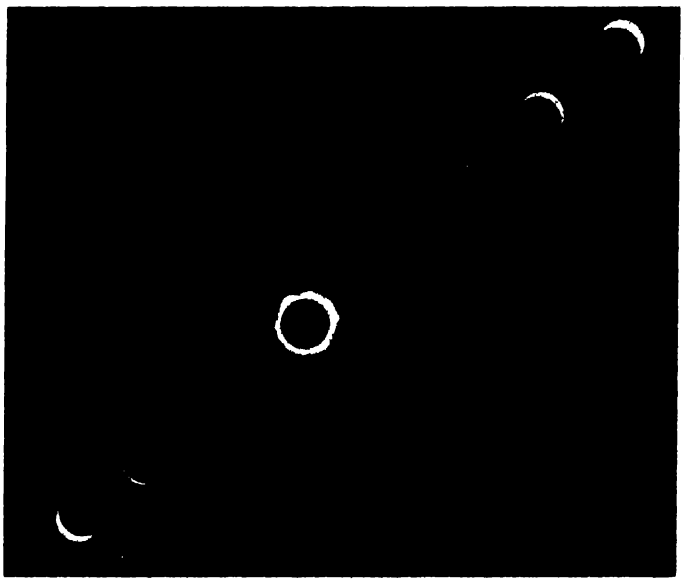
The total solar eclipse of August 11, the last of its kind in this millennium, has yielded a wealth of scientific data.

R.RAMACHANDRAN

A TOTAL solar eclipse (TSE) is the most spectacular celestial event that can be viewed from the earth. Another great thing about this majestic event is that it recurs: on an average, 66 TSEs occur in a century, with the longest period of totality being about 7.5 minutes.

The last time a TSE occurred over India was on October 24, 1995, the track of which passed over northern and eastern India. It was the shortest TSE of the decade, the duration ranging from 45 to 76 seconds, but the time of the year was ideal for clear skies unlike in the case of the recent TSE of August 11, the last of the millennium. It was more or less a wash-out because of the cloudy monsoon skies all along its track from northwestern Kutch to Srikakulam in Andhra Pradesh. Also, in most parts the timing was close to sunset and, even where people could catch a glimpse of it, it lasted only for a short time. Even over the dry regions of Kutch (around Bhuj), where the probability for clear skies based on historical meteorological data was given as over 70 per cent, it was cloudy. At some places like Warara near Nagpur, groups of people were reported to have witnessed totality thanks to clouds lifting just at the right time.

The next TSE visible over India will be 10 years hence: on July 22, 2009. Its path will span from China to Bangladesh via Bhutan and the Indian States of Assam and Meghalaya. However, that will be during the monsoon season too. After that a TSE over India will not occur for about four decades.



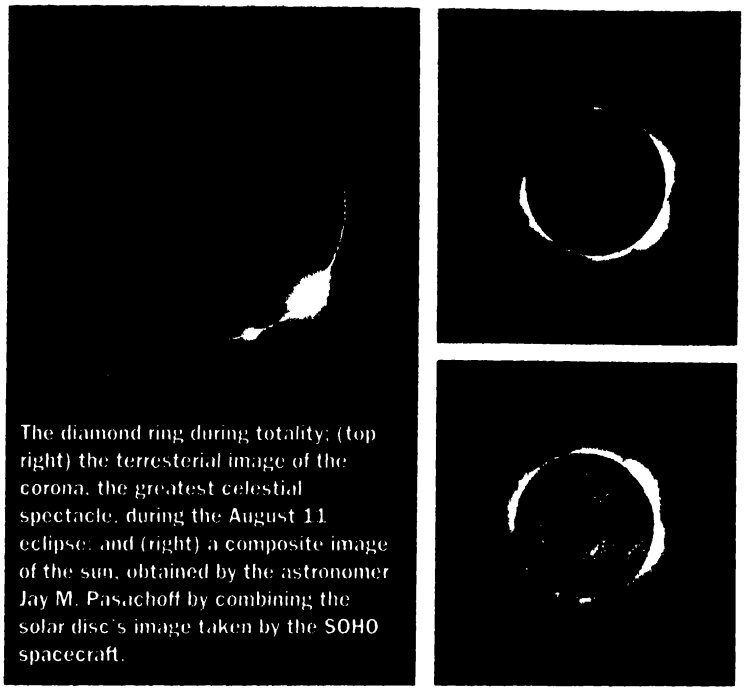
A TSE is an eagerly awaited cosmic event for an astronomer. For, even in these days of satellites and orbiting astronomy laboratories, a TSE still provides the best occasion to study the sun. Astronomers travel thousands of kilometres to where the combination of viewing and duration is best, lugging tonnes of equipment. Jay M. Pasachoff, an astronomer from Williams College in the United States, has become a legend in this respect and is referred to as Mr. Eclipse within the astronomical community. This time Pasachoff travelled to Rimnicu-Vilcea near Bucharest where the duration of totality was the longest. Pasachoff has reported that he got 2 minutes and 23 seconds of "the rarest solar observing time".

A team headed by Dr. Jagdev Singh, from the Indian Institute of Astrophysics (IIA), Bangalore, which has acquired a reasonable reputation over the years for terrestrial eclipse experiments, travelled to Chadegan (about 15 km from Isfahan) in Iran where the totality lasted for one minute and 33 seconds. According to Jagdev Singh, the sky at Isfahan was clear during totality and he and his team obtained considerable amount of data.

Interesting results are expected from the latest eclipse because it occurred close to a maximum in the 11-year cycle of solar activity, just nine months before the predicted maximum. During a solar maximum there are frequent solar flares and lots of sunspots, and the corona (the outer solar atmosphere) expands to many times its average size; the sun has been seen to be very active around the time of the eclipse.

The solar eclipse is so spectacular owing to a rather fortuitous circumstance which causes the solar disc to be covered by the moon completely and exactly – no more, no less – when the sun, the moon and the earth are perfectly aligned in a straight line. This is an interesting cosmic coincidence, as if nature conspired to provide scientists with a convenient laboratory to study the sun, where the sizes of the sun and the moon and their distances from the earth are in such proportions (of 400:1) that both subtend the same angular size (of about 0.5°) at the earth. Because of this, during a TSE the moon exactly covers the solar disc as if by design.

If the moon were slightly smaller, the best eclipses would be annular ones with no dramatic blackening of the sky and the streaming corona. If the moon were slightly larger, the full glory would be absent. Fortunately, the moon is "just right". This, on the one hand, enables the clearest view of the solar atmosphere for solar experiments, and, on the other, provides the dazzling spectacle of Baily's Beads and the diamond ring effect. This happy coincidence is not present any where else in the solar system.



The different phases of the solar eclipse of August 11, as seen from Austria.

Most eclipse watchers consider the corona to be the most beautiful of all phenomena during totality. The super-hot outer atmosphere of the sun glows with the intensity of the full moon when the solar disc is fully occulted. Pearly white coronal streamers sometimes stretch several degrees across the sky near a solar maximum. According to Jagdev Singh, the corona was indeed

brighter this time. Corona is the focus of eclipse experiments.

Much of humankind's understanding of the sun has actually come from studying the fully blocked sun during a TSE. Eighteenth century astronomers, including Edmund Halley, routinely monitored eclipses to refine the orbits of the moon and the earth. In the 19th century, astrophysicists realised that the chromosphere (the reddish layer above the solar surface, the photosphere, which forms part of the solar atmosphere), prominences (large flame like structures extending from the chromosphere to the lower corona that follow the sun's magnetic field) and the corona were important physical aspects of the sun. Indeed, helium was discovered from the existence of a new bright yellow line in the spectrum of the sun's prominences during the TSE on August 18, 1868, by six different observers in different parts of the world.

The diamond ring during totality; (top right) the terresterial image of the corona, the greatest celestial spectacle, during the August 11 eclipse; and (right) a composite image of the sun, obtained by the astronomer Jay M. Pasachoff by combining the solar disc's image taken by the SOHO spacecraft.

In the 20th century, the TSE of May 29, 1919, provided a dramatic verification of Einstein's General Theory of Relativity by measuring the bending of light from a distant star that grazes the sun. Einstein's theory predicts that light would bend when traversing close to a gravitating mass and a large object like sun can cause perceptible shift in the path of light. But with a dazzlingly bright sun in the foreground, it would be otherwise impossible to verify this. Under a suggestion from the astrophysicist Sir Arthur Eddington, the 1919 TSE was utilised to show that light from a star close to the sun in the sky did bend as predicted by Einstein's theory which he had propounded in 1916.

Since then there have been no such dramatic discoveries during eclipses, but TSEs have continued to offer a great deal of insight into solar physics. Only during eclipses can the solar corona and the chromosphere be studied in detail. This is because in normal daylight, even under the best possible conditions at high altitudes, the sky brightness is about a millionth of the value at the centre of the solar disc and the coronal intensity close to its limb is only marginally higher than that of the sky. On the other hand, when the moon blocks out the solar disc, the predominant white light emission from the photosphere is absent and the sky brightness near the limb during totality falls to very low levels. Coronal intensities then become 1,000 times brighter than the sky and the corona can be observed as far as 4-5 solar radii (solar radius = 700,000 km). If one wishes to go beyond 5 solar radii, one needs to go to altitudes of about 30 km, beyond the earth's atmosphere where atmospheric scattering is totally absent and the sky becomes black.

With the discovery of the coronograph (a device which occults the solar disc) in 1930 and the advent of orbiting telescopes, it may seem that eclipses are no longer that useful for scientific purposes. This is not so because, on the one hand, ground-based coronograph observations cannot see the corona very far because of the day sky. On the other, out there in space, to limit the scattering, space-based coronographs have had to block the inner corona. An intermediate approach is to take the coronograph above the major portion of the atmosphere in a sounding rocket when the corona can be observed to larger distances against a much reduced background of scattered light. But such artificial eclipses using coronographs are no match to the natural eclipse, according to Pasachoff. The moon is still the best coronograph that nature has given the scientist, and a TSE remains the best means to observe a solar corona, though space-borne data serve to refine terrestrial observations and complement in frequencies beyond the visible in X-ray and the ultraviolet in which the sun emits strongly.

One of the questions astronomers have been asking is: why does the corona exist and why is it so hot? Compared to the 6,000° Kelvin (0° Celsius = 273°. K) of the surface of the sun, coronal temperatures rise up to between two and three million degrees K over a distance of 2,000 km, which is very small compared to the sun's dimensions. Indeed, the million-degree hot corona gas was discovered in 1942 with the identification of coronal 'green' spectral line of Fe XIV (highly ionised iron atoms which have been stripped of 13 of their 26 electrons) and 'red' line of Fe X during total eclipses. The corona is now known to be a region of very hot, electrically charged gas streaming away into space. But what is the source of the energy that drives the corona is the long-standing astronomical mystery and most of the eclipse experiments are designed to address this question. Indeed, if the corona were cooler, it would be much closer to the sun's surface and, therefore, would be invisible even during a total eclipse.

Because of the high temperature, the corona emits high-energy radiation in the X-ray and the ultraviolet frequencies, while the sun itself is a poor emitter in these frequencies. The earth's atmosphere absorbs these but satellites above the atmosphere can observe in these wavelengths. If so, much of the corona (outside the white-light region) can be studied using space-borne systems on a regular basis without having to wait for eclipses.

But still, terrestrial experiments are important because satellites are expensive and have only limited life, points out Jagdev Singh. He adds: "Also, there are limitations in getting the data at faster rates owing to limited telemetry capabilities. Space-borne telescopes observe in the limited wavelength region and with limited spatial and spectral resolution. When these provide data in soft or hard X-ray wavelengths, we would like to know how the observation is linked to the surface phenomena on the sun. It is much easier and less expensive to study the surface features of the sun, like solar flares and fast events,

The eclipse and the Foucault pendulum

R.RAMACHANDRAN

A CURIOUS experiment was undertaken during the recent August 11 eclipse to seek to resolve a 45-year-old mystery: does a solar eclipse affect the behaviour of the Foucault pendulum? David Noever and Ron Koczor of the Marshall Space Flight Centre of the National Aeronautics and Space Administration (NASA) headed this experiment to verify some measurements on the motion of the Foucault pendulum during a solar eclipse reported by the Nobel laureate Maurice Allais in 1954.

Allias in 1988 won the Nobel prize for Economics, but he is a physicist as well. At the urging of the rocket pioneer Werner von Braun, he undertook experiments between 1954 and 1960 on the motion of metallic and glass pendulums to detect any connection between the two disparate forces, magnetism and gravity. He did not discover any such link. But he observed something extrordinary in his laboratory in Paris. During the total solar eclipses of June 30, 1954, and October 22, 1959, he detected "anomalies in the movement of the (Foucault) pendulum". However, Allais' strange observations have not been taken seriously all these years, even though occasional experiments to verify this effect, including an Indian one during the 1995 TSE, produced conflicting results.

A Foucault pendulum is a pendulum supported by a long wire with its motion restricted only in the vertical direction; that is, it can swing (in a plane) as well as rotate. In 1851, Jean Bernad Leon Foucault, the inventor of the gyroscope, demonstrated how such a pendulum could track the earth's rotation. What happens is that with the rotation of the earth, the plane of the pendulum rotates clockwise in the northern hemisphere and anti-clockwise in the southern hemispehere. The rate of this rotation is dependent on where you are located. This is an amazing effect in itself that one can detect the earth's rotation even from a sealed room.

Now what Allais observed was that, instead of the normal 0.19°-a-minute rotation in Paris, during eclipses the plane took an unexpected turn of 13.5° and this abrupt turn persisted during the entire duration of the eclipse. However, in 1954 itself, the experiment was repeated in Shetland, Scotland, using a gravimeter but a null result was found. In 1965 again the experiment using a gravimeter was repeated in Trieste, Italy, and no anomaly was detected.

In Harvard during the March 1970 eclipse, the experiment was done using a torsion pendulum. In the observations, a 0.0372 per cent increase in the baseline period (29.570 second) began with the onset of the eclipse. It peaked just after the eclipse (29.581 second) and then decreased to an offset value. The researchers concluded that this "agrees qualitatively with the work of Allais".

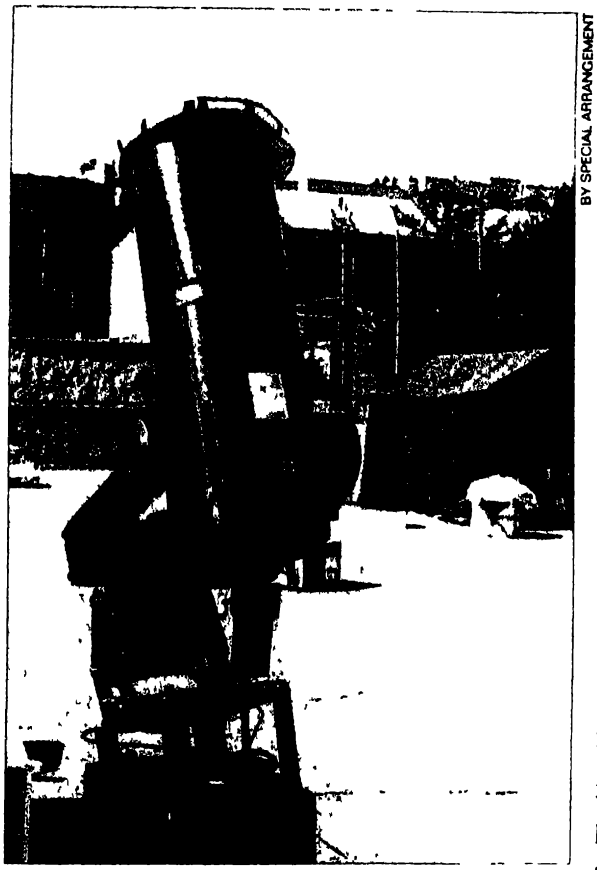
The Allais effect was observed again in 1981 in Romania in a Foucault pendulum. A number of observations were made of the behaviour of a Foucault pendulum during the eclipse of February 15, 1981 by G.T. Jeverdan and associates, and a similar shift in the oscillation plane of the pendulum was seen.

During the July 1990 eclipse over Helsinki, Finland, the torsion pendulum experiment was repeated. Using a set-up very similar to the Harvard University experiment, a group took a set of four measurements over nine hours – the night preceding, during and the night after the eclipse and also two weeks later. But no effect was observed. However, during the 1991 eclipse in Mexico City, the same Finnish team detected an inconclusive signal. The researchers found two distinct shifts in the pendulum plane at the beginning and the end of the eclipse. But they concluded that the effect could not be unambiguously attributed to some eclipse-coordinated phenomena.

During the 1995 TSE over India, Dr. D.C. Mishra and Dr. M.B.S. Rao of the National Geophysical Research Institute (NGRI), Hyderabad, detected slight changes in their gravimeter readings over an hour of magnitude "that can neither be classified under short period variations due to tidal effect or drift of the gravimeter nor under high frequency noise which have special patterns." The researchers observed in their paper published in the journal *Current Science* in 1997: Therefore, this variation is highly significant as it occurs with the onset of an eclipse... to understand its actual nature and mechanism, more planned experiments of this kind should be carried out during solar eclipses throughout the world whenever such opportunities are available."

The NASA experiment involves Internet and video collaboration among observatories and universities in seven countries (the U.S., Austria, Germany, Italy, Australia, the United Arab Emirates and the United Kingdom) and 11 cities (Huntsville, Indianapolis, Louisville, Denver, Boulder, Richmond, Vienna, Greifswald, Trento, Abu Dhabi and Sydney). Noever is, however, sceptical. He says: "The idea that some unexplained aspect of gravity is at work seems nonsensical when you consider that it would seem to imply planets spinning out of their orbits over very long time scales, among other things. Also, why would the effect show up only during a solar eclipse? The sun, the moon and the earth are nearly aligned once a month." In order to settle it once and for all, NASA/Marshall conducted the experiment using a high precision gravimeter and, if the Allais effect is real, and if it has to do with gravity, this experiment would have measured it to an accuracy of 10 decimal places.

In order to determine whether or not the effects of any single eclipse are one-time, localised events, many observing stations are needed to test eclipse phenomena. While Noever's team used a high-precision gravimeter, the network of scientists elsewhere simultaneously observed Foucault pendulums. The results will now be compared and analysed.



If the scientists do observe the Allais effect, the natural question will be "Why does it occur?" So far, explanations have included the anisotropy of space (the condition of having different properties in different directions), gravitational waves, and solar radiation. But, it could take years for a final settlement of the question, given that gravity has been tested many times over a wide range of conditions and no anomalous situation has ever been observed.

in the visible region by doing terrestrial experiments. Eclipse experiments, both terrestrial and space-borne, are designed keeping these various factors in view."

The coronal heating problem has received quite a bit of attention in solar physics in recent years, and an explanation seems to be at hand. It is believed that energy transfer into the corona is likely to be in the form of waves of magnetic energy because it is physically impossible to transfer thermal energy from the cooler surface to the much hotter corona. But no measurement until the results of the Solar and Heliospheric Observatory (SOHO) of the National Aeronautics and Space Administration (NASA) in 1997 had found an adequate level of energy to account for the coronal temperature.

The Theory of Magneto Hydro Dynamics (MHD) tells us that regions overlying magnetic structures can be hotter than those over non-magnetic structures. Earlier it was assumed that such magnetic structures were concentrated in isolated spots on the sun's surface and hence were not an adequate source of energy for coronal heating. SOHO's results show that such magnetic concentrations, each of which is thousands of kilometres across, are now in tens of thousands, forming almost a "magnetic carpet" spread across the sun's surface. Loops of magnetic wave energy connecting opposite poles of such concentrations transfer energy from the solar interior into the corona. With each loop carrying energy that a power plant would generate over a million years, enough energy transfer from the "magnetic carpet" can take place to heat up the coronal plasma to over a million degrees.

Magnetic waves carrying energy from sun's interior up into the corona are likely to produce oscillations in the white-light region of the corona which is visible during TSEs. These oscillations are expected to be very fast (at least once a second). If one does not see such oscillations at regions above a given level in the outer corona, it would imply that these waves are being dissipated and energy is being deposited. It is best to search for them with ground-based electronic cameras (like charge coupled devices) and photometers during TSEs as spacecraft instruments cannot yet operate at high speeds. However, most terrestrial experiments for the August 11 event were designed in conjunction with the space-borne instruments which were appropriately positioned to complement these terrestrial observations.

BY SPECIAL ARRANGEMENT

At an eclipse camp of the Indian Institute of Astrophysics at Chadegan near Isfahan in Iran.

The solar eclipse corona imaging system (SECIS) is a rapid scanning instrument which was deployed by British scientists at a site in Bulgaria. This is also designed to search for short-period modulations in the corona. The CCD cameras used in SECIS had the capability of imaging a selected portion of the corona at the rate of 50 images a second.

The coronal diagnostics spectrometer (CDS) aboard SOHO had been geared to support this experiment with coronal scans in the extended ultraviolet region. A description of this experiment, with which Dr. B. N. Dwivedi of Banaras Hindu University (BHU) is associated, is expected to appear in the November issue of the Indian journal *Current Science.*

The IIA expedition to Isfahan was part of a large internationally coordinated white-light photometric measurement project by the International Astronomical Union (IAU) under its Joint Organisation for Solar Observations (JOSO). The IIA team included two students from Iran Institute of Advanced Studies in Basic Sciences, Zanzan, and was led by Jagdev Singh. The team conducted two experiments: one imaged six locations on the northeastern side of the corona up to 1.5-2 solar radii using a telescope designed to look at the corona and measure the intensities using an array of photomultiplier tubes. This was to study the variations in intensities which would be there if there are coronal oscillations.

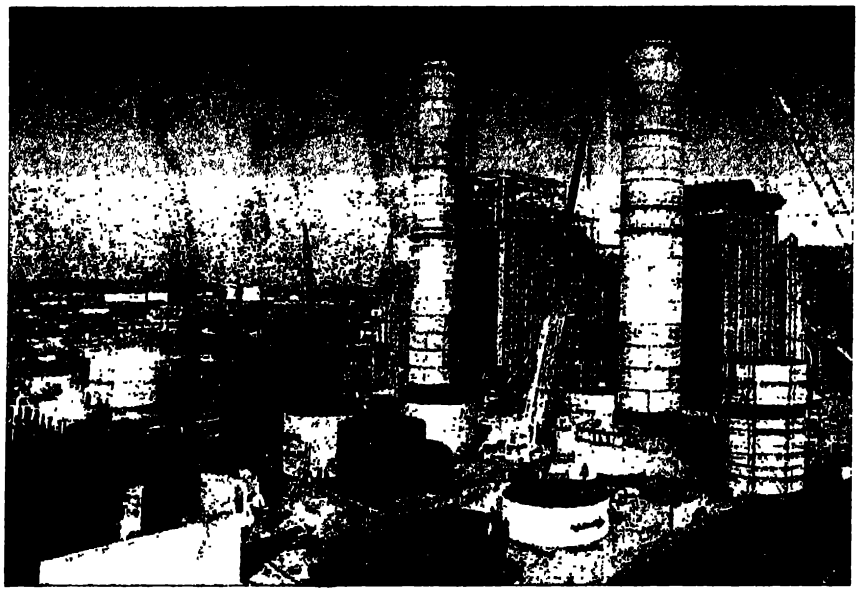
The other experiment involved high-resolution two-dimensional imaging of the corona using CCD cameras and the group has obtained 11 images. If there are waves carrying energy into the corona, such an experiment (which is like the British SECIS) can give an idea of the nature of the waves. Jagdev Singh's team had earlier observed short-period coronal oscillations during the 1995 TSE over India and the February 1998 eclipse in Venezuela. The latest experiment has been further refined and, according to Jagdev Singh, preliminary results show that these short-period intensity oscillations were detected this time as well.

While future TSEs will provide opportunities to refine data on coronal oscillations, increased sophistication in instrumentation has also given new directions for eclipse research. For example, a Japanese research team has devised a CCD-based instrument to measure coronal temperatures directly. This is different from temperatures derived from the SOHO data or emission line spectra, says Jagdev Singh. Coronal temperatures, according to him, need to be determined accurately for a good model of the corona and this experiment should enable that. Despite very advanced orbiting platforms on the anvil, terrestrial experiments do not seem to be anywhere close to being given up.

Considering that the latter come cheap, and with least noise, astronomers will continue to chase eclipses carrying heavy equipment across countries. Tomorrow coronal heating may find a solution in eclipse experiments but the sun holds many secrets that need to be studied over for many more eclipses. There are also terrestrial phenomena which eclipses may help unravel. In any case, even if one understood the sun fully, an eclipse will continue to dazzle scientists and the public alike.■

Dear power

Following the commissioning of the first phase of the Enron power project, the Maharashtra State Electricity Board purchases power from the Dabhol Power Company at an exorbitant cost, which may soon be passed on to consumers.



LYLA BAVADAM
in Mumbai

THE controversial Enron power project is back in the news, and the price of governmental profligacy, and worse, is becoming all too evident. Power consumers in Maharashtra will soon begin to feel the direct impact of the extremely unfavourable terms on which the project was finalised. Initiated in 1993 when Sharad Pawar was Chief Minister, it was subsequently scrapped and "renegotiated" by the Shiv Sena-Bharatiya Janata Party coalition Government.

In May, 1999, Phase I of the project was commissioned, and in June the Maharashtra State Electricity Board (MSEB) purchased 236 million units of electricity from Enron's Indian subsidiary, the Dabhol Power Company (DPC), at the exorbitant rate of Rs.4.96 a unit. This burden is certain to be passed on to the consumers in the near future, according to A.D. Golandaz, vice-president of the Mumbai MSEB Workers Federation. He said: "There is likely to be an increase in the power tariff after the Assembly elections. Consumers will soon be paying higher rates." Only by hiking the power tariff could the MSEB hope to meet the high cost of the power it purchased from the DPC, Golandaz added.

In addition to the cost of acquisition of power, the MSEB is to pay the DPC Rs.230 crores towards pre- and post-commissioning charges; the DPC has sought an additional Rs.120 crores towards fuel charges incurred during trial runs.

There are two issues at stake here. One is that consumers will soon be paying a far higher tariff for power purchased from the DPC compared to power that the MSEB purchases from other producers. The other is that the MSEB's purchase of power from the DPC, with which it has entered into an agreement, will have a deleterious impact on other power producers. They have already been forced to cut back on generation since the MSEB no longer purchases power from them. The MSEB has a 30 per cent stake in the DPC, and under the terms of a Power Purchase Agreement (PPA) with the DPC it is committed to purchasing power from the DPC.

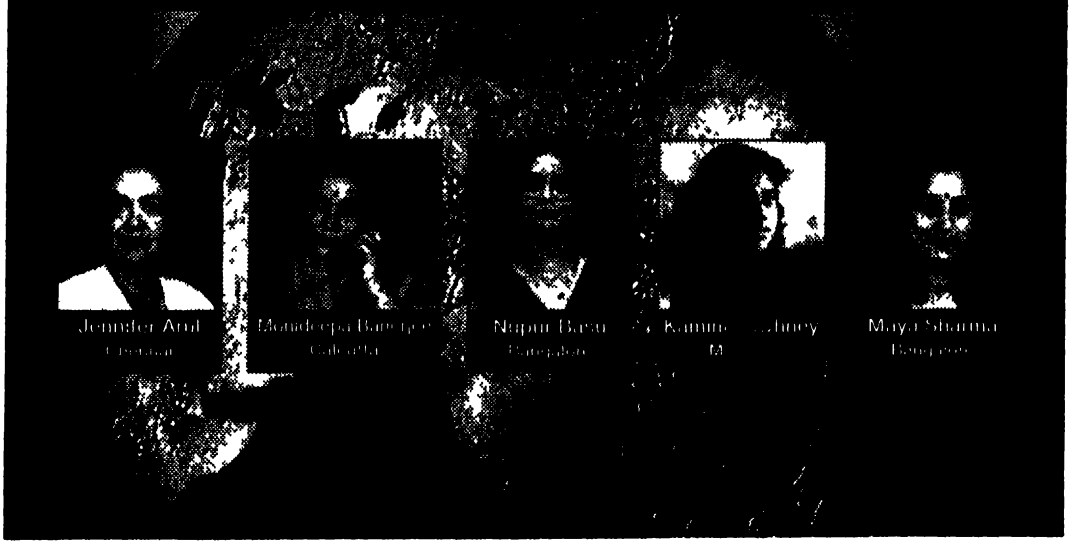
Construction work under way at the Dabhol plant in June 1998. The first phase of the project was commissioned in May 1999.

Power that was hitherto purchased at a far lower per-unit cost from other power utilities in the State, such as the Tata Electric Company (TEC) and the National Thermal Power Corporation (NTPC), will now be purchased from the DPC at a higher rate. The MSEB purchased power from the TEC, which generates a surplus of between 200 and 400 MW, at the rate of Rs.2 a unit; in the case of the NTPC, the rate was Rs.1.35 a unit.

Power costs in Maharashtra

The following is a comparison of the per-unit cost at which three power producers in Maharashtra sold power to the Maharashtra State Electricity Board.

Tata Electric Company	Rs. 1.00-2.00
National Thermal Power Corporation	80 paise-Rs. 1.50
Dabhol Power Company	Rs. 4.00-4.96



The MSEB says that despite a claimed power shortage in the State a few months ago, it did not purchase power from the NTPC because its units were shut down for maintenance. However, a trade union source said that the Government's claim about a power shortage was intended to prepare the ground for power purchase from the DPC. The source alleged that in May the Government deliberately slowed down the pace of maintenance work at the MSEB power stations in order to induce an artificial shortage.

The MSEB has reportedly asked the TEC to step down its power generation by about 200 MW. The TEC, which sells power to Gujarat, could be in trouble with its lending agencies if its capacities remain underutilised. According to TEC sources, in the absence of a regulatory authority the company is unable to force the MSEB to honour a standby agreement under which the MSEB should purchase power from the TEC if its own plants are shut down.

Power politics

LYLA BAVADAM

DURING the Maharashtra Assembly elections in 1995, the Shiv Sena-Bharatiya Janata Party combine promised in its manifesto that its government would scrap the Enron power project that had been finalised by the Sharad Pawar Government in 1993. Shiv Sena leader Bal Thackeray frequently referred to the project as "Sharad Pawar's white elephant" and the alliance characterised it as a symbol of the corruption of the Pawar regime. Bharatiya Janata Party leader Gopinath Munde even threatened to "throw Enron into the Arabian Sea".

Accordingly, immediately after coming to power the Shiv Sena-BJP combine began investigations into the award of the contract, the economics of the project and the consequences for Maharashtra if the project was to go ahead. A Cabinet subcommittee was constituted to review the project and report whether it "subserves the interest" of the State.

Based on the subcommittee's recommendations, the Cabinet decided in August 1995 to "scrap" the project. On August 3, 1995, Chief Minister Manohar Joshi made a formal announcement to this effect in the Assembly. Days later, however, he said that anybody could make representations to him. Taking its cue from this, Enron re-established a dialogue with the ruling establishment, including Thackeray. Enron Development Corporation's chief executive officer Rebecca Mark flew down to meet Thackeray. By end-September the Government had decided to explore the possibility of reviving the project. On November 8, 1995, a committee of experts was constituted to renegotiate the agreement.

The committee submitted its report to the Government on November 21, and about seven weeks later the Cabinet decided to revive the project, claiming that the Government had induced Enron to lower the project cost and, consequently, the per-unit cost of power. The "renegotiated" deal, however, retained some of the most objectionable features of the original agreement.

Four years later, the tables have been turned yet again. This time, it is Sharad Pawar, who now heads the Nationalist Congress Party (NCP), who is critical of the agreement with Enron. The NCP manifesto promises an inquiry into the manner in which the "renegotiated" deal has been implemented by the Shiv Sena-BJP Government on the ground that the State is losing entrepreneurs because of the high power tariff that the agreement entails. ■

UNDER the terms of the PPA with the DPC, the MSEB is committed to purchasing 90 per cent of the 740 MW of power generated during the first phase of the project. This is because the PPA was negotiated by reckoning the MSEB's requirement at 90 per cent of the Plant Load Factor(PLF) of the DPC plant. Under normal circumstances, the per-unit cost of purchase decreases as the quantum of power purchased draws nearer to the plant's generating capacity. However, in this case such a deal benefits only the DPC, not the MSEB, because estimates by a variety of independent experts have shown that the MSEB's needs will rarely exceed 70 per cent of the PLF of the DPC. In effect, the MSEB will purchase from the DPC more power than it needs; consequently, its requirements from other utilities will decrease and it will also have to step down generation in its own units.

In addition, under the terms of the PPA, for the next 20 years the MSEB is contract-bound to purchase 90 per cent of the power produced by the DPC regardless of whether or not the power is required or used. A clause in the PPA specifically forbids the MSEB from asking the DPC to cut back production levels.

The Shiv Sena-BJP Government was a trenchant critic of the PPA that had been finalised by the Sharad Pawar Government in 1993; in fact, it scrapped the project in August 1995 stating that it was "anti-Maharashtra". In a statement in the State Assembly in 1995, Chief Minister Manohar Joshi said that "a wrong impression" had been conveyed to the people that consumers would pay only Rs.2.40 a unit, and that in fact the price would be closer to Rs.5 a unit. He highlighted the fact that the price at which the MSEB would procure power from the DPC would depend on the rupee-dollar exchange rate and the price of fuel. Joshi said that "while negotiating the agreement no thought was given to protect the interest of the State and consumers." The Joshi Government "renegotiated" the deal (in the process adding a much bigger Phase II at higher costs), but the revised agreement retained some of the most objectionable features of the original agreements.

Energy analyst Abhay Mehta, who is authoring a book on the Enron deal, says that the PPA was weighted heavily in favour of Enron. Citing secret internal documents with the MSEB, he alleges that the per-unit cost of electricity purchased from the DPC would be higher than what is claimed by the Government. Under the terms of the PPA, two costs are factored into the tariff: capacity charge and the charge for fuel. Mehta states that there was "no mention anywhere in the PPA of the capital expenditure on the plant." According to him, the officially mentioned cost of Rs.9,053 crores did not factor in the capital recovery charge; further, the variables in the formula for the payment of capacity charges had not been stated. The variables in calculating the capital recovery charge include the dollar-rupee exchange rate, inflation rates in India and in the United States, the U.S. labour inflation index, and the U.S. materials inflation index. Mehta states that between 1993 and 1998, a single variable – the dollar-rupee exchange rate – accounted for a 40 per cent increase in capacity charges. Furthermore, he says, under the agreement, even if the MSEB picks up only half the contracted capacity (as seems likely), it would have to pay the full amount agreed upon, which would effectively double the per-unit cost.

The PPA, in Mehta's view, is very one-sided in that the MSEB has no rights under it. It is virtually impossible for the MSEB to terminate the agreement, but the DPC can do so unilaterally if things do not go its way. There are certain clauses in the PPA which permit the DPC to dictate specific terms to the MSEB: for instance, the DPC maintains the right to decide which MSEB official will inspect its plant.

Anti-Enron activists have for long been warning against the Enron project. The controversy over the high power cost, which is certain to be passed on to the consumers, may be only the tip of the iceberg. ■

Narmada

The way the Narmada issue is being handled by the government causes concern. It is now clear that most of the so-called benefits of the Sardar Sarovar Project (SSP) are to be cornered by Gujarat, while the tens of thousands of people who will be displaced are primarily from Madhya Pradesh and Maharashtra. The Government of Madhya Pradesh has filed an affidavit with the Supreme Court, stating that it does not have enough land to resettle the people, while the Maharashtra Government has conveyed the same message to the media. In this background, it is shocking to see the apathy exhibited by the Central Government, the Supreme Court and the Gujarat Government.

Mobilisation of Dalits

It is true that Dalits have been politically mobilised in Tamil Nadu as never before ("A consolidation of forces", August 27). But it appears to have happened more on a casteist basis. Could it be owing to the failure of major political parties to organise them on the basis of principles and policies? Does it mean a setback to democracy? It is clear that the Tirunelveli massacre and the continued oppression of Dalits in the South have created a new awareness among them about the need for unity. It is essential to ensure that caste differences are not widened. Instead of looking for short-term gains, the political leadership should show the vision to foster harmony.

Vellore, Tamil Nadu

Nuclear weapons

In "A flawed character" (August 27), the author quotes Henry Kissinger as saying that "the strategic arsenal of nuclear warheads is useful to deter nuclear attacks from the enemy and for little else" and makes a comment that this should provide a sobering thought for "our nuclear hawks". The so-called "nuclear hawks" have no problems in accepting this reasoning. Strength in conventional arms is not a sufficient deterrent against a state like Pakistan, unless it is made known to it that any first strike with nuclear warheads would invite instant retaliation. In fact, it is the numerical and technological superiority of India's armed forces and its conventional weapons that would tempt Pakistan to deploy nuclear weapons and venture a first strike.

Neelan Tiruchelvam

Your coverage of the assassination of Neelan Tiruchelvam (August 27) was comprehensive. Several prominent personalities from different parts of the world have condoled the death of the Tamil leader. However, what puzzles and disappoints me is that neither the Tamil Nadu Government nor any prominent politician from Tamil Nadu has issued any statement in this regard.

Kargil

In "A probe and its prospects" (August 27) the author says that the committee on the Kargil conflict has no statutory authority. Could he cite even one instance of any committees appointed by government in free India having statutory powers? The BJP is playing the same game that was played by its predecessors in power. At least in the future all political parties should agree to respect and follow the findings of inquiry commissions. Their findings should be treated in the same manner as Supreme Court verdicts.

★ ★ ★

As you rightly pointed out ("Now the cover-up", August 13), the decision of Lt. Gen. N.C. Vij, the Director-General of Military Operations (DGMO), to brief the BJP National Executive was indeed disgraceful. But the question is: did he do so on his own initiative? The Chief of the Army Staff has disowned any responsibility, saying that he had no control over the senior officer who did the briefing. If that is so, did the DGMO carry out the briefing without clearance from his chief? Or does the Army chief's statement betray a lack of moral courage? The Army should clarify.

Col. D. Lal (retd)
Ghaziabad, Uttar Pradesh

★ ★ ★

The quality of the victory in Kargil is questionable ("The unending cost", August 13). The conflict was the result of the BJP-led government's misgovernance. In order to evict a handful of infiltrators, the Indian armed forces had to fight a "war" for 50 days. They had to deploy powerful war machines, and hundreds of soldiers had to sacrifice their lives.

Rajan Ramarao
Mumbai

BJP government

By a strange stroke of luck, the BJP-led government's handling of the Kargil crisis has heightened the rating of A.B.Vajpayee and his government although it was they who were responsible for the crisis, as it was their failure to prevent the infiltration that resulted in the avoidable national tragedy. There is no reason to give special credit to the BJP-led government for the "Kargil victory". At best, it may be partially ascribed to Vajpayee's ability as an individual.

Democracy in India has reached a stage where a government which lost the confidence of the House and was voted out continues in office and functions with more independence, fearlessness and vigour than before. The reason is simple, while in power, it was subjected to pushes and pulls from its coalition partners.

But once it lost the confidence motion, it had nothing to fear because it could not fall any further and has therefore become hundred per cent stable. Neither house of Parliament is in session. The Government is no longer subject to its coalition partners' pulls and pushes – and herein lies the strength of a voted-out government.

Even if the prediction that the National Democratic Alliance will win over 300 seats in the September elections comes true, Vajpayee of "Kargil fame" cannot be the same again. For, when every partner of the NDA – more than 20 parties that have temporarily come together in search of power – starts demanding its pound of flesh, Vajpayee will become his old self – a person who could not lead an alliance. Unable to control the affairs of the NDA, the government will soon meet with the same fate of the previous government.

The telecom tangle

My attention has been drawn to an interview given by Mr.Arun Jaitley to *Frontline* ("It is a revival package", August 27), in which he has referred to some alleged excerpts from my letter dated May 12, 1999, written to Prime Minister Atal Behari Vajpayee to the effect that "those who are overstating the ability of the industry to pay this licence fee are the interested quarters who want the industry in India to collapse. There is now an urgent need to change." After the quotation, he has said that he was quoting from the letter.

I am enclosing a copy of my letter dated May 12, 1999, addressed to Sri Atal Behari Vajpayee, Prime Minister. There is no such sentence as has been purported to be "extracted" from my letter dated May 12, 1999, and in fact my letter does not contain any observation to that effect at all.

It is strange that a Senior Advocate of Mr. Jaitley's standing, claiming to be a key strategist of the BJP, is indulging in total disinformation, if not fabrication, trying to make out a desperate case finding that the government led by Sri Vajpayee has indulged in gross anti-people and anti-national activity.

Mr. Jaitley has questioned why the revenue sharing system of March 26, 1999 was not opposed. That policy was not applicable to the existing cellular operators. By my letter of May 12, 1999, I actually brought the representations made by the existing cellular operators to the notice of the Government of the day and I categorically stated in my letter that "If it is ascertained by the Government, on a proper review, that the existing cellular operators cannot survive without introduction of a revenue sharing arrangement, then obviously proper consideration has to be given upon an objective assessment of all the issues with an open mind." I further mentioned that upon such review and assessment, if the apprehensions of the cellular operators were found to be justified then the question of integration might be worth considering. Significantly, till today, the Government of India has not disclosed whether any study or review was made and if so, to what effect. I never asked the Government to take any wrong or anti-people decision based upon their subjective feelings.

I charge that the BJP and its so-called spokesmen and strategists are deliberately misleading the people in an attempt to extricate their government from a very murky situation, knowing that they have no proper answer and they are making insinuations and indulging in false propaganda in spite of the fact that their own Minister for Communications and Minister for Finance had objected to the change of policy regarding the existing operators, which clearly points to corruption at the highest level, which prompted the Government to take such a controversial decision.

I hope Mr. Jaitley would tender an apology in writing for the deliberately misleading and incorrect allegations made against me. I am enclosing a copy of this letter to Mr. Jaitley.

Somnath Chatterjee, ex-M.P.,
Leader CPI(M), Lok Sabha

Following is the text of the letter written by Somnath Chatterjee:

Dear Prime Minister,

During my tenure as the Chairman, Standing Committee on Communications, and even thereafter, several cellular operators belonging to the concerned Association met me and brought to my notice the problems faced by them. They have been requesting for due consideration by the Government of the disadvantaged position they are occupying.

The Telecom Policy of 1994, it seems, very significantly, failed to achieve most of, if not all, its objectives. As a result, the expansion of the network that was expected through the efforts of DoT as well as the private operators, both in basic telecom and cellular operations, has not been achieved.

The cellular operators have very categorically denied that they have received premium by sale of shares at a discount as has been alleged against them in some interested quarters. It has been represented by them, and as the facts appeared to be, that the Indian operators have not only participated in equity but also have had to provide guarantees to DoT apart from debt funding, which their foreign collaborators did not have to do. So far as I have been able to ascertain, the final stake of cellular operations in the different regions has been substantially more so far as Indian operators are concerned, compared to their foreign counterparts.

It is well-known that the cellular operators have not been able to have the targeted number of customers as per the projection of DoT, which, according to them resulted in poor cash flow, culminating in the failure on the part of cellular operators to pay the licence fees. The Indian cellular operators have represented to me that by reason of additional induction of funds, their financial capability was put under great strain.

The new Telecom Policy formulated by your Government has provided for a dual system – one for payment of licence fees by existing operators and the other for revenue sharing by the new operators. This has, as has been represented by the cellular operators, not only created an anomaly but has also made their future operations totally uncertain and unviable. Such operators, from time to time, have been requesting for review of the position.

If it is ascertained by the Government, on a proper review, that the existing cellular operators cannot survive without introduction of a revenue sharing arrangement, then obviously proper consideration has to be given upon an objective assessment of all the issues with an open mind. Indian concerns, who genuinely wanted to make a contribution for the development of the telecom network in our country, are almost now out of business for no direct fault of theirs. Certainly the Government has to ensure that the foreign telecom companies should not at any time be able to take over our telecom network and for that reason also, it is essential that the Indian operators should be provided due consideration so that their financial viability is not affected.

Integration of the existing cellular operators into the new Telecom Policy framework seems to be worth considering, in the face of apprehensions that have been apparently expressed in some quarters. I feel that since there is considerable justification in the representations that are being made by the existing cellular operators, this matter should be brought to your attention so that no Indian operator is ultimately denied justice, considering the present situation in an objective manner, consistent with national interest.

Somnath Chatterjee

ON THE CAMPAIGN TRAIL

India votes for the second time in less than 20 months, and for the first time in five phases, spread over a month. A look at the line-ups, electoral mood and prospects in the States that go to the polls on September 5 and 11, some of which have simultaneous elections to the Lok Sabha and the State Assembly.

RAJASTHAN

SUKUMAR MURALIDHARAN

WHEN Congress veteran Balram Jakhar arrived in Jaipur *en route* to filing his nomination for the Sikar parliamentary constituency, it was to a strangely subdued reception. Absent was the customary effervescence with which the Jat community in Rajasthan welcomes a leader of national stature. Local enthusiasm remained subdued as he proceeded to Sikar the following day in a cavalcade of cars. Although he has represented Sikar for two full terms in the Lok Sabha, Jakhar does not maintain a permanent establishment in the constituency. Nor does he depend upon local talent for his closest campaign managers.

Elsewhere in the constituency, Amra Ram, the sole legislator from the CPI(M) in the Rajasthan Assembly, was stepping up the tempo of his campaign for the Lok Sabha. Where was Balram Jakhar, he asked a gathering at the village of Bhakhron ki Thani, some 30 km from Sikar, when the peasants of Rajasthan were mobilising in their thousands to demand an assured minimum supply of electricity? Where was he when prices of phosphatic fertilizer were sharply raised, causing distress to the farming community? Where was he when Sikar received its dead heroes from the war in Kargil?

Jakhar is returning to Sikar after contesting and winning the 1998 elections from distant Bikaner. Apart from Amra Ram, he is facing Subhash Maharia of the BJP, the winner the last time around. Maharia himself seems to embody some of the malleable political loyalties of the locally powerful Jat community. His uncle Ramdeo Singh Maharia represented the Dhod Assembly segment of Sikar in the Rajasthan legislature virtually without break till 1993. He has since suffered two successive defeats at the hands of Amra Ram.

For his part, the CPI(M) candidate seems clearly to perceive Jakhar as the man to beat. When he chooses to direct his

GOPAL SUNGER

Amra Ram, the CPI(M) candidate for the Sikar constituency, addressing an election meeting.

rhetoric against the BJP's Mehariya, it is only as a minor distraction from the main task of skewering the "intruder" from Punjab. Accompanying him on the campaign trail, Sheopat Singh of the All India Kisan Sabha puts his own interpretation on the stakes involved for the people of Sikar. Amra Ram is one of our own, he declares. He was born in a small peasant household and has steeped himself in the struggles of his class. Sikar has had a history of sending large landholders, business tycoons and rootless outsiders to Parliament. It is time now for the constituency to have its authentic voice heard in New Delhi.

Rajasthan (1998)	
Seats:	25
CONG.	18
BJP	5
Ind & Oth	2

Since the Janata Dal began disintegrating in 1991, Rajasthan has, by all appearances, been settling into the relatively predictable framework of a two-party system. However, periodic disturbances in the settled course of bipolar contests have arisen from within the ranks of the two main parties. Violent eruptions of factionalism within the two principal contestants have been a feature with often decisive influence in most elections over the last decade. In the 1993 Assembly elections, the Congress suffered grievous losses because of an upsurge of dissidence within. It was the turn of the BJP to suffer likewise in 1998. Today, just nine months after a historic landslide in the Legislative Assembly elections, the Congress in Rajasthan is facing a tide of resentment among one of its principal constituencies.

The Jat Mahasabha, which was till recently a social organisation dealing with matrimonial and such other matters, has issued an edict that the Congress should be defeated in the Lok Sabha polls. Jat ire has been provoked by the Congress' perceived obstruction of a move to bestow upon them the status of a "backward class". More than opportunities in public employment, the Jats in Rajasthan are being impelled into this demand by backward class reservations in local self-government. Once a channel for mobilising Jat power, panchayati raj has today become a serious obstacle to the projection of their political might.

The Jat Mahasabha's edict is not good news for the Congress. Except for 1989, when they strayed into the embrace of the Janata Dal, the Jat community – by some estimates the most numerous caste grouping in the State – has been one of the main pillars of strength of the Congress in Rajasthan.

The Mahasabha's strategy is simple. It will not contest elections directly, since it is not a registered political party. But prominent community leaders are being fielded as independent candidates in the hope that they will cut into the vote share of the Congress. Sumitra Singh, a senior politician till recently associated with the Congress, is contesting in Jhunjhunu. Her presence could make a material difference to the fortunes of the Jat patriarch Sis Ram Ola, who has returned to the Congress fold after a brief interlude in Third Force politics.

As an individual, Ola has proven twice in the recent past that he can win even without the label of the big parties. This endows him with a special confidence in the battle. His personal standing, when bolstered by the stamp of approval of the Congress, should prove an irresistible formula for success.

The situation in Nagaur is not dissimilar. Ram Raghunath Chaudhary won the seat for the Congress in 1998, taking it out of the grasp of the Mirdha family for the first time since 1971. Bhanu Prasad Mirdha, son of Nathuram Mirdha, brought the seat into the BJP fold in a byelection in 1997. But he proved a fickle customer and was replaced by his cousin Richpal Singh as the BJP candidate in the 1998 general elections. Ram Raghunath's massive victory proved, however, that the Jats of Nagaur were uncomfortable with the BJP and would even abandon their fealty to the Mirdha family to make this point.

Ram Raghunath enjoys a personal stature in the constituency which should see him through. The likely bearer of the Jat Mahasabha mantle, Vijay Punia, was till recently in the Congress, where his penchant for unsavoury deals was a perennial source of embarrassment. But an element of collusion is evident in this constituency, where the BJP has fielded a little known Bania, Sham Sundar Kabra.

Bhairon Singh Shekhawat, the BJP's old warhorse, sees nothing amiss in this decision. A split in the Jat vote between Punia and Ram Raghunath, he says, could see Kabra through in Nagaur. But public perceptions of the individual worth of the two Jat candidates makes this a less than credible proposition.

This suggests two kinds of strategies that the BJP could adopt – it could bank on a deep division in the Jat vote that could secure victory for itself. Or it could, in a last minute switch, transfer its core votes to the Mahasabha candidate, supplementing whatever he may be able to attract from his caste constituency.

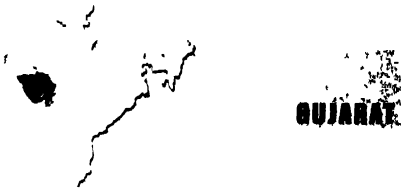
Five constituencies in northern Rajasthan (Ganganagar, Bikaner, Churu, Jhunjhunu and Sikar) and five in the west (Pali, Jalore, Barmer, Jodhpur and Nagaur) go to the polls on September 5. Eight constituencies in the east (Jaipur, Dausa, Alwar, Bharatpur, Bayana, Sawai Madhopur, Ajmer and Tonk) and seven in the south (Banswara, Salumber, Udaipur, Chittorgarh, Bhilwara, Kota and Jhalawar) follow on September 11.

The first phase of polling covers the core areas of Jat political influence. Gyan Prakash Pilania, a former Director-General of Police who today heads the Jat Mahasabha, admits that the crusade against the Congress will not be fully reflected in this belt of the State. Rather, the deepest impact would be in the eastern and southern constituencies, where Jat voting behaviour does not follow long-established custom and is prone to volatile shifts.

Congress Chief Minister Ashok Gehlot's first reaction to the prospect of a Jat rebellion was insouciance. "Where will they go if they do not vote for the Congress," he is reported to have said. At a later stage, when the threat became real, he apparently amended this early formulation, reflecting a definite strategic shift: "Let the Jat go; others will then come on board".

This stands at the core of the Congress' rather confident strategy in Rajasthan. As the first Chief Minister from the backward classes, Gehlot is acutely aware of the potential to create a fresh Congress consolidation by recruiting these segments of the electorate. Malis, Yadavs, Gujjars and Rawats are the principal backward class communities in the State, which are yet to develop any fixed political loyalties. In seeking to safeguard the rights of these communities against dilution by the inclusion of Jats within the category of backward classes, Gehlot is essentially stepping on to uncertain terrain. He is seeking a tranformation in the representative character of his party, which could cause turbulence for his Ministry in the near future.

A positive feature for the Congress is the continuing disarray within the BJP after the electoral rout last November. Once a powerful figure in the central councils of his party, Shekhawat is today physically frail and politically isolated.



The distribution of the party ticket in Rajasthan led to a minor revolt: Kirorimal Meena parted ways in ire at being denied the Sawai Madhopur seat. This is expected to have repercussions in at least one other seat – Kota.

An element of disorientation is also evident in the BJP's choice of candidates for crucial seats. In fielding an outsider Bangaru Lakshman, the head of its Dalit cell, from the Jalore reserved constituency, the BJP has virtually conceded the seat to the Congress' Buta Singh. Also an outsider Buta Singh has, however, won the seat thrice before.

The free-floating political loyalties of Rajasthan's old feudal dynasties are another factor. In Bharatpur, the BJP has put up Vishwendra Singh, a descendant of the erstwhile Jat dynasty. He will face Jagat Singh, son of senior Congressman K. Natwar Singh. Vishwendra Singh, winner on the Janata Dal ticket in 1989, has a well-remembered history of political eccentricity. He was a defeated candidate from the area in the 1998 Assembly elections. The BJP's rather optimistic predictions of success in Bharatpur may be premature for this reason.

In neighbouring Alwar, Mahendra Kumari, who lost by a whisker as an independent candidate in 1998, is expected to return to the fray as the Congress nominee Mahendra Kumari won the seat in 1991 on the BJP ticket and sat out the next elections. The BJP candidate is Jaswant Yadav, who would presumably be counting upon the rather substantial number of voters from his community. The Congress could well seek to neutralise this element of caste solidarity by fielding a proxy Yadav candidate through its electoral ally, the Rashtriya Janata Dal.

Recent electoral encounters in Rajasthan have witnessed a rapid increase in voter turnout. Notably, women voters have been turning out in large numbers in a State once sunk in feudal torpor. The flux of political loyalties that is being witnessed today points to deeper undercurrents. Increasingly, the two-party framework is proving incapable of containing the articulation of contending aspirations in a State where community loyalties run deep. The large chunk of votes that has gone to independent candidates in recent elections, points to this reality. For the Congress, holding on to some of the gains made in 1998 seems clearly dependent upon subtly altering the character of its core constituencies, without seriously disturbing the equanimity of its traditional loyalists. ■

V.VENKATESAN

AT his first press conference as the Congress(I) candidate in Gandhinagar where he will take on the Bharatiya Janata Party veteran and Union Home Minister L.K. Advani, former Chief Election Commissioner T.N. Seshan – a terror for the political class till three years ago – posed most of the questions himself, and held the ground for nearly an hour. Was he a Sena loyalist? It so happened that of all the parties he approached for support to his candidature for the presidential election in 1996, only the Shiv Sena kept its word, he explained.

How could he win when the BJP has fielded a much stronger candidate from Gandhinagar? Seshan remarked:"As the tough get going, the going gets tough". Why did he choose Gandhinagar for his maiden contest? Gandhinagar is the best constituency, he is the best candidate, and the Congress(I) is the best party, he would say. "You have been very strict in enforcing the ceiling on election expenditure. How will you campaign in Gandhinagar, without incurring huge expenses on conveyance," asked one scribe. "I will campaign through your hearts. Front page of your newspapers would be my medium", came Seshan's reply.

Indeed, by announcing Seshan's candidature after much suspense, the Congress(I) has scored a tactical victory over the BJP. The BJP has re-nominated most of its 1998 election candidates. Some of these, who were successful, are now unpopular in their constituencies. Advani is seeking re-election for a third successive time from Gandhinagar. "Advani's visits to the constituency have been less frequent after he filed his nomination last time. He has not been able to fulfill the constituency's aspirations," said a voter in Gandhinagar.

However, the electorate of Gandhinagar, in general, seem to be impressed by the Congress(I)'s selection of Seshan, who is seen as having contributed greatly to make the electoral system effective. A cross-section of voters in both rural and urban areas, whom this correspondent met, endorsed the candidature of Seshan, who remains a "hero" particularly to the middle class people. "The Congress(I) has fielded a good candidate. He is sure to win," said a Government official. The voters seem to be not bothered about Seshan's origins outside the State. "After all, Advani is

T.N. Seshan, the Congress(I) candidate from Gandhinagar constituency.

PARAS SHAH

equally an outsider," remarked a voter

However, the BJP circles dismiss Seshan's entry as nothing more than a "comic relief"

Gujarat has a special significance in the BJP's scheme of governance, as it is the only State in which the party has been in power with a comfortable majority of its own in the Assembly since 1998. Gujarat was also the only State in western India, in which the BJP won a substantial number of Lok Sabha seats (19 out of 26) in the 1998 elections. In Maharashtra and Rajasthan, the BJP's tally was only in single digits. It is not surprising, therefore, that Chief Minister Keshubhai Patel has claimed that the BJP will win all the 26 seats in the September 5 elections.

The BJP owed its landslide victory in 1998 to a peculiar social arithmetic, which enabled the dominant Patel community to avenge the perceived "injustice" caused to their leader, Keshubhai Patel, who was dethroned as the Chief Minister within six months of assuming office after the 1995 Assembly elections. The Patel caste rallied in support of Keshubhai Patel. The people belonging to the numerically stronger, non-Patel castes, which comprise the Durbars, the backward castes, minorities, and the Scheduled Castes were sought to be mobilised by two of BJP's rivals, the Congress(I) and the Rashtriya Janata Party (RJP), formed by a breakaway BJP group, which was instrumental in pulling down the Keshubhai Patel Government. As a result, the anti-BJP vote was divided. In at least eight constituencies the combined votes of the RJP and the Congress(I) exceeded the votes secured by the BJP.

The merger of the RJP with the Congress(I) is expected to have an impact on the results. The leader of the erstwhile RJP and former Chief Minister Shankarsinh Vaghela has lost some clout but he still wields considerable influence among the Kshatriya community, which is said to be traditionally hostile to Patels. The consolidation of Patels in the 1998 elections in favour of the BJP has seemingly united the people belonging to the non-Patel communities, who are likely to vote for the Congress(I), simply because the Patels will vote for the BJP.

The chances of Vaghela, who is the Congress(I) candidate in Kapadwanj, appear to be bright. He is banking on the substantial number of Kshatriya voters in this constituency. A Kshatriya voter in a village in the Saurashtra region told *Frontline* that he would vote for the BJP, if it is known that the Patels would vote the Congress(I). Such is the divide between the two rival communities. The animosity between the two communities has its roots in the emergence of Patels as the neo-landlords in this century.

Gujarat (1998)	
Seats:	26
BJP	19
CONG	7

However, it is pointed out that Patels have no rallying point now, with their leader firmly in the Chief Minister's chair. The Lok Sabha elections do not seem to have any special significance for them particularly when there is no prospect of a Patel Prime Minister and in the absence of any reason for them to feel insecure. In fact, Keshubhai Patel's style of governance has seemingly disappointed his constituency, the Patels.

Another factor that brought victory to the BJP in 1998 was its excellent organisational network in the State, which is fine-tuned to fight elections, more particularly when it is in the Opposition. Drawn from the Vishwa Hindu Parishad (VHP) and the Rashtriya Swayamsevak Sangh (RSS) pracharaks, the BJP's campaign machinery found it easy to ensure that grassroot workers were sufficiently motivated. No doubt the organisational network continues to call the shots. However, there appears to be a divide between the activists in the constituency and the organisational leaders, who are generally RSS men from outside the State.

There is resentment among party activists over the functioning of the secretary of the BJP State unit, Sanjay Joshi, who is playing a key role in the party's strategy. Joshi hails from Nagpur. Local BJP leaders feel that they are being sidelined by the State-level party functionaries. The attitude of the functionaries, drawn from the RSS, is attributed to their fears of a repeat of the Vaghela episode, which split the party.

Besides, the Vishwa Hindu Parishad (VHP) and the Bajrang Dal, of the Sangh Parivar, have reasons to be dissatisfied with the Chief Minister's approach to the communal issue. Starting from the anti-Christian bashing early this year to the recent Ahmedabad riots, these organisations expressed their reservations over the State Government's handling of the inci-

L.K. Advani being taken in a procession through Gandhinagar.

PARAS SHAH

dents, for which some of their members were arrested. It is not clear whether the Sangh Parivar activists would show the same degree of enthusiasm to work for the BJP's victory. After all, it is the Chief Minister who will ultimately take the credit for victory.

The results of the 1999 Lok Sabha election could see the principal parties in the State exchange their seats-tally, if the mood of the people is any indication. The ruling BJP has not so far succeeded in transforming the election to a referendum on the leadership of Prime Minister Atal Behari Vajpayee and his so-called success in tackling the Kargil conflict, as it would desire. Local issues, the lacklustre performance of the BJP-led Government in the State, and of the BJP MPs in the dissolved Lok Sabha, appear to dilute substantially any mileage that the BJP seeks to gain from its record in the Centre.

Water scarcity in the Saurashtra, Kutch, and North Gujarat regions is expected to affect the prospects of the ruling party. The Congress(I) appears to have achieved significant gains in Saurashtra, where the BJP won all the seven seats in 1998. Voters in both urban and rural pockets appear to be dissatisfied with the local BJP units and the BJP MPs, and are ready to vote for the Congress(I), although some of them would endorse Vajpayee as Prime Minister.

Allegations of misuse of power by the Chief Minister's son-in-law, Dr. Mayur Desai, and centralisation of power in the hands of the Chief Minister, have led to disgruntlement within the Keshubhai Patel Ministry. A senior Cabinet Minister, who did not want to be identified, alleged that the Chief Minister sought to have direct control over the key Ministries by appointing Ministers of State with independent charge and thus violated the principle of governance by a cabinet system. These Ministers, who are not free to take independent decisions, are asked to serve the interests of those close to the Chief Minister, the senior Minister alleged.

Can the Congress(I) effectively make use of the opportunity provided by the BJP's ineptitude? Although there are several factions in the Congress(I), they seem to be united in their objective of defeating the BJP. The party has strived to balance all the major factions in distributing the seats. Shankarsinh Vaghela's group got a couple of seats. The party did not give the ticket to its veteran leader, Sanat Mehta who had narrowly lost to the BJP in Surendranagar in 1998. The party has fielded Savsibhai Kanjibhai Makwana in Surendranagar against BJP's former MP, Bhavanaben Dave. Mehta has apparently paid the price for making critical remarks against Sonia Gandhi in an interview. Dave's popularity seems to have nosedived because of her failure to keep in regular touch with the voters. The Congress(I) has fielded several new faces in those constituencies which it lost in 1998.

The outcome of the election is expected to have an impact on the State politics as well, with many fence-sitters in the BJP waiting for an opportunity to challenge Keshubhai Patel. The pro-Congress(I) undercurrent in the run-up to the poll is a pointer to the turbulent days ahead for the BJP in the State. ■

MAHARASHTRA

LYLA BAVADAM

THE first campaign rally of the Shiv Sena-Bharatiya Janata Party coalition on August 9 might politely be described as a damp squib. Less than 20,000 people turned up on Mumbai's Chowpatty beach. The vast sprawl of sand accentuated the thinness of the crowd, and even the party faithful appeared to lack enthusiasm. Giant cutouts of Prime Minister and BJP leader Atal Behari Vajpayee did little to conceal the fact that no national-level leader had turned up to endorse the start of the Sena-BJP campaign. There will be a simultaneous two-phase polling to the Assembly and the Lok Sabha on September 5 and 11.

Among the Shiv Sena's principal problems in this election is the unconcealed war of succession that has broken out in the household of Shiv Sena chief Bal Thackeray. He shared the platform at Chowpatty with his son Uddhav Thackeray and nephew Raj Thackeray, but this show of unity did little to paper over the battle for power between the two heirs-apparent. A fortnight earlier, Uddhav Thackeray's supporters had assaulted his cousin's followers in Mumbai. Raj Thackeray was for long seen as the Shiv Sena supremo's natural successor. But voter anger with the Sena's criminality, as illustrated by Raj Thackeray's alleged involvement in the death under suspicious circumstances of Ramesh Kini a few years ago, led Uddhav Thackeray to emerge as the chosen successor.

The factionalism has taken several forms. Former Minister Babanrao Gholap, indicted earlier this year for his role in the embezzlement of state funds meant for the welfare of the poor, is believed to have threatened the Sena leadership that he would contest the Assembly elections as an independent if denied the party ticket. After a protracted battle, a compromise was reached through which Gholap's nephew Ravikiran Gholap was made the candidate from Deolali. Former Sena Minister Shashikant Sutar, facing similar corruption charges, was also denied the ticket, and this angered his supporters in the Pune area. In the Pimpri-Chinchwad constituency, Sena workers were so infuriated by the renomination of sitting MLA Gajanan Babar that they gheraoed State Culture Minister Pramod Navalkar.

Relations between the Sena and its coalition ally, the BJP, are increasingly strained. Deputy Chief Minister and BJP leader Gopinath Munde recently alarmed Sena leaders by putting out advertisements proclaiming himself to be Maharashtra's future leader. Sena apparatchiks have long complained that Munde harbours ambitions to displace their party as the princi-

pal formation of the Hindu Right in the State. That prospect may just come true if the Sena loses the bulk of the 171 Assembly seats it is contesting. The BJP is contesting in 117 constituencies.

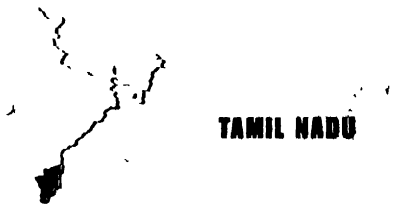
BUT it is the five-party Progressive Democratic Front (PDF), with former Congress(I) heavyweight Sharad Pawar's Nationalist Congress Party (NCP) at its apex, that will shape the election outcome in the State. Most observers believe that any division of votes as a consequence of formation of the PDF, made up along with the NCP of two Republican Party of India (RPI) factions, the Samajwadi Party (S.P.), the Janata Dal (Secular) and Sharad Joshi's Swatantra Bharat Paksh, will help the Sena-BJP alliance.

In 1996, fissures within the Congress(I) led to the emergence of a welter of breakaway party candidates. As a result, the Shiv Sena-BJP grouping won 33 of the 48 seats it contested, with the Congress(I) taking just 15. In 1998, with the right-wing alliance considerably less discredited than it is now, a united Opposition platform made up of the Congress(I), the major factions of the RPI and the S.P., won 33 of 48 Lok Sabha seats – wins which covered 220 of the 288 Assembly segments.

Pawar's PDF is named after the formation that propelled him to power in 1978. Although the Peasants and Workers Party (PWP), which was a key member of that front, is contesting alone this time, the NCP is supporting the sole MP of the PWP in the just dissolved Lok Sabha from the Kulaba Lok Sabha constituency in Mumbai.

NCP strategists have been seeking to broaden the organisation's base. In the first week of its formation, the NCP had attracted 45 of the State's 77 Congress(I) MLAs and 15 of 78 MLCs into its fold, along with six independent MLAs. Pawar has since been focussing on breaking the Sena-BJP grouping. Two former BJP MPs and six persons who were Ministers in the coalition government have joined the NCP. Former Sena Minister Ganesh Naik, who formed the Bharat Vikas Party after being sacked by Thackeray, will also receive NCP support. The NCP has not been particularly fastidious in its search for allies. Sachin Aher, general secretary of the Rashtriya Mill Mazdoor Sangh and nephew of Mumbai underworld figure Arun Gawli, along with Keshavrao Khed, accused of involvement in the landing of smuggled goods on the beach along the Raj Bhavan grounds in Mumbai some years ago, are contesting the Assembly elections on the NCP ticket.

NCP leader Chhagan Bhujbal pointed out that such criminality is minor in a political terrain where the Chief Minister himself has been the principal accused in a murder case. But voters might be less forgiving of the NCP's backing of discredited Sena-BJP figures. Muslim voters, accounting for some 12 per cent of the State's electorate, are central to the NCP's prospects. The PWP and the Communist Party of India, earlier sympathetic to the NCP, have refused to campaign for such candidates. Pawar has sought to regain ground by promising to implement the recommendations of the Justice B.N. Srikrishna Commission of Inquiry on the Mumbai riots, to set up a corporation for the economic welfare of the minorities, and to "restore the cosmopolitan character of Mumbai".



Just how these promises will play is hard to say, but one fact remains: the Congress(I) is in at least as much of a mess as the PDF. At the time of writing, the party had produced lists for only 35 Lok Sabha and 112 Assembly seats, a sign of its difficulty in finding credible candidates in several areas. Maverick politician Suresh Kalmadi, who allied himself with the BJP in 1998, has returned to the Congress(I), proclaiming himself to be "a Congressman at heart". The Mumbai North-West seat will see former actor Sunil Dutt contesting on the Congress(I) ticket. In 1996, Dutt withdrew from the fray reportedly as a favour to Thackeray, who had played a key role in securing the release of his son Sanjay Dutt, jailed on charges of involvement in the Mumbai serial bombings.

The decisive battle between the NCP and the Congress(I) will be in western Maharashtra, a region that has 12 Lok Sabha seats, the largest number among the State's six distinct regions. Western Maharashtra, flush with wealth generated from sugar, has traditionally backed the Congress(I). Three of the four seats that went to the Sena-BJP in 1996 were regained by the party in the last Lok Sabha elections, and a fourth one, Ahmednagar, was lost only because a sugar baron shifted his allegiance to the Sena. But this time the Congress(I) faces a new threat. Its MPs from Khed, Pune, Sangli and Kolhapur in the last Lok Sabha shifted their allegiance to the NCP, along with Nivedita Mane, the Shiv Sena candidate who came second to the Congress(I) winner in Ichalkaranji. PDF candidate and Dalit leader Ramdas Athavale will also give the Congress(I) a tough fight in the Pandharpur reserved constituency.

Pawar's record of not having led any party to an Assembly election victory in Maharashtra has given the Sena-BJP more than a few reasons to gloat. Congress(I) leader Murli Deora said that the NCP is working to an agenda in seeking to split the secular vote. "It is obvious that his agenda is to damage the party that he used to belong to," says Congress(I) leader Arjun Singh. "The very act of setting up a new party in Maharashtra has been of the greatest help to the Shiv Sena and the BJP." ■

T.S. SUBRAMANIAN

THEKKUR is a picturesque village in the Sivaganga Lok Sabha constituency in Tamil Nadu. A big open space leads to the village, with several neem trees. At the centre is a tamarind tree. Next to it is an open shrine for the village deity. Some feet away is a newly painted primary school. The village looks spic and span.

It is afternoon when P. Chidambaram, Tamil Maanila Congress (TMC) candidate for the constituency, drives in, followed by only two vehicles. He walks up to the tamarind tree, where a table and a microphone are kept. He waves to children trooping out of the primary school. On the tamarind tree is pinned a TMC poster. There are a few TMC flags and festoons on the branches. A group of people gather.

In fluent Tamil, Chidambaram comes straight to the subject. He says: "We warned you that the Bharatiya Janata Party-led Government will not last long and that the All-India Anna Dravida Munnetra Kazhagam (AIADMK) will withdraw support to it." He adds that Rs.484 crores was allotted to the villages in Tamil Nadu when he was Union Finance Minister but the BJP-led government had ignored villages. He promises the residents that the 1.5-km-long gravel

K. GANESHAN

(Top) AIADMK general secretary Jayalalitha addresses a public meeting in Madural. On her left is CPI(M) candidate P. Mohan. (Above) A section of the crowd at the meeting.

road to the village would be made a *pucca* road. He concludes: "In this constituency, the DMK and the AIADMK are not contesting. So I appeal to you to vote for the cycle (TMC's election symbol)."

A villager angrily asks him why this gravel road had not been blacktopped earlier. Another joins him in the demand. Chidambaram remains unruffled and drives off.

S. Adaikappan, a Thekkur resident, says: "This road is our only grievance It is full of protruding blue metal, which topple cycles and mopeds." But Adaikappan and others acknowledge the good work done by Chidambaram. There is a primary school now, a water tank, a road leading to the cremation ground and a ration shop in the village

Chidambaram's campaign style is simple and direct. He has no retinue of supporters He goes to the villages by himself Opposing him is H. Raja of the BJP, backed by the Dravida Munnetra Kazhagam (DMK), the Marumalarchi Dravida Munnetra Kazhagam (MDMK), the Pattali Makkal Katchi (PMK) and the Tamilaga Rajiv Congress (TRC) Another candidate is E.M. Sudarshan Nachiappan of the Congress, backed by the AIADMK, the Communist Party of India (Marxist), the Communist Party of India (CPI) and the Indian National League

While Chidambaram is touring villages, Raja is concentrating on towns such as Karaikudi, Tirupattur and Sivaganga Raja said on August 16 'There is time There are 18 more days to go I will go to the villages" The DMK has plunged headlong into the battle, and wants to put up a stiff fight against Chidambaram who has won consecutively for the last five times from the constituency

WITH the crises over seat-sharing resolved, three political fronts have emerged in Tamil Nadu The DMK-led front includes the BJP, the MDMK,the PMK and the TRC. The AIADMK-led front has the Congress, the CPI(M), the CPI and the INL The TMC front is backed by the Janata Dal (Secular), the Puthiya Tamilagam headed by Dr Krishnasamy, the Dalit Panthers led by R. Tirumavalavan and the Republican Party of India

There are 39 Lok Sabha constituencies in Tamil Nadu and they go to polls in two phases on September 5 and 11. With 19 out of 39 constituencies going to polls on September 5, election fever is building up. Leaders have hit the campaign trail. The first off the block, after performing *pujas* at home, was AIADMK general secretary and former Chief Minister Jayalalitha, on August 1 She travels in a custom-built, air-conditioned van, from which she addresses roadside gatherings in the villages In cities and big towns, she takes part in public

meetings. Karunanidhi also travels in a van, addressing roadside gatherings and public meetings. Moopanar hit the campaign trail after worshipping at the Ashtalakshmi temple in Besant Nagar, Chennai.

Among the issues in the campaign are provision of basic amenities for people in villages, the Kargil war, federalism, regional parties, stability at the Centre, 33 per cent reservation for women in the legislature, constitutional guarantee for 69 per cent reservation in Tamil Nadu, the Cauvery issue, the Sethusamudram project, and so on. The level of the debates ranges from the banal to the dignified.

Ind. & Oth.	3

The mood of the people ranges from enthusiasm, indifference to sullenness. A few are scared to voice their opinion. At Jayamkondan, a couple of youths politely declined to say anything because "this is a bad area". While some readily reveal their preferences, many hedge their bets. N. Narasimhan, a youth, asked: "Did Jayalalitha allow Vajpayee to have a peaceful meal even for a day?"

The DMK and its allies project Vajpayee as the prime ministerial candidate of the National Democratic Alliance (NDA), and as the man who brought "honour to India in war and peace." While the NDA trains its guns on the AIADMK-Congress-Left front and vice versa, both the alliances ignore the TMC front.

The AIADMK, the PMK and the TMC have had their share of setbacks following desertions. AIADMK legislator from Srivilliputhur R. Thamaraikani filed his nomination papers as an independent from the Sivakasi constituency after a tiff with Jayalalitha over an extremely poor gathering at Srivilliputhur to hear her on August 16. Thamaraikani is opposing the official AIADMK candidate V. Ramasamy, former Supreme Court Judge. Consequently, Thamaraikani was expelled from the party.

Union Minister of State for Health Dalit Ezhimalai of the PMK quit his post and decided to join the AIADMK after his party denied him renomination in Chidambaram. Former Union Minister M. Arunachalam deserted the TMC and joined the Congress after his suggestion to align with the DMK or the AIADMK was rejected by the party.

Cracks appeared in the AIADMK-Congress(I) alliance on August 22 when Jayalalitha failed to turn up for a public meeting at Villupuram that was to be addressed jointly by her and Congress(I) president Sonia Gandhi. AIADMK district secretary S.S. Paneerselvan claimed that Jayalalitha was held up by a "sea of humanity" on the way. Besides, he added that she was to attend a function at which Dalit Ezhimalai would be admitted into the AIADMK. After waiting for an hour, Sonia Gandhi went ahead with her address. She said: "What our country needs is a government with genuine concern to improve the lives of the poorest people. Only the Congress can do it. The BJP has been given a chance, but it failed miserably."

The previous day, Atal Behari Vajpayee said at a public meeting on the Marina beach in Chennai: "For me, dealing with the AIADMK was one of the most painful periods of my public life." Chief Minister M. Karunanidhi, who read out portions from the National Democratic Alliance manifesto, assured the minorities that their interests would be protected.

The campaign has shifted to high gear in the Sivaganga constituency. As one drives from Puduvayal village to Karaikudi and beyond, there is a surfeit of cycle symbols on walls. Partymen were busy drawing lotus or cycle symbols. The DMK is active here on behalf of the BJP. Indeed, the DMK volunteers had outstripped the BJP cadres in the campaign for Raja everywhere in this constituency.

A big battle is in prospect in the temple town of Madurai. Here the fight is mainly between two heavyweights, P. Mohan of the CPI(M) and Pon. Muthuramalingam of the DMK. A.G.S. Rambabu of the TMC and Subramanian Swamy of the Janata Party are also battling it out. Posters hail Swamy as the "Chanakya of politics". The BJP posters call Vajpayee "the *sanyasin* of politics".

Karunanidhi's son M.K. Alagiri, who hitherto used to work in the background, is now the manager of Muthuramalingam's campaign. Alagiri was present on the dais when BJP leader and Union Home Minister L.K. Advani addressed a public meeting on August 17 near the Meenakshi temple.

Advani denounced Jayalalitha for demanding the dismissal of the DMK Government. According to him, Jayalalitha rang him up in June last year on the eve of the Rajya Sabha elections from the Tamil Nadu Assembly, which would have returned six DMK candidates. Advani said Jayalalitha demanded either the dismissal of the DMK government or postponement of the Rajya Sabha elections. He replied that neither was possible. "That was the last conversation I had with her," he added.

P. Mohan of the CPI(M), backed by the AIADMK, is running a powerful campaign. There is general admiration for Mohan as a man of integrity, who champions the cause of the daily-wage labourers, petty traders, the working class and the middle class. Mohan was the unsuccessful CPI(M) candidate here in the 1991, 1996 and 1998 elections.

According to R. Jothi Ram, CPI(M) district secretariat member, Mohan's campaign was largely based on the basic facilities that Madurai lacked. There was no underground drainage in 36 out of 72 wards in the Madurai municipal corporation, now controlled by the DMK. The civil body lacked funds; it is short of sanitation workers; and work on a ring road was proceeding at a snail's pace. There are not enough ration shops. The CPI(M) is demanding a High Court Bench in Madurai. "Our allies, the AIADMK, the Congress, the CPI and the TMMK (Tamil Nadu Muslim Munnetra Kazhagam) are fully coordinating with us," Jothi Ram said.

Subramanian Swamy claimed that the going was good for him. According to him, the presence of the CPI(M) candidate had hampered him from attacking the BJP effectively. He had to train his guns on the CPI(M) too now.

In the Sivakasi constituency, it is a colourful and noisy campaign by both the MDMK candidate Vaiko and his rival Ramasamy of the AIADMK. The BJP and the DMK workers are behind Vaiko in his campaign.

Jayalalitha's avowed plans to defeat Vaiko, who was her erstwhile ally, received a setback when Thamaraikani decided to contest as an independent. Jayalalitha set out in her caravan on August 16 to seek votes for Ramasamy. If poor attendance at Rajapalayam annoyed her, she was shocked that there was hardly any crowd at Srivilliputhur and Sivakasi. There were only a few hundred people at Tiruthangal where she was to address a public meeting. So former Minister K.A. Sengottaiyan announced that the meeting was postponed to the next day and appealed to the people to "gather in waves".

An angry Jayalalitha lambasted Thamaraikani, and Virudhunagar district AIADMK secretary K. Sundara Pandian

for the poor turnout. Their explanations that people were in their workplaces because it was afternoon then and because of the condescending attitude of Ramasamy towards local party leaders cut no ice with her.

Jayalalitha returned the next day to Virudhunagar, Tiruthangal and Sivakasi to a better reception. At many roadside villages, village bands were in attendance, presenting songs from films that featured M.G. Ramachandran and Jayalalitha. Women waited with "arathi". AIADMK youths, in white shorts and white T-shirts, controlled the crowd.

Jayalalitha and her friend Sasikala Natarajan reached Amathur in their van, followed by about 60 vehicles. Alongside was an open vehicle in which Ramasamy stood. A woman went ecstatic. Jayalalitha spoke from inside the vehicle, repeatedly calling the BJP an "evil force". She dwelt on why the AIADMK withdrew support to the Vajpayee government. According to her, it betrayed Tamil Nadu on the Cauvery issue; it did not give a constitutional guarantee to 69 per reservation in Tamil Nadu; it did not provide for 33 per cent reservation for women; and it compromised India's security. She described Justice Ramasamy as "a good man and a tough man".

When Advani addressed a meeting at a school playground at Virudhunagar on behalf of Vaiko, all around the dais were big cutouts in blue depicting the Indian Army's victory in Kargil – ten "heroes" (soldiers) from Tamil Nadu, holding aloft the national flag on a peak; a howitzer firing; Army trucks moving in a convoy in a valley; and Indian soldiers freezing Pakistan soldiers with bullets. Advani admired "the magnificent stage and the cut outs" and said: "I am greatly impressed with Vaiko for recreating a scene from Kargil." Advani praised Vaiko's interest in the welfare of the match and fireworks industry workers, and called him a man of integrity. Vaiko said that he would be the voice of the suppressed people and peasants if elected to the Lok Sabha.

Traffic chaos prevailed in Tiruchi town for a few hours on August 18 when two candidates, Union Power Minister Rangarajan Kumaramangalam of the BJP, and L. Adaikalaraj of the Congress went in separate processions of vehicles to file their nomination papers. M. Rajasekaran is the TMC contestant here. In terms of the sheer number of vehicles and supporters, Rangarajan outdid Adaikalaraj.

A. Ilankumar Sampath, election officer-in-charge for Rangarajan, summed up the BJP's strategy: "We will list out our achievements and request people to vote for us." According to Sampath, Rangarajan's achievements were: four bridges under construction at Palakkarai, Thennur, Srirangam and Othapalam; Tiruchi airport renovation and runway expansion work; putting Tiruchi on the internet server map; rural roads for Rs.33 crores at Lalgudi, Puvalur, Siruganur and Tirupattur; orders placed with BHEL, Tiruchi, for four 500-MW boilers; a check dam to be constructed near Musiri which will irrigate about 10,000 hectares.

To counter this, Adaikalaraj's supporters claim in a pamphlet that he was really the architect of many achievements that Rangarajan claimed as his own.

From Tiruchi to Chidambaram lies a part of the PMK belt that includes Jayamkondan and Minsuruti. In Chidambaram, another PMK (Vanniya) stronghold, three important candidates are P.Ponnuswamy of the PMK; Dr. Sumathi Udayakumar of the Congress; and R. Tirumavalavan of Dalit Panthers, who is backed by the TMC. Although the PMK campaign here is in high gear, the exit of Dalit Ezhimalai has disappointed Dalits. Informed political sources said that Dalit Ezhimalai did not get the ticket because top PMK leaders were afraid that he would "overtake them in status".

K. Balakrishnan, State Secretariat member of the CPI(M), said that though communal clashes used to break out occasionally in Tamil Nadu, it was the advent of the PMK that led to "long-standing communal strife" in the State. According to Balakrishnan, this had its echo in the southern districts too where caste-based parties had come up.

According to TMC leader V.M.S. Chandrapandian, chairman of Chidambaram municipality, Dalits were happy with Moopanar for giving "recognition" to the Dalit organisations such as Puthiya Tamilagam, Dalit Panthers and RPI.

In the neighbouring Pondicherry constituency, which is a Union Territory, there is a triangular contest among P. Kannan of the TMC, M.O.H. Farook of the Congress and Dr. M. Ramdas of the PMK. The DMK's offer of the seat, which it held, to the PMK was a surprise. So also Kannan's decision to resign his post as Home Minister and file his nomination paper. A third surprise was the choice of Farook, which set off a revolt in the Congress. All the eight Congress(I) members in the Pondicherry Assembly submitted their resignations as legislators to local Congress president P. Shanmugham to protest his being denied the ticket.

Shanmugham, however, made light of the resignations, asking the MLAs to accept Congress president Sonia Gandhi's decision. According to Shanmugham, the issues were administrative inefficiency and protection of Pondicherry's special status. Farook declared that he would launch a "dharma yudh" to cleanse politics in Pondicherry. According to Farook, it was "political buffoonery" that the TMC and the DMK should run a coalition government while the two parties had parted ways in Tamil Nadu.

Kannan promised to "bring back the lost charm of Pondicherry" if elected to Lok Sabha and gave a string of assurances for this.

In terms of sheer distance, the largest constituency is the archipelago of the Andaman and Nicobar islands, whose capital is Port Blair. The Campbell Bay, which is the southernmost tip of India (not Kanyakumari) is several hundred km and four days' of boat travel away from Port Blair. Those who will be voting include tribal groups such as the Sentinelese, Great Nicobares, Onges and Andamanese living in far-flung islands. Ballot boxes by boats will be reaching remote islands where forest personnel live. Five candidates are contesting in the constituency which goes to the polls on September 5. They are: Uma Bharati of the Nationalist Congress Party; Bishnu Pada Ray of the BJP; the incumbent M.P. Manoranjan Bhakta of the Congress, and independents Agapit Kujur and K. Kalimuthu Thevar. ■

KARNATAKA

PARVATHI MENON

BELLARY, the constituency in Karnataka's heartland where the Congress(I) president Sonia Gandhi and the Bharatiya Janata Party's Sushma Swaraj face each other, has become the focal point of Elections 1999 for Karnataka, and perhaps for the rest of the country as well. This constituency, which has returned Congress candidates in the last 12 elections, has been pushed into the centre stage in the election campaign of both parties. They will put to test their philosophies, and a victory in Bellary will be seen as a vindication of the fundamental issues both the parties are fighting these elections on.

No two elections are alike, and, in

Relive the sensation

Karnataka, which faces its 11th State Assembly elections along with the Lok Sabha elections, the pre-poll picture is fundamentally different from that of any previous election. With the split in the centrist Janata Dal, a prominent player in the last several elections, the fight in the State has essentially become a bipolar one – between the BJP and its allies and the Congress(I).

Karnataka (1998)	
Seats:	28
BJP	13
CONG.	9
JD	3
LOK SHAKTI	3

Under the BJP umbrella are the Janata Dal (United), which includes the Lok Shakti and the Samata Party (which has negligible support in the State). The Janata Dal (Secular) under former Prime Minister H.D. Deve Gowda will be a force to reckon with in the Vokkaliga-dominated areas of southern Karnataka. The BJP sees itself on the threshold of power in the State and is making a serious bid for forming the next government. The State unit of the party has successfully resisted pressures from its central leadership to dilute its dominant position in the alliance in the overall 'national' interests of the party.

Another notable feature of these elections is that although it is essentially a bipolar contest, alliances are a vital part of the election scene. The major alliance is that of the BJP and the JD(U), formalised just a couple of days before the last date for the filing of nominations on August 18. The JD(U) itself is an alliance between the Lok Shakti of Ramakrishna Hegde and the J.H. Patel-led faction of the former Janata Dal. Conflicting interests over seats and nominations within the alliance partners delayed the sealing of the alliance between the BJP and the JD(U). There are also differences within the parties that comprise the alliance. Uneasy alliances, therefore, are a significant aspect of the pre-poll scenario in the State.

KARNATAKA goes to elections in two phases – on September 5 and September 11. In the first phase, voters of 15 Parliamentary and 120 Assembly constituencies will exercise their franchise. In the second phase, the remaining 13 Parliamentary and 104 Assembly constituencies will elect their representatives. (On August 22, the Election Commission cancelled the election process in five Assembly constituencies in the State.) The five Hyderabad-Karnataka constituencies of Bidar, Gulbarga, Raichur, Bijapur, Koppal and Bellary vote in the first stage, as do the central Karnataka constituencies of Davangere, Chitradurga and Tumkur. Voting will also take place on the same day in Bangalore North and South, Chikkaballapur, Kolar, Mandya and Kanakapura.

The 13 Lok Sabha constituencies that go to the polls on September 11 include constituencies in coastal Karnataka (Mangalore, Udupi, Kanara, Shimoga), Bombay Karnatak (Dharwad North and South, Belgaum, Chikkodi, Bagalkot), and some constituencies in the Old Mysore area (Mysore, Chamrajnagar, Hassan, and Chickmagalur).

The BJP-JD(U) alliance is anything but united and there is anger and resentment in both parties over the seat-sharing agreement that was hammered out as late as August 15 between Prime Minister Atal Behari Vajpayee and JD(U) leaders George Fernandes and Ram Vilas Paswan in New Delhi.

According to this the BJP will contest 18 of the 28 Lok Sabha seats leaving the remaining 10 for the JD(U), the same formula of sharing worked out between the BJP and the Lok Shakti in the 1998 elections. (The BJP won 13 out of the 18 seats it contested, and the Lok Shakti three out of 10). Of the 224 Assembly constituencies, the BJP will field candidates in 129 and the JD(U) in 95. Left to itself, the State unit of the BJP would not have agreed to a tie-up with the JD(U), even if it meant breaking relations with the Lok Shakti and going it alone.

The State unit of the BJP has resisted the centrally imposed alliance with JD(U). It feels that the seat-sharing agreement is unwarrantedly generous to this new formation. It argues that the Patel faction of the JD(U) is a liability to the alliance as the anti-incumbency factor will work against it.

The JD(U), on the other hand, says that it is entitled to a larger share of seats owing to what it feels is the 'winnability' factor of the Patel faction. The BJP's original demand for 180 Assembly seats was rejected by Ramakrishna Hegde, who dubbed it as "greedy". "In the 1994 elections they won 40 seats, and suddenly they think they have grown so strong that they can contest 180 seats," he said.

As the last day for filing of nominations drew near and with no firm agreement over seat sharing emerging, the BJP made arrangements for the issue of 'A' and 'B' forms to all its candidates to contest from all the 28 Lok Sabha and 224

Assembly constituencies. The final seat-sharing agreement was clinched just a day before the last day for the filing of nominations. Candidates from both parties, the JD(U) and the BJP, have filed nominations for the same seats.

Thirty-eight JD(U) candidates, it is reported, have filed nominations in constituencies allotted to the BJP for the first phase of polls. Some BJP candidates have also filed nominations in constituencies allotted to JD(U) and will withdraw only if the rebel JD(U) candidates do so. There is resentment amongst 'rebel' candidates from each party against the 'official' candidates from the other party.

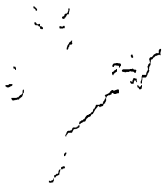
With seat sharing turning out to be a matter of such acrimony between the BJP-JD(U) front, the joint campaign is not likely to be a particularly smooth or effective one. No joint manifesto has been released by the alliance.

No less bitter is the relationship within the JD(U) among its constituents – the Lok Shakti and the Patel faction. The party is in a state of disarray with its constituents fighting over the number of seats that each should contest out of the quota allotted to it.

The Lok Shakti, whose leader Ramakrishna Hegde was responsible for the entry of the Patel faction into the JD(U), now feels short-changed in the seat-sharing exercise. Although the precise number of seats allotted to the Lok Shakti has not been agreed upon, party sources say that of the 95 Assembly seats given to the JD(U), the Lok Shakti has been given only 29 while the Patel group kept the rest for itself. Angry ticket seekers of the Lok Shakti thronged the residence of Ramakrishna Hegde on August 17, sitting in dharna and shouting slogans against party bosses. In the JD(U) too, more than one candidate was given the 'B' form for one constituency resulting in the rejection of a large number of nominations of Lok Shakti applicants.

With seat sharing turning out to be a matter of such acrimony between the alliance partners of the BJP-JD(U) front, the joint campaign is not likely to be a particularly smooth or effective one. No joint manifesto has been released by the alliance. Indeed the issue of the JD(U) joining the National Democratic Alliance has been deferred to after the elections as the BJP continues to be wary of sharing a platform with the party.

Meanwhile, the Congress(I), immersed in its own internal problems, has been unable to cash in on the opportunity presented by the inter- and intra-party acrimony in the opposition camp. The State unit has been confronted with a storm of protests by party members over the delay in nomination of candidates, and the selection of the candidates by the All India Congress Committee (AICC) and the Karnataka Pradesh Committee. Following the split in the Janata Dal, a number of leaders of the Janata Dal have joined the Congress(I). They include former Ministers in the J.H. Patel Cabinet, Roshan Baig and V. Somanna, former JD Member of Parliament Qamarul Islam, film star-turned-politician Ambarish and Siddaraju, a backward class leader.



Bellary, the constituency of Sonia Gandhi, will be the focus of the Congress(I) campaign. She inaugurated the party's campaign from Bellary on July 14, and although there was speculation that she might file her nomination papers from there, none of the State leaders was taken into confidence regarding this matter.

Many State party leaders are unhappy with the way Sonia Gandhi was spirited into the State under a cloud of secrecy and high security, and feel that the party lost considerable campaign mileage from having been kept in the dark about the nomination of its star candidate. Bellary has successively returned Congress candidate to the Lok Sabha in the past 12 elections. In the 1996 and 1998 elections K.C. Kondaiah won from the constituency bagging 43.89 per cent and 39.76 per cent of the total votes respectively. Kondaiah won the seat by a margin of 63,000 votes in 1998.

The fight this time round is not going to be easy as the BJP too will concentrate its electoral resources on Bellary. In the 1998 elections the combined votes of the Lok Shakti and Janata Dal candidates exceeded the votes polled by Kondaiah by over a lakh. On the other hand, the BJP by itself has a limited committed vote-base in the district and will have to rely heavily on its alliance partners for its campaign.

THE Janata Dal(S) under Deve Gowda is perhaps the only party to have started active campaigning in the State. After some hectic campaigning in Bangalore, where Deve Gowda rode through the streets in a tractor, his party's election symbol, he went on to Mangalore and Shimoga. The party has worked out electoral arrangements with the Communist Party of India, the Communist Party of India (Marxist), the Bahujan Samajwadi Party and a faction of the Dalit Sangarsh Samiti (DSS).

Some of the prominent political personalities who have filed their nominations for the first phase of elections for the Lok Sabha and State Assembly are Chief Minister J.H. Patel, who is standing for the Assembly from Channagiri in Devangere district; H.D. Deve Gowda, who is contesting for the Lok Sabha from Hassan; H.D. Kumaraswamy from Kanakapura Lok Sabha and Satnur Assembly constituencies; former Cabinet Ministers P.G.R. Sindhia and M.P. Prakash, both JD(U), from Kanakapura Lok Sabha and Hadagali Assembly constituencies respectively; Lok Shakti State president Jeevaraj Alva from Jayamahal Assembly constituency; and State BJP president K.S. Eashwarappa from Shimoga Assembly constituency. ■

DELHI

S.V. PANDE

DELHI is all set to witness one of the closest electoral battles in its history. In the absence of a credible third force, the Bharatiya Janata Party and the Congress(I) are locked in a straight contest, as it used to be in the 1960s. For the moment, the BJP appears to be marginally better prepared. However, at the popular level there is an air of cynicism, and this is manifested in the low turnouts at most of the public meetings.

The BJP has been shaken a bit by the decision, after a fortnight of vacillation, of Dr. Manmohan Singh, former Finance Minister, to contest. His presence has galvanised the Congress(I) organisation in South Delhi, where he will take on the BJP's Vijay Kumar Malhotra. Besides, there are signs of swing of

Delhi (1998)	
Seats:	7
CONG.	1
BJP	6

Sikh votes back to the Congress(I). The Congress(I) had indeed played its trump-card in fielding Manmohan Singh. Yet South Delhi is a seat which has returned only BJP candidates since 1989. It was held last time by Sushma Swaraj.

In the historic Chandni Chowk, it is a battle royal between the BJP's giant-killer Vijay Goel and the Congress(I) stalwart J.P. Aggarwal. The presence of Shoaib Iqbal of the Janata Dal (Secular) in the fray will only decide the margin of victory of either of the former two. The BJP could suffer a shock reverse, here. The result depends on the Muslim vote, and it seems to be shifting towards the Congress(I).

In Karol Bagh, the Congress(I) member in the previous Lok Sabha, Meira Kumar, is pitted against the BJP's Sunita Arya, a new face. Last time it was a close race. Meira Kumar won by just 4,847 votes.

A keen tussle is on in the Sadar area, between the BJP's Madan Lal Khurana and one-time Congress(I) strongman Jagdish Tytler, who won the seat three times – in 1980, 1984 and 1994 – and lost it once, in 1996. The several controversies that have chased Khurana, which include those about his virtual revolt against the party leadership, battle with party colleague and former Delhi Chief Minister, Sahib Singh Verma, may fetch him an upset defeat. There are reports of party rebels working actively against Khurana.

In East Delhi the Congress(I) was unable to find a strong candidate against the BJP's Lal Behari Tiwari, who scored an emphatic victory in 1998. Its candidate is former Lieutenant-Governor H.K.L. Kapur. This seat where Chief Minister Sheila Dixit lost last time by over 45,000 votes, offers the BJP a strong wicket.

In the vast Outer Delhi constituency, the BJP stalwart Kishan Lal won last time by over 98,000 votes. This time the party is represented by Sahib Singh Verma, and the Congress(I) ticket has gone to Deep Chand Sharma. Congress(I) stalwart Sajjan Kumar is sulking on being denied the ticket, and this could mean some trouble for the Congress(I) candidate.

Another keen contest will be in New Delhi, between former Communications Minister Jagmohan, who won the seat last time, and Congress(I) Working Committee member R.K. Dhawan. Jagmohan is a two-time winner. Dhawan, a good campaigner, has chosen the new plank of full statehood to Delhi.

The noise and dust is yet to come, though Prime Minister A.B. Vajpayee struck an aggressive posture at the rally he addressed. The BJP is preparing a list of the lapses of Delhi Congress(I) Government, which was elected last November.

Elections in Delhi University to the students' union and the teachers' association are scheduled to precede the Lok Sabha elections. The results of these could provide some indications. In the elections to the teachers' association both the Congress(I) and the BJP have betrayed a lack of confidence and are looking for alliances.

The traditional Left parties, that is, the CPI and CPI(M), are not contesting in Delhi. This, coupled with the disarray in the Janata Dal, could mean the shifting to the Congress(I) of a crucial, though not considerable, chunk of the vote. There is also another new factor – the presence of over two lakh new voters. Which way will they go. Last time the Congress won one seat. This time it could be one more for the party, in the best of situations. ■

PUNJAB

VENKITESH RAMAKRISHNAN

THE National Democratic Alliance (NDA), the umbrella grouping of the Bharatiya Janata Party (BJP) and its allies, does not appear to be as optimistic about its poll prospects in Punjab and in the adjacent Union Territory of Chandigarh, as is the case in other parts of the country. Elections will be held in Punjab and Chandigarh in the first phase of polling on September 5.

The BJP and its State-level allies, the Akali Dal (Badal) and the Bahujan Samaj Party (Ambedkar), convey a sense of unease, which manifests itself in several ways. The Akali Dal-BJP pair was once considered invincible because it supposedly brought together the two dominant communities, the Jat Sikhs and the Hindus.

In a series of meetings with BJP cadres in several constituencies, senior party leaders such as general secretary Narendra Modi pointed out how difficult it would be for the NDA to repeat the 1998 performance. Of the 13 constituencies in Punjab and the lone seat in Chandigarh, the Akali Dal had won eight and the BJP, four (including Chandigarh). Janata Dal candidate and former Prime Minister Inder Kumar Gujral, who was supported by the Akali Dal, won in Jalandhar. Gujral has refrained from contesting this time as he is not sure of Akali Dal backing.

Modi and other leaders spoke about the "need to concentrate on the battle for each polling booth and win it convincingly so that Vajpayeeji is not defeated again on the floor of the Lok Sabha". They highlighted that there is no alternative to Atal Behari Vajpayee as Prime Minister.

In a meeting in Amritsar on August 19, where this correspondent was present, Modi said that a major handicap faced by the NDA in this region was the anti-incumbency factor, which stemmed from the shortcomings of the Akali Dal Government. "There could have been hundreds of limitations in the way the State government performed and addressed your genuine concerns, representations and demands. You could have got humiliated time and again by the representatives of our NDA partner (Akali Dal), which is running the State government," he said. He wanted BJP workers to forget the insults and strive wholeheartedly for the success of all NDA candidates, remembering that every single seat was important to ensure Vajpayee's return as Prime Minister. This defensive approach has not done the NDA campaign much good.

All constituents of the NDA focussed on a Vajpayee-centric campaign in villages and towns. Even Chief Minister Prakash Singh Badal stressed on the "Kargil victory" and the "need to bring back Vajpayee". His campaign underscored the fact that the State Government does not have much to speak of in terms of achievement. It failed to address key issues, such as the revival of the agricultural economy it promised when it assumed power in 1997, improving the lot of government employees and the promises made to the business community.

The inability to highlight the Government's performance has been the bane of the Akali Dal since the Adampur Assembly by-election last year. The Akali Dal lost the seat for the first time in over two decades. According to Congress(I) State president Amarinder Singh, the Lok Sabha polls would mark a continuation of this trend. He added that the Congress(I) is quietly confident of making gains. In 1998, the party failed to win a single Lok Sabha seat in Punjab. This time, it has worked out electoral adjustments with the Left parties. The Communist Party of

India (CPI) and the Communist Party of India (Marxist) have been allotted one seat each – Bhatinda and Sangrur. The CPI and the Congress(I) are conducting a joint campaign, while the CPI(M), campaigning on its own, is urging voters to defeat the communal BJP and its friends.

BJP	3
Ind & Oth	2

Apart from the mood against the Badal Government, other factors going against the NDA include the split in the Akali Dal, which led to the creation of the All India Shiromani Akali Dal (AISAD) under the leadership of former Shiromani Gurudwara Prabandhak Committee (SGPC) president Gurcharan Singh Tohra; a significant shift of the Dalit vote from the BSP to the Congress(I) and the relatively poor selection of candidates by the Akali Dal and the BJP. The Congress(I), on the other hand, seems to have come up with a better list of candidates.

In 1998, the NDA constituents had polled 45 per cent of the popular vote. The Akali Dal, the BJP and the BSP(A) accounted for 32.93 per cent, 11.67 per cent and 0.40 per cent respectively. The Congress(I), which fought the last elections in alliance with the BSP, polled 25.85 per cent of the popular vote. Of this, the BSP accounted for 12.65 per cent.

Observers said that the AISAD would drain away between 25 and 30 per cent of the Akali Dal vote. In Patiala, Ropar and Ludhiana constituencies, where Tohra has a personal following, the damage could be greater. The AISAD has utilised former Akal Takth Jathedar Bhai Ranjit Singh for its campaign. Ranjit Singh is conducting a high-voltage campaign that highlights the connection between Akali politics and Sikh religious ideology. He has emphasised the perceived transgressions committed by the Badal Government on the Khalsa Panth.

These developments are bound to make an impact on a section of ardent Sikhs. District-level Akali Dal leaders agree that AISAD would make a dent in the NDA's fortunes, although the State leadership put on a brave face and described Tohra as a non-starter.

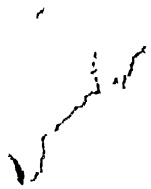
The NDA leadership argued that the Congress(I) would also suffer because the BSP has parted ways with it and joined hands with the AISAD. Congress(I) leaders said that the Dalit vote is no longer under the BSP's control. Impartial observers also believe that a section of Dalit voters would prefer the Congress(I).

In at least 15 villages spread over four Lok Sabha constituencies, this correspondent came across scores of BSP activists and supporters who left the party to support the Congress (I). In Budhipura village of Gurdaspur constituency, a group of Dalit Sikhs, who had returned to the Congress(I) since the last election, explained this shift as the result of the BSP's "high promise and low yield" politics. A local resident, Satnam Singh, said: "The BSP leadership talks about Dalit assertiveness and the supremacy of the BSP only to play second fiddle to the Akalis and the BJP from time to time. Socially too, the BSP has not improved the lot of Dalits in Punjab unlike in Uttar Pradesh or Madhya Pradesh."

The Congress(I) also stands to gain from its association with the Left parties, which had polled 4.5 per cent votes in 1998; of which the CPI accounted for more than 3.4 per cent. The support of Left parties and the split in Akali Dal would be crucial for the Congress(I) in Faridkot, Patiala, Ludhiana and Ferozepur constituencies, which the party lost by margins of less than 50,000 in 1998.

In Patiala, where AISAD leader Prem Singh Chandumajra is pitted against Parneet Kaur of the Congress(I) and Surjit Singh Rakhra of the Akali Dal, there will be a keen triangular contest. Chandmajra has taken a lead on the campaign front. In Faridkot, Prakash Singh Badal's son and Union Minister Sukhbir Singh Badal's re-election bid has run into rough weather against Congress(I)'s former MP Jagmeet Singh Brar. There are indications that the Akali Dal is trying all methods to turn the tide in its favour. Talk about the use of money, muscle and wine is common in the Akali Dal offices in the villages and towns. The appointment of Harchand Singh, a Senior Superintendent of Police in his home district of Faridkot, was cited by the Opposition as a ploy to influence the polling process. The Election Commission cancelled the appointment.

The NDA seems to be banking on the internal dissent within the Congress(I). In Jalandhar and Amritsar, the selection of Congress(I) candidates caused resentment among a section of aspirants. In Amritsar, the Congress(I) had earlier considered the young city Mayor O.P. Soni as a candidate only to sideline him at the last minute. Former Union Minister R.L. Bhatia will contest from here again. Supporters of the immensely popular Soni were upset and they made moves to make him contest as an independent. Amarinder Singh intervened to stop Soni from contesting, but the BJP is hopeful that the bitterness of Soni's supporters will continue.



In Jalandhar, the Congress(I) chose Balbir Singh, a former State Minister and Member of Parliament, despite opposition from many aspirants, including Umrao Singh, a former MP from the constituency. The BJP hopes to make some inroads in the constituency even though the initial mood of the electorate was pro-Balbir Singh.

The NDA too has faced problems on the selection of candidates in Chandigarh, Patiala, Hoshiarpur and Ludhiana.

In Chandigarh, BJP national vice-president K.L. Sharma, who is virtually unknown in the constituency, was given the ticket in the place of S.P. Jain, who won the seat twice in a row. This "outsider effect" could prove detrimental for the NDA given that Chandigarh has only 5.5 lakh voters and the Congress(I) has fielded P.K. Banal, a local politician and former MP.

In contrast to the picture presented by its campaign managers at the national level, the NDA is carrying on an uphill struggle in Punjab and Chandigarh. While its leadership admits that it would be impossible to repeat the 1998 performance, it hopes that the Vajpayee factor would help it retain at least 60 per cent of the seats won last time. But to achieve even this, Modi pointed out at the cadre meeting in Amritsar, the NDA will have to make laborious efforts at the polling booth. ■

Apart from the mood against the Prakash Singh Badal Government, other factors going against the NDA include the split in the Akali Dal, which led to the creation of the All India Shiromani Akali Dal; a significant shift of the Dalit vote from the BSP to the Congress(I) and the relatively poor selection of candidates by the Akali Dal and the BJP.

KERALA

R KRISHNAKUMAR

RAMANILAYAM the Kerala Government Guest House in Thrissur has for long been witness to the triumphs and tribulations of K Karunakaran. Karunakaran is the State Congress(I)'s political puppeteer, whose interests and ambitions continue to hold sway over the fluctuating fortunes of the party and the Opposition United Democratic Front (UDF) it leads.

Thrissur is Karunakaran's home ground where he honed his political cunning and religiously sought refuge from its after effects, famously at the Krishna temple in nearby Guruvayur. A 1996 picture of the former Chief Minister in the full glare of the media inside his favourite Ramanilayam VIP suite with his head bowed in shocked disbelief, as the news of his imminent defeat in the Lok Sabha elections was trickling in, is still a fresh memory in Kerala politics.

That picture and his defeat in Thrissur at the hands of V.V. Raghavan of the Communist Party of India (CPI) was a landmark in the suicidal group rivalry within the State Congress(I). But, two years later, the 1998 Lok Sabha elections saw Karunakaran score an emphatic victory against his detractors in the party who, he believed, had connived to engineer his defeat in 1996. When everyone expected him to lose a second time, Karunakaran, who contested from the Thiruvananthapuram constituency, projected himself back into political reckoning, defeating another CPI leader, K.V. Surendranath, by a margin of 15,398 votes.

On August 19, a tired-looking Karunakaran was once again on the steps of Ramanilayam, soon after filing his nomination papers at the Thrissur Collectorate, and waiting for the right "muhurtam" to drive to his newly rented residence at Chalakkudy, in the nearby Mukundapuram Lok Sabha constituency. Obviously the scars of 1996 have not healed. Mukundapuram, not Thrissur or Thiruvananthapuram, is Karunakaran's new battle-ground, where he is pitted against E.M. Sreedharan of the ruling Communist Party of India (Marxist). Sreedharan is also a member of the State Planning Board and a key architect of the Left Democratic Front Government's much-acclaimed decentralisation programme, the People's Plan Campaign.

Sreedharan is the son of E.M.S. Namboodiripad, and to those who seek to see the entry of Sreedharan into politics as one based on merit and that of Karunakaran's son and former Member of Parliament, K. Muraleedharan, as one forced on the Congress(I) by a doting father, Karunakaran has only a tongue-in-cheek response. "The only difference between the two is that Murali is my son and Sreedharan is EMS' son."

That difference, however, is a campaign issue throughout Kerala, especially in Mukundapuram, a known UDF bastion, where the BJP-led National Democratic Alliance's candidate is from a decimated party, the Socialist Revolutionary Party (SRP). The LDF alleges that it is in return for this "favour" that Karunakaran chose a little-known Youth Congress(I) leader, V.S. Sivakumar, as the Congress(I) candidate in Thiruvananthapuram, where the BJP, which is yet to win even an Assembly seat in Kerala, has fielded its most important candidate, O. Rajagopal, the party's vice president and a member of the Rajya Sabha (elected from Madhya Pradesh).

The LDF candidate in Thiruvananthapuram, the CPI's Kaniyapuram Ramachandran, may eventually benefit from the Congress(I)'s choice, even if the BJP may at best gain more votes. But, typical of many Karunakaran strategies, it satisfies several conflicting interests. The BJP knows it cannot yet win a seat in Kerala, but may be able to prove that its support base is widening in the capital constituency. Karunakaran supporters will be satisfied that it was only their leader's charisma that won the Thiruvananthapuram seat for the party in 1998 and even an LDF victory in Thiruvananthapuram does mean less support for the BJP at the national level, in Mukundapuram, Karunakaran himself may gain from the fact that the BJP has fielded a weak candidate.

Yet, in general, the Karunakaran-imposed seat-sharing formula, which admirably accommodates his own need to shift from Thiruvananthapuram to Mukundapuram and ensure a seat for son Muraleedharan in Kozhikode, despite the Congress(I)'s stated policy of denying the ticket to all those who have lost two previous elections, has created an undercurrent of discontent in the State party.

But this does not reflect in the UDF election campaign, to the extent it did on previous

H. VIBHU

K. Karunakaran outside the Government guest house, Ramanilayam, in Thrissur after he filed his nomination papers.

R VIBHU

CPI(M) candidate E.M. Sreedhran campaigning in Kodungalloor in the Mukundapuram constituency.

occasions (hastened by the debilitating results of feuds in the past over such issues, long time party rival A K Antony is nowadays a picture of tolerance and benevolence when it comes to accommodating Karunakaran's needs, though much to the chagrin of his own supporters. Antony told *Frontline*: "For the first time in several years, the Congress(I) and the UDF have been able to complete the candidate selection process amicably and well ahead of the LDF and this is sure to reflect in the results."

Yet the rapprochement, if any, is only skin-deep, as Congressmen themselves admit. A former MP told *Frontline*: "I can only describe it as unjust and unfair seat allocation, when a party like the Congress(I) throws norms to the winds and allows Karunakaran to have his way. Muraleedharan has the seat he wants (Kozhikode) despite being a loser twice. The Congress candidate who won back the Kozhikode seat for the UDF in 1998 is therefore denied a seat. P J Kurien, who is allegedly involved in a scandal, gets transferred to a constituency (from Mavelikkara to Idukki) of his liking. Also because Karunakaran does not want to contest from Thiruvananthapuram a second time, a lot of successful Congress(I) candidates get shunted from their own constituencies. And the Congress(I) fields candidates with corruption charges or non-entities in constituencies where it has winning chances."

Asked why the Congress(I)'s seat sharing exercise was so uncharacteristically amicable this time, a former MP and party candidate said: "It was but a package deal. We are not in a fighting mood. Our silence (in the selection committee meetings) was a compromise."

Says Oommen Chandy, a senior Congress(I) leader and a close confidant of Antony, while on the campaign trail for Karunakaran, rival P C Chacko: "The Congress(I)'s fight is against the forces that threaten the country's secular fabric at the Centre. The party cannot but stand as one in this election."

But will it work? Quite uncharacteristically, all is not well in the LDF either. The seat-sharing exercise was a rough ride for the ruling coalition, and has made Congress(I) leaders jump to predict "the disintegration of the LDF after the elections", as Antony described it to *Frontline*. But, says senior CPI(M) leader and LDF convener V S Achuthanandan: "In the UDF, the Congress(I) had been cornering 17 of the total 20 seats for itself all along, while in the LDF the leading partner CPI(M) had so far been claiming and contesting in only nine seats. The remaining 11 seats were divided among its Front partners. But this time, because of the split in the Revolutionary Socialist Party (RSP), which was already a small party, the group led by the ailing senior leader Baby John had threatened to defeat the nominee of the other RSP group, N K Premachandran, if he was fielded as the LDF candidate. It was as a compromise formula that the CPI(M) said it would field its own candidate in Kollam, whom both the RSP groups could

Kerala (1998)	
Seats:	20
CONG.	8
CPI(M)	6
CPI	2
IUML	2
Ind. & Oth.	2

support."

But the official RSP group, led by national president K. Pankajakshan, expressed his party's resentment at the CPI(M)'s action. He told *Frontline:* "We withdrew our claim to the Kollam seat, from where the RSP has been contesting from the beginning of Parliament elections, only under extreme protest and to see that Left unity is preserved and strengthened. We also felt we should not allow the Congress(I) to gain from our predicament. But it was injustice and betrayal to deny us a role in this election. Premachandran had won from Kollam twice and is perhaps the only candidate who can attract both political and non-political votes in Kollam. Had the RSP fielded him as an independent, there were several people within the CPI(M) itself who would have voted for him." The CPI(M) nominee for the Kollam seat is former Cashew Development Corporation chairman P. Rajendran. He faces the Congress(I)'s M. P. Gangadharan, tainted by corruption charges during his tenure as PWD Minister.

Neighbouring Alappuzha and the northern constituency of Kannur are the cradles of the communist movement in Kerala, where the CPI(M) continues to have a dynamic presence. Yet by a curious quirk of politics, both these constituencies have been electing Congress(I) candidates in the past several elections. In Alappuzha, this was largely because of the personality of the Congress(I) candidate, former Assembly Speaker and Health Minister V. M. Sudheeran, who has as impeccable a reputation as A.K. Antony. Another reason was the deep divisions in the CPI(M), following the shocking defeat of Achuthanandan from the Mararikkulam Assembly constituency in the district in 1996.

In Kannur, where the CPI(M) has an even stronger presence, Congress(I) candidate Mullappally Ramachandran won for the fifth time in 1998. The constituency has a reputation for violent clashes between the cadres of the CPI(M) and the Congress(I) and also between the CPI(M) and the Rashtriya Swayamsevak Sangh (RSS). Mullappally's main rival for the past three elections was from the Congress(S), now part of Sharad Pawar's Nationalist Congress Party (NCP). In 1998, despite his growing unpopularity in the constituency, Congress(S) leader and Health Minister A. C. Shanmukhadas had lost only by 1,180 votes, riding on a wave of CPI(M) support. For several years now, demands had been aired that the CPI(M) should field its own candidate in Kannur if the LDF is to have a winning chance. Therefore the CPI(M) was firm that the Congress(S), which lost thrice in Kannur, should move over to Moovattupuzha. It was not a welcome suggestion for the NCP, as Moovattupuzha is Kerala Congress leader K.M. Mani's Christian fortress, where only his candidate P.C. Thomas wins elections for the UDF, always with a brute majority.

The NCP protested till the very end and threatened to withdraw from the LDF. But it yielded finally, possibly because it had no other option. Party State president Ramachandran Kadannappally told *Frontline*: "We resolved not to weaken the LDF by quitting the coalition."

In Kannur, the CPI(M) has fielded the president of the State unit of the Student's Federation of India, A. P. Abdullakkutty, against Mullappally and A. K. Antony has already set the trend for a virulent campaign by declaring that the Congress(I)'s fight in this election is as much a struggle against Hindutva as it is a battle against "the brand of political fascism being experimented by the CPI(M)". He has also demanded the deployment of more Central security forces in Kannur, expressing apprehensions about possible foul play and violence.

Till 1996, had a tradition of favouring the UDF in Parliament elections, even on occasions when it elected the LDF to power in the State. Of the 20 Lok Sabha seats, three are decided entirely on the basis of religion – Manjeri and Ponnani in Muslim-dominated Malappuram district favouring the Muslim League and Moovattupuzha favouring the Kerala Congress (Mani), both constituents of the UDF. In 1991 the UDF won 15 seats, but in 1996 it could manage only 10. In 1998 the UDF got 11 seats but its victory margin in five constituencies – Adoor, Mavelikkara, Idukki, Mukundapuram and Kannur – was extremely thin.

This time around, as the campaign began for the single-phase polling on September 11, the contest appears to be extremely close in at least nine constituencies. Manjeri, Ponnani and Moovattupuzha are sure to go the UDF way again. Of the remaining eight constituencies, the LDF has a definite advantage in five (Thiruvananthapuram, Chirayinkeezhu, Palakkad, Vadakara and Kasaragod) and the UDF in three.

WHAT would be the clincher for either Front? If there is one such factor, in all the constituencies which this correspondent visited, it appears to be the effectiveness of the election machinery of the two Fronts to convince the substantial minority population about their claims of being the most effective safeguard against the BJP. All over the State, CPI(M) and Congress(I) leaders are left to explain how they are really fighting the BJP, even though they are fighting each other in the State.

All the major political organisations which claim to represent Muslim and Christian sentiments have rallied behind the UDF. The Muslim League, despite its frequent appreciative glances towards the CPI(M), has decided to support the Congress(I), at least till this election is over. Both the Indian National League (INL) and the People's Democratic Party (PDP), formed on an anti-Congress(I), anti-Muslim League plank, have unilaterally declared support to the UDF. But there is a growing section among the large Muslim population in north Kerala constituencies which doubts the Congress claims of being their only saviour.

Among the Christian voters concentrated in the central Kerala constituencies, there are signs of a similar thinking slowly emerging. Significantly, for the first time, Catholic priests came under the banner of a Visaala Catholic Conference, to demand that the Congress(I) which banked on 80 per cent of the votes from the community, should provide more seats for Catholics, or else, face the consequences.

The tacit understanding that the Congress(I) is alleged to have with the BJP in many constituencies, especially Thiruvananthapuram and Mukundapuram, is likely to boomerang on it wherever it plays on minority sentiments *vis-a-vis* the BJP. Says Achuthanandan: "Sooner rather than later the realisation is bound to come that while Congress(I) candidates win elections, in many places with the support also of the BJP, and go to Parliament, it is the CPI(M) cadres that come to the rescue of the minorities in the State as elsewhere, whenever Hindutva forces tend to overplay their zealotry."

The Vadakara experiment of 1991, when the Congress(I), the Muslim League and the BJP joined hands to support an eminent lawyer M. Ratna Singh against the LDF candidate K. P. Unnikrishnan, predicted a 50,000 plus victory, and yet lost the election by 17,489 votes, is being kept alive in public memory by a hyperactive CPI(M) election machinery. ■

HARYANA

T K RAJALAKSHMI

DESPITE having only 10 Lok Sabha seats, Haryana a predominantly Jat State, has always attracted the attention of the Indian polity one way or the other As with other northern States politics in Haryana, where polling is scheduled to be held on September 5, is distinctly feudal, and is, to a large extent dominated by caste equations and money and muscle power In addition, the State has a tradition of backing one of three families at the political level – those of Devi Lal Bansi Lal and Bhajan Lal Lok Dal leader s son Om Prakash Chautala is the Chief Minister Haryana Vikas Party (HVP) leader Bansi Lal who has in recent months been reduced to a non entity in national politics is working towards ensuring the political survival of his son Surinder Singh in the September elections former Chief Minister Bhajan Lal of the Congress (I) nurtures an ambition to recapture the post (Two of Bhajan Lal's sons, members of the State Assembly, are likely to be his political heirs)

Since 1977 politics in Haryana has been characterised by caste polarisation between the Jats and the non-Jats, the former represented by Devi Lal and his progeny and the latter by Bhajan Lal, a Bishnoi Unlike the Jats in Rajasthan those in Haryana are not traditional Congress(I) supporters, they have always veered between the Lok Dal and the Congress(I)

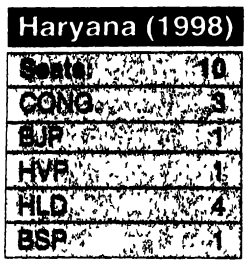
The toppling of the Bansi Lal government twice – once by its coalition partner the Bharatiya Janata Party (BJP) and later by the Congress(I) which after bailing out the Government, did a complete *volte face* in less than a month s time – could have an impact on the fortunes of all the contestants The actions of the two national parties – the BJP and the Congress(I) – paved the way for Indian National Lok Dal (INLD) leader Om Prakash Chautala, and the split in the HVP staking a successful claim to form the government (Recently, the breakaway faction of the HVP merged with the INLD)

However whether these events will have a tangible impact on Chautala s fortunes is not clear The battle for the 10 seats will primarily be between the Congress(I), which has the support of the secular parties, and the INLD-BJP combine The Bahujan Samaj Party (BSP) will contest three seats and may succeed in retaining its lone Ambala seat The Communist Party of India (Marxist) is contesting only from Bhiwani The party fielded candidates from Hissar in the last two elections but failed to win

In the previous Lok Sabha elections, the INLD which had an electoral alliance with the BSP, won four seats – Kurukshetra, Sonepat, Hissar and the reserved seat of Sirsa This time around, the INLD has struck an electoral alliance with the BJP The INLD-BJP alliance can be traced back to the four votes the INLD contributed in favour of the BJP during the vote on the confidence motion in Parliament in April this year The INLD and the BJP have put up five candidates each

The Congress(I) won three seats last time – in Rohtak Devi Lal was trounced for the third time by Bhupinder Singh Hooda the Pradesh Congress Committee (PCC) chief, in Karnal, Bhajan Lal won and in Mahendargarh, Rao Inderjit Singh emerged the winner This time the Congress(I) is contesting all the 10 seats

Observers believe that with the virtual decimation of the HVP Bansi Lal is concentrating on building the political future of his son and will therefore focus on only one seat The BSP has entered into a pact with the HVP, this will however be confined to extending its support in Bhiwani The BSP may also extend support to the Congress(I) in areas where the INLD-BJP alliance has a strong presence



RAJEE Bha...

Prime Minister Atal Behari Vajpayee with Haryana Chief Minister Om Prakash Chautala (left) and National Lok Dal candidate Sushil Kumar Indora (centre) at a rally in the Fatehabad constituency.

DIRECT contests will be witnessed in Rohtak, Hissar and Mahendargarh between the Congress(I) and the INLD-BJP combine Bhiwani will witness a keen contest with four main contestants in the fray The HVP has renominated Bansi Lal's son Surinder Singh Om Prakash Chautala's son Ajay Chautala, Dharamvir Singh, a former Congress(I) legislator, and

the CPI(M)'s Prabhat Singh are the other three contestants Dharamvir Singh, who defeated Bansi Lal in the 1987 Assembly elections, is perceived to be close to Bhajan Lal.

In the previous elections, it was widely rumoured that Bhajan Lal, who has a base in at least two of Bhiwani's Assembly segments, contributed to the votes of Ajay Chautala, the INLD candidate. Surinder Singh won by a very narrow margin due to the covert support extended by the Congress(I) to Ajay Chautala. This time around, despite the Congress(I) appearing to be a serious contender, the anti-incumbency sentiment against Surinder Singh, combined with the dwindling fortunes of his father Bansi Lal, may favour Ajay Chautala. During a brief conversation with this correspondent in Bhiwani, Om Prakash Chautala said that the INLD was very much a part of the National Democratic Alliance (NDA) and that all the 10 seats in the State would go the BJP-INLD combine.

The CPI(M), which has put up a feisty trade union leader, hopes to garner the support of the landless people, the workers' unions, as well as around a lakh brick kiln workers. Bhiwani has the largest number of brick kiln workers in the State.

At Rohtak, the Congress(I) candidate is Bhupinder Singh, a member of the dissolved House. The INLD chose to field a retired Army Captain, Inder Singh, who also happens to be related to Chautala, with an eye on the votes of the Army personnel from that area. At least three INLD aspirants are believed to be unhappy with this choice. The electorate here believes that the INLD has done little for this area.

The Congress(I)'s fortunes rate comparatively better in southern Haryana. This belt is dry and small land holdings characterise its agrarian topography. One major source of employment is the armed forces. A senior Congress(I) leader from Rohtak said that non-agriculturists would also vote for the party as a fear psychosis had set in among them following Chautala's installation as Chief Minister.

In Hissar, the Congress(I) has fielded Birender Singh former Haryana Pradesh Congress Committee (HPCC) president and grandson of the legendary Sir Chotu Ram. Birender Singh faces INLD's Surinder Singh Barwala, who held the seat. Birender Singh is regarded as a strong candidate and he is expected to benefit from the anti-Barwala sentiment.

In Mahendargarh too, the INLD-BJP has, with an eye on the "Army" votes, as it were, fielded Sudha Yadav, the widow of a BSF commandant. Sudha, who will contest on the BJP ticket, takes on Rao Inderjit Singh. The BSP too has fielded a candidate from here.

Sirsa may have witnessed a tough contest if former Congress(I) MP Kumari Selja had been fielded against Sushil Kumar Indora, who was the INLD MP. Selja has been roped in for work at the Centre, and the party has opted for a weaker candidate.

According to Bhupinder Singh Hooda's father Randhir Singh, a veteran parliamentarian and Congressman, the Congress(I) can, besides retaining its three seats, win Hissar, Faridabad, Ambala and Sonepat. At Faridabad, the BJP nominee, Ram Chander Bainda faces the Congress(I)'s Zakir Hussain, son of a Rajasthan Minister. Bainda is originally from Hissar; he defeated the Congress(I) nominee in the previous elections by 15,343 votes. The Congress(I) candidate apparently lost because of the presence of a rebel candidate, mining magnate Avtar Singh Bhadana.

Faridabad has a sizable Meo Muslim population and the Congress(I) hopes to get the secular votes from here *en bloc*, especially since there is no rebel candidate in sight. In Ambala, the BSP candidate, Aman Kumar Nagra, won by a fairly narrow margin of 2,884 votes the last time around. Nagra may retain his seat since the BJP candidate is a newcomer. However, the Congress(I)'s Phool Chand Mulana, a well-known former legislator, may still stand a chance.

In Sonepat, Kishan Singh Sangwan, who contested as an INLD candidate in the previous elections, is contesting on a BJP ticket this time. This has reportedly angered INLD and BJP party workers. The Congress(I) has fielded Chiranji Lal Sharma, a senior politician and a four-time MP from Karnal.

The Congress(I) has more or less given up on Sirsa, where Sushil Kumar Indora of the INLD has a good chance of retaining his seat.

In Karnal, where Bhajan Lal meets I.D. Swami of the BJP, observers predict a tough battle for the Congress strongman. In Kurukshetra, the Congress(I) has fielded former HVP leader O.P. Jindal against INLD's Kailasho Devi, who won by the largest margin in the State last time.

The issues that are being raised by the INLD-BJP include the BJP's handling of the Kargil crisis, Atal Behari Vajpayee's performance as Prime Minister, and Sonia Gandhi's foreign origin. The ground reality, according to observers, favours the BJP-INLD, although the aggressive mobilisation of Jat votes could turn away the other communities from this combine.

According to Balbir Singh Grewal, a former member of Devi Lal's government, not all Jats vote for the INLD. That is why even in Jat dominated areas, the father-son duo of Devi Lal and Om Prakash Chautala have suffered humiliating defeats. Grewal said that the BJP may have to face uncomfortable questions from the electorate as it was in an alliance with Bansi Lal's HVP for over three years. At Mahendargarh, the BJP State unit president Ram Vilas Sharma was reportedly heckled by the public when he went there with Chautala. There is no apparent wave in favour of the INLD-BJP combine.

At the local level, the populist efforts of the Chief Minister have not gone unnoticed. The renaming of Kurukshetra University as Guru Gobind Singh University with an eye on Jat-Sikh votes was one of the more blatant attempts at vote gathering. The Chief Minister has also promised to resolve the Sutlej-Yamuna Link canal issue with Punjab that has been hanging fire for 18 years.

So far, the Congress(I) has not put up as aggressive a campaign as the INLD-BJP. The Congress(I)'s major vote plank is stability. Observers feel that the party is reluctant to counter the Kargil issue since it does not want to be projected as being anti-national. The CPI(M) has been vociferous on the non-performance of the BJP-led government at the Centre, besides criticising the party's manifesto.

The rural electorate may not be impressed by attacks on Sonia Gandhi's foreign origins, and are most likely to vote on the basis of the performance, profile and caste of the candidate. The urban voters could tilt towards the BJP-INLD on the Kargil issue.

The final result will depend on how well the Congress(I) and other parties campaign. The BJP-INLD combine will attempt to distract the voters from real issues such as rising unemployment, stagnant irrigation and a rising crime graph. What could eventually go against this combine is the polarisation of the Jat and non-Jat votes. ■

Ready for revenue-sharing

AFTER the Delhi High Court allowed the conditional migration of private telecom operators to a revenue-sharing regime, almost all the licensees – both basic and cellular – paid up their outstanding licence fee dues and liquidated damages by the August 15 deadline, signalling their readiness to migrate. According to the Association of Basic Telecom Operators (ABTO), its six members together paid Rs.64 crores. Of this, over Rs.53 crores constituted liquidated damages to compensate for the delays and non-fulfilment of commitments made to the government at the time of the issue of licences and the rest towards 35 per cent of licence fee outstandings until July-end. Essar, which holds the licence for the Punjab circle, did not pay its licence fee dues owing to a dispute over the claim amount, but paid Rs.8 crores towards liquidated damages.

Of the 23 cellular operators, 20 paid a total of Rs.159 crores, of which liquidated damages accounted for Rs.60 crores. Essar Aircel Digilink, Koshika Telecom and JT Mobile Evergrowth had been disconnected by the Department of Telecommunications (DoT) for non-fulfilment of obligations and therefore did not receive the migration offer.

All the licensees will have to securitise their remaining licence fee dues in the form of bank guarantees by November 30.

In a three page interim order on August 11, Justice S.K. Mahajan of the Delhi High Court said that the court neither vindicated nor disapproved of the new policy. The court ruled that only those licensees who gave an undertaking to the Court on affidavit to migrate to the new regime as approved by DoT would be permitted to migrate. However, the migration would be subject to approval by the Council of Ministers of the new government or disapproval by the 13th Lok Sabha.

While both basic and cellular operators are believed to be ready with the undertakings since the court has stipulated no deadline for the submission of such undertakings, they have not yet submitted them. While the basic licensees are unanimous in their resolve to migrate to the new regime, there appears to be disagreement among the cellular operators.

Counsel for the licensees had stated in court that the undertakings would remain in operation until December 31, 1999, and this was acknowledged by the court. Therefore, the licensees claim that if the Lok Sabha does not disapprove of the policy by December 31, 1999, the new revenue-sharing regime will stay. C.V. Ramachandran of the Cellular Operators Association of India (COAI) said: "If the Lok Sabha disapproves or the next Council of Ministers does not approve of the New Telecom Policy by December 31, by default the new regime will continue." However, he added that Parliament had the prerogative to revoke it through a resolution even later. Ramachandran told *Frontline* that apart from individual undertakings given by its members, the COAI would give a collective undertaking to the effect that the migration would be subject to disapproval by the Lok Sabha.

Meanwhile, there is mounting apprehension in DoT circles about the revenue-sharing regime (*Frontline*, August 27). Informal sources point out that it would be impossible to monitor the revenues of private licensees, especially cellular licensees. Therefore they apprehend that DoT will not be able to realise its due share of revenues. Even licensees agree that it would be impossible to instal safeguards to ensure that operators pay up their fair share, but argue that in the larger interest of increasing teledensity, such lacunae should be overlooked. In their perception, the Government's myopic approach of viewing the telecommunications industry as a source of revenue has been instrumental in driving away investments. They claim that at least three multinational companies have withdrawn from India in the last two years. According to them, unless the New Telecom Policy is implemented in full earnest, reaching the target teledensity of seven per hundred will remain a pipe dream. ■

Sudha Mahalingam

Gaisal accident inquiry

THE preliminary inquiry into the Gaisal railway tragedy of August 1 has held a succession of errors by operating staff responsible for the collision between the Awadh Assam Express and the Brahmaputra Mail that claimed over 290 lives (*Frontline*, August 27). M. Mani, the Chief Commissioner of Railway Safety (CCRS), went back to the venue of the accident to complete his inquiry after the Assistant Station Master of Kishanganj, S.P. Chandra, was arrested at Katihar on August 10.

Missing since the day of the accident, Chandra has admitted to having sent the Awadh-Assam Express through on the "down line". In the normal course, a train moving in that direction would have been despatched on the "up line". Only one line was functional at Kishanganj station since track doubling work was in progress.This also meant that the fail-safe signalling system was suspended with traffic being regulated by manual controls. Apart from the signals, the "points" have to be set on the rails, allowing a train through along a continuous length of track.

It appears that on the night of the accident a goods train had preceded the Assam-Awadh Express by a few minutes. It had been allowed through on the down line, following which routine procedure demands that points on the track be switched back to the up line. Further permission to travel on the down line would be subject to the rules governing single-track operation in double-line sections – known as the "absolute block system". A train will simply not be cleared for travel between two successive stations without definitive confirmation that the line is clear of other traffic.

Chandra flagged on the Awadh-Assam Express from Kishanganj but failed to inform the railway operational staff at Gaisal that they had to confirm its arrival there before allowing any traffic in the opposite direction. He was supposedly proceeding on the basis of a rough calculation of how long it would take for the train to reach Gaisal. The CCRS has concluded that apart from Chandra's grievous error, there were departures from prescribed norms on the part of operational staff in Gaisal station too. And neither did the running crew of the two trains adhere to the rules of single-track operation in a double-track section, where strict speed limits and multiple verification of every signal are prescribed.

Mani's final conclusion is chastening. Rarely has the Indian Railways seen a systemic failure of this sort, with human agency at various levels compounding rather than correcting one another in error. Even as the Government has announced a judicial commission of inquiry headed by G.N. Ray, a former Judge of the Supreme Court, the CCRS has urged a rigorous investigation of the possibility of outside involvement, including background checks on all the personnel involved in operational duties on the fateful night. ■

Sukumar Muralidharan

Honour for M.S. Swaminathan

MUCH of Asia's growth since the 1960s is rooted in agriculture and farm research, and considerable credit for this goes to Dr. Monkombu Sambasivan Swaminathan, the internationally acclaimed farm scientist. The scientific leader of the Green Revolution in India, Dr. Swaminathan, 74, is the only living Indian to be included in *Time* magazine's (August 23-30) list of one hundred most influential Asians of the 20th century. (*Time* carries features on Jawaharlal Nehru, Mahatma Gandhi and Rabindranath Tagore and briefly mentions contributions of a few other Indians – Indira Gandhi, Satyajit Ray, Vinobha Bhave, Maharaja Hari Singh, Kamal Hassan, Sonia Gandhi, Maharishi Mahesh Yogi and Satya Sai Baba.)

A geneticist trained in the Netherlands, the United Kingdom and the United States, Dr. Swaminathan developed in the 1960s with his colleagues at the Indian Agricultural Research Institute (IARI) in Delhi a wheat strain that disproved the Malthusian prophecy of an imminent tragedy because of food production not keeping pace with population growth. According to *Time*, the miracle wheat seed, and similar rice strains developed at the International Rice Research Institute in the Philippines, saved millions from famine.

After a Ph.D from Cambridge University and post-doctoral research work at Wisconsin University, Dr. Swaminathan returned to India in 1954. With a conviction that he "had to serve the nation" – a lesson perhaps learnt from his father who participated in the freedom struggle – Dr. Swaminathan worked in the laboratories of the Central Rice Research Institute, Cuttack, and the IARI for 18 years, and became Director-General of the Indian Council for Agricultural Research (ICAR) in 1972.

With India living ship-to-mouth on U.S. foodgrains, Dr. Swaminathan, with help from the Rockefeller Foundation, brought from Mexico a cross-bred (between Japanese and Mexican) wheat seed developed by farm scientist and Nobel Laureate Norman Borlaug, and married it to an Indian wheat variety to produce a golden-coloured strain much favoured in India. This breakthrough set the pace for the Green Revolution and paved the way for the Asian farm miracle of the 1970s and the 1980s.

Besides setting up 2,000 demonstration farms, Dr.Swaminathan, who was given a free hand by Indira Gandhi to organise a new agricultural programme for India, also took up the onerous task of convincing Indian farmers, steeped in traditional methods, to use the new seeds. Once farmers were convinced, there was no looking back. Today, India produces 70 million tonnes of wheat a year compared to 12 million tonnes in the 1960s no mean achievement. In fact, Asian countries have become net exporters of foodgrains, from being net importers.

A quintessential researcher, Dr. Swaminathan, after retiring as Director-General of the IRRI, Manila, set up a pioneering farm research institute in Chennai in July 1988 that aims at "reaching the unreached". Called the M.S. Swaminathan Research Foundation (MSSRF), the institute is a non-profit, non-political trust, which is committed to harnessing science and technology for environmentally sustainable and socially equitable development.

The MSSRF has been nurtured as much by Dr. Swaminathan's commitment as by prize money – from the World Food Prize (1987), the Tyler Prize (1991), the Honda Prize (1992), the UNEP-Sasakawa Environment Prize (1994) and the Blue Planet Prize (1996) – he and his Foundation have received since 1987. Even before 1987, he had donated to various international institutes all the prize money he received. For instance, he gave away the $20,000 that came with the Albert Einstein World Science Award to the University of Philippines in 1986 to set up an Environment Chair.

Dr. Swaminathan has always been ahead of his time. While it is only recently that biotechnology, ecotechnology and eco-friendly farm methods are being pursued vigorously, he has been identifying, spreading awareness of, and helping farmers adopt these methods for the past decade and a half.

About his achievements, Dr. Swaminathan said in his usual modest manner: "All that was needed for this effort was the inspiration, perspiration and luck of the numerous farm scientists and farmers whom I have worked with."

Dr. Swaminathan's contribution to Indian agriculture is something that, as *Time* quotes him, "changed our history" and will remain etched in the history of development of Asia, and indeed, of the world. ■

Asha Krishnakumar

Mounting quake toll

A LITTLE less than a week after a devastating earthquake struck Turkey on August 17, relief officials said that more than 12,000 bodies had been recovered, and a United Nations relief official estimated that the final death toll may reach 40,000. More than 33,000 people were injured, and at least 200,000 are homeless (see story on page 61). Minister of Housing Koray Aydin estimated that 60,000 buildings had been either destroyed or seriously damaged.

Soldiers were on the streets of many devastated towns, collecting refuse, keeping spectators away from dangerous sites, spraying disinfectants and spreading lime along gutters. Military trucks and jeeps moved through streets alongside power shovels, bulldozers and other heavy equipment.

Prime Minister Bulent Ecevit fired the Governors of Yalova, Kocaeli and Sakarya, three of the hardest-hit provinces. He said that they had proved unable to meet the challenges posed by the disaster, and replaced them temporarily with members of his Cabinet. Many people remained angry, however, not only at Ecevit but at the entire state apparatus. They accuse the Government of failing to grasp the magnitude of the crisis for days and then responding too slowly. ■

New York Times Service

How do you compute tax on your total income?

Part-I

By a panel of experts

There is no need for you as an individual, to take recourse to a tax consultant merely for the purpose of calculating the tax payable and filing your returns. You would do better if, instead, you utilise the consultant's expertise to obtain advice to design an investment strategy that maximises your take-home-a strategy based on your own risk taking capacity and your need for liquidity.

But, to most taxpayers, working out the amount of tax payable seems a complicated exercise requiring the attention of a chartered accountant – until you learn the simple algorithm of computing the tax payable.

So how do you go about it all by yourself? To begin with, all that you have to do is take your bank passbook and classify your incomes under the heads given below. Then, understand the provisions and follow the steps given under each head.

1. Salaries

This is the simplest to handle. The salary and taxable perquisites are chargeable to tax. Standard deduction is allowed @33.33% of the salary with a ceiling of Rs. 25,000 for those having salary upto Rs. 1 lakh, 20,000 for those with a salary between Rs. 1 lakh and 5 lakhs and nil for those with a salary higher than Rs. 5 lakhs.

Over and above this, professional tax paid, if any is deductible. This tax varies from state to state.

2. Income from House Property

The owner of a house property, inclusive of the land attached, is taxed on the 'annual value' of the property. If the assessee has only one property where he is residing, the annual value is nil. If he has taken a loan to buy this property from some permitted sources, the interest is deductible with a ceiling of Rs. 30,000 and the capital attracts rebate u/s 88. If you have more than one property, go to a consultant. Where there are additional properties or the property is let out, there is no ceiling on the interest deductible.

3. Capital Gains

Long-term capital gains are treated as a separate block and charged to tax at the flat rate of 20%, irrespective of the size of the gains. Even this cost can be saved by investing the net sale proceeds in avenues covered by Sec. 54EA with a lock-in of 3 years or the capital gains in avenues covered by Sec. 54EB with a lock-in of 7 years.

Short-term capital gains are added to the normal income.

4. Income from Other Sources

This consists of all the other investment avenues such as banks, post offices, Co-FDs, bonds of financial institutions such as ICICI, IDBI, etc.

5. Exemptions and Deductions

Dividend from shares is now exempt. So, ignore it while computing 'Gross Total Income'.

Add the incomes from the four heads above and from the total, subtract the deductions available under Sections 80L, 80D, 80G, etc., to arrive at 'Total Income'. Refer to the previous articles for details.

6. Income Tax Rates

Now, compute the tax payable by applying the following rates :

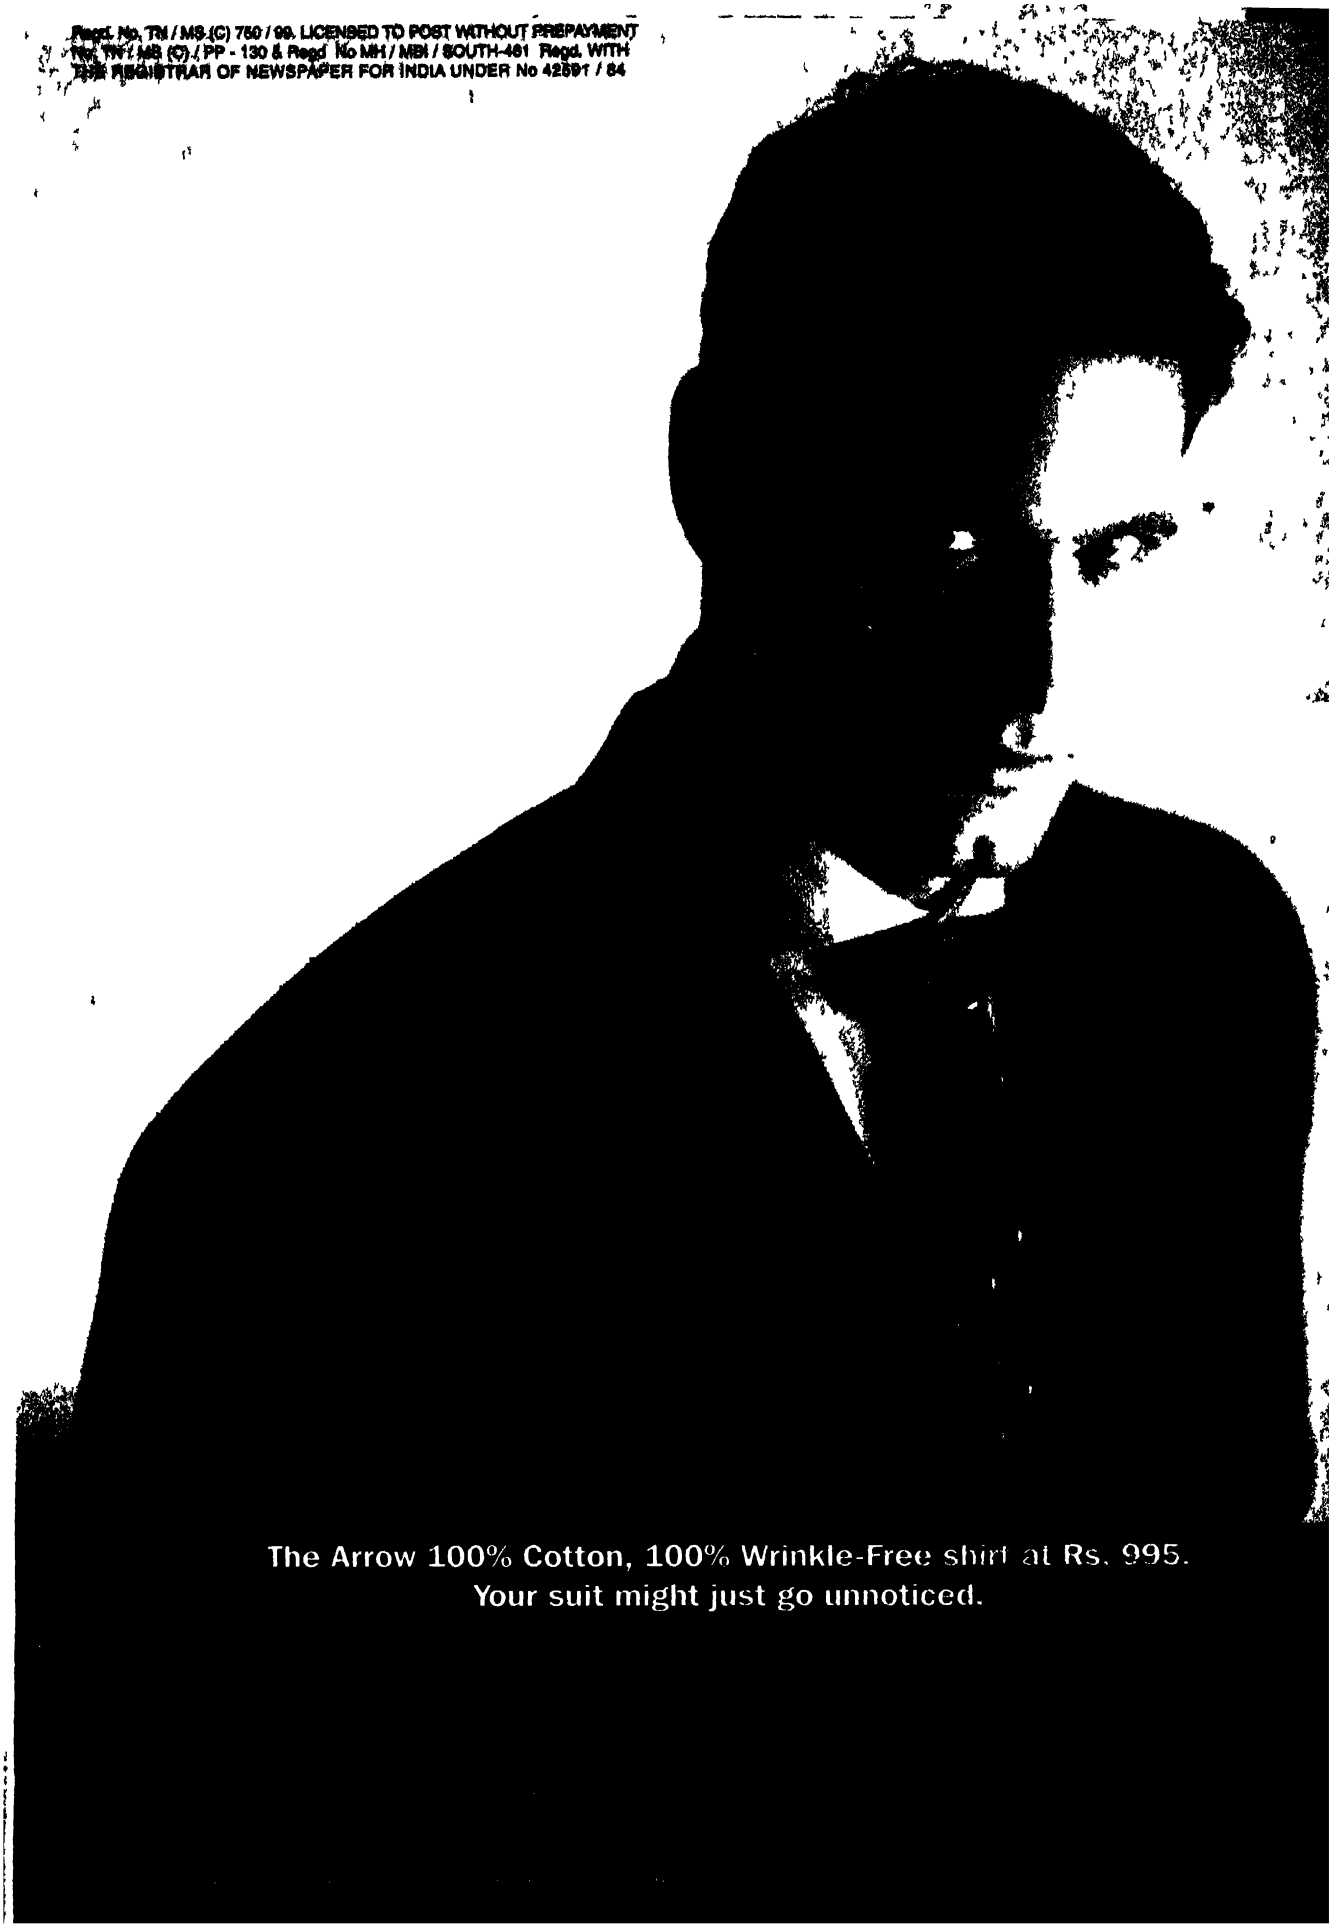
7. Tax Rebates

From the tax arrived at as per the above formula, you are allowed to subtract 20% of the contributions made by you in instruments qualified under Sec. 88 such as PPF, LIC, ULIP and NSC VIII.

For infrastructure-related instruments, a higher limit of Rs. 70,000 (in place of Rs. 60,000) is available for the qualifying investment..

Amongst the avenues under Section 88, PPF was the leader of the pack until the infrastructure-related instruments like the Tax Saving Bonds of ICICI and IDBI with lock-ins of only 3 years comes into the arena.

Then again under Section 88B, all senior citizens can claim a tax rebate up to Rs. 10,000, irrespective of the size of the income. If your 65th birthday falls within the relevant financial year, you get the title of 'senior citizen' for the year and all subsequent years.



8. Agricultural Income

The general perception is that this income is tax-free. It is not. The income is required to be clubbed with others for the computation of tax purposes.

Do you find all this complicated? Well, an illustrative example next week will show you how easy it is.

Petroleum Company in the world.

In just 35 years.

The spirit of IndianOil
actually began in 1959.
The people in Indian
Refineries Ltd. took on the challenge to create independence from
Oil multinationals. The people of Indian Oil Company joined this
crusade in 1959. They came together, on 1st September, 1964, to build
Indian Oil Corporation Ltd.

The battle against the Oil MNCs was won long back. As
we step into the next millennium, IndianOil is already the
largest business enterprise in India. The 16th largest
Petroleum Company in the world. The only PSU to feature
in the top 5 ranks of the Most Respected Companies in India. The only
Indian name in Fortune Magazine listing of Global 500 mega-corporations.

A long distance by any standards, for an Indian Corporate, in 35 years.

The road ahead. A vision to become a major diversified, transnational,
integrated energy company, with national leadership and a strong
environment consciousness, playing a pivotal role in oil security & public
distribution.

We were India through war and peace, oil shocks and market challenges.
We bring the same force of belief to whatever needs to be done. Fast.
Right. And with commitment and innovation.

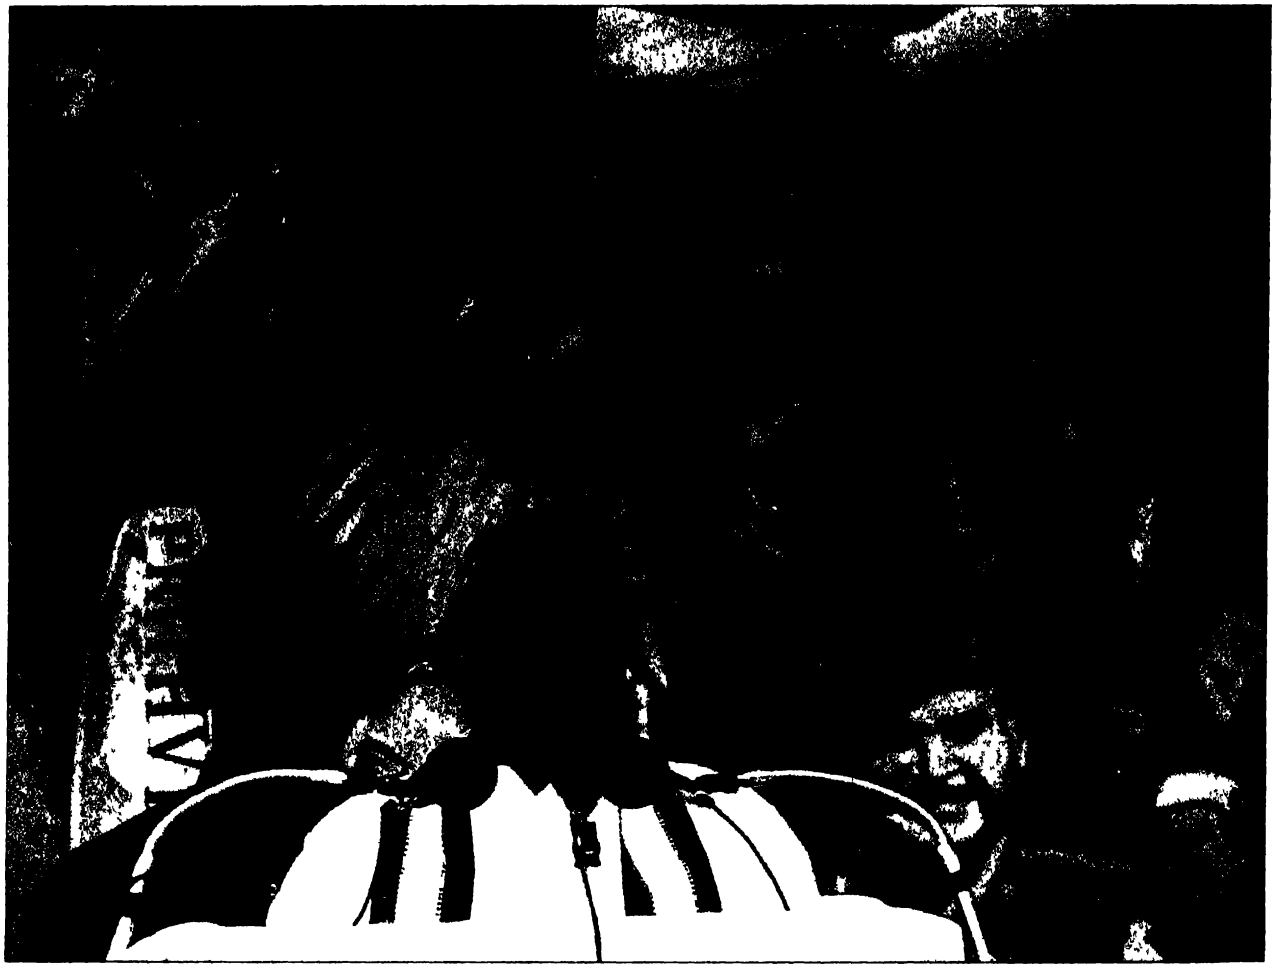
A KARGIL ELECTION?



There is a 'Kargil inflation' in the BJP-led alliance's prospects in the ongoing national elections. Although a 'Kargil deflation' also seems logical and inevitable, it is impossible to predict the timing of its onset and its effects.

SUKUMAR MURALIDHARAN
in New Delhi

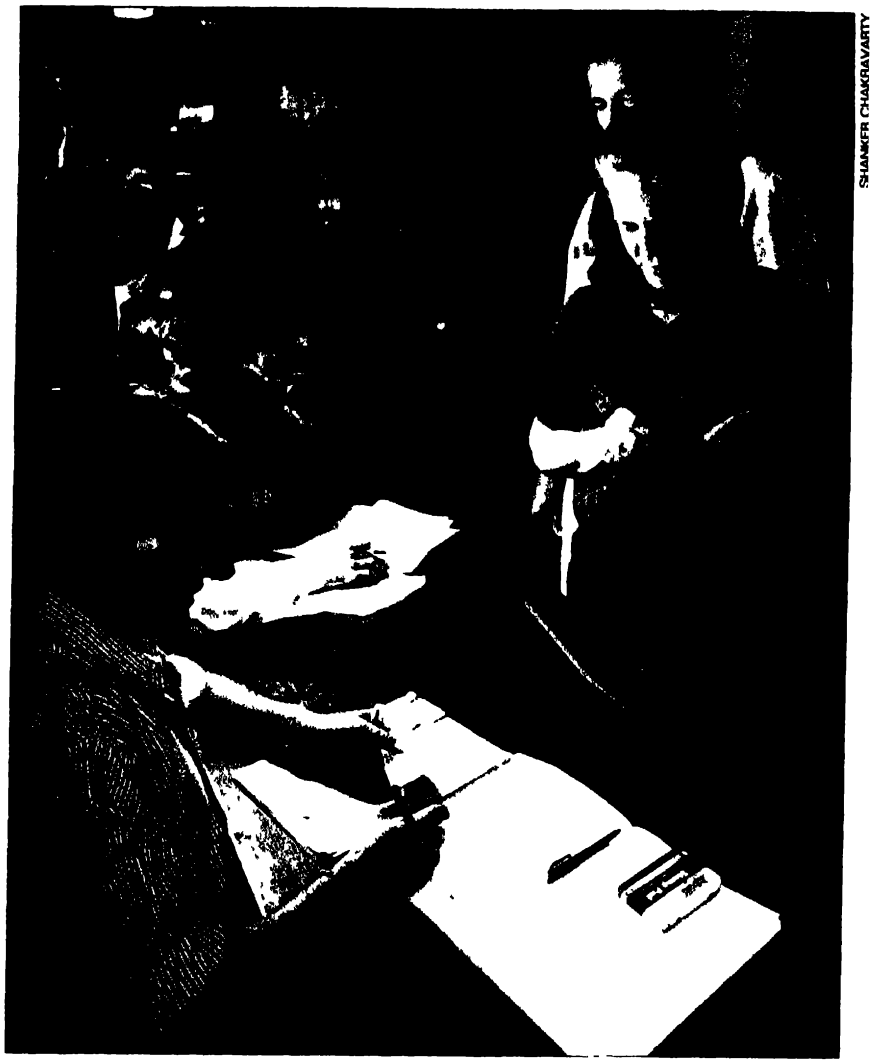
IF democracy involves a continual process of learning through experience, the interregnum between the dissolution of the 13th Lok Sabha and the election of the next one has presented the country with a new spectacle – of a government devoid of a real democratic mandate winning popular endorsement through the prosecution of war. The heights of Kargil were the arena where a government's tattered image was dramatically refurbished, where a party that had little going for it except an affected sense of grievance over the premature termination of its effort at governance regained a measure of popular legitimacy.

National elections were notified literally on the day Pakistani forces began an ignominious retreat from Kargil. By then, Prime Minister Atal Behari Vajpayee seemed to have put the disorientation and uncertainty of an entire year behind him and to emerge as a national leader by popular acclaim. The euphoria of military victory had decisively snuffed out the transient promise of an election that would not be unduly influenced by extraneous factors.

The Kargil factor is today unmistakably at work across the country. At most it may be moderated or mediated by other localised factors in some areas or States to a greater or lesser degree in its effect on the

BJP leader and Prime Minister Atal Behari Vajpayee addressing an election rally in Karnal, Haryana, in August. The assorted backdrop, which features the national flag, the Prithvi missile, the three Service chiefs, and so on, was seen to reflect crude attempts to capitalise on the Kargil developments.

elections.



Premature declarations of electoral victory can always be hazardous when they are premised upon a phenomenon as fickle as public euphoria. The results of opinion polls, again, have often proven themselves rather remote from the actual shape of the popular will that emerges from the exercise of the franchise. There are inherent sources of error, especially in a survey of political intentions conducted over a month before they are actually sealed in the ballot boxes.

Further, ground realities as gauged by most observers do not quite square with the picture derived from opinion polls. A micro-examination by States and then further by constituencies would reveal a political picture of mixed fortunes that does not really add up to the kind of sweeping mandate forecast by the polls.

Yet for all that, there is a certain "law of large numbers" which seems to indicate that in the aggregate, opinion polls conducted with an adequate degree of attention to detail would produce results in which the errors neutralise rather than compound each other. The only problem with this generalisation in the current context is that the Kargil factor has uniformly tended to boost perceptions of the BJP-led alliance across the country. Any dilution of the influence of this factor over the month of polling would again have an uneven effect, depending on the quirks of the electoral schedule. But a general deflation in the BJP-led alliance's fortunes cannot be ruled out. What is apparent today in the opinion polls is the "Kargil inflation" in the BJP-led alliance's prospects. Although a "Kargil deflation" seems inevitable on current reckoning, it is impossible to predict the precise timing of its onset and subsequent course.

If the deflation does indeed set in, it would exert an influence in the States where polling is scheduled for the latter half of the election schedule. These include Uttar Pradesh and Bihar (September 18 and 25 and October 3), and Madhya Pradesh (September 11, 18 and 25) – three States of the Hindi belt where the BJP-led alliance has substantial stakes. Moreover, in the largest of these, Uttar Pradesh, the BJP faces the incumbency disadvantage at the State level. Having won 57 of the 85 seats at stake in U.P., the party may have nowhere to go but down.

YET it seems the undeniable reality today that the National Democratic Alliance (NDA) led by the BJP will have

V SUDERSHAN

Flanked by other leaders of the National Democratic Alliance, Atal Behari Vajpayee releases the NDA manifesto in New Delhi.

S GOPAKUMAR

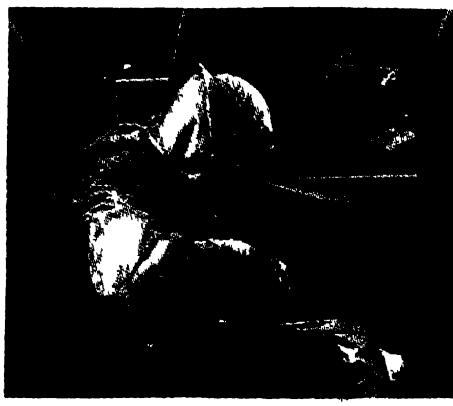
In Thiruvananthapuram, a BJP hoarding celebrates "Rakshabandhan Mahotsav", a novel event in the southern State, and claims credit for the Kargil victory. An election meeting of the Left Democratic Front is in progress in the foreground.

the first claim on the formation of the next government The magnitude of its putative victory could still be debated till the actual counting ends And there could be further inconclusive discussions over how secure the parliamentary position of the NDA would be, about how vulnerable the prospective new government of Atal Behari Vajpayee would be to multiple pressure groups within its ranks Jayalalitha has opted out, but a fresh prospect of internal schisms looms in the shape of the newly consolidated "socialist bloc" led by George Fernandes

The closest analogue to the current electoral situation would be from the United Kingdom immediately after it waged a successful military campaign to regain the Falkland Islands from Argentina in 1982 Margaret Thatcher, the Conservative Party Prime Minister, stood at the nadir of her public approval in early 1982 Her right-wing economic policies had plunged the U K into the depths of recession, and public disenchantment was mounting Falklands provided her with the possibility of redemption, and general elections called in its immediate wake gave her a comfortably enhanced majority Subsequent developments at the global level – notably the inauguration of a similar regime of right-wing economic policies in the

The steering committee of the United Front meets in 1997.

United States, the collapse of international commodity prices and the subjugation of Third World economies through the instrument of debt – endowed her with greater political durability



For these diverse reasons, the Falklands war is recognised today as a turning point in modern British history Yet to say that Kargil is a similarly decisive moment for India may strain credulity For one, though Vajpayee and his External Affairs Minister Jaswant Singh have worked with great ardour towards evolving a special relationship with the U S , there is little evidence yet to suggest a durable shift in U S strategic perceptions in the region For another, the Indian economy confronts a multitude of vulnerabilities, which are not likely to be mitigated in the prevalent global environment Further still the Indian political scene, though seemingly settling down to a comfortable state of bipolarity, will not remain quiescent for long

THE disappearance of the Third Force, which stood at the core of two efforts at coalition government over the last decade, has seemingly simplified the electoral contest this time around Only certain elements of this once formidable force – such as Mulayam Singh Yadav s Samajwadi Party (see interview) and G K Moopanar s Tamil Maanila Congress – today insist on maintaining a degree of autonomy from the two main forces They have been joined by Sharad Pawar's breakaway faction of the Congress(I), the Nationalist Congress Party As always, Kanshi Ram's Bahujan Samaj Party (BSP) stays resolutely outside all groupings at the national level

Indications are that even if all these forces were to put their parliamentary resources together, they would be no more than a marginal force in the 14th Lok Sabha Their relevance would be premised on an indecisive outcome, in which case they would all be more inclined towards the Congress(I) than the BJP-led alliance In an oppositional role they could, in league with the Congress(I), exert a gravitational pull on the erstwhile participants of Third Force politics who are now reluctant allies of the BJP

AN aspect that needs to be factored into the calculation is the level of comfort that the Congress(I) would enjoy in an oppositional role For the first nine months of the Vajpayee government's tenure, the Congress(I) seemed reconciled to its status as the main Opposition party, constructively utilising the ample opportunities afforded by the BJP s maladroit style of governance to consolidate its own position The results of this approach were apparent in the outcome of the Assembly elections held in two northern States and Delhi in November 1998 An opinion poll conducted soon afterwards showed that at that juncture the Congress(I) was in a position to win a comfortable national majority if elections to Parliament were held then

But at the threshold of national revival, the Congress(I) fumbled It

encouraged All India Anna Dravida Munnetra Kazhagam leader Jayalalitha to pull out of the BJP-led coalition in the evident belief that an alternative government could be formed out of the incoherent arithmetic of the 13th Lok Sabha. The Congress(I) then proceeded to undermine the remote possibility of such an alternative through an adamant insistence on single-party governance, a failure to accommodate diversity and a relapse into an attitude of dynastic absolutism.

After she cemented her authority with the Assembly elections of 1998, Congress(I) president Sonia Gandhi suffered a severe setback when her rather brash claim that she would conjure up a parliamentary majority within days was proved hollow. A willingness to negotiate terms of political engagement with the numerous parties that had a direct stake in forming an alternative government may have paid off. But the Congress(I) brushed aside all such initiatives, demanding unconditional support for a single-party government.

The Left parties had proved relatively amenable to a single-party government but later sought in vain to persuade the Congress(I) to agree to some form of a power-sharing arrangement with the recalcitrants, such as Mulayam Singh Yadav. Underlying the Congress(I)'s arrogance was the belief that even in the event of fresh general elections, it could carry the momentum of November 1998 into a vastly improved performance. What it failed to factor into the calculation were a virtual revolt within its own ranks, and the outbreak of hostilities on the frontier.

VINO JOHN

At a polling booth in Tindivanam, Tamil Nadu, on September 5.

Much of the petulance the Congress(I) has shown in dealing with the Kargil situation can be directly ascribed to the dawning perception that it missed out on a historic opportunity in April. Although there has been much criticism of the failure of the government to act in time on the basis of intelligence available to it early enough and the actual conduct of the military operations in Kargil, there is little question that any government in authority would have followed very much the tack that the Vajpayee Ministry adopted once the intrusions from Pakistan were discovered. Rather than being at the receiving end of the "Kargil inflation", the Congress(I) might well have been its beneficiary.

Far from holding the initiative now, the Congress(I) has been reduced to searching for the electoral advantages that contingent local circumstances may afford. It is uneasily aware that accretions to its strength would be likely to come from the diminishing electoral base of the Third Force, rather than at the cost of its principal adversary.

A certain mood of involution is apparent in the leadership as a consequence of the multiple sources of vulnerability that the Congress(I) faces. Sonia Gandhi's candidacy, which should have been a strong assertion of leadership, was transformed under the guidance of the insecure coterie that surrounds her into a furtive effort to preempt the possibility of a

strong nominee from the adversary camp. And the elaborate norms that had been worked out by an intra-party committee on ethics were thrown overboard in the distribution of the party ticket.

The conspicuous sense of disdain that Congress(I) campaigners have since expressed for the concept of coalition politics does little to promote public confidence in the political sagacity of the party's leadership. Absent is a strategic sense, a willingness to reconstruct the social and political coalitions that underpinned the Congress(I)'s pretence of single-party governance. Far from being a monolith, in its dynamic phases the Congress(I) was always an amalgam of several political factions. Its decline began from the time it failed to adapt to changing social realities, to broaden the compass of its policies to accommodate the diversity of aspirations that had been thrown up since the 1970s.

The alternative strategy was for the Congress(I) to dig itself deeper into the borough of dynastic legitimacy. But since the time of Rajiv Gandhi, dynasty within the Congress(I) has only been as good as its functional results. Its principal merit was that behind the facade of a nationally recognised leader, it provided the space for a variety of factional bonds to be cemented. These faction leaders were in turn given their due in terms of authority and opportunities for the dispensation of patronage. But to aspire for a position of absolute authority even in a limited domain, as Sharad Pawar did in Maharashtra, was strictly impermissible. Any such effort would call forth reprisals from the supreme leader, leading to another phase of factional instability.

Where a genuine effort to evolve a collective leadership might have contained the chronic malaise of factional instability, the Congress(I) relapsed further into the caprices of dynastic and coterie politics. Today it seems to provide a superficial assurance that it will constitute one of the stable poles of Indian politics in a bipolar contest with the BJP. But just as the BJP-led alliance could fray on account of the conflict between the compulsions of pragmatism and the hardline ideological agenda of its principal constituent, the Congress(I) too could enter a phase of turbulence and possible schism soon after the election results come in. If Indian politics seems today to be settling into a bipolar framework, this can only be construed as a transient phenomenon. The variety of political forces that today contend for influence clearly cannot be accommodated within these constrictions. ■

Peaceful first phase

V. VENKATESAN

THE first phase of voting in the general elections, on September 5 in 16 States, the National Capital Territory of Delhi and five Union Territories, was largely peaceful. An average voter turnout of 55 per cent was recorded in this phase, which covered 145 Lok Sabha and 343 Assembly constituencies. Nearly 25 million voters used electronic voting machines (EVMs), which performed without any glitches. In some constituencies where EVMs were used, a higher turnout of voters was noticed.

There were at least two isolated incidents of violence. In Cuddapah district of Andhra Pradesh, five persons, including a polling agent of the ruling Telugu Desam Party, died. Four deaths resulted from police firing on supporters of the TDP and the Congress(I) as they threw bombs at each other in the Badvel Assembly constituency. The polling agent was killed in a bomb attack in the Kamlapuram Assembly segment.

In Amritsar, Punjab, a Congress(I) polling agent died in "clashes" between the supporters of the Congress(I) and the ruling Shiromani Akali Dal. Two minor incidents were reported from Faridkot and Ferozepur districts of the State.

Chief Election Commissioner M.S. Gill expressed satisfaction with the first phase of polling. The Statewise polling percentages are: Andhra Pradesh 65; Goa 45; Gujarat 40; Haryana 62; Karnataka 63 (65 in Bellary); Maharashtra 60; Punjab, Rajasthan, and Tamil Nadu 55; Delhi 47; Andaman and Nicobar Islands 53; Chandigarh 54; Dadra and Nagar Haveli 51; Daman 70 and Pondicherry 60.

In Jammu and Kashmir, the turnout was 15 per cent in Srinagar, one of two constituencies that went to the polls. In Ladakh, comprising Leh and Kargil districts, the turnout was 70 per cent. At least five persons were injured when the guards of a leader of the ruling National Conference opened fire at Kandoora in Badgam district, which forms part of the Srinagar constituency. Stray incidents of clashes were reported from sensitive Srinagar localities.

M.S. Gill said that political parties ought to read the signals coming from the high and the low voter turnout. Each of the two major parties, the Bharatiya Janata Party and the Congress(I), has interpreted the turnout to mean an electoral victory for it. BJP general secretary K.N. Govindacharya said that his party expected to win more than 100 of the seats that went to the polls in the first phase. Govindacharya smugly declared that the BJP candidate in Bellary, Sushma Swaraj, would win by a margin of over one lakh votes against Congress(I) president Sonia Gandhi. BJP spokesperson Arun Jaitley viewed the huge voter turnout in Karnataka, Andhra Pradesh and Tamil Nadu, States that have witnessed political realignments since the last elections, as a vote in favour of the BJP.

Congress(I) spokesperson Kapil Sibal, on the other hand, said that Sonia Gandhi would trounce the BJP candidate in Bellary by an "overwhelming" margin. He claimed that there was a "huge wave" in favour of the party and against the "khichri" rule of the BJP-led alliance.

The first phase was not without its aberrations: Election Commissioner G.V.G. Krishnamurthy found to his dismay that his name was missing in the voters' list. He cast his vote when his name was later discovered against his previous residential address. This lapse raised questions about the effectiveness of the time-consuming exercise of electoral roll revision undertaken by the E.C.

SINCE M.S.Gill assumed office as CEC, he has been introducing the use of EVMs in a phased manner. The EVMs were tried on a limited scale in the 1998 Lok Sabha elections and then in the Assembly elections later that year. In the first phase of polling, voters of 21 constituencies, including the seven constituencies in Delhi, cast their votes through the EVMs.

The photo identity card for voters, introduced by the former CEC, T.N.Seshan, has proved of limited value. There were many instances in Delhi in which genuine voters carrying photo identity cards had to forgo their franchise, as their names did not find a place in the voters' list. ■

The unaligned players

How crucial a role will the handful of parties that are currently unaligned or conditionally aligned with either of the two major political formations come to play in forging a new balance of parliamentary arithmetic post-election? A survey of the scene.

SUKUMAR MURALIDHARAN

IN the whirl of Indian politics, alliances come in several forms and shapes. Unconditional exchange of vows pledging two parties to support and nourish each other irrespective of all else are obviously a rarity. Purely contingent agreements on sharing seats, of one party transferring its political constituency's vote for the purpose of augmenting another's elected representation in Parliament, are rather more frequent. These can come with a variety of conditions attached on the relations between the two parties after elections are concluded.

The National Democratic Alliance (NDA) led by the Bharatiya Janata Party presents a multitude of such scenarios. It includes a number of parties that are unconditionally aligned with the BJP's quest to lead the next government at the Centre. At the same time, there are a number of parties that are conditionally aligned, which would sustain their support subject to certain vital interests being addressed and met. Ranking among the foremost of the conditional allies are Mamata Banerjee's Trinamul Congress, N. Chandrababu Naidu's Telugu Desam Party and Om Prakash Chautala's Indian National Lok Dal.

Chandrababu Naidu and Chautala are newly arrived in the BJP's political constellation. Both have strong – and realisable – ambitions in the regional political context. Moreover, they have the kind of support base and resources to compel the BJP to accept a subordinate role in their respective States. Mamata Banerjee too is the senior partner in the West Bengal context, though her ambitions of displacing the ruling Left Front look nowhere near fruition. And though all three are conditionally aligned with the NDA, their ability to work towards the fulfilment of State-specific interests would seem somewhat disparate.

The Biju Janata Dal and the Janata Dal(United) have similarly strong regional interests underpinning their alliance with the BJP at the national level. The J.D.(U) in Karnataka, a splinter of the party ruling the State today, seeks a junior role in a future government led by the BJP. In Bihar, where Assembly elections are due in the next few months, it will presumably like to reverse the order of precedence, gaining for itself the larger share of seats in an electoral arrangement with the BJP. The future of the J.D.(U)'s alliance with the BJP would depend upon how far these two scenarios are fulfilled. Since all the top leaders of the J.D.(U) are practised hands in the art of political schisms, this must seem one of the most vulnerable flanks in the NDA.

The BJD in Orissa is yet an untested entity, with its leader by dynastic inheritance, Navin Patnaik, being a novice in politics. Here too the test of the alliance will come in the next few months when Assembly elections are held.

The conditionally aligned parties within the BJP camp would, of course, enjoy only as much leeway as their numbers permit. The current round of elections in Bihar and Orissa would afford the test for any future agreements on seat sharing at the State level. Should discord arise at any stage, they are unlikely to switch allegiance to the opposite camp, since for most of them the Congress(I) represents a traditional adversary. Rather, the unaligned parties, although their number is shrinking, are likely to play a mediatory role in forging a new balance of parliamentary arithmetic.

NO more than four of the unaligned parties seem on current reckoning to have any chance of influencing the course of political events in the months to come. Mulayam Singh Yadav's Samajwadi Party is, for obvious reasons, the most weighty among these. Mulayam Singh draws his sustenance almost entirely from Uttar Pradesh, where he obtained a substantial 28 per cent of the vote share in the 1998 general elections. He is threatened now by a desertion of Muslim voters to a Congress party trying hard to reinvent itself in the State. But he is likely to dispose of the greater resources at the grassroots and capitalise on the Congress(I)'s obvious lack of credible candidates. Having begun his poll preparations early, Mulayam Singh stands a reasonable chance of retaining his strength of 20 in the Lok Sabha. That could make him the most substantial of the unaligned group.

Sharad Pawar's Nationalist Congress Party is fighting hard to harness the anti-incumbency factor in its favour. On current reckoning, the going appears tough for him. The traditional Congress(I) vote appears to have split almost evenly in Maharashtra, leaving the BJP-Shiv Sena alliance the winner by a large margin of the popular vote. But the stakes in overturning the discredited saffron alliance are strong and if Pawar is able to deploy his formidable political skills appropriately, he could benefit from a late surge.

G.K. Moopanar's Tamil Maanila Congress is fighting what appears a symbolic battle against the communalism of the BJP and the corruption of Jayalalitha. The personal prestige of some of its leaders may win it a handful of seats. But it would need a substantial bloc of unaligned parties in Parliament to team up with if it is to exert any leverage.

The Bahujan Samaj Party, led by Kanshi Ram and Mayawati, is another party that has raised the symbolic battle to the level of fine art. It commands a substantial 20 per cent share of the popular vote in Uttar Pradesh and is not a trivial player in Madhya Pradesh and Punjab. But its representation in Parliament has never been proportionate to its popular vote share and it remains averse to any kind of alliance that may dilute its unique political identity.

In the most generous reckoning, the unaligned parties are unlikely to get much more than 7 per cent or so of the seats in Parliament. That would make them not quite a substantial force in the immediate post-electoral context. But as and when the potential sources of discord within the NDA begin to multiply, their role could become more significant. ■

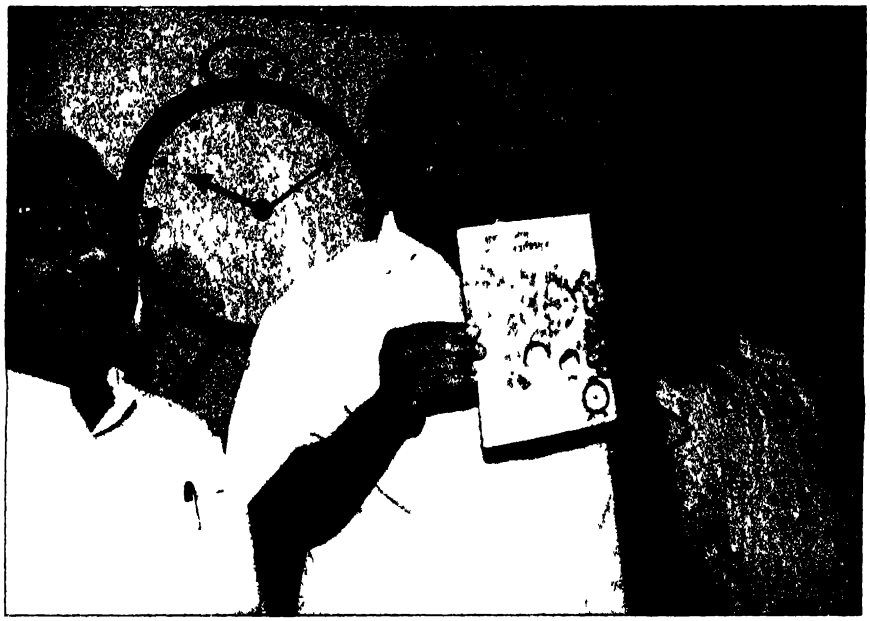
Battle for survival

The future of the Nationalist Congress Party hinges crucially on its electoral performance this time in Maharashtra, the home State of its leader Sharad Pawar.

LYLA BAVADAM
in Mumbai



FOR the first time in democratic India, all the major political parties have begun to acknowledge the inevitability of coalition governance at the Centre. It is this factor that gives some hope to the newly formed Nationalist Congress Party (NCP). The party's survival is by and large linked to its showing in Maharashtra in the Lok Sabha elections. Sharad Pawar, its leader and former Union Defence Minister is playing a high stakes political game.

Of Maharashtra's 48 Lok Sabha seats, the NCP will contest 39 and support the Peasants and Workers Party (PWP) in one. It has offered eight seats to its partners in alliance collectively called the Progressive Democratic Front (PDF), who include the two factions of the Republican Party of India (RPI), the Janata Dal (U), the Samajwadi Party (S.P.) and Sharad Joshi's Swatantra Bharat Party.

Pawar is a shrewd politician, but this time he faces serious disadvantages. First, he lacks the organisational infrastructure of his rivals. Second, in order to build his party he had to attract influential Congressmen, but very little time was available for him to do this – hardly two months, between the formation of the NCP and the beginning of the election campaigns. And third, compared to its opponents in the State, the NCP is strapped for cash.

Despite these shortcomings, Pawar asserts that he will win a majority of seats in the State. Relying on his 32 years' experience in public life, vast rural support base and tremendous grasp of issues pertaining to the State, Pawar hopes to capitalise on the voters' disillusionment with the four-and-a-half-year-old Shiv Sena-Bharatiya Janata Party rule, marked by scandals and corruption charges.

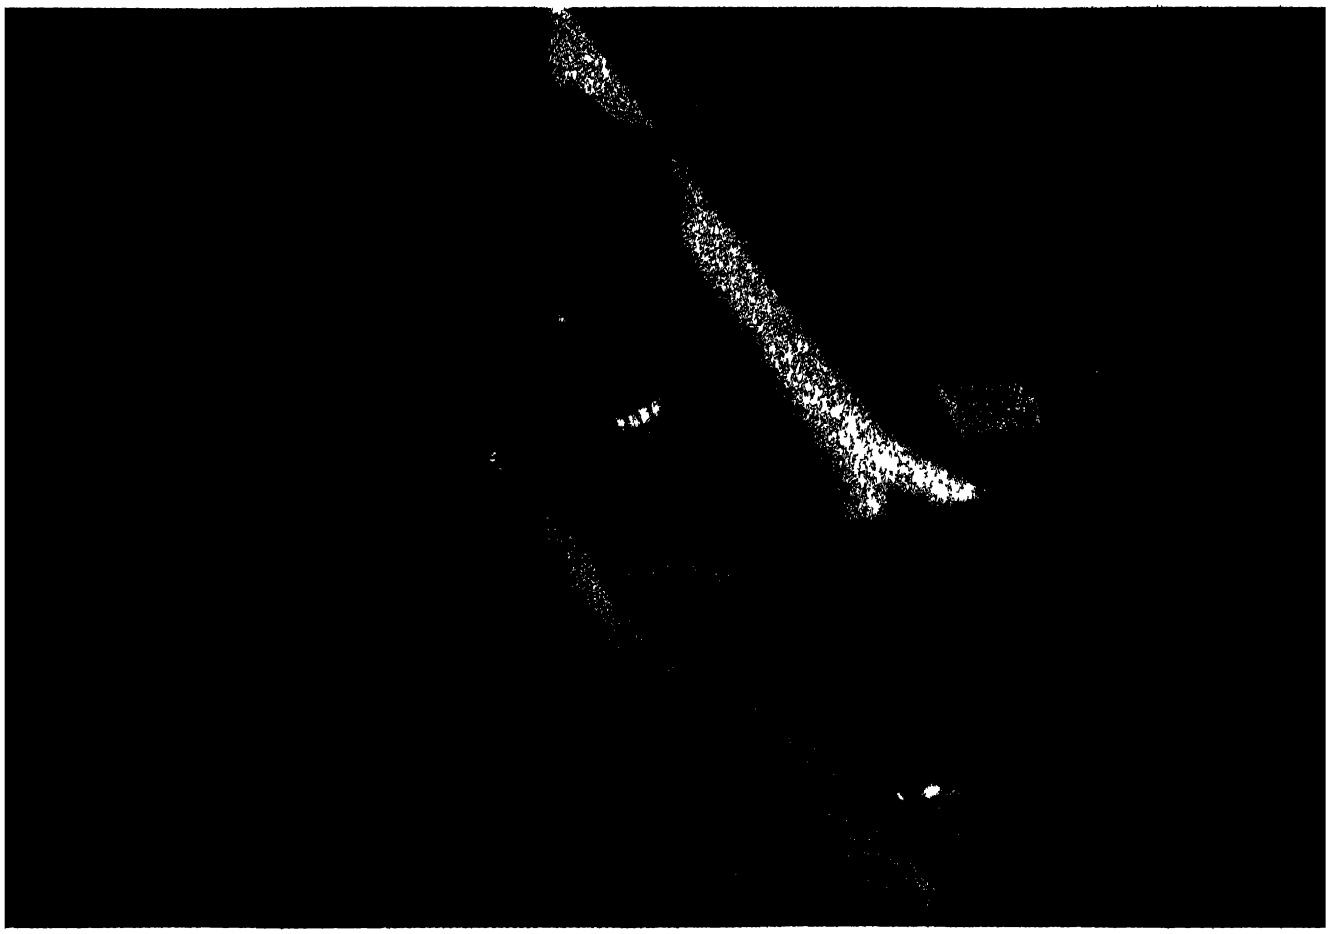
The saffron combine relies largely on the division of votes between the Congress(I) and the NCP. It also hopes to cash in on Prime Minsier Atal Behari Vajpayee's public meetings in the State. As a BJP source admits, "Atalji's public meetings here are very important to us."

Nationalist Congress Party leader Sharad Pawar releases his party's manifesto in Mumbai on August 28. Former Lok Sabha Speaker and NCP leader P.A. Sangma is to his left.

Both the NCP and the Shiv Sena-BJP do not consider the Congress(I) a formidable opponent because of its weak local leadership. A source in the NCP said: "In the 1998 Lok Sabha elections in Maharashtra, 44 per cent of the vote went to the Congress(I). After splitting away from the Congress, we expect to get at least 22 per cent of that share. The Shiv Sena-BJP had 42 per cent of the vote at that time. This time the NCP will take away about 15 per cent of that vote. Plus we will get 4 per cent of the vote through the RPI. Our tally thus comes to 41 per cent. The coalition government's tally drops to 35 per cent." Thus the fight in Maharashtra is between the Shiv Sena-BJP and the NCP and its allies, the NCP leader argues.

Pawar's power in the State was amply demonstrated in the 1998 Lok Sabha elections when the Congress(I) and its allies won 37 of the 48 seats, compared to the 15 seats it had won in 1996.

Pawar himself attributes the 1998 victory to "the hatred that the people had developed for the Shiv Sena and BJP" as well as to the popular acceptance of the alliance between the Congress(I), the RPI and the S.P.



Immediately after forming the NCP, Pawar set about roping in Congress(I) members. Fifteen MPs (14 from the Congress(I) and one from the RPI) of the dissolved Lok Sabha joined Pawar right away. This gave the NCP an edge.

Maharashtra has six district regions – western Maharashtra, north Maharashtra, Marathwada, Vidarbha, Konkan and Mumbai. The highest number of Lok Sabha seats, 12, are in western Maharashtra, which has the rich and powerful sugar cooperatives that have traditionally supported the Congress. In fact, this is the only region where the NCP is engaged in a clear tug-of-war with the Congress(I). In an effort to consolidate his party's position, Pawar won over four of the 11 Congress(I) MPs from here. In the constituencies of the remaining seven, including Baramati which is Pawar's constituency, the NCP has a strong winning chance, except perhaps in Karad.

'No support for Sonia or BJP'

In the first 12 days of his election campaign in Maharashtra, Sharad Pawar, leader of the Nationalist Congress Party (NCP), toured more than 200 villages and towns by helicopter. His speeches dealt with Sonia Gandhi's foreign origin or, as he punned in his speech, the *videshi haath* (foreign hand); the failure of the BJP-led government to detect the infiltration in Kargil early; the price rise; and the plight of farmers and Dalits under saffron rule in Maharashtra. Pawar's public meetings attracted only fair-sized crowds but this veteran of 32 years of public life remained unfazed: "It's not the size but the response that matters". Pawar spoke to **Lyla Bavadam** about the NCP's prospects:

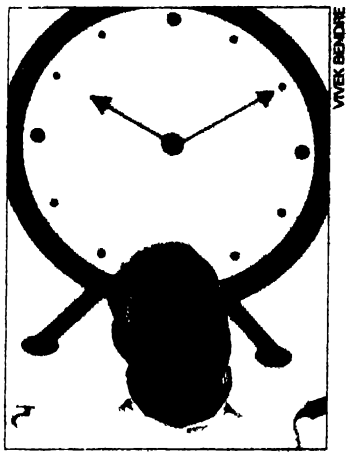
▶ *What is your assessment of the post-election prospects of the parties other than the Congress(I) and the BJP-led alliance?*

It is too early to say. But I can say that we are not going to associate with the BJP and we are not going to support or associate with Sonia Gandhi. One has to see if there is any other alternative.

▶ *Which un-aligned parties will be important at the national level after the elections?*

Unless and until one knows about the strength, this has no meaning. For instance, in 1996 the Janata Dal had some 40 MPs. In 1998, the Janata Dal had six MPs. So the party might be important but ultimately its performance in the election is most important.

▶ *How would you rate the Bahujan Samaj Party(BSP), for instance?*



A: I don't think it will improve its position. In the last Parliament, it stood sixth or fifth in terms of numbers. It will be somewhere near that.

▶ *How will the BJP's alliance with the Telugu Desam party of N. Chandrababu Naidu work out in Andhra Pradesh?*

There are two problems that the TDP will face if it is going to associate itself with the BJP. First, the State has a substantial population of minorities, especially in Telengana. Secondly, in the election process the People's War Group plays an important role. These two sections will never support anybody who hobnobs with the BJP. So that might affect him. People say that the BJP has 16 per cent of the vote, and if that information is correct, then that 16 per cent can change the entire position.

Have you made any specific plans if the polls are indecisive? The NCP will be in great demand in a situation like that.

Let us see. Two things are clear. No Sonia. No BJP. We will be happy to sit in the Opposition.

▶ *Sonia Gandhi has often said that the interests of the country are dear to her. Will she agree not to take up the prime ministership in national interest?*

If the people are not ready to accept (her), what can she do? If other parties are not ready to support... at least Mulayam Singh and I are clear that we will not support...

▶ *Do you think the Congress(I) will be willing to sacrifice Sonia Gandhi if the NCP helps it form the government?*

The Congress will do anything. I know that a sizable section in the Congress does not want Sonia as Prime Minister.

▶ *Why did they not come with you?*

They had no courage, and secondly anyone who is interested in entering Parliament has to see how they will be able to do so. I have to accept and admit one thing. I have not created that kind of strength in a number of States as yet where I will be able to bring someone into Parliament. My organisational set-up is not yet built up. It's only a few months since the NCP was started on June 10. It has not been possible for me to build up the party in different States and that is why people stay away. If they want to contest elections, they would prefer a safer party. A number of people have expressed their views, that they are not happy with Sonia Gandhi, that they are waiting for the appropriate time...

▶ *Have any Congress members in Maharashtra indicated that they will shift to the NCP if you prove stronger?*

In Maharashtra there is a sharp division and a bitter fight.

▶ *Whom would you find acceptable in the Congress as a prime ministerial candidate?*

Why should we disclose that at this juncture? First of all, why should we accept anyone from the Congress? Why should they not accept our candidate?

▶ *You wish to be Prime Minister?*

I will not get 270 seats... Let us see what happens. If a person like Sonia Gandhi expects to be Prime Minister after 13 months of experience in public life... at least I have been getting elected continuously for 32 years.

▶ *In the 1998 Lok Sabha elections in Maharashtra you were largely responsible for the Congress(I) doing much better than it did in 1996. Do you think you can work the same magic for the NCP?*

We will get a majority in the State... 30 to 35 seats in the Lok Sabha. There is of course the problem of money. The Shiv Sena-BJP and the Congress have access to lots of money. We have no money but we've got the people. Our workers plead with us. They say, "Saheb, just hold one sabha". The people are determined to defeat the Sena-BJP. This factor and our alliance will get us victory.

▶ *Are you isolated in politics right now? You had earlier said that everyone was gunning for you. At public meetings leaders as diverse as Pramod Mahajan, Sonia Gandhi and Bal Thackeray have had something to say about you.*

I'm not isolated. On the contrary, I seem to be in a good position if they are all talking about me.

▶ *Is the NCP isolated in terms of money power, organisational abilities?*

Monetarily, yes. We are a very young party.

▶ *Which are the large interest groups interested in supporting the NCP?*

The farming community, the middle class and Dalits.

▶ *Corporate support?*

Not so much. I have a personal relationship with many corporate houses but we've been continuously asking them to help. The 1995 elections, then 1996, then 1998, now 1999... one feels ashamed even to ask.

Have you got any assurance this time from corporate houses?

By and large, yes.

North Maharashtra has six Lok Sabha seats, of which the Congress(I) won five last time. The region has three reserved constituencies. Two Congress(I) MPs form this region joined Pawar's party. While Dhule, Nasik and Malegaon (where the Janata Dal (U) has a strong candidate) are safe constituencies for the NCP, the party will face a tough fight in Nandurbar, Jalgaon and Erandol where the fight is between the BJP and the Congress(I).

Marathwada has eight Lok Sabha seats, of which the Congress(I) won six and the BJP two in the last elections. Pawar won over the Congress(I) MPs from Hingoli and Parbhani. The NCP appears to be strong in Beed and Jalna, where the BJP member in the dissolved Lok Sabha, who has not been renominated, is believed to be working against the party candidate. The NCP appears to be weak in Nanded, Aurangabad, Latur and Osmanabad. The Latur seat has consistently gone to the Congress candidate and former Speaker of the Lok Sabha Shivraj Patil. His devoted following is referred to as MaMuLi, an acronym for "Marwaris, Muslims and Lingayats".

Marathwada is crucial to Pawar. With its large Dalit and tribal populations, the region has been a centre of social turmoil for decades. In 1996, the Congress(I) lost almost all of Marathwada but regained most of the region in 1998. The Shiv Sena, which had grabbed four seats in 1996, is unlikely to repeat that perfomance. Pawar claims that Shiv Sena "shakhas are being closed and their boys are joining the NCP. They are very disillusioned." The Renapur Assembly constituency in Beed district has evoked special interest since Deputy Chief Minister Gopinath Munde of the BJP is in the fray here. Munde has a large following among his Vanjara tribe but alleged acts of high-handedness by the members of his family during Shiv Sena-BJP rule could work in favour of the NCP candidate, Radhakrishna Patil, who was a member of the last Lok Sabha.

On September 4, Munde's brother Pandit Anna Pandurang Munde was stabbed by a group of 50 men allegedly belonging to the Congress(I) and the NCP. His attackers alleged that Munde's brother, while campaigning, had been announcing to the crowds that the local NCP and Congress(I) candidates had withdrawn their candidature.

While touring Beed, Pawar was greeted by ecstatic party workers who assured him that Munde's chances were damaged by his brother's behaviour. Party workers said that Munde was "so worried about his chances here that he is not leaving his constituency". Munde got Vajpayee and Pramod Mahajan to address public meetings in Renapur. While Vajpayee addressed one meeting, Mahajan addressed some half a dozen. Former BJP MLA Vimal Mundada has shifted to the NCP. Mundada had for long complained of being sidelined by Munde.

Vidarbha, which has 11 Lok Sabha seats, has had a record of being politically volatile. In 1998 the Congress(I) won all the seats here; whereas its 1996 tally was just two. The 1998 victory was largely because of the alliance with the RPI. This time the RPI is fractured; two factions are with the Congress(I) and two with the NCP. Pawar has achieved some success here by winning over the Congress(I) members of the last Lok Sabha from Bhandara and Wardha. The Congress(I)'s morale, however, received a boost because of the alliance with the Prakash Ambedkar and R.S. Gavai factions of the RPI. Ambedkar's

NCP general secretary P.A. Sangma at a party convention in Guwahati.

'Every alliance will undergo changes'

KALYAN CHAUDHURI

GENERAL SECRETARY of the Nationalist Congress Party, P.A. Sangma, believes that none of the major political formations – the BJP-led National Democratic Alliance (NDA), the Congress(I) and its allies, or the NCP and its partners – will remain intact after the outcome of the Lok Sabha elections are known.

Speaking to *Frontline* in Calcutta, Sangma predicted a hung Parliament, a situation in which the NCP would play a crucial role. He said: "Every alliance will undergo changes after the elections. In the post-election scenario, all political parties will witness a realignment at the national level. A hung Parliament will follow a fractured mandate whereby the Sharad Pawar-led NCP will play a crucial role." Sangma ruled out any alliance between the NCP and the NDA.

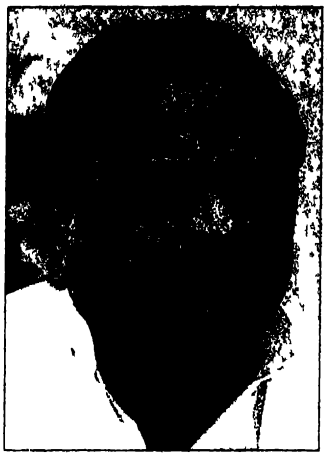
Sangma, a former Lok Sabha Speaker and once the most prominent Congress(I) leader from among the northeastern States, rejected the possibility of the NCP returning to the Congress(I) under Sonia Gandhi. He predicted a split in the Congress(I) after what he described would be its worst-ever drubbing in the Lok Sabha elections. This would lead to an intra-party revolt and there would be a demand for a change of leadership, he said, and added that such a change would help the Congress(I) mend fences with the NCP. The BJP and the Congress(I) were fighting the polls on non-issues, he said. "One of them is busy projecting Vajpayee and the other Sonia Gandhi."

Following Sangma's appreciation of Trinamul Congress leader Mamata Banerjee for her "cautious role *vis-a-vis* the BJP-led NDA", there was speculation in West Bengal that the NCP might join forces with her. Sangma said that Mamata had kept her options open by not joining the NDA. Sangma appears to be not averse to closer ties with the Trinamul Congress if the NCP gets an opportunity to play a crucial role after the elections. ■

group is strong in Akola, Washim and Mumbai, while Gavai is strong in Amravati. The RPI faction led by Ramdas Athavale, which is an NCP ally, has support all over Maharashtra While it is difficult to be specific about Athavale's areas of influence, the merger of the Khobragade faction with the Athavale faction has improved the prospects of Pawar's alliance in Marathwada and Vidarbha.

There has been considerable shuffling of seats between parties and candidates in Vidarbha The Congress(I) member in the dissolved Lok Sabha from Bhandara Praful Patel, contests on the NCP ticket this time from Chimur, where he is pitted against Joginder Kavade of the RPI faction that has allied itself with the Congress(I). Kavade represented Chimur in the previous Lok Sabha The Congress(I) has put up Dr. Shrikant Jhichkar against the NCP's Jagdish Nimbathe in Bhandara. The relatively unknown Nimbathe is expected to benefit from Praful Patel's campaigning In Washim, former Chief Minister Sudhakkarrao Naik, who has joined the NCP, will campaign for the NCP candidate, Javed Khan. The NCP is expected to win a big chunk of Muslim vote as well as the Banjara (Naik's community) vote. There is considerable uncertainty in the Ramtek constituency since all the candidates are new.

The NCP is strong in Yavatmal, where it has fielded former BJP MP Rajabhau Thakre Thakre lost in 1998 to the Congress(I) by less than 60,000 votes.



The coastal Konkan region, which has five seats, is the chink in the Congress(I) armour In 1998 the party got just one seat in the region. Pawar admits that the region has been neglected. In the Kulaba constituency, the PDF will support the Peasants and Workers Party candidate, Ramshet Thakur, who is expected to retain his seat. Janata Dal (S) stalwart Madhu Dandavate, who contests from Rajapur, the southern-most constituency in the State, faces Suresh Prabhu, Shiv Sena member in the last Lok Sabha.

Mumbai, a Shiv Sena bastion, has six seats. In 1996 the Congress(I) did not win any seats, but in 1998 it won three with the help of its allies. The NCP and its allies contest all seats in Mumbai.

Although Pawar has consistently ruled out any alliance with the BJP, it is believed that the BJP had considered a mutually beneficial alliance with the NCP in the State. Such an alliance would have benefited the BJP, which has lost considerable strength especially in Mumbai, because of the strong-arm tactics and corrupt ways of the Shiv Sena. ■

Anti-Congress, anti-BJP mood

Samajwadi Party (S.P.) president **Mulayam Singh Yadav** has been on the campaign trail for the past one and a half months, mostly in Uttar Pradesh where his party contests 83 of the 85 Lok Sabha seats. He has also made trips to Maharashtra, Rajasthan, Madhya Pradesh and Gujarat where the S.P. has fielded candidates. When **Venkitesh Ramakrishnan** met him in Delhi for an interview, Mulayam Singh Yadav was upbeat, obviously undeterred by reports of erosion of the S.P.'s support base, especially among the minorities. Excerpts:

AKHILESH KUMAR

▶ *Whatever happened to your efforts to form a third front as an alternative to both the Congress(I) and the BJP?*

We have forged an alliance in Maharashtra with the Nationalist Congress Party, the Republican Party of India (Athawale), the Peasants and Workers Party and the Janata Dal (Secular) led by Deve Gowda. In Uttar Pradesh too the NCP and the Samajwadi Janata Party (SJP) led by former Prime Minister Chandra Shekhar are with us. In Gujarat and Rajasthan we have an understanding with the NCP and other like-minded parties. In States where we do not have formal tie-ups because of seat allocation problems, forces opposed to the Congress(I) and the BJP are rallying around the most influential alternative in each constituency. This varies from State to State, sometimes from constituency to constituency.

▶ *But such alliances seem too weak to make any real impact on the electoral outcome.*

The fundamental problem with many of our non-Congress(I), non-BJP friends is that they have lost confidence in themselves. They have failed to read the anti-Congress(I), anti-BJP mood among dominant sections. I am sure, they will realise the situation once the election results come out.

▶ *Many of them, including your former allies such as the CPI(M), see the BJP as the main enemy now.*

That is their perception. The S.P. has its own perception of the national situation. As far as I am concerned there is no doubt that parties such as the CPI(M) have made a grievous error in assessing the situation. I am sure they will correct their mistake in course of time.

▶ *But you had said earlier that the days of 'anti-Congressism' are over. That was one of the premises on which the S.P. and the Rashtriya Janata Dal (RJD) formed the Rashtriya Loktantrik Morcha.*

At that time we wanted to oust the Vajpayee government and put an end to the Sangh Parivar's communal and fascist rule. We were ready to give the Congress(I), the largest Opposition party, an opportunity to lead this fight. However, the Congress(I) failed miserably in fulfilling this responsibility. Instead, it competed with the BJP in asserting its commitment to Hindutva. Even the Congress Working Committee passed a resolution to underline this point. After all this, Congress(I) leaders are trying to be votaries of protecting the minorities. They are trying to teach us the values of secularism. Nothing could be more ridiculous than this.

▶ *The general impression is that this time the fight is essentially between the Congress(I) and the BJP in a majority of States.*

Some sections of the media do not tire of converting India into a bipolar political society. But India is too pluralistic socially and politically to submit totally to the fascist-communal agenda of the BJP or the dynastic rule of the Congress(I). Remember the 1991 elections? Then too the Third Front was written off and said to be non-existent. But in the round of polls held before the unfortunate assassination of Rajiv Gandhi, it was the Third Front parties that claimed the majority of seats. ■

Conditional allegiance

KALYAN CHAUDHURI
in Calcutta

MAMATA BANERJEE, the founder of the Trinamul Congress, says she is happy with the performance of the Bharatiya Janata Party-led coalition government and expects it to return to power. She told *Frontline* that the Trinamul Congress wanted a "friendly" government at the Centre which would honour the Bengal Package the Vajpayee government had announced, investigate economic "irregularities" committed by the Left Front Government in West Bengal and send Central teams to oversee the law and order situation in the State. She said: "The Trinamul will forge ties with whichever party is ready to fight the Communist Party of India (Marxist). The removal of the CPI(M)-led government in West Bengal is our ultimate aim. To fulfil this objective, the Trinamul will join the government at the Centre if it is headed by Atal Behari Vajpayee."

Mamata Banerjee said that her party had declined to join the government in 1998 because it had sought the people's mandate only to provide external support to the government. In this election, she said, the party sought a mandate to join the government. Although the manifesto of the Trinamul Congress promises a stable government under Vajpayee's leadership, it does not seek to bring in legislation that will ensure a full term for a government, as suggested by other National Democratic Alliance (NDA) partners.

She reiterated that the BJP was not "untouchable"; however, she pointed out that her party had not entered an alliance with it but had merely made seat adjustments. "Some say that the BJP is a communal party that demolished the Babri Masjid. When the Election Commission has recognised the party and the people have voted for it, how can it be untouchable? If the BJP is guilty of demolishing the Babri Masjid, so is the Congress, for at that time the Narasimha Rao Government was in power at the Centre. The Left parties cannot afford to call the BJP communal since in 1989 they had joined hands with it against the Congress," she said. She believes that the minorities are not worried about their security under a Vajpayee-led government because there were no communal riots during its 13-month tenure.

The manifesto of the Trinamul Congress has praised Vajpayee for the way in which he handled the BJP's alliance partners and ran the government. However, it is silent on Sonia Gandhi's foreign origin, a key issue in the NDA campaign. Mamata Banerjee said: "To keep the issue out of our manifesto is our party's decision and one should not read too much into it. Our decision is final. Even in the event of a hung Parliament, Trinamul will not desert the BJP and join any other political formation that may require our support to form a government." ■

Coming closer to the BJP

DASU KESAVA RAO
in Hyderabad

THE Telugu Desam Party is going to the polls again with the Bharatiya Janata Party as an alliance partner after the gap of a decade. The two parties and the Communist Party of India and the Communist Party of India (Marxist) fought against the Congress(I) in the 1984 Lok Sabha elections and in the 1985 and 1989 Assembly elections in Andhra Pradesh.

After the demolition of the Babri mosque on December 6, 1992, the TDP distanced itself from the BJP and moved closer to the Left parties. However, with the [illegible] United Front [illegible] the formation of which [illegible] Chief Minister N. [illegible] and [illegible] [illegible] ment that was formed after the 1998 elections. BJP leaders acknowledge his gesture with gratitude. Critical of the TDP's stance, the Left parties parted ways with it.

The Congress(I) and the Left parties condemned the TDP's *volte-face* as opportunistic and as damaging to the secular fabric of the nation. Chandrababu Naidu, however, explained that the collapse of the United Front had narrowed his choice to either the Congress(I) or the BJP. As the TDP was fighting on an anti-Congress plank, he moved to the BJP. He believed that if the Congress(I) came to power at the Centre, it would quash the pitch for his [illegible] in Andhra Pradesh.

[illegible] TDP claimed that by [illegible] Atal Behari Vajpayee [illegible] the coordination panel [illegible] and its allies, their party had refused to dilute its commitment to secularism. For the same reason, they say, the TDP still does not want to join the BJP-led National Democratic Alliance (NDA), or a government it may form.

What then will be the TDP's role if the elections yield a hung Parliament? In the first place, TDP insiders discount the possibility of a hung Lok Sabha; they insist that Vajpayee will be re-elected Prime Minister with a bigger mandate. The TDP will continue to extend issue-based and conditional support to his Government without prejudice to its commitment to secularism and the welfare of minorities. According to party leaders, the close presence of a strong secular party, like the TDP would help checkmate any BJP plans to revive the Hindutva agenda.

Chandrababu Naidu and Vajpayee, who shared platforms in Hyderabad, Bhimavaram and Bellary, heaped praise on each other. ■

A strategy against communalism

The Left parties share varying perceptions about the political approach to be adopted *vis-a-vis* the Congress(I) in the current context. However, in view of the need to mobilise democratic and secular forces against the BJP and its communal agenda, they have evolved State-specific electoral tactics.

VENKITESH RAMAKRISHNAN
in New Delhi

THE four main Left parties – the Communist Party of India (Marxist), the Communist Party of India, the Revolutionary Socialist Party and the Forward Bloc – face the September-October elections on the basic premise that their representation in the 13th Lok Sabha has to be increased. This, in their view, is essential to advance "the struggle against the reactionary communal forces represented by the Bharatiya Janata Party and the struggle for alternative policies in government". These parties expect that elections will throw up a hung Parliament, and in such a situation having a significant strength in Parliament is crucial.

In order to enhance their parliamentary strength, the Left parties have to improve their position not only in States such as West Bengal, Kerala and Tripura, where they already have a strong base and are in power, but in other areas, where they have no strong moorings of their own. It is in this context that the need to strike alliances with other secular and democratic parties has been emphasised. In the opinion of Left leaders this kind of cooperation and mobilisation of secular and democratic forces will lead to the evolution of another Third Front, which will present a path of governance that is fundamentally different from the course followed by the Congress(I) and the BJP.

However, even while sharing this general perception, the Left parties disagree on how to achieve the electoral objective. The CPI(M) and the CPI have underlined that all efforts must now be concentrated on preventing the BJP from returning to power through the National Democratic Alliance (NDA) which it leads. They consider this their paramount responsibility because the Hindu Right represented by the BJP has marked tremendous growth in recent years. The CPI(M) argues that the central task having been identified, it will be detrimental to take a position of equidistance from the BJP and the Congress(I) as advocated by the Samajwadi Party (S.P.) of Mulayam Singh Yadav and the Nationalist Congress Party (NCP) led by Sharad Pawar. This line of the CPI(M) is based on a candid admission that the contours of the Third Front are yet unclear and that the proposed entity does not have the ability to take on the BJP-led alliance politically.

In view of this line, the CPI(M) has refrained from aligning itself with the S.P. or the NCP although both parties face the BJP-led alliance as their principal opponent in the areas of their strength, Uttar Pradesh and Maharashtra respectively. The CPI(M) was a small but important ally of the S.P. in Uttar Pradesh until the 1998 elections, and both were members of the erstwhile United Front (U.F.).

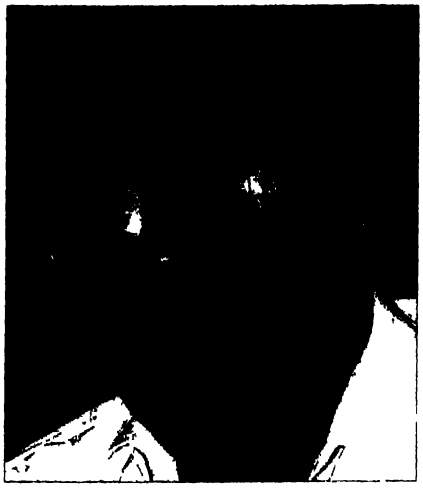
The CPI agrees that it is counter-productive to remain equidistant from the BJP and the Congress(I), but it has a different perception of the S.P. and the NCP. The CPI leadership believes that although the S.P. and the NCP have "failed to understand the struggle against communal forces in the right perspective, these parties should not be kept away from a larger secular platform."

Interestingly, the smaller parties of the Left – the RSP and the Forward Bloc – are closer to the S.P.-NCP position. These parties have asserted that they would like to maintain a policy of equidistance from the Congress(I) and the BJP. In fact, the two parties had taken this position as early as April, when efforts were made to form an alternative government after the fall of the BJP-led government. While the CPI and the CPI(M) were ready to support a minority Congress(I) government from outside, the RSP and the Forward Bloc made it clear that they would not support such an arrangement. They wanted a Third Front government put in place with the Congress(I) supporting it from outside.

R V MOORTHY

CPI(M) general secretary Harkishan Singh Surjeet and Polit Bureau members S. Ramachandran Pillai and Prakash Karat.

THE differences with regard to electoral strategies have reflected in the alliances the Left parties have formed with other secular parties. Highlighting the centrality of the fight against the BJP, the CPI and the CPI(M) evolved specific tactics for States such as Andhra Pradesh, Punjab and Tamil Nadu and worked out seat adjustments with the Congress(I) and the All India Anna Dravida Munnetra Kazhagam



(AIADMK), among others. Although both the CPI and the CPI(M) had negotiations with the Rashtriya Janata Dal (RJD) led by Laloo Prasad Yadav in Bihar, only the CPI(M) could clinch an accord with it.

The Left had consistently opposed all these principal non-BJP parties not only on ideological and political grounds but also on account of doubts about the political and moral integrity of their leaders. Despite this, the CPI and the CPI(M), after considerable inner-party debate, decided to align themselves with these forces on the ground that the paramount political task at hand was to halt the advancement of right-wing communal forces. The popular response to the new electoral alignments, particularly in States such as Tamil Nadu and Punjab, indicate that the decision of the CPI and CPI(M) has found considerable public acceptance.

The lack of agreement on electoral strategies prevented the Left parties from coming out with a joint manifesto. Central to this inability is the candid admission of the CPI and the CPI(M) that a Third Front, which would chart a path independent from that of the Congress(I) and the BJP, is yet to take shape. The Left parties' joint manifesto in 1998 had branded the Congress(I) a party that had degenerated both politically and organisationally and castigated it for pursuing economic policies that hurt the people's interests, betraying its secular heritage by compromising with communal forces, and promoting corruption in public life. The manifesto had said that it was this dismal record of the Congress(I) that led to its humiliating defeat in the 1996 elections. It projected the U.F. as an alternative to the "discredited" Congress(I) and as a firm secular response to the communal platform of the BJP.

According to the CPI and CPI(M) leaders, there is no entity like the U.F. to be presented before the electorate this time. During the 13 months of BJP rule the U.F. collapsed with two of its principal constituents, the Telugu Desam Party (TDP) and the Dravida Munnetra Kazhagam (DMK) turning allies of the BJP. According to CPI(M) general secretary Harkishan Singh Surjeet, accepting the collapse of the U.F. realistically and seeking modified ways and means to defeat the communal threat is not tantamount to succumbing to the Congress(I). Surjeet said that there were no two opinions among the Left parties that "the Congress(I)'s basic policies do not provide a democratic alternative to the BJP". The CPI(M) election manifesto itself had made it clear, he pointed out.

Surjeet said that on economic policy

S MAHINSHA

CPI general secretary A.B. Bardhan.

the BJP and the Congress had no basic differences. Whether it was privatisation and further liberalisation, or the opening up of the insurance sector or the question of the Patents Bill, the Congress(I) had no alternative to the BJP-led government's stands on these issues. The RSP and the Forward Bloc, however, tend to believe that the U.F. or a similar Third Front can be built by the Left by joining hands with parties such as the NCP and the S.P., which pursue an anti-BJP, anti-Congress(I) line.

In fact, an intense discussion had taken place within the CPI(M) on this issue when the NCP was formed. Among the opinions expressed was the one that advocated alignment with the NCP at least in Maharashtra. This came from a section of the Kerala unit of the party. Some of the participants in the discussion even recommended the severing of ties with the Congress(I) in all parts of the country. The Kerala unit had its own compulsions for advancing this line. For, unlike in West Bengal and Tripura, the other two power bases of the party, in Kerala the party's principal opponent is the Congress(I). Secondly, the Congress (Socialist), a constituent of the CPI(M)-led Left Democratic Front in Kerala, had merged with the NCP. In this situation a position of equidistance from both the Congress(I) and the BJP would have helped its campaign immensely. Reports from Kerala suggest that despite the anti-BJP line prevailing over the equidistance policy, sections of the Kerala leadership state that the Congress(I) will have to support a Third Front government.

However, the manifestoes and election policy documents of the Left parties agree on most other issues. These documents assert that the Left platform represents the aspirations of all sections of the working people, of all patriotic citizens who are committed to a socially and economically just order. The parties affirm their resolve to strengthen the Left as the guardian of the interests of the working people and the promoter of self-reliant growth, employment, equal opportunities and reduction of inequalities. All four parties criticise the mindless economic liberalisation and point out that economic reforms require a different orientation. They speak in unison about the need to implement land reform and the enormous contribution made by the Left-led governments of West Bengal, Kerala and Tripura in this respect.

The four parties agree that the 13-month stint of the Vajpayee Government was an unmitigated disaster for the country, which threatened the very basis of the secular principles enshrined in the Constitution. The policy statements of the parties also warn that secular and democratic values, which had become part of the common consciousness of the Indian people, would be eroded if the BJP continues in government. The parties agree that the Vajpayee Government has through the Pokhran nuclear tests as well as by generating the Kargil crisis aggravated the strains on national unity. The arbitrary dismissal of the Chief of the Naval Staff, Admiral Vishnu Bhagwat, and the refusal to discuss the matter in the Parliament have also been highlighted by the Left parties as actions endangering national security.

The parties allege that the Government instilled fear and insecurity among the minorities by allowing the Viswa Hindu Parishad (VHP) and the Bajrang Dal, both members of the Sangh Parivar, to attack Christians and Muslims. The economic policy of the Government gave a bonanza to foreign capital and big business and imposed heavy burdens on the common people. By dismantling the Public Distribution System to benefit private traders, the Left parties say, the BJP has left the urban poor at the mercy of black-marketeers, hoarders and profiteers in the matter of buying essential commodities. The Vajpayee Government is also accused of being complacent and committing grave diplomatic errors following the euphoria created over the bus ride to Lahore.

The Left parties have launched a campaign on these issues. The popular response is rated as satisfactory by the leadership, both in their power bases and in areas where they are weak. In the 1998 elections the Left parties totalled 48 seats, of which 32 belonged to the CPI(M), nine to the CPI, five to the RSP and two to the Forward Bloc. By all indications, the Left is aiming at 70 to 80 seats this time. ■

Coalition constraints

With the BJP leadership sending out mixed signals on contentious issues, the NDA appears to suffer from a problem of cohesion.

V.VENKATESAN
in New Delhi

IN the election campaign, Prime Minister Atal Behari Vajpayee tried to score a point over his rival, Congress(I) president Sonia Gandhi, on the matter of the dharma of coalition governance. While Sonia Gandhi clearly preferred single-party rule, Vajpayee indicated that he would form a coalition government even if the Bharatiya Janata Party got a majority on its own. His message to the electorate was that the BJP was more willing to share power with its alliance partners than the Congress(I), which would consider a coalition arrangement only if it failed to get a majority.

BJP leaders say that the era of coalitions is here and that only the BJP is honest enough to accept this reality. With the Third Front in disarray and the Congress(I) refusing to share power, the BJP-led National Democratic Alliance sees itself as the only formation capable of forming the next government.

However, does the BJP mean what it professes? The NDA does not include many parties with which the BJP has seat adjustments, for instance, the Telugu Desam Party in Andhra Pradesh and the Trinamul Congress in West Bengal. Although the TDP has seat adjustments with the BJP in the Lok Sabha and Assembly elections, it is not a party to the NDA manifesto. TDP chief and Andhra Pradesh Chief Minister N. Chandrababu Naidu, who campaigned jointly with Vajpayee and praised his leadership at public meetings, has not indicated whether the TDP's post-election ties with the BJP would extend beyond issue-based support from outside.

Vajpayee admitted that he will have to apply a "little pressure" on the TDP to join his Ministry, if the NDA returns to power. If the Congress(I) is unwilling to share power with friendly parties, the TDP is equally reluctant to be seen to share power with the BJP. After the Vajpayee Government collapsed last April, Chandrababu Naidu said that the TDP's ties with the BJP were over. Electoral compulsions forced him to renew the ties even though the BJP State unit demanded more Lok Sabha and Assembly seats than what he was willing to spare.

Even as it backed Vajpayee's leadership, the Trinamul Congress released its own manifesto. Its leader Mamata Banerjee did not challenge Sonia Gandhi's leadership qualifications; nor did she endorse the NDA's declaration that it would bring an amendment to the Constitution in order to deny high constitutional posts to naturalised citizens. In her campaign, unlike that of the other NDA partners, Sonia Gandhi's foreign origins were not mentioned.

The NDA is a loose formation. Its constituents have the option to walk out of the alliance when it suits them. The BJP, by virtue of its dominant status, can bring in any new party to the NDA without consulting other allies, a privilege that other constituents of the NDA do not have. This was obvious when the Samata Party and the Lok Shakti sought to force the entry of the Janata Dal (United) led by Sharad Yadav into the NDA. Senior BJP leaders resisted the move at the behest of its Karnataka unit, even though Vajpayee was inclined to admit the party into the NDA.

The BJP finally gave in and agreed to seat adjustments with the JD(U) in Bihar and Karnataka, even though it left open the question of admitting JD(U) leaders Sharad Yadav, J.H. Patel and Ram Vilas Paswan into the NDA. BJP leaders in Karnataka are not willing to share power with JD(U) leaders, despite the seat adjustments that are in place. When it replaced the Haryana Vikas Congress with the Indian National Lok Dal as its alliance partner in Haryana, the BJP did not find it necessary to consult its partners in the NDA.

The BJP's new ally in Tamil Nadu, the Dravida Munnetra Kazhagam (DMK), withdrew its nominees in Maharashtra, Karnataka and Andhra Pradesh in favour of other NDA candidates to help the BJP form a stable government at the Centre. The Communist Party of India (Marxist) questioned the DMK's move in view of the Shiv Sena's history of "anti-Tamil jingoism" in Mumbai. However, the Shiv Sena did not show any such gesture towards the BJP. The party has fielded candidates against the BJP in States other than Maharashtra.

The BJP-Biju Janata Dal alliance in Orissa also suffers from inconsistencies. The BJP State unit is not willing to oblige the BJD's quest for dominant status in the alliance. As per the formula worked out in the 1998 elections, the BJD is contesting 12 seats and the BJP nine. The BJD has allowed nine JD(U) MLAs to enter the party without conceding their demands for the Lok Sabha ticket. The BJD did not heed the BJP's request to change candidates in two constituencies, Dhenkanal and Jajpur. The BJD was averse to George Fernandes' move to bring together the splinter groups of the Janata Dal within the NDA under the JD(U) umbrella.

In Bihar, the BJP made no major sacrifices to accommodate the JD(U). The BJP decided to contest 29 of the 54 seats, three less than what it contested in 1998 in alliance with the Samata Party. Though the JD(U) demanded 27 seats, the BJP spared only three in addition to the 22 that the Samata Party had in 1998. The Samata Party had spared two for the Janata Dal out of its quota in 1998.

Even as the other NDA partners have to live with the BJP's dominant status, it is doubtful whether the BJP has given up its stand on core issues, such as building the Ram temple at Ayodhya, abrogation of Article 370, which confers special status on Jammu and Kashmir, and the enactment of a uniform civil code. Govindacharya, BJP general secretary and a key member of the party's think-tank, remarked that the party remained committed to the core issues which are missing from the NDA's manifesto.

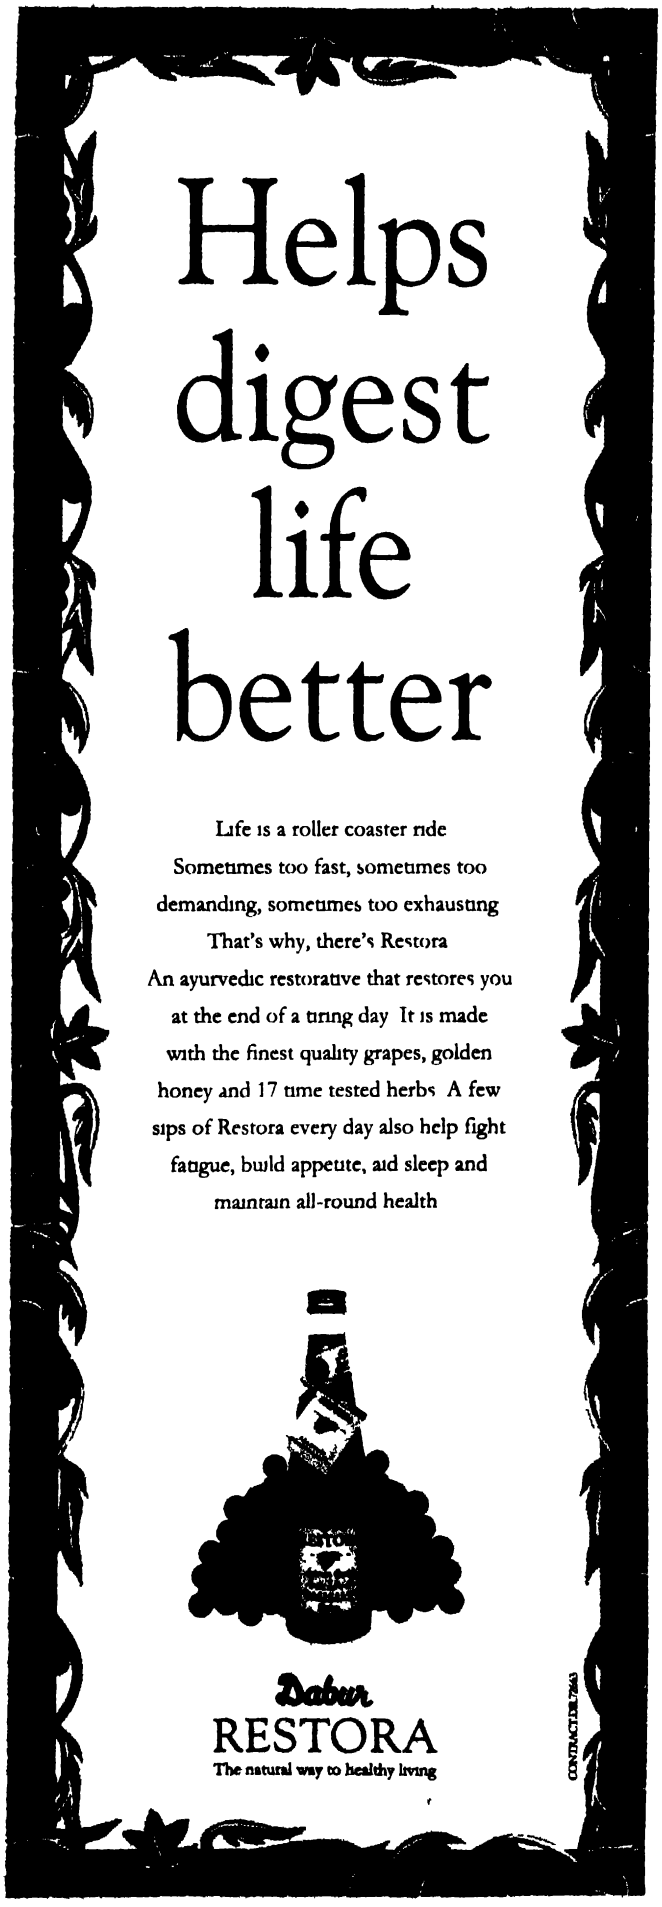
Lok Shakti leader and Union Commerce Minister Ramakrishna Hegde has threatened to walk out of the ruling coalition if the BJP revived its stand on these core issues, which would weaken the secular fabric of the nation. ■

Slander campaign

A new style of electioneering focusses on personal vilification rather than issues.

V. VENKATESAN

Monica Lewinsky. Party of eunuchs. Nothing more than a mother of two children. Suspicious deals. Elizabeth Taylor. Can a woman accuse a man of cheating her in politics? How does a bachelor have a son-in-law?



THESE are but some samples of the juicy exchanges between senior functionaries of rival national parties during the 1999 election campaign. Innuendoes and invectives are routine components of any campaign but all previous records were broken in the run-up to the 13th Lok Sabha elections. The campaigns of mutual slander unleashed by the Bharatiya Janata Party and the Congress(I) have left a bad taste at a time when the electorate had expected a meaningful issue-based campaign.

Information and Broadcasting Minister Pramod Mahajan, who in a lighter vein sums up his name as PM and claims to be the eyes and ears of the P.M., started the verbal duel while he was campaigning in Maharashtra. He asked: "If we are so keen on having a foreigner as Prime Minister, then why can't we have Bill Clinton or Tony Blair or even Monica Lewinsky?" Although Mahajan subsequently clarified that he did not intend to equate Sonia Gandhi with Lewinsky, the Congress(I), women's groups and many commentators took umbrage at Mahajan's remarks.

Defending himself weakly, Mahajan said that he only meant that no foreigner could stake a claim to be the Prime Minister of India, but dragging the name of the former White House intern, whose affair with Clinton led to demands for his impeachment, was seen as an indiscretion. Mahajan protested against the coverage of his speech in *The Hindustan Times*. The report filed from Mumbai was fair, he said, but it was deliberately twisted when published. He flourished a copy of the letter written by the paper's Mumbai bureau chief to its Executive Editor Bharat Bhushan in New Delhi in which the former distanced himself from the contents of the published story on the controversial speech. The Congress(I) and the Left parties objected to Mahajan's act of infringing upon press freedom. Bharat Bhushan stood by the published version.

Mahajan blamed the "dirty tricks department" of the Congress(I) for planting mischievous reports in newspapers that showed him as anti-women. He offered his regrets, but insisted that he was being vilified for something he had not said.

Mahajan invited another controversy when he compared Nationalist Congress Party leader Sharad Pawar to Hollywood actress Elizabeth Taylor on the grounds that Pawar changed parties as frequently as Taylor changed husbands. Despite protests from NCP quarters, Mahajan did not apologise. The BJP unit in Maharashtra said: "The remark was intended to

ANU PUSHKARNA

Pramod Mahajan and George Fernandes.

educate the masses about the reality with regard to our political leaders."

Defence Minister George Fernandes added his own gender insensitive remarks against Sonia Gandhi when he canvassed for NDA candidate Sushma Swaraj in Bellary. Fernandes accused Sonia Gandhi of contributing little to the country, except marrying Rajiv Gandhi and giving birth to two children. He defended his remark, saying he had only stated facts which Sonia Gandhi herself referred to in her speeches.

In a complaint to the Election Commission, the Congress(I) brought up the issues of the "personalised attack" and "gutter level tirade" against Sonia Gandhi by the BJP and allies. Senior leader Pranab Mukherjee and party spokesman Kapil Sibal urged Chief Election Commissioner M.S. Gill to issue a directive to the BJP and its allies to stop their "campaign of denigration". They said that Fernandes had mocked motherhood. In their memorandum to the E.C., they assailed Union Ministers Pramod Mahajan and George Fernandes for their "vilification" of Sonia Gandhi.

In an interview to a television channel, Gill appealed to political parties to focus on issues rather than on personalities. "If the elections were to have any real meaning, issues like better life and jobs should be discussed," he said.

Indirectly rebuking the BJP and its allies, Gill said: "If anyone in the country is going to make cheap jokes against women, what sort of a country are we; what sort of a people are we, what sort of a campaign is this?"

According to the model code of conduct during elections, criticism of parties and candidates should not touch on the opponents' private lives, unverified allegations or things unconnected with public activity. "Above all, we should not demean our ancient world-admired culture, by any kind of undesirable remarks about our opponents, least of all women," the E.C. observed.

VAJPAYEE'S first reaction to the controversy over Pramod Mahajan's remarks on Sonia Gandhi was that it was a closed chapter because Mahajan had offered an explanation. However, after the E.C.'s warning, Vajpayee expressed his distress over the transgression of the standards of decent and dignified electioneering. "I especially disapprove of any remarks about Congress president Sonia Gandhi, that are, or can be construed to be undignified," he said, adding rather belatedly that his colleagues' remarks were in bad taste.

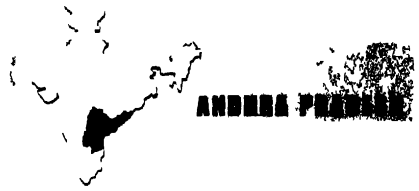
He warned that such attacks could serve to shift the focus away from the real issues. He however affirmed that criticism of Sonia Gandhi on account of her foreign origin, political inexperience and as a representative of dynastic rule was legitimate. While educating the people about these important issues, they should desist from saying anything that was gender insensitive or lowered the standard of the campaign, he said.

Vajpayee's sermon had little impact across the political spectrum. NDA partner, DMK president and Tamil Nadu Chief Minister M. Karunanidhi chose innuendo to attack his opponent, All India Anna Dravida Munnetra Kazhagam general secretary Jayalalitha. On the campaign trail, Karunanidhi asked:

"If a woman accuses a man of betraying her, what does it mean? Is it proper for Jayalalitha to accuse Vajpayee of betrayal?" The AIADMK women's wing protested against Karunanidhi's "mischievous" misinterpretation of Jayalalitha's statement, which referred to Vajpayee's mediation on the Cauvery issue.

Calling Karunanidhi a "rotten egg", Jayalalitha said: "The foul smell is now crossing all limits and becoming really intolerable." But in taunting Jayalalitha about the "betrayal", wasn't Karunanidhi casting aspersions on Vajpayee as well, ask observers.

Congress(I) leader Ghulam Nabi Azad, in an interview to a television channel in Hyderabad, said: "A time may come when we may have to ask the Prime Minister how, without getting married, he has sons-in-law and daughters-in-law? Whose son-in-law? Who is married to whom?" Azad's comments came a day after film star and Congress(I) campaigner Rajesh Khanna told a rally in Gujarat that Vajpayee does not have children, but he has a son-in-law. There were allegations earlier regarding the Prime Minister's foster son-in-law's role in questionable deals. Kapil Sibal condemned Azad's comments and Rajesh Khanna denied his reported remark. Vajpayee expressed anguish over the incident, and said that never in his public life had opponents made personal attacks on him.



The Congress(I) also levelled allegations against Vajpayee over the import of sugar worth Rs. 900 crores from Pakistan. It said the deal benefited Pakistan's Army Welfare Trust controlled by the Inter-Service Intelligence and Pakistan Prime Minister Nawaz Sharif's family. The Indian government denied the allegation saying there was no budgetary support for such imports. The Congress(I) spokesperson alleged that Vajpayee sacrificed the interests of the Indian Army and canegrowers to benefit Nawaz Sharif.

The BJP refuted any link between sugar imports and the Prime Minister's Office. It released the names of the owner of the Kundan Rice Mill in Delhi which imported sugar from Pakistan. BJP general secretary K.N. Govindacharya said: "Its owners are no Ottavio Quattrocchis. It is an unknown Garg family of Naya Bazar, Chandni Chowk – a private party that imports sugar." He also said that the government imposed customs duty on the sugar imports, initially at 5 per cent and subsequently at 20 per cent and 25 per cent. ■

Column by Praful Bidwai: Page 103

ON THE CAMPAIGN TRAIL

With the completion of the first phase of polling involving 145 Lok Sabha constituencies and 343 Assembly seats on September 5, the polling process goes on. A look at the line-ups, electoral mood and prospects in some of the States where further rounds of polling are to take place.

DASU KESAVA RAO

THE ruling Telugu Desam Party (TDP) and a resurgent Congress(I) are the principal contestants in the electoral arena in Andhra Pradesh, which has a total of 2,386 candidates for 294 Assembly and 42 Lok Sabha seats It is for the second time in over 30 years that the State is witnessing simultaneous elections to the Lok Sabha and the Assembly

The key players in the battle are Nara Chandrababu Naidu, who leads the Telugu Desam for the first time in an Assembly election, and Dr. Y S. Rajasekhara Reddy, the firebrand leader from Rayalaseema who infused a new life into the State Congress(I) unit, which was demoralised after the humiliating defeat in the 1994 elections when it failed even to qualify to be a recognised Opposition party. The bitter contest has changed into a no-holds-barred affair.

Fears that violence will mar the elections proved right when four persons were killed in a bomb blast in the nursing home-cum-residence of the Minister for Panchayati Raj, Dr. Kodela Siva Prasada Rao, in Narasaraopet town and land mines were unearthed in the Pattikonda constituency There were demands for the dismissal of Siva Prasada Rao and a judicial inquiry into the incident, even as the Telugu Desam blamed the Congress(I) for planting the mines. The Election Commission has rescheduled the election in Narsaraopet to October 3.

The Telugu Desam has an electoral understanding with the Bharatiya Janata Party, under which the former contests 270 Assembly seats and 34 Lok Sabha seats, leaving the rest to the BJP. The Congress(I) contests all the seats The Anna TDP of Nandamuri Harikrishna held talks with the Communist Party of India (Marxist), while the Communist Party of India held informal talks with the Congress(I) for seat-sharing. But these bore no fruit

The Anna TDP, which contests 210 Assembly seats and 21 Lok Sabha seats, has declared support to the CPI, the CPI(M) and the Nationalist Congress Party (NCP) of Sharad Pawar in other constituencies. The NTR TDP of Lakshmi Parvathi (the widow of the founder of the TDP, N.T. Rama Rao), which was a force to reckon with in the 1996 Lok Sabha elections, is a pale shadow of its former self today It has forged an alliance with the Mahajan Front and the Samajwadi Party (S.P.) and contests 110 Assembly and 16 Lok Sabha seats The Majlis-e-Ittehadul Muslimeen (MIM) and the Majlis Bahao Tahreek (MBT),

P.V SIVAKUMAR

MOHD YOUSUF

Congress(I) leader Y.S. Rajashekhara Reddy at an election rally in Tandur in Rangareddy district.

which represent minority interests, are dominant in Hyderabad and other Urdu-speaking areas.

The CPI and the CPI(M) have worked out an understanding. The former contests six Lok Sabha and 46 Assembly seats and the latter seven Lok Sabha and 48 Assembly seats. Both parties support independent candidates in Polavaram and Vijayawada East as they could not agree on who should contest in these constituencies.

CHANDRABABU NAIDU has transformed his Kuppam constituency, once a backward area, into a showcase of development, while Pulivendula continues to be the pocketborough of Rajasekhara Reddy's family. Rajasekhara Reddy is seeking election to the Assembly after being in the Lok Sabha for 10 years. He has swapped places with his brother Y.S. Vivekananda Reddy, now in the fray for the Cuddapah Lok Sabha seat. Chandrababu Naidu and the Y.S. brothers are both in unassailable positions.

Former Chief Minister K. Vijayabhaskara Reddy faces his traditional rival K.E. Krishnamurthy in the Kurnool Lok Sabha seat, while faction foes Bhuma Venkata Nagi Reddy (TDP) and Gangula Pratap Reddy (Congress(I)) fight it out for the Nandyal seat, which was once held by former Prime Minister P. V. Narasimha Rao. (Faction feuds between political groups or powerful families, which continue for generations and involve bloody violence, have been a major feature of life in Andhra Pradesh, particularly the Rayalaseema area.)

Two other former Chief Ministers, Nedurumalli Janardhana Reddy and Nadendla Bhaskara Rao, have shifted from their traditional constituencies – the former from Bapatla to Narasaraopet and the latter from Khammam to Secunderabad. The TDP has fielded actress T. Sharada against Rajyalakshmi, wife of Janardhana Reddy, in the Venkatagiri Assembly constituency and actress-director Vijayanirmala for the Kaikalur Assembly seat. D. Rama Naidu, who has produced 100 movies, is in the fray for the Bapatla Lok Sabha seat.

Other major contestants include former Union Ministers P. Shiv Shankar (Tenali) and P. Upendra (Vijayawada), Rayapati Sambasiva Rao (Guntur), M. Baga Reddy (Medak), Renuka Choudhury (Khammam), Bandaru Dattatreya (Secunderabad), U. Krishnam Raju (Narsapur), Ch. Vidyasagar Rao (Karimnagar), and MIM leader S.S. Owaisi (Hyderabad). Harikrishna contests from Gudivada and Lakshmi Parvathi from Sompeta and Eluru.

BOTH the Congress(I) and the Telugu Desam went through a tortuous process of candidate selection, which lasted several weeks. The high command made a short-list from the list drawn by the pradesh election committee even as unsuccessful aspirants and senior party leaders complained against the style of functioning of the State unit president. Both parties failed to meet the expectations of women and the weaker sections in the matter of nomination. The TDP dropped 69 sitting MLAs and fielded several new faces.

Many ticket-seekers belonging to both the TDP and the Congress(I) defected to other parties, frustrated by the selection process. Unsuccessful aspirants for the TDP ticket accused Chandrababu Naidu of letting down people who served the party sincerely since its inception and experimenting with rank outsiders, some of whom had not even applied for the ticket. Chandrababu Naidu may have his own reasons for fielding the former Central Bureau of Investigation Director K. Vijayarama Rao against Congress(I) Legislature party leader P. Janardhana Reddy in Khairtabad, but party workers feel that it was an unwise move. The leadership had a tough time pacifying sitting members and senior leaders who failed to get the nomination. While some of them were expelled from the party, there are nearly 10 rebels still in the fray.

The Congress(I) was also plagued by the problems of rebels and resignations. The Pradesh Congress president was accused by partymen of handing out a raw deal to women and the weaker sections and safeguarding the interests of only one caste.

The Congress(I) and the TDP each rewarded 10 defectors with the ticket. Janata Dal stalwart S. Jaipal Reddy crossed over to the Congress(I) and was instantly given the ticket for Miryalguda, while CPI stalwart Ch. Rajeswara Rao severed his 57-year-old association with the party to join the TDP and get the nomination for the Sircilla Assembly seat, which he held. Renuka Choudhury was yet another latecomer to get the Congress ticket. Two Left party MLAs, Kunja Biksham and Vooke Abbayya, also joined the TDP.

THE airdash to Hyderabad on August 17 by Congress(I) president Sonia Gandhi electrified the scene and put both the Telugu Desam and the BJP on ten-

terhooks. Reports that Sonia Gandhi might file her nomination for the Cuddapah Lok Sabha constituency sent Chandrababu Naidu making frantic efforts to get actress and BJP supporter Vijayashanthi rush to Cuddapah and file her nomination. The drama ended with Sonia opting for Bellary in Karnataka.

The Congress(I) campaign is mostly handled by the PCC president, who is touring the constituencies; most other senior leaders are confined to their own segments. Sonia Gandhi attracted large crowds during her meetings in Mahbubnagar, Chittoor, Cuddapah and Nellore. Chandrababu Naidu hops around in his helicopter, attending meetings in various constituencies. A number of cine personalities are campaigning for TDP nominees. Both parties use cassettes and video films for telecast in private channels.

The focus of the Congress(I) campaign is on the "misrule and corruption" of the TDP and the target is Chandrababu Naidu, who has taken the people for a 'hi-tech ride"'. Chandrababu Naidu is accused of corruption, pampering the rich, bleeding the poor and surviving just on publicity and make-believe. His Government is faulted for bowing to the dictates of the World Bank and for undermining the local bodies by creating parallel set-ups such as water users' associations, watershed committees and vana samrakshana samitis through which development works are taken up.

The Telugu Desam, on the other hand, has gone all-out with the positive message of its "excellent record" in the past four years. It cites its innovative initiatives in the use of information technology and in areas such as irrigation, women and youth empowerment, agricultural development and power generation. Chandrababu Naidu and other leaders hold the Congress(I) responsible for the Election Commission order suspending the 'Deepam' scheme (under which cooking gas connections were given to poor women in rural areas). They have asked the voters to confront Congress(I) leaders to demand an explanation.

Even as Chandrababu Naidu asks people to "vote for my nominees on the basis of my performance", his party has missed no opportunity to project Rajasekhara Reddy as a faction leader and as the architect of the "bomb culture" in the State.

There is no perceptible wave in favour of any party, but both Chandrababu Naidu and Rajasekhara Reddy claim that their party will sweep the polls.

A feature of the Congress(I) manifesto is the party's resolve to make the State 'Aadarsandhra Pradesh', as a counterpoint to the Chief Minister's dream of 'Swarnandhra Pradesh'. The highlights are the promise of free power and the waiver of power bill arrears for farmers, power for four lakh pumpsets in 100 days, cooking gas connections for the rural poor, payment of Rs.2,500 a year to unemployed youth, allotment of telephone booths for one lakh women and supply of "white cards" to all eligible families. The Janmabhoomi programme will be replaced by Gram Swaraj, another programme of rural development, it says. The manifesto also plans to revive the Legislative Council, abolished in the mid-1980s by a TDP Government.

Rajasekhara Reddy appealed to the farmers not to pay their electricity bills because the Congress(I), if elected, would waive arrears and give them free power. This drew protests from the Telugu Desam as the call amounted to inciting the people against the Government.

Giving free power to farmers and energising four lakh pumpsets in 30 days is nothing short of promising the moon, because it will require 1500 MW of additional capacity and Rs.10,000 crores. The Congress(I) feels that this can be achieved by bringing down transmission losses and pilferage.

The TDP has said that the Congress(I), which ridiculed some of its programmes, had no qualms in incorporating them in a different form in its own manifesto – such as Deepam, Janmabhoomi, housing and poverty eradication. The TDP manifesto promises a special poverty eradication mission in order to bring 45 lakh families above the poverty line; clean, efficient, transparent and responsive governance; an addition of 10,000 MW to the power generation capacity; one million more hectares of land under irrigation; safe water, house sites, houses and roads for villagers; and a nutrition programme for three million schoolchildren. Among the political reforms contemplated is an amendment to bar foreigners from contesting for high constitutional offices of the country.

THE bomb blast in Narasaraopet had a negative fall-out for the ruling party because it went off in the premises of a Minister and the ruling party candidate and four people, including an independent candidate, were killed. The incident caused a serious erosion in the credibility of the Telugu Desam's espousal of free and fair polls. It also took the sting out of its attack on Rajasekhara Reddy's bomb politics.

Lok Satta, a non-political organisation striving for electoral reforms and decriminalisation of politics, released a list of 46 candidates who, according to information furnished to it, have a criminal background. The TDP tops the list with 20, followed by Congress(I)'s 12. It also organised a public debate featuring K. Rosaiah of the Congress(I) and Revenue Minister and TDP politburo member T. Devender Goud, who faced questions from panelists and the audience on a number of issues.

The CPI(M) released the list of its nominees with their economic background and properties held by them. Most of the candidates are full-time party workers, teachers' representatives and small farmers. While seven candidates did not own a house, seven others had a house but no land. They demanded that the Congress(I), the TDP and the BJP emulate their example. ■

PARVATHI MENON

THE campaign for the first phase of the Lok Sabha and Assembly elections held on September 5 was a remarkably low-intensity one in Karnataka. This was despite the dramatic political realignments that preceded the elections – the split in the Janata Dal with a faction led by Chief Minister J.H. Patel lending support to the BJP alliance; the merger of the Lok Shakti, the Samata Party and the Sharad Yadav faction of the Janata Dal as the Janata Dal(U); the simultaneous birth of the Janata Dal (Secular) led by former Prime Minister H.D. Deve Gowda, and so on. But little of this political turmoil was reflected in the campaign.

Seventy-two candidates are contesting for the 15 Lok Sabha seats and 711 for the 115 Assembly seats. If the spirit and colour of electioneering was missing, also lacking was a meaningful projection at the constituency level of issues that are the subject of heated inter-party public debate in other forums. The focus of each cam-

The battle for Bellary

PARVATHI MENON

A MEASURE of cynicism underlies the Congress(I)'s choice of Bellary as the constituency it hopes will assure Sonia Gandhi of a place in Parliament. While for the Congress(I), the straight run of victories over the last 12 Lok Sabha elections makes this a "safe" seat, it is clear to anyone who has visited Bellary or read about it, that the 'safety' factor is born of the extreme backwardness of the district, which 50 years of Congress representation in Parliament has done little to ameliorate.

This district has some of the lowest human development indicators in the State and the country. Its Human Development Index is 0.429, the fourth lowest of the districts in the State (Kodagu has the highest, 0.615). Bellary has a literacy rate of 32.2 for women and 59.1 for men. At 60.32, the district's life expectancy at birth for men and women is the lowest of all the districts in the State. The infant mortality rate in Bellary is 92 per 1,000 live births, the second highest in the State after Bijapur. It has the lowest health index (a measurement of health status and longevity) in the State. Thirty per cent of children in the schoolgoing age in Bellary district are out of school. Untouchability remains entrenched here. The "two-tumbler practice" is common in the villages of Bellary. And so on.

The whys and hows of the constituency's underdevelopment were not issues addressed in any substantive fashion by either of the two candidates – Sonia Gandhi, the Congress(I) president, or Sushma Swaraj, the BJP's spirited and strident candidate. Both promised benefits to the constituency, but only if elected. Sushma promised to "adopt" Bellary and nurture it as a "mother cares for her child". The Congress(I) promised that it would make an Amethi out of Bellary. But even these promises were mere footnotes in the speeches of the two candidates. Sonia Gandhi's speeches were in large part devoted to the "sacrifices" of her family, and her determination, if elected, to help stem the rot in India's body politic brought on by the BJP's misgovernance.

Sushma Swaraj, in her vigorous campaign that swept through the small towns and taluk headquarters of Bellary district, shrilly hammered in the peg on which her campaign hung, the "videshi-swadeshi" argument. Presenting the exclusivist theory that a certain category of citizens (in this case those who are foreign-born) must be statutorily denied certain rights (in this case the right to stand for the highest elected office), this gifted orator would urge her admiring audiences, in Sanskritised Kannada learnt on her campaign trail, to "honour the Indian daughter-in-law and reject the foreign daughter-in-law" *(swadeshi beti ko puraskar, videshi bahu ko thiraskar)."* Intended or not, Sushma's campaign wardrobe – the inevitably gaudy sari, glass bangles, flowers in her hair, and her usual large red bindi – came across as a not-very-subtle put-down of the widowed 'bahu' by the married 'beti'.

"Many constitutions of the world - even the American Constitution - have a provisions that disallow foreign-born citizens from standing for high office," Swaraj told *Frontline* as her cavalcade sped through the Kudligi Assembly constituency. She launched into a small speech on various constitutions which contain such a provision. "Our Constitution-makers did not include this provision because they did not foresee a political party going so insolvent that it must import a leader for Prime Minister," she said. A mention of the British Constitution, which allows foreign-born citizens to contest elections, and on which the Indian Constitution is modelled, brought forth an angry outburst quite inconsistent with the position she had just been arguing. "I don't want to be compared with those people who made us slaves for 250 years. My blood boils when a person like Sonia Gandhi aspires for the top post," she bristles.

In Swaraj's speeches the fine line between 'foreign-born' and 'foreign' disappears, and Sonia Gandhi becomes the reviled "videshi" whose political ambitions represent a threat to the country. The videshi-swadeshi argument does not appear to have rubbed off on a great many people. A good many of the people spoken to at random – in villages along the highways, in election meetings – said that they did not consider Sonia a foreigner. More than one person drew the analogy between Sonia's entry by marriage into India, and the experience in their society where daughters who are given in marriage outside their village do not lose their rights.

N. Tippana of the Janata Dal (United), who lost the election in Bellary in 1998 contesting as a candidate of the Lok Shakti, accompanied Sushma on her election campaign. "The strength of her campaign is entirely due to the following that Ramakrishna Hegde has in this constituency," he told *Frontline*. "Those who arrange her campaign meetings and have been working for her are from the Janata Dal (United)," he said. It was

paign was by and large on the individual candidate rather than her or his party or political persuasion. Bellary was of course the exception. The constituency came under intense media scrutiny, and here both the party agenda as well as the merits of the contesting individuals were purposefully highlighted.

The mess that the BJP-Janata Dal(U) alliance has landed itself in would explain why candidates of the BJP and the JD(U) chose not to foreground the politics of the alliance in their campaign. Overshadowing their campaign was the uneasy and often hostile relationship amongst the partners of the alliance. This mutual hostility exists from the level of grassroots-level workers to the leaders of the parties; and ranges from disagreements over seat-sharing in select constituencies to claims on the post of Chief Minister should the alliance get a majority. The BJP-JD(U) alliance, forged against the will of the State BJP unit, has broken down in around 50 constituencies. According to the seat-sharing arrangement arrived at on August 20, a day before the last date for the withdrawal of nominations for the first phase of polling, the BJP was to contest 18 and 129 out of the 28 Lok Sabha and 224 Assembly seats and the JD(U) 10 and 95 respectively. By the time the arrangement was announced, both parties had distributed 'B' forms for almost all the seats. Those who were asked to withdraw were unwilling to do so. Even as late as August 28 (the last date for withdrawal of nominations for the second phase of polling on

K. BHAGYA PRAKASH

Congress(I) president Sonia Gandhi with her daughter Priyanka at an election meeting in Sanaur near Bellary.

K. BHAGYA PRAKASH

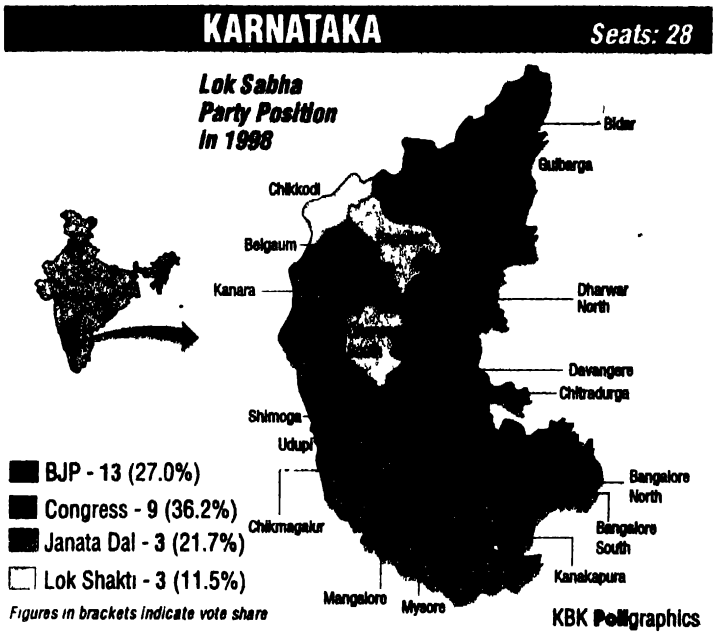
reported that 6, 000 workers from the affiliates of the Sangh Parivar – the Rastriya Swayamsevak Sangh, the Vishwa Hindu Parishad and the Bajrang Dal – had come into the constituency to "oversee" the polling.

THE Congress(I) campaign had far less of the BJP's sound-and-fury. K.C. Kondaiah, the sitting Congress MP from Bellary, appeared not in the least perturbed by the crowds Sushma was attracting, nor by the very flattering media coverage that she was getting. "We have a different style of campaigning," he said. "Our MLAs and party workers are going door to door. In this constituency more than 70 per cent are from the Scheduled Castes and Tribes, minorities and backward castes. They have always voted for us and will continue to do so."

After filing her nomination, Sonia Gandhi came to the constituency on August 27 when she addressed meetings in four Assembly segments. In Sandur, the second stop on her itinerary, her public meeting was the occasion for a public holiday for people who had been brought from distant villages. Crowds danced, sang (and drank) their way to the venue and waited patiently till her helicopter appeared, a distant speck in the sky, and sank noisily into their midst. They sat patiently through her woodenly delivered speech, and cheered for Sonia, but more especially for her charismatic-looking daughter, Priyanka.



The response to their last campaign visit, on September 1, was an amazing endorsement of the mass appeal of the Nehru-Gandhi family. Bellary city was turned inside out. Cheering and waving, its citizens lined the streets, stood on rooftops and trees, and reached out of windows, as the cavalcade passed. As in the earlier public meetings, much of the cheering was for Priyanka. The enormous public response took everyone – party workers, mediapersons, the police and the Special Protection Group – by surprise. "I have covered many election campaigns, but have seen nothing like this before," a senior journalist commented. The next day, Sonia Gandhi and Priyanka drove through some of the Assembly constituencies of Bellary, receiving the same enthusiastic and warm public response. ■

September 11 was August 27), the agreement on seat-sharing was being flouted at the ground level, with the BJP and the JD(U) facing each other in no less than 46 constituencies. While the BJP claimed that JD(U) candidates were contesting in 27 of the 129 constituencies allotted to them, the JD(U) said that the BJP had put up candidates in 15 of the 95 seats earmarked for it. This does not include the innumerable constituencies where those candidates who were asked to vacate their seats opted to contest as independents.

Bellary was allotted to the JD(U) in the seat-sharing agreement. When the BJP decided to field Sushma Swaraj from the constituency, the JD(U) asked for four more Assembly constituencies. In Bellary, Sushma Swaraj's campaign is dependent on the JD(U) network. In at least one of the eight Assembly constituencies, Harapanahalli, BJP candidate Narayan Das is facing a rebel JD(U) candidate. All three BJP Assembly candidates in Bellary are recent entrants from the Congress(I), and BJP loyalists are not happy with the nominations. The JD(U) is also facing internal dissent. An important party leader, Bhavi Bettappa, who is a close confidant of M.P. Prakash, a senior Minister in J.H. Patel's government, recently resigned from the JD(U) in protest against the party asking him to withdraw his nomination in favour of a BJP candidate after he had filed his papers from the Kudligi Assembly constituency in Bellary. If these are the undercurrents in the alliance in a constituency like

Bellary where a critical contest is on, the situation in other constituencies is worse.

J.H. Patel, for example, faces a 'rebel' BJP candidate, Vadnal Rajanna, in his Assembly constituency of Chennagiri in Shimoga. The BJP unit here is believed to be working overtime to ensure the defeat of J.H. Patel, and although Vadnal has for the record been "expelled" by the BJP, it is understood that he has the tacit support of even the BJP leadership. In Gulbarga, of the eight Assembly segments three were allotted to the BJP. Yet the BJP and the JD(U) face each other in three constituencies – Gulbarga City, Shahabad (Reserved) and Afsalpur. Lok Shakti president Ramakrishna Hegde and BJP State president B.S. Yediyurappa were engaged in a war of words over the rival candidates in Gulbarga and Raichur City Assembly segment, each refusing to withdraw their candidates. C. Byre Gowda, former Agriculture Minister in the J.H. Patel Ministry, now in the JD(U), accused the BJP of the "absence of a gentlemanly approach". He said that in 30 to 40 constituencies the BJP has extended tacit support to independent candidates (meaning rebel candidates of the BJP).

In the Koratagere and Madhugiri Assembly seats of the Chickaballapur Lok Sabha seat, candidates of the JD(U) and BJP are fighting each other. In Koratagere, Kannada film-star Jayanthi is the JD(U) candidate. She has accused the BJP of spreading the lie that she had withdrawn in favour of the official BJP candidate. In the Chikmagalur Lok Sabha constituency area, BJP and JD(U) candidates face each other in two Assembly constituencies; there are similar problems in Assembly constituencies in Raichur, Ramnagaram, Tumkur and several other constituencies. In the Kolar Lok Sabha constituency, the confusion over who the official candidate is has still not been sorted out. Mangamma Muniswamy is the BJP candidate while the JD(U) announced the candidature of Balaji Channaiah. When asked to withdraw from the contest, Channaiah resigned from the primary membership of the party but remains in the contest fighting on the JD(U)'s 'arrow' symbol. BJP workers in the district were reportedly so upset that they threatened to campaign for independent candidates in all the Assembly segments of the district.

Even in those constituencies where the alliance is projecting a single candidate, campaigning is by and large under the parent party's banner. BJP workers in particular are loath to campaign for any symbol other than the lotus. New symbols have caused a degree of confusion. The JD(U) symbol is the arrow. While a Lok Sabha candidate may be from the JD(U), the Assembly segments under it are divided amongst those contesting on the lotus and arrow symbols, and it is feared that this may cause confusion in voters' minds.

If such is the mistrust within the alliance on the ground, the lines of communication amongst the leaders of the alliance have all but snapped. When Prime Minister A.B. Vajpayee addressed a meeting in Bangalore on September 1, BJP leaders on the podium studiously avoided any reference to their ally J.H. Patel, who was on the dais and who later gave a speech. The main concern of the BJP State leaders is that the post of Chief Minister must go to the party, and they lose no opportunity to stake their claim publicly. The JD(U) leaders, on the other hand, have made no statements in support of this claim. In fact, sources in the Lok Shakti unofficially indicated that the large numbers of 'rebel' JD(U) candidates would add to the bargaining power of the party at the time of choosing a leader (should the alliance come to power).

Although some poll surveys have predicted major gains for the BJP-JD(U) alliance, the picture that emerged at the end of the first phase of campaigning pointed to the possibility of a more fragmented verdict, at least in terms of the percentage of vote share. Each constituency has a minimum of three 'official' candidates from the Congress(I), the JD(S) and the BJP-JD(U) alliance. In addition to this are the 'unofficial' or 'rebel' candidates (the Congress too has its share of rebel candidates in almost 20 Assembly constituencies). In a four-cornered contest in the first-past-the-post system, in theory a candidate needs to get just around 27 per cent of the vote share to win. Karnataka has tended to show different patterns of voting in Assembly and Lok Sabha elections. However, the last time that Assembly and parliamentary elections were held simultaneously was in 1989. That year, although the State voted against the all-India trend, in both elections it voted overwhelmingly for the same party – which happened to be the Congress(I). ■

NAGALAND

KALYAN CHAUDHURI

FOUR of the seven northeastern States – Nagaland, Meghalaya Manipur and Mizoram – are going to the polls on September 25 with a major issue in common, one concerning their territorial integrity. Six Lok Sabha seats are at stake in these four States – Nagaland (one), Meghalaya (two), Manipur (two) and Mizoram (one).

Unlike in the 1998 elections, the underground insurgent groups including the Khaplang and the Isaac-Muivah factions of the National Socialist Council of Nagaland (NSCN) have not this time openly called for boycott of polls in Nagaland and in the predominantly Naga areas in Manipur. But they have asked the people to think twice before participating in the elections which, they said, would never bring about a solution to the 50-year-old Naga problem. The Naga Hoho, an apex body of a number of non-gov-

ernmental organisations (NGOs) and social action groups which play a key role in removing the rivalry between the Khaplang faction and the Isaac-Muivah faction of the NSCN, has also decided "not to encourage people to participate in the elections". Last time the Naga Hoho asked the people to boycott the polls.

In 1998, when Assembly elections were held in Nagaland simultaneously with the Lok Sabha polls, the ruling Congress(I) won all the 60 Assembly seats and the lone parliamentary seat unopposed as the two major Opposition parties, the National Democratic Movement (NDM) and the Nagaland People's Council (NPC), kept off in response to the boycott call of the underground organisations. But this time they have decided to contest the poll "to bring to an end the one-party rule and expose the Congress(I)'s misrule in the State".

The race for the Nagaland seat is mainly between K. Asungha Sangtam of the Congress(I) and Shurhozelie of the Opposition combine comprising the Nationalist Congress Party (NCP) led by Sharad Pawar, the NDM led by former Nagaland Chief Minister Hokishe Sema and the NPC led by Shurhozelie. The formation of the NCP in Nagaland was recently announced by P.A. Sangma, once an undisputed leader of the Congress(I) in the northeastern States. Shurhozelie has resigned as president of the NPC to contest as an independent. Also in the field are the BJP's N. Bhesto, who is the president of the State unit of the party formed recently, and the Lok Shakti's Akhei Achumi, who heads the party's State unit. Observers find the Congress(I) better placed. The BJP, according to observers, may cut into the Congress(I) votes in the urban areas of Dimapur populated by non-tribal people and the Opposition combine's votes among the tribal people in the hilly regions.

Announcing the candidature of Sangtam, Chief Minister S.C. Jamir said that the people suffered owing to the instability of the BJP-led 18-party coalition government at the Centre and cautioned that if the 22-party National Democratic Alliance led by the BJP was elected, it would only lead to another mid-term poll.

The Roman Catholic Church in Nagaland, which has formidable influence over tribal Nagas, has decided not to support any political party in the elections, sources in the Bishop's house at Dimapur said. The Nagaland Baptist Church Council (NBCC) general secretary, Zhabu Terhuja, said that the National Council of Churches in India (NCCI), reflecting the official stand of the Protestant churches in the country, had urged its congregation through a circular to vote for a secular and democratic party and asked the churches to play a "prophetic role". However, the NBCC would not tilt towards any party.

MEGHALAYA

THE Tura constituency in the West Garo Hills district of Meghalaya is set to witness a battle royal between Nationalist Congress Party (NCP) general secretary Purno A. Sangma and Atul C. Marak of the Congress(I). Sangma has won the seat six times in a row on the Congress ticket.

In the straight contest, while Sangma has to prove that he is the "uncrowned monarch of the Garos", the Congress(I) has to redeem its oft-repeated claim that "Garo Hills is a Congress(I) stronghold with or without Purno Sangma". Since 1977, barring a two-year period during which he was the Chief Minister, Sangma has been winning the Tura seat with ever-increasing margins on the Congress(I)'s "hand" symbol. This is the first time that he is contesting on a symbol (clock) other than "hand". "The people have become so used to voting for 'hand' that many of them might just continue with it, even if they have Sangma in mind," a senior Congress(I) functionary said.

The Meghalaya Parliamentary Forum (MPF), comprising the Congress(I) and the United Democratic Party (UDP), which has been running the State government for nearly a year, is breaking up, with the UDP setting up a candidate, S.D. Khongwir, against the Congress(I)'s P.R. Kyndiah in Shillong.

Although the UDP leadership is determined to keep the alliance going "at least till the elections are over", the grassroots workers including MLAs from Jaintia Hills have been extremely vocal in lodging their protest and want the alliance to break before the polls. Asked how they planned to campaign against the candidate of the Congress(I), which is their main ally in the government, senior UDP leader and Home Minister, S. Lyngdoh, said that they would not campaign against the Congress(I), but against its candidate, who has failed to project the State's problems in Parliament.

Relations between the UDP and the Congress(I) are bound to get strained even before the elections as the UDP is likely to support the NCP in Tura. In return, the UDP will seek the NCP's support for its candidate in the Shillong Lok Sabha constituency. It is a piquant situation with the UDP sharing power with the Congress(I) on the one hand and fighting it, on the other.

MANIPUR

ALL the major political parties in Manipur have severed their ties with their alliance partners and have fielded candidates of their own for the two Lok Sabha seats in the State. Failure of all efforts to bring together the forces against the NDA has led to multi-cornered contests in both constituencies. The NDA in the State comprises the ruling Manipur State Congress (MSC), a breakaway group of the Congress(I), the Federal Party of Manipur (FPM) and the BJP, while the Opposition Secular Democratic Front (SDF) includes the Manipur People's Party (MPP), the Communist Party of India (CPI), the Communist Party of India (Marxist), and the Janata Dal (Secular).

The Congress(I) was initially a constituent of the SDF, but pulled out at the seat-sharing stage as it demanded both seats for itself. The SDF and the Congress(I) announced candidates for the Inner and Outer Manipur (Reserved) constituencies. The Congress(I) has fielded in Inner Manipur Nimaichang Lawang, who unsuccessfully contested the last elections and R.K. Theko for Outer Manipur. Kh Mani Singh of the MPP is the SDF nominee for Inner Manipur and the CPI's Th Gangte for Outer Manipur.

The NDA partners also are not united. The BJP declared its support to former MP Thounaojam Chaoba of the Manipur State Congress (MSC), its ally in Inner Manipur, but wanted to contest the Outer Manipur seat. The MSC, however, fielded its candidate (Soso Lorha) in Outer Manipur. The State BJP president, Haobam Bhuban, said that the MSC's "betrayal" led them to field former MP Kim Gangte in Outer Manipur. The MSC describes its fight with the BJP as a "friendly" one.

MIZORAM

IN Mizoram, the most peaceful State in the northeastern region, the contest for the lone Lok Sabha seat is between the Mizo National Front-Mizo People's

Conference combine and the Congress(I)-Mizo National Front (Nationalist) alliance. The MNF-MPC has fielded a common candidate, Vanlalzawma, against the candidate of the Congress(I) and the MNF(N), Rokamlova. There is a third candidate in the fray, H. Vanchhawng of the BJP, which has hardly any base in this tiny hill State.

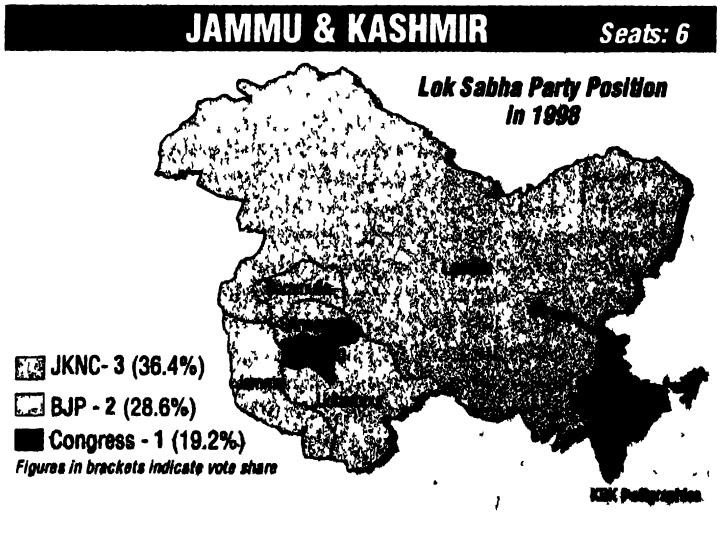
The MNF-MPC combine defeated the Congress(I) in the November 1998 elections and brought to an end the decade-long Congress(I) rule under Chief Minister Lalthanhawla. The alliance won more than three-fourths of the 40 Assembly seats.

The Congress(I)-MNF (Nationalist) combine invited all like-minded parties to support its candidate. The MNF (Nationalist) was formed in 1977 by Lalduhawama following his differences with Zoramthanga, the present MNF Chief Minister, and his defeat in the organisational elections. ■

PRAVEEN SWAMI

IN a corner of downtown Srinagar, National Conference flags, bright red and bearing the sign of the plough, share space with a green neon billboard advertising religious leader and secessionist politician Umar Farooq. This merging of icons, representative of a larger tacit alliance that is in place, is just one of the many ironies that this bitterly fought Lok Sabha elections have thrown up in Jammu and Kashmir. The democratic process that began in 1996 has set off a genuine competition for political space and legitimacy, forcing the strangest of alliances among mainstream parties and those hostile to them. But this important gain does little to conceal the fact that these elections, like those of 1996 and 1998, are being held in the middle of a festering low-level war.

Umar Abdullah's campaign for the Srinagar Lok Sabha seat illustrates just why the N.C. is in a state of panic perhaps unprecedented in the party's history. Party faithful travelling in large numbers along with the Chief Minister's son's campaign convoy constitute a major part of the crowd at village meetings. Residents of the constituency make no secret of their frustration with poor governance, a moribund economy, worsening violence, and for that matter the N.C's alliance with the Bharatiya Janata Party in New Delhi. Umar Abdullah's dynastic credentials appear to be wearing thin.



Mehbooba Mufti, who resigned her Bijbehara Assembly seat and her position as Congress Legislature Party chief to found the People's Democratic Party (PDP) in July, ought to be on a roll given her rival's apparent lack of popularity. But former Union Minister and Anantnag MP Mufti Mohammad Sayeed's daughter has her share of problems. Plans to recast the PDP as a reincarnation of the Muslim United Front (MUF), the broad coalition of anti-N.C. forces which fought the 1987 Assembly elections, have not quite worked. The MUF, whose leading candidates included Jamaat-e-Islami leader and Hurriyat Conference chief Syed Ali Shah Geelani and now-Hizbul Mujahideen "supreme commander" Mohammad Yusuf Shah, rejected democratic politics after alleged N.C. poll fraud in 1987.

The PDP simply has not been able to join up with the allies it had hoped for. Despite the crowds Mehbooba Mufti attracts, she is certain to lose votes in Shia Muslim-dominated pockets like Budgam to her powerful Congress(I) rival, religious leader Aga Sayyed Mehdi, incidentally the brother of Hurriyat Conferenc leader Aga Sayyed Hassan. Given the fac that the N.C. is likely to hold on to strong holds around Ganderbal and Kangan Mehbooba would have hoped for taci Hurriyat Conference support in urbar Srinagar, of the kind that helped he father take the Anantnag seat in 1998. Bu that support has not materialised, fo interesting reasons.

Mufti's central poll platform, direc negotiation with insurgent groups and what she describes as "all alienated sections of the Kashmiri people", directly hits the Hurriyat Conference, eroding its constituency. The N.C. has moved rapidly to exploit this fissure, allowing the Hurriyat to conduct its anti-campaign poll until the end of August. Such anti-election campaigns met with arrests in 1996 and 1998, on the grounds that the Hurriyat Conference's links with terrorist groups ensured that the calls for a poll boycott were coercive in character. This time around the N.C. allowed Hurriyat Conference leaders to move freely through the Valley, thus ensuring low turnouts which would erode the PDP's prospects.

Hurriyat Conference leaders were finally arrested on August 26 and 27, leading to sporadic street battles in Srinagar. Interestingly, Union Home Ministry officials told *Frontline* that the State government had refused to respond to earlier formal requests to arrest Hurriyat leaders. The arrests finally came about as a result of mounting disquiet in New Delhi over the prospect of a major law and order problem. But from the PDP's point of view the arrests could have come far too late to prevent low turnouts in urban Srinagar and in towns such as Baramulla, Sopore and Anantnag.

PDP candidates outside Srinagar are also facing problems. In Baramulla, efforts failed to persuade rebel N.C. leader Saifuddin Soz not to contest. Soz could attract enough anti-N.C votes to create problems for the PDP candidate, New Delhi-based lawyer Muzaffar Baig. Here the Congress(I) supports Soz's candidature, and party leaders such as Taj Mohiuddin with significant pockets of support from Gujjars, could cut into votes the PDP might

PRAVEEN SWAMI

People's Democratic Party candidate Mehbooba Mufti at an election meeting; (left) a section of the crowd at the meeting. (Below) CPI(M) leader Mohammad Yusuf Tarigami.

have hoped to attract in areas such as Langate and the Baramulla Kandi belt. Baig's prospects have also been hurt by the fact that the principal campaign organiser of his vibrant but unsuccessful 1998 challenge, Abdul Rashid Shaheen, is now his N.C. rival.

In Anantnag, the Lok Sabha seat Mufti Mohammad Sayeed won in 1998 to signal the rise of anti-N.C. forces in the Valley, similar complex equations render the outcome difficult to predict. In Sayeed's favour this time is the fact that the N.C. had great difficulty finding a credible candidate; several top leaders refused to take on the PDP supremo. N.C. leader and State Revenue Minister Ali Mohammad Naik's influence is restricted to two Assembly segments, Pulwama and Tral. The Congress(I) candidate, Peerzada Sayeed, also does not appear to have a broad support base, although observers believe that he could still attract votes from those alienated by the PDP leader's chronic party-hopping.

But Mufti Mohammad Sayeed's real problem is a surprise contender – Communist Party of India(Marxist) leader and Kulgam MLA Mohammad Yusuf Tarigami. The vigour of Tarigami's campaign has amazed most observers, and intelligence sources believe that he will command a formidable number of votes in at least three segments other than his parent constituency – those of Wachi, Noorabad and Shopian. Those votes will cut into the prospects of both the N.C., which backed Tarigami in the 1996 Assembly elections, and of the PDP. The success of the campaign, conducted in an area traditionally considered to be among the most socially and religiously conservative in Jammu and Kashmir, show that Tarigami's individual hard work has paid off and that the room for progressive politics has remained untapped.

S. SUBRAMANIAN

OUTSIDE Kashmir, the contest is playing itself out on depressingly communal lines. In Ladakh, consisting of the twin entities of largely Buddhist Leh and Muslim Kargil, parties have focussed their efforts on deepening communal divisions. The battle centres on the Congress(I)'s Leh-based Thupstan Tsewang, and the N.C's Ghulam Hassan Khan. The N.C. had won in 1998 with 59.3 per cent of the vote to the Congress(I)'s 30.28 per cent, but block Buddhist voting in Leh could alter the result this time. Chronic electricity and water shortages in Leh, caused by the breakdown of the Stakna hydroelectric project (the State government claims there are no funds to repair it), have fuelled anti-N.C. sentiment here, sadly exacerbating anti-Muslim sentiment.

In the two Jammu region constituencies of Udhampur and Jammu, similar communal issues have come to the fore. Both Udhampur's BJP candidate and sitting MP Chaman Lal Gupta, and his Jammu counterpart Vaid Vishnu Dutt, have however suffered from their alliance with the N.C. The Congress(I) has been quick to exploit Hindu resentment against the N.C., pointing to the fact that the BJP-led government fell the day Soz rebelled against it. The N.C. has sought to move on in the midst of this fray, but both its candidates, Jagjivan Lal in Udhampur and R.S. Chib in Jammu, have a history of shifting loyalties, which has done little to endear them to the party's local cadres.

PERHAPS the worst problem in this election will be security. Security personnel have been doing their best to keep the peace. On August 26, top terrorists Sajjad 'Grenade' Magray, Shabbir Bhaduri and Parvez Ahmad, responsible for the murder of 12 migrant brick-kiln workers at Anantnag in June, were shot dead at Gopalpora village along with two unidentified Pakistani terrorists by a joint team of the Jammu and Kashmir Police, the Border Security Force and the Rashtriya Rifles. Two others involved in the massacre, Mohammad Hussain Dar and Mohammad Mubarik Koka, were killed on August 15. The massacre had spread a wave of terror through rural

Anantnag, with obvious election-time implications.

But such successes are increasingly rare, and officials are worried about the presence of large groups of terrorists throughout the State. "Let's put it this way," says Anantnag Senior Superintendent of Police Farooq Khan. "I'm keeping my fingers crossed." In 1998, 354 additional companies of troops had been deployed to keep the peace. This time just eight companies have been made available, although the Army's counter-insurgency deployments have been sharply reduced after the Kargil War. But there have been few protests from the State government. This thinned security comes at a time of escalating violence, a fact that has prompted cynics to suggest that the N.C. might not be entirely unhappy to have as few people vote as possible. ■

V. VENKATESAN

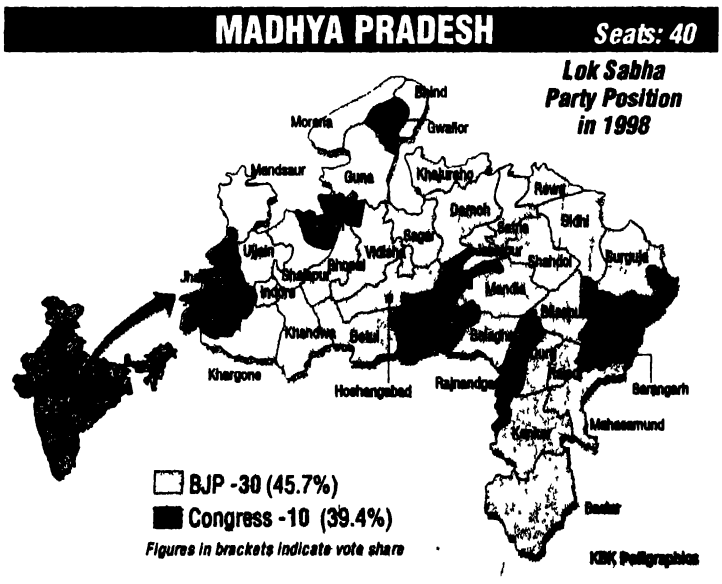
AS the people of Raghogarh, in the Rajgarh Lok Sabha constituency, gathered to take a close look at the screen-incarnation of Krishna, they were hardly amused. Wearing the traditional turban and shawl, Nitish Bharadwaj, who played the role of Krishna in the tele-serials *Mahabharat* and *Krishna*, sought his second stint in the Lok Sabha, in the name of dharma.

"When I got the party ticket first to contest from Jamshedpur in 1996, Atalji, who calls me Bhagwan, asked me to fight the Kamsa in Bihar, Laloo Prasad Yadav," Bharadwaj said, eliciting a few claps from the committed BJP workers. The bulk of the crowd remained mute.

The reason for the tepid response was not far to seek. Bharadwaj was the BJP's answer to the Madhya Pradesh Chief Minister, Digvijay Singh, who hails from Raghogarh. Here, Digvijay Singh is literally contesting by proxy, as his younger brother Lakshman Singh seeks re-election to the Lok Sabha.

Bharadwaj makes the most of Lakshman Singh's lacklustre performance as member of Parliament. "I know him as a good colleague during my two-year term as MP. I have hardly seen him speak in Parliament, or take any interest in the proceedings", he told the audience, to whom the Rajasaheb, as Digvijay Singh is affectionately known, matters more than his younger brother. It is said that Lakshman Singh hardly keeps contact with his electorate, and does not recognise even the local party workers. He is also accused of being arrogant. In contrast, Digvijay Singh remembers the names of most party workers and prominent citizens, and makes it a point to oblige them whenever they seek some help.

The charge of being an outsider to Rajgarh haunts Bharadwaj. "Why take a risk by voting a Mumbaiwallah, and earn the anger of Rajasaheb?" said a local resident. Even the BJP workers find the going tough. Pramod Valmik, a BJP worker, said soon after the public meeting:"Even if 25 persons in this gathering vote for him, what is the use? Here, people prefer the local candidate."



Bharadwaj declared that he would leave the country if the Congress(I) was returned to power. He did not contest the 1998 Lok Sabha elections, purportedly because of his professional commitments as an actor. He claims he is now in the field at the behest of the Prime Minister, Atal Behari Vajpayee. The tepid response of the Raghogarh electorate perplexed him. He told the audience that he would interpret it as their determination to vote for him on September 11, when Rajgarh and 13 other constituencies in the State go to the polls.

Bharadwaj dismissed the Congress(I)'s claim to offer a stable government and questioned Sonia Gandhi's prime ministerial ambitions. But to the Rajgarh voters, the question of Sonia Gandhi's citizenship hardly matters; the Congress(I) posters here carry mostly Digvijay Singh's picture, Lakshman Singh figuring only in a few.

Indeed, the Malwa region, which had been the BJP's forte in the earlier Lok Sabha elections, presents a mixed picture today, with the Congress(I) set to make strategic gains. In Bhopal, Union Minister Uma Bharati also suffers the tag of outsider. Reluctant to contest from her earlier seat, Khajuraho, where her fortunes had taken a nosedive, Bharati demanded from the party's top leadership an urban constituency, in view of her ill-health. After naming former Chief Minister Kailash Joshi as the candidate from Bhopal, the BJP's central leadership buckled under Bharati's pressure. Joshi's supporters took umbrage at the leadership's decision to replace him and burnt Bharati's effigies. Joshi's son Deepak Joshi was slated to join the Congress(I), but the party's spokesperson, Prabhat Jha, denied it.

Sensing the mood, Bharati is on the defensive. In her public meetings, she dismisses the "outsider" tag, saying if Sonia Gandhi, who was born in Italy, has the right to contest from Bellary, why can't she shift from Khajuraho to Bhopal, both in the same State. Her rabid views on Hindutva and her role in the Ramjanmabhoomi movement have given her a firebrand image. She says she is not *"Danga* Bharati" (riot Bharati) as made out by her rivals. She tries to convince the voters that her concept of Hindutva involves equal respect for all religions, even while preserving her religious identity.

Uma Bharati draws huge crowds, not necessarily because of her charisma. People who love to hate her, also come to listen to her. Says Jaspal Singh, an employee of BHEL in Bhopal, who came to listen to her:"I will vote for the Congress(I) candidate, Suresh Pachouri, because

the BJP has failed to fulfil its promises." According to him, the BJP MLA, Babulal Gaur, promised to demand abolition of professional tax, but did nothing. Bharati promises to bring Narmada water to Bhopal, but sections of her audience find it hardly convincing. A few young voters, however, were taken by Bharati's rhetoric. They felt that the Congress(I) won three of the four Assembly seats in Bhopal last year because of the onion shortage. This time, the issues were different and people wanted Vajpayee to continue as Prime Minister, they said.

Madhya Pradesh Chief Minister Digvijay Singh with his brother and Congress(I) candidate in Rajgarh, Laxman Singh.

Nitish Bharadwaj, the BJP's candidate in Rajgarh.

The mood is upbeat in Suresh Pachouri's camp. Pachouri, who hails from Bhopal, is also the leader of the Congress(I)'s All-India Seva Dal, and is credited with nurturing the constituency over the years. He is assured of the minority vote, which is unlikely to go to the Muslim candidate, Aslam Sher Khan. After a brief stint in the BJP, the former Olympian and a Minister in the Narasimha Rao Government, is now the National Congress Party (NCP) candidate. Says Aftab Ahmed Khan, of Barah Mahal, Mohalpura, who was present at Suresh Pachouri's home: "Even Aslam's family members are not likely to vote for him." Pachouri is also sure to get the votes of the upper castes, who dislike Bharati's backward caste tag. Observers cite the "mammoth" rally in Bhopal on August 28, in support of Pachouri when he filed his nomination, as proof of his likely victory.

The BJP is trying to paper over the apparent divisions in the party triggered by Uma Bharati's candidature. The party spokesperson, Prabha Jha, said: "Joshi was against the decision-making process in the party, which first announced his name for the Bhopal seat, and not the decision as such." If S.C. Verma could win the Bhopal seat successively, despite being an outsider, why can't Uma Bharati, he asked. Verma refused to contest this time, apparently because of frustration of not being made a Minister. Verma's reason was that the BJP-led Ministry did not honour his promise of declaring the entire Bhopal, which saw the gas tragedy in 1984, as gas-affected.

The BJP secured 30 out of 40 Lok Sabha seats in M.P. in the 1998 elections, primarily because the Congress(I) was not united. Leaders such as Arjun Singh and Madhavrao Scindia, who had left the Congress on the eve of the 1996 elections, had just returned to the party, after Sonia Gandhi took over the reins. After he led the Congress(I) to a remarkable return to power against all odds in the 1998 Assembly elections, Digvijay Singh is now the unquestioned leader and had his say in the selection of candidates. With his rival Arjun Singh keeping away from the State politics (Arjun Singh is not contesting the elections, after two successive defeats), Digvijay Singh is relatively free from factional threats. Hence, his campaign strategy, which helped him in the Assembly elections, is expected to help the Congress(I) secure the majority of the Lok Sabha seats as well.

Madhavrao Scindia, Congress Working Committee member and AICC general secretary, has moved from Gwalior, where he has won several times, to Guna, where he made his debut. Scindia has conceded that his victory margin in Gwalior has been declining, and with his mother, Vijayraje Scindia opting out of electoral contest because of ill-health, Guna (which she held) was his natural choice. Scindia is expected to win easily, with the BJP fielding a weak candidate.

Indore, another BJP citadel in the earlier Lok Sabha elections, is going the Congress(I) way. Former MP Sumitra Mahajan initially declined the party ticket sensing factionalism in the local unit, which drastically reduced the BJP's tally in the Assembly elections to three out of the eight Assembly segments. Although she bowed to the party's diktat, she has refrained from making huge expenditure on her campaign.

While the city is flooded with Congress(I) candidate Mahesh Joshi's posters, cut-outs and the party's flags and banners, the BJP's campaign is subdued. Its strategists lay emphasis on door-to-door canvassing rather than incurring huge expenditure on publicity. Sumitra Mahajan and her supporters claim that she had deliberately done this to save money that could be offered to the victims of the Kargil war. "Rs.1 lakh has already been given to the widow of a Kargil hero from Indore, and we intend to contribute more after the elections", she told *Frontline*. Asked why the BJP is not following her example elsewhere, she said it was her decision and not the party's. In her roadside meetings, Mahajan makes free use of the victory in the Kargil war to promote her electoral prospects. She

accuses the Congress(I) of not willing to celebrate this victory

The Union Minister for Labour, Satyanarain Jatia appears to be a sure winner in Ujjain reserved for Scheduled Castes Although the Congress(I) won the majority of the Assembly seats here in the 1998 elections Jatia appears to have made a remarkable recovery People speak highly of his role in the disbursement of Rs 15 crores from the Provident Fund to 6,400 employees of Vinod Mill now closed He has also arranged payment of Rs 8 10 crores towards their rehabilitation His role is also acknowledged in the payment of Provident Fund amount to the employees of Indore Textile Mill A Congress(I) worker admitted that it was not easy for the party candidate and Scindia loyalist Tulsi Silawat to win the seat The BJP s chances in the other two reserved seats Dhar (S T) and Shajapur-Dewas (S C) – the Congress(I) State unit president, Radhakish in Malaviya is contesting from here – however, do not appear to be bright ■

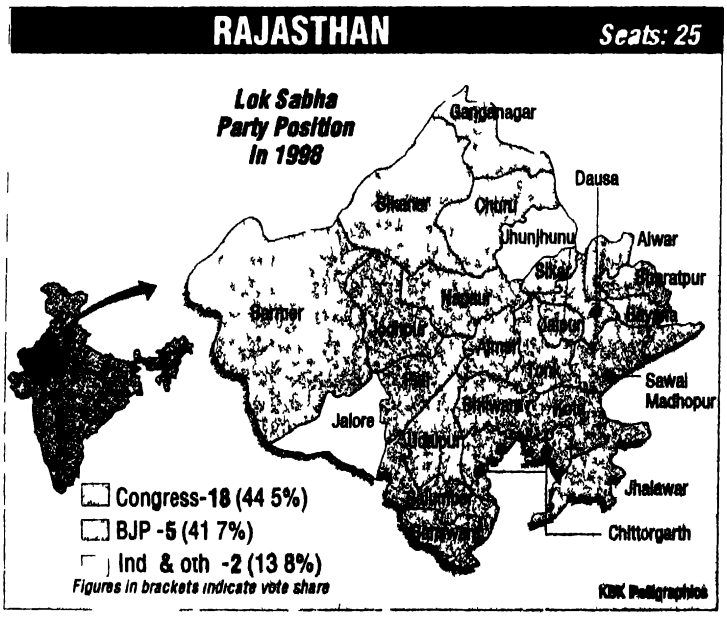
RAJASTHAN

SUKUMAR MURALIDHARAN

MODERNITY and progress are obvious aliens in the Mewat region which straddles the trijunction of Rajasthan, Haryana and Uttar Pradesh Stagnancy and squalor are the most evident realities here

The village square fills up rapidly as senior Congressman K Natwar Singh drives into Gulpara in the Bharatpur Lok Sabha constituency of Rajasthan Women are conspicuous by their absence as the dominant Meo community turns up in strength to receive 'Kunwar saheb – a title that Natwar Singh enjoys by virtue of his status as an adoptive member of the dynasty that once ruled Bharatpur But as he speaks in support of the candidature of his son, Natwar Singh is unsparing in his criticism of the feudal dynasty

In seven of 12 elections, he points out, Bharatpur returned candidates from the palace to Parliament In the other five Lok Sabhas, it was represented by senior members of the Congress The sordid condition of civic amenities in the region is a direct consequence of the benign neglect it suffered while the presumptive rulers sought unsuccessfully to don the garb of elected representatives The choice then was clear for the constituency – Jagat Singh of the Congress for progress



The once powerful feudal dynasties in Rajasthan have of late encountered a significant waning of political influence From consistent opposition to the Congress, the royal remnants who continue to dispose of substantial personal fortunes have moved towards a phase of partial reconciliation And where the Congress has been reluctant to take them on board, the BJP has been eager to seek their favour

Royalty has spread its favours evenly among the two main contenders in the neighbouring constituencies of Bharatpur and Alwar In Bharatpur, Vishwendra Singh who stands in the direct line of descent of the last recognised maharaja, carries the mantle for the BJP In Alwar, the Congress has fielded Mahendra Kumari, widow of the man who killed himself in 1977 while under pressure from Indira Gandhi s Emergency regime to cede control of his vast feudal patrimony to the government

Claims of feudal allegiance apart, neither candidate seems to carry very much credibility, for reasons linked to their own eccentric political wanderings over the years Vishwendra Singh won from Bharatpur as a Janata Dal candidate in 1989, but quit the party and resigned his Lok Sabha seat in 1990 to register his opposition to the implementation of the Mandal Commission recommendations on reservations for other backward classes (OBCs) Today the Jat community that he nominally belongs to is in ferment over the denial of OBC status to it The BJP has embraced the cause of the Jats in the evident hope of winning over a traditional Congress constituency But the scion of the Bharatpur palace finds himself in a rather unviable position on this account He also has to contend with uneasy memories of a defeat in the Assembly elections of 1998 from the Kumher segment of Bharatpur

Mahendra Kumari, who won Alwar for the BJP in 1991, now seeks the seat as a Congress candidate Herself from the former ruling dynasty of Bundi, she confronts a formidable caste consolidation of Ahir voters that her BJP adversary Jaswant Yadav is marshalling And the recent history of the Alwar feudal dynasty s tortured relationship with the Congress makes her change of heart less than authentic in the popular perception

Widowhood and Congress perfidy were prominent motifs in Mahendra Kumari's campaign for the Lok Sabha in 1991 She won in a landslide but could not quite effect the transition from ruler by dynastic investiture to elected representative She was denied the BJP ticket in 1996 on account of her undistinguished five-year record but came back fighting as an independent candidate in 1998, losing by the narrowest of margins to the Congress' Ghasi Ram Yadav

As Mahendra Kumari was till recently with the BJP, her adversary Jaswant Yadav was likewise prominent in local Congress councils He only shifted loyalties to the BJP when denied the Congress ticket in 1996, and lost narrowly on account of a substantial defection of Ahir voters to a competing candidate on the Janata Dal ticket He finished third in 1998 since a large part of the BJP's traditional constituency migrated towards Mahendra Kumari's independent candidacy and the Congress nominee was an Ahir of greater stature.

Jaswant Yadav evident-

ly believes that the Vajpayee wave will this time around overwhelm the aversion that the BJP's core constituencies in Alwar have had towards an Ahir candidate. Should this indeed happen, then the consolidation of community votes should propel him to victory in his third attempt at the Lok Sabha.

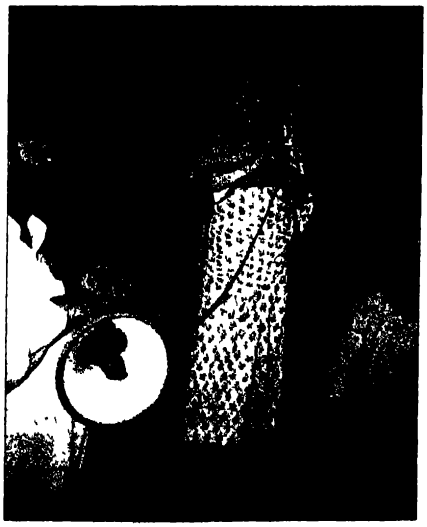
For the Congress, the calculation is that the Brahmin community in Alwar – estimated to be as numerous as the Ahir – will stick to custom and oppose Jaswant Yadav. Add on the entirety of Mahendra Kumari's Rajput community and the larger part of the Meo voters and she should sail through, claim local Congress functionaries. The implicit calculation here is that the hardening of caste consciousness within the Ahir community will impel a consolidation of all others under the Congress banner.

R V MOORTHY

Senior Congress(I) leader Natwar Singh with son Jagat Singh, who is the Congress(I) candidate in Bharatpur.

Caste demography still remains an uncertain guarantee of success, forcing both parties to bring to the foreground the issues they perceive as the larger ones. BJP supporters insist that Atal Behari Vajpayee's leadership is the sole issue before the electorate. In private, they concede that their candidate's loyalty is rather uncertain and would only be cemented by a convincing national mandate in favour of the BJP. Jaswant Yadav himself makes much of the foreign origins of the Congress president and questions his opponent's new-found allegiance to that party.

Mahendra Kumari, for her part, is forced into certain curious inversions by her candidacy on behalf of the Congress. All her efforts on behalf of the constituency during her previous tenure in Parliament, she says, were thwarted by the State government of the time. In contrast, she hardly encountered any serious obstacles at the central level. The irony of the claim is that the State government then was under the control of Mahendra Kumari's own party while the central administration was under the Congress. Rapid switches of political allegiance evidently also call for the extensive reinterpretation of recently transpired events.



Jagat Singh, the 30-year-old son of Natwar Singh, former Union Minister, faces a somewhat less acute problem of credibility in neighbouring Bharatpur. Natwar Singh insists at numerous campaign halts on behalf of his son that he was among the first to raise the issue of OBC-status for the Jat community. The measure was blocked not so much by the Congress government in Jaipur as by the BJP-led government at the Centre. Vajpayee's recent Sikar declaration endorsing the Jat demand fails to carry credibility, argues Natwar Singh. Indeed, when a delegation of 19 MPs recently met him to plead the Jats' case, Vajpayee made his opposition more than evident.

Yet Natwar Singh's advocacy of the Jat cause confronts certain other problems of a fundamental kind. The National Commission on Backward Classes has recommended that Jats in Rajasthan be accorded OBC status since they meet all the required criteria, except in Bharatpur and Dholpur districts, where they were the ruling community. This would make for a rather unwieldy and potentially discriminatory system of affirmative action, which the Jats of Bharatpur are intent on opposing.

Chief Minister Ashok Gehlot insists that the matter should go through extensive scrutiny by the Rajasthan State Commission on Backward Classes. As the State's first Chief Minister from an OBC background, Gehlot is keen to ensure that existing beneficiaries are not compelled to share the limited advantages of affirmative action with the substantial Jat community. His political blueprint allows for a limited desertion of Jat votes, which in his calculation would be more than offset by a consolidation of OBCs under the Congress banner.

As far as the more basic problem of electoral coalition-building is concerned, the Congress candidate from Bharatpur faces the prospect of a split in the Meo vote. Bhairon Singh Shekhawat, the BJP's old war horse, has ensured the candidacy of a Meo, Nasru Khan, on the Bahujan Samaj Party ticket. Nasru Khan won from Lacchmangarh – a segment of the Bharatpur Lok Sabha constituency – in the 1993 Assembly elections as a Janata Dal candidate. He subsequently switched loyalties to the BJP and won himself a ministerial berth in Shekhawat's Cabinet.

Nasru Khan's entry is not good news for the Congress. Meo Muslims account for some 150,000 votes in Bharatpur and the Congress depends crucially on their endorsement. The party draws some solace from the fact that Chaudhary Tayyab Hussain, the acknowledged feudal patriarch of all Meo clans, has committed himself to an active campaign role in Bharatpur – a commitment further cemented by Natwar Singh's energetic advocacy of his son Zakir Hussain's candidacy on the Congress ticket from Faridabad in Haryana. The parents have, in a sense, bonded together in a shared quest for their sons' political well-being.

R V MOORTHY

Mahendra Kumari, Congress(I) candidate in Alwar.

THE constituency of Jhalawar, which is a geographical protuberance tucked into the erstwhile principality of Gwalior in neighbouring Madhya Pradesh, offers another glimpse of the many facets of royalty in politics. Vasundhara Raje Scindia, the BJP candidate, goes into battle with a double advantage – direct descent from the Gwalior feudal lineage and marriage into the Dholpur palace. When the Congress ticket for Jhalawar was given to Abrar Ahmed, there were murmurs that sibling influences were at work to ensure a weak candidate who would not stand much chance against a four-time winner. But Abrar Ahmed is by all accounts putting up a spirited fight. And the seat that had seemed to be a certain one for the BJP now does not quite appear to be so.

In a half-century of independence, the

feudal political idiom of subject and sovereign has gradually yielded place to the modern notion of a citizen's civic relationship to the representative state. This transition remains incomplete at best in most of the country, though nowhere more so than in Rajasthan. This in turn makes for a self-perpetuating process of economic and social backwardness. The conditions that prevail in the Mewat region, virtually contiguous with the national capital, are a continuing reminder of the grim human consequences of feudal remnants in representative politics. ■

T.S. SUBRAMANIAN

WHETHER it is the Coimbatore, Rasipuram, Nilgiris or Salem constituency, it is development issues and local problems such as the closure of cotton mills, spinning mills and engineering units that have occupied centre stage in the election campaign in Tamil Nadu. This is especially striking in Coimbatore, the textile city, which saw anti-Muslim violence in November 1997 and retaliatory bomb blasts by Al-Umma, a Muslim terrorist organisation, on February 14, 1998. The blasts led to a sharp decline in the economic well-being of Coimbatore. R. Nallakannu, Communist Party of India (CPI) candidate, C.P. Radhakrishnan, Bharatiya Janata Party nominee who is seeking re-election, and S.R. Balasubramaniam of the Tamil Maanila Congress, each says that if elected his mission will be to "restore the glory of Coimbatore as South India's Manchester".

The issues that dominate the campaign in Coimbatore are the closure of mills and engineering industries and the slump in the jewellery, scrap iron, wet-grinder and pumpset trade. The slump has followed the blasts and the restrictions imposed by the police.

Coimbatore was one of the three Lok Sabha seats the BJP won for the first time in Tamil Nadu. The other two were Tiruchi and the Nilgiris. While Radhakrishnan is backed by the Dravida Munnetra Kazhagam (DMK), the Marumalarchi Dravida Munnetra Kazhagam (MDMK), the Pattali Makkal Katchi (PMK) and the Tamilaga Rajiv Congress (TRC), Nallakannu has the support of the All India Anna Dravida Munnetra Kazhagam (AIADMK), the Congress(I), the Communist Party of India (Marxist), the Indian National League (INL) and the Tamil Nadu Muslim Munnetra Kazhagam (TMMK). With the TMC are two Dalit organisations, Puthiya Tamilagam (P.T.) and the Dalit Panthers; the Indian Union Muslim League; and the Janata Dal (Secular).

IT is around 8-45 a.m. at Nanjundapuram in Coimbatore. This is a typical working class locality, with rows of tile-roofed houses. Most of the residents are laid-off employees of cotton mills and spinning mills. Ahead of Nallakannu comes a car from which a Congressman announces: "Nallakannu was jailed for seven years in the Nellai conspiracy case. He is a freedom-fighter who declined to accept the freedom-fighter's pension. He is a friend of the proletariat. He is a trade unionist. He is a man of integrity."

As his jeep weaves through the lanes and halts, a crowd gathers. In his speech, Nallakannu skilfully weaves national issues with local problems. "In the 15 months that the BJP-led government has been in power, cotton mills, spinning mills and engineering industries in Coimbatore have closed down. There is a cash crunch. There are no remunerative prices for agricultural produce. Trade links between Coimbatore and Kerala have snapped because of police harassment. The BJP has been trying to divide people into Hindus, Muslims and Christians. But we are all Indians and we need a secular Government at the Centre."

Nallakannu points to the nearby coconut groves where the trees have wilted because of blight. The Tamil Nadu Government had taken no action to halt the spread of the disease, he alleges. If elected, he will work for the formation of a separate directorate for coconut as in Kerala, Nallakannu says. Every 200 metres or so, Nallakannu stops to deliver similar speeches.

Not dissimilar in style is Radhakrishnan's campaign, but the issues he takes up are different. As the bearded, 42-year-old Radhakrishnan waves out, he establishes an instant rapport with people. His jeep halts at Arivoli Nagar, Senathichettipalayam, about 14 km from Tirupur, the hosiery town.

A crowd of women, children and men gathers. Radhakrishnan tells them: "We need a strong Bharat and India should march forward into the 21st century under the leadership of Vajpayee. The last three elections have entailed an expenditure of Rs.3,300 crores for the Government. You should put an end to this confusion. The Pandiar-Punnampuzha scheme and the Avinasi-Athikadavu scheme to bring you drinking water and irrigation facilities will remain a pipedream if there is no stable government at the Centre. Vajpayee called four Chief Ministers to Delhi and solved the Cauvery water issue in 48 hours. So please vote for lotus."

Elsewhere, Radhakrishnan points out that it was he who got spinning mills exempted from excise duty which P. Chidambaram, as Union Finance Minister, had earlier denied. His another "achievement" was the inclusion of spinning mills in the scheme for modernisation of the textile industry. He also takes credit for the introduction of train and air links between Coimbatore and New Delhi.

There is a riot of colours all over Tiruppur town and nearby Palladam. K. Subbarayan of the CPI is the legislator from Tirupur, which has hundreds of hosiery units. It is not surprising, therefore, that the CPI has mounted a high-intensity campaign here.

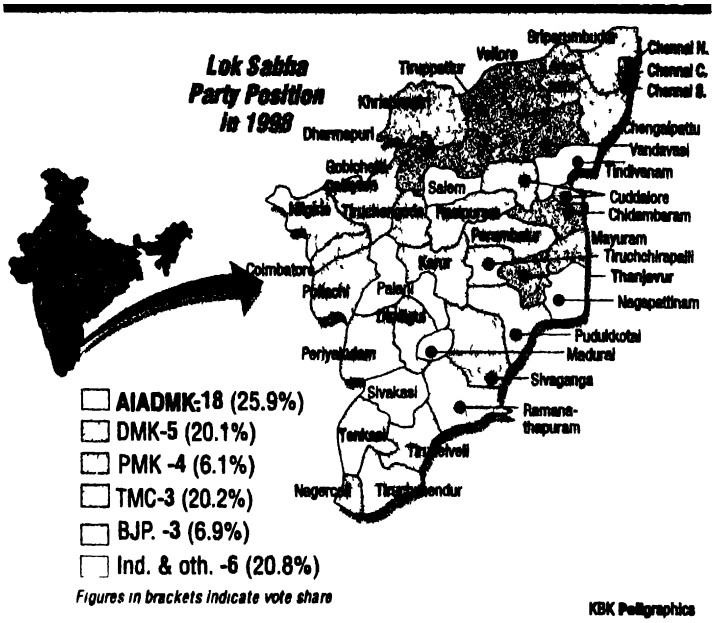
Travelling in an open jeep, TMC candidate Balsubramaniam stops every few hundred-metres at Five-Corner junction, Town Hall, Oppanakara Street and so on, in the heart of Coimbatore city. His speeches are crisp. "I will be in the field whatever be your problem. I came here on foot during the communal riots. I will reply to your letters. Only communal amity will make trade and commerce prosper in Coimbatore," he emphasises repeatedly. He alleges that it is the BJP that "ruined" Coimbatore and it was AIADMK general secretary and former Chief Minister Jayalalitha who was responsible for the advent of the BJP in the city. The DMK, which earlier opposed the BJP, has now turned its ally, he says, and makes a request: " Please, therefore, vote for the cycle symbol."

Kottaimedu, the nursery of Al-Umma, is densely populated with Muslims. Resentment runs high here because the police checkposts are back and the police sieve vehicles that enter the area. P.A. Badurudeem, Kottaimedu branch secretary of the CPI, describes the checkposts as "the arrest of public at large." A. Sulaiman and A. Mohammed, both CPI members, assert: "All (Muslim) votes here will go to Nallakannu."

The BJP has not made Islamic fundamentalism its main poll plank now as it did in 1998. This is not surprising because it is

now in the company of the DMK, which was earlier perceived as soft towards Al-Umma and the TMMK. If there is any reference to to Islamic fundamentalism, it is limited to accusing the TMMK of being the front organisation of Al-Umma and charging the AIADMK, the CPI(M) and the CPI with supporting it.

In Salem, with no communal hangover of Coimbatore, there is a carnival atmosphere. The contest is a high-profile one, between TRC founder and Union Petroleum Minister Vazhappadi K. Ramamurthy and former State Minister T.M. Selvaganapathy of the AIADMK. Another important candidate is the TMC's R. Devadoss.



Ramamurthy's main election office in Salem is a beehive of activity with DMK, MDMK, PMK and TRC cadres working in tandem.

But Selvaganapathy is not one who would shy away from a fight. There is good coordination among AIADMK, Congress(I), CPI(M) and CPI cadres. Jayalalitha addressed an election meeting at Bose Maidan, Salem, on August 29 and the big crowd has enthused Selvaganapathy.

If there is an air of confidence about Ramamurthy's campaign, it is in no small measure owing to the more than 1.5 lakh cooking gas connections given to people in his constituency. Ramamurthy is unfazed about Jayalalitha raking up the issue of cooking gas connections. "I know how many AIADMK MPs got thousands of gas connections from me," he says, and he names them too. He adds, "I am prepared to give the details. I gave them connections even after my party's alliance with the AIADMK broke."

If Ramamurthy is confident in Salem, the AIADMK seems to be on a strong wicket in neighbouring Rasipuram, reserved constituency where the main contestants are Dr.V. Saroja (AIADMK), who seeks re-election, C. Udaya Arasu (PMK) and Dr. C. Natesan (TMC).

As one drives from Salem to Rasipuram, there is palpable disillusionment in the villages with the parties ruling at the Centre and in the State because of the unemployment in the powerloom sectors, the hardship of tapioca growers with the slump in the sago industry, and the crisis in the vehicle body-building industry at Namakkal, the hub of the lorry trade. Women voters seem to be solidly with Jayalalitha here and elsewhere.

Alavaipatti has about 5,000 powerlooms. According to Krishnan, a jobless weaver, the looms have been idle for the past six months. Weavers used to get Rs.8 for weaving a metre but with export orders drying up, this has come down to Rs.4. Many weavers have begun to work as agricultural labourers, Krishnan says.

In the Rasipuram town, AIADMK cadres have gathered in strength for Jayalalitha's meeting, which will start around 3-30 p.m. At the venue, adjacent to the bus treminus, scores of highpowered lamps are on at 3 p.m. in the bright sun. Several vendors sell stickers and badges with pictures of Jayalalitha and AIADMK founder and former Chief Minister M.G. Ramachandran. A vendor volunteers a piece of information: "AIADMK cadres do not buy badges or stickers with a picture of only Jayalalitha. They prefer badges with pictures of both MGR and Jayalalitha."

JAYALALITHA arrives at 6-50 p.m. and straightway reads her prepared speech, which she has already read at any number of meetings. Midway through the speech, she breaks into a song, and poses a series of rhetorical questions to Vajpayee. There is applause, and she asks the crowd, "Will you put these questions to Vajpayee?" The crowd roars, "We will, we will." A little later she sings another ditty, and there is applause again.

She denies that the AIADMK was responsible for forcing the elections on the country. She takes a potshot at the Congress(I) and the CPI(M), without naming them, for missing the opportunity she gave them to form a government after the fall of the Vajpayee Government. "I did not ask for any share in power... So the AIADMK is not responsible for the elections." Towards the end she comes to local problems.

Even on August 29, the campaign is low-key in the Pollachi constituency, which goes to the polls on September 11. No important local issue is discussed. Krishnan, an autorickshaw driver, says, "The AIADMK booked my auto for ten days for campaigning but has not paid me so far because the local unit has not received the cash." In this reserved constituency, C. Krishnan (MDMK) is locked in a fight with M. Thiyagarajan (AIADMK). Janata Dal (Secular) and Puthya Tamilagam are also in the fray as well.

V.P. Chandrasekar, former AIADMK MLA from Pollachi, says that people are not familiar with the "top" symbol of the MDMK and so the AIADMK candidate will win easily. He claims that the DMK thrust the seat on the MDMK because the AIADMK was strong here.

R.T. Mariappan, the MDMK's Coimbatore district secretary, who is in charge of Krishnan's campaign, is confident of victory because of the "working strength" of the MDMK's allies. Of the six MLAs in the constituency, five are from the DMK and one from the TMC. Besides, DMK men head local panchayat unions, town panchayats and cooperative banks. The MDMK was also strong in the constituency. According to Mariappan, the BJP holds a fascination for the youth.

In the Nilgiris constituency, there is good coordination between the Congress(I) and the AIADMK. Here R. Prabhu of the Congress(I) is fighting Master M. Mathan of the BJP, the representative in the dissolved Lok Sabha, and C. Chinnarfaj of Puthiya Tamilagam. As at Pollachi, the Congress(I), the AIADMK and its allies focus on the need for a stable government at the Centre which, they say, can be provided only by the Congress(I). Another important issue is the plight of handloom weavers at places such as Samychettypalayam. ■

Of promises and policies

The election manifestoes of the National Democratic Alliance and the Congress(I) are marked by a consensus on economic policy while the Left presents a distinctive agenda.

VENKATESH ATHREYA

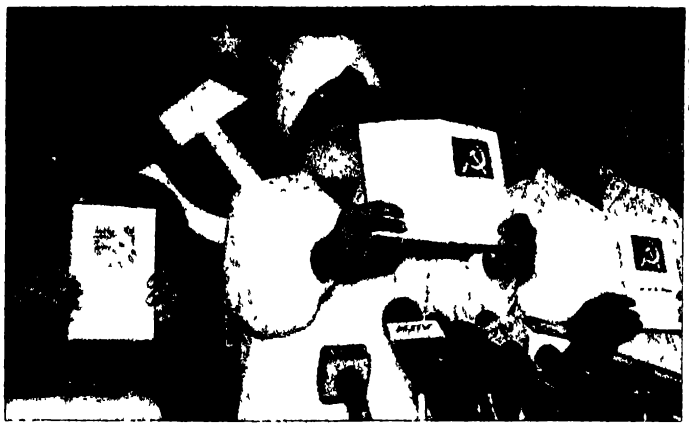
IN the rough-and-tumble of hectic election campaigns, attention to serious issues often takes a backseat. Yet, it is important that such issues come to the fore in public discussions. The election manifestoes of political parties, even allowing for the inherent incentive for such documents to be self-serving, represent a partial attempt to meet this need. At any rate, they do provide material for meaningful public discussion. In this context, it would be interesting to examine what the manifestoes of the three leading formations – the National Democratic Alliance (NDA), the Congress(I) and the Left parties – have to say.

The most striking visual feature of the NDA manifesto is the pervasive presence of Atal Behari Vajpayee. A little less than ten pages of text in print are accompanied by nine full page photographs featuring Vajpayee, not counting the ninth text page, half of which is occupied by a picture of Vajpayee addressing a meeting. Interestingly, the text of the manifesto does not mention the leading party of the NDA, the Bharatiya Janata Party, even once. It does refer to Vajpayee more than once, describing him, among other things, as "...a statesman who is accepted by all sections of the country" but makes no reference to his role as a leader of the BJP.

In terms of content, there are no big surprises. The manifesto predictably blames the Opposition parties, described as a "...negative coalition led by the Congress," for forcing fresh elections and claims credit for the clearing of Pakistani intruders from Kargil.

On economic policy, the NDA manifesto pledges to continue the reforms, control fiscal and revenue deficits and carry out "...comprehensive reforms of the public sector undertakings, including restructuring, rehabilitation and divestment". While stating that NDA's main thrust will be to eradicate unemployment, the manifesto does not put forward a credible strategy towards this end. On foreign direct investment (FDI), the manifesto claims that "...the country cannot do without FDI because besides capital stock it brings with it technology, new market practices and *most importantly employment* (emphasis added)." The manifesto seeks to reform the public distribution system (PDS) "...to serve the poorest of the poor", the implicit implication being the exclusion of many currently benefiting from PDS.

Although the manifesto claims "consensus on a common cause and a common set of principles..." among its partners, the nuances in some of its formulations are suggestive of a certain tilt. Thus, it talks of: special efforts to be made in animal husbandry, "...particularly in respect of cow and its progeny"; "the establishment of a credible nuclear deterrence"; "genuine secularism" and "...the concept of secularism consistent with the Indian tradition..." However, by and large, the NDA manifesto is consistent with the BJP's tactical decision to put its key Hindutva agenda on the backburner at least until after the elections.



An interesting aspect of the NDA man-

V SUDERSHAN

At the release of the National Democratic Alliance's manifesto in New Delhi, BJP leaders A.B. Vajpayee and L.K. Advani, Samata Party leader George Fernandes and Dravida Munnetra Kazhagam president M. Karunanidhi.

ifesto is its stand on Centre-State relations. It states: "We are convinced that there is a clear case for devolution of more financial and administrative powers and functions to the States." This is one democratic concession that the BJP has had to make to its regional allies. Cleverly, however, this concession is accompanied by an assertion that the NDA will "...take measures for ensuring a fixed term (five years) for all elected bodies including legislatures." This is a patently undemocratic stand.

R V MOORTHY

CPI(M) general secretary Harkishan Singh Surjeet releases the party's election manifesto. With him, Polit Bureau members Sitaram Yechury and S. Ramachandran Pillai.

THE Congress(I) manifesto is the longest and most elaborate. Shorn of verbiage, though, the manifesto is all-too-familiar. The neoliberal paradigm and the new economic policies unleashed by the Congress(I) in 1991 are defended. While the manifesto concedes that self-reliance has served India well, it seeks to give it what it calls "... a contemporary meaning" and what follows is an exercise in evasion. Self-reliance is, by simple assertion, made synonymous with eradication of poverty and unemployment through faster growth in agriculture and industry.

Like the NDA, the Congress(I) also calls for $10 billion of FDI a year. Despite a plethora of incentives, the total FDI from 1991-92 to 1998-99 is only around $10 billion or an average of $1.25 billion a year. The neoliberal paradigm that underlies both the NDA and Congress(I) manifestoes fails to recognise that FDI gravitates to an economy growing rapidly rather than to one that expects it to fuel such growth in the first instance.

The manifesto repeats the familiar and arbitrary figure of 4 per cent (or less) as the target for combined fiscal deficit of the Centre and the States. It states both that "tax reforms will be continued", and that "the tax-GDP ratio must be brought up to at least 18 per cent over the next five years". The contradiction between these two statements will be obvious if one recalls that the Congress-initiated tax reforms (pursued by the United Front and the BJP governments) have led to a significant decline in the tax-GDP ratio over the 1990s.

The Congress(I) manifesto repeats its claim to have ushered in genuine decentralisation in this country through constitutional initiatives, though this is far from accurate, and its own practice has been highly centralist and often in utter disregard of the rights of State governments. The manifesto continues the Congress(I) policy of playing off panchayati raj against the autonomy of States by declaring: "All Central funds for poverty alleviation and rural development will be credited directly to the funds of elected panchayati raj institutions." The Congress(I)'s concern for panchayati raj is somewhat difficult to square with its own record in respect of holding elections to local bodies in the States where it had been in power, but perhaps the Madhya Pradesh experiment may have convinced sections of the Congress(I) leadership of the political benefits of commitment to a degree of democratic local governance.

The Congress(I) manifesto strains one's credulity when it states: "The Congress will continue to lay great stress on land reforms..." In a reference that must have caused the Congress(I) considerable agony, the manifesto actually talks of "...registration of all tenancies through Operation Barga type campaigns..." (Operation Barga was the West Bengal Government's pioneering programme for the registration of share-croppers.)

In what seems to be a case of promising everybody everything, the Congress(I) manifesto states: "The terms of trade will always be kept in favour of agriculture." In an interesting and rather far-reaching proposal, it says: "Organisations that supply inputs to farmers will be converted into farmer managed and controlled organisations." What this implies is not made clear, but the proposal would not at all be easy to implement.

One area where the manifesto comes close to making a progressive commitment pertains to education. It states: "Over a period of time, we must move towards making primary and secondary education compulsory as well." However, it stops well short of making a time-bound commitment to honour, at least belatedly, the promise of free and compulsory education for all children in the 6-14 age group.

In an evident attempt to rewrite history, the Congress(I) which instigated, along with the Sangh Parivar, violent opposition to V.P. Singh's attempts to implement the Mandal Commission report, now declares in its manifesto: "It was the Congress that built the consensus over the Mandal Commission report."

While the NDA and Congress(I) manifestoes thus have little to set them apart with respect to economic policies, the Congress(I) makes a rather more categorical statement on secularism. It states that "...secularism can only mean... the clear separation of politics from... religion. Religion is a private matter for individuals. Politics is all about activities in the public arena." And further: "Religion cannot be used as an instrument of mobilisation... The Congress vehemently rejects the use of religion for political ends." One can only hope that the Congress(I) will, unlike in the past, be consistent in its stand on secularism.

Finally, it must be noted that the Congress(I) is dismissive of regional parties ("Regional parties are born and fade away") and poses before the people the choice between "... a coalition that has failed miserably and a cohesive Congress alternative." This last assertion has since been somewhat tampered by a more sober assessment of political ground realities.

THE election manifesto of the Communist Party of India (Marxist) is in two parts. The first part provides a detailed critique of 13 months of the BJP-led coalition rule, rejects the notion that the Congress(I) can be an alternative to the BJP, draws attention to the record of the Left, and finally calls upon the electorate to defeat the BJP and its allies, strengthen the CPI(M) and the Left and support the Left, democratic and secular forces. The second part puts forward the CPI(M)'s positive programme of action.

The CPI manifesto is similar in structure to that of the CPI(M). Both the Left parties draw attention to what they regard as the major failures of the BJP-led

Greater concern for children

ASHA KRISHNAKUMAR

ARE political parties becoming more sensitive to issues concerning children? The manifestoes of parties in the fray suggest that they are.

According to the Delhi-based Child Labour Action Network (CLAN), which studied the election manifestoes of eight parties *vis-a-vis* issues relating to children, the Bharatiya Janata Party (BJP), the Congress(I), the Communist Party of India (Marxist), the Nationalist Congress Party (NCP) and the Tamil Maanila Congress (TMC) have promised measures to abolish child labour. In the 1996 elections, according to the study, only two parties had referred to the issue, that too vaguely.

The TMC is for the "abolition of child labour". The NCP supports abolition of child labour and the introduction of compulsory primary education.

The CPI(M) promises "abolition of child labour and enforcing rights of children subjected to such exploitation." The BJP merely says that it will "take measures to eliminate child labour", without explaining how it will go about it.

The Congress(I) outlines some strategies to tackle the child labour problem. These include creation of special educational facilities in child-labour-endemic areas, strengthening of the mid-day meal and poverty alleviation programmes, and strict implementation of the legal provisions against the practice of child labour.

Primary education figures in almost all manifestoes this time; only three dealth with this subject in the 1996 elections. The manifestoes demonstrate an increasing awareness of the problems caused by low literacy levels and high drop-out rates.

The Congress(I) manifesto stresses that "girls and women belonging to the Dalit, Adivasi and other backward class and minority communities (should) have access to the best education and health facility by the end of the next decade." It states that "a time-bound programme for universalising access to elementary education for all children up to 14 by 2003 will be implemented and resources found for making this happen."

The Congress(I) has reiterated its commitment to increase the expenditure on education at least up to 6 per cent of the gross domestic product (GDP). It has also promised that 50 per cent of the expenditure on education will be earmarked for elementary education.

The CPI(M) manifesto guarantees free and universal education for all children up to 14. According to CLAN chairperson Joseph Gathia, the CPI(M) is the only party among the eight parties, whose manifestoes were studied, to have said that the 83rd Constitutional Amendment Bill, which has lapsed, must be revived in order to make education a basic right of children up to the age of 14. ■

Government:

★ failure to protect religious minorities from attacks by various constituents of the 'Sangh Parivar'.

★ nuclear adventurism, now tending to capitulationism on such issues as the signing of the Comprehensive Test Ban Treaty (CTBT), attitude to the aggressive actions of the United States and the North Atlantic Treaty Organisation in various parts of the world and so on.

★ sell-out to the transnational corporations and an even more vigorous pursuit of neoliberal economic policies including a wholesale attack on the public sector.

★ authoritarian actions, including the ultimately unsuccessful invoking of Article 356.

★ compromising national security, by its complacent attitude post-Pokhran and "Lahore" euphoria.

★ record of corruption, capped by the telecom scam.

The manifestoes of the Left parties reject the Congress(I) as the alternative. The CPI(M) makes the point that the Congress(I) "...still advocates the economic policies initiated in 1991, which are against the interests of the toiling people of the country" and that "on questions of economic policies the BJP and the Congress have no basic differences." Even on the issue of secularism, the Congress "...is bereft of the political and ideological will to rally all the secular and democratic forces to fight the menace of communalism."

In sharp contrast to the NDA and the Congress(I), the Left parties put forward an economic agenda that rejects neo-liberalism and calls for:

★ radical land reforms

★ increased public investment in infrastructure and agriculture

★ review of telecom and power policies

★ protection for domestic industry

★ defence of the public sector

★ renegotiating the World Trade Organisation (WTO) terms, forging common cause with other countries of the South

★ broadening the direct tax base, with higher tax rates on affluent sections

★ opposition to opening up the financial sector

★ review of patent laws

★ strong public distribution system

★ job security and working class rights

In a similar vein, the Left parties support a number of democratic demands pertaining to women, youth, Dalits and Adivasis and other socially and economically vulnerable sections.

The Left manifestoes call for strengthening India's secular foundations, promotion of federalism for national unity including the replacement of Article 356 by a suitable, democratic alternative; an independent, non-aligned and anti-imperialist foreign policy; reversing nuclear weaponisation and not signing the CTBT; universalisation of child care services and abolition of child labour; compulsory primary education, guaranteed free and universal education for all children up to the age of 14 years; an environment policy to serve the needs of rapid and sustainable development; the promotion of scientific and technological self-reliance; and progressive electoral and judicial reforms.

While the Left Parties have presented a distinctive secular and progressive agenda before the people, in sharp contrast to those of the Congress(I) and the NDA, given their limited media access, it is unlikely that their programmes and policies will reach as wide a segment of the electorate as those of the Congress(I) and the NDA.

The Left manifestoes address the needs of the bottom 90 per cent of the population and not of the articulate and powerful top 10 per cent and they deserve to reach the people much more widely. The fact that they do not is yet another reminder of the relevance of the Chomsky-Herman concept of "manufactured consent". ■

How do you compute tax on your total income?

Part II

By a Panel of Experts

In our last article 'How do you compute tax on your Total Income – Part I' we discussed about the various aspects to be borne in mind for tax computation on total income Today, we shall go through an example for the same, which will clarify all the minor details one must keep in mind for computing tax payable on total income

Statement of Income	**Rs.**	**Rs.**
Salary	2,40 000	
Taxable Value of Perks	30,800	
	2 70 800	
less Standard Deduction (Refer to ceiling as mentioned earlier)	20 000	
Professional Tax	1,800	2,49 000
House Property		
Self Occupied (Annual value is nil) NIL		
Property Given on Rent	50 000	
	50,000	
Less Interest on Loan (taken for purchase of house)	20,000	30,000
Capital Gains		
Short Term		11,000
Long Term 25,000 (considered separately)		
Other Sources (u/s 80L)		
Interest on Bank Deposits	10,490	
Interest on ICICI bonds	7,510	
	18 000	
Dividend on US64	2,000	
	20,000	
Less Deduction u/s 80L		
US64	2,000	
Others, limited to	12,000	6,000
Other Sources (not u/s 80L)		
Interest on Co-FDs		23,000
Total Gross Income		3,19,000

Tax Thereon				
First Rs 50,000			NIL	
Next Rs 10,000 @10%			1,000	
Next Rs 90,000 @20%			18,000	
Next Rs 1 69,000 @30%			50,700	
			69,700

The machines arrive

T.S. SUBRAMANIAN

ELECTRONIC voting machines (EVMs) are being used in 46 constituencies in the country in the ongoing elections, covering six crore voters. Chief Election Commissioner M.S. Gill hopes that based on the lessons of the current exercise, EVMs would be used in all the 543 Lok Sabha constituencies in later elections. EVMs were used in 16 constituencies in the elections to the Madhya Pradesh, Rajasthan and Delhi Assemblies in November 1998 and the Goa Assembly in June this year.

Electronic voting machines are manufactured in India by the public sector Bharat Electronics Limited (BEL) and Electronics Corporation of India Limited (ECIL). An EVM consists of two interlinked units: the ballot unit, which is for the voter's use, and the control unit, which is under the charge of the presiding officer. The ballot unit, where the vote is "cast", is a simple device. It displays the list of candidates with the names of their political parties and symbols. A voter has only to press the button next to the name of the candidate of his choice. A short beep and a flash of a lamp show that the vote has been registered. A ballot unit can show the names of 16 candidates. An EVM can display the names of a maximum of 64 candidates in an election, by connecting four ballot units.

The control unit consists of a display and a set of button switches. Polling begins when the presiding officer presses the "ballot" button. After the voter has pressed the button against the name of the candidate of his or her choice, the presiding officer has to press the "ballot" switch again to enable the next voter to cast his or her vote. A master ballot paper can be used for every thousand voters.

To prevent bogus voting or booth-capturing, there is a "close" button. If the presiding officer, fearing booth-capturing or violence, presses this button, polling will stop, that is, the button that the voter uses will not function.

At the end of the polling, the presiding officer snaps the green paper seal and presses the "result" button. The seal will have to be signed by the candidates' agents before polling begins. When the presiding officer cuts the seal and presses the "result" button, the votes polled by each candidate will be displayed on the screen in the control unit.

Electronic voting machines have several advantages. They are easily operated on batteries. There is, therefore, no need for electrical wiring and plugs. There can be no bogus voting. Nor can invalid votes be cast because if a voter presses two or more buttons simultaneously, the first one pressed – a microsecond earlier than the second – will be the vote cast. The use of EVMs also lead to huge savings, for very little paper is used; no ink is needed; there is no need to fabricate metal boxes; and transportation is easy.

The Election Commission's belated decision last year and this year increasingly to go in for EVMs cannot undo the huge waste it was responsible for in the past eight years. The report of the Comptroller and Auditor-General of India for the year ended March 1997 has roundly blamed the Election Commission for "rushing to procure 1.50 lakh" EVMs valued at Rs.73.50 crores and keeping them idle.

Electronic voting machines were used for the first time in the country in 1982 in 11 Assembly constituencies – one each in Kerala, Nagaland, Arunachal Pradesh, Bihar, Karnataka and Andhra Pradesh, and two in Tripura and three in Delhi. A defeated candidate from Parur constituency in Kerala went to court. In its ruling in 1984, the Supreme Court disapproved the use of the machine-voting because, among other things, there had been no amendment of the law relating to mode of voting in the Representation of the People Act. Finally, Section 61-A of the Representation of the People Act was introducted with effect from March 15, 1989. It read, "...the giving and recording of votes by voting machines, in such manner as may be prescribed, may be adopted in such constituency or constituencies as the Election Commission may, having regard to the circumstances of each case, specify."

Following this, the Election Commission ordered the manufacture of 1,50,000 EVMs from BEL and the ECIL. Even as their manufacture was under way, the proposal to use them was dropped in November 1989 in spite of the announcement of elections.

The decision to use EVMs in the elections to the Madhya Pradesh, Rajasthan and Delhi Assemblies last year was taken in December 1997 at a conference on electoral reforms in New Delhi. At the conference, national and regional parties consented to the use of EVMs, especially in urban constituencies.

The Government, with the aid of various agencies, has launched a major drive to familiarise voters with the system. In Tamil Nadu, for instance, a Coimbatore-based social welfare organisation, the Academy for Sociological Projects (ASPECTS) had worked in tandem with the administration to educate voters on the use of EVMs. An ASPECTS team comprising its chairman, S.R. Krishnamoorthy, and K. Shanthi [illegible] had led the effort. The Administration had conducted mock polls to gauge the reaction of the voters to the system. ASPECTS [illegible]

Warnings in vain

Revelations about warnings provided by Brigadier Surinder Singh on rising border tensions ahead of the Kargil intrusion raise new questions about the designs of a political and army establishment which was desperate first to conceal the scale of the intrusion and then to project rapid military gains.

PRAVEEN SWAMI
in Srinagar

The GOC directs that all Bdes (brigades) will capture / procure suitable animals / birds peculiar to their sect(or) and hand them over to 3 Inf(antry) Div(ision) Sig(nals) Regt (Regiment) by 31 Mar(ch) 1998. However in case of animals / birds under hibernation, the sizes of cages which may be required should be intimated to 3 Infl Div Sig Regt for their fabrication action at the earliest... concerted efforts will be put by all concerned.

– from letter 6361/STN/21 dated March 2, 1998, signed by Colonel S.P. Tanwar for Lieutenant-General V.N. Budhwar, General Officer Commanding, 3 Infantry Division, Leh.

IN the spring of 1998, even as Pakistan was preparing the contours of its Kargil offensive, matters of war would seem to have receded from the consciousness of the Indian Army's 3 Infantry Division based at Leh. Lieutenant-General V.N. Budhwar, General Officer Commanding, was busily engaged in a Frederick of Bavaria-style enterprise of setting up a zoo for the tiny town, a charming project albeit one of somewhat dubious legality. Even when massive artillery exchanges broke out around Kargil in the wake of the May 1998 nuclear tests at Pokhran, the zoo project remained central to the 3 Infantry Division's activities. Even as their Brigade Headquarters was under sustained fire, officers in Kargil received a second urgent order, marked 6361/9/ZOO/Q1, on June 8 from Lieutenant-Colonel V.K. Singh with the instruction that the search for suitable wildlife specimens be speeded up.

By a curious coincidence, Brigadier Surinder Singh took command of the 121 Infantry Brigade at Kargil the same day this second zoo missive was issued. But the no-nonsense Brigadier, decorated for gallantry and valour as Captain, Major and Colonel and responsible for the capture of the key 5,108-metre mountain dominating the Kaksar area in 1980, realised that the Army ought to have things other than zoo-building on its mind. *Frontline*'s continuing investigation into the failures that enabled Pakistan's summer intrusion in the Kargil sector has thrown up new evidence that Brigadier Surinder Singh had repeatedly warned of rising tension on the border, but his warnings were ignored. Strangely, the Brigadier's reward has been a military inquiry that violates elementary principles of natural justice.

PANKAJ RISHI KUMAR

Brigadier Surinder Singh.

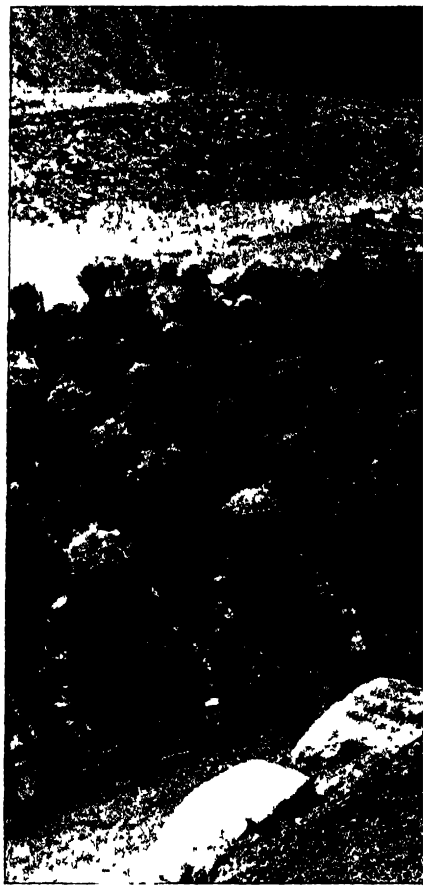
Chief of the Army Staff General V.P. Malik was, *Frontline*'s investigation has found, among the first to be informed of Brigadier Surinder Singh's concerns. In August 1998, as General Malik prepared to visit Kargil, the 121 Brigade was asked to put up a note to 3 Division Headquarters stating just what they intended to tell the Chief of Staff. This procedure is meant to ensure that in this case Lieutenant-General Budhwar would be aware of the issues that Brigadier Surinder Singh intended to bring up with General Malik. The 121 Brigade's note, marked "BRIEF: COAS" and numbered 124/GSD/VIS, was sent out on August 21, 1998. A report in *Outlook* magazine wrongly called it a letter to the Chief of the Army Staff, and this led to official denials on September 2 that General Malik had ever received such a letter. The denial is in a narrow sense therefore correct, but since the Army admits that General Malik was indeed briefed in accordance with its contents on August 29, 1998, the fact remains that he was aware of the Brigadier's note.

Paragraph 5(a) of the August 21 note made clear Brigadier Surinder Singh's perception that Pakistan would seek to escalate violence in Jammu and Kashmir after the Pokhran-II tests. It also pointed to the upcoming summits of the South Asian Association for Regional Cooperation (SAARC) and the Non-Aligned Movement. It proceeded to suggest that major efforts would be made to push insurgents across the Line of Control (LoC) in Kargil. The reasons for this belief were outlined in Paragraph 8, beginning with the heading 'Enhanced Threat Perceptions'. Paragraph 8(a) recorded that the 24 Sindh Regiment, a reserve unit at Gilgit,

had been moved up to Pakistan's forward headquarters at Olthingthang. One battalion had also moved from Sialkot to Skardu, although its precise location was not known at that time. Twenty-five heavy and five medium guns had been sent to the sector, the note said, along with M-198 155-millimetre howitzers and M-11 missiles.

Pointing in paragraph 15 to "infilt(ration) routes available through (the) Mushkoh Valley from Doda side to Panikhar, Yaldor and through nullahs", the briefing note proceeded to demand new equipment. Brigadier Surinder Singh asked for "one air OP (observation) fl(igh)t for observation, control of artillery fire and evacuating casualties to be at Kargil" on a full-time basis. One Remote Pilotless Vehicle (RPV), part of India's fleet of four such Israeli-manufactured aircraft, along with seven gun and mortar locating radar, air photographs and satellite images, and an electronic warfare detachment were also requested. For reasons it best understands, the Army, in defiance of independent defence experts' evaluations, insists in its denial that RPVs and weapon locating radars "do not form part of the Army's inventory". "If Brigadier Surinder Singh had asked for equipment the Army did not have," one official pointed out, "he would have faced charges of insanity, not incompetence. It is extremely unlikely that a senior officer with decades of experience would have asked for things we don't have."

No action was taken on this request, and lack of sustained air surveillance was subsequently cited as a major reason for Pakistan's intrusion having passed undetected.

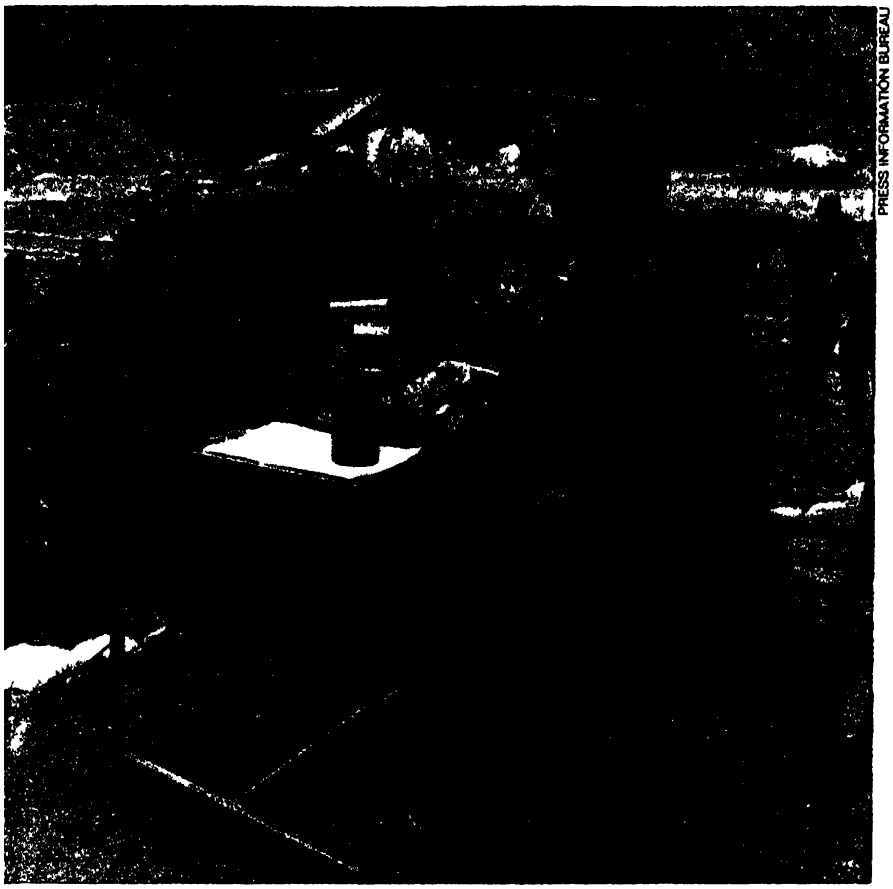


By September 1998, Brigadier Surinder Singh's apprehensions had sharpened. Letter 132/GSI/Pak/China, sent to 3 Infantry Division's headquarters on September 1 by Major H.C. Dwivedi, outlined insurgent movements on the Pakistan side of the LoC. "Int(elligence) sources have revealed that 500 Afghani militants have been conc(entrating) at Gurikot (map reference) NG 7959 for induction to (our) own side," it read. The likely routes of infiltration, the letter continued with a precision that is in retrospect chilling, were the Kil nullah, Safaid nullah and Kaobal Gali into the Mushkoh Valley and on to Pindras and Drass. A copy of an Intelligence and Field Security Unit letter, number 1/1 016 dated August 30, 1998, was attached to Major Dwivedi's letter (bearing out earlier reports in *Frontline* on the availability of such information with Military Intelligence). "Pakistan," the letter concluded, "is likely to intensify art(iller)y duels and train L(o)C firing to ensure (their) induction."

COULD Brigadier Surinder Singh's warnings have prevented the Pakistani incursion? Several senior officials have sought to underplay the significance of the Brigadier's letters, arguing that his reports pointed only to infiltration, not a full-scale attack. This position is, however, frivolous. As Brigadier Surinder Singh pointed out in a writ petition filed in August 1999 before the Punjab and Haryana High Court, "the conceptual thrust in regard to the enemy tilted towards selective infiltration, not an invasion". Nonetheless, had his warnings been heeded, Pakistan's aggression would most probably have been detected early, and Indian soldiers would have been better prepared to deal with the early incursions. However, Brigadier Surinder Singh was widely termed alarmist by his seniors, and his warnings became a recurring topic of cocktail party humour.

Air surveillance was clearly one key element needed to engage with the emerging threat perception. In January 1999, reliable sources told *Frontline*, the 121 Brigade desperately asked for an escalation of winter air surveillance, requesting that at least one helicopter be stationed in Kargil on a full-time basis. Intelligence reports were cited in support of a request to upgrade the Mushkoh Valley's priority for surveillance. It was also suggested that at least one surveillance sortie be carried out each week over Mushkoh Valley, the Mumar Shung and the Tololing nullah.

But these requests were turned down, and knowledgeable sources say that in the end barely four flights were carried out through the winter over the entire Kargil sector. Requests for additional troops, including a company to play a specialised anti-infiltration role east of Batalik, particularly Yaldor, were also rejected. Troops from the 9 Mahar Regiment were pulled out, leaving the Batalik area open to any enemy offensive.



THE stage was now set for war. After the first fire contact with Pakistan irregulars and troops on May 6 in the Batalik area, Brigadier Surinder Singh's first instinct was to launch a cautious response, focussing on cutting the infiltrators' supply lines rather than launching full-scale, near-suicidal assaults up the

General V.P. Malik, Chief of the Army Staff, addressing troops at Batalik during a visit to the Kargil sector in July.

mountains. The military strategy was sound, but it was evidently irreconcilable with the designs of a political and army establishment desperate first to conceal the scale of the intrusion and then to project rapid military gains. Friction grew between Brigadier Surinder Singh and Lieutenant-General Budhwar, who chose to attend a Rashtriya Swayamsevak Sangh-sponsored Sindhu Darshan festival in Leh this summer as he had done last summer. Brigadier Surinder Singh's removal from office was now becoming imminent, with senior officers charging that his conduct of the campaign was incompetent.

Facts suggest that competence was not in fact the issue at stake. Indeed, early on in the campaign, Brigadier Surinder Singh was assigned charge of operations in Drass although that area had been placed under the command of 70 Infantry Brigade on April 24, 1999. After combat broke out in Drass, Brigadier Surinder Singh was ordered to take charge of the operations conducted by the Deputy Commander of 70 Brigade. His strategy to contain Pakistan positions at points

PRESS INFORMATION BUREAU

4,080 m and 4,590 m and the highest 5,140-m summit on the Tololing ridge was to push troops around them and consolidate to their north. Similar manoeuvres were used to effect containment around Tiger Hill, and points 4,195 m and 4,410 m. Such containment enabled troops to choke Pakistani positions, and it was recognised that the rapid physical eviction demanded by New Delhi would cause an unacceptable level of casualties.

But a desperate Bharatiya Janata Party-led government in New Delhi was simply unable to wait for a sound operational strategy to play itself out. On June 6, Brigadier Surinder Singh was abruptly told to report in Srinagar, where he was to be attached to 15 Corps Headquarters. Four days later the order was cancelled in the face of the Brigadier's protests, but it was revived on June 21. He was informed that his transfer was prompted by concern for an injury he had sustained in his left ear, an injury that the officer himself had not complained about. Brigadier Surinder Singh made repeated attempts to contact General Malik at this stage, and was finally informed that he would be granted an interview on June 28. In the event, the Chief of the Army Staff failed to keep the appointment. After waiting for six days in Delhi, on June 28 Brigadier Surinder Singh submitted a letter, marked 29734/SS/CONFD listing his grievances, along with a file containing documents. A receipt for these documents was issued by General Malik's staff upon the Brigadier insisting on it.

Back in Srinagar, the Brigadier learned on July 2 that he was to be posted as the Andhra Sub-Area Commander based in Secunderabad. Before his luggage had arrived in Secunderabad, fresh orders came on July 17 shifting him to Ranchi. This transfer is alleged to have been prompted by fears that the Brigadier planned to open an investigation into the denotification of a large tract of Army land in Secunderabad, parts of which several senior officers subsequently purchased. Whatever the truth, a frustrated Brigadier Surinder Singh now applied for a month's leave, which was granted on July 21. Part of the leave period was later terminated, and he was told to proceed to Ranchi by August 22. This posting too was withdrawn. Now the Brigadier was ordered to report back to the 3 Infantry Division in Leh. When he asked why this was being done, he was reported to have received only vague verbal assurances that he was required to assist in an enquiry.

Pushed to the wall by these quick-fire transfers, Brigadier Surinder Singh moved the Punjab and Haryana High Court. The petition makes clear his belief that he was being punished for doing his job well, but none of the confidential correspondence on security issues is appended to the legal document. "On account of the truthful stand taken by him in various communications addressed to Chief of Army Staff," the petition stated, "the authorities are feeling scared and are wanting to somehow deal with the petitioner in an unfair, inequitable and unjust manner." The petition also stated: "The petitioner also perceives serious threat to his life, and his life is in danger." Brigadier Surinder Singh's counsel, military law expert R.S. Randhawa, later withdrew the petition, but has been granted liberty to approach the High Court in the event of the Brigadier facing any persecution in Leh.

That is more than a little likely. The Leh inquiry into the leakage of official documents to the media has been constituted by the 3 Infantry Division's Budhwar, an officer about whom Brigadier Surinder Singh has complained in writing and who is at the centre of the Kargil controversy. Led by Deputy General Officer Commanding Ashok Duggal, Budhwar's immediate subordinate, and made up of Brigadiers C.M. Nayar and Devinder Singh, the inquiry will have little credibility since its members will in effect be judging their own cause Indeed, Brigadier Surinder Singh's logical demand that others with access to the documents the Army claims he has leaked also be examined – individuals including the Army chief and his staff – has so far met with no response. "The whole inquiry is a travesty of every principle of the law and the basic principles of natural justice," says Randhawa. "It is a vindictive attempt to persecute Brigadier Singh, and it has no legal legitimacy."

The witch-hunt launched against Brigadier Surinder Singh illustrates official responses to investigative disclosures on the political and defence establishment's handling of the Kargil war. Instead of welcoming scrutiny which would lead to a meaningful examination of just what went wrong and why, there has been a flat denial of the truth. The objective of inquiry ought to be to ensure that Kargil-type debacles do not recur. Instead, protecting top officers and their political patrons has, it would seem, become the defence establishment's principal concern. ■

India, Israel and Arab fears

Arab countries express their unhappiness over alleged military and nuclear cooperation between India and Israel.

JOHN CHERIAN

FOR the first time, the Arab League has alleged "military and nuclear cooperation" between Israel and India and warned against its consequences for the Arab world. In a statement issued on August 24, the League's deputy secretary-general, Mohammed Zakaria Ishmail, said that the organisation had evidence to prove it. He, however, refused to reveal it.

Ever since reports appeared about Israel's sale to India of an advanced electronic warfare system, suspicions have been further aroused in the Arab world about the extent of Indo-Israeli cooperation. The United States is also unhappy with Israel's sale of high-tech military equipment to India. It is possible that some details of the alleged nexus between India and Israel in the nuclear field have been supplied by U.S.

New Delhi was prompt to issue a denial. "We would like to emphasise that while we have good relations with Israel, there is no nuclear cooperation between the two countries," said an External Affairs Ministry spokesman. He emphasised that India's support to the Arab and Palestinian causes "continues unchanged". An External Affairs Ministry official said: "India's relationship with the Arab world is based on close people-to-people contacts and cooperation in the political and economic fields."

Although Arab diplomats in New Delhi are sceptical about the Indo-Israeli nuclear links, they are suspicious of the emerging security and military relationship. They do not appear to be convinced by the terse denials of the External Affairs Ministry every time the issue is raised. Arab diplomats complain that officials of the Ministry refuse to shed any light on the nature of the security relationship.

Suspicions about the growing links were reinforced after India's nuclear tests of May 1998. According to Indian officials, "motivated propaganda" was generated soon after the tests suggesting that India and Israel had worked closely in developing India's nuclear weapons capability. It was even suggested in some quarters that of the five tests conducted by India, two were done on behalf of Israel.

The sudden visit of the Principal Secretary to the Prime Minister, Brajesh Mishra, to Israel in the first week of September – a week after the Arab League's strong criticism of Indo-Israeli security links and a few days before polling was to start for the general elections in India – further fuelled suspicions in the Arab world. Mishra, who is also the National Security Adviser, was accompanied by the Secretary in the Ministry of External Affairs, Nareshwar Dayal. The Foreign Office, however, insisted that Mishra's trip was part of the frequent diplomatic exchanges between the two countries.

Besides, the visit took place at a time when the Israelis and the Palestinians were engaged in protracted negotiations (story on page 51). The new Israeli Prime Minister, Ehud Barak, has so far exhibited the same hawkish propensities of his predecessor, Benjamin Netanyahu, and appears to be trying his best to stall the Wye River accord. Indian officials, however, say that Barak is keen on further strengthening ties with India.

ANU PUSHKARNA

Brajesh Mishra, Principal Secretary to Prime Minister.

Before joining the government, Mishra was one of the leading proponents of closer security and defence cooperation between India and Israel. The Kargil conflict gave the caretaker government an excuse to go in for a full-fledged defence relationship with Israel. Arab governments are wondering why the Indian government is so keen to buy high-technology equipment, surveillance systems and force multipliers from Israel, when they can be acquired from other countries such as Russia, France and the U.S. at more competitive rates.

The day before it conducted its own nuclear test, Pakistan had alleged that India intended to destroy Pakistan's nuclear facilities with the help of Israeli aircraft. There were reports in the Western media that Defence Research and Development Organisation (DRDO) chief A.P.J. Abdul Kalam had visited Israel thrice. While Indian officials insist that Kalam visited Israel only once, Arab diplomats maintain that he visited Israel twice – in 1996 and 1997. Indian officials say that such "baseless" allegations about Indo-Israeli cooperation are probably Pakistan-inspired. Reports about Kalam's alleged visits to Israel first surfaced in *The Times*, London.

Several of the newspaper reports that appeared in the West, stressing on Indo-Israeli nuclear cooperation, were written by Indian security analysts. Brahma Chellaney, who is now on the National Security Advisory Board, wrote an article in *The Washington Times*, a few weeks after the Pokhran-II tests, giving certain details about Indo-Israeli cooperation. Chellaney, in fact, argued for an open strategic alliance between India and Israel on the lines of the Turkish-Israeli strategic partnership. He went on to specify certain Indo-Israeli joint projects in the area

WRITE FOR FREE PROSPECTUS

of defence research, including missile guidance technology and electronic warfare and intelligence technology. Quoting from Indian publications, he said that covert cooperation had existed between India and Israel in the nuclear and missile fields for two decades.

In July, on a visit to Israel, Jasjit Singh, the Director of the Institute for Defence Studies and Analyses was quoted in the Israeli newspaper *Haaretz* as saying that India and Israel had a joint role in fighting "Islamic terrorism".

The Arab nations suggest that in order to allay their fears and suspicions, the first thing India needs to do is to lift the shroud of secrecy that surrounds the dealings between New Delhi and Tel Aviv.

Important Arab countries are worried about the growing defence links between New Delhi and Tel Aviv. One Arab diplomat said that Israel was trying to make an all-out bid to get lucrative defence projects by playing on India's security concerns and threat perceptions. Diplomats of these countries say that Israel's proposals about fencing India's borders with Pakistan in Kashmir and Punjab, besides other anti-terrorist measures, are only a ploy to sell arms. According to informed sources, avionics for India's airborne surveillance platform has been ordered from Israel.This will be integrated into a Russian aircraft.

Indian officials, however, assert that India's defence ties with Israel are limited to procurement. A senior Foreign Ministry official said: "We buy everything off the shelf. India does not contribute to the military capability of Israel by way of supply of defence software or hardware or joint production of hardware. There has been no cooperation whatsoever in the field of nuclear and missile technologies." A few years ago, there were reports that India and Israel were planning to manufacture jointly the Kfir jet fighters and the Arrow missiles. According to Arab sources, the high costs involved, coupled with U.S. pressure on Israel, prevented this project from taking off.

Jane's Defense Weekly reported last year that India and Israel were cooperating in the area of military intelligence and that Israeli spy satellites were providing India with information relating to Pakistan. In return, the report said, India allowed Israeli military intelligence experts "to undertake missions on Indian territory". Indian officials said that these allegations were baseless. They pointed out that India had its own indigenous satellite fabrication and launch vehicle programme and that its remote-sensing capabilities were among the most advanced in the world.

Indian officials also dismissed as "completely baseless" suggestions that India had permitted Israeli intelligence agents to work on Indian territory. India and Israel jointly set up a research fund in 1995, with each side contributing a $1.5 million each. Indian officials insist that the project had nothing to do with defence research, and that the funds have since dried up. Many people in the Arab world are, however, not fully convinced. One Arab official alleged that it was the American embargo on Israeli arms sales to India that had stopped the sale of pilotless reconnaissance planes to India.

Arab diplomats are of the opinion that the defence links between the two countries have a security and strategic dimension encompassing the entire region and could have an adverse impact on future relations between India and the Arab world. A diplomat said: "If sometime in the future, Israel, Turkey and India make a security pact, it would be a dangerous scenario for the Arab world. In the 1960s, the alliance between Iran, Ethiopia and Turkey was a great threat to the region".

Indian officials, on the other hand, say that there is no question of a strategic alliance between India and Israel and they have characterised the Arab League's accusations as "totally false and misleading". They point out that Egyptian Foreign Minister Amr Mousa had said that there was no cooperation between India and Israel. A senior official said that there was no commonality between the strategic perceptions of the two countries, and that India had always rejected military alliances and did not believe in setting up alliances or partnerships that may threaten or cause concern to other countries. He said that India's security and economic interests were tied with the countries of the Gulf. India receives $5 billion as remittances from Indians in the Gulf.

Some Indian officials have hinted that Egypt is, for its own reasons playing an important behind-the-scenes role in the whole issue. "Egypt wants to be the sole interlocutor on behalf of the Arabs as it thinks it is the big power in the region. It is also trying to play to the Islamic gallery", said an official. Another diplomat pointed out that the secretary-general of the Arab League, Abdul Maguid, is a former Foreign Minister of Egypt, but the deputy secretary-general, Mohamed Zakaria Ishmail, who prepared the report on Indo-Israeli nuclear cooperation, is a Syrian.

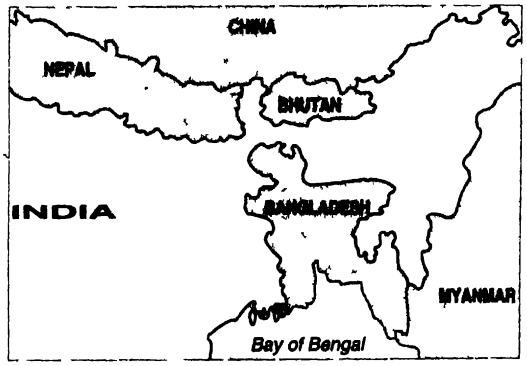
For their part, Arab diplomats claim that the people of their countries would be angered by persisting allegations about an Indo-Israeli defence cooperation. They feel that such cooperation, by implication, is against Arab interests. They say that nobody can object to India doing business with Israel but that it is a different matter when it comes to trading in military hardware. The general feeling is that India is taking the Arab world for granted. They point out that during the Kargil conflict, barring the initial exception of Saudi Arabia and the United Arab Emirates, none of the Arab countries supported the Pakistani misadventure, despite the fact that Pakistan sent high-level delegations to most Arab capitals. India did not bother to present its case to the Arabs, confident as it was with the support it received from Washington.

Officials of Arab countries argue that the security of Arab nations is also a guarantee for the security of the Indian subcontinent. Israel, they say, can never come to India's rescue, as that country amounts to nothing without the U.S. They suggest that in order to allay Arab fears and suspicions, the first thing India needs to do is to lift the shroud of secrecy that surrounds the dealings between New Delhi and Tel Aviv. Arab countries, they say, have reasons to be worried if Abdul Kalam makes frequent visits to Israel and no explanations are given for this.

The fact that the Arab League has taken note of Indo-Israeli cooperation means that Arab countries have concluded that the relationship has entered uncharted territory. An Arab diplomat said: "As a sovereign state, India has every right to do what it wants, but it should not endanger the future of the region". Israel may have a close relationship with China, but India's geographical proximity to the Arab world gives a dangerous strategic connotation to any Indo-Israeli links. ■

Furore over transshipment

The Awami League Government in Bangladesh faces Opposition resistance to its proposal to offer transshipment facilities for Indian goods.



HAROON HABIB
in Dhaka

THE Awami League's struggles to create a secular and civil society in Bangladesh have always run contrary to the preferences of the country's elite. The party, which led and won the liberation war against Pakistan, with support from India, is now in the eye of another storm. Forever criticised for its supposed proximity to India, it now faces fierce opposition over a proposal to offer transshipment facilities to goods en route to the northeastern States of India.

The idea of transshipment of Indian goods through Bangladesh territory was endorsed in principle at a Cabinet meeting chaired by Prime Minister Sheikh Hasina on July 28, primarily in view of the economic benefits it would bring to the country. An official announcement said that a Joint Experts Committee would examine the feasibility of local carriers undertaking such transshipment.

The Cabinet decision kicked off stormy debates and protests. Although there was no mention of "transit" or "corridor", the Opposition alleged that the Government had agreed to give India a "corridor", jeopardising national sovereignty. The Opposition alleged that the Cabinet decision had followed Prime Minister Atal Behari Vajpayee's visit to Dhaka on June 19 in connection with the inauguration of the Dhaka-Calcutta bus service.

The Opposition, which includes the Bangladesh National Party (BNP) led by former Prime Minister Khaleda Zia, the Jatiya Party led by former President Gen. H.M. Ershad, and the fundamentalist parties, the Jamaat-e-Islami and the Islamic Oikya Jote, launched a major offensive against the Government. They organised a 30-hour hartal and demonstrations across the country on August 2.

Although the Awami League took a principled stand to open up the economy in tune with the changing global situation, some political commentators believe that Sheikh Hasina virtually dropped a bombshell ahead of the general elections by agreeing to examine the transshipment proposal. Opposition politicians, particularly those who are known for their anti-India stance, were waiting for a chance to collar the Awami League. Branding the Government an "Indian stooge", they alleged that since returning to power in mid-1996 the Awami League had acted only in India's interest. They accused the Government of compromising national interest by enter-

Opposition leader Khaleda Zia leads a procession in Chittagong on August 23.

ing into "unequal agreements" with India.

Khaleda Zia declared that all "unequal treaties" with India would be scrapped when she came to power. She also accused India of masterminding the assassination of her husband, President Gen. Ziaur Rahman, during an army rebellion in 1981. When an Indian spokesperson termed her accusations "untrue" and "false and outrageous", she denied the press reports that had quoted her. Ershad and another Opposition leader, Prof. Golam Azam, alleged that the Sheikh Hasina Government's policies were designed to serve the purpose of India.

PAVEL RAHMAN / AP

Prime Minister Sheikh Hasina at the grave of her father Sheikh Mujibur Rahman on August 15.

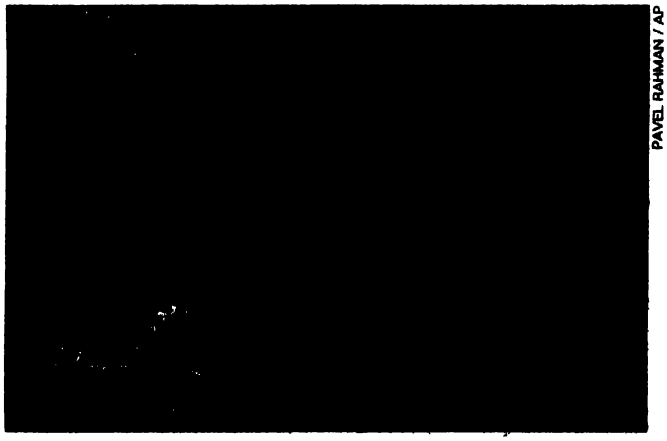
THE Awami League, which led a movement in the 1960s for the cause of secular Bengali nationhood, relentlessly fought against the military rulers of what was then East Pakistan. It achieved independence for the country and at the same time many enemies for itself, mainly among pro-military politicians, religious fundamentalists and anti-secular forces. These groups have now forged a strong unity, and some of them still believe in the "One Pakistan" concept. Some of them dream of making Bangladesh a "Muslim Bangla" or an Islamic state, as the Taliban did in Afghanistan. Anti-India slogans have become louder. Newspapers that are progressive and that supported Liberation warned the Government that the Pakistani intelligence network in Bangladesh had become stronger than ever before.

When the Awami League returned to power 21 years after it was forced out following the assassination of the country's founding father, 'Bangabandhu' Sheikh Mujibur Rahman, it alarmed two political sections – anti-Bangladesh forces and the beneficiaries of the coup in 1975. Sheikh Hasina's initiative to change existing political patterns and curb communalism added to their worries.

The Awami League also took some significant decisions with regard to improving relations with India. Bangladesh signed the landmark Farakka Barrage Treaty in December 1996 to share Ganga waters with India. Another agreement sought to restore peace in the Chittagong Hill Tracts (CHT), which witnessed tribal insurgency. The treaty completed the process of repatriation of more than 50,000 tribal refugees from Tripura and led to the opening of a direct bus service between Dhaka and Calcutta. When India and Pakistan try to normalise relations, many anti-India forces in Bangladesh either welcome the move or remain silent. Yet they are reluctant to accept the improved relations between Bangladesh and India.

However, the measures taken by the Government have been welcomed by a large section of the people, including business leaders and intellectuals. This group believes that Bangladesh should not tread the anti-India path and instead begin a new chapter of regional cooperation.

The transshipment issue is likely to have an impact on the general elections, which may be scheduled for end-2000 or early 2001. Observers do not see any possibility of negotiations between the Opposition and the Government. Although the Opposition had demanded a discussion in Parliament, it boycotted the current session from August 29, when the ruling party presented the transshipment issue for discussion. It has planned a siege on Dhaka's Central Secretariat on September 12.



The Opposition alliance is trying to bring the Government down "through a mass upsurge" on the questions of "transit" or "corridor". It will try to capitalise on the transshipment issue in the elections, which will be held under a neutral caretaker government.

It is not clear what the ruling party will do to counter the Opposition onslaught. The ruling party believes that one reason for agitation is to protect the "killers" of Sheikh Mujibur Rahman – the death sentences awarded to them by a lower court (*Frontline*, December 4, 1998) are awaiting the Supreme Court's approval.

Awami League general secretary and senior Minister Zillur Rahman observed: "Begum Khaleda Zia, in cooperation with the anti-Liberation forces, is trying to implement the blueprint of her late husband Gen. Ziaur Rahman, who tried to make Bangladesh a neo-Pakistan." He added: "Patriotic people will not allow them to do so."

President of the Federation of Bangladesh Chamber of Commerce and Industry (FBCCI) Abdul Awal Mintoo said: "Transit will not only bring foreign exchange for Bangladesh, it will also develop our transport sector and benefit our economy." Other business leaders said that allowing transit or transshipment would reduce the widening trade gap with India.

Several smaller, Left-leaning parties, including the Jatiya Samajtantrik Dal (JSD), the Jatiya Party (Mizan-Manjoo) faction, the National Awami Party (NAP) and the Communist Party of Bangladesh, say that the transshipment issue should not be viewed as a political one, but should be seen in the economic context of the changing global situation.

PAVEL RAHMAN / AP

Activists of the Bangladesh National Party at work on August 18.

However, several leading newspapers, particularly the more independent ones, projected the proposal as "a dangerous treaty undermining Bangladesh's interests". The Government has constituted a 12-member task force to examine the benefits from the transshipment.

Commerce and Industries Minister Tofail Ahmed produced documents to show that the Khaleda Zia Government had signed an agreement in 1995 for the transshipment of Indian goods through Bangladesh. Tofail Ahmed, who has invited the Opposition for an open discussion on the issue at any place, including the floor of Parliament, said: "Earlier the Indian goods were supposed to be transshipped through Bangladesh by Indian carriers, but we have decided to use our carriers, considering the national interest."

The Government says that Bangladesh and India have agreements on the use of railways and waterways and partial land transit is already in operation. Bangladesh also has an agreement with Nepal for railway transit for 218 km through Indian territory. Tofail Ahmed said: "Transshipment by road is also not new. It is already there. We are negotiating to expand it, protecting our own interest."

The Government says that Bangladeshi trucks have been carrying Indian goods transshipped through riverways from Sherpur and Chattak to the border under the 1995 agreement. Negotiations are also in the final stage to facilitate the passage of Indian goods from Chandpur to Agartala. According to World Bank and Asian Development Bank statistics, Bangladesh may be able to earn taka 2,000 crore a year and employ 2.5 lakh workers if India is granted transshipment facilities. Some quarters, however, doubt these figures.

The Government's arguments have not convinced the Opposition. "We have taken an oath on the blood of our comrades to resist the Government's evil design. If necessary, we will give more lives," said Khaleda Zia, who led a huge procession of vehicles across the country on August 26.

The Opposition alliance also sees the transshipment issue as part of an "Indian design" to suppress the "freedom struggle" in the northeastern States of India. "We can't allow India to transship its troops and weapons through Bangladesh. We can't make our country the target of the northeastern Indian States, which are fighting for their independence," she said. ■

On the Wye track

Follow-up on an agreement between Israel and Palestine over the implementation of the Wye accord is expected to be slow, with sudden spurts of activity in between.

KESAVA MENON
in Bahrain

"I HAVE to say that these people intend to implement the agreements," Saeb Eerekat, one of the principal Palestinian negotiators, said the other day about his Israeli counterparts. This kind of language has not been heard for years in West Asia, and it shows that beneath all the obfuscation and dramatics on several fronts, some progress is indeed being made here. However, crunch-time in the Israeli-Palestinian track of the negotiations is nearing, and while sudden spurts forward are possible, much of the movement will be slow and grinding.

For the Palestinians, the situation is quite favourable in some ways and not so comfortable in others. On the positive side they enjoy the kind of relationship with the United States administration which could not have been dreamt of a few years ago. A sympathetic President will continue to occupy the White House for a year and more and Bill Clinton would like to round off a process in which his administration has invested so much time and energy. This President cannot seek re-election and does not therefore need to keep looking over his shoulders at potentially hostile domestic lobbies. On the other hand, his wife seems ready to seek a Senate seat from a constituency where the Jewish lobby is dominant and this will inhibit him from exerting too much pressure on Israel.

But the point, as brought out by Eerekat's statement, is that the need for such U.S. pressure appears to have receded. Although no Israeli Prime Minister can possibly say it in so many words, Ehud Barak, the present incumbent, appears to have realised the legitimacy of the Palestinian case. Unlike his predecessor Benjamin Netanyahu, for whom negotiations and signed agreements were mere tools to delay and obstruct a settlement being reached, Barak seems genuinely interested in making a deal. Barak is no push-over, and sometimes seems overly eager to prove this point. But from some relatively unnoticed measures he has taken, it is fairly clear that he does want to settle Israel's disputes with the Palestinians.

While Barak's track record and the content of his election campaign did indicate that he would be different from Netanyahu, the months since his electoral victory in May have not been an anxiety-free period for the Palestinians. About the only firm promise that Barak made as soon as he won was that he would withdraw Israeli troops from the enclave which they occupy in south Lebanon. The obvious implication of that statement was that Barak was keen to make a deal with Syria. When Syrian President Hafez al Assad responded with alacrity, bestowing unprecedented praise on the Israeli leader, the Palestinians had reason to fear that they would be left in limbo as Barak switched attention to the Syrian track of the negotiations.

Israel believes that the disciplined and firmly-led Syria presents a real threat to its well-being. In contrast, as Barak has himself noted, the threat from the Palestinian sub-state is "ludicrous". While a deal with Syria would be valuable for the Israelis from the security point of view and also because it would help stanch the bleeding wound that their occupation of south Lebanon has turned out to be, a final settlement with the Palestinians would at best bring an end to terrorist attacks. It is also widely recognised that a settlement between Israel and the Palestinian Authority will not necessarily bring an end to the attacks. But security arrangements to deal with this threat are in place and they will only have to be continued. In terms of relative benefits Israel has more to gain by making a deal with Syria.

Assad has not forgiven Palestinian leader Yasser Arafat (as he did not forgive Egypt's Anwar Sadat or Jordan's King

JACQUELINE LARMA / AP

Israeli Prime Minister Ehud Barak.

ADEL HANA / AP

Palestinian leader Yasser Arafat.

Hussein earlier) for breaking Arab unity and making a separate deal with Israel. Although Assad continued to insist that a settlement with Israel would only be possible if the Jewish state withdrew from "all" occupied Arab territories (that is, Palestinian as well as Syrian and Lebanese territory), he would not have been unhappy if Arafat was sidelined in these negotiations. In other words, the Syrians would not have been interested in handing out any sops to Arafat if Israel turned around and made the leadership in Damascus its main interlocutor in the negotiations.

During the initial phase of Barak's prime ministership, the Palestinians made frantic efforts to ensure that their fears were not borne out. They received a lot of sympathy from a U.S. administration which, annoyed with Netanyahu's intransigence, had drawn closer to the Palestinian leadership. The U.S. administration would have also realised that its diplomatic objectives would not be served if a negotiating process into which it had invested so much was side-tracked and substituted by another set of negotiations where it might not have a central role.

Besides U.S. advice or pressure, there were other factors which inhibited Barak from following a policy of ignoring the Palestinians while he settled with the Syrians. There was always the probability that the Palestinians would explode, receiving wide international sympathy in the process, if Israel were suddenly to begin ignoring their interests. When Barak made his promise about an early withdrawal from Lebanon, some Israeli analysts had predicted that his policy towards a settlement with the Arabs would be on the following lines.

As a first step Barak would make a strong positive gesture to the Palestinians, and having thus quietened them for a while, move firmly on the Syria-Lebanon track of the negotiations. Once he was able to secure an agreement which would enable him to pull out his troops from Lebanon, Barak would have the necessary domestic support that would enable him to make bold decisions on the very difficult issues that are to be discussed with the Palestinians in the "final status" talks – the future of Jerusalem, the return of the refugees, statehood, borders, Jewish settlements in the West Bank and Gaza, and so on. It is too early to say whether this prognosis will be borne out in full because the first part of it – the making of a strong positive gesture to the Palestinians – has yet to be fulfilled.

One very necessary measure which Israel is treaty-bound to take, and which would also convey a clear positive signal to the Palestinians, is the implementation of the Wye River Memorandum signed in October 1998. Under the terms of the Memorandum, Israel was to hand over another 13 per cent of the West Bank to full or partial Palestinian control (in addition, that is, to the 27 per cent over which the Palestinians already have some authority), release about 650 prisoners from Israeli jails, open a safe corridor between the Gaza Strip and the West Bank, and so on. Netanyahu, who signed the deal and got the Palestinians to agree to tougher security measures in exchange, transferred a mere 2 per cent of additional West Bank territory and then reneged on the deal, accusing the Palestinians of not fulfilling their security pledges.

Barak was not happy about the Wye Memorandum to start with. It provides detailed maps of the land which is to be included in the three-phase transfer process. While most of the land to be included in the second phase of the transfer apparently does not pose much of a problem (from the Israelis' security point of view) portions included in the third phase would impose a tighter squeeze on isolated West Bank Jewish settlements. Territories under Palestinian control would encroach closely on these settlements or access roads to them.

One way out of the dilemma would have been for Barak to see the writing on the wall and announce that these isolated settlements were not viable and would be closed down. However, he probably lacks sufficient domestic support to enable him to take such a measure so early, and in any case the Israelis argue, and correctly from a legalistic point of view, that the issue of settlements cannot be taken up in this current "interim phase of the peace process". Barak has tried to get the Palestinians to a third phase transfer which would be closer in time to the start of the final status negotiations. The calculation appears to be that some idea about the future of these isolated settlements will begin to firm up by then or at least that by then the majority of the Israeli public would have come to recognise by then that these settlements would not survive a final peace deal.

There were several other indications that Barak was not following a Netanyahu-esque policy of "agree and cheat". According to reports in Israeli newspapers, although Barak was not happy about some of the land transfers provided for in the Memorandum, he was not rejecting Palestinian demands outright but suggesting creative options. For instance, he was reported to have offered parcels of land which would have increased the areas under contiguous Palestinian control in lieu of land in the Judean desert which Israel has agreed to transfer but would like to retain for military purposes. Other reports that Barak has significantly increased the quota for Palestinians seeking employment in Israel also indicate that the new Prime Minister has brought a refreshingly different approach to the issue.

Palestinians, who became extremely suspicious about the Israeli leadership during Netanyahu's tenure, would most

naturally have thought that they were being confronted with more of the same old thing. They had been promised a certain amount of land in the Memorandum and they were determined to get it well before the start of the final status talks. Over most of August there was much confusion, compounded by contradictory statements, about the existence of an agreement on principle with regard to the parcels of land identified for transfer and the time-table for the two-phase transfers. By the end of the month it appeared safe to say that the two sides appeared close to clinching a deal.

There were also differences between the two sides over the identities of the prisoners to be released. Netanyahu, true to his style, had released ordinary criminals instead of political prisoners. For long Israel had maintained that it would not release any Palestinian prisoner who had "blood on their hands". As Eerekat pointed out, this was a rather bizarre position to take, considering the fact that the two sides have not exactly been playing soft-ball for the past fifty years. Confusion continued to dog the issue till the last moment, but it appeared that Israel had significantly diluted its position and that it had come to a point where it would retain in custody only Islamic militants who had actually killed Israelis.

Disagreements over the specifics obscured to an extent the contrasting strategic approaches of the two sides. The Palestinians, being the weaker party, had come to rely on the U.S. "facilitators" (who had in course of time become first mediators and then arbitrators) to extract concessions from the Israelis. Almost from the outset, Barak declared that he wanted the U.S. to revert to its "facilitating" role and insisted that bilateralism be the leitmotif of the negotiations with the Palestinians. He therefore threatened that he would implement the Memorandum as originally conceived, and to the detriment of Palestinian interests, if they did not accept the modifications which were so close to being mutually worked out.

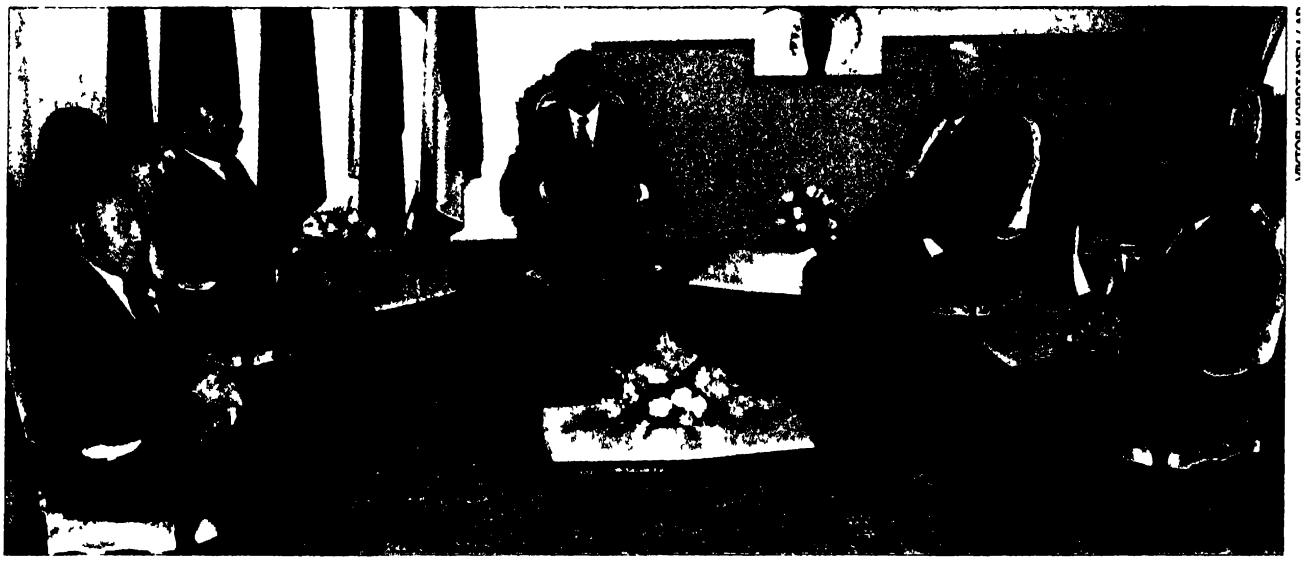
What these contrasting approaches meant in real terms was that the Palestinians wanted the negotiations over the implementation of the Wye Memorandum to drag on till U.S. Secretary of State Madeleine Albright arrived in the region and helped finalise the deal. The Israelis, for their part, were equally determined to ensure that Albright's only contribution would be to grace the signing ceremony with her presence. ■

A summit in Central Asia

At a significant session, the Shanghai Group of Five nations discuss diplomatic and political initiatives pertaining to regional security.

JOHN CHERIAN

BISHKEK, the capital of the Central Asian Republic of Kyrgyzstan, hosted the fourth summit of the "Shanghai Group of Five" on August 24 and 25. Leaders of the group, which comprises China, Russia, Kazakhstan, Tajikistan and Kyrgyzstan, reaffirmed their commitment to establishing durable peace and stability in Asia. The main goal of the association is sub-regional security. All participants of the summit came out strongly in favour of establishing a nuclear-free zone in the region. The Bishkek Declaration, issued at the end of the summit, focussed on the importance of jointly fighting international terrorism, ethnic separatism and religious fundamentalism.



Since the group first met in Shanghai in April 1996, it has come forward with important diplomatic and political initiatives. At Shanghai, the five nations signed an agreement on military matters and on confidence-building measures on their borders. At the Moscow summit in 1997, they agreed on mutual arms reductions along their common borders. The two agreements have provided a basis for military detente in the Asia-Pacific region. The borders between China and the Central Asian republics have been tranquil and most of the territorial disputes in this vast area of the Asian continent have been settled.

Russian President Boris Yeltsin said at the latest summit that the common goal of the association was to create a unique zone of peace along the 10,000-km-long border shared by the five countries. All the leaders stressed that the grouping was not a political or military bloc aimed at any state in particular. Some of the countries in the grouping, such as Kazakhstan and Kyrgyzstan, have good relations with the United States. But China and Russia have openly aired concerns about the U.S' bid to redraw the geopolitical map of the world in its favour and its growing tendency to trample on the sovereignty of nations.

Coming just months after the Western aggression on Yugoslavia and in the context of continuing air strikes on Iraq by U.S. and British planes, the Bishkek talks touched on these and other important global security problems. Yeltsin's statement that he was ready for a "battle against Westerners" may have been hyperbole but his remark that "some countries obviously strive to create a world order suitable only to them, disregarding the objective trends of multipolarity" struck a chord. Senior Russian and Chinese Foreign Ministry officials have in recent months vociferously criticised the U.S. for using force in many parts of the world without the sanction of the United Nations Security Council.

Russia and China are worried about some emerging trends in the region, especially the creation of a U.S.-Japan-South Korea security triangle. They are also critical of Washington's plans to revise the Anti-Ballistic Missile (ABM) treaty and the new plans being drafted in Washington and Tokyo to set up regional anti-missile defence systems. Russian Foreign Minister Igor Ivanov emphasised that the Bishkek Declaration reflected the general international mood in favour of the restoration of a multi-polar world and a rejection of Washington's claims that it was the sole remaining superpower. The Bishkek Declaration specifically stated that "multi-polarity is the general trend in the development of the contemporary world, facilitating the long-term stability of the international situation".

Another important paragraph in the declaration talks of "the determination not to allow the use of their countries' territory for organising any activities detrimental to the sovereignty, security and public order in any of the five nations." This point was included, according to

(From left) President Nursultan Nazarbayev of Kazakhstan, President Jiang Zemin of China, President Askar Akayev of Kyrgyzstan, President Boris Yeltsin of Russia and President Imomaly Rakhmonov of Tajikistan at the Bishkek summit.

observers, at the insistence of China, which is embroiled in a diplomatic spat with the U.S. on Taiwan.

For China, Taiwan is one of its own provinces, and it is angry with U.S' continued encouragement of Taiwan's attempts to secede formally. The U.S. also continues to be the main supplier of arms to Taiwan. Taiwan is also trying to buy influence among the cash-strapped countries in the region. There is also a suspicion that the Uygur separatists in China are getting support from some influential sections in Washington.

One of the highlights of the summit was the meeting between Yeltsin and Chinese President Jiang Zemin. Their meeting, according to media reports, exceeded the scheduled time. The two leaders gave top priority to the dangers posed by the anti-missile defence system being planned by Washington and Tokyo. According to the Russian media, the two leaders also expressed their "serious concern" about the situation in the sphere of nuclear weapons and agreed to cooperate to stop nuclear proliferation. Before the start of the summit, there were reports that Beijing would bring up the issue of nuclear proliferation in South Asia.

The Central Asian countries had expressed their misgivings about the nuclear tests conducted by India and Pakistan when the Shanghai Five met in Almaty last year. However, at Bishkek, open criticism was confined to Washington's stated intention of deploying the anti-missile systems. The Chinese and Russian positions on the issue coincide: the two countries are of the opinion that such a move would sound the death knell of the ABM treaty, besides giving a fillip to nuclear proliferation and bringing to an end the trend towards global demilitarisation. The last thing Moscow wants at this juncture is to spend its scarce resources on another arms race.

Washington has been ingeniously trying to claim that the projected anti-missile defence shield is planned only against North Korean missiles (*Frontline*, April 9). Moscow and Beijing, however, dismiss Washington's threat perceptions about North Korea: they argue that given the dire economic straits North Korea is in, it poses no real threat to powerful countries like the U.S. and Japan. Moscow and Beijing are convinced that Washington is using North Korea as a bogey for its far-reaching strategic ambitions in the Asia-Pacific region.

Ivanov told the media in Bishkek that during their one-on-one talks, Yeltsin and Jiang Zemin explored avenues "for further practical strategic partnership between Russia and China in the international arena". He said that the two leaders reaffirmed their viewpoint that the future world order should be multi-polar. Beijing and Moscow, meanwhile, let it be known that they too had contingency plans in case Washington and Tokyo went ahead and deployed new missiles.

Another worry for the Shanghai Five is the growing threat posed by fundamentalist groupings inside their own territories and in the immediate vicinity. Russia has virtually lost Chechnya to the forces of religious extremism and is currently engaged in a fierce fight to keep these forces at bay in Dagestan. Kyrgyztan is also facing a serious challenge from Islamic groups. In fact, even as the summit was in progress, about 1,000 Islamic militants seized Kyrgyz hostages in the mountainous southern region and grabbed international headlines. Among those seized were four Japanese geologists and a senior Kyrgyz army official. The Kyrgyz Government is finding it increasingly difficult to subdue the Islamists, who have a strong following in the Fergana valley in neighbouring Uzbekistan. Beijing is worried about its own Islamists, who have been active in the Xinjiang Uygur autonomous district. China wants to coordinate with its neighbours in its efforts to combat the separatists. There are an estimated 200,000 Uygurs in Kazakhstan and about 50,000 in Kyrgyztan.

The Shanghai Five are also concerned about the situation in Afghanistan, which has had a direct impact on Tajikistan, a member of the grouping. Tajikistan's politics has been volatile since the Taliban consolidated its hold over Afghanistan. It is only the presence of elite Russian troops on the border with Afghanistan that has prevented a bloody Islamist takeover of the country. In fact, all the countries in the grouping have been adversely affected by the developments in the region. Along with its fundamentalist version of Islam, Afghanistan also exports guns and drugs in huge quantities. The Bishkek Declaration in its very first paragraph emphasises the importance of joint resistance to international terrorism, drug-trafficking, smuggling of arms and "manifestations of national separatism and religious extremism". ■

Press under pressure

The issue of the Pakistan government's continuing attempts to muzzle the press is linked to the wider issue of democracy and good governance, freedom of expression and tolerance.

BEENA SARWAR

RETIRED Group Captain Cecil Choudhry relates the tale of the enraged man who pounded his three-year-old son's fingers with a hammer the boy had used to dent the father's new car. His rage subsided, the boy was rushed to hospital. The crushed fingers had to be amputated. The father was at the son's bedside when the boy emerged from anaesthesia. "Daddy, I'm sorry I hurt your new car," he said. "But when will my fingers grow back?"

While this story is relevant to many aspects of society, Cecil Choudhry recently related it during a talk on the pounding the press has taken from successive governments in Pakistan, especially the present one. And the question left lingering is, will the fingers grow back... or is the damage irreparable?

The issue is, of course, linked to the wider issue of democracy and good governance, freedom of expression and tolerance of criticism. As Choudhry said in his talk, it is the responsibility of the press to hold anyone in public office accountable. If someone has anything to hide, he or she should not be holding public office. If the press is allowed to carry out this role, there would be no need for an Ehtesaab (accountability) bureau.

But those in power are invariably so thin-skinned and quick to take offence that they refuse to tolerate criticism, especially valid criticism. Some of them have been fortunate enough to have advisers such as the lawyer Aitzaz Ahsan, who can prevail upon them to avoid heavy-handed tactics against offending publications and journalists and take recourse instead to legal measures. Others, such as the present lot, are surrounded by sycophants who know that what will make the masters happy is to suggest, and follow through with, extreme measures.

The damage thus caused is immense. For one thing, these measures are invariably clumsy and backfire, blackening the government's and the country's image further. Secondly, and more dangerously for the fledgling democracy, each blow tends to make publishers and newspaper owners more cautious. In a situation where the newspaper business is also an industry, there is much that the government can do to punish it. The industry's employees too – journalists, reporters and analysts – begin to be more careful about what they write. A kind of self-censorship creeps in, which could be far more insidious and damaging than the press advice that used to trickle in to, sometimes flood, the news desks when Pakistan was governed not by a democratically elected government but by a military dictatorship. It was in August 1988 that the country saw the last of its most recent military dictators. But the country has not really seen the last of him; his legacy is far from dead. Zamir Niazi, in his well-documented book *Press in Chains* observed that repressive press laws and other measures had resulted in conformism going into our blood.

The dictum "people have the right to know" has been changed to "people should know only what the government wants the people to know", he wrote, at a time when the military dictator and his diktat were alive and well.

Today this observation still holds true. Recent examples of the government's attempts to muzzle the press include those employed to put pressure on the Jang group to get rid of reporters and editors who are seen as "undesirable" (*Frontline*, March 12, 1999). Towards this end attempts were made to arm-twist the owner by stopping the company's newsprint allowance and by reopening old tax cases. More recently, Najam Sethi, Editor, *The Friday Times*, was harassed and browbeaten, first by trying to pin a treason case on him and then by allowing a member of the ruling party to appeal to the Chief Election Commissioner on the basis of unproven charges against him. The application audaciously seeks to have Sethi's name deleted from the list of Muslim voters – not only an infringement on Sethi's rights as a citizen but also a move that impacts on the rights of all Pakistani citizens.

Those in power are so thin-skinned that they refuse to tolerate criticism... In a situation where the newspaper business is also an industry, there is much that the government can do to punish it.

Meanwhile, Maleeha Lodhi, Editor of *The News*, Rawalpindi, has been barred from writing in her own paper unless she mends her relationship with the government. This unofficial ban has been in place since April this year, apparently as a kind of compromise between the government and the Jang group following their clash.

At that time a request from the management not to write critical pieces under her own name for the time being had seemed to be a temporary measure, but she has not been allowed to write since then. There has been no official statement in this regard, nor has the government contradicted reports and comments appearing in other newspapers on the issue. Government officials privately fend off criticism by saying that it is a matter between Maleeha Lodhi and her publisher. But if that was the case, she would hardly have been entrusted with the task of bringing out an entire newspaper, including its editorial pages.

To a question why she does not resign, Lodhi replies that that is just what the government would like her to do. "Why should I make it easier for them?" she asks defiantly. Meanwhile, it is a bizarre situation in which an editor is pushed into writing for publications other than her own, in order to present her point of view with her own

byline although editorials written by her are printed in the same publication every day. She is sticking it out, but this kind of pressure does take its toll, and certainly it makes others more cautious. "Please don't quote me," one senior journalist told an international newsmagazine. "I don't want to end up like Najam Sethi."

There are other, more insidious, ways of bringing journalists under pressure, such as harassment by intelligence sleuths and anonymous callers. "When you start getting calls from intelligence agencies at your house, or you find unidentified cars parked outside, you do start being more careful in what you write or do," admits one reporter. These methods of intimidation are used regularly these days, as various journalists would testify, including Lodhi and Nadeem Malik, senior economic correspondent of *The News*, Rawalpindi, to name just two. In January 1999, on two successive nights, unidentified people tried to break into Malik's house, and then again during the day on February 15, 1999 at 11-30 a.m. On other occasions he has been chased and stopped, apparently by intelligence sleuths trying to interrogate him.

This pattern of official intimidation intensified following the publication of a number of Malik's stories on the state of Pakistan's economy, especially on Islamabad's problems with the International Monetary Fund (IMF). On successive nights starting July 13, 1999, Malik received anonymous telephone calls, after he was officially blacklisted by the Finance Ministry. He believes the offending story might have been an analysis on how economic weakness had forced Islamabad to bow to international pressure for the withdrawal of Kashmiri fighters from Kargil. Nadeem Malik apprehends that his personal safety is under threat. He fears that his house may be broken into as threats that he has received on the phone may translate into actions. Some journalists have simply dropped out of sight – stopped writing for the moment, or gone on well-deserved holidays abroad, removing themselves physically from high-pressure situations. Those who remain are conscious of the phenomenon of self-censorship, and of stories being killed, at least for the present. Some of these stories involve high-level corruption, but they cannot find their way into print right now. Journalists working outside the mainstream national media in smaller towns and cities face other kinds of risks.

What is needed at this point of time is introspection and openness, a clear-sighted examination of what is wrong and an open discussion on how to overcome the problems.

In July, the News Editor of a Sindhi daily, *Kawish*, was arrested by the Kotri police, forcing journalists to take to the streets in protest in Moro. As an editorial in *The News* (July 26, 1999) noted: "This was not an isolated incident. Reports of one or the other Sindhi daily or weekly being suspended and its editor taken into custody regularly appear in newspapers. The troubled city of Karachi... makes the job of journalists even more demanding as private mafias are as interested in getting a favourable press as the government. Elsewhere in the country, unless they cooperate with the administrative and political hierarchy, journalists at the local level are likely to face their wrath usually on the pretext of anti-state activities or one of the many laws used to curb the freedom of expression.

"The role of Pakistan's vernacular press, especially the Sindhi-language publications and small papers in many towns of Punjab, in giving voice to the people at the local level is little acknowledged. This small-town press has, by and large, been a messenger of authentic public sentiments at the grassroots. And doing this job scrupulously often means inviting the fury of local administrations and other segments whose interests are hurt by independent reporting and dissenting views."

Journalists in small towns know precisely what this fury can do, as Sikandar Bhutto, a senior reporter in Ghotki, testifies. He and a number of his colleagues in rural Sindh constantly face police harassment and have often been charged with false cases. Arrest in any of these cases can mean severe beatings and torture. One journalist recently lost hearing in his left ear because of police brutality.

It is hardly surprising that, as *The News* editorial put it, "the example of intolerance set at the national level has been impacting at the local level by fostering the same behaviour of officials towards journalists."

THE pattern of intimidation and intolerance is visible also in the government's dealings with non-governmental organisations (NGOs), especially since the introduction of the so-called Shariat Bill in 1998, which many of them have opposed and organised resistance to. Constitutional Amendment 15, while apparently Islamising the legal system, in effect gives the Prime Minister immense powers – which obviously is the real motive behind it.

"Civil society is in a make or break situation," the Internet news agency Rediff on the Net quoted Lodhi as saying. "This is a fight against rulers who represent the Pakistani version of the Taliban. They have a flawed view of civil society and are socially conservative about women."

The government's ban of some 2,000 NGOs in Punjab and 200 in southern Sindh this May was followed by the announcement that it would enact a law for NGOs. This move is under processing, the idea being to curb political activism and raise the level of awareness, which is very much a part of the work being done by NGOs such as the Human Rights Commission of Pakistan, Shirkat Gah and the Aurat Foundation, groups which are being particularly targeted and pilloried as "enemies of the nation".

Today, when tensions along the border are running high, and politicians from both India and Pakistan are openly threatening aggression, this bogey is particularly useful in suppressing dissenting reports and opinions. At a time when Pakistan needs to be united to face the external threat, it is considered highly unpatriotic to criticise the government and its policies.

But can we afford not to? As far as the government is concerned, there is no opportune moment for criticism. A good press and civil society is one that takes what is dished out and wags its tail in gratitude no matter what is served.

What is needed at this point is introspection and openness, a clear-sighted examination of what is wrong and an open discussion on how to overcome the problems. Silencing criticism and dissent is not the answer. ■

A radical blueprint

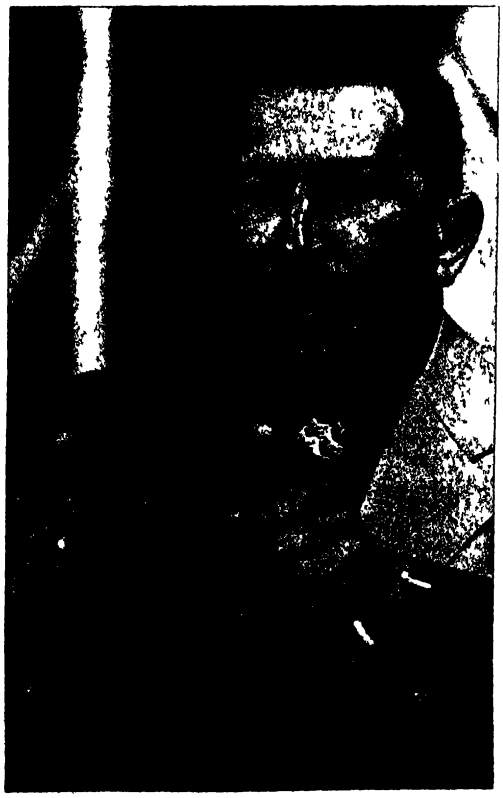
President Hugo Chavez of Venezuela appears determined to revamp the country's discredited political system.

JOHN CHERIAN

EVER since Hugo Chavez became President, Venezuela's politics has been in ferment. Although the elite at first tried to co-opt Chavez, the paratrooper-turned-statesman has insisted on implementing his agenda of radical reforms. He has gone full steam ahead with his programme of restructuring. The newly elected Constituent Assembly has started in earnest the business of rewriting the Constitution and restructuring the corrupt and rotting state institutions.

Since he assumed the presidency, Chavez's popularity has grown by leaps and bounds. Opinion polls show that more than 70 per cent of the Latin American country's population supports Chavez.

Venezuela ranks among the world's biggest oil-producers, and yet the majority of its people live in poverty. The wealthy elite, a minuscule section of the population, wallow in luxury.



The elite, represented by the two traditional parties, Accion Democratica (Democratic Action) and the Social Christian Party or the COPEI, have found it difficult to cope with the new reality represented by Chavez. Chavez has been their *bete noire* ever since he tried to stage a coup in 1992, backed by leftist officers and groups that were fed up with the corruption and economic mismanagement of successive governments. On his release from prison, Chavez embarked on a mission to reform Venezuelan politics. Many Venezuelans considered his bid for the presidency a quixotic one; however, Chavez persisted and, despite overwhelming odds, was elected President in December 1998. Former U.S. President Jimmy Carter, who was in Venezuela as part of a high-profile international team of observers during the election, described his victory as a "peaceful revolution".

Although the two traditional parties were decimated at the hustings, they along with the smaller political parties still control the Venezuelan Congress, to which elections were held earlier. In the past few months, Congress seemed intent on stymieing the political initiatives of Chavez rather than in providing constructive opposition. During the 1998 election campaign, Chavez had given top priority to reforming the Venezuelan Constitution, which was adopted in 1961. He had promised a new Constituent Assembly to draft a new Constitution, if he was elected. The issue has remained controversial from the outset as the 1961 Constitution does not provide a legal basis for the creation of a new Constituent Assembly.

Soon after he was elected, Chavez restated his commitment to convene a Constituent Assembly that had the power to dissolve Congress and dismiss the Supreme Court. He said that Congress did not reflect the political realities or the will of the people. Both the Supreme Court and Congress stood in the way of Chavez's revolutionary project of reforming Venezuela's discredited political system. Congress, which could have helped Chavez in amending the Constitution, instead accused him of mounting a "creeping coup" against the legislature and the judiciary.

This left Chavez with no alternative but to call for a referendum on convening a new Constituent Assembly. The Supreme Court also gave a ruling that convening a Constituent Assembly by referendum was not unconstitutional. The court clarified that while the Constitution limited the means by which the sitting Congress could reform the Constitution, that did not apply to a Constituent Assembly.

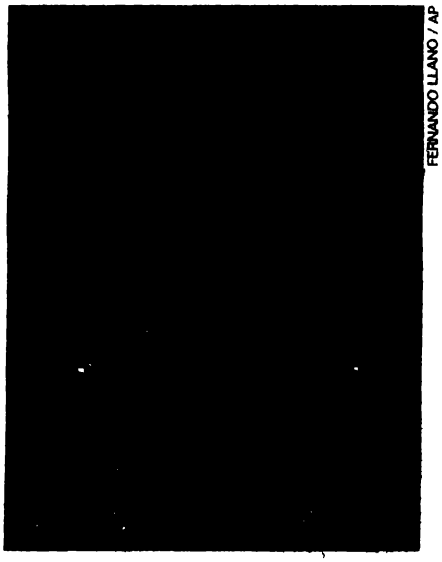
In the referendum, Chavez's plan was overwhelmingly approved, and in the elections that followed, his supporters won 121 of the 131 seats in the new Constituent Assembly. After the Constituent Assembly was sworn in, Chavez reiterated that its main tasks were to rewrite the Constitution and root out corruption.

FERNANDO LLANO / AP

President Hugo Chavez.

On August 25, the Constituent Assembly formally assumed law-making duties, rendering Congress practically irrelevant. The Assembly was assigned not only the task of creating a new Constitution in six months' time but also the responsibility "to restructure the state". Congressional leaders of the Opposition adopted a conciliatory tone and later declared a long summer recess for Congress.

In the last week of August, the Constituent Assembly announced the setting up of a "judicial emergency committee" to review 2,000 charges of corruption and incompetence against judges and recommend action. The majority of Supreme Court judges voted in favour of the Constituent Assembly's decision. But the Chief Justice, Cecilia Sosa, resigned from the bench dramatically, stating that the "court had committed suicide to avoid being murdered". The senior judge's action was just the cue Congress needed to



A demonstration outside the Congress building in Caracas in support of the new Constituent Assembly on August 30.

launch a last-ditch attempt to scuttle the radical blueprint Chavez had in mind. The leadership of the Opposition-dominated Congress announced that Congress would reconvene to discuss the dispute involving the judges

The Government retaliated by issuing a decree under which a committee of four Assembly members and three "independents" was to take over the main functions of Congress. The Government also announced that it was setting up a committee to investigate charges of corruption among legislators. Legislators opposed to Chavez reacted by calling for a congressional session in defiance of the decree. In the presence of their supporters and the media, the legislators tried to force their way into the Congress building, violating an earlier agreement brokered by the Catholic Church. Under the terms of the agreement, a commission was to be set up to discuss the differences between Congress and the new Constituent Assembly. The action of the legislators had the support of the Mayor of Caracas, Antonio Ledezma, a leading light of the Democratic Action Party.

Minor clashes between supporters of Chavez and the largely outnumbered supporters of the Opposition followed. Luis Miquilena, President of the Constituent Assembly, said that the Congress members were acting in bad faith and that it was impossible to negotiate with people "who make a commitment, sign it and three hours later turn their back on it".

On August 30, the Constituent Assembly voted formally to remove the legislative control of Congress on budget and tax matters. Congress had used these powers in a petty way, refusing to sanction President Chavez's trips abroad. Chavez is scheduled to visit neighbouring Panama in order to take part in the inauguration of its new President.

FERNANDO LLANO / AP

Chief Justice Cecilia Sosa, who resigned on August 24.

Chavez has strongly defended his actions and emphasised that they are democratic. "A peaceful and democratic revolution is under way," he said recently. He went on to add that the state had gone bankrupt and that "the corrupt elite had taken control of power". Some of the proposed constitutional changes include allowing two consecutive six-year terms for the President. At present, the President is allowed only one five-year term. Chavez says that continuity is needed at the helm to complete the restructuring he has promised. He also wants a post of Vice-President, who will be nominated by the President, to be created. Chavez has also indicated that he would like judges to be elected by the people.

President Chavez has so far not spelt out his plans for the ailing Venezuelan economy. His Government, however, has managed to keep a tight leash on the profligate oil sector. At this juncture, Chavez seems to be treading warily as the United States and some of Venezuela's other neighbours are suspicious of the path that the country is taking. ■

Simmering discontent in Brazil

A protest march by left-wing parties, trade unions and others signals the popular frustration against the IMF-initiated austerity programme adopted by the government.

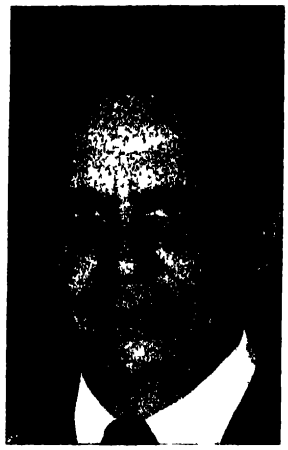
VIJAY PRASHAD

ON August 26, over 100,000 Brazilians gathered before the National Congress in Brasilia, the modernist capital of the world's fifth largest country. The "March of the 100,000" was organised by a coalition of left-wing parties, trade unions and the Movement of the Landless. Signs with slogans such as "Out IMF, Out Cardoso" signalled popular frustration with the International Monetary Fund's (IMF) austerity programme that has been adopted by the Government of President Fernando Henrique Cardoso, a one-time Marxist theorist. One opinion poll showed that 59 per cent of the people who responded to questions thought that Cardoso was doing a "bad or terrible job". A further indication of the prevalent discontent was the handing over of a petition by the marchers to the Government. Signed by 1.3 million people (of a population of 163 million), the petition called upon Cardoso to investigate the 1998 privatisation of Telebras, the national telephone company. The marchers felt that austerity was organically linked to corruption.

Three days before the march, the IMF released a report praising Brazil for its economic performance. "To lay the foundation for sustained recovery," the IMF noted, "the authorities' principal challenges are to build on the progress already achieved in implementing fiscal consolidation and to accelerate structural reforms." The disjuncture between the IMF and the Brazilian masses is enormous. One indication of this came when the savvy Cardoso told the media that "the message (of the march) is noted. We have to look at what lies ahead." At the same time, Cardoso sneered at the protest, calling it the "March of the Directionless".

In the 1970s, the importance of state regulation was such that many people nodded when Richard Nixon said that "we are all Keynesians now". Two decades later, however, the tide has turned, as even liberal regimes resort to the logic of structural adjustment and state deregulation. The word from Brazil, as from Washington, is that "we are all neo-liberals now". The protest was a mark of widespread resentment against the narrowed political horizon – one that privileges the gross domestic product (GDP) over the index of general misery.

FRALDO PERES / AP



At a protest march in Brasilia on August 26, protestors carry a coffin with the message, "Bury Fernando Henrique Cardoso before he buries you."

BRAZIL has been central to the world economy for centuries, at least since 1625 when its slave plantations allowed the Portuguese to supply all of Europe with sugar. The reckless use of human beings and of nature devastated the Brazilian northwest, which is now a desolate region prone to drought and desperation. In 1957, as Amerindian labour built the magical city of Brasilia in the thick of the Amazon, the United Nations found that children in the northeastern region suffered from protein deficiency. Their body weight was, on an average, 40 per cent less than that of children in sub-Saharan Africa. The legacy of Luso-colonialism and British mercantilism hung heavily on the bodies of the Brazilian working poor.

In 1889, the Brazilian military overthrew the monarchy to rid the nation of parasitical leaders. The new oligarchy adopted the positivist philosophy of Auguste Comte (whose slogan "Order and Progress" is the motto of Brazil) and pledged to modernise the country. Although Brazil abolished slavery at that time, the new regime did not attempt to dismantle the *latifundio* (the powerful, large farming families). The *flagelado*, (the "tormented ones"), or the Afro-Brazilian peasants of northeastern Brazil, earned their "freedom", but they quickly re-entered enslaved conditions out of necessity. The reforms enacted by the military remained superficial since the country continued to rely upon the export of sugar and rubber as well as of raw materials. Production of goods for the domestic market was not on the new positivist order's agenda.

After a short bout with democracy, the military, with the blessings of the United States, once again took over the reins of Brazil, from 1964 to 1985. The land reforms it intro-

duced did not break up the *latifundio* but instead neutralised whatever marginal gains had been made by the peasantry and restored the untrammelled power of a few families. From 1964 until 1973, the economy of Brazil enjoyed an 11 per cent rate of growth, as the country produced about 45 per cent of Latin America's goods and services. The broken lives of numerous leftists, trade unionists and the bulk of the workers paved the path to prosperity. In 1973, Brazil was hit by the oil shock, and the military oligarchy reduced the nation's oil imports by a substantial amount and freed its own lax laws to allow oil merchants the right to speculate in the Amazon. When the military came to power in 1964, Brazil's foreign debt was $3 billion. In 1985, the civilians inherited a debt of over $100 billion, a liability that only grew in the next decade.

BY SPECIAL ARRANGEMENT

President Fernando Henrique Cardoso.

BRAZIL, like other South American nations, has taken its time getting used to the logic of capitalist democracy. In 1992, President Fernando Collor de Mello was impeached on corruption charges. The country was in dire straits. Cardoso came to power in 1995 with a promise to end the economic uncertainty marked by an inflation rate of 2,000 per cent. His "Real Plan" offered the country a new currency (the real); he also lowered the inflation rate to a manageable 4 per cent. This was done, for the most part, at the behest of international capital flows, by the sale of precious state enterprises, including the oil company and major utilities, and by further opening up the Amazon for raw material extraction. Foreign investment rushed into the country, from $2 billion in 1995 to $34 billion this year. To retain this money within Brazil, Cardoso raised interest rates to 50 per cent. A rise in unemployment (18 per cent in industrial areas), food prices and the budget deficit ($100 billion or 8 per cent of the GDP) crippled the Cardosian reforms. Inequality, never low in Brazil, is now at an embarrassing high – 20 per cent of the population controls over 80 per cent of the wealth and 1 per cent of all landowners hold 44 per cent of the agricultural land.

While the military ruled Brazil, Cardoso pioneered the Dependencia school of Marxism. Cardoso, along with Gunder Frank and Paul Baran, argued that colonial regions such as Latin America remained underdeveloped because of the vast surplus extracted by colonisers who then invested these capital sums to develop their own countries. The theory, which remained at the level of circulation, did not consider the way colonialism reorganised production relations and how imperialism negotiated the class struggle within the colony. At the policy level Cardoso remains a Dependencia, since his strategy for Brazil is to reverse the flow of capital without making any changes in the basic production structure. The reality, however, is very different. The inequities of Brazil, including those in agriculture and industry, remain unaddressed as finance is seen as the sole means to rescue Brazil from the plight of colonialism and dictatorship.

In January 1998, investors withdrew billions of dollars from the country ($1.2 billion in one day) as the real was devalued. Although Brazil was in a debt crisis for some time, the devaluation put pressure on it to take immediate action. This crisis, however, was less for the Brazilian people and more for the overexposed U.S. financial houses. If Brazil defaulted on its $228-billion debt, U.S. creditors such as Citigroup ($3.9 billion), Chase ($3.9 billion), BankAmerica ($3.3 billion), J.P. Morgan ($2.2 billion), Bankers Trust ($900 million) and BankBoston ($860 million), would bear its brunt. Many U.S. firms rely on the Brazilian market for their sales, so the integrity of its foreign exchange remains important to them. Coca-Cola, for example, derives 17 per cent of its worldwide sales from Brazil, as 20 per cent of U.S. exports find their way to Brazil. Brazil is to the U.S. what South-East Asia was to Japan.

The IMF and the U.S. met Cardoso in November 1998 and urged him to adopt an austerity plan. Although the IMF claimed that the bail-out was intended to help the structural adjustment policy, it was clear that the money was intended to prevent a meltdown of U.S. interests. Cardoso pledged to slash Brazil's social service budget and to ask public sector workers to contribute more money towards their pension funds. U.S. Treasury Secretary Robert Rubin announced that "it is essential that Brazil implement its programme promptly and convincingly." President Bill Clinton noted that "a strong Brazil makes for a stronger United States." The U.S. offered $5 billion to the final loan of $41.5 billion ($18.1 billion from the IMF, $5 billion each from the International Development Agency and the World Bank, and the remainder from the G-7 states).

THE day before the March of the 100,000, Venezuela's President Hugo Chavez (himself in the midst of a crisis) told Brazil's leading newspaper *Folha de Sao Paulo* that "the market has gained the status of God." He urged Brazilians to stop "dogmatically copying the savage neo-liberal models that are imposed on us." At the same time, Lawrence Kreicher of Alliance Capital Management (who administers $6 billion in "Emerging Market" assets and who owns $600 million in Brazilian debt) noted: "We are not going to place more money in Brazil until we see a political improvement." In other words, until Brazil cowers before the IMF. The value of the real dropped sharply and the Central Bank held an unscheduled auction of dollar-indexed domestic debt to protect the currency.

The 100,000 protestors paused before the Congress building. Despite the austerity regime, Brazil plans to spend $800,000 on a moat around the Congress building to protect the politicians from the people. Lula da Silva of the Brazilian Workers' Party, who lost three close elections to the presidency, told the marchers that the Cardoso regime asked "for IMF blessings on its knees." "If Cardoso resigns," he said, "it would be a gracious gesture, but Cardoso has no grace... This is just the beginning. We hope that Cardoso listens and feels the clamour of the people." The Left alliance (including the Central Labour Union with its 19 million members) and the Catholic Church have planned a protest called the "Cry of the Excluded" for September 7, Brazil's Independence Day. Progressives, Chavez noted, needed to "find a new road for our countries and people." The March of the 100,000 offered stringent criticisms of neo-liberalism. One hopes that new roads will be laid to help emerge from the IMF's clutches. ■

In the doldrums

Brazil's economy comes under severe strain after the sharp devaluation of the real, and the austerity measures proposed by the Government are unlikely to alleviate the problem.

V. SRIDHAR

CLASSIFIED as an "emerging market" by investment banks, Brazil is a poor country. Nearly half of its population of 160 million lives below the officially determined poverty line. According to an activist group that is conducting a campaign to get Brazil's foreign debt cancelled, the income distribution profile of Brazil is among "the worst in the world". Extreme inequalities in land distribution reinforce the image of a deeply divided society. One per cent of the population holds nearly half of the country's total arable land. The richest 10 per cent of the population earns about 44 times more than what the poorest 10 per cent earns.

Although opposition to the austerity measures adopted by the Government of Fernando Henrique Cardoso has swelled since the collapse of the real in January, anger is mounting also against the International Monetary Fund (IMF) because it is widely perceived to be the main initiator of the austerity measures. The mood of outrage has quickly yielded to one of anger as it has become clear that while investment bankers made a killing during the run-up to the devaluation of the real in January, the poor are asked to tighten their belts to face the severe austerity measures.

Allegations of sleaze have rocked the nation. The latest of these relates to the privatisation of the national telecom company, Telebras. The IMF has also been drawn into the controversy because of allegations about the manner in which it organised the $41.5-billion "bailout" early this year in association with the G-7 countries, with the active support of private financial institutions. There has been outrage over reports that while private banks – mainly from the United States – booked huge profits on the basis of privileged access to inside information available from Brazil's Central Bank, several large U.S. banks, including Chase Manhattan and J.P. Morgan, made huge profits when the real collapsed in January. Chase Manhattan, for instance, earned $150 million in January 1999 from its Brazilian operations – double its net earning in the whole of 1998. It is estimated that between July 1998 and January 1999, $50 billion worth of foreign currency, equal to 6 per cent of the country's Gross Domestic Product (GDP), was appropriated by private – mainly foreign – financial institutions. The speculative raids resulted in the Central Bank's reserves falling from $75 billion to $27 billion during this period.

The sharp devaluation of the real has caused a sharp increase in prices. An increase in the prices of basic goods of the poor such as bread, and of essentials such as fuel, has had a cascading effect on the general price level. The outrageously high levels of interest (at one time it was more than 80 per cent on an annualised basis; although it has come down, it is still at a high level of nearly 25 per cent) have put tremendous pressure on indigenous manufacturing. Brazilian industry, traditionally regarded as one of the most diversified in the developing world, has thus come under severe strain. There have been massive job losses, as signalled by

Taking a break from work at a charcoal furnace in northern Brazil. The income distribution profile of Brazil is among the worst in the world.

DARIO LOPEZ MILLS / AP

the recent layoffs in factories belonging to Ford, General Motors and Volkswagen.

The Brazilian Government has also resorted to a general freeze in public spending. The obvious victims have been the social sectors. Activist groups fighting against the "neo-liberal agenda" claim that the public health system is in danger of collapse. The IMF's traditional prescription of austerity has caused massive lay-offs among the bureaucracy, the dismantling of social programmes, and the sale of state assets to private (and foreign) entities such as banks. The cuts in government spending will affect pensions, health care and education. Brazil has also provided guarantees to the IMF that its servicing of foreign loans will remain unhindered.

The freeze on transfer payments to State governments threatens to undermine the large country's federal structure. Itamar Franco, Governor of the State of Minas Gerais, led anti-government and anti-IMF protests over the austerity measures. He said that the IMF's policies in Brazil would lead to "further recession and unemployment", adversely affecting the "poorest sectors of the population". Since early this year Franco has emerged as a national figure because of his refusal to repay his State's debts to the federal government. Even as the international media portrayed Franco as a "rogue Governor", six other Governors joined him in demanding a moratorium on debt payments to the federal government.

The real collapsed in January when its "crawling peg" to the dollar was broken. Central Bank Governor Gustavo Franco was replaced by Francisco Lopes, who later figured in a scandal. Lopes was sacked in April after refusing to testify under oath before a Senate committee investigating the conduct of the Central Bank's affairs just before the collapse of the real. There were allegations that Lopes traded in inside information with private banks during the crucial period. The owner of one of the banks is reported to have claimed that he had paid informants in the Central Bank who provided him with details of impending changes in interest and currency policies. Lopes accompanied Brazilian Finance Minister Pedro Malan to the U.S. in January to negotiate the bailout package with the IMF, the U.S. Treasury Department and private banks.

In the Memorandum of Economic Policies submitted to the IMF on July 2, 1999, the Brazilian Government said that it was "fully committed" to the course of fiscal adjustment. The Government has submitted to Congress a draft of the Fiscal Responsibility Law. It informed the IMF that this would be the pillar supporting the fiscal adjustment. Quantitative limits are to be set not only on indebtedness but also on the number of personnel at each level of government. Indirect tax reforms and pension reforms are also part of the plan submitted to the IMF. Inflation is to be "targeted", implying that monetary policy would remain paramount. The obvious question about how Brazilian domestic industry will cope with this kind of severe targeting is, of course, not elaborated. The programme to privatise state-owned banks (PROES) is to proceed rapidly. When the programme was launched, there were 30 such banks; only six are projected to survive after two years, when the programme comes to a close.

The IMF, in a statement issued on August 23, expressed satisfaction with progress being made in Brazil. It expects GDP to decline by 1 per cent in 1999. This is after the virtual stagnation in 1998, when the economy grew by just 0.1 per cent.

Between April 26 and 28 the Foreign Debt Tribunal conducted a public hearing at the Joao Caetano Theatre in Rio de Janeiro to hear the case for the cancellation of Brazil's debts. The venue of the meeting is the site where the national hero Tiradentes was publicly hanged by the Portuguese colonial administration in April 1792. More than 1,200 people participated in the hearing, which was organised by a cross-section of organisations representing agricultural workers, churches, lawyers, industrial workers and political groups.

The Tribunal, working to reinforce the Jubilee 2000 Coalition's international campaign to cancel the debts of poor countries, argued that Brazil's debt had increased from $148 billion in end-1994 to $270 billion in March 1999. During this period, $126 billion was paid to foreign creditors. It ruled that this kind of borrowing – making fresh borrowings to finance interest payments on past borrowings – was unsustainable. It said that the Brazilian Government regarded the financial system as an "end in itself", neglecting health, education, employment, demarcation of indigenous lands, agrarian reform, the environment, and the elderly and the children. The Tribunal condemned the "Brazilian debt process" and held it as "grossly unjust and illegitimate." ■

■ WORLD AFFAIRS

D.B.S. JEYARAJ

ON September 2, the deputy leader and military commander of the People's Liberation Organisation of Thamil Eelam (PLOTE), Nagalingam Manickathasan alias Thasan, became the latest victim of Sri Lanka's ongoing ethnic conflict when an explosion occurred at Vavuniya, the southernmost town of the predominantly Tamil Northern Province. It happened at the 'Lucky House' camp where the headquarters of the PLOTE functioned in Vavuniya. Lucky House is situated within the Vavuniya Urban Council limits, at Rambaikulam behind the St. Anthony's Catholic church and about half a mile from the Clock Tower road junction.

Along with Manickathasan, his lieutenant Illango who was the Vavuniya regional military leader of the PLOTE, and Vino, a former member of the Kaluvanchikudi *pradeshiya sabha* (local authority) in Batticaloa district were also killed. Another cadre, Uthayan alias Thavam, was seriously injured. Residents of Vavuniya described the explosion as a powerful one; it reverberated through the town. Vino died instantly and Illango a little later at the spot; Manickathasan died on the way to hospital.

There was some confusion initially about the mode of attack. The police first stated that a suicide killer of the Liberation Tigers of Tamil Eelam (LTTE) was responsible for that. Subsequently they said that an explosive device of the Claymore variety had been fixed on the ceiling above the staircase and triggered just as Thasan and Illango were coming down from the first floor. The extensive damage caused to the building seemed to bear testimony to this.

Informed sources in Vavuniya said that the initial impression of a suicide bomber being involved was caused by the fact that Vino took the full force of the blast: his body was torn to bits. Vino was ascending the stairway while the other two were descending. Thavam was standing at the foot of the staircase. Since Vino's body had disintegrated, it was presumed at first that he was a suicide bomber.

The explosion at the Jaffna Municipal Council in Nallur last year, in which the Tamil United Liberation Front (TULF) Mayor of Jaffna, Sivapalan, Jaffna military commandant Brigadier Mendis and several high-ranking police and municipal officers were killed, was

Who killed Manickathasan?

The killing of the PLOTE leader in Vavuniya on September 2 right inside the fortified local headquarters of the organisation raises a host of questions.

also carried out in a similar manner. Until then, Claymore devices were usually placed on the ground as landmines to target mobile patrols or convoys. Deploying one on the ceiling and making it explode in a downward direction was considered an LTTE 'innovation'.

According to sources in Vavuniya, there were 15 to 20 people on the ground floor waiting to meet Manickathasan. None of them was harmed. According to eyewitness reports, Manickathasan had just asked his men to prepare tea for the waiting people: those were his last words.

The prevailing confusion was compounded by the fact that the explosion had occurred within the fortified premises. When there were doubts about the involvement of a suicide killer, the question was how such a person would have managed to enter the camp, walk upstairs to the room and self-destruct. The same doubt persisted when the cause was attributed to an explosive device fixed on the ceiling. Again the question is how it was possible to affix an explosive device there.

The preliminary answer to these questions was that it was an insider's job: there had to be collaboration by some PLOTE cadres in the affair. In fact, a person closely trusted by Manickathasan could have been responsible. If the bomb was triggered by a remote device, how did the person responsible know that Manickathasan was coming down the stairs at that very moment? Was that person then close at hand? These questions raise certain doubts.

BORN in 1959, Manickathasan was involved in Tamil militancy from his teens. He hailed from Jaffna town. His father, Nagalingam, ran a small lumber depot at Martyn Road in the heart of the town. Thasan's mother is Sinhalese and, incidentally, is the sister of former Janatha Vimukthi Peramuna (JVP) general secretary Upatissa Gamanayake's mother. Gamanayake, along with JVP leader Rohana Wijeweera, was killed in military custody in 1989, during Ranasinghe Premadasa's presidency. It was an interesting case of two cousins being actively involved in two extremes of the political spectrum.

Thasan was earlier a junior member of the LTTE. After the split between former PLOTE leader Umamaheswaran (who was killed in July 1989) and LTTE supremo V. Prabakaran in 1980, he threw in his lot with the former. Along with Umamaheswaran he was one of the founder-members of the PLOTE. He later went to Lebanon and obtained military training in one of George Habash's PFLP camp. He returned to Sri Lanka in 1981, and is said to have been responsible for the gunning down of four policemen at an election meeting of the Tamil United Liberation Front (TULF) in Nachimarkovilady, Jaffna. Thasan was arrested on suspicion and detained in Colombo. He survived the Welikade prison massacre of July 1983 and was then transferred to the Batticaloa jail. He escaped from that jail and made his way to India. He spent several years in Chennai and Orathanadu in Thanjavur district, trying to recover from health problems caused by torture in custody. He returned to Vavuniya in early 1987 and set up a PLOTE camp in Chettikulam.

Vavuniya town as well as the greater part of the district has long remained a citadel of the PLOTE. Thasan and the military wing formed the cutting edge of the organisation. One consequence of Manickathasan's endeavours was that the LTTE, in spite of its overall hegemony, could not retain a dominant presence in Vavuniya town and its environs. After the death of Umamaheswaran and Kandaswamy alias Sangiliyan in 1989, there was some internal restructuring. D. Siddharthan, son of former TULF MP V. Dharmalingam, became the PLOTE leader. Manickathasan became its military commander. Soon he became its deputy leader too.

Gradually, the PLOTE devised a new equation with the Sri Lankan armed forces and began to enjoy absolute power within Vavuniya district. The taste of such power had a corrupting influence, according to PLOTE insiders themselves. Soon Thasan began imposing taxes on the people. Vehicles involved in transporting people and goods had to pay a levy. Businessmen and farmers had to pay up too. The PLOTE under Thasan exercised a monopoly over the sale of eggs and coconuts in Vavuniya. "Donations" were extracted from ordinary people too. Those who did not pay up were dubbed LTTE supporters, "arrested", and tortured. Suspected LTTE members or informants too were detained and tortured. There was internal repression; several PLOTE cadres were subjected to this harrowing treatment.

There were several torture centres in Vavuniya, the most notorious one being the Malar Maaligai (flower palace) camp and the Lucky camp. The existence of a torture camp in Lucky House was dramatically revealed last year when a detenu in shackles escaped and burst into the adjoining St. Anthony's Church while morning Mass was going on. He fell at the feet of the priest and cried out for protection. When armed cadres of the PLOTE entered the church and tried to take him away, the priest refused to allow them to do so. The PLOTE members turned nasty but the worshippers prevented them from being violent. Ultimately the police arrived and rescued the man. This incident as well as many others were highlighted by Amnesty International.

PLOTE leader Manickathasan.

In recent times, Manickathasan displayed an ambitious political streak when he contested the Jaffna Municipal Council elections and aspired to be the Mayor. The TULF won and Sarojini Yogeswaran became the first Mayoress. Thasan was elected councillor but he declined to serve and returned to Vavuniya. There began a controversial, perplexing and troubled phase in his life.

One aspect of this phase was the launching of a

vicious intra-organisational campaign to oust PLOTE leader Siddharthan. All those identified as Siddharthan's supporters were warned not to set foot in PLOTE offices. Subsequently, Thasan seemed to have realised that he lacked the ability to function as the PLOTE head. He opted to allow Siddharthan to function as the *de jure* leader while he himself would be the *de facto* leader. A few weeks before his death, both PLOTE leaders appeared jointly before sections of the media and declared that there were no differences between them.

The second controversial aspect of Manickathasan's conduct was his open confrontation with another Tamil group. the Tamil Eelam Liberation Organisation (TELO). The clash began as a turf war, with both groups competing to levy "taxes' from the traders of Vavuniya. Soon Manickathasan led a bitter campaign against TELO, leading to the death of several cadres and supporters. TELO retaliated and soon there was a full-scale 'civil war' in Vavuniya; at one stage the entire town was paralysed. Several ordinary people were caught in the crossfire. The residents of Vavuniya agitated for the disarming of both groups. The security forces confiscated some of their arms. But both groups objected to this, saying that they were needed to defend themselves from the LTTE. The situation became too hot in Vavuniya, and the leaders of both groups shifted temporarily to Colombo.

But the conflict spread to the national capital. The TELO leader in Vavuniya, Rajaratnam Kugarajah alias Kugan, and two others were shot dead at a shopping complex in Bambalapitiya. It was widely believed that Manickathasan himself had executed them. There was a public outcry that the Tamil groups should not be allowed to continue the violence in Colombo and the police began looking for Manickathasan. He then flew out to Singapore and from there to Mumbai.

From there Thasan moved to Chennai. Finding Chennai inhospitable, he returned to Colombo.

THE third and perhaps the most controversial aspect of Manickathasan's conduct was his attempt to appease and align himself with the LTTE. Earlier, Sri Lankan intelligence officials had discovered that the PLOTE was harbouring suspected LTTE operatives in its camps. Calendars published by the PLOTE with the picture of a tiger mauling a lion lying spreadeagled over the northeastern area of a map of Sri Lanka were confiscated. Thasan gave some interviews to the Tamil press in the course of which he said that the LTTE and the PLOTE were brothers, while the Army was always the enemy. On another occasion he said that the PLOTE would "give up" Vavuniya if the LTTE wanted it. When the armed forces began confiscating arms from PLOTE cadres, he threatened to team up with the LTTE and fight the government. He announced that he had instructed his junior cadres to join the LTTE. Later there were reports in the Sri Lankan media that more than 70 such cadres had indeed joined the LTTE.

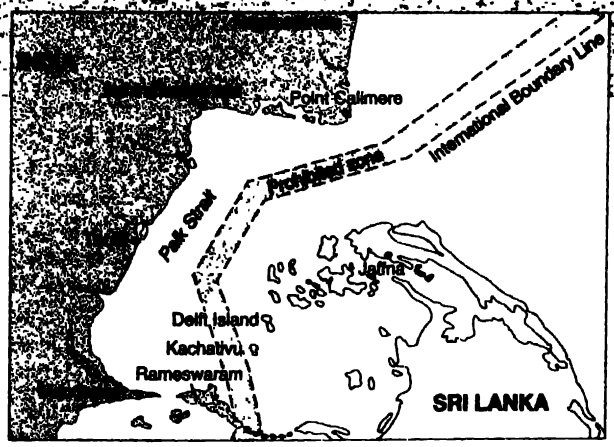
AGAINST the backdrop of such bizarre conduct by Manickathasan, his killing too has become a matter of speculation. Although the needle of suspicion naturally points to the LTTE, there is reason to think otherwise because of the recent overtures Manickathasan made to that organisation. Whether the Tigers would have killed someone who was trying to ingratiate himself with them is a moot question.

Given the prevailing state of affairs, other possibilities also remain. It could have been TELO; it could have been the dirty tricks department of the Sri Lankan Army; it could even be the handiwork of PLOTE elements opposed to Manickathasan. Given the fact that Lucky House was a veritable fortress, an internal squabble being behind the killing is a distinct possibility. It was only a few years ago that Manickathasan was being blamed for the killing of Arjuna, the PLOTE leader from Trincomalee who participated in the ill-fated invasion of the Maldives that was thwarted by the Indian Navy. He was also thought to be responsible for the death of Karavai Kanthasamy, a political activist of the PLOTE who was on the verge of crossing over to the Eelam People's Democratic Party (EPDP). It is also rumoured that Thasan travelled to Switzerland and killed a former cadre, Robin, and his wife in order to suppress information about his own involvement in the killing of Umamaheswaran.

All these signs of internal divisions within the PLOTE and enmity with other groups, notably TELO, has caused a cloud of doubt to appear whenever the PLOTE was targeted effectively. Last year Manickathasan's deputy, Alavaanku Das, was blown up using a Claymore mine when he was travelling on a tractor. Thasan was travelling in another vehicle. Last year, the PLOTE MP from Wanni district, Shanmuganathan alias Vasanthan, was killed in another landmine attack. Shots were fired at the house of another PLOTE MP, Balachandran, but he survived. In July, Thasan's aide, Sabaratnam Baskaran alias Dumal, was killed in a Claymore mine attack.

All these incidents in Vavuniya taken along with those in Jaffna against PLOTE members indicate that the LTTE has been consistently targeting the PLOTE. It has not been possible to point the finger of guilt conclusively because of the suspicion that other agencies too may be involved.

Such a climate of uncertainty is one in which the LTTE thrives. It continues with its actions systematically and ruthlessly while the victims and aggrieved parties indulge in mutual recrimination. The Special Task Force commandos of the Army have been taking action against TELO in Vavuniya. They think the recent landmine attacks by the LTTE against them were carried out with the connivance of TELO. In that context, the killing of Manickathasan too will raise doubts.



Nevertheless, to those analysts who have been observing the pattern of the LTTE's attacks, there is no doubt about who is responsible for the latest attack. The LTTE is currently aiming to demolish all effective alternatives to it within the Tamil community. In Vavuniya the PLOTE enjoys some popular support though much of it was eroded owing to Manickathasan's ignoble conduct. Still the LTTE wants to reduce the PLOTE to a non-entity through selective assassinations. It may like to co-opt some of the junior PLOTE cadres. LTTE deputy military commander Balraj himself came from PLOTE. The LTTE, however, would not accommodate senior members from other groups. They are forever dubbed traitors or anti-social elements who must be eliminated. In the case of Manickathasan, he was always perceived by the LTTE as a "thug and criminal" who had to be eliminated. He had also killed and tortured a number of LTTE members and supporters. So there never was any chance of his being pardoned and accepted by the LTTE.

For now, the questions about his death will linger. But it will be only a matter of time before the truth emerges. The important factor, however, is to recognise that the killing would not have been possible without internal connivance in the PLOTE. This means that the LTTE has deeply infiltrated the movement. That should make the alarm bells ring for the PLOTE, other Tamil groups and in the final analysis the armed forces of the country. ■

In risky waters

Indian and Sri Lankan fishermen who seek to make a living in the Palk Bay region face harassment as the bilateral maritime agreements are not sensitive to questions related to their fishing rights.

In Vercode village, some of the boats damaged by the Sri Lankan Navy.

MUKUL SHARMA

THE list is long. Pathianathan, S.P. Royappan, Susha Raj, John, Sebastian, M. Sahayam, Pandi – they are among thousands of fishermen of Tamil Nadu who fish in the Palk Bay and other seas between India and Sri Lanka. When they stray into Sri Lankan waters, they are arrested, harassed and sometimes injured or killed. Their boats are sunk or captured. Scores of Sri Lankan fishermen have met the same fate at the hands of the Indian Navy and Coast Guard. The charges against them are similar: illegal entry into the territorial waters of a neighbouring country to engage in fishing activity. The fishermen are harassed for another reason too: with the continuing problems of terrorism in India and ethnic strife in Sri Lanka, they are often mistaken for terrorists. The sheer need to make a living leaves the fishermen with no choice but to continue fishing in the increasingly unsafe waters, even at the cost of being gunned down.

The bilateral agreements on maritime zones and related issues agreed upon by the two countries on June 26, 1974 and March 23, 1976 would seem to treat the question of the fishermen's security and their fishing rights as tradable commodities, which can be given or taken away in order to satisfy geopolitical or security considerations.

Sri Lanka and India share a maritime border extending to more than 400 km. In the Palk Bay region, in which the island of Kachativu is located and which lies between the coastal regions of Nagapattinam, Thanjavur, Pudukottai and Ramanathapuram districts and Sri Lanka, firing, killing, detention and imprisonment of fishermen are a regular feature. In 1996, I.K. Gujral as External Affairs Minister informed Parliament that 11 fishermen had been killed in 20 incidents of shooting by the Sri Lankan Navy on their fishing vessels. The Sri Lankan Navy admitted to its involvement only in three of the reported incidents.

The Tamil Nadu Government, in its report on the situation up to 1991, said: "Since 1983, till the end of August 1991, there have been 236 incidents of attacks by the Sri Lankan Navy on Tamil Nadu fishermen. Three hundred and three

boats have been attacked and 486 fishermen have been affected; 51 boats have been destroyed; 135 fishermen have been attacked and injured. Over 50 fishermen have been killed; 57 fishermen have been injured in firing incidents. The Sri Lankan Navy has seized 65 motor boats and arrested 205 fishermen. There has been an increase in these incidents, particularly this year (1991)."

Further, in an update, the Tamil Nadu Government noted in November 1993 that 25 fishermen were killed and 109 injured. A total of 136 attacks had taken place on fishing boats; 15 of the boats had sunk.

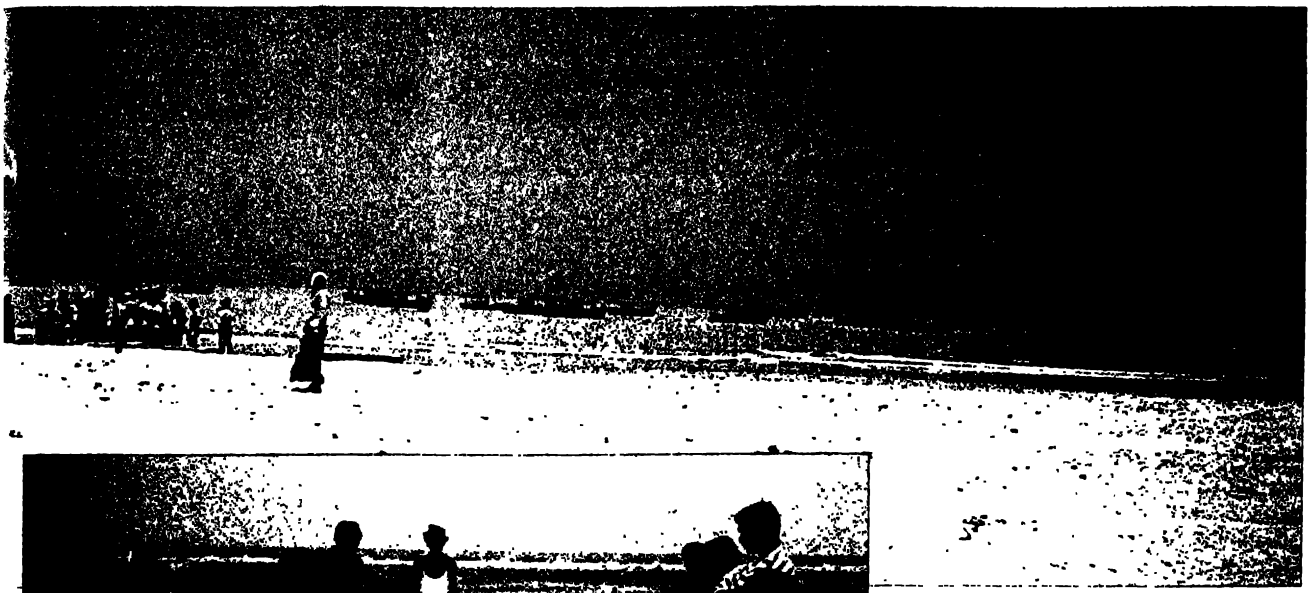
RAMESWARAM in Ramanathapuram district is an island situated in south-central Bay of Bengal. It has a coastline of approximately 80 km, a land area of some 38.5 sq km and a fishing community of around 35,000 people, of whom around 8,000 are sea-going fishermen. To the island's south is the Gulf of Mannar, and to its north is the Palk Bay. At its eastern tip is Dhanushkodi, from where it is only about 16 km to Talaimannar in Sri Lanka.

Saghai Nagar is a settlement of 1,000 fishermen in Pamban village near Rameswaram. Pathianathan, 45, who lives there with his wife and six children, says: "I had a country boat. On the stormy night of November 5, 1996, Richard, Armstrong, Adaikalam and I set sail. Our boat inadvertently crossed into the Sri Lankan side near Talaimannar. When we realised this, we started retracing our course, but we were confronted by a Sri Lankan naval boat. We beamed the light, raised our hands and begged for mercy. But they opened fire and kept shouting. They captured us, removed our shirts, blind-folded us and started beating us. They pushed us onto their boats and continued to beat us. We were taken to the Mannar jail. The following day we were produced in a court in Kothi Mannar. We were detained in the Mannar jail for two more days and from there we were taken to the Marihana police station and detained for a week. We were served a small quantity of food, that too at odd hours. We even went on a hunger-strike for one and a half days."

He continued: "After 10 days in captivity, somebody from the Indian Embassy came to see us and assured us justice. But we spent 100 days in several police stations and jails before we were taken to Jaffna and handed over to an Indian naval ship at mid-sea." Pathianathan's life has changed since that incident. "We did not get the boat back. We made five trips to Talaimannar to recover the boat. When we got it back four months after our release, the boat

Tackling over-harvesting

MUKUL SHARMA



SRI LANKA faces the problem of over-harvesting of its coastal waters. In order to address this problem, the Government encourages deep-sea fishing by offering a number of subsidies. The country's marine fisheries sector currently produces around 220,000 tonnes a year from two-thirds of the area of its Exclusive Economic Zone (EEZ).

A report compiled by Steve Creech with inputs from organisations such as the Forum for Human Dignity, the Social and Economic Development Centre, the National Fisheries Solidarity and the National Union of Fisheries says that there has been a rapid increase in the number of mechanised coastal fishing craft, while the number of traditional craft has remained unchanged. One-day deep-sea vessels, according to it, have become near-extinct, whereas there has been a near-explosion in the number of multi-day fishing boats.

According to government figures, in 1995 the country had a fleet of 1,543 multi-day fishing vessels. Now their number is close to 1,800. Deep-sea fishing within the EEZ is at the point of or nearing over-exploitation: 19 per cent of the small boats and 39 per cent of the larger boats reportedly fish outside the country's territorial waters. Nearly 74 per cent and 64 per cent of the boats operating from Negombo and Chilaw respectively fish beyond the EEZ. The deep-sea fishing boats are also getting bigger, another indication of the desire of the fisherfolk to fish off the Sri Lankan coast and for longer durations. Five years ago, boats measuring even 50 feet were not common; now the demand is for boats as long as 60 or 70 ft.

The report says: "When they begin to search for fish outside Sri Lanka's EEZ, deep-sea boats face a number of problems. To the north-east and north-west, they are confronted by India's EEZ. To the west, they encounter first the Maldivian territorial waters, then those of the Seychelles. To the south-west lies the British Indian Ocean Territory (BIOT) of Diego Garcia. To the east lie the territorial waters of Indonesia. Fines for illegal fishing in Seychellian waters are approximately Seychellian $50,000 a day. The boat, gear and catch are automatically confiscated. Likewise in the Maldives, boats, gear and catch are confiscated following arrest. Licences to fish in BIOT are granted at the cost of SLRs 360,000 to SLRs 450,000 a month for long lining. For purse-seine fishing the fee is SLRs 2 million for four months and a daily payment of SLRs 120,000 for each day the boats are engaged in fishing." The quantum of the fines and the licence fees reflect the lucrative nature of commercial deep-sea fishing and the strong desire of states to control fishing within their EEZs, it remarks.

The report concludes: "It is difficult to be optimistic about the future. All the while Sri Lankan Government policy persists in seeking an answer to over-fishing in coastal waters, by promoting deep-sea fishing as an alternative, the problem is likely to continue... The most viable option for many boats is to poach fish from Indian or Maldivian waters – regardless of the risks involved." ■

T S SUBRAMANIAN

Fishing boats and fisherpeople on the Vedaranyam coast.

was wrecked and the engine was missing. We never received any compensation for the loss of our livelihood or for the damage caused to the boat. Our families survived on loans. I am no longer a boat-owner. I am only a boat worker who has a heavy debt to repay."

Susha Raj of the same settlement owned a boat (RMS-30). It was his ambition to have a boat of his own. He took a bank loan to purchase a boat worth Rs.5 lakhs. The bread-winner of his six-member family, Susha Raj set out to fish late in the evening of January 5, 1995 with six others. Around 11 p.m., when they were near Kachativu, Sri Lankan Navy personnel opened fire at them. "The boat began to sink and we were drowning. I swam to safety. The next day I went to sea with 10 boats in search of the other fishermen. We found the body of Arulanandan. On the second day of our search, we found the body of Vinanzis. On the third and fifth days, we found the bodies of Michal, Panja Felice and Anthony near Irumeni and Sashamanakodhi. The body of the sixth fisherman, Moscow, was found near Dhanushkodi after 17 days."

Five fishermen – John, Sebastian, Arulanandan, Austin, George – were in a mechanised fishing boat on July 14, 1997, when they were attacked by the Sri Lankan Navy. The boat was smashed. Says John: "Austin and George died – they went down with the boat. The rest of us swam to Nedundhevve island on the Sri Lankan side. There, some Sri Lankan fishermen rescued us and a local organisation took us to Jaffna for medical treatment. After being hospitalised for five days, we were jailed in Jaffna and produced before a court. No cases were filed against us, but at the end of every fortnight we were taken to court and then sent back to jail. We spent five and a half months in the Jaffna jail. The families of the dead have not got even the death certificates, leave alone compensation. The widowed women have none to care for them. For no fault of ours, our lives are being ruined. It was wind and water currents that took us to the Sri Lankan waters."

Sebastian shows the deep scar on his right hand, which is crippled. "I can't think of a future. I am married with three children and we are now dependent on my father," he says.

The owner of the destroyed boat, K. Raj, now works as a helper on another boat. "I took a loan to purchase the boat. I used the boat for eight months. I got no compensation, though I approached everybody." Why did he stray into the Sri Lankan waters? "We get a good catch there," says Raj.

In Vercode village, 22-year-old Antony Doss works in a fishing boat. He went in Ananth's boat to fish near Talaimannar in 1998. What followed were long, troublesome days. "Eight boats were fishing together. The Sri Lankan Navy captured all the boats but released four of them instantly. The other boats were kept at sea in Talaimannar under the Navy's watch. We were forced to fish for four days and the catch was taken away. No food was given, except one slice of bread each in the morning and in the evening."

Sahayraj, also from Vercode, owned a fishing boat (RMS-1829). It was taken out into the sea in December 1997 but never returned. Raj, Acquin, Sunil and Albert, who were in the boat, also disappeared. "The parents keep asking me about their sons, but I have no answer. I have spent around Rs.40,000 to search for them. I suspect the boat was hit by the Sri Lankan Navy and it sank with the fishermen on board," says Sahayraj.

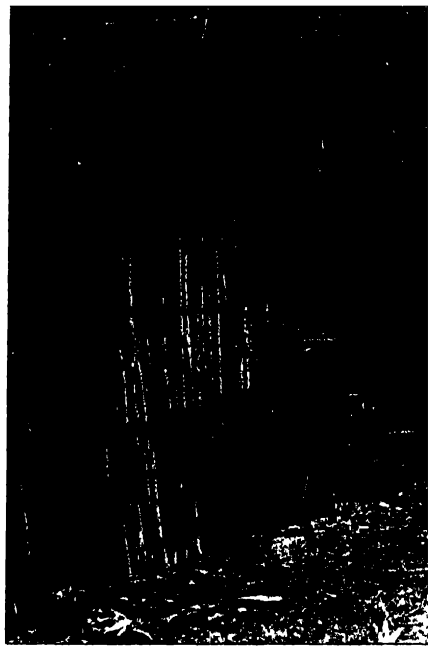
Sahayraj himself was arrested in March 1998 when he was fishing near Nedundhevve. "It happened early in the morning. The Sri Lankan Navy captured four of us. All our belongings – the catch, a compass, a radio and a tape-recorder – were taken away. We were beaten, and released after 24 hours," remembers

Sahayraj. "Our lives and livelihood are in danger and no government has done anything about this."

Felix Gomez, Assistant Director of Fisheries for the Rameswaram region, says that between 1983 and 1997, 74 fishermen have been shot dead and 251 injured.

The incidents are not limited to Rameswaram. Fishermen of Pudukottai and Nagapattinam districts are also harassed. On January 29, 1990, James Chellathurai, Karuppan and Raja set out in their mechanised boat (ARS-32 Arulmurugar) from Kottaipattinam in Pudukottai district. The Sri Lankan Navy fired at the boat, which caught fire and sank. Raja was killed. A fishing boat (BDK-609 MP) that set out from Jegathapattinam on May 20, 1991 with four fishermen – Mayavan, Manivannan, Senthivel and Senchivel – capsized following heavy firing by the Sri Lankan Navy. The four fishermen have not been traced. Muthuvel Rajendra, Samsu, Justin, Kumar Ravi and several others from Pudukottai district have either witnessed or suffered as a result of such firing. Chinnathambi, Murugan, Veerappan, Govindarasu and several others have been missing for several years after similar incidents.

ON the Indian side of the maritime border, Sri Lankan fishermen are caught regularly by the Indian Coast Guard or Navy. According to the Sri Lankan newspaper *Island* (May 18, 1998), 80 Sri Lankan fishermen were at that point under detention in India and 25 vessels had been confiscated. S. Gautama Dass, Deputy High Commissioner of Sri Lanka in Chennai, said: "According to our information, there are more than 100 Sri Lankan fishermen in Indian jails."



In May 1998, W. Antony Vincent, a Sri Lankan boat owner from Munnakara, Negombo, waited desperately outside the Madurai Central Jail in Tamil Nadu. He was in India to retrieve his boat 'Philip Sahana', which had been confiscated, and also to get five fishermen released. Vincent spent more than Rs.10,000 to reach Thiruvananthapuram and Madurai and meet several people. His boat had cost him Rs.9 lakhs five years earlier: he had taken a bank loan of Rs.3 lakhs and had to repay Rs.15,000 each month "I was not in the boat. So I don't know how the capture took place. The fishermen who were captured – K.S. Nicholas, W. Wilbert, K.S. Joseph, Sirinimal Fernando and Wijendra Wadugu Chandra – wrote to me that they were fishing on the Sri Lankan side of the Gulf of Mannar when the Indian Navy seized the boat. The boat is kept in Keelakarai, south of Mandapam. I want it back, otherwise I will not be able to survive. I am also making efforts to get the fishermen released... One day this country, the next day the other... how can we earn a livelihood?" he asked.

W. Wilbert, who is lodged in the Madurai Central Jail, says: "Personnel of the Indian Navy and the Coast Guard pursued our boat while we were returning after fishing on April 3 last year. They asked us to surrender, but we tried to flee. The Navy people said that they arrested us because the Sri Lankan Navy killed Indian fishermen."

H. Mahadevan, an All India Trade Union Congress (AITUC) leader, explained how Sri Lankan fishermen were harassed: "Fifteen Sri Lankan fishermen were released from the Madurai jail on May 25, 1998. They left with their boats from Mandapam. A lot of drama preceded their release. They had been charged under the Customs Act for smuggling in shark skin. Basically nothing incriminating was found in the vessels and the only material available was fish. A confession was obtained to the effect they smuggled in shark skins for sale in India at a better price than in Sri Lanka. Actually marine fish fetches a much better price in Sri Lanka than in India, and shark skin is an internationally traded item, in whose case no significant price differences are likely – in fact, exploitation by middlemen ensures that the beach prices of fish are often lower than what they should be. The Customs at Tuticorin levied a penalty of Rs.47,000 on the fishermen. In addition, they were prosecuted. What followed was a case of miscarriage of justice, and genuine fishermen were convicted as smugglers."

According to Sri Lanka's Ministry of Fisheries and Aquatic Resources Development, between 1993 and 1997, as many as 269 Sri Lankan boats were seized and 338 fishermen detained. It takes up to a year to obtain the release of fishermen. Captured boats are not returned for years.

Gautham Dass says: "Whenever we get some information regarding the arrest of our fishermen, we inform the Tamil Nadu Government. The State Government gets a report from the departments concerned and sends it to the Central Government. The Central Government takes a political decision about the release... We don't provide any legal support to the captives."

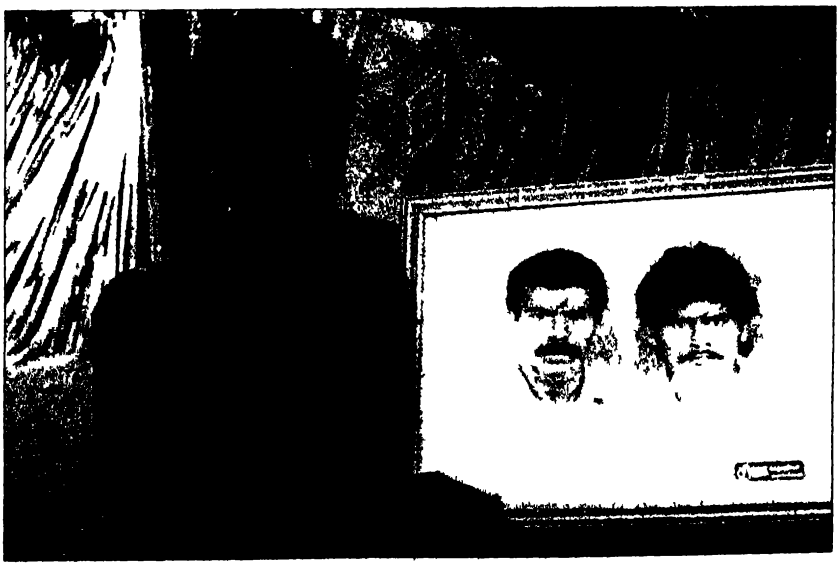
THE fishermen's travails have their genesis in the maritime agreements of 1974 and 1976. The 1974 agreement demarcated the maritime boundary between the two countries in the Palk Strait and ceded Kachativu to Sri Lanka. The 1976 Agreement demarcated the boundary in the Gulf of Mannar and the Bay of Bengal and barred each country's fishermen from fishing in the other's waters.

The 1974 agreement handed over Kachativu to Sri Lanka (*Frontline*, April 22, 1994) The tiny, uninhabited island is situated in the Palk Strait at a distance of between 12.8 km and 16 km from the nearest points of Sri Lanka and India respectively. Article 5 of the agreement, which safeguards the rights of Indian fishermen and pilgrims (who visit the isle to take part in the St. Anthony's festival there), states: "Subject to the foregoing, Indian fishermen and pilgrims will enjoy access to visit Kachativu as hitherto, and will not be required by Sri Lanka to obtain travel documents or visas for these purposes." Article 6 states: "The vessels of India and Sri Lanka will enjoy in each other's waters such rights as they have traditionally enjoyed therein."



This agreement or any of its provisions was neither discussed with the State

MUKUL SHARMA

MUKUL SHARMA

MUKUL SHARMA

governments, fisherpeople's organisations or political parties, nor debated in Parliament before it was enforced. There were other dominant considerations for the then heads of state.

The aftermath of the 1971 insurrection by the Janatha Vimukthi Peramuna (JVP) witnessed a change of mood with regard to the credibility of the Sirimavo Bandaranaike Government in Sri Lanka. The country went through a severe economic and political crisis. The Kachativu settlement contributed to a large extent in lifting the morale of the Bandaranaike regime. (S.D. Muni, "Kachativu Settlement: Befriending Neighbouring Regimes", *Economic and Political Weekly*, Vol.9, No.28; July 13, 1974; page 1,121).

The maritime boundary settlement also helped curb the anti-India hysteria in Sri Lanka. In fact, the agreement strengthened the relations between the governments of Indira Gandhi and Sirimavo Bandaranaike. Sri Lanka extended its support to India on some vital issues. While several countries condemned India's nuclear explosion in May 1974, Sri Lanka accepted India's stance on putting its newly acquired nuclear capability to peaceful use. Besides, when Pakistan tried to use the 15-member ad hoc United Nations Committee as a forum to attack India over the nuclear explosion, Sri Lanka in its capacity as the chairperson of that committee prevented the use of the forum for that purpose (Muni, as cited earlier). Thus the agreement was a political decision, with no thought or consideration to the fishermen.

The 1976 Agreement is entitled "Agreement between India and Sri Lanka on the Maritime Boundary Between the Two Countries in the Gulf of Mannar and the Bay of Bengal and Related Matters". There was an Exchange of Letters on the same day as it was signed between India's Foreign Secretary and Sri Lanka's Secretary to the Ministry of Defence and Foreign Affairs. These letters also constituted an agreement. Significantly, this agreement was signed when India was under Emergency rule, when no discussion or dissent was permitted.

Paragraph I of the Exchange of Letters says: "With the establishment of the Exclusive Economic Zones by the two countries, India and Sri Lanka will exercise sovereign rights over the living and non-living resources of their respective zones. The fishing vessels and fishermen of India shall not engage in fishing in the historic waters, the territorial sea and the Exclusive Economic Zone of Sri Lanka, nor shall the fishing vessels and fishermen of Sri Lanka engage in fishing in the historic waters, the territorial sea and the Exclusive Economic Zone of India, without the express permission of Sri Lanka or India, as the case may be."

It is the different interpretations of this portion of the Exchange of Letters and of Article 5 in the 1974 agreement that have led to the controversy over whether or not Indian fishermen have the right to fish in and around Kachativu. The Sri Lankan Government argues that the relevant portion of the Exchange of Letters supersedes Articles 5 and 6 of the

1974 agreement. It also claims that Article 5 allowed Indian fishermen only to dry their nets in Kachativu and not to fish in and around the island. Since then, India and Sri Lanka have held several meetings to solve the riddle. As Prof. V. Suryanarayan, Director, Centre for South and South-East Asian Studies, Madras University, who has studied Kachativu and the problems of Indian fishermen in the Palk Bay region, says: "It is always a fire-fighting exercise by both the governments, without removing the causes of fire. In fact, who cares in New Delhi and Colombo about the shooting and killing of some hundred poor fishermen?"

MUKUL SHARMA

Sahayraj with another sufferer in Vercode. Sahayraj's boat was taken out into the sea but it never returned.

FOR the coastal fisherpeople, the immediate fallout of the rise of terrorism and militancy was that in 1993 Sri Lanka banned all types of boats in its territorial waters extending from Trincomalee to Mannar, thus giving a *carte blanche* to its Navy to open fire at any boat. In times of heightened conflict, Colombo promulgates emergency regulations, which convert Sri Lanka's territorial waters into a Prohibited Zone. Sri Lankan fishermen living in Jaffna and Mannar face restrictions on the types of boats they can own, areas where they can fish and the time they can spend at sea, owing to security reasons. Similarly, the Indian Government applies strict measures to prevent the infiltration and movement of militants. In these situations, nobody distinguishes between militants and fishermen.

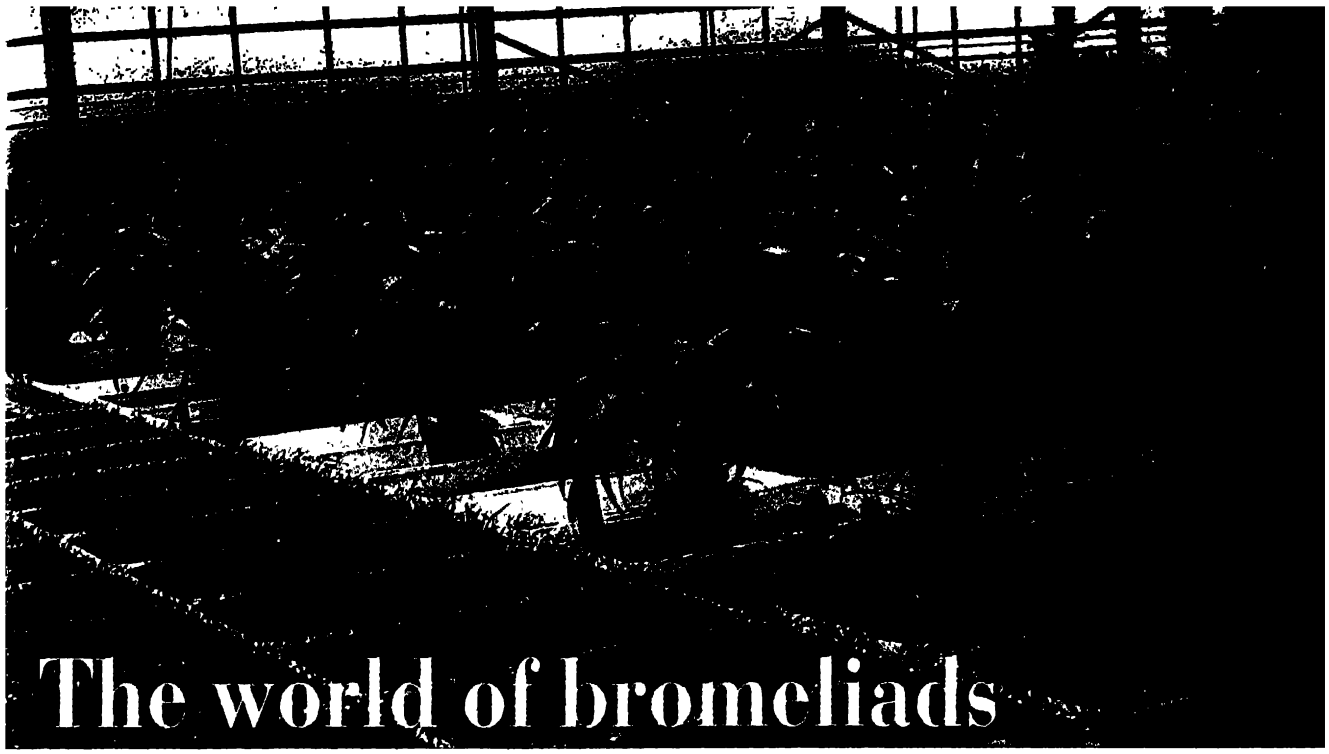
Indian fishermen are a regular target of attack allegedly by the Liberation Tigers of Tamil Eelam (LTTE). On April 23, 1997, a number of Indian fishermen were injured when the LTTE attacked a Sri Lankan naval camp in northern Talaimannar, using Indian fishing vessels as cover. The militants virtually dragged the fishing vessels along with them. Muruganandan, president of the Ramanathapuram District Fishermen's Association, complains: "LTTE men regularly take away our fishing boats and send the crew back. People belonging to Rameswaram have lost at least 40 boats. As recently as March 1998, LTTE members came as close as Tondi on the Indian side of the sea and took away a fishing boat."

Felix Gomez, Assistant Director of Fisheries, also views terrorism as an important issue. "It is owing to suspicion that most shooting incidents take place. In April 1998, one Indian boat was in the Sri Lankan waters, and its lights were switched off. The Sri Lankan Navy captured it, suspecting the crew to be LTTE men."

There exist some gray areas regarding the impact of terrorism on the fisherpeople. A.J. Vijayan, a leader of the fisherpeople, said in Rameswaram that generally fishermen who sought a livelihood from fishing were not involved in any activity supporting Tamil militants across the border. It is alleged that some anti-social elements supply goods to the militants. Local fishermen point out that there are about 30 mechanised boats which are owned by people who do not belong to the fishing community. These boats are actually not used for fishing, they allege, and wonder what these could be doing at sea.

MUKUL SHARMA

W. Antony Vincent, a Sri Lankan boat-owner, waiting outside Madurai Central Jail in Tamil Nadu. His mission is to recover his boat confiscated by the Indian Navy and get five fishermen who went in it released.



WHAT forces fishermen from Tamil Nadu to the Sri Lankan waters beyond Kachativu, up to the Delft Island off the Jaffna coast, even at the risk of being killed? What compels the Assistant Director of Fisheries for the Rameswaram region to say: "If fishermen do not cross the border today, tomorrow there will be no fishing in the region"? One answer is that the ocean currents and sedimentation on the Sri Lankan side of the Palk Strait have made it a rich field of Tiger prawns, which fetch a high price. Another lies in the massive growth of fishing activity and income-sharing in the region. According to information from the Fisheries Department, the number of trawling boats operating from Rameswaram is about 1,000. In the traditional sector, there are about 1,500 craft. Ramanathapuram ranks first in the total marine fish landing of Tamil Nadu; it accounted for 23.57 per cent during the 1993-96 period. The growth rate of marine fish landings in the district is much higher than that of the State as a whole. It was 44.9 per cent during 1987-90, 10.6 per cent during 1990-93 and 20.7 per cent during 1993-96, whereas it was 9.9 per cent, 8.3 per cent and 9.2 per cent respectively for the whole State.

When the coastal region-wise marine fish production for 1992-96 is considered, the Palk Bay, with only 27 per cent of the coastline, accounted for 36.7 per cent of the State's fish landing, while the other two major coasts, Coromandel and Gulf of Mannar, with 35 per cent and 32 per cent of the coastline respectively, accounted for 28.6 per cent and 25.9 per cent respectively.

The system that is in vogue in Rameswaram also puts pressure on the fisherpeople to seek fishing grounds much closer to the Sri Lankan coast, where the availability of shrimp is high. Unlike other places in the State, where the net income is shared between the boat owner and the crew in the ratio 60:40, in Rameswaram the boat owners pay daily wages. There are special wages for overnight trips, and incentives based on the catch in bottom-trawling. For every one kg of shrimp, the driver gets Rs.20, the second hand Rs.15 and the deck hands Rs.10 each. As a result, the crew want to catch more, even in dangerous waters.

"If you don't decongest Rameswaram and other affected areas, there will be no solution to the problem of fishermen from India and Sri Lanka crossing into the territorial waters of each other's country," says M.K. Suresh, Commandant of the Coast Guards in Mandapam. ■

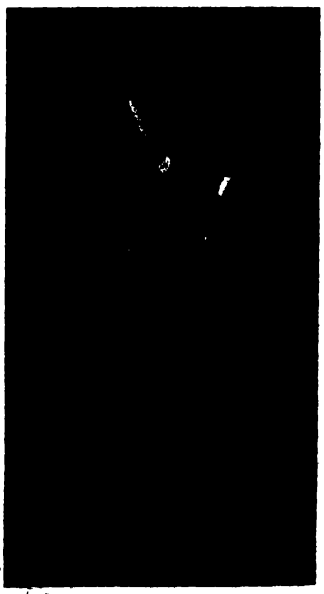
The world of bromeliads

Bromeliads are fascinating plants, easy to grow and ideal for indoors.

Text & pictures
KESHAB C. PRADHAN



IT was the spring of 1993. We were on our way to Amsterdam from Nancy in France to see Floriade, the flower festival of Holland. On the way was Ghent, where a rhododendron enthusiast we met at a rhododendron congress in Germany a few days earlier had asked us to drop by if we happened to pass that way. Ghent also happens to be the begonia and azalea capital of the world. My friend suggested that we have a look at the bromeliads and sent along a specialist from his institute to show us around the leading bromeliad nurseries.

Acres and acres of bromeliads were grown meticulously in green-house conditions. I was told that it was a very popular pot plant in Switzerland and Germany and that its cut flowers were also catching on. We brought home some representative samples to plant in Sikkim. They have liked the place, in the foothills of the Himalayas, and are growing well, although they tend to sink in deep winter. The temperatures here are rather mild – not exceeding 30° C in summer and hovering around 10° C in winter. However, it is not the optimum for bromeliads. Of late, we have brought them out of the poly-houses and into the field. Bromeliads are fascinating plants. They are easy to grow and make excellent

Guzmania and Tillandsia (blue) in a nursery in Belgium. Bromeliads are an ornamental part of the plant kingdom. There are around 2,000 species in about 50 genera.

indoor plants. I have seen many of them growing well in Bangalore and in the Western Ghats and Kerala, where the climate is typically tropical. This is understandable since the hot, humid tropical jungles of Central and Southern America, especially the Amazon forests in Brazil, happen to be their original home.

In their native home, bromeliads are the companions of orchids, palms and aroids, dwelling as epiphytes on trees or as terrestrials on the forest floor. They are an ornamental part of the plant kingdom. They are usually in the form of a rosette of leathery leaves with bizarre and strikingly variegated designs. Their flowers are either hidden deep in the centre, jutting out from pools of water and surrounded by brilliant inner leaves, or carried high on showy spikes and feathery racemes. There are around 2,000 species in about 50 genera. They receive the moisture they need through their central funnel of leaves and can survive for a considerable length of time without roots. As such they are ideal for home decoration – in hanging pots, as wall pieces, on driftwood, in landscaping and so on.

Aechmea Fasciata.

Bromeliads prefer filtered sunlight. They require porous light soil, such as peat and leafmould, or shredded coconut husk with brick chips, charcoal and some organic manure. Since they hardly have any root, the smaller the pot the better. A 15-centimetre clay pot is good enough for the largest plant. The compost should be kept moist but not soggy. The rosette of leaves should be filled with water all the time. It is usually the practice in trade to make them flower prematurely by pouring a solution of calcium carbide into the centre of the plant.

Propagation is usually by offshoots, which appear in spring. They should, however, be left attached to the mother plant until they are large enough to be handled for rooting.

Unfortunately, in India bromeliads have not received the acceptance they deserve. Some success stories and a better representation in flower shows and botanical gardens should help popularise them among garden lovers and flat dwellers. ■

Keshab C. Pradhan is a former Chief Secretary of Sikkim and a floriculturist.

Cosmic surprises

The spectacularly vivid images obtained by the orbiting X-ray observatory Chandra create a sensation among astronomers.

R. RAMACHANDRAN

THE cosmos abounds in mysteries, and the first images beamed on August 26 by the orbiting X-ray observatory, Chandra, a little over a month after it was launched aboard the space shuttle Columbia on July 23, have already thrown up two and created a sensation among astronomers. The images have been described as extraordinary. "This observatory is ready to take its place in the history of spectacular scientific achievements," said Dr. Martin Weisskopf, Chandra Project Scientist at the Marshall Space Flight Centre (MSFC) of the National Aeronautics and Space Administration (NASA).

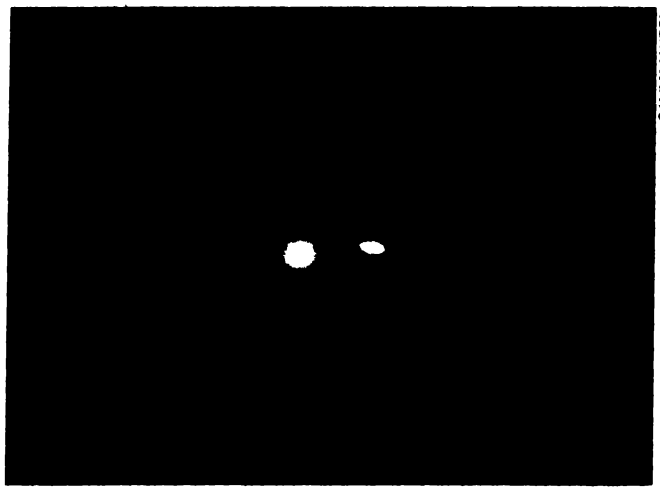
Named after the Indian-born Nobel laureate Subrahmanyan Chandrasekhar, whose work laid the basis for much of the understanding of the cosmos today, this most powerful X-ray telescope inspires great expectations. And not without reason. For, the first images from the Chandra X-Ray Observatory (CXO) have resulted in two remarkable discoveries – and these were only "First Light" observations using the telescope. "First Light" is something similar to the commissioning of a ship – the instrument, after being launched and checked, is readied for measurements. It is not the actual first light through the telescope. That occurred on August 13 when the telescope's aperture door was opened. "First Light" measurements are a means to standardise the instruments against signals from some well-known stellar objects. But in the case of Chandra these initialising exercises themselves brought a wealth of cosmic surprises.

One image traces the aftermath – the expanding shell of hot gas – of a supernova explosion that is believed to have occurred 320 years ago. The supernova remnant is in the constellation Cassiopeia in our galaxy and is called Casseiopeia A or Cas A. Scientists say that it has been imaged in such "stunning detail" (in the X-ray region of the spectrum) that they can see evidence of what may be a neutron star or a black hole near its centre. Scientists have described it as the best X-ray image ever of a cosmic object. This discovery is expected to answer one of the many questions about Cas A that have bugged astronomers. A supernova remnant usually harbours in its centre a compact, highly dense star called the neutron star. Until now, no one had seen any central object in Cas A; it had eluded detection in optical, radio and even X-ray wavelengths. Chandra has, however, shown that it exists. For the present, the object has been named Leon X-1 in honour of Dr. Leon van Speybroeck, the key man behind the design of Chandra's highly sensitive X-ray-reflecting mirrors.

GAMMA LIAISON

This X-ray image of the Cassiopeia supernova remnant is the official "First Light" image of the Chandra Observatory. Two shock waves are visible: a fast outer shock wave and a slower inner shock wave. The inner shock wave is believed to be the result of the collision of the ejecta from the supernova explosion with a circum-stellar shell of material, heating it to a temperature of 10 million degrees Celsius. The bright object near the centre may be the long-sought-after neutron star or black hole that remained after the explosion that produced Cassiopeia A.

Supernovae (see box) are exploding stars, which spew out enormous amounts of energy and radiation and are seen as extremely bright objects. Despite its proximity (only about 9,100 light years away), for some reason the explosion had been missed by astronomers. It was discovered by Karl Jansky, the pioneer of radio astronomy, in the 1930s – it was one of the first radio-emitting stellar objects discovered. The nature of the explosion that resulted in the remnant Cas A, however, remained an enigma of sorts. Although radio, optical and X-ray observations of the remnant indicate that it was a powerful explosion, the visual brightness of the outburst was perhaps much less than that of a normal supernova. It is believed that Cas A was produced by the explosion of an unusually massive star that had already ejected most of its outer layers. Chandra may come up with clues to why Cas A is not quite like other known supernovae.



The spectacularly vivid images obtained by Chandra should allow scientists to trace the dynamics of the remnant and its collision with any material ejected by the star before it exploded. Extensive observations in radio, infrared, visible and X-ray wavelengths have revealed an incomplete shell of expanding gas with 300 glowing compact knots of material at temperatures of up to 28 million degree Celsius. Its outer shell is expanding at a speed of 800 km, creating shock waves rushing into inter-stellar space at tens of millions of kilometres an hour. These violent sonic booms cre-

ated by shock waves have created a vast 30-million-degree bubble of gas that is emitting X-rays for Chandra to see in fine detail. The first image has revealed the collision of the debris from the exploded star with the matter around it. Chandra has also detected both the fast outer shock wave and the slower inner shock wave with great precision in addition to giving tantalising evidence of a neutron star associated with the explosion.

Heavy elements in the hot gas produce X-rays of specific energies. The detectors aboard Chandra (see box) will also provide Cas A's precise X-ray spectra. These measurements make it possible to identify the heavy elements present and their quantities. This is necessary to understand how the elements essential for life were created and spread through the galaxy space by exploding stars. This should also help resolve another long-standing question: why is the Cas A a source of cosmic titanium-44, a radioactive isotope of the metal.

Infrared and X-ray spectral studies conducted until now have revealed the presence, as in all supernovae, of oxygen, neon, silicon, sulphur, argon, iron, calcium and even magnesium silicate, the stuff of inter-stellar dust. But the oddity about Cas A is that it seems to have an unusual abundance of Ti-44 as compared to nickel-56, another product of nucleosynthesis in a star. The presence of Ti-44 was discovered from the indirect evidence provided by the orbiting Compton Gamma Ray Observatory (CGRO) – of emission lines corresponding to scandium-44 decaying into calcium-44, the last leg of T-44's life cycle. If correct, Ti-44 holds the clue to the nuclear fusion in the core of the star that exploded. Chandra will look for Ti-44 from the sample of star material just above the layers that formed the neutron star that seems to be present and will perhaps throw light on what Cas A's contribution will be in the making of future worlds of our galaxy.

While Chandra's image of Cas A corresponds with earlier X-ray pictures taken by the United States-German-United Kingdom X-ray satellite ROSAT, it has given an incredible amount of detail and that too just after 90 minutes of exposure, where ROSAT took days to make its image. This is an indication of the power of Chandra's on-board instruments, making it the largest and the most sensitive X-ray astronomy telescope in the world. Chandra is expected to do for X-ray astronomy what the orbiting Hubble Space Telescope (HST) has done to optical astronomy. Chandra's observations *vis-a-vis* Cas A are not yet over; they will continue even as the telescope's calibration and verification tests will be carried out over the next few weeks. One of the observations will be to confirm whether the spectrum, brightness and time variation of the point source at the heart of Cas A do correspond to a neutron star.

GAMMA LIAISON

From Chandra, an X-ray image of PKS 0637-752, a luminous quasar six billion light years away. It radiates with the power of 10 trillion suns from a region smaller than the solar system. The source of this energy is believed to be a supermassive black hole.

EVEN before Chandra focussed on Cas A, it had made an amazing discovery with regard to a distant X-ray source called PKS 0637-752, a luminous quasar in the farthest reaches of the universe, six billion light years away. The quasar has been emitting energy with the power of 10 trillion suns, but from a region smaller than our solar system. It has little background X-ray noise or clutter and was also known to be a point source (against a dark background), making it an ideal target for sky calibration of the on-board instrument for what is called "point spread function", a measure of the on-axis blur of the focussed radiation in the telescope. But, as Dr. Harvey Tannanbaum, Director of the Smithsonian Astrophysical Observatory's Chandra X-ray Centre in Massachusettes, observed after what CXO saw in the quasar, "nature often has surprises in store."

Instead of a neat little point source, Chandra found a massive jet spewing from the quasar. Although radio observations in the past have shown a jet, astrophysicists involved with Chandra did not expect to see it in X-ray because of the ultra-high resolution that has been achieved in radio observations by using multiple telescopes in conjunction. Dr. Tannanbaum said: "It is immediately apparent that we are not seeing a dot, that we are not seeing a simple point source." The jet appears to be at least 200,000 light years long, a huge expanse in intergalactic space, which can hold the entire Milky Way.

This serendipitous discovery poses a fundamental question to theoretical and observational astrophysics: how can such a massive burst of matter and energy extend across so much of space? Chandra's image, combined with radio telescope observations, should provide insights into the processes by which supermassive black holes can produce such cosmic jets. It was after detecting the jet-spewing quasar that the CXO was aimed at Cas A, an extended object which gave rise to its own fresh set of mysteries.

According to the Chandra Project team, both images confirm that Chandra is in excellent health and that its instruments and optics are performing up to expectations. The experiments planned and designed for Chandra will commence once its orbital check-out and calibration phase is over.

SINCE X-rays are absorbed by the earth's atmosphere, space-based observatories have become necessary. Based on the recommendations of the U.S. National Academy of Sciences, Chandra, originally called the Advanced X-Ray Astrophysics Facility (AXAF), was conceived in the 1970s as an advancement over the Second High-Energy Astronomy Observatory (HEAO-2, also called the Einstein Observatory), which was launched in 1978. Chandra has been billed as one of NASA's new Great Observatories for Astrophysics, complementing the already orbiting HST (which looks at visible and near infrared wavelengths) and the Compton Gamma Ray Observatory (which looks at even higher energies than Chandra) and the

planned Space Infrared Telescope Facility (SIRTF) and ground-based radio observatories.

With the arrival of the first images from Chandra, U.S. scientists have begun to claim that Chandra has put the country back in the lead in X-ray astronomy. Unlike the HST, which has a circular orbit, Chandra has a highly elliptical orbit with a perigee of 10,000 km and an apogee of 140,000 km (one-third of the distance to the moon). Its minimum life is about five years; it is, however, expected to last for at least 10 years.

The importance of X-ray astronomy stems from the fact that X-rays in the universe are not an oddity; they are present everywhere. Every major class of astronomical objects emits X-ray frequencies. It takes temperatures of around a million degrees to produce X-rays. X-ray sources have also been found to display tremendous time variability, indicating rapid dynamic events that produce X-rays. The Einstein Observatory found X-rays coming from quasars to normal stars to hot gas pervading the space between clusters of galaxies and many extra-galactic sources. Weisskopf said: "Most of the mass in the universe seems to be tied up in hot X-ray emitting gas, even more than what is seen from stars in the galaxies." It was X-ray astronomers who, based on observations on Cygnus X-1, came up with evidence for the existence of black holes. (The black hole emitted X-rays.)

Dr. K.P. Singh, an X-ray astronomer with the Tata Institute of Fundamental Research (TIFR), said: "To understand really the most important elements of Chandra, one has to compare it with what we have had so far and what is likely to become available during its lifetime." It was the advent of truly focussing X-ray telescopes that revolutionised X-ray astronomy. This began with the Einstein Observatory, which brought about a technological leap in imaging and sensitivity. Einstein Observatory was able to image with a blur (the angular resolution) of 4 arc-second. This increased the sensitivity to detect faint sources or features by a factor of about 1,000 through the simple act of focussing over much smaller detector areas than before. After that came ROSAT, which had even smoother mirrors. Its resolution was similar to Einstein, but because of a reflecting area that was four to five times larger than that of Einstein, it was much more sensitive. It also had a long operational life. The number of X-ray sources rose to 100,000 with ROSAT, as compared to 10,000 with Einstein and 800 before.

After ROSAT came ASCA (US-Japan), which had a poorer spatial resolution but pioneered the use of sensitive (single photon counting) CCD X-ray cameras and increased the spectral resolution by a factor of 10. Dr. K.P. Singh said that Chandra had much more improved X-ray mirrors with a designed resolution capability of 0.3 arc-second. Unprecedented, this improves the sensitivity beyond that of ROSAT by over a factor of 10, even though its effective area is only slightly larger. It also has a better bandwidth, which is important for spectral studies. According to him, the CXO will, therefore, be able to see much deeper into the universe than before and would be the best tool to study faint and distant populations. "It has the sensitivity to look for distant and faint objects at a factor of 20 to 50 times better than anything that has been done before," Weisskopf said.

So what are the things that Chandra can do once it becomes an operational laboratory? According to Weisskopf, Chandra's ability to dissect energy spectrum and look carefully at line features and their characteristics will enable the study of plasmas in the vicinities of black holes and neutron stars and other regions of high energy activity. The largest and most massive objects in the universe are galaxy clusters, an enormous collection of galaxies. These are held together by gravity and much of their mass is in the form of an incredibly hot, X-ray emitting gas that fills the entire space between the galaxies. But neither the mass of the galaxies nor that of the hot gas is sufficient to hold a cluster together. So scientists believe that a dark matter which exerts this gravity, but cannot be seen, exists. So, what and where is this dark matter? X-ray observations with the help of Chandra can help map the location of the dark matter and help its identification. "Perhaps we, the geographers of the universe, will not discover what the dark matter is, but surely map where it is," Weisskopf said.

Of supernovae and quasars

T. RAMACHANDRAN

A SUPERNOVA occurs when a massive star has used up its nuclear fuel and the pressure drops in the central core. The matter in the core is crushed to higher and higher densities by gravity, and the temperatures reaches billions of degrees. Under these extreme conditions it becomes nuclear matter, whose enormous repulsive force violently reverses the collapse. A thermonuclear shock wave is generated through the expanding debris, fusing lighter elements into heavier ones and producing a brilliant cosmic bonfire. The shell of matter spewed out creates a bubble of multimillion-degree gas, called the supernova remnant. The hot gas will expand and produce X-rays for thousands of years. About every 50 years a star explodes in our galaxy. Cas A is a prime example.

The study of supernova remnants is essential to understand the origin of life on the earth. The heavier elements present in the clouds of gas and dust that collapsed to form the sun and other planets, such as carbon, nitrogen, oxygen, iron and so on, came from such catastrophic explosions, which spread them throughout the galaxy. Supernovae thus keep renewing the galaxy through star formation out of the spewed-out matter.

Quasars are peculiar, bright, star-like objects that radiate as much energy per second as a thousand or more galaxies from a region that has a diameter about one millionth of that of the host galaxy. Supermassive black holes with the mass of millions of stars are thought to lie at the centre of most large galaxies, driving this enormous energy generation. The evidence comes from optical and radio observations which show a sharp rise in the velocities of stars or gas clouds orbiting the centres of galaxies. High orbital velocities mean that something massive is creating a powerful gravitational field, which accelerates the stars. X-ray observations indicate that a large amount of energy is produced at the centres of many galaxies, presumably by the infall of matter into a black hole. In any event, the energy radiated by a supermassive black hole can be stupendous as it gobbles up large clouds of gas. This is apparently what is happening in quasars. ■

Chandra, the most advanced

R. RAMACHANDRAN

At the heart of Chandra is the High Resolution Mirror Assembly (HRMA). Since high-energy X-rays would penetrate a normal mirror, special cylindrical mirrors were created. The two sets of four nested mirrors resemble tubes within tubes. Incoming X-rays will graze off the highly polished surface and will be focussed on the detectors at the end of the telescope (with a focal length of 10 metres). Such grazing incidence is necessary because at greater angles of incidence, X-rays will just pass through materials such as mirrors. Chandra's mirrors are the largest of their kind and the smoothest ever created. The largest of the eight mirrors is about 1.2 m in diameter and 1 m long. The mirror assembly itself weighs more than a tonne.

At the end of its 13.8 m telescope, Chandra has two sets of focal plane detectors, which analyse and render the radiation focussed on to them by the front end of the telescope into images and spectra. Both the instruments are "two-in-one" devices consisting of an imager or a camera and a spectrometer. The spectrometer comes into play when a transmission grating is swung into place behind the telescope mirrors to spread the X-rays into separate energies, much in the manner a prism breaks visible light into its colours.

One of the devices on board Chandra is the AXAF CCD Imager and Spectrometer, or ACIS, which uses 10 charge-coupled devices (CCDs). AXAF itself stands for the observatory's original name - Advanced X-Ray Astrophysics Facility. Four of the CCDs, in a 2 x 2 array, constitute the imager (ACIS-I), which produces images 2048 pixels across, much like video camcorders and digital cameras, but detect X-rays, covering about 16.9 arc-minute of the sky. The moon has an apparent diameter of 31 feet, which gives an idea of the area in the sky that the instrument images at a given time. The spectrometer (ACIS-S) uses a strip of six CCDs to take X-rays from an object and [illegible] them into 12,288 discrete channels corresponding to 50 different X-ray energies.

The second instrument is the High Resolution Camera (HRC) which uses micro-channel plates (MCPs), a completely different detection method, with a resolving power of 0.5 arc-second, which is equal to reading the letters of a traffic sign from a distance of 20 km or a newspaper from a distance of half a km. The MCPs are ultra-thin microscopic lead oxide tubes carrying electric charge. To achieve this kind of resolution, 69 million MCPs are used. The tubes are about 1.25 millimetres long and just one-eighth the thickness of the human hair. An X-ray entering a tube liberates an electron that bounces off the wall and releases several more and so on, until an avalanche of 30 million electrons arrives at the bottom where the discharge is interpreted as a measure of the X-ray's energy. The imager part of the device (HRC-I) is a single array 9 cm x 9 cm with a 31 feet x 31 feet field of view. The spectrometer, HRC-S, is a single 2 cm x 11.8 cm strip with special metal foils masking some parts to help spectral analyses.

Indian scientists too have contributed to the HRC. Dr. Somak Raychaudhury of the Inter-University Centre for Astronomy and Astrophysics (IUCAA) in Pune was part of the team at the Harvard-Smithsonian Centre for Astrophysics, which was responsible for the design and calibration of the HRC from September 1992 to February 1995 when the design was completed. The fabrication of the camera and the actual calibration were, however, completed in early 1996. According to Dr. Raychaudhury, his contribution was to simulate the working of the HRC, given the spectra of the typical stellar objects that Chandra would be used to observe. This involved studying the energy response of various materials and deciding on the material to be used in the instrument, such as the material for its UV (ultraviolet) filter, the coating for the micro-channel plates, the camera shutter, the [illegible] on. Dr. Raychaudhury also designed an optimal set of ground calibration tests.

The other outstanding astrophysical question that Chandra may help answer is about the identity of the powerhouse that is driving the explosive activity in many distant galaxies, the centre of many of which are sources of incredibly enormous amounts of energy and radiation, particularly X-rays Scientists theorise that massive black holes are at the centre of galaxies, gobbling up material Detailed observations with the help of Chandra can probe even the faintest of these active galaxies and study not only their time variability, but also how such intense emissions are generated in the first place

Weisskopf believes that some of the most astronomical discoveries that could be made with Chandra would relate to the so-called extended objects Many types of X-ray sources are extended the debris of exploding stars as shock waves heat the inter-stellar medium, dense regions of bright X-ray stars, the hot gas in galaxies, and clusters of galaxies, the largest known structures in the universe 'In my opinion, the pictures will be as spectacular as any of the pictures from Hubble," said Weisskopf

The CXO will however, have to contend with competition even before it completes one year in orbit Two observatories are ready for launch in early 2000 – the XMM , the European X-Ray Multi-Mirror telescope, and ASTRO-E, a U S - Japanese satellite The XMM will have four times more the effective area of the CXO Although its blurring will be more, the XMM will have a higher spectral resolution, according to Dr K P Singh It also will carry X-ray CCD cameras ASTRO-E will have an effective area similar to the CXO, but with a blur factor higher than that of the CXO and less than that of the XMM It will have five independent telescopes which will carry CCDs, one will carry a new instrument called microcalorimeter (MCM), having a high spectral resolution at medium X-ray energies, thus having an edge over the CXO and the XMM However, since the MCM needs to be cryogenically cooled, it will have a life of only two years The other four telescopes will, however, have a minimum life span of five years

The new millennium is, therefore, going to be the era of X-Ray astronomy in the true sense of the word. According to Dr. K.P. Singh, notwithstanding the other proposed X-ray observatories, Chandra will be the best for cosmological studies and will remain at the forefront until the end of its life. ■

Dealing with dementia

Interview with Dr. John Copeland.

"Memory loss, considered normal among the elderly, is actually a disease that needs to be treated," says **Dr. John Copeland**, founder-director, Institute of Human Ageing, Liverpool. Dr. Copeland has all through his career worked towards understanding and measuring mental illnesses. However, since teaching took much of his time (he held the Chair in Psychiatry at the University of Liverpool until his retirement in 1997), he could not devote much time to research. Yet research, which he began to pursue after his initial training in psychiatry in the United States, remained his first love. Beginning with a U.S.-U.K. diagnostic project supported by the National Institute of Mental Health, Washington, Dr. Copeland kept in touch with state-of-the-art research in mental illnesses and published over 50 articles in journals and books. After retirement, he turned to full-time research.

Dr. Copeland standardised the diagnostic techniques for many mental illnesses. These included procedures to measure the geriatric mental state (GMS), for which he devised a computer-aided system.

Dr. Copeland, who was recently in Chennai to train doctors, psychologists, psychiatrists and health workers in the measurement of GMS, spoke to **Asha Krishnakumar** on the symptoms, diagnosis and treatment of dementia. Excerpts:

▶ *What is dementia, and what are its symptoms?*

Dementia is a slow decline in what we call cognitive functions and memory. Memory loss is usually the most obvious symptom. All of us lose memory to some extent as we grow older; most people over 30 would have at one time or the other forgotten some names. The harder you try to remember, the more difficult it becomes to recall. Then suddenly, it comes to you in a flash when you are not thinking about it.

Then comes a situation when you cannot remember where you have kept things, and spend a lot of time searching for them. We consider that normal. But for some reason, which we don't understand, ageing affects memory and, to a lesser extent, the other functions of the brain.

When people begin to forget the names of their family members and friends, causing difficulty and confusion, memory-loss becomes a serious problem. I think that is when the serious problem of dementia begins. The progress of loss of memory in dementia is very quick. Usually, within six months to a year, there is a serious loss of memory.

V. GANESAN

The symptoms can vary slightly. The problem begins with an immediate loss of memory, for instance, forgetting where the car is parked. Then, gradually, other symptoms and memory problems occur. People begin to have difficulty calculating numbers, working out finances, finding the right word and, eventually, they may even have difficulty in putting on their clothes because they have forgotten how to. Some tend to put on clothes upside down or inside out. Eventually, they become quite immobile. It is a sad and tragic condition.

▶ *Is dementia specific to any intelligence level or social group?*

It affects people of all intelligence levels and social groups. It is also not confined to any age group, except that certain varieties tend to run in families and occur much earlier in life, any time after 30. The more common types occur around 70 years, and the incidence increases with age. So, at 90, the strike rate can be one in three people.

It is, of course, easy to confuse dementia with normal ageing. In all cultures, memory loss is seen as the final stage of ageing. Earlier, when some people aged faster and went into the child-like stage of dementia, they were said to have become senile. Now we know that it is a disease. Therefore, we ought to be able to tackle it and cure it. There is a lot of research going on to identify the different varieties of dementia.

▶ *What are the different types of dementia and when can each be diagnosed?*

There is Alzheimer's disease, named after Dr. Alzheimer who first described it. It progresses steadily in a short period of time. You can detect it from within a year or two to almost 10 years of its occurrence. There is another kind which fluctuates. This seems to be associated with vascular problems (see box). There is now the new one, the Lewy Body. This was discovered by Dr. Lewy. Apparently this is not very dissimilar to Alzheimer's disease, but if you look through a microscope at the brain of a person with Lewy Body, it shows lumps in the brain. Also, people with Lewy Body sometimes react very badly to drugs.

▶ *What are the rates of incidence of the different types of dementia?*

In Liverpool, when we looked at the pathology of the brains donated by people for research after death, we found that Lewy Body was a rare condition. The commonest form was Alzheimer's disease. We don't know much about it, except that it is hereditary. We know people who have lived up to 90 with that genetic make-up although they did not have more than a 50 per cent chance of living beyond 50.

These early studies were based on hospital data. But only when we did community studies to see its distribution in the population did we find that the genetic make-up we know of was not as clear a factor as we thought it was. There may be other genetic factors, which have not been discovered. However, what we know now makes a considerable difference to our understanding of the problem. Yet it doesn't explain most cases.

▶ *What are the different kinds of treatment for dementia?*

There are several types of treatment. For instance, when the brain deteriorates, you lose some chemicals. You need to give

drugs to compensate for the loss and improve the condition. There is evidence that this process helps, though not dramatically. However, none of the drugs now available makes a big impact. They do not cure, they simply replace the lost chemicals.

There is a group working on drugs that arrest the disease. We now understand a lot about the chemistry of the brain and what happens to it in old age. So, efforts are on to intervene in this chemical process in order to stop the disease. Many drug companies have invested money in this research. However, nothing has come out of it yet.

▶ *How does one manage people with dementia, particularly with the breakdown of the joint family system where the extended family used to take care of the elderly?*

The major problem is looking after these people. Traditionally, as you said, they were looked after by the joint and extended families. This was the case all over the world. It is a myth that people in the West do not look after their elderly. The breakdown of the extended family is therefore going to create a major social security problem all over the world.

▶ *With life expectancy at birth improving considerably, there will also be an increase in the proportion of the elderly in the population. With this the incidence of dementia will also increase. What are the issues involved in the management of dementia a country like India has to address?*

The population of the world is set to change and there is going to be a higher proportion of older people. Two decades ago, the Queen of England used to send about a hundred telegrams to people completing 100 years. Now she sends 4,000.

In Norway, the population aged slowly over the last 100 years. So they had 100 years to prepare themselves to face the problem. But in countries such as Brazil and India, for instance, the proportion of older people had hardly risen until 10 years ago. But subsequently, it rose sharply. The projections for the future are also very sharp. These countries now have to look seriously at the economic and social implications of this problem for society.

Another important need is to diagnose the disease in the early stage. Otherwise, even if treated, those affected by it may be left disabled to a certain extent. So it is important to focus on questions such as how to recognise the symptoms.

▶ *What are the problems in diagnosing dementia? How did you work out the computer-aided system of diagnosis?*

There is a general worry about the differences in diagnosis, particularly of the younger people, in the U.S. and the U.K. In the U.S. there were high levels of schizophrenia cases recorded in hospitals. But that was not the case in the U.K. The U.S. government was worried. So, I and my colleagues were asked to look at this problem. We did a study, comparing the diagnosis on admission to hospitals in both countries. We found no difference in the number of cases at that time when we applied our diagnosis in the U.S. So it was clear that the American diagnosis was very different from the European. And partly out of that study an interest grew in the U.S. and the U.K. in looking at diagnostic issues – trying to bring some science into what was until then a clinical impression.

With help from the U.S. government, we started looking at the diagnostic problems among the aged. A large number of people were apparently going to American hospitals with dementia, while a much higher proportion went to English mental hospitals with depression. Again, we were able to show by using the same diagnostic criteria that there was no difference between the two. Many of the cases that were diagnosed as dementia in the U.S. were diagnosed as depression in the U.K. In fact, when patients were treated for depression in the U.S., they got better.

Then, in Liverpool, we prepared a detailed schedule and did a survey to get a more accurate recording of symptoms in order to measure GMS. The next stage was to bring consistency into the diagnosis. This was necessary because until then we expected doctors to do the interviewing and make their own diagnosis after understanding the symptoms.

So we did a survey, and from its results we devised a computer-assisted diagnostic system we called AGECAT (aged geriatric examination computer-assisted taxonomy). This is a standardised method of diagnosis and can help diagnose many diseases, including dementia. After we published this work, many centres in the world showed interest in using this system.

▶ *For what other diseases is AGECAT used?*

AGECAT gives a range of diagnoses as well as differential diagnoses. People have found that quite useful. It helps in looking at depression, schizophrenia, neurosis and so on. It is now used widely throughout the world.

Some years ago, I realised that there were nine centres in Europe using GMS/AGECAT for population studies. At that time we approached the European Union and asked for funds to set up a programme involving data-sharing by these centres. We used the data put out by these centres and published a number of papers showing the prevalence of depression. Recently, 12 medical centres in Asia showed an interest in this and we have brought them together.

▶ *India is going to face a major problem with an increase in the population of the aged. Do you plan to include India in your study?*

We have just begun our work in India. Eight centres are doing this work. We are trying to bring them together.

Study group on dementia

ASHA KRISHNAKUMAR

AN international group – 10/66 for Dementia – was formed recently by Dr. Martin Prince and Prof. John Copeland in collaboration with medical centres in various countries that study the effects of ageing.

Two groups of doctors, from the Schizophrenia Research Foundation, the Voluntary Health Services (VHS) and the Public Health Centre (PHC), all in Chennai, have been chosen to be a part of this group.

The first group is headed by Dr. Thara Srinivasan, a psychiatrist and director of the Schizophrenia Research Foundation.

The second, a joint venture between the departments of neurology at the VHS and the PHC will have Ravi Samuel, a psychiatric social worker, who is currently a Paul Hamlyn Fellow at the National Hospital, London, as convener. Ravi Samuel has received overall training in dementia care, cognitive behaviour therapy and so on. The supervisor of this group is Prof. Krishnamoorthy Srinivas, chairman of the departments of neurology at the VHS and the PHC.

The first 10/66 workshop was held by the group headed by Prof. Krishnamoorthy Srinivas in March. The second was held by the group headed by Dr. Thara Srinivasan in June. ■

Politics throws up

so many questions.

Rely on us.
We rely on experience.

HTA 1324.1999

I am now looking at ways to get these centres to collaborate with one another without having to spend too much money. This is because there isn't much money in India to spend on this.

▶ *Are there no common obvious symptoms for dementia?*

A majority of symptoms are fairly straight-forward. For example, loss of appetite and loss of concentration and memory. So that is why, I think, we don't have a problem. But nevertheless, we have to make sure that we measure the same sort of things the same way everywhere. That is the first stage. Once that is done, we can rely on the computer system to give us the diagnosis. Once we collect all the information from all the centres, we can find out what the underlying causes for dementia are across societies, and what causes one society to be more prone to dementia or depression than another.

▶ *How do you measure the GMS, and how does India compare with other Asian countries and the world?*

To compute the GMS, patients are interviewed and all health data recorded and coded. In this, you have to make a judgment about whether the symptoms the patients describe are genuine symptoms. Those data are then fed into the computer. The computer then comes up with the diagnosis – it may say this is an organic condition and may give you the level of severity. Doctors may disagree on the diagnosis. That is why we are now standardising symptoms across countries with the help of surveys. This system seems to work in Britain, Australia, India and some other countries.

In terms of the incidence of dementia, there is no difference among countries. Using the GMS, we found that incidence levels varied between 4 per cent and 5 per cent in the population above 65 years. This is the result from the surveys done in many countries by the European group, the Asian group, our group in Liverpool and in India.

▶ *What is the state of the art in research on dementia?*

An enormous amount of work is going on. Neurochemists are working on brain tissues. They are looking at the chemical structure of the brain and how progressive are the lesions that are formed. Geneticists are trying to discover the genetic qualities of the population with dementia. They have had one breakthrough, with the discovery of Apo-E 4 (those with Alzheimer's disease). Now they are working towards another. Then there are the pathologists who are looking at the brains of the dead and trying to reconstruct how they got to that condition. The chemical composition of the brain that leads to this problem is also being studied to help in the early recognition of the condition. People are visualising the brain with magnetic resonance imaging (MRI) and using positron emission tomography (PET) to know the chemistry of the brain.

So a lot of work is going on, but it is slow. The interest started with us in the 1970s. There is a conference on dementia almost every week somewhere in the world. Therefore, there is hope that we will make substantial progress very soon. But the countries and governments should not be complacent. As we do not know how long it will take for a breakthrough, we need to be prepared for the social problems dementia causes.

▶ *Do you think people should "age gracefully"?*

I feel one should not age gracefully because ageing gracefully means that you recede to the background in a dignified way. Why should it be so? At 65 you can still contribute substantially. The elderly people also need an economic and political position in society. Otherwise, they will be squeezed out by the younger generation. There has got to be some balance between the young and the old. Elderly people cannot sit back and let the youth run over them. So, I think you should age "disgracefully". ■

For early prevention

KRISHNAMOORTHY SRINIVAS

DEMENTIA has become a major problem the world over. In an interview to *Frontline* (May 21, 1999), Prof. Sid Gilman discussed Alzheimer's disease in detail. Many of the causes of dementia are reversible: for example, thyroid and Vitamin B-12 deficiency and some kinds of brain tumours and clots. However, one neglected area is vascular dementia. It was V. Hachinski and his colleagues who drew attention to this condition. However, even now, neurologists and physicians are a little sceptical about this term despite the fact that the term multi-infarct dementia is used rather freely.

The main risk factor in the case of vascular dementia is hypertension. Prof. H.M. Barnett, a pioneer in stroke research, describes four factors that contribute to stroke. They are: high blood pressure, smoking, accumulation of fats called lipids in the blood cells and diabetes mellitus.

It is necessary for the physician to understand that the onset of this kind of dementia can be prevented by a systematic campaign which would include the launching of a nationwide campaign against smoking; measuring blood pressure periodically and keeping it under control; controlling diabetes and keeping the blood sugar level within reasonable limits, especially in elderly people; and taking drugs called statins to lower lipids in the blood.

Unfortunately, in a country like India, very little is done towards prevention. If the guidelines mentioned above are followed, even heart disease can be prevented. Instead of spending money on treating these diseases, what is necessary is a public health campaign that uses the media to educate people about the risk factors and the preventive measures.

Why does vascular dementia occur? Generally, people associate a stroke with a major paralytic attack. However, strokes of lesser intensity, such as temporary paralysis or numbness of an arm, a leg or one side of the face, also occur. Without being unduly alarmed, people should recognise that these strokes, called transient ischaemic attacks, can be prevented and controlled. In international trials, a consensus was arrived at – that is, 75 mg of aspirin should be taken by individuals who come under the high-risk category and run the risk of having a minor stroke.

At present, Alzheimer's disease is given much more attention than vascular dementia. However, it is important that dementia is tackled at the national level.

A 10/66 Dementia group was formed recently. The K. Gopalakrishna Department of Neurology at the Voluntary Health Services and the T.S. Srinivasan Department of Clinical Neurology and Research at the Public Health Centre, both in Chennai, have been included in this group. ■

The BJP's real agenda

A.G. NOORANI

The Saffron Wave: Democracy and Hindu Nationalism in Modern India by Thomas Blom Hansen; Oxford, 1999; pages 293, Rs. 495.

THE skeletons began rattling all the more noisily for the desperate determination with which the cupboard was being shut. The Bharatiya Janata Party tried to assure its allies in the so-called National Democratic Alliance (NDA) that issues such as the Ram temple in Ayodhya, scrapping of Article 370 on Kashmir's autonomy, and a uniform civil code were not on its immediate agenda. But what assurance could it offer its own cadres who supported it precisely because it was committed to these issues and to Hindutva?

The mentors, the Rashtriya Swayamsevak Sangh (RSS), can quietly be squared with. If the RSS could spread its influence when its political front, the Jan Sangh, predecessor of the BJP, was but a constituent of the Janata Party Government (1977-79), its influence, surely, would be far greater if the BJP is allowed to stay in power as the dominant member of a coalition. The RSS boss, Rajendra Singh, declared in an article in *Organiser* (May 7, 1995), entitled "Ayodhya, Mathura and Kashi", that "no friendly interaction between the Hindus and Muslims is possible unless the latter shed their intransigence in regard to Kashi, Mathura and Ayodhya."

The silence of a man of such a rabidly communal outlook during the current controversy over the BJP's commitments *vis-a-vis* its pact with the allies, is as significant as that of the dog that did not bark.

First came the calculated leak. "RSS sources" told a correspondent of *The Asian Age* (August 18) that "there has been no dilution in the agenda and ... installation of a BJP-led coalition government at the Centre will be a step towards achieving the implementation of the agenda."

They told him: "Our priority is to install a BJP-led government at the Centre. But that does not mean that it will be done at the cost of our agenda.... It will be the BJP alone which is going to implement our agenda." Atal Behari Vajpayee would be supported to the hilt because he is the best vote-getter available. Incidentally, the issue of *Organiser* in which Rajendra Singh wrote as he did, also carried Vajpayee's famous article "The Sangh is my soul".

It was left to the BJP's general secretary, the too-clever-by-half K.N. Govindacharya, to give the game away as he tried publicly to assure the cadres. He said in New Delhi on August 22 that the BJP remained committed to the three contentious issues even though it accepted the NDA's agenda. Why? Because "with the BJP yet to traverse some more distance *to attain the steering position in Indian politics*, we decided that *in this interregnum of transition* we should commit ourselves" to the NDA's agenda. Kalraj Mishra, Public Works Minister in Uttar Pradesh, confirmed it in Lucknow the next day: "The party is committed to the construction of the Ram temple."

Vajpayee tried frantically to limit the damage, in Ahmedabad on August 23: He was "surprised" to read Govindacharya's statement and said "all contentious issues should not be brought into the political arena". Govindacharya obediently issued a "clarification". Having claimed on August 22 that "we work with bifocal vision", he demonstrated the next day that the BJP also speaks with a forked tongue.

If Pramod Mahajan asserted at Aurangabad on August 23 that the three issues had *not* been sidetracked, J.P. Mathur said the opposite on August 24. M. Venkaiah Naidu declared on August 25: "Even if tomorrow we were to fight an election on our own and get 370 seats, we will not make Ram Mandir part of our election agenda." The very next day he denied having said so. He had said that, not to a press reporter, but on the Star News TV channel, which said his "statement was on tape and could not be refuted" (*The Indian Express*, August 27).

Kalraj Mishra returned to the fray on August 25. "Even now Ram Mandir was a burning issue for us. But since there was no consensus in the NDA on this, it is not part of the joint manifesto with the NDA... *there is no dilution in our stand.* However there are the compulsions of coalition politics...." A *Times of India* report (August 27) from Nagpur said that "the RSS was completely at peace with the BJP on the Ayodhya temple issue, RSS sources claimed. The RSS realises that getting Mr. Vajpayee back into power is much more important." Mamasaheb Ghumre, former vice-president of the Vishwa Hindu Parishad (VHP), told him: "The temple has a better chance of getting built with him in the saddle for five years." Once in power with a solid majority of its own, the BJP will discard the flotsam and jetsam it has gathered in the NDA – and fulfil its own agenda. To paraphrase Milton, case will recant vows made under pain as unsaid and void.

On April 24, 1996, on the eve of the Lok Sabha elections, L.K. Advani, then BJP president, said there would be no compromise on the Ram temple and the matter was high on its agenda. The party's 1998 election manifesto had a whole page on Hindutva, and "cultural nationalism". It concluded with a pledge – to build the temple. The National Agenda for Governance was drawn up *subsequently* and published on March 18, 1998 when alliances became inescapable if power was to be won. The BJP's decision not to bring out its own manifesto this year is as unprecedented as it is meaningful – the 1998 document stands.

ONE must not miss the wood for these trees. The Danish scholar, Thomas Blom Hansen's book makes a timely appearance to remind us of what

is in store for us once the BJP takes us into the wood. Its sub-title captures the theme: what the BJP's concept of Hindu nationalism spells for India's governance and its democracy. His grasp of political theory, intensive field work in Maharashtra, and familiarity with the vast literature on the subject are well reflected in the work. To what do we attribute the saffron wave? One school of scholarship attributed it to "imaginative political strategies", another to the older "reserves of religious nationalism".

Hansen incorporates both the strands but goes beyond them. "My main argument is that Hindu nationalism has emerged and taken shape neither in the political system as such nor in the religious field, *but in the broader realm of what we may call public culture* – the public space in which a society and its constituent individuals and communities imagine, represent, and recognise themselves through political discourse, commercial and cultural expressions, and representations of state and civic organisations" (emphasis added, throughout).

The Sangh's credo is quintessentially paternalistic, xenophobic and authoritarian. "Many Hindu nationalists have only a skin-deep commitment to democratic procedures." But there are some latent fears, some hidden concerns, which it was able to draw upon. Hansen's book is, in its mercilessly incisive analyses, a mirror to Indian society. "Is Hindu nationalism really revealing the dark side of the middle-class culture and social world of the 'educated sections' who have dominated Indian public culture and the Indian state for so long – the authoritarian longings, the complacency, and the fear of the 'underdog', the 'masses', and the Muslims?... The recent Indian experience of Hindu nationalism should remind us that democracy also very often gives birth to forces, desires, and imaginings of an authoritarian and anti-democratic nature, or 'majoritarian' and moral backlashes against what is seen as 'excessive liberalism' in the public culture."

His resume of the course of Indian politics in recent years is prefaced by a thorough discussion of the ideology of Hindu nationalism as developed in the last century and the present one by men of intellect such as Bankim Chandra Chatterji, Lala Lajpat Rai and Bal Gangadhar Tilak right down to the likes of V.D. Savarkar and M.S. Golwalkar.

The BJP capitalised on the policy of "soft" Hindu communalism which Indira Gandhi adopted after her return to power in 1980. But the seeds had been sown much earlier. "Radical anti-Muslim discourse had coexisted with political pragmatism within the Sangh Parivar and within the older sanghathanist tradition *for almost a century*. What was new in the 1980s was, in other words, not so much the employment of the idiom of Hindu communalism *per se*, but rather the ingenuity and scale with which this idiom was differentiated and disseminated through an array of new technologies of mass mobilisation."

The book makes a timely appearance to remind us of what is in store for us once the BJP takes us into the wood. Its sub-title captures the theme: what the BJP's concept of Hindu nationalism spells for India's governance and its democracy.

Amazingly – or perhaps not – the BJP's supporters in the "respectable" middle class do not find its techniques of mobilisation offensive. The ends justify the means. Sadhvi Rithambara and Uma Bharati were found useful. The latter was made a Union Minister. The author quotes one of her election speeches in 1991: "We could not teach them with words, now let us teach them with kicks... Tie up your religiosity and kindness in a bundle and throw it in the Jamuna... Any non-Hindu who lives here does so at our mercy."

Acts of violence are a natural consequence of speeches such as this. No wonder riots followed the Hindutva campaign.

The Sangh Parivar operates from a narrow electoral base and its success is far more tenuous than is imagined. It owes a lot to the erosion of centrist forces such as the Janata Dal. Regionalist parties fell in line. Its electoral constituency is limited to 25 per cent of the popular votes, a mere 15 to 16 per cent of the country's adult population. One limitation to its expansion is that it is confined "mainly to the Hindu upper-caste and middle class milieus". It has no message for social uplift, economic emancipation and gender equality. The women it projects are not known for commitment to issues of gender equality, unlike, for instance, Brinda Karat of the Communist Party of India (Marxist) or Gita Mukerjee of the CPI.

The Hindutva movement has wreaked sheer havoc in the country. It claimed to have altered the political agenda in the early 1990s, only to profess to discard it at the end of the decade. "Has the Indian democracy been weakened by the BJP's expansion over the last decade and its recent formation of the Central Government in New Delhi? Is this only the beginning of a gradual Hindu nationalist penetration of the public administration, the judiciary, the military, and the press that over time may constrict democratic procedures, and encourage a more heavy-handed line toward public protests, social movements and others who are critical of the government or just oppose economic and social exploitation?... Throughout this work I have presented evidence and arguments that in many ways support the conclusion that the RSS represents a kind of 'Swadeshi fascism' decisively vernacularised and shaped by modern Indian colonial and postcolonial history." But, the author adds, the BJP must not be viewed in isolation from other dark social forces in Indian society. "The advent of Hindu nationalism forces us to ask larger and more uncomfortable questions."

This is not to minimise one bit the seriousness of the sheer evil that is the Sangh Parivar: "There is little doubt that the BJP's road to power has ridden over the dead bodies of thousands of innocent Muslims, and there is no doubt that strong forces within the movement and in the BJP's sizeable constituency among bureaucrats, commercial strata, and officers would like to see India as a much stronger, less democratic, and more repressive state that could provide security, labour, and the pleasant sides of modern life to the elite and the middle class." The Parivar must be viewed in the context of the milieu in which it has been able to prosper and attract support from some who were not suspected of being communal. There are many more closet Hindutvaists than is commonly realised.

The battle for India's democracy is not lost, it will not do to minimise the arduousness of the tasks that lie ahead. The future of India's democracy and its secularism depends on the outlook Indians of all creeds come to share. Ideology matters, still. ■

An officer's prescriptions

R.K. RAGHAVAN

Not a Licence to Kill by Rajendra Shekhar; Konark Publishers, New Delhi, 1999; Rs.350.

POLICE-BASHING is a favourite pastime with most observers of the Indian scene. The police are accused of everything from brutality to sheer personal aggrandisement. Almost everyone reading accounts of police performance is inclined to believe that there is little good about the force in India. Undoubtedly, many members of our police forces have contributed wittingly or unwittingly to this sordid image. Also, until recently, whatever was said about the police went unrebutted. There is now the healthy trend of senior police officers – serving officers and those who have retired – penning their side of the story, which lends some balance to all the criticism of the police. Also heartening is the willingness to admit failures and shortcomings and to explore ways and means by which the police can give a better account of themselves. The growing volume of "police literature" in the country is an index of a change in the mindset that had characterised the police psyche for more than a century.

Rajendra Shekhar, a distinguished Stephenian and a former Director of the Central Bureau of Investigation, is the most recent person to record his reflections. While in service he enjoyed a Himalayan reputation for integrity and reluctance to yield to extraneous pressures. This is why what he writes gains credibility.

Like many sensible police scholars, Shekhar sets much store by the recommendations of the National Police Commission (1977). This is meant to bolster his theme that the police are more reactive than proactive. In this context, he cites the lack of attention on the part of the police with regard to preventive action. Fortunately, the charge does not lend itself to generalisation. Some in the higher echelons of the administration alone are aware of how many a crisis had been defused in the nick of time by thoughtful pre-emptive action. But the basic complaint that at the grassroots level there are many who are lethargic and are not inclined to move by themselves and that there is premium on inaction in the existing highly politicised ambience, cannot be brushed aside as being fanciful.

Shekhar uses his knowledge of the scriptures as well as current management literature to great effect. The chapters "The Process of Change" and "The Agents of Change" give more than a glimpse of the knotty issues involved in the process of transforming the police from a 'force' to a 'service'. He is no doubt conscious that cultural differences make universal application of management concepts rather difficult. Nevertheless he draws up a blueprint for skilled leadership ("a tightrope walk") that strikes a ("honourable") compromise between "the real politics of democratic governance" and "abdication of authority to the detriment of the (police) organisation".

The author's prescription for most of the current ills: Empowerment to serve. Not a licence to kill. He looks upon this as a new paradigm that will usher in a phase of "dynamic rule of the law" and "service to the people".

Talking of the "real politics of leadership", he prescribes a formula that is distilled wisdom with which few among the police top brass can disagree: "...on the idealistic plane (he) is required to have no caste, creed or religion. He should be apolitical and democratic. On the practical plane, however, he has to indulge in good politics; to sell his ideas to his Government, to his men, to the public, in organisational as well as public interest."

Public lore in India is replete with comical accounts of individual leaders who had either become the factotums of the ruling party or vainglorious chieftains pretending to be autonomous and were totally out of touch with the cold realities of grassroots politics. It is not very often that one comes across a leader who blends the professional and political needs of the job without inviting scorn or ridicule.

Shekhar's prescription for most of the current ills: *Empowerment to serve. Not a licence to kill.* He looks upon this as a new paradigm that will usher in a phase of "dynamic rule of the law" and "service to the people". He goes on to delineate his five-fold strategy, actuated by the belief that this would somehow refurbish the police image. He pleads for an attitudinal change that will pull the police out of the slough of their own sub-culture that relies rather heavily on conformity and unquestioned compliance.

Those like me who have been in the force for several decades are conscious of the enormity of the task. Shekhar himself should be aware that when he pleads for more internal democracy he is in a hopeless minority. A large chunk of the leadership is smug with the *status quo* and will be averse to the change that Shekhar advocates. This is, however, no case for giving up the movement in favour of a qualitative change in the hierarchical relationship that dominates police organisations.

Shekhar comes out as a man with a vision. Remarkably, there is not even a trace of rancour or bitterness in the many anecdotes he cites in order to lend substance to his theme. This is in contrast with many others who write these days mainly to settle personal scores and, incidentally, also to be in the limelight in the evening of their lives.

Shekhar may not have said anything new or sensational on the police, particularly on how to alter their poor image. But his approach to the problem is refreshing. He needs to be read with all seriousness. ■

Dr. R.K. Raghavan is Director, Central Bureau of Investigation.

The North Korean paradox

GLYN FORD

The Guerrilla Dynasty: Politics and Leadership in North Korea by Adrian Buzo; I.B.Tauris; £12.95.

ADRIAN BUZO is a former Australian diplomat who served in Pyongyang almost a quarter of a century ago. His thesis is fundamentally a simple one. The enigma that is North Korea is directly drawn from its leadership. Nurture, not nature, wins the day. Kim Il Sung, and therefore his politics, was a product of his environment.

Kim, North Korea's leader since his imposition by the Russians in 1946 until his death in 1994, was an uneducated rebellious son of a father who participated in anti-Japanese activities organised by Christian-led nationalist groups. These activities led the family to flee to Manchuria, where the Japanese authorities had limited reach, when Kim was seven years old. In Manchuria, Kim entered the Chinese school system, which he left when he was 14. At 17, he joined a Communist youth group, was arrested and imprisoned for eight months.

By 1933 he was under arms in a Chinese Communist Party-led guerilla group fighting as part of the grandly named Northeast Anti-Japanese United Army. After two years, under sustained Japanese pressure, this 15,000-strong army had been scattered and driven deep into the countryside. Kim rose in the ranks, but it was all small beer. His largest and most famous operation was the June 1937 attack on the Japanese garrison at the Chinese-Korean border village of Bonchonbo with a company of 200 men.

By 1941 the Japanese threat was so severe and so close that Kim and his band left Eastern Manchuria and crossed into the Soviet Union, where after a short interval he, along with the remnants of the Manchurian guerillas, was absorbed into the Red Army's 88th brigade responsible for reconnaissance and infiltration. It was the end of Kim as a combatant. He saw no active service in one of the world's shortest wars, the Soviet Union only entering the war in the East against Japan seven days before Japan's final surrender.

While in the USSR, Kim spent all his time in military circles with two extended trips to Stalin's Moscow to see the future and its works. His superiors in the Soviet Communist Party were impressed by his dedication, discipline and ruthlessness. These led to his selection for a leadership role in autumn 1945 when, a little to their surprise, the Soviet Union found itself as the occupying force in the northern half of Korea.

Kim had been nurtured in almost total isolation. Physically he had been in exile from his homeland since the age of seven. Socially and culturally, since his teenage years, apart from his time in the USSR, he had never lived in a town or city and had been cut off from newspapers, radio and consequently, world events. Politically the situation was even worse. He was a complete unknown outside of his own small circle of warrior Communists.

At the end of the War, Korean Communism had four distinct strands. The domestic Communists who had operated underground during the War in Korea itself, Soviet-Koreans from amongst the party members of Russia's Korean minority, the Yan'an group, Korean Communists who had left Manchuria to fight against the Japanese and the Chinese nationalists under the banner of the Chinese Communist Party, and Kim Il Sung and his former Manchurian guerillas. Over the next 20 years Kim bested them all with a series of kaleidoscopic alliances reflecting the internal situation in Korea and changing relationships with the big two of Communism, the Soviet Union and China.

Kim Il Sung survived his misreading of America when the Korean War was launched in June 1950, and the subsequent invitation to the Chinese to send in hundreds of thousands of "volunteers" when his back was up against the Yalu river as the "U.N. forces" threatened to reach the Chinese border – a setback that triggered the factions into a struggle for supremacy. Most important, he won North Korea's version of the Stalin-Bukharin struggle in 1955 when his "leftist" demand for a forced march to heavy industrialisation driven by Stakhanovite shock-workers won out against "rightist" demands for more investment in agriculture and light industry. When in 1966 he weathered within the Korean Workers' Party a microcosm version of the same challenge, this time to his "Equal Emphasis" policy that placed equal weight on economic development and military preparedness, in favour of channelling more resources into the civilian sector, the battle was over. The last faction fell.

Kim Il Sung was no longer the first among equals; he was now the state, encased by a self-selected carapace of admiring and unquestioning companions from among the former guerillas. The emerging Juche philosophy is best described as a version of Georgi Lukacs' Hegelian Marxism where it is the humans who create nature. The difference is that the catalyst that leads to class consciousness in Lukacs is the party, and in Juche philosophy the revolutionary – almost Nietzchean – leader, retrospectively intellectualised North Korean reality.

Kim's rule had its economic successes. Stalinism was running ahead of South Korea's version of clientalist capitalism until well into the 1970s, but here it stalled as it failed to make the transition from the initial construction of an industrial base to the constant waves of creative destruction required for a modern industrial society. Heroes of Labour butter few parsnips in the era of post-industrial society. Nor does monument building in Pyongyang, with its almost pharonic appearance, help. True, the United States inexorably drove North Korea's military excesses onwards, forcing the economy to live a lie, but in the end it is in an industrial and political cul-de-sac.

If man is the product of his upbringing, what future for North Korea? Kim's son, Kim Jong Il, is, along with the military, in charge of events. They may have nuclear weapons, they have already launched a satellite demonstrating a capability of hitting Japan with a missile, and they "have available for launch" a missile thought to have a range that would encompass the west coast of the U.S. Simultaneously former senior figures in the regime claim that three million people – one in eight of the population – have died of starvation. How will a privileged and indulged son of a man who almost became a God for his people, react? Either we hope Adrian Buzo is wrong or it is clearly in everyone's interest to find a soft landing. ■

In search of perfection

RICHARD BERNSTEIN

T.S. Eliot: An Imperfect Life by Lyndall Gordon; W.W. Norton; pages 721, $35.

DESPITE the best efforts of biographers, in the public mind a life is too often just a caricature, an identifying line or two. And the most common lines that T.S. Eliot has been reduced to are great poet but miserable man; anti-Semitic, cold-hearted author of immortal verse; a man who committed his troubled first wife to an asylum and then abandoned her there forever.

THE HINDU PHOTO LIBRARY

Lyndall Gordon, the South African-born literary biographer who had already published two volumes on Eliot, has done her best in *T.S. Eliot: An Imperfect Life* to rescue both the poet and the man from the simplifying abstractions that have always been applied to him. She has written an intellectually demanding, sophisticated and distinguished book.

By presenting Eliot as a flawed and tireless searcher for perfection, Gordon seems kinder to him than some recent writers, like Cynthia Ozick and Anthony Julius, who have compellingly brought to light his undeniable prejudices, especially his dislike of Jews ("T.S. Eliot and anti-Semitism", *Frontline*, November 15, 1996). Gordon does not turn away from these faults; indeed, she argues that in one way Eliot was even worse than his critics believe because his misogyny was as strong as his hatred of Jews.

And yet the overall effect of her probing and extremely thoughtful study is partly to redeem Eliot, at the very least by picturing him in all of his complex dimensions. "Eliot's admirers played up his mask, while detractors stripped it only to find the flaws," Gordon writes on her very first page. "Both overlooked a man of extremes whose deep flaws and high virtues were interfused." Gordon's book is an attempt to fathom the ways in which this interfusing took place, her theory being that "the 'impersonal' facade of his poetry – the multiple faces and voices – masks an often quite literal reworking of personal experience."

To advance her theory, Gordon, who has also written biographies of Charlotte Bronte, Virginia Woolf and Henry James, takes her readers on a tortuous journey. She tracks the difficult man and his poems from his blue-blood origins in St. Louis to his death in London in 1965, when he was widely proclaimed not just the greatest poet of the century but its literary prophet as well. The consistent theme that emerges is that of a tortured, fastidious figure of puritanical self-denial, horrified by the spectacle of ordinary life in a relativistic and secular age, who strove mightily, as he put it, to sense "vibrations beyond the range of ordinary men."

Although Eliot was born in St. Louis in 1888, his ancestors were from the priestly elite of Boston. (One of his ancestors was a judge in the Salem witch trials.) His father was a brick manufacturer, his mother a minor poet, his other close forebears were ministers in the generally optimistic, upbeat Unitarian church, very different from the sin-obsessed theology that Eliot, who converted to Anglicanism, developed.

Gordon traces a complicated set of influences on Eliot, from French Symbolist poetry to the domineering role played by the expatriate American Ezra Pound, to the Ballets Russes. But Eliot's grounding in New England Puritanism and in the sense of the artist as a solitary voyager, a kind of moral and aesthetic lone wolf, are perhaps dominant in Gordon's portrayal. At least, it is this feature of Eliot that seems to explain his aversion to sensuality and his strangely cold-blooded relations with women.

"Eliot's commitment to the solitary burden of the soul is not out of line with an American plot where the Jamesian New Englander, awakening to life, renounces love out of a finer moral passion 'to be right,'" she writes. The sudden poetic eruption of what Gordon calls "the stern voice of denial" – she is writing here specifically of the *Four Quartets* – is Eliot's hatred of humanity speaking, his powerful sense of "the disorder, the futility, the meaninglessness, the mystery of life and suffering." His goal was to transcend that corruption and the dross of quotidian relationships by the creation of timeless art.

This brought him into painfully inconclusive relationships, notably with his first wife, Vivienne Haigh-Wood, and with Emily Hale, the Bostonian companion of his middle years, whom he never married. At the emotional centre was Vivienne, who has generally been portrayed as a victim of Eliot's cruelty and his sexual aversions (especially in the film *Tom and Viv*, adapted from the play of a decade or so ago). Gordon's account of their relationship is far from sympathetic toward Vivienne, who emerges as manipulative, weak, depressive and demanding, the person whom Virginia Woolf called a "bag of ferrets" around Eliot's neck.

Gordon's close readings of the poems, which are complex, intellectually demanding and richly suggestive, are at their most interesting when delineating the links between Eliot's tortured sentimental life and his work. Vivienne, for example, she finds oppressively present in *The Waste Land*, the powerful evocation of urban despair and death of the spirit that made Eliot world-famous at the age of 40. Her lengthy and deep analysis of this poem is one of the most arresting parts of her book. She links Eliot's mocking disillusionment, his dislike of women and Jews, his yearnings for a religious awakening, to the specific anguish he was experiencing.

"Unlike the satirist, Eliot does not criticise an actual world but creates a 'phantasmal' world of lust, filth, boredom and malice on which he gazes in fascinated horror," she writes. Gordon also argues that the work has been largely misread. Critics have "fastened on his despair and erudition," she argues, and in so doing they have missed the "visionary alternative" that Eliot presented in the poem, the "possibility of regeneration."

The theme throughout is a kind of moral agony. It does not excuse the horrible flaws in the man, and, indeed, Gordon makes no attempt to excuse them. It is perhaps Eliot's signal flaw that he forced others to share his moral agony. But moral agony also suggests a bitter, lifelong struggle and an overweening seriousness of purpose, and while these qualities do not make a portrait of virtuousness, they need to be remembered as parts of a complicated and troubling whole. ■

Monitoring the environment

R. RAMACHANDRAN

The Citizens' Fifth Report on State of India's Environment Volume I: National Overview; pages 440; **Volume II: Statistical Database**; pages 256; edited by Anil Agarwal, Sunita Narain and Srabani Sen; published by the Centre for Science and Environment, New Delhi, 1999; price: hardbound – Rs. 1,590; paperback – not mentioned.

IF the size of this publication of the Centre for Science and Environment (CSE), the Delhi-based non-governmental organisation involved in, in its own words, "environmentally sound and equitous development strategies", is any indication, environmental concerns in the country have only multiplied manyfold since the earliest in the series, the First Citizens' Report came out in 1982. This time the Report is in two volumes: Volume I presents a report on environmental issues, events, policies and practices, and Volume II provides a statistical database on different aspects of India's environment.

As the blurb inside says, "The Report supplements the information provided in the earlier reports and is not a substitute for them." The Second Report came out in 1984-85, the Third Report in 1991 and the Fourth Report in 1997.

Substitute it is not, because the environmental issues confronting the country and its people are, on the one hand, so varied and diverse, and on the other, growing in number, that it calls for an effort of this magnitude with greater frequency, even once a year. But within its constraints of finance and manpower, the CSE has been doing a commendable job.

Having said that, it must be pointed out that in its scope the current Report marks a return to the original idea of the Citizens' Report with which the First Report was launched in 1982 and perfected in the Second one in 1984; namely, to provide an overview of environmental issues from the perspective of environment as a resource and its entitlement to the people in an equitable and democratic framework. It aimed to provide data and information pertaining to different facets of environment and ecology without any underlying activist agenda. Indeed, the Second Citizens' Report is a valuable document in terms of its content and analysis which became a model for similar efforts in other developing countries.

The Third and Fourth Reports, however, moved away from this concept of a generalised resource document to a specialised one focussing on one issue in detail. Defending that shift, the editors say that it was felt that an overview tended more to focus on problems than offer solutions. However, the premise built in the reports seemed to push the activist's position to a degree more than what scientific objectivity would warrant. The editors of this volume now concede that the possible solutions are varied, given India's size and ecological diversity, and would need much more in-depth research and understanding. The importance of the larger picture, even as specific issues demand focussed attention from time to time, is what has driven the organisation back to the framework of an overview.

THE return to the original conception is a welcome one because it gives the document an identity of its own and makes it a valuable souce of reference of updated quantitative information on environment in the country. Of course, in the intervening 14 years, the CSE's major activities have included bringing out the fortnightly environmental magazine *Down to Earth* which has not done too well in the market but has drawn attention to the need for such a publication that places environment high on the country's developmental agenda, especially in an era of economic liberalisation and increasing consumerism.

The CSE's foray into journalism has certainly impacted on its Citizens' Reports as well and, to that extent, the Fifth Report seems to lean heavily on reportage seen in *Down to Earth* because more or less the same set of people has been involved in bringing out the Citizens' Report. (There are, of course, bloomers such as "INSAT data from an American satellite." But, to reiterate, the flavour of a generalised document on the state of the environment is back, and hopefully it will be maintained in the future.

As usual, the document is well produced with the lay-out making for easy reading. The announcement about the Sixth Report appears in the inside cover of the Fifth Report itself and the proposed contents suggest that it will be a mix of both the kinds of frameworks used for the Citizens' Reports so far. It will include the generalised overview as well as a specialised volume on the ecology of the Eastern Himalayas. However, when it is slated for release has not been indicated, though the suggestion in the introduction is that the publication of the Citizens' Reports is from now likely to be an annual event.

BEING a research-oriented public interest organisation, the CSE has always given importance to data and, from that perspective, the addition of a statistical database on various aspects of environment to the scope of the Citizens' Report is noteworthy. As the introduction points out, statistics on environment are scattered all over the place, not easily accessible. The attempt here has been to compile as much data as could be found in one place. This database has been issued as a companion volume to the main document. The two together should constitute an important reference document for the public and policymakers alike.

The present Report is, on the one hand, an assessment of the future of environment in this country as we enter the next century and, on the other, an indictment of policies that have been pursued by government after government which have gone little beyond pious statements in glossy government reports and political rhetoric. On the ground it might appear that the country has reached

a point of no return. What the report says is that if India learns from the outstanding work done in rural areas like Ralegan Siddhi in Maharashtra in the 1970s and 1980s, and more recently in Sukhomajri, a village near Chandigarh, and Jhabua district in Madhya Pradesh, it is possible to reverse ecological poverty (of land degradation) through people's participation and community-based natural regeneration. Indeed, efforts to replicate these success stories in various parts of Haryana, Punjab and Madhya Pradesh has demonstrated that it is possible to wipe out rural economic poverty through this approach in the next 20 years.

WHILE this provides hope, the picture on the urban front is one of despair. With increasing pollution, traffic congestion, dirt and filth, all products of the headlong rush into a consumerist lifestyle, life in Indian cities and towns will become unbearable as we enter the 20th century. There is no success story to recount on the urban front, let alone to make efforts to replicate, is the sad picture that the Report conveys. The Report brings together the host of challenges that lies ahead in the march towards sustainable development and a green millennium and calls for "good democracy, good governance and good science".

As in the case of all the earlier reports, this one too carries a "Statement of Shared Concern" which is signed by a host of "concerned citizens", many of whom happen to be CSE staffers. The conclusion of the Shared Concern of the Second Citizens' report was: "... India requires an imaginative political and honest political system, in which elections are fought without black money, contractors and land speculators are put under control, the industrialist who pollutes is prosecuted... the land can be greened and the environment improved, but only if people who control the socioeconomic system can learn to control their greed." The statement in the latest report says: "While the political system has deteriorated even more than what it was in the 1980s, the latter part of our conclusion has been proved right..."

There is an important essay here that focusses on the not-so-obvious role of corruption among government functionaries and officials in environmental degradation, which once again underscores the importance of good governance that can tackle the menace of corruption at all levels. The moot question is: Will the document make a dent on political thinking, and will environment become an electoral issue, coming as it does at the time of elections? Or will it be relegated to the shelves of bureaucrats, as happened in the case of the earlier Citizens' Reports? ■

Fomenting communalism

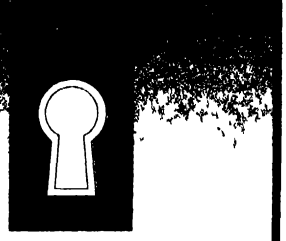
LYLA BAVADAM

ON July 20, two Muslim boys in Ahmedabad tried to stop a group of Hindu boys from teasing another Muslim boy, who they knew was mentally disturbed. Twelve days of communal rioting followed the incident; eight persons were killed and several injured.

The Bharatiya Janata Party Government in Gujarat attempted to argue that the riots were not communal in character but were driven by a spontaneous upsurge of patriotic feelings over the Kargil war. However, an investigative report released by the Committee for People's Democratic Rights (CPDR) in August showed that such claims were frivolous.

A three-member CPDR team, led by P.A. Sebastian, a Mumbai-based lawyer, toured the affected areas and met victims, social organisations and police personnel on August 7 and 8. Its finding, published as a 15-page report titled "Communal Riots in Ahmedabad", concludes: "A careful analysis of the chain of events shows that the aggressors were the leaders and activists of the Sangh Parivar and the victims were Muslims." According to the report, Muslims too "indulged in violence but it was in the nature of defence and retaliation."

The report documents the build-up to the riots through July. It was engineered through six key events, which in themselves were of seemingly little consequence. The first of these was the celebration of the Indian cricket team's victory over Pakistan in a World Cup match, which was marked by deliberate ostentation in Muslim areas. Provocative and anti-Muslim slogans were raised at these celebrations. In one instance, BJP and Bajrang Dal workers shouted: "Lahore bus *se* Lahore *Jao*" (Go to Lahore on the Lahore bus). The slogan was targeted against Muslims and this, the report pointed out, was "a crude attempt to equate the Muslim citizens of India and Pakistan".



Union Home Minister L.K. Advani's subsequent visit to his constituency, Gandhinagar, became the next pretext for communal mobilisation. Advani accompanied the ashes of a soldier from the area, who was killed in action in Kargil. Slogans shouted at a public meeting addressed by Advani turned from anti-Pakistan to anti-Muslim. Significantly, soon after the meeting, the BJP, the Vishwa Hindu

The real story. Every time

Parishad (VHP) and the Bajrang Dal opened offices in Meghani Nagar, the soldier's neighbourhood. Local residents told the CPDR that the activities carried out from these offices were decidedly communal, a position which was supported by Deputy Commissioner of Police Vinod Mal. He said that the police had addressed letters to local parties asking them to "restrain their cadres from precipitating a communal situation."

On July 8, the conflict escalated. Stones were thrown at an Id-e-Milad procession, participants of which, ironically, were shouting anti-Pakistan and anti-Nawaz Sharif slogans. Six days later, the annual Jagannath rath yatra was used to vitiate the atmosphere further. Several localities through which the yatra passes have a history of communal conflict, and according to the report, no effort to provoke another one was missed this time. Devotees at the yatra traditionally chant the slogan "*Jai ran chod, makhan chor*" in praise of the deity, Krishna. This year, while the yatra passed through sensitive areas, the slogan "*makhan chor*" was changed to "*Mian chor*", a reference describing Muslims as thieves.

The CPDR report records that at this year's yatra, the VHP distributed leaflets containing yet another allegation, which is often a central theme of Hindu communal mobilisations. One such leaflet spoke of an "international conspiracy of Christians/Muslims to abduct Hindu girls, tempt them... take on Hindu names to hoodwink them." It says: "They tempt them with offers of marriage and then cheat them." Local presidents told the CPDR that the Muslim community had gone out of its way to resist such provocation, with its ordinary members staying indoors while community leaders visited the Jagannath temple and offered Rs. 51,000 by way of donation as a gesture of inter-religious amity.

On July 17, Sonia Gandhi addressed a well-attended public meeting in Ahmedabad. The CPDR analysis shows that this was the decisive moment that, in retrospect, appears to have unnerved the BJP, and apparently the Hindu Right decided to act. The first incident of violence came on July 20 at Kadiya Naka in Daryapur, where the two Muslim boys attempted to end the harassment of a mentally disturbed boy. Severely beaten, the boys tried twice to file a formal police complaint. On both occasions, police personnel were unavailable. An angry crowd that had gathered in Daryapur threw stones at the local police stations. The police responded with a lathicharge, and were supported by stone-throwing by some local Hindus.

According to the report: an hour after the first clash, three Muslim boys were stabbed to death in Daryapur; rioting broke out in the area and spread to Kaupur and Saraspur; and one more Muslim was killed in these riots. On the same day, in nearby Saraspur district, the Muslim chawl (slum housing complex) at Jalampuri was attacked by a mob of up to 200 men. The residents informed the CPDR team that they received no help from the Sharkota police station. A local resident, Mohammad Hanif Seth, told the CPDR team: "As many as 300 families had to flee and take shelter in the Kalapur railway station".

On July 23, VHP activists began shouting anti-Muslim slogans and throwing stones at Muslim-owned food stalls in Gomtipur district. A luxury bus owned by a Muslim was burned. The police were called in, but they only charged a Muslim with looting one of his co-religionist's stalls. The local Magistrate's bail order in this case, as quoted by the CPDR, succinctly pointed out that "it was unbelievable that a Muslim looted a Muslim-owned stall".

Charges of police bias also emerged from a July 28 attack on some 180 Muslim families in Guptanagar, where officers are alleged to have beaten women with rifle butts. The last violent incident was reported on July 31, when one of the Muslim owners of a restaurant died of burn injuries after communally inspired attackers set the establishment on fire. The arsonists were named in a first information report as VHP and Bajrang Dal workers, one of whom the CPDR report identifies as the president of the Bajrang Dal unit in Ahmedabad.

All evidence points to the fact that the riots were an attempt by the Hindu Right to whip up communal frenzy prior to elections. The report says that the basic motive of the Hindu Right in engineering the violence was to bring about a communal consolidation. Girish Patel of the Lok Adhikar Sangh said that Shankersinh Vaghela's alliance with the Congress(I) had left the Sangh Parivar "desperately seeking an issue to mobilise the Hindu masses".

As the CPDR has demanded, the election-eve riots and their handling deserve a judicial inquiry. In the absence of a meaningful inquiry and real administration of justice, this round of riots, like several others that have marked Ahmedabad's troubled history, would only be another phase in the ripping apart of the city's social fabric. ■

India's billion

With the birth of the billionth Indian, as estimated by the U.N's Population Division, one in every six people in the world is an Indian.

LAXMI MURTHY

THE billionth Indian has been born. According to estimates released by the Population Division of the Department of Economic and Social Affairs of the United Nations, this event took place on August 15. The announcement was received with considerable surprise, since Indian estimates had placed the event as far away as May 2000. Officials at the Union Ministry of Health and Family Welfare insist that India is still short of the billion mark by about 12 million. The exact date is yet to be fixed by the technical committee on Population Projection.

The announcement by the U.N. Population Division took even other U.N. agencies by surprise. The U.N. Population Fund (UNFPA), which has been gearing for its Day of Six Billion, was somewhat deflated when the "Day of the Billionth Indian" stole some of the momentum of the build-up to the campaign.

According to UNFPA estimates, the world population will reach the six-billion mark on October 12 – only 12 years after the five-billion mark. From 1804, when the world passed the one-billion mark, it took 123 years to reach the two-billion mark in 1927; 33 years to reach three-billion mark in 1960; 14 years to reach the four-billion mark in 1974. The landmark of five billion was crossed 13 years later, on July 11, 1987, a day which the governing council of the United Nations Development Programme (UNDP) suggested retrospectively in 1989 should be observed annually as World Population Day. The intent behind this observance was to "focus attention on the urgency and importance of population issues, their impact on development and the environment, and on the need to find solutions to these concerns." The theme for the 1999 World Population Day, "Count up to the Day of Six Billion", was intended to drive home the message that although world population growth has slowed, population is still growing – adding 78 million people every year.

Of the total increase in world population, 60 per cent is contributed by just 10 countries. India tops the list – contributing 21 per cent, with China second at 15 per cent. With India reaching the one-billion mark, one in every six people in the world is an Indian. Yet it is clear that the population growth rate the world over is slowing. The growth rate of 1.33 per cent a year between 1995 and 2000 is significantly less than the peak growth rate of 2.04 per cent between 1965 and 1970. In the developing countries, family size has reduced by half in the last three decades.

On October 28, 1998, the UNFPA moved the Day of Six Billion from June 16 to October 12, 1999. Dr. Nafis Sadiq, Executive Director, UNFPA, said: "This is very encouraging news." Yet a closer look reveals that there are distressing reasons underlying the apparent population slowdown. The UNFPA itself admits that this is, according to the revised estimates, partly a result of the HIV/AIDS (Human Immunodeficiency Virus/Acquired Immune Deficiency Syndrome) pandemic. For instance, in Botswana, one of the countries hardest hit, one adult in four is infected with HIV.

P V SIVAKUMAR

Of the total increase in world population, 60 per cent is contributed by just 10 countries. India tops the list, contributing 21 per cent.

IN any case, how relevant is the precise date of crossing either the billion mark or the six-billion mark? In a vast country like India, exact projections are near impossible and estimates may be way off the mark. While fixing exact dates on these events may be of mere statistical interest, they do serve to whip up a collective frenzy about the population "explosion". It is brought home to us that every sixth person in the world will be an Indian. Cause for celebration? Or alarm? The latter, if the international media are anything to go by.

A case in point would be a "news brief" of the Worldwatch Institute by Lester Brown and Brian Halweil, authors of *Beyond Malthus: Nineteen Dimensions of the Population Challenge*, a neo-Malthusian analysis centred on "over"-population as the major causative factor of food scarcity and environmental degradation. The authors outline a gloomy picture for India: "Well before hitting the one billion mark, the demands of India's population were outrunning its natural resource base. This can be seen in its shrinking forests, deteriorating rangelands, and falling water tables." They quote the International Water Management Institute (IWMI) which estimates that aquifer depletion could reduce India's grain harvest by one-fourth. The gloomy prognosis continues with a dire warning of political anarchy: "Falling water tables will likely lead to rising grain prices on a scale that could destabilise not only grain markets, but possibly the government itself." And in conclusion, the authors intone: "The principal threat now may not be military aggression from without but population growth from within."

The presentation of population growth as a security threat stems from a supposed causal relationship between population pressures and resource scarci-

ties. The main proponent of the scarcity-conflict model, Canadian political scientist Thomas Homer-Dixon, suggests that environmentally induced internal conflict in turn causes states to fragment or become more authoritarian, seriously disrupting international security. The scarcity-conflict model today largely informs foreign policy, besides population and environmental policies. This perspective ignores the other, more important, contributory factors of environmental degradation – colonial forest policies which laid the ground for the ravaging of forests by contractors and the government, inequitable consumption patterns, and polluting technology. Moreover, it ignores the organic relationship with nature shared by many indigenous and rural communities. Human beings are not merely rapacious consumers of the earth's resources, in some social paradigms they also protect and nurture the earth. The unsustainable depletion of natural resources is more characteristic of an urban, industrial society. Rural Indian women have spearheaded ecological movements, questioned the dominant development paradigm, and campaigned for a more sustainable model.

In India, the consumption by the highest income group (1.44 per cent of the population), of electricity, petroleum products and machine-based household appliances – products that have global environmental impact – is about 75 per cent of the total. For instance, the land diverted from food crop production to floriculture not only adversely impacts on nutritional levels, but degrades the environment with high pesticide and fertilizer use.

The consumption pattern of the elite in any Third World country is comparable to the relationship between that country and the "developed" world. In Latin America, for instance, vast tracts of valuable rainforest were cleared for cattle ranching. Owing to favourable tariff treatment, most of the beef in Latin America is exported to the United States, much of it for use in fast-food chains or for pet food. The average Central American eats less beef than the average house-cat in the U.S. Every North American child consumes as much energy as three Japanese, six Mexicans, 12 Chinese, 33 Indians, 147 Bangladeshis, 281 Tanzanians or 422 Ethiopians.

I = PAT, an algebraic equation put forth in the 1970s by Paul Ehrlich and John Holdren, measures the impact of humans on the environment (I) as the product of the number of people (P), affluence/the amount of goods consumed per person (A), and the pollution generated by technology per good consumed (T). This analysis fails to account for various complexities such as who among the monolithic P is responsible for what, and the how and why behind pollution. While the global population reaches the six-billion mark, it is worthwhile to remember that just under 25 per cent of the world's population consumes about 75 per cent of the world's resources and energy, and the same fraction generates most of the world's waste and global atmospheric pollution. The Pentagon, for instance, is the largest single consumer of energy in the U.S. and generates a tonne of toxic waste every minute. It is the "luxury" emissions of the rich that generate almost 90 per cent of the ozone-depleting chlorofluorocarbons (CFCs) and two-thirds of carbon dioxide emissions, rather than the "survival" emissions of the poor. However, the "consumption explosion", with its disastrous implications, appears to engender less fear in the public consciousness than the "population explosion".

Yet the belief that all people use resources and create waste, and large families use more resources and create more waste, gained currency among most international development agencies which put population high on their agendas for problem-solving. The 'T' component of the debate – the highest-polluting industrial processes that provide consumer goods for the wealthiest fifth of humanity – are controlled almost entirely by men in the most powerful transnational corporations and governments, which manufacture chemicals and weapons of mass destruction, with the main goal of maximising economic growth and profit. Yet policies of "population control" are targeted at the "poorest of the poor" – institutionally powerless women whose main goal is survival and have larger numbers of children for complex reasons that range from immediate survival and necessity to high infant mortality, lack of access to health services and patriarchal control over reproduction.

India has one of the longest-running population programmes in the world, and Indian women, especially those from the poorer sections, have been subject to a population reduction programme garbed in euphemisms ranging from "family planning" to "family welfare" and now "reproductive health". Sterilisation accounts for 71 per cent of contraception practice in India and the procedure is usually performed after achieving a family size of three or four children. Although it is an effective option of birth control for the individual woman, it does not have a significant demographic impact. To reduce birth rates dramatically, spacing methods have to gain primacy. From a policy-maker's perspective, long-acting hormonal contraceptives such as injectables (Net En and Depo Provera) and implants such as Norplant are "ideal" because they are provider-controlled. Women need not be relied upon to remember taking the pill, or to keep intrauterine devices in place, and men need not be persuaded to use condoms. The shift to long-acting, hazardous contraceptives is justified on the plea that birth rates have to be brought down in a hurry – the price that women pay with their health is irrelevant.

The much-touted "paradigm shift" in population policy following the International Conference on Population and Development (ICPD) in Cairo in 1994 pressured governments to depart from "demographic imperative" language and accommodate women's perspectives. Yet real changes have yet to take place. The panic about population explosions tends to overtake concerns of empowering women and enlarging the coverage of primary health care. The Delhi Population Bill, which was recently introduced in the Delhi Assembly, contains harsh disincentives for those who have more than two children.

For many decades it has been known that birth rates are affected by a variety of parameters – the means of production, that is, whether the economy is in subsistence or industrialised mode; women's status and education; family structures; women's participation in the labour force, and so on. Though Indian representatives at the first World Congress on Population in Bucharest in 1975 popularised the slogan "Development is the best contraceptive", official policy has concentrated almost exclusively on the provision of contraceptives. The technological "solution" of developing more effective contraceptives is a politically safer option than genuine changes which impact on birth rates – land reform, expansion of social services and a just distribution of resources. It is this paradigm which has to shift for birth rates to fall and equitable development to take place. ■

Questions about capabilities

In the light of experiences worldwide, it is impossible to accept the claims that Pokhran-II has established all-round weapons capability for India. Yet such claims are behind the grandiose vision of India's nuclear future prepared by the National Security Advisory Board.

T. JAYARAMAN

THE draft Indian Nuclear Doctrine (dIND) prepared by the National Security Advisory Board (NSAB) is the most hawkish document to emerge so far on the nuclear weapons issue from any official or institutional body associated with the Government of India.

Although it may, on superficial reading, seem to be a fleshing out of the details of the broad nuclear defence posture outlined earlier by the government, particularly in Prime Minister Atal Behari Vajpayee's Rajya Sabha speech of December 15, 1998, the document in practice stakes out a far more aggressive position on the issue of nuclear weaponisation.

While formally reiterating the position that India should build a credible, minimum nuclear deterrent, the document, in outlining the details of the proposed nuclear doctrine, prescribes in fact an open-ended, far-reaching programme of nuclear weaponisation with maximal capabilities.

The ambitious reach of the programme outlined in the dIND follows directly from the one-sided emphasis that is placed on the credible in the "credible, minimum deterrence" mantra. The minimum, except for its initial ritual invocation, finds little mention in the rest of the document. The crux of the matter is made clear in the key formulation of para 2.2 of dIND that states: "The requirements of deterrence should be carefully weighed in the design of Indian nuclear forces and in the strategy to provide for a level of capability consistent with maximum credibility, survivability, effectiveness, safety and security." Despite the subsequent statement that the basic doctrine is one of "retaliation only", it is clear that it is the vision of para 2.2 that animates the rest of the document.

The scope and quality of the nuclear arsenal and nuclear capabilities that the dIND subsequently prescribes would delight the heart of any nuclear weaponeer. India's nuclear forces are to be such that they can "respond with punitive retaliation should deterrence fail". They are to be based on a "triad of aircraft, mobile land-based missiles and sea-based assets in keeping with the objectives outlined". In other words, even submarine-launched missiles carrying nuclear warheads are on the agenda. The nuclear forces and their command and control are to be "effective, enduring, diverse, flexible and responsive to requirements".

The nuclear forces envisaged are to be not just survivable, but designed to "endure repetitive attrition attempts with adequate retaliatory capabilities for a punishing strike which would be unacceptable to the aggressor". In other words, the nuclear forces are supposed to survive multiple strikes by any nuclear aggressor

SHANKER CHAKRAVARTY

At Pokhran, after the nuclear explosion in May 1998.

and then still be able to respond with punishing force. Survivability is to be aided by "mobility, deception and dispersion". The dIND repeatedly emphasises that India's nuclear forces must be ready for quick action.

They must be able to shift from "peacetime deployment to fully employable forces in the shortest possible time," and the efficacy of India's nuclear deterrent is to be maximised by, among other things, the "timeliness" of the response. The fact that this emphasis will push India's proclaimed no-first-use policy much closer to that of a launch-on-warning or launch-under-attack strategy is not allowed to stand in the way of pursuing the "credibility" and "effectiveness" of the proposed nuclear deterrent.

If these prescriptions were to be followed through to the letter, nuclear weapons could become the new growth industry in India. And if global tenders could be floated for such projects, India would have a queue of multinationals at its door, clamouring to be let in on a piece of the action. But regrettably, nuclear weapons and associated technologies are a closed-door affair, jealously guarded and not for export. The NSAB's vision has to be realised by purely indigenous efforts and it is here that reality intrudes on hawkish dreams in a rude fashion.

The problem is that India's technical capabilities in the area of nuclear weapons, their delivery systems and command and control are nowhere near the levels required by the dIND. Nor is it clear how these capabilities could be enhanced to the levels demanded by the dIND in the medium or long term, given the various constraints that operate on the development of indigenous capabilities in the defence sector and the country's track record in this area.

THE first issue in this respect is the limited range of capabilities in the design of nuclear weapons that has been achieved by Pokhran-II, both in terms of reliability, in the military sense of the term, and safety (to the users, that is). Following Pokhran-II, Indian nuclear weaponeers can build basic fission weapons of the implosion-type using plutonium as the fission fuel. One such warhead was tested on May 11 last year. The information on the sub-kiloton tests, and the statements of the Department of Atomic Energy (DAE) on the range of nuclear weapons codes that were tested therein suggest that some capability exists for variations in the shape and size of the warheads. However, it is not clear that the capability to build reliable fission weapons of the most advanced designs, including 'levitated' pit fission weapons, has been achieved.

These have two important implications for the scope of the arsenal demanded by the dIND. The first is that not too much leeway will be available in the choice of delivery systems. Submarine-based missiles, for instance, will require the careful minimising of weight without loss of yield and the ability to pack warheads with the same yield into smaller and smaller spaces. It appears unlikely that Pokhran-II has delivered such a capability. Secondly, the timeliness of response demanded by the dIND suggests that weapons must be designed so that the fissile material would be already sealed and in place in the warhead, with many such warheads ready on board various delivery systems.

Importantly, the safety requirements for sealed-pit designs include extensive testing in the hydro-nuclear range, something that has not been undertaken so far. Nor does the DAE appear to have adequately tested three-dimensional weapons codes that are required to design 'safe' sealed-pit designs.

The other important aspect of India's current nuclear weapons capability is that reliable and safe boosted fission-weapons or thermonuclear weapons capabilities simply do not exist. Without entering into the merits of the controversy over the yields of the thermonuclear device that was tested at Pokhran, it is clear from the entire history of the nuclear weapons business that one test does not make for a reliable weapons capability. To make matters more complicated, the thermonuclear device tested had a boosted fission weapon as its weapon primary stage. There has been therefore no independent test of a boosted fission weapon either. Without thermonuclear weapons or boosted fission weapons it is not clear how the dIND's claimed objective of a deterrent capability to inflict unacceptable damage on "any potential aggressor" is to be achieved. If the words of the dIND are to be taken at face value, the term 'potential aggressor' includes even the United States. It would be strange to imagine that India could build a deterrent (even if, for argument's sake, that piece of nuclear theology were to be granted any credibility at all) based solely on fission weapons against a nuclear weapons state like the U.S.

Nuclear weaponisation *per se* is bad enough but worse could be in store if it is pursued on the lines indicated by the dIND. If any thermonuclear arsenal were to be built on current capabilities, it would be highly unreliable and unsafe. And this state of affairs could not be remedied without further extensive testing. The logic of the dIND if taken seriously would inevitably lead to the breaking of the moratorium on further nuclear weapons testing that is currently in place, a fact that the luminaries of the NSAB would not have been unaware of.

THE claim of the DAE that the current nuclear weapons codes and the tests conducted at Pokhran are sufficient is completely untenable in the light of the experience of nuclear weapons states like France. This is a particularly illuminating example for understanding the weapons test requirements of a full-fledged Indian nuclear weapons programme, for several reasons. First, the French nuclear weapons programme is by and large an indigenous effort like the Indian one. Secondly, France has tried to bypass the route of several incremental design changes and tested only a few basic designs. Thirdly, the French programme was one of the last to take off and its latest weapon, an advanced warhead designed for use on submarine-launched missiles, began development only in the late 1980s. So like the Indian weapons programme, the French one would also have benefited from the recent developments in basic scientific know-how as well as in computing power, over and above the extensive experience that they already possessed. Nevertheless French weaponeers thought it prudent to conduct 22 tests even for the latest weapon.

Significantly, President Jacques Chirac declared in a television talk-show in September 1995, that France did not "have the technology for small weapons" (even though he ruled out the possibility of further development of such weapons). Clearly, despite the extensive testing done earlier, the French did not consider their technology adequate in some areas of nuclear weapons.

In the light of such experiences worldwide, it is impossible to accept the claims of the defence and atomic energy establishments that Pokhran-II has established all-round weapons capability for India. But undoubtedly these exaggerated claims are very much behind the sabre-rattling of the NSAB and its grandiose vision of India's nuclear future. In an interview to the *Times of India* published on August 22, Chairman of the Atomic

GAMMA

The ocean surface froths during a French underwater nuclear test near the Pacific atoll of Mururoa in 1995.

Energy Commission (AEC) Dr. R. Chidambaram declared: "Our country has full capability to provide technological back-up to the Indian nuclear doctrine." And further: "R&D capability and technological expertise, which we have for every area related to nuclear technology, will enable India to maintain a credible nuclear deterrent *as enunciated in the doctrine* (emphasis added)." On another occasion, in an interview to the Press Trust of India that set off a round of competitive boasting between India and Pakistan about neutron bomb capability, the AEC Chairman was quoted as saying that India can design and build nuclear weapons of "any type or size" *(The Hindu*, August 17, 1999).

INDIAN capabilities with regard to the development of delivery systems are clearly somewhat of a secondary issue in the context of the dIND, given the exaggerated claims about the development of nuclear warheads. But even on this front, the sabre-rattling of the NSAB is underpinned by the lack of a sober assessment of the capabilities of Indian S&T in this area. It is undoubtedly true that with the development of Prithvi and the further development of Agni-II India's nuclear weapons would have a moderate reach. And this capability could certainly be achieved in the medium-term. But the requirements of the dIND are considerably higher, including the development of Inter-Continental Ballistic Missiles (ICBMs), submarine-launched ballistic missiles, and possible tactical nuclear weapons for induction in the Army.

The truth is that the Indian armed forces are heavily dependent on imported equipment. There is not a single combat aircraft in service that is indigenously produced. In the midst of the Kargil near-war situation, India was hurriedly shopping internationally for shells for its imported artillery. The long-promised and much-talked-about Light Combat Aircraft (LCA) is yet to be completed in prototype form. It is not clear when, if ever, it would be a production line item. The development of even conventional arms is enmeshed in difficulties and time and cost overruns. India's indigenous software expertise does not extend in the same fashion to electronic and communication hardware, where imports play an important and crucial role. Indeed, Dr. A.P.J. Abdul Kalam himself estimates, in his book *Vision 2020*, that India is self-reliant only with regard to about 30 per cent of its defence needs. But any recognition of this reality is missing in the dIND. The fact that any accelerated move towards weaponisation would attract sanctions that would have a serious negative effect even on conventional arms capabilities clearly does not bother the gung-ho hawks of the NSAB, who desire a state-of-the-art nuclear arsenal and command and control system.

The misplaced emphasis in the dIND on the 'credible' in the "credible, minimum deterrence", in the absence of a real technological capability to back it up, could be dismissed as a farcical exercise, if it were not for some very real dangers that follow from its prescriptions. With its complete dependence on nuclear theology, particularly deterrence theory together with the variant of "damage unacceptable to the aggressor", it is unsurprising to find that the dIND fails to take into account the issue of peace and security in South Asia, which is already seriously threatened by the first halting moves towards weaponisation.

The guiding principle is "India's strategic interests", an ambiguous term that could cloak all manner of superpower ambitions and posturing, and not security.

Despite the posturing that India's nuclear forces are directed against any potential nuclear threat, it is clear that the real confrontation will continue to be mainly with Pakistan and secondarily with China. Several commentators on nuclear issues in South Asia have repeatedly pointed to the fact that it is unlikely that any command and control system can cope with the awesome requirements imposed by the geographical proximity of India and Pakistan. They have also drawn attention to the fact that the low technological level of the two nations would contribute to the lowering of the threshold for a nuclear outbreak, due to accidental, unauthorised or deliberate use of nuclear weapons. Despite the perfunctory noting of nuclear weapons safety and security issues in the dIND, the rest of its formulations run patently counter to such considerations.

In a deeper sense, the country and society most seriously threatened by Indian nuclear weaponisation is India and Indian society itself. The far-reaching programme of nuclear weaponisation prescribed by the dIND would engender a serious negative shift in the priorities of Indian S&T, away from development issues that need urgent attention, towards an inevitable militarisation of science and technology. The pursuit of the mad-cap vision of India's hawks would consume substantial resources, even if the goals set are never reached.

This is hardly the vision of free India that inspired its freedom struggle. India's Strangeloves are well aware of this fact. In demanding that India possess "the will to employ nuclear weapons", the dIND in fact unequivocally advocates that India abandon any moral values in its politics and discard any peace-oriented value system underlying its foreign and nuclear policies. ■

Voters and consumers

Viewing politics through the prism of marketing management could provide a perspective on the past and insights into the future.

D. SAMPATH KUMAR

TO the lay person, it would appear that there is very little to choose among the multitude of laundry detergent brands on offer on supermarket shelves from competing manufacturers, much less among the many brands from one manufacturer. But Procter & Gamble, the United States-based major in consumer products would disagree. The company has not one but ten brands of detergents for the U.S. market alone – each targeted at what it believes to be distinct consumer segments.

The variety is bewildering. There is, for instance, "Tide", a fairly popular brand, with its promise of an all-purpose detergent wash. "When Tide is in, dirt is out," goes the advertising slogan. The nine other brands cater to different consumer needs for detergents with a variety of attributes. Customers can have the choice of a detergent being made available in solid or liquid form. They can also choose to have it as a concentrate or mixed with inert material – as is commonly done in the industry. Then there is choice available in terms of – with a fragrance and without, in combination with a bleaching agent or a fabric softener, a detergent for washing baby's clothes, and so on.

It is tempting to conclude that such an array of choice is a case of overkill on the part of P&G. On the other hand, it does seem that there indeed exists a diverse range of customer needs in a product as commonplace as a detergent. At least, the success of the company in the marketplace would seem to suggest that. The company, after all, posted in 1998 a turnover of $40 billion (detergents account for a big chunk of it) and net profits close to $4 billion.

NOW, if the consuming public can be differentiated in ten different ways with regard to their expectations from something as commonplace as a detergent, it will be naive to think that the public cannot be so segmentated with regard to their differing expectations in the choice of a particular political party to govern the nation. Conversely, the success of a political party at the hustings will depend on how effectively it segments the voting public and presents a particular visage to individual segments that carry the maximum appeal.

The fundamental issue here is the notion of the Indian voter as a "consumer" in the context of his or her participation in the democratic process of governance. It is easy to see how the average voter is cast in that role. He or she is in the market for a bundle of goods and services that promote his or her sense of well-being. It is a bundle of goods and services that he or she can access only through the political process in the society that he or she belongs to. A political party which seeks his or her mandate for governance is thus in the position of a service provider. The citizen casting the vote in favour of one party or another can therefore be viewed as a choice in favour of one brand (of politics) over a competing brand.

A business journalist looks at the Indian political bazaar in terms of products, market segmentation and success and failure in marketing strategies.

Of course, this bundle of goods and services is not something that he or she can claim exclusive ownership over. Invariably they can be enjoyed collectively with other citizens. The desire of an individual for a society in which he or she will have unfettered enjoyment of the wealth that he or she has accumulated – a privilege that is unencumbered by any risk of expropriation through theft or violence caused by some other member of the society – may come into play. But the fact that the means through which this is achieved – the enforcement of law and order in society – benefits others as well does not in any way dilute its appeal or the relationship between a citizen and a political party (which promises superior law and order enforcement in the society) as that between a consumer and a service provider. The desire of an individual for law and order in society is the most basic of all needs that a political party can offer to meet for voter-consumers. There are other intangibles that might appeal to different sections of the voting public. The promise of land distribution might hold particular appeal to the landless agricultural labourers. The promise of price stability might possibly appeal to the entire voting public. The range of intangibles can be endless.

IF voters are consumers and political parties service providers, can political developments be viewed through the prism of marketing management? They can and in fact they do offer a better perspective on the past besides offering insights into the future. The growth in popular support for the Bharatiya Janata Party in recent years is as good an example as any, in this context. From a party of two elected members in the Lok Sabha in 1984, it went on to command the loyalty of nearly 190 members in a space of 15 years. It has been generally accepted that the degree of success it has been able to achieve in electoral terms is the outcome of the consolidation of large sections of Hindu voters in its favour. It is equally well recognised that it has been able to do so by creating a belief in voters' minds that successive governments in the past resorted to a policy of appeasement of minority religious communities.

In the language of marketing management, the BJP's success can be described as a case of segmenting the market (the voting public) along religious lines. As a corollary, it would seem to have somehow created in the minds of the same public the perception that the product it offers (public administrative service) contains a desirable attribute (non-appeasement) that competing brands do not possess.

Two points need to be made here. Firstly, it is not necessary that there

The History of Science and Engineering in IAS

There was a time when the IAS was the exclusive territory of Law and Humanities students When preparing for the Civil Services Exam meant running from one library to another in search of relevant reading matter When the coaching available was for a few 'traditional' IAS subjects like History, Political Science and Philosophy.

Times have certainly changed Today, more and more graduates from the Science, Engineering, Management and other streams are making their way into the IAS That's because firstly, they are able to select an optional subject they're familiar with, and secondly, they can now be sure of receiving top quality preparatory assistance – whatever their chosen subject

The latter advantage is due largely to Brilliant Tutorials. Because Brilliant offers coaching for every optional subject in the IAS Exam, except Medicine. Whatever your optionals – Accountancy or Animal Husbandry, Physics or Philosophy, Economics or Electrical Engineering – Brilliant will be with you all the way.

A committed team of highly qualified and experienced professors, researchers and support staff help you in 3 distinct areas of preparation for the IAS – equipping you with relevant knowledge of your optional subjects, providing you with a wide coverage of general studies and a constant update on current affairs and finally coaching you for the most gruelling of interviews

Brilliant's Postal Course for the Civil Services Exam is a comprehensive package dedicated to helping you achieve your goal Proof of its power lies in the number of Brilliant's students who get into the IAS year after year.

should indeed have been "appeasement" in some tangible manner of any section of society. It is just that the public should believe this to be so. In other words, for the BJP's campaign to succeed, it is necessary that large sections of the voting public must believe there has been some kind of appeasement of some segments of the voting public, no matter that the reality is different. This is important. As any marketing professional worth his name will confirm, in marketing, perceptions of value is more important than the reality of value. One can go so far as to say that in marketing, perception of "value" is itself the reality.

Secondly, the voting public should be convinced that a policy of "appeasement," even if it did exist, is immoral and, more significantly, that it is inherently injurious to their own interests. Here again, such a perception may already have existed and the BJP may have merely capitalised on it by segmenting the market in terms of those who agreed with it and those who did not. If on the other hand the voting public did not really think so initially, what the BJP did was to persuade people through product promotion efforts (campaigns) that it did indeed exist. Additionally, it also warranted that its rule would not suffer from such a negative attribute even as the offerings by the competition (Congress, Communists, etc.), did.

At a shop in Bangalore. Principles of marketing have come into play in elections as well.

THE BJP is not really a pioneer when it comes to creating new product values or segmenting the market along new lines. The real pioneer is the Dravida Munnetra Kazhagam (DMK). In the 1950s, when it entered the electoral scene, it segmented the "market" of Tamil voters in terms of those who would acquiesce in the "hegemony" by the North *vis-a-vis* the people of the South (read the Tamils) and those who are opposed to it. Implicit in the division was the claim that while the DMK was opposed to it, the then ruling party, the Congress was in favour of it. Of course, for added measure, the hegemony by the North was also presented as domination by Brahmins, which formulation later metamorphsed into a culture of "Brahminism" as opposed to Brahmins *per se*, in order to add punch to campaign. That it succeeded in imprinting such a "product value" (North vs South) even on Rajaji and the Swatantra Party with its upper-class image did not dilute the consolidation of voters in its favour at the time of the general elections of 1967. Too much should not also be read, in this context, to the role of the anti-Hindi agitation launched in 1965 in Tamil Nadu for the Congress party's defeat in that election. The truth is that the DMK-inspired "market segmentation" of the Tamil voters was well under way by then, and this led to the consolidation of voters in its favour. The language agitation merely hastened the process. In a sense, even the political success of Mulayam Singh Yadav and Laloo Prasad Yadav can be attributed to their causing a paradigm shift in the market for the political mandate that all the parties seek.

Customer perceptions of product values do change, primarily because the utility that people associate with the consumption of products changes with time. A bath soap may initially have been thought of as nothing more than a means to remove dirt. But as bathing transforms from an act of personal hygiene into one of undertaking a pleasurable experience (a good marketeer can be counted upon to make it so), a capacity to remove dirt is not what many people look for in a bath soap. Rather, they look for fragrance and even a suggestion of some exotic locale.

And so it is with electoral politics. In the beginning electoral battles were fought on grounds of more jobs, better education, more incomes and so on. That is to say, on "secular" values. As successive governments failed to deliver on their promises of more jobs, more schools and so on, the public began to lose faith in the ability of political parties to do so at all. The stage was now set for the voting public to vest the political process and parties with newer product values. Thus was born the appeal for "sectarian" (religion, caste, community and so on) values.

Where does the country go from here? The marketing crystal ball suggests that the process of segmentation along sectarian lines is by no means complete. The political process seems ripe for even narrower forms of segmentation. ■

The song supreme

M.S. Subbulaksmi is no ordinary musician; she is a living legend, a role model for every aspiring singer. A tribute on the occasion of her 83rd birthday.

C.V. NARASIMHAN

THE announcement by the President of India, K.R. Narayanan, on March 1, 1998, conferring the Bharat Ratna, the highest civilian award in India, on M.S. Subbulakshmi was received with universal approval. It was the first time that a musician had received this signal recognition. How did this come about?

The short answer is that M.S. is no ordinary musician. Today, she is a living legend, a role model for every aspiring singer.

M.S. was born on September 16, 1916, in Madurai. Her father was Subramania Iyer, a lawyer by profession and a rasika, and her mother was Shanmugavadivu, a well-known veena player of her times. Blessed with a mellifluous voice with total tonal purity *(sruti suddham)*, and an unusual understanding of the subtleties and nuances of our complex musical system, best described as *gnanam*, M.S. quickly became a popular concert artist, as well as a recording artist. Her musical education, beginning with her mother, developed further under a well-known vidwan of Madurai, Srinivasa Iyer. Her first public concert was given when she was 13. She also attained proficiency on the veena, and is an accomplished veena player to this day.

In 1936, M.S. moved to Madras. Chennai was then, as it is now, the capital of Carnatic music. She was already a much-sought-after concert artist. Here she met T. Sadasivam, at that time a senior executive in the popular Tamil weekly *Ananda Vikatan*. She married Sadasivam in 1940, and with it began a new and very fruitful phase in her life.

For the next 57 years, until his demise in November 1997 at the age of 95, he was, in the words of M.S. herself, her "guide, philosopher and friend". With Sadasivam's encouragement she was able to meet the famous vocalists of those times, Ariyakudi Ramanuja Iyengar, Musiri Subramania Iyer and Semmangudi Srinivasa Iyer and also the vainika, K.S. Narayanaswami. With these contacts, her repertoire expanded and her rendering of raga and kriti, *neraval*, *swaram*, and so on attained even higher levels of excellence. Semmangudi became a close friend of the family, when he moved to Madras after his distinguished tenure as principal of the Swati Tirunal College of Music in Thiruvananthapuram. Semmangudi was practically a daily visitor at the T.S.-M.S. home. Musiri was also a frequent visitor, and he gladly shared his special gift for *bhava sangeetham* with M.S.

At *Ananda Vikatan*, the star writer was R. Krishnamurthi, who wrote under the pen-name "Kalki". Besides writing essays, short stories, novellas and musical cri-

At a reception hosted by United Nations Secretary-General U Thant after a special concert by M.S. Subbulakshmi in the General Assembly hall in 1966. Among others in the picture are T. Sadasivam, daughters Radha and Vijaya, C.V. Narasimhan, Under Secretary-General of the U.N., G. Parthasarathy, India's Permanent Representative at the U.N., and James Rubin, an American devotee of Carnatic music.

tiques, he composed songs which M.S. would sing. With the combination of the executive ability of Sadasivam and the literary talent of Kalki, a new Tamil magazine, *Kalki,* was established, which is still going strong.

M.S. starred in a number of films. Her earliest appearance, in the 1930s, was in *Seva Sadan,* in which she gave a superb rendering of the Kalyani kriti "Needu Charana". In *Shakuntala* she was cast opposite the great vidwan G.N. Balasubramanian, and this film was also replete with many song hits. She shared the honours with Shanta Apte in *Savitri* appearing as the sage Narada. Her rendering of "Broohi Mukundeti" in this film made it very popular.

Her brightest achievement in the celluloid medium was as the Krishna devotee Meera. This film was first produced in Tamil and later remade in Hindi. The Hindi version was an instant hit and established her as a great bhajan singer. As the stateswoman-poetess Sarojini Naidu said, "it was pure enchantment... it was a true representation of Meera, nay it was Meera herself singing songs of devotion of prayerful appeal... it was Meera herself come to life." She also called M.S. the Nightingale of India.

Partly thanks to her films, but even more because of the large number of gramophone discs and (later) audio tapes, the voice of M.S. could be heard in every corner of India, from the remotest villages to the crowded metropolises. Her public concerts, which were usually given for the benefit of some favoured cause, drew packed houses. On several occasions, her concerts were open-air affairs, and the audience numbered several thousands.

Her major international exposure began with her programme at the Edinburgh International Festival of Arts in 1963. In 1966, the Secretary-General of the U.N., U Thant, invited her to give a special concert at the United Nations. This programme was given in the magnificent General Assembly hall, and I had the privilege of introducing her to the audience. A coast-to-coast concert tour of the U.S. followed. This was repeated in 1977, and on this visit I had the honour of presenting her programme at the Carnegie Hall in New York, where all the musical greats of this century have performed. She gave the inaugural concert of the Festival of India in London in 1982, which was attended by the Prince of Wales, Prince Charles, who stayed till the end of the programme. In 1987, she gave the inaugural concert of the Festival of India at the Kremlin in Moscow in the presence of the Prime Ministers of India and the USSR.

Her Meera bhajans, soaked with *bhakti,* may be said to have been responsible for her interest in rendering various "stotras" in Sanskrit. Her "Venkatesa Suprabhatam", first in Sanskrit and then in Tamil, rendered with perfect enunciation and beautiful musical intonation, were best-sellers: so was her "Vishnu Sahasranamam." The other side of this record features a ragamalika rendering of the "Bhaja Govindam" of Adi Sankara with a masterly introduction in English by Rajaji.

Rajaji was a major influence on the life of T.S. and M.S. The devotion of T.S. to

Rajaji was total and absolute. Rajaji's composition in Tamil, "Kurai Ondrum Illai", was set to music as a ragamalika by Kadayanallur Venkataraman. M.S.' soulful rendering of this song has become extremely popular, and is sung by many concert artists.

T.S. and M.S. also came under the benign grace of the Paramacharya of Kanchi. It was the Acharya who composed the benediction "Maitreem Bhajata" which M.S. sang at the conclusion of her U.N. and Carnegie Hall concerts, ending with the ringing words "Sreyo bhooyat sakala jananam' (Let there be grace abounding for all mankind).

While on the subject of devotional music, one must mention her record albums of the compositions of the great *bhakta* Tirupati Annamacharya. The compositions were beautifully sung and one has become common in Carnatic music – "Sriman Narayana", in Bhouli, thanks to M.S.' rendering of this kriti.

The laurels she has won, all unsought, are many and varied. She received the Padma Bhushan in 1954, when the national awards were instituted, and the President's award for Carnatic music in 1956. She has received several honorary doctorates. She was the first woman artist to receive the Sangita Kalanidhi title from the Music Academy of Chennai. She received the Ramon Magsaysay award, usually referred to as the Asian Nobel Prize, in 1974. The Padma Vibhushan award from the President came in 1975 and the Bharat Ratna in 1998. In 1988, she received the "Kalidas Sanman" of the Madhya Pradesh Government.

T.S. and M.S. made it a habit to give all she received to charitable causes. It all began with Rajaji's request to M.S. to give five benefit recitals for the Kasturba Memorial Fund in 1944. From then on, not only the proceeds of her concerts, but also the considerable sums representing royalties on her gramophone records and tapes, have gone to charitable and worthwhile causes. The major beneficiaries include the Tirumala-Tirupati Devasthanam, the Ramakrishna Math, the Nanak Foundation, the Subramanya Bharathi memorial at Ettayapuram, the Hindu temple in Flushing, New York, the Bharatiya Vidya Bhavan, the Kamakshi temple at Kanchi, the Sankara Nethralaya, the Cancer Institute and the Voluntary Health Services, all in Chennai, the Kamban Kazhagam, the Music Academy and the Sri Sri Sri Mahalakshmi Mathru Bhuteswarar Trust, which is building the Kanchi Mahaswami Mani Mandapam at Orirukkai village near Kanchipuram.

N. RAM

If I were to attempt a critique of M.S.' music, I can sum it up in one word, "perfection". Her repertoire is immense and her rendering of any song in public is perfect, representing hours of dedicated effort. Her diction is a model of clarity. She learnt the correct pronunciation, and understood the meaning of every word. Her tonal purity is extraordinary. Her *raga alapana* is always musical and never too long. Her *neraval* and *swara prastara* are tuneful and crisp with complete mastery of *laya* Her bhajans can move the audience and touch hearts; she can induce in them a *paravasam* (ecstasy) because she is herself in such a state. She has sung bhajans in ten languages, each one of them an example of the highest standards of purity of diction and emotional content.

T.S. and M.S. together lived a life of Gandhian simplicity. (The Mahatma himself longed to hear her sing Ram Dhun and bhajans). They moved from the spacious acres of "Kalki Gardens" to a modest abode in Kotturpuram with the utmost ease. The VIPs were received here with the simple dignity that was the hallmark of this blessed couple. After T.S. passed away, M.S. was truly a woman bereft. Only her *bhakti* to T.S.' memory and to the Almighty has sustained her. She remains the same simple unaffected human being, with her gentle humanity and inborn grace.

M.S. is not in the best of health, but she keeps going with some physical therapy and medical attention. One can only hope that before long she is able to resume her singing, if not at public concerts, at least through the electronic media. Her music is a god-given gift. She must sing again! ■

C.V. Narasimhan, a former Indian Civil Service officer, was Under Secretary-General of the United Nations between 1956 and 1978.

Towards Seattle

The Ministerial Conference of the World Trade Organisation in Seattle in the United States will provide an opportunity for poor countries, including India, to come together and fight for justice in trade-related matters.

BIPLAB DASGUPTA

THE Ministerial Conference of the World Trade Organisation (WTO), which is to be held at Seattle, Washington, from November 30 to December 31, presents both an opportunity and a danger. A great opportunity because if the poor countries of the world manage to form an effective trade alliance, do their homework well and bargain hard, they may succeed in rectifying at least to some extent the injustice that had been done to them during the 1994 Marrakesh agreement on TRIPs (Trade Related Aspects of the Intellectual Property Rights). On the other hand, should they fail to present a united front, there is a real and ominous possibility that whatever little remains of economic sovereignty in the TRIPs Agreement will be taken away by the rich countries. In the language of economics, it is a zero sum game: the poor countries cannot play for a draw: it is a win or lose situation.

The Indian side should have begun the preparation for this crucial meeting from the beginning of this year, at the latest. In February, when the Patents Bill incorporating exclusive marketing rights (EMR) was being debated in Parliament, the Left parties reminded the Government about the need to prepare for this task in time. However, so far virtually nothing has been done by way of preparation for a meeting that would decide, effectively, whether India, ranked among the poorest countries in the world, would ever be able to move out of the poverty trap and meet the very modest objective of advancing a few inches towards becoming a middle-level income country like South Korea or Taiwan in a few generations' time.

If the Government were sincere about protecting India's economic interests, it could have done one of the following: First, it could have made an attempt to evolve a national consensus on this vital issue either by way of a meeting of the Rajya Sabha or, at the least, by holding consultations with the Opposition parties. Had this been done and a national consensus arrived at, no matter which party or coalition came to power after the elections, the country would have been ready with an agenda for the new government to work on. Unfortunately, so far no White Paper or Position Paper has been released setting out the issues that the Government of India would wish to raise in this important world meeting, or around which it would seek to form a trade alliance with other poor countries. Since nothing has been done so far in this direction, the government that is to be formed in October, barely a month before this crucial conference, will hardly have the time to evolve a national consensus and act on it, not to speak of forging alliances with other poor countries.

The second route could have been to take advantage of the election campaign to initiate a national debate on this vital issue. In keeping with one of the well-established norms of parliamentary democracy, the government could have placed before the electorate its agenda for the Seattle meet and challenged other parties to place theirs, so that the people could comprehend the main issues and the various standpoints and then exercise their choice between the alternative positions, through the ballot box.

Rather than follow one of these two routes – of evolving a national consensus or of engaging in a national debate during the election campaign – the tendency has been to shy away from any discussion. And this is not the first time that a government has deliberately sought to keep the people in the dark about an issue that would profoundly influence their lives and those of also future generations. Both the Congress(I) and Bharatiya Janata Party-led governments adopted devious means over the past four and a half years to suppress information and to get one Patents Bill through Parliament with virtually no discussion.[1] Both the Congress(I) and the BJP opposed the proposal of the Left parties for an in-depth scrutiny by a parliamentary committee, assisted by experts, since they were motivated by their common desire not to let the people know or understand how their future was being mortgaged in order to appease the multinational companies domiciled in rich countries. In February, only four hours were allocated in the Rajya Sabha to discuss the Patents Bill incorporating exclusive marketing rights (EMR). The BJP and the Congress(I) did not find it necessary to field any speaker and relied on their joint voting strength to get the bill through.

In their common concern to avoid any meaningful dialogue on this sensitive issue they were helped by the obscure nature of the bill, which was loaded with legal, technical and scientific jargon making it virtually impossible for the uninitiated to comprehend what it was all about. Further, unlike a rise in the prices of, say vegetables, or the closure of a factory leading to unemployment, the impact of the global patents regime is not immediate. It is not known and understood that the global patents regime has irreversibly closed for India the option of ever becoming industrialised or even mildly developed.

The time constraint is serious for yet another reason. Even if one assumes that the new government is honest and sincere and is willing to rectify the injustices done at Marrakesh by raising the issues at Seattle, that cannot be done by India alone; it will have to be done by forming trade alliances with other less developed countries. Given its appallingly low share in world trade – 0.6 per cent, compared to 2.67 per cent at the time of Independence – India alone will not count for much. The rich countries take care to form alliances to augment their bargaining strength: for example, the

1. Biplab Dasgupta, "Patent Lies and Latent Danger – a study of the political economy of patent in India", in *Economic and Political Weekly*, 17-24 April, 1999, pp 979-993.

European Union (E.U.); the North American Free Trade Agreement (NAFTA) covering the U.S., Canada and Mexico; the Japanese connection with South-East Asia; organisations and institutions such as the Organisation for Economic Cooperation and Development (OECD) and the G-7; and the global trinity of the World Bank, the International Monetary Fund and the WTO, which maintain year-round vigil to protect the interests of rich countries.

Among the poor countries too one finds similar regional trade alliances, such as the ten-member Association of South East Asian Nations (ASEAN) in South-East Asia, the Andean Pact, Central American Common Market (CACM), the Caribbean Community (Caricom), the Mercado Caomu del Sur (Mercosur) in Latin America, the Preferential Trade Area for Eastern and Southern Africa (PTA), and the Union Douaniere et Economique de l'Afrique Centrale (UDEAC) in Africa. A major incentive for the formation of such alliances was that these were permitted, under the General Agreement on Tariffs and Trade (GATT) rules, to extend to intra-region members additional concessions that were denied to other GATT members.

Where is the trade alliance that India belongs to? The most natural of such alliances could have been called the South Asian Common Market, comprising India and its immediate neighbours, countries that were once part of the British empire and share a common historical experience and common cultural roots. These countries also share many common economic interests; for example, they are concerned about the world prices of jute and tea and have opposed the patenting of basmati rice by an American company and the distribution of trade gains that would follow from the dismantling of the textile quotas with the conclusion of the infamous multi-fibre agreement (MFA) in 2005, to name a few. Such trade blocs, could have, by joining hands with other trade blocs in Asia, Africa and Latin America, effectively changed the world trade scenario and vastly improved the bargaining position of poor countries. So far, virtually nothing has been done to achieve this. Still, we have about three more months to work on such an alliance and put our diplomatic skills to test on economic issues. These days international diplomacy has more to do with the objective of furthering a country's economic interests than with the question of frontiers and war. It should not be the case that our soldiers would die in Kargil to protect our frontier against the infiltration of foreign soldiers and mercenaries while the managers of our economy sell the country to multinationals under what the government describes as "external compulsion". Often, the "There Is No Alternative" (TINA) argument is advanced as an excuse for not doing anything.

We already know from the way the 8th (Uruguay) Round of GATT negotiations operated (1986-1993) what is in store for Indian negotiators in the Seattle meeting. The three key players in the Uruguay negotiations were the U.S., Europe and Japan. They exchanged drafts among themselves and finalised everything and without bothering to seek the opinion of the poor countries. As the Jamaican Ambassador to GATT commented on the Dunkel Draft: "The draft package is reflective of the distribution of negotiating power and whether or not we are prepared to accept it as a reasonable basis for the further phase is academic."[2] Apart from these three, a fourth player who was sometimes consulted was the Cairns Group of 14 members, representing rich and middle-income countries specialising in agricultural exports and having close links with the G-7. These included Australia, New Zealand, Argentina, Brazil, Canada, Chile, Colombia, Fiji, Hungary, Indonesia, Malaysia, the Philippines and Thailand. These countries, accounting for one-tenth of the world's Gross Domestic Product (GDP) and manufacturing output and 30 percentage of the world's agricultural exports, made a much bigger impact than the much larger group of less developed countries.[3] If the rich countries ever wanted to consult the less developed countries, they talked to South Korea or Taiwan. The poor countries operated in the periphery, seldom consulted until the rich ones completed negotiations amongst themselves. As one commentator pointed out: "Whatever the skills of the negotiators from the South, for the most part they are like extras on the GATT stage; the show can't go on without them, but nobody is remotely interested in what they have to say."[4]

One major reason for the poor performance of the less developed countries in the negotiations, apart from their weak economic power and lack of unity, was the absence of specialised staff and advises. In the 1990 Brussels meeting during the Uruguay Round negotiations, Carla Hills, the U.S. Trade Representative, brought along 400 advisers, a number that exceeded the combined strength of all the sub-Saharan Africa and Latin American trade missions. The formidable intellectual strength of those 400 people was augmented by another 200 or so, who were lent to Hills by corporate giants such as American Express, Citibank and IBM, and agro-chemical conglomerates such as Pfizer, Monsanto, Cargill and Du Pont. They had the ability to examine an issue from all possible angles and then to project into their drafts U.S. interests under the guise of benefitting the entire humankind. Although 70 of the 108 countries in GATT negotiations were the less developed ones, they had no voice and they expressed their views – on the few occasions on which they did – "within a framework scripted by the major industrialised states".[5] It is hardly possible for India to bring together, as the U.S. did, such an array of skills or to match it in terms of the number of experts. But the least one would expect of a government is not to surrender without a fight, and to devote as much time and energy as possible to a proper homework. It seems likely that the Indian delegation will reach Seattle without having done adequate homework and without any significant skilled assistance, thanks to the criminal indifference, if not actual complicity with the multinationals, on the part of our government.

BROADLY speaking, five types of issues can be raised by the Indian delegation at the Seattle conference, all of which relate to the major changes brought about by the 1994 TRIPs Agreement at Marrakesh.

First, until the TRIPs Agreement, patents were a matter of national law.

3 Rod Typtes, "The Cairns Group Perspective", in K.A. Ingersent, A.J. Rayner, and R.C. Hine(eds.), *Agriculture in the Uruguay Round*, St. Martin's Press, New York, 1994, pp 88-109.

4. Watkins, op. cit., p 37.

5. Raymond F. Hopkins, "Developing Countries in the Uruguay Round: Bargaining under uncertainty and inequality", in William P Avery (ed.) *World Agriculture and the GATT*, Lynn Rienner Publishers, Boulder and London, 1993. pp 143-163.

Each country formulated its own legislation taking into account its own national and human resources, national characteristics, the stage of development and history. Now, under TRIPs, each and every member-country of the WTO has to conform to an international patent regime and change its national law accordingly. The all-important question is: why this attempt to standardise and harp on conformity and make everything – in TRIPs and in some of the other proposals under discussion such as patents, labour standards, environmental standards, investment norms – uniform, when this is diametrically opposed to the norms laid down in the 1993 Convention on Bio-Diversity (CBD), which emphasises that life cannot be sustained without diversity. If 150 countries have signed TRIPs, 170 countries have signed the CBD, and an overwhelming majority have signed both without taking notice of the essential conflict between these two international documents in terms of prescription. The CBD, in its Article 16.5, asserts that intellectual property rights must not be in conflict with conservation and sustainable use of biodiversity, a provision that has been totally ignored by those who composed the TRIPs Agreement. While in the case of agriculture, the higher yield of patented products induces the farmers to switch to these products from a more varied production pattern, the resulting narrowing of genetic base makes the economy and society more vulnerable to plant diseases and epidemics.[6] The emphasis on conformity in TRIPs and that on diversity in the CBD cannot be right at the same time; one or the other has to go.

Secondly, we can question this concern over "piracy" of intellectual property now when, historically, every developed country of today has at some time borrowed or copied technology from other countries in the course of its development. Japan, South Korea, Taiwan, Singapore and Hong Kong were among the last to adopt foreign technology on a large scale by way of what came to be known as "reverse engineering", but the developed European countries also did the same – to a larger extent in the case of Italy and to a smaller extent as in the case of U.K., while they were undergoing the process of industrialisation. The reason for the globalisation of the patent regime now is to make such copying impossible and thus to take away the option of reverse engineering. The result is that backward countries of today will remain backward and poor for ever as they will not have the option of copying and eventually developing their own technologies and thereafter selling those under their own brand names. They will be forced to depend permanently for technology on multinational companies, which control more than 80 per cent of world patents.

Thirdly, we can challenge the extension of the patent period to 20 years under TRIPs when there are strong arguments against doing so, and demand that it be revised downwards to four or five years in this age of fast changing technologies and emergence of new products. In the case of India, black-and-white and colour television sets, video cassette recorders, cable televison and multimedia came in quick succession – after every four or five years. Over the past 10 to 12 years, we have seen how 286 computers were replaced by the 386 ones, then by the 486 ones, and this in turn by the Pentium and its subsequent versions. We have also seen how the measure of the hard-disk capacity of computers has changed from kilobytes to megabytes and then to gigabytes, all within the last 10 years or so. In such a situation, a product becomes grossly out of date long before its patent period of 20 years expires. The only rationale behind lengthening the patent period to 20 years is to perpetuate the technological dependence of poor countries on multinationals.

Fourthly, we can challenge conceptually the decision to extend patenting to life forms in the TRIPs Agreement, and the consequent rush of multinational agri-business firms to scour the countryside of poor countries to collect, by means legal or illegal, plants and their germplasm. Such plant varieties are taken to their own countries and, after some tinkering, patented under their own names to establish themselves as their legal owners for the patent the period world over, and to take away from others, including indigenous Third World producers who would have been producing them for centuries, the right to produce them. This conference gives us the opportunity to establish safeguards against bio-piracy particularly of medicinal plants.

Fifthly, we can question how the U.S can exercise both the options, multilateral action through the WTO and unilateral action by way of "special 301" which is actually article 1303 of the U.S. Trade Act, which operates like Article 301, also known as Super 301. Under the law the U.S. Congress has passed on the Uruguay Round of GATT negotiation, in case of any conflict between the GATT-WTO rules and the U.S. law, the latter would prevail. We can insist that the U.S. should desist from such open and declared violation of GATT-WTO rules and that it should not flex its superpower muscles to force poor countries to do what it is itself not willing to do.

There are many other issues that can be raised, but these are major ones. In case Third World countries fail to unite and push these demands, some of the safeguards that still exist in the TRIPs Agreement are likely to be taken away. Under Articles 27.2 and 27.3 of the Marrakesh TRIPs Agreement, the countries may deny patent protection on a number of grounds – for reasons of public order, morality, or protecting human, animal or plant life, or protecting the environment. Protection can also be denied for inventions involving "diagnostic, therapeutic and surgical methods for the treatment of humans and animals, and plants and animals (other than micro-organisms) and biological process (other than microbiological processes) for their production".[7] Reference to public order and morality are wide enough to permit a significant amount of discretionary power to the governments. "Immorality" can mean obscenity, blasphemy, breach of peace, immoral activities and so on, while the French counterpart of "public order", "ordre public" is closer to "public policy" than to "public order". The U.K. used this provision to refuse twice a patent on a contraceptive device.[8] There is a serious risk that this provision would be taken away at Seattle unless the poor countries resolve to unite and fight. ■

Plebiscite on prejudice?

This is country's dirtiest, most personalised, election campaign. By launching it, the BJP has confronted India with a choice: for or against bigotry, pro- or anti-exclusivism, for or against sexism.

"ITALIAN opera singer", "cafe crooner", *"kaalmukhi"* (someone who brings ill-luck), "dirty widow", *"upri"* (interloper), "matric-pass" (college dropout), "Pope *ki cheli*" (The Pope's disciple), "Monica Lewinsky"... The vilest of abuse, the choicest of epithets. It is almost impossible to believe that our sensibilities could be so deadened as to make all this foul personal calumny and disgusting political slander seem like "normal" campaigning in a general election in a country that claims to be a more or less civilised democracy. It is even harder to imagine that someone as decent and infectiously polite as Manmohan Singh could "provoke" his rival to resort to downright obscenity, by challenging the professor to remove his turban and prove he is a true Sikh! The conclusion is inescapable. This is without doubt India's dirtiest, most personalised, vilest, campaign since elections in some form or other were organised in this country.

Even Atal Behari Vajpayee, supposedly the BJP's most gentle, moderate, "civilised" face, has stooped to the level of agitating the "foreign origins" issue after having solemnly promised any number of times that he would not do so. Not only did he say (Lucknow, August 27) that Sonia Gandhi should not hold high office, for the reason of her origin. He has also been a passive spectator to the delivery of foul personal attacks on her in meeting after election meeting. His belated, half-hearted, August 30 statement calling for "restraint" and gender-sensitivity in campaigning does little to redeem the damage.

BJP leaders like Vajpayee's most trusted Minister Pramod Mahajan, having taken their cue from the Prime Minister himself, have surpassed themselves in slander campaigns. Mahajan's outrageous comparison of Sonia Gandhi with Monica Lewinsky – doubly confirmed by his denial – is perhaps the most offensive assault on decency in public discourse which we have recently witnessed. It was quickly followed with George Fernandes' vituperative remarks on Sonia Gandhi on August 28 in Bellary. Fernandes reduced Gandhi's entire "contribution" to India as giving birth to her children, two amongst our population of one billion. Mahajan's and Fernandes' remarks have rightly excited strong condemnation from scholars, political leaders and feminists. There is every reason why they must be categorically condemned for their deep-seated male- supremacist prejudice.

First, it is utterly insulting to any civilised mind that Sonia Gandhi, who is a full-fledged Indian citizen, should be put in the same category as Monica Lewinsky, or Bill Clinton or Tony Blair – merely because of her foreign origin. It is even worse that she should be personally targeted for vilification in this gutter-level campaign at least partly because she happens to be a *woman,* and a *white woman* at that. It is hard to dissociate the strongly sexist innuendoes that are being deployed in this campaign from the fact of Sonia Gandhi's gender. This is itself part of a larger phenomenon – of women like Rabri Devi, Jayalalitha and Sonia Gandhi being singled out for particularly sharp sexist barbs.

It is almost impossible to believe that our sensibilities could be so deadened as to make all this foul personal calumny and disgusting political slander seem like "normal" campaigning.

(Even M.Karunanidhi has indulged in this, predicting that Sonia Gandhi and Jayalalitha's equation will be worse than the 13 month-long Vajpayee-Jayalalitha relationship because now both allies are women, who are bound to give each other a hard time.) Appellations like "crooner" and *"kaalmukhi"* (or their masculine equivalents) are not used against men. It is telling that Fernandes chose to diminish Sonia Gandhi to a mere bearer of children – a reproductive machine, a passive receptacle, without agency or personality. He did not do this even to Rajiv Gandhi, no favourite of his. Evidently, such insults are reserved for women alone.

However, there is a special "white" angle to the reviling of Sonia Gandhi. This derives from the widely prevalent middle class prejudice that white women typically have "loose morals", that they are quintessentially either saints (for example, Mother Teresa, Annie Besant or Meera Behn) or (more usually) sinners (Monica Lewinsky). This makes the latter fair game for all manner of sexist attacks. Such views are so common that even the Chief Minister of one of our most progressive States, Kerala, once poured scorn over the outrage that the rape of two white women in the State caused. What's all the fuss, he asked. For whites, rape is common, normal, it's like having a cup of tea.

The Sonia Gandhi-Lewinsky comparison was no aberration or accident. It captured a stereotype, the polar opposite of the *Bharatiya Naari*, the hallowed, artificially constructed "Indian" (read, Hindu) woman of pure character and unblemished personality. This sees the white, foreign, *mleccha* woman as sullied, spoiled, immoral, at best a sex object. We should feel offended at this not only because the president of India's oldest party is being equated with a former White House intern, nor so much because "Indian motherhood" is being slighted, but because the equation implicitly reviles Lewinsky (rather than the older, more pow-

■ BEYOND THE OBVIOUS

PRAFUL BIDWAI

erful, more "responsible" Clinton) for having had a sexual relationship. This amounts to revictimising the victim. It is the kind of mindset that regards the rape victim as the guilty party – an "impure" woman who "must have done something" to bring that outcome about.

This mindset is typical of the Sangh Parivar. Indeed, a former president of the BJP's Mahila Morcha, Mridula Sinha, is on record as saying that wife-beating and domestic violence against women have "two sides": often the woman herself "provokes" it. The same attitude characterises the Parivar's adherence to the "Aryan" values of the Manusmriti, some of its leaders' defence of sati (they include former vice-president Vijayaraje Scindia and J.P. Mathur) and the demand repeatedly made by a number of VHP (Vishwa Hindu Parishad) leaders that women be banned from reciting the Vedas or performing sacred rituals.

The present election campaign confronts us all with a stark choice, a choice imposed by the decision of the BJP-NDA to go for broke: to concentrate on issues of identity and "authenticity", rather than substance.

Beneath this gutter-level campaign, then, are deep-rooted sexist prejudices and hatreds characteristic of the Sangh Parivar's male-supremacist ideology. Clearly, this has rubbed off even on Fernandes. He now uses the same language as do such well-known Parivar ideologues as Arun Shourie – for example, terming all Congress members hijras (eunuchs); hijras are here contrasted to *real*, virile, strong, brave, males. All other sexual identities are considered inferior, low or unauthentic. The whole idea of womanhood here is suffused with male-chauvinism of the dirtiest variety, of the kind that "respectable" middle class *bhadralog* people are supposed to be too embarrassed to vent in public. The fact that the Mahajans and the Fernandeses no longer feel so restrained, and that they *know* they could speak in that vein in the presence of Vajpayee, is testimony to the debasement of our political discourse.

Some of these vile sentiments now being vented have a distinctly contrived quality about them. They appear manufactured. They represent very little spontaneity, and are calculated to create and fan prejudice and appeal to primordial identities. It is hard to believe that Fernandes really thinks that Sonia Gandhi's claim to being Indian is primarily predicated upon her wearing a sari and learning some Hindi, as he alleged. It is also difficult to believe that the attack on her comes from a mainly *personal*, as opposed to a *political*, assessment of her. This makes the BJP-NDA (National Democratic Alliance) campaign all the more reprehensible. At its heart is an attempt to tug at notions of national "loyalty" and put people on the defensive. Those who disagree with the government's handling of Kargil have been equated with Pakistan – by Vajpayee himself. This is grossly unfair. Indeed, this dirty campaign highlights the need for laws and norms against hate speech. We must drastically reduce our "tolerance" of hate speech.

Clearly, however, the worthies of the NDA think that all means are justified by the end they have set: defeat their secular Centre-Left opponents. Once you sever ends from means, anything can be rationalised. Indeed, why stop at verbal attacks? Even violent disruptions of the opponent's campaign are permissible.

Within this framework, politicising Kargil, communalising the armed forces (through "Sindhu Darshan", VHP leaders' visits to army hospitals and distribution of Ramacharitamanas, flooding the Defence Ministry with lotus-shaped *raakhis*) is permissible. As is character assassination of your opponents. Scoring low-level points in the manner of the small-town criminal lawyer can become a higher priority than grappling with substantive policy issues. Programmes can be relegated to the background. What matters is creating symbols, charging emotions, playing with identities, false or real.

The present election campaign confronts us all with a stark choice, a choice imposed by the decision of the BJP-NDA to go for broke: to concentrate on issues of identity and "authenticity", rather than substance. We are not being asked to decide which alternative policy course we favour, whose programmatic perspective we find more convincing, whose claim to provide decent, stable governance is more credible. We are not asked to choose candidates for what they *do*. Rather we are being asked to vote for who or what they *are* or claim to *be:* Indian or foreign, Hindu or otherwise, like us or against us. Their trade-marks, promoted through the clever marketing of images and icons, are calculated to play on "affinities", however irrational.

This gives this election a singular character. Only in 1984 were issues of identity – at that time, national "unity" and the grave "threat" to it highlighted through barbed-wire fences – played up in such a significant fashion. Their deliberate use in this campaign is even more cynical. They compel us to take a stand on prejudice: against false patriotism, manufactured nationalism, Kargilised identities. Therefore, we must refuse to set aside issues of real relevance – whether food security or education, or our right to minimum public services, and to be protected by the law of the land. Such issues must not be sacrificed at the altar of "national security" and macho symbols of "national strength", themselves divorced from flesh-and-blood people.

This depraved identity politics is not just a massive diversion of our attention from our needs and priorities. It is an assault on our sensibilities: we are being asked to cater to xenophobia, legitimise male supremacism, privilege narrow sub-identities, and suppress plurality. We can no longer be ordinary people going about their worldly business, or people committed to a larger project of humanisation and deepening of this democracy. We are asked to wear our Mera-Bharat-Mahan badges on our sleeves, and fool ourselves that our real problems are not about hunger, deprivation, inequality, corruption and bigotry within our borders. Rather, the problems are presented as caused by *them:* those monsters across the border.

In this sense, this election is a plebiscite on prejudice. True, it is an extremely complicated affair – with regional parties as well as national ones offering a range of black, white and (largely) grey options. The BJP's opponents are divided. The Congress is not playing its cards well. The Third Force has taken a knock with the vanishing of the Janata Dal. No one is presenting dazzling new, fresh alternatives. And yet, at its core, the choice is starkly simple. Either we succumb to the politics of false identities and manufactured "pride", and vote for the NDA. Or we reaffirm our real priorities, re-emphasise our true concerns as citizens, return to programmatic issues, and vote for secular, pluralist, democratic parties. At the end of the day, it *is* an either-or choice. ■

The looming shadow

Recent trade data confirm that the government's management of the external sector has made future balance of payments problems likely.

IN the 15 months that the BJP-led government has been in power, it has done perhaps more in terms of liberalising imports and furthering the interests of international capital, and done it faster, than any previous government. Indeed, its effective policy in this regard has been in marked contrast to its stated electioneering position, both in this election and the previous one. The party that once prided itself on its declared economic aim of "swadeshi" has been leading a government that has allowed a greater degree of import penetration, especially in the area of non-necessary consumer goods, than ever before in independent India.

This has largely occurred at the cost of domestic producers, in a whole gamut of manufacturing industries ranging from small-scale producers of marble and small consumption items to sugar manufacturers. And this in turn is likely to have had an unfavourable effect on employment in these sectors, which in turn will create negative multiplier effects.

However, there are other adverse consequences of the government's management of the external sector, quite apart from those relating to domestic economic activity and employment. The export-import policy has been associated with a widening of the trade deficit, an increase in non-oil imports into the country even during a period of industrial recession, and a major deceleration (even decline) in exports in dollar terms.

This is made amply evident in the data relating to external trade which have just been released by the Directorate General of Commercial Intelligence and Statistics (DGCI&S). They indicate that the trade balance deteriorated substantially over 1998-99, largely because of the increase in non-oil imports, even though the ongoing recession in domestic manufacturing industry at that time meant that the requirement of raw material and intermediate imports was less. Subsequently the trade deficit has recovered slightly, largely because of the depressing effects of industrial recession, since the expansion in exports remains muted at best.

Thus, in the period April-July 1999, exports increased by only 4 per cent in dollar terms, compared to the same period of 1998. While this was still a slightly better performance than that of the previous year, when exports actually fell by 3 per cent, it is hardly much cause for celebration, especially as this rate of growth still remains below the estimated rate of growth of world exports during these months.

Several features of the trade pattern and the balance of payments are major causes for concern. The chances are high that after the elections the new government will have to take on quite soon the challenge of coping with yet another incipient balance of payments crisis.

Even more to the point, it still remains well below the average of $3 billion a month for export values that were achieved in 1997-98. So the export performance over the past 15 months has been such that it has not even recovered to the levels that were seen as barely adequate even two years ago.

Meanwhile, the only reason that the trade deficit has been kept within even manageable limits is the collapse in international oil prices, which has kept India's oil import bill low. Non-oil imports grew fairly rapidly until March 1998, suggesting that the import liberalisation measures undertaken over the 1990s had contributed to a surge in imports despite fairly depressed domestic demand for manufactured goods. Since then, however, the recession appears to have taken its toll in terms of a reduced rate of expansion of non-oil imports.

However, since April 1999 there has been a firming up of world oil prices, and this must have involved an increase in India's oil import bill. It is still not clear how much of the increase in imports over the period April-July is due to this factor, but this will certainly be a major source of concern for policy makers in future since it reduces the leeway for non-oil imports.

The large trade deficits have still not become a source of concern in the public perception because the current account deficit remains quite low. This is essentially due to the role played by worker's remittances from abroad, which have in fact shored up India's balance of payments throughout the 1990s. In 1998-99, Reserve Bank of India data show that transfer incomes from abroad, which are dominated by worker's remittances, financed more than 80 per cent of the trade deficit.

The role of all invisible payments has been less because the country loses some income to profit remittances by multinational companies. Last year these amounted to nearly another one-third of the trade deficit. It is also worth noting that transfer incomes from abroad in 1998-99 (as indeed, in every other year of this decade) have been more than all sources of capital inflow put togeth-

PREOCCUPATIONS

JAYATI GHOSH

er, by more than 22 per cent.

When considering the role of capital inflows, another legacy of the economic policies of the decade, which have been so avidly followed and pushed by the BJP government also, has been the growing share of foreign direct investment (FDI), which has been in the form of purchase of shares in existing Indian companies rather than as greenfield investment. Even in 1995-96, the ratio of such investment to total FDI was only 1 per cent. By 1998-99, the BJP-led government had managed to raise this to 16 per cent, and guesstimates for the current year suggest that it is likely to be even higher and could reach as much as one-third. It is interesting that this should be part of the economic legacy of the party that earlier presented itself as the champion of Indian business.

These mergers and acquisitions are important not only because of any simplistic nationalist economic sentiment. They also imply a future drain of foreign exchange resources because of the repatriation of profits by such foreign purchasers, where there was no such outflow in the past. This is not an idle concern. In Brazil at the moment, there is a heated debate over this issue, because the outflow of such remitted profits has soared from $37 million to as much as $7 billion in just five years from 1993 to 1998, following a wave of such FDI in the form of mergers and acquisitions.

All this becomes particularly worrisome because the other sources of capital inflow into the country have proved to be extremely fragile at best. Both portfolio capital inflows and net short-term external commercial borrowing into the country turned negative in 1998-99. While the reduction of reliance on such highly volatile capital is to be welcomed, it should be remembered that this has happened not because of the sagacity of the Indian government, but because foreign investors have turned away from this emerging market. This suggests that it would be highly problematic to base a future growth strategy on reliance in such external capital inflows.

In sum, several features of the trade pattern and the balance of payments are major causes for concern. The chances are high that after the elections the new government will have to take on quite soon the challenge of coping with yet another incipient balance of payments crisis. It is a pity, therefore, that so few fresh ideas are evident in this regard from both the leading political combinations. ■

■ LETTERS

The Congress(I)

This has reference to the cover story "Into battle" (September 10). With the Congress(I) finding its prospects to be dim in Uttar Pradesh and deciding to contest as a junior partner in alliances in States such as Bihar and Tamil Nadu, it is unlikely that the party will get a majority on its own. The Congress(I) has started speaking of forming a coalition government in the event of the elections producing a hung Parliament. After the fall of the Vajpayee government, the Congress(I) was not able to form an alternative government because the leadership of Sonia Gandhi was not acceptable to some of the secular parties. As a candidate for the prime ministership Manmohan Singh may be more acceptable to parties across the political spectrum. So, if Sonia Gandhi is really interested in the future of the party and the welfare of the country and in upholding secularism, she should, at least at this late stage, support Manmohan Singh's candidature and confine herself to leading the party.

A. Jacob Sahayam
Vellore, Tamil Nadu

★ ★ ★

The cover story brings out all the facts about the current crisis facing the Sonia Gandhi-led Congress(I). The days of Jawaharlal Nehru, Indira Gandhi and Rajiv Gandhi are over, and the Congress(I) is showing signs of being a spent force.

Instead of being on the offensive during the run-up to the parliamentary elections the party is expending a lot of time and energy defending a) its projection of Sonia Gandhi, a foreigner by birth, as the next Prime Minister of India; b) its attempts to sneak in Sonia as its candidate in Bellary in what you have correctly pointed out as a "hide and seek operation", inviting criticism from members of her own party; and c) its attempts to strike an alliance with Laloo Prasad Yadav's RJD in Bihar, which has resulted in a revolt by party cadres in that State. Sharad Pawar, a political heavy-weight, left the Congress(I), weakening its hold in Maharashtra. Ironically, an alliance with Jayalalitha, the maverick Tamil Nadu politician, has further diminished the party's credibility, because of the corruption cases against her and her unprincipled role in bringing down the BJP-led government in collusion with the Congress(I).

In the final analysis, what works in India during election time is the sort of fuzzy logic used in the microprocessors of washing machines, and not the cold analytical stuff of your columns. Atal Behari Vajpayee's BJP-led alliance may win the elections not entirely because of the victory in Kargil, nor on account of the low inflation rate, not even because of his party's image of being less corrupt, but because of his oratorical skills and his frequent dalliance with mellifluous poetry in Hindi when he reaches out to the masses. Personal charisma does indeed matter and right now, Vajpayee's counts a lot more than Sonia's.

Kangayam R. Rangaswamy

Narmada Valley

Arundhati Roy has done a commendable job in drawing attention to the struggle of the Narmada Bachao Andolan ("I felt that the valley needed a writer", August 27).

Her essay "The Greater Common Good" has made a lot of people understand the principle behind the struggle of the tribal people in the Narmada valley. She made a valid point when she said that the "Government has suddenly discovered the emotive power of thirst." Quenching the thirst of the people of Kutch and Saurashtra has been projected as a goal of the Sardar Sarovar project. If that was so, why were the dammed waters of Mahi and Sabarmati (the rivers closest to the two regions) not diverted to Ahmedabad, Mehsana and Kheda instead of Kutch and Saurashtra?

At the same time, the NBA and Arundhati Roy have not answered a crucial question: what alternative does the movement offer to farmers in need of water, if the struggle succeeds? Merely stating the obvious – that the water from this dam may still not reach the farmers – is not the answer. Or is the NBA (and Arundhati Roy) only limiting their concern to the threatened villages?

Shweta Moorthy
New Delhi

The English language

This has reference to William Safire's column, "The bandwidth of the e-speak" (August 27).

As the centuries passed, the English

anguage, both spoken and written came to be categorised as "Old English" and 'Middle English". Present-day English is called "Modern English".

Come 2000, with the advent of the lingo of the netizen, present-day English may come to be called "pre-millennium English".

The Encarta global dictionary, to be published in eight versions – with the collaboration of Microsoft – may reflect 'Millennium English".

K. Viswanathan

Muhammad Ali

The book review ("In the fight for black freedom", August 27) by Nirmal Shekar was inspiring.

The story of Muhammad Ali's hardships and struggles is touching. His convictions as well as his momentous and emphatic decisions have a compelling significance. As today's "technocratic" world races towards a global village that is socially, culturally and economically monolithic efficiently wiping out all "unfit elements" (societies, ideas and systems regarded by it as backward and obsolete), it requires great courage to swim against the current. Ali deserves to be honoured.

By declaring that he has no quarrel with the Vietcong, he immediately identified himself with all the victims of colonialism and not just blacks.

In the history of the emancipation of oppressed people all over the world Ali has made a special contribution in his own way.

Kamrul Haque

Guwahati

Nirad C. Chaudhuri

The tribute to Nirad C. Chaudhuri ("The passing of an unknown Indian", August 27) was highly commendable for its style and objectivity.

I feel that Nirad babu paid the highest tribute to the Mahatma when he said that no Prophet was so completely identified with the Indian masses as he and that 'he was profoundly uneducated intellectually and lived in utter nakedness of spirit till his death." This is the state of a free soul, of the self-realised saint, seer and sage. What was unique about Gandhiji, however, was that, living as he did in that state of inner freedom, he worked tirelessly for the Independence of the country and for the emancipation of the Indian masses and shone as a beacon for seekers of truth everywhere.

The other remarks of Nirad babu about Gandhiji may be highly prejudiced, but Sukumar Muralidharan has exposed their hallowness with admirable restraint and power. Nirad babu worshipped the intellect and missed the dimension that transcends it.

K.V. Subrahmanyam

Plantation workers

The article "A bitter harvest" (August 27) highlighted the plight of the workers of the Manjolai estate in Tamil Nadu. Their hardship can be traced to their poor income. All the managerial, supervisory, clerical, technical and medical staff of plantations are paid monthly salaries whereas the workers, who are the real backbone of the plantation industry, earn daily wages. The disparity between the salaried staff and the workers is enormous. Unless remedial action is taken to reduce this iniquity, it will be difficult to achieve industrial peace in the plantation sector.

During wage negotiations, plantation owners put forth the oft-repeated argument that the industry is unable to foot the wage bills. The Tea Board's figures for the year 1997-98 indicate that the total production of tea in India was 838 million kg, of which 660 million kg was locally consumed; that is, 80 per cent of the tea was sold in the local market. Only 20 per cent was exported.

At Coonoor, one kg of tea dust is sold between Rs.120 and Rs.180 at the retail outlets, depending on the grade and quality. Branded tea is sold at Rs.250 a kg at other places in the country. Tea is normally sold in auctions in different centres in the country and the trade is controlled, nationally and internationally, by a handful of monopoly companies. The lion's share is cornered by the intermediaries – brokers, agents, retailers and so on.

An average tea picker can collect, during the peak season 60 to 70 kg and even more, if the picker is young and energetic. During the lean season, which lasts for four to five months a year, the norm is 15 kg for a day's wage. Tea prices go up during the lean season because of the fall in the harvest. Five kg (maximum) of green tea leaf is required to make one kg of dust tea and no one needs to be in doubt about the profitability of the industry.

Tea producers, with the help of the government and the Tea Board, can sell their production in the local market and effectively check the operations of the middlemen, agents and brokers and thus pave the way for a better deal to the workers.

Many plantations do not implement properly the provisions of the Plantations Labour Act, 1951. This Act requires urgent revision to ensure that the workers get adequate health, housing, potable water and other facilities. Instances can be quoted where the owners of plantations have not paid wages for months on end, and one can imagine the difficulties of the poor workers.

More than one million workers, mostly from tribal communities and socially weaker sections, are directly employed in tea plantations all over India. One hopes that the owners of plantations will shed the age-old colonial concept of management and treat the workers as an integral part of the industry, recognise their contributions to the growth and development of the industry and banish poverty from their lives.

Gudalur

Neelan Thiruchelvam

Radhika Coomaraswamy's article on Neelan Thiruchelvam (August 27) was more refreshing than the anti-LTTE reports. While she condemns violence, she refrains from making sweeping generalisations about the perpetrator(s) of this murder. However, her support for moderation seems to offer little for the Tamils in Sri Lanka to advance their self-respect and dignity.

Neelan, I agree, was a brilliant lawyer, but he was an individual who basically echoed the sentiments of the Sri Lankan regime. Moderate Tamil leaders have a vision, but I am not sure that the Tamil people would like to be part of this vision.

Correction: In the Update article on M.S. Swaminathan (September 10), in the reference to *Time* magazine's choice of the major figures of 20th century Asia the number of those chosen was 20, not a hundred. Also, Jawaharlal Nehru did not figure among the 20 "most influential Asians of the 20th century": his name, with a photograph, only figured in a related article in the news magazine on "men who created and nurtured nations with a new-fangled skill called politics."

Police in the dock

Independent inquiries by non-governmental organisations and social action groups find that unwarranted and brutal police violence led to the July 23 massacre in Tirunelveli.

S. VISWANATHAN

A JUDICIAL inquiry ordered by the Tamil Nadu Government into police violence against a procession of tea estate workers in Tirunelveli on July 23, which claimed 17 lives (*Frontline*, August 13), is yet to take off. However, a number of non-governmental organisations and social action groups have conducted independent inquiries.

The Tamil Nadu unit of the All India Democratic Women's Association (AIDWA), the People's Union of Civil Liberties (PUCL) – Tamil Nadu and Pondicherry, and the Writers and Thinkers Forum for Social Harmony (WTF), a human rights organisation in Madurai, sent separate fact-finding teams. Other groups jointly held a joint "a public inquest".

The "jury" of the "public inquest" comprised Justice H. Suresh, former Judge of the Bombay High Court; V.R. Lakshminarayanan, a former Director-General of Police, Tamil Nadu; V. Vasanthi Devi, a former Vice-Chancellor of the Manonmaniam Sundaranar University in Tirunelveli; and V. Karuppan, a retired IAS officer. The organisers were the Human Rights Education and Protection Council, Tirunelveli; the Society for Community Organisation Trust, Madurai; the Society for Integrated Rural Development, Madurai; the National Campaign for Dalit Human Rights (Tamil Nadu chapter); Human Rights Foundation, Chennai; and the People's Watch – Tamil Nadu, Madurai.

The reports prepared by the PUCL, the AIDWA and the WTF provided detailed accounts of the police action, which they descibed as "unwarranted". An interim report of the public inquest said: "*Prima facie* evidence indicates that the police were brutal and callous in dispersing the crowd." According to the interim report, the crowd was surrounded by the police on three sides and the only way the people could escape from the lathi-charge was by jumping into the river. "If the objective was to disperse the crowd near the Collector's office, there was no need for the police to chase them up to the river and continue to beat them even when they were jumping into river," the jury members observed.

The interim report said that there was evidence to believe that most of the deaths had resulted from police beating and not cases of drowning. Photographs placed before the jury showed the victims bleeding ante-mortem, owing to head and chest injuries. There were grievous injuries in other parts of their bodies. Post-mortem reports did not record the injuries suffered by the victims, the report said. It concluded: "This makes us doubt the veracity of the post-mortem reports."

(According to a government counter-affidavit filed in response to a writ petition by Puthiya Thamizhagam president Dr. K. Krishnaswamy, who has sought a second post-mortem, some of the bodies had only fish bites and minor aberrations and death in all cases was due to drowning. The petition is pending before the court.)

All the inquires brought to light the humiliation meted out to some women processionists at a police station in Tirunelveli hours after the police action on July 23 afternoon. They were illegally detained at the police station and stripped and abused by police personnel. They were let off after they gave the police a written assurance of good behaviour.

A press release signed by the "members of the jury of the public inquest" said that 40 persons, most of them eyewitnesses, had deposed on the first day of the inquest, August 19. Many witnesses were women. They alleged that they were "beaten and chased into the

P. SEETHARAMAN

CPI(M) district secretary V. Palani, who was injured in the July 23 incident, speaking at the public inquest in Tirunelveli.

river by the police and even stripped naked at the police station".

Vasanthi Devi told *Frontline* that there was a big response from the affected people, particularly women, at the public inquest. The organisers had invited officials to present their case on August 20, but no one turned up. Some local people who deposed on the second day said that processions organised by the Puthiya Tamizhagam usually turned violent. Some of them mentioned that women constables were teased by a section of the processionists. There was, however, no mention of such teasing in the press reports or in the first information reports (FIRs) filed by the police. Vasanthi Devi said: "What happened in Tirunelveli on July 23 was a heart-rending incident and a gruesome evidence of what is going on in our society."

THE PUCL team, led by its president Sudha Ramalingam, an advocate, visited Tirunelveli on August 8 and 9 and interviewed 18 eyewitnesses and 15 persons, including relatives of those killed in the incident. V. Palani, secretary of the Tirunelveli district committee of the Communist Party of India (Marxist), who was injured in the incident; District Collector K. Dhanavel; Commissioner of Police T.K. Rajendran; and legislators K. Krishnaswamy (Puthiya Tamizhagam) and Appavu (Tamil Maanila Congress) were among those interviewed.

The team observed that a common aspect of all the versions it heard was the idea that the problem was localised and could have been solved by "mature and balanced handling" by the police. "Even assuming that a section of the processionists indulged in some unwarranted activities which provoked the police to take some action, the large-scale lathi-charge, stone-throwing and chasing of people down the ramp wall of the road and up to and into the river cannot be justified," the team said.

The very fact that all the deaths occurred in the Thamiraparani river more than 100 metres away from the place where the procession was stopped, the team said, "clearly establishes that the police did not stop with dispersing the crowd".

Disagreeing with the official view that the deaths were only due to drowning, the team noted that at least two of the victims, A. Syed Abdul Rahman, 24, and Shah Nawaz, 20, were good swimmers. The only logical explanation for their death, the team said, was that they received head injuries at the hands of the police even after they jumped into the river. The team observed that stone-throwing by the police, "a wholly irresponsible behaviour", aggravated the situation.

The team made a pointed reference to the absence of the City Police Commissioner at the scene, although the administration had anticipated a large turnout and Leader of the Opposition in the Assembly S. Balakrishnan was leading the procession, with some other legislators.

The PUCL team observed that a common aspect of all the versions it heard was the idea that the problem was localised and could have been solved by "mature and balanced handling" by the police.

The team said that the Deputy Commissioner of Police was the senior-most police official at the scene. "It is very clear that the lathi-charge and the stone-throwing by the police personnel started even as the Deputy Commissioner was talking to the leaders. According to him, he even physically prevented some of the constables who were close to him from beating up the people. Thus the absence of another senior officer on the spot is one of the major reasons for the incident," the team observed.

The team said that the lathi-charge had not been ordered by the senior-most police official present. "It is very clear that the police contingents present took the law into their own hands and were totally uncontrollable. Very clearly, the police did not behave like a disciplined force." The team dismissed the police version that their action was to protect the honour of the policewomen who were allegedly teased by some processionists.

The team said: "Since the offenders in this case are the police themselves, the investigation and the laying of charge-sheet against these personnel should be done by a Special Investigation Team constituted under Section 37 of the Protection of Human Rights Act, 1993."

A SEVEN-MEMBER team of the Tamil Nadu unit of the AIDWA, led by its working president, Mythily Sivaraman, visited Tirunelveli on August 3 and 4 and met several persons, including members of the families of some victims. The AIDWA report said: "Unless the Collector and the DIG are transferred, an impartial inquiry into the police action is impossible." Citing the fact that the shops on the procession route had remained open, it said that the entire procession was peaceful.

Refuting the official version that the processionists triggered the violence by throwing stones at the police, the team observed that the women witnesses had told the team that there were heaps of stones inside the Collectorate and that the first stone came from policemen inside the Collectorate compound, even as the leaders of the procession pleaded with police officials to clear the way for their entry into the premises.

The team said that the only escape route was the river. It added that on being kicked by policemen, women rolled down into the riverbed through thorny bushes, and, hit on the heads, many fell into the river unconscious. The report alleged that the police snatched Vignesh, the 18-month-old son of Rathina Mary, and threw him into the river. The mother was chased and beaten. Both the child and the mother died.

The report said that policewomen stripped and humiliated a few women who swam to safety but were taken to the police station. Some women started bleeding after they were kicked in the abdomen. One woman lost three of her front teeth. The team said that the injured victims, who were admitted in the Government Hospital, were ridiculed and chided by the staff and they received scant attention. The AIDWA team also demanded a second post-mortem of the bodies.

DESCRIBING the police action as "an unprecedented brutal attack on an unarmed, innocent people", the WTF team led by A. Marx, which visited Tirunelveli on August 15 and 16, criticised the Dravida Munnetra Kazhagam (DMK) Government's hard line towards Dalit processions. A substantial number of the Manjolai tea estate workers, who participated in the procession, were Dalits. Noting that the police had indulged in violence even after an official had ordered them not to attack the processionists, the team expressed concern over the growing indiscipline in police ranks. ■

Another victim in Orissa

The hate campaign against minorities in Orissa leads to one more killing, the victim this time being a Christian priest.

KALYAN CHAUDHURI

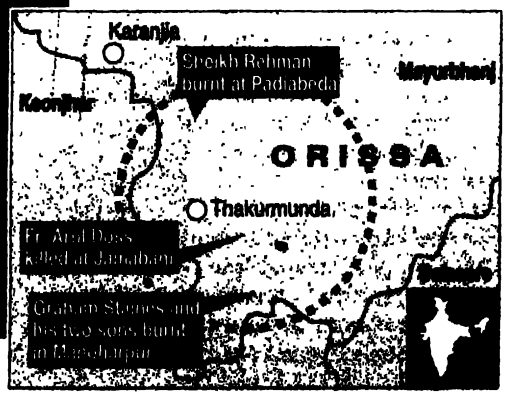
THE sustained hate campaign against Christians in Orissa has assumed diabolic proportions with the killing of a Roman Catholic priest, Fr. Arul Doss, by a mob of non-Christian fanatics at Jamabani, a remote village in Mayurbhanj district, on the night of September 1. This is the third such incident involving minorities in the State this year: Australian missionary Graham Stewart Staines and his two sons were burnt to death at Manoharpur on the night of January 22, and a Muslim trader, Sheikh Rehman, was killed at Padiabeda village in Mayurbhanj district on August 26. Fr. Arul Doss died in a mob attack on him and other Christians who were participating in festivities after a prayer meeting. (Jamabani is not far from the spot where Graham Staines and his sons were killed.)

The 35-year-old Fr. Doss, a native of Tamil Nadu, had been the priest of the Anandapur Roman Catholic church in Mayurbhanj district for the past five years. He had been visiting villages in the area since August 31.

Fr. Doss arrived at Jamabani on September 1 along with two other church workers, Darsan Birua and Kate Singh Khuntia, and organised a prayer meeting there the next day. According to some reports, they were watching a cultural programme after a prayer meeting when a group of 10 to 15 persons, who were armed with lathis, bows and arrows, attacked them. As the participants in the celebrations, including Fr. Doss, tried to escape, the attackers reportedly pierced his body with arrows. The attackers set fire to local church before leaving. Khuntia is in a critical condition.

Fr. Jose Thundiyil, a fellow priest, said that Fr. Doss used to make weekly visits to Jamabani. The journey involved a 32-km scooter ride followed by a 19-km trek. "He had been in our diocese for five years, and he was a very good missionary," Fr. Thundiyil said. "He led a simple life. He wanted to be with the poor all the time. He was not interested in conversions. He was keen on organising the poor people and educating them about their rights so that they could lead better lives," he added.

Condemning the killing, Prime Minister Atal Behari Vajpayee urged the Orissa Government to arrest immediately the perpetrators of the "heinous crime" and of previous such incidents, irrespective of their political or other forms of affiliation. "It is extremely distressing that such murderous attacks on representatives of the minority community should be taking place unchecked and with alarming regularity in Orissa," he said.



Orissa Chief Minister Giridhar Gamang blamed "non-secular forces" for the killing. The incident occurred in the "area of operation" of Dara Singh, who is wanted in connection with the murder of Graham Staines and his sons and of Sheikh Rehman. "Any killing on the eve of the elections can only be the handiwork of non-secular forces, aimed at creating confusion in the minds of voters," Gamang said.

On September 3, Opposition parties organised a Statewide bandh, calling for the Chief Minister's resignation in the light of the latest act of violence against members of minority communities.

The killing of Fr. Doss came barely a week after Dara Singh, the prime accused in the Staines murder case, allegedly killed Sheikh Rehman in Padiabeda. Dara Singh and his men allegedly chopped off Rehman's hands at a crowded market before burning him to death. The ghastly attack came as a shock to the State police and the Central Bureau of Investigation (CBI), who have been searching for Dara Singh for months. One of Sheikh Rehman's neighbours, Madina Bibi,

EASTERN PRESS AGENCY

EASTERN PRESS AGENCY

The body of Fr. Arul Doss (inset), who was killed on the night of September 1, being taken for post-mortem.

alleged that Dara Singh had announced his intentions in advance. Padiabeda's 20-odd Muslim families, who are terrorised, made similar allegations. They said that Dara Singh had been visiting the area and that he had been spotted at the weekly markets. They wondered why the CBI and the State police had not arrested him. They alleged that Dara Singh had a history of attacking Muslim traders, especially cattle dealers.

The State Government was non-committal on whether Dara Singh was involved in the killing of Fr. Doss. "We will neither confirm nor deny it," State Home Secretary Ajit Tripathy said. However, police sources in Mayurbhanj said that the Jamabani attack had the hallmarks of Dara Singh's *modus operandi;* for instance, the way in which the victims were attacked and churches burnt. They said that Dara Singh's involvement could not be ruled out as the four organised attacks on Christians and Muslims that had taken place over the past eight months in the villages of Keonjhar and Mayurbhanj districts in north Orissa had occurred within 30 km from Thakurmunda, which is believed to be his stronghold. Dara Singh, an alleged religious fanatic, is believed to be a Bajrang Dal activist who is on a "mission to take out the minorities". He carries a reward of Rs.5 lakhs on his head.

Dara Singh, who is believed to be involved in the killing of Fr. Arul Doss.

The Wadhwa Commission which inquired into the Staines murder case has stated in its report that Dara Singh did not act at the behest of any political organisation. This observation has, however, been rejected by many people who say that evidence indicates otherwise.

The National Council of Churches in India and associated Christian missions have called for a fresh inquiry into the Sangh Parivar's alleged links with Dara Singh. The NCCI president, K. Rajaratnam, and the India Missions Association's vice-chairman, Ebe Sunder Raj, said that the continued killings of members of minority communities necessitated a fresh probe with wider terms of reference that would implicate the abettors of the crime. They said that the Wadhwa Commission report was full of contradictions as an overwhelming number of affidavits and documents that were placed before the Commission pointed to Dara Singh's links with the Bajrang Dal/Bharatiya Janata Party/Rashtriya Swayamsevak Sangh. They alleged that statements made by various Sangh Parivar leaders, which appeared indirectly to justify the killing, were further pointers to the involvement of the Bajrang Dal.

The CBI, which has identified Dara Singh as the prime suspect in the Staines case, is yet to track him down; he is believed to be operating from a dense forest in tribal-dominated north Orissa. The CBI has filed a charge-sheet against 18 accused in the Staines murder case. The charge-sheet, filed at the Designated Court of Justice E. Vasudev Rao in Bhubaneswar, sought permission to conduct further investigations and issue warrants against the absconders. Altogether, 46 persons are believed to have been involved in the killing: nine have been arrested; nine, including Dara Singh, have been mentioned as absconders; the others are yet to be identified. The CBI is reported to have conducted nearly 500 raids to arrest Dara Singh. Police sources conceded that the State Government had "washed its hands of" the Staines murder case by handing it over to the CBI in March. The number of raids conducted by the State police on Dara Singh's suspected hideouts in Mayurbhanj and Keonjhar districts came down drastically. Dara Singh's decision to lie low for six months after the murder of Graham Staines misled the police into believing that he was "cornered" and that he may have taken refuge in Uttar Pradesh, his home State. "Just when we thought he was gone, he came out of nowhere and struck again," one official said.

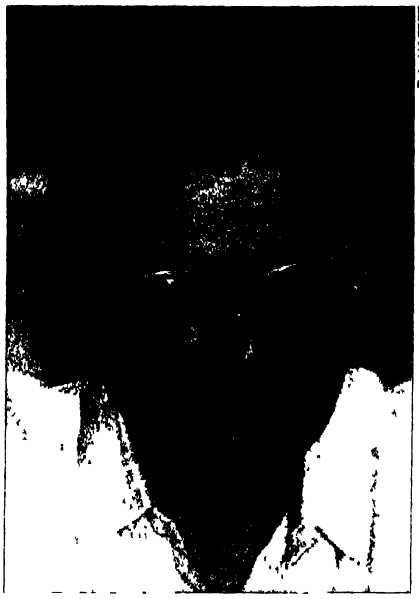
Officials of the CBI said that Dara Singh had become a prominent figure in the area bordering Keonjhar and Mayurbhanj districts. His name entered the police records after he launched a series of attacks on Muslim cattle traders in the area. It has been alleged that villagers with whom Dara Singh shared his loot, harbour him.

Evidence collected by the CBI so far reveals that Dara Singh instigated his supporters by saying that Christian missionaries spent a lot of money trying to "convert poor tribal brothers and sisters". According to investigating officers, Dara Singh is both respected and feared by the local people. The CBI has decided to start booking cases against those who have been harbouring him. ■

Pioneer of Indian rocketry

Dr. S. Srinivasan, 1941 - 1999.

T.S. SUBRAMANIAN



DR. S.SRINIVASAN, Director, Vikram Sarabhai Space Centre (VSSC), Thiruvananthapuram, who died on September 1, was the pioneer of rocketry in India. He was the architect of the Indian Space Research Organisation's (ISRO) Rohini sounding rockets, the Satellite Launch Vehicle, SLV-3, the Augmented Satellite Launch Vehicle (ASLV) and the Polar Satellite Launch Vehicle (PSLV), and was looking forward to the lift-off of the Geostationary Satellite Launch Vehicle (GSLV) from Sriharikota next year. He was fully involved with the GSLV, which entails the application of the frontier technology using liquid oxygen and liquid hydrogen. He was an expert in launch vehicle technology. Srinivasan was 58 and is survived by his wife, a daughter and a son.

Dr. Srinivasan was admitted to a hospital in Chennai on August 29 and underwent emergency heart surgery. He had undergone bypass surgery a decade ago. Hundreds of his colleagues from the VSSC and SHAR paid their respects to him in Chennai.

ISRO chairman Dr. K. Kasturirangan, who attended the funeral, told *Frontline:* "Dr. Srinivasan was an exceptional scientist. He was the pioneer of rocketry in India. He was the architect of Indian rocketry in more than one sense because in the design, configuration and implementation of a launch vehicle project – in all aspects – he was outstanding. He grew with ISRO, evolved with ISRO and gave the pride of place to ISRO in the comity of space-faring nations."

According to fellow-scientists and engineers, he was a visionary, working on the dream project of a technology demonstrator for a re-usable launch vehicle which would reduce the cost of access to space.

D. Narayana Moorthi, Programme Director, Launch Vehicle Programme Office, ISRO Headquarters, Bangalore, said that Dr. Srinivasan was wedded to technology. Moorthi said: "He was a technologist and a project manager, both rolled together."

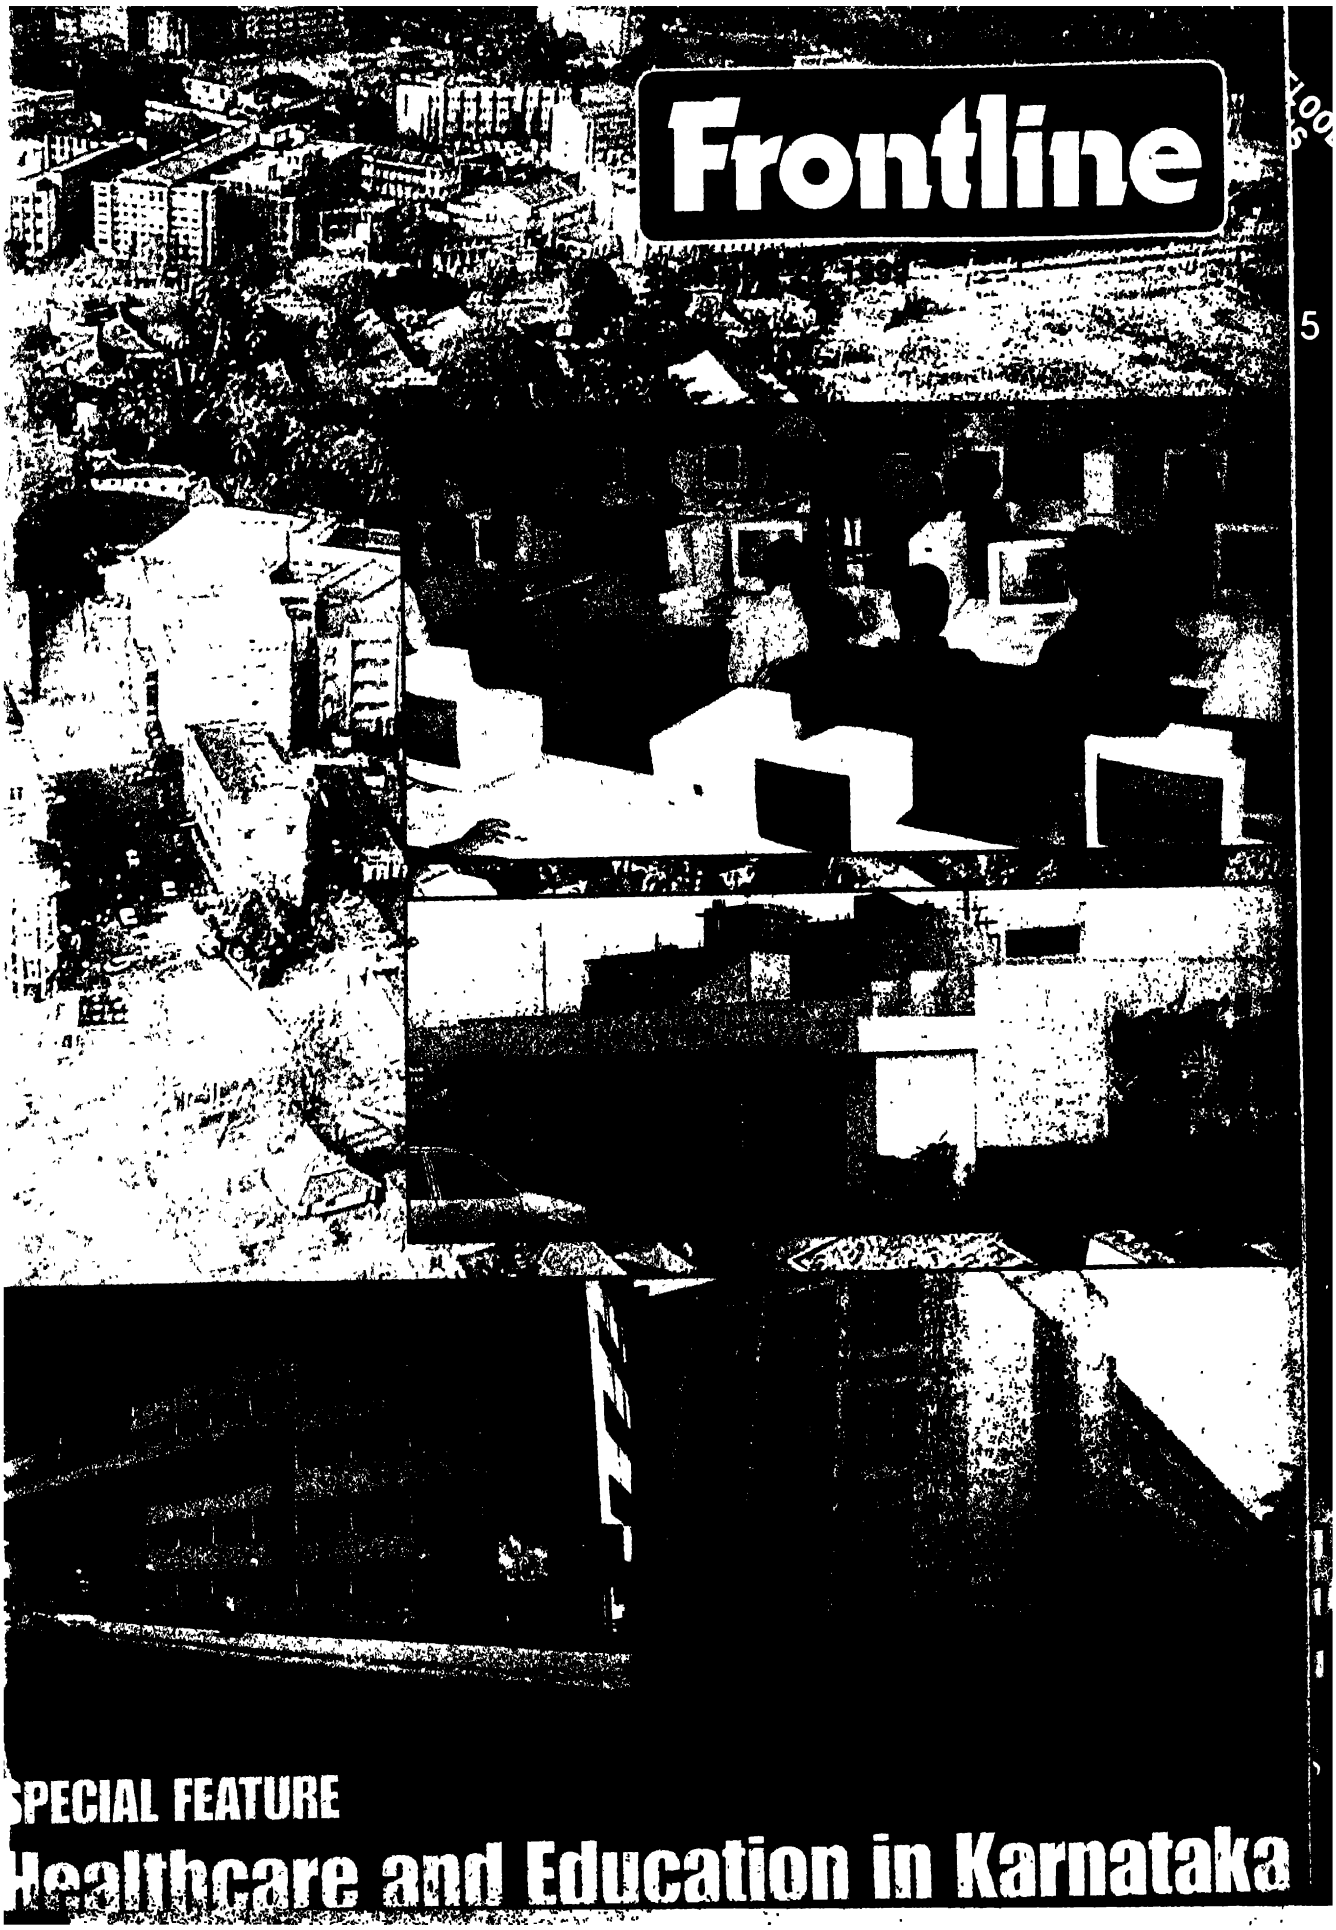
T A HAFEEZ

BORN on April 14, 1941 in Thanjavur district, Tamil Nadu, Srinivasan took his B.E. degree in Electrical Engineering with honours from Annamalai University and M.E. in Aeronautical Engineering from the Indian Institute of Science, Bangalore. He received his doctorate in Engineering Mechanics from Ohio State University, the U.S.

Srinivasan worked for Hindustan Aeronautics Limited (HAL), Bangalore as an aeronautical engineer. He joined ISRO in 1970. He was first involved in the development of hardware for the Rohini rockets, and from 1973 started working on the SLV. When A.P.J. Abdul Kalam, now Scientific Adviser to the Defence Minister, was the Project Director of SLV-3 in 1980, Dr. Srinivasan was the Deputy Project Director. They formed a great team and the launch of SLV-3 in 1980 from SHAR was hugely successful; it deployed a 35-kg Rohini satellite in near-earth orbit. Then followed a series of SLV-3 flights. According to Rajaram Nagappa, Associate Director, VSSC, Dr. Srinivasan was instrumental in the design and development, qualification and realisation of the flight stages of the SLV-3.

Dr. Srinivasan was the Project Director of the PSLV in its formative stages. He became the Programme Director of the Integrated Launch Vehicle Programme in 1988 and contributed to the planning of the follow-on PSLVs, GSLVs and advanced vehicles. He was Director, SHAR, for a brief period, after which he became Director, VSSC, in 1994.

Nagappa said that after the first two ASLV flights failed, Dr. Srinivasan provided a re-configuration to the vehicle by adding fins and other features, giving controllability to the vehicle. The next two ASLV flights were successful.



Narayana Moorthi said that Dr Srinivasan was responsible for the evolution of the PSLV from the drawing stage to its commercial launch on May 26, 1999 when it lifted three satellites – Indian Remote-Sensing Satellite (IRS), a German satellite and a South Korean spacecraft. According to Nagappa, even as Dr. Srinivasan gave shape to the PSLV's configuration, design and development, he simultaneously conceived, planned and established the facilities needed for the project. These included vehicle integration and checkout facilities at Valiamala and Thumba, Kerala, and at SHAR, Andhra Pradesh.

A characteristic trait of Dr. Srinivasan was that even as he was working on one project, he would scout around for future projects. He kept track of developments in space in other countries and decided what speciality ISRO should develop. Narayana Moorthi said, "He was thinking of a technology demonstrator for a re-usable launch vehicle."

In the assessment of G. Madhavan Nair, Director, Liquid Propulsion Systems Centre, ISRO, Dr. Srinivasan "was a master of vehicle technology. Besides, he was one person who could cover any aspect in the field. PSLV was his dream baby."

R.V. Perumal, Project Director, GSLV, said: "He was a builder. He was a man of grand ideas, which were substantially met. He was a good man to a fault."

There was all round praise about the human side of Dr. Srinivasan too. S. Ramakrishnan, Project Director, PSLV, said: "He was a positive person. He was a good leader." ■

Healthcare and Education in Karnataka

TAPMI

Admissions 2000 - 2002

POST-GRADUATE DIPLOMA IN MANAGEMENT (PGDM)

POST-GRADUATE DIPLOMA IN MANAGEMENT – FAMILY BUSINESS (PGDM-FB)

TAPMI is one of the premier B-Schools in the country, reputed for its two year residential programme offering a Post Graduate Diploma in Management (PGDM) recognised by AICTE and awarded equivalence with MBA by the Association of Indian Universities (AIU) Backed by highly qualified faculty and excellent infrastructure, PGDM offers a wide array of courses

* Students can take specialized courses in Marketing, Finance, Human Resources, Entrepreneurship and Systems TAPMI attracts students from all over the country with a range of academic backgrounds Strong support is provided for securing placements through campus recruitment
* From this year, TAPMI is also offering a PGDM with specific focus on Family Business (PGDM-FB)
* Candidates applying for PGDM-FB must be sponsored by their family business

Eligibility:

A three year (10+2+3) university degree, recognised by the Association of Indian Universities as eligible for postgraduation, in any discipline with not less than 50% in the overall aggregate (45% for SC/ST) The same requirement applies to those with qualifications like ACA/ICWA/ACS Candidates appearing for the final year degree examination in 2000 can also apply

Weightage:

Due weightage will be given to candidates

* with work experience
* sponsored by their organisations

Please address all correspondence to

The Admissions Co-ordinator

T. A. Pai Management Institute

Manipal – 576 119, Karnataka, India
Ph (08252) 70162/73162/71358/73163
Fax (08252)70699/70622
Grams TAPMI, E-Mail. tapmi@mahe ernet.in

However, such candidates have to go through the same selection process as others

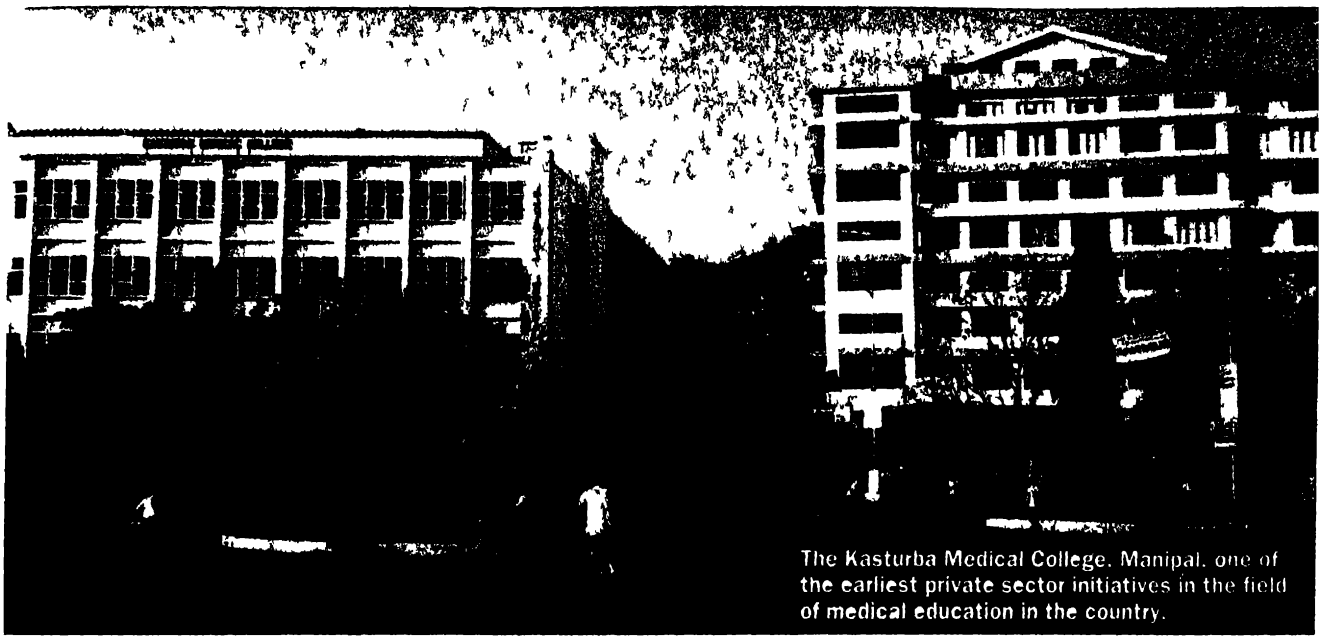
Admission Procedure

1 All candidates seeking admission to either programme should appear for the Common Admission Test (CAT) to be conducted by IIMs on December 12, 1999 The CAT Bulletin with application form has to be purchased from select branches of the State Bank of India

Note: CAT is used for shortlisting candidates who apply for admission to TAPMI IIMs have no role either in the selection process or in the conduct of the Programme

2 Register at TAPMI by filling a separate application form

* **TAPMI's application form and handbook of information will be sold at the same branches of State Bank of India where CAT forms are available.**
* Alternatively, candidates may receive the application form and handbook of information by registered post by sending a DD for Rs 800/- (Rs 500/- for SC/ST) drawn in favour of **T. A. Pai Management Institute**, payable at either **Manipal** or **Udupi**



3 Candidates shortlisted on the basis of CAT ranks will be called for Group Discussion and Interview for final selection in Manipal during April/May 2000

Executive Education Programs

TAPMI has launched Executive Education Programs of various modules aimed at middle level executives, brand managers, owners of small and medium enterprises and CEOs. These programs, held regularly, vary in duration from 3-5 days. The Institute is recognised as faculty development centre for training faculty members in management institutes of South India. TAPMI also offers Company-specific programs which could be conducted at Company/TAPMI premises.

For more information kindly contact: The EEP Coordinator

The Kasturba Medical College, Manipal, one of the earliest private sector initiatives in the field of medical education in the country.

Academic capital

Karnataka led the way in the matter of private sector initiatives in quality medical education in the country. And the trend continues.

RAVI SHARMA

WHEN the late Dr Tonse Madhava Anantha Pai set up the Kasturba Medical College in Manipal in 1953, he could hardly have imagined that his home State of Karnataka would one day witness a boom in the field of private medical colleges In the last three decades, there has been a phenomenal growth in the number of privately managed and capitation fee-based medical colleges in the State With the tacit encouragement of a succession of Chief Ministers, from Devaraj Urs to S Bangarappa, religious institutions and philanthropists set up professional colleges to serve their communities and the public. Of Karnataka's 19 medical colleges, 16 are privately managed

Medical and dental colleges sprang up in almost every corner, particularly the urban and semi-urban centres Although there were numerous teething problems, the Karnataka experience showed that a capitation fee medical college was a sure money-spinner The trend of capitation fee colleges has been successfully copied in recent years in Andhra Pradesh, Maharashtra and, to a lesser extent, in Tamil Nadu. Despite the competition, students from other parts of the country as well as from abroad flock to Karnataka for seats in medical and dental colleges

Until 1992, there were few hitches in starting a capitation fee college in Karnataka, given the cozy relations between politicians and prospective managements and the fact that the State Governments were the sanctioning authority All that managements needed to secure sanction was to approach the right politician

The spurt in capitation fee colleges sadly led to a dilution of standards Faced with a shortage of qualified and experienced staff and inadequate infrastructure, colleges functioned with makeshift arrangements, often without even the required quality in clinical material (especially in dentistry)

While the early pioneers such as T.M.A Pai had a vision that their colleges should impart quality education, entrepreneurs who came in later were motivated more by profit than by idealism Most managements set up colleges only as a commercial proposition

However, a series of Supreme Court orders, which put restrictions on the management quota seats, brought about order in the admission process. The Medical Council of India became the final sanctioning authority Even today, with managements entitled to 15 per cent of the seats, it is still possible to run a medical college profitably An added bonus is the clout that comes with running a professional college Funds for expansion and infrastructure must, however be carefully planned from sources other than capitation fees

Contrary to the general perception, privately managed medical colleges have not all been "money-making institutions They have provided thousands of students the opportunity to secure a professional education, given the limited number of government-run or aided institutions Without the capitation fees, it would have been impossible for colleges to put up the required infrastructure and build up impressive campuses

Even the Bangalore Medical College, one of the three government-run medical colleges in Karnataka that is still much sought after, was started by a group of leading private medical practioners It was taken over by the Government and developed

Two privately run medical colleges that have earned international recognition are the Kasturba Medical College in Manipal and the college by the same name in Mangalore. Founded by the late T M A

VIGNAN EDUCATIONAL FOUNDATION

Founder of

1) **Bangalore Institute of Dental Sciences & Hospital**-offering B.D.S. & M.D.S. Courses
2) **Vignan Super Speciality Teaching Hospital**-offering Super Speciality and rare Medical services and Diploma course in Nursing.

ADMAS

On the campus of the International Medical University at Dar-es-Salam, Tanzania, promoted by the Vignan Educational Foundation, Bangalore.

Pai, who started the Academy of General Education in 1942 in Manipal, a hamlet 60 km from Mangalore, the colleges attract and nurture talented professionals. In 1993, the Manipal Academy of Higher Education (MAHE) was granted the status of a Deemed University by the Government of India under the purview of the University Grants Commission (UGC).

According to Dr. Glenn G. Christo, Director (Planning), MAHE is on the verge of setting up campuses elsewhere in India and overseas. Christo said: "We applied to the Government of India and the UGC to set up the campuses. A subcommittee was set up to decide whether a deemed university like ours could have multi-campuses. It has now cleared the concept, and the decision has been conveyed to the Human Resource Development Ministry. The notification from the Ministry is expected any time now."

Initially MAHE will set up a campus in Jalandhar which will include a medical college, hospital, a school of nursing and paramedical training institute. It will also set up a post-graduate training centre in Bangalore, which will offer highly focussed specialised training in areas such as cardiac anaesthesia. Christo said: "Although a number of people have invited us to set up a campus, we are very selective before choosing a place. We would first like to look at the track record of the State government, the environment in the State and so on." He added: "You must understand that private medical education is expensive. Today though private initiative in medical education is well accepted by the public at large and even by the judiciary, it is still frowned upon by governments and politicians."

According to Christo, there are no vacancies in faculty positions at MAHE. The huge number of electives means that opportunities for students to go overseas are tremendous. "And the atmosphere on our campuses is cosmopolitan. There are over a hundred second-generation students studying medicine," he added.

From this academic year, MAHE has started distance education. Diploma courses in medical laboratory technology, radiography, medical records and nursing will be offered shortly. There are also plans to transform MAHE into India's first completely wired university. Its 240-hectare campus in Manipal has been chosen by the Software Technology Parks of India as one of its 15 information gateways. It is the only university in the country to have its own earth station.

Christo said that one of the requirements for a wired medical university would be a networking of 2,500 personal computers on the campus. He added: "We have 1,500. We are setting up a Hospital Information System (HIS) – where all details of a patient such as lab records, results, medical history and so on will go online. Admission to any of our hospitals, whether in Manipal, Sikkim or Goa could also be made online, just as the financial aspects will be. In academics, we will have a proprietary software system whereby a professor can interact through the network with students." The academy, along with the United States-based Healthscribe, is to start a medical transcription course in January.

MAHE'S pioneering efforts have facilitated the entry of other groups into medical education. The Nitte Education Trust, which was registered as a Tulu Linguistic Minority Trust in 1979, is another private initiative in education. Started by the late Kowdoor Sadananda Hegde, Supreme Court Judge and Lok Sabha Speaker, and his son N. Vinaya Hegde, the Trust's Medical Sciences Complex at Deralakatte, on the outskirts of Mangalore, houses the A.B. Shetty Memorial Institute of Dental Sciences and the Justice K.S. Hegde Medical College and Charitable Hospital.

Vinaya Hegde is critical of excessive government control in running private educational institutions. He said: "Too many laws and statutory requirements allow some people (close to the government) to manipulate the system. Too many laws also make the running of these institutions financially unviable. What is required is for the government to understand the way these institutions are run and then to work out transparent procedures, especially in financial matters. Today the money derived from educational institutions is not open for public audit. This has meant that many of them have become centres to collect and launder black money. While the government should have control on the financial aspects, it should leave the academic aspects to the trusts that run the institutions."

OTHER noteworthy trusts which run medical and paramedical colleges include the SDM Trust and the Rashtreeya Sikshana Samithi Trust. The Vignan Educational Foundation (VEF), which runs a dental college and 100-bed general hospital in Bangalore, was invited by the Government of Tanzania to set up and run dental, nursing, pharmacy and medical colleges as well as a multi-speciality, dental and medical hospitals in Dar-es-Salaam. In addition, paramedical, engineering and management courses were also to be offered. In short, the VEF was asked to set up a full-fledged university in Dar-es-

Every year several hundred students *graduate from* Manipal.

And carry with them the essence of India's premier university town.

Every morning sees Manipal's bustling hilltop disseminating knowledge in different disciplines. From medicine to information technology and everything in between.

Ranked among the top private educational enterprises in Asia, the Manipal Academy of Higher Education (MAHE) also enjoys Deemed University status. The number and variety of courses being offered at

Manipal provides fertile ground for a healthy interaction between the various disciplines, resulting in holistic solutions.

Among the first private educational enterprises to launch twinning programmes with foreign universities, Manipal's expertise has also been sought after to set up medical colleges abroad. Forays into the competitive world of Information Technology has been made by MAHE's Distance Education Wing, which offers Bachelors' and Masters' degrees in Information Technology.

The rich soil of Manipal it appears is also an inexhaustible source of knowledge. As testimony are the several educational institutions that dot Manipal.

And the several hundred graduates who step out of Manipal, year after year.

Dr B M Hegde
Vice-Chancellor

We know what chickenpox is. Our children needn't.

Chickenpox, and the fever and itchy rash it comes with, can disrupt children's lives in quite a few ways.

Preventing them from going to school. Playing with their friends. Small things which don't allow them to be their usual carefree selves.

And as a parent you know how that feels.

Perhaps what you also ought to know is that if your child gets the disease later on in life, the outcome could be quite serious.

For at this stage there's also the possibility of getting scarred. With the risk of developing life-threatening complications like pneumonia and infections of the central nervous system.

There's also Herpes Zoster to consider. A painful condition which could occur later in life due to reactivation of the same virus.

However, the good news is, thanks to modern science your children don't have to suffer from chickenpox in the first place.

CHICKENPOX IS NOW PREVENTABLE THROUGH VACCINATION. CONSULT YOUR DOCTOR.

This message is brought to you by SmithKline Beecham Pharmaceuticals, P. O. Box 2, Bangalore-560 049.

ENTERPRISE NEXUS 7062

ılaam. The International Medical and echnological University (IMTU), as this enture is to be called, was a further exam- ɔle of South-South cooperation.

Although the grand plan of a full- ledged university with multiple disci- ɔlines has not yet materialised, IMTU's medical college has started functioning on he 40-hectacre campus given by the Tanzanian government. It was inaugurat- ed by Prime Minister Inder Kumar Gujral during his visit to Tanzania in September 1997.

Kasturi Subbarao, Managing Trustee, VEF, said: "For us it is a matter of pride that a foreign government called us to establish a university in their country. We were given autonomous status. Our first batch of medical students started class in January 1997. There were seven students, two Tanzanians and five Indians. Our third batch has 40 students who come from seven countries." Fees charged are $4,000 for a local candidate and Rs.2.5 lakhs for an Indian student. Hostel accommodation costs Rs.60,000 a year. The faculty is Indian and the medical degree offered by the IMTU is recognised by the Medical Council of Tanganayika.

Subbarao is bitter that "though it is a matter of pride for an Indian foundation to start a university abroad", neither the Government of India nor the Medical Council of India (MCI) has provided any support. The MCI is yet to recognise the medical degrees of the IMTU. Subbarao said: "The Indian Ministry of Health and Family Welfare, in its letter dated August 17, 1998, directed the Medical Council of India to recognise the degrees of IMTU under reciprocity. But it is yet to come. A two-member team, comprising an official from the Ministry and a representative of the Medical Council of India, will visit the IMTU medical college shortly. We hope recognition will come after this."

The medical course is also being offered by the IMTU in a twinning programme "for students who don't want to go to Dar-es-Salaam". The twinning programme is being offered at the moment from Guntur, Andhra Pradesh, where 48 students are scheduled to take their first and second year examinations in India and the remaining in Dar-es-Salaam. The students, according to Subbarao, will also "have to go to Dar-es-Salaam for clinical training as and when required". The admission fees is Rs.2.5 lakhs. The IMTU also hopes to start its dental college from this academic year. ■

'The private sector has a role to play'

Interview with Dr. Ramdas M. Pai.

President of the Manipal Academy of Higher Education (MAHE) **Dr. Ramdas M. Pai** is a firm believer in the Chinese proverb, 'If you give a person fish, you give him a meal; if you teach him to fish, you give him a meal for life.' Dr. Pai benignly watches over the fortunes of nearly 50 educational institutions and numerous hospitals run by the Manipal group. Other than a host of institutions in Manipal in southwest Karnataka, where the group's headquarters is located, the group has set up

RAVI SHARMA

institutions in other towns and cities in Karnataka, besides Sikkim, Goa, Nepal and Malayasia.

In an interview to **Ravi Sharma**, Dr. Pai said: "Education is of paramount importance if the country is to progress. And if society depends solely on the government to provide education, generations of students will be denied educational opportunities. The private sector has a role to play in higher education. The nation cannot afford to wait for the promises that politicians make." Excerpts:

▶ *Manipal, which is perhaps India's only university town, was a grand vision of your father Dr. Tonse Madhava Ananth Pai.*

The plan for the university town existed only in my father's mind. There were no drawings. In fact, his wish for a residential university in Manipal came true 14 years after his death.

▶ *How did he venture into this field in the 1940s?*

My father felt that only by educating the youth could society be transformed. He felt that people should invest in their children's education as they would in business or in real estate.

▶ *Was he a firm believer in a role for the private sector in education?*

Yes. Nowhere in the world is higher education subsidised. The government should give free education up to the high school level. Thereafter, its policies should create opportunities for higher or vocational education. Students who have secured the requisite marks but cannot afford the cost of education should be allowed to avail themselves of loans from banks, loans which will then be directly paid by the bank to the institution where the student has secured admission. Once students complete the course, they can repay the loan.

Let me give you a crude example. Hundreds of tuberculosis patients are dying and most, if not all of them, are poorer than the students in the government-run medical institutions. But it is the poor tax-payers, who can neither afford a cure for tuberculosis nor remain unemployed for long, who contribute to the government subsidies to educate each medical student. It costs the government between Rs.1.5 lakhs and Rs.2.5 lakhs a medical student a year. His education in the government-run institution is at the cost of the tax-payer (even the poor man), but only the student and his family benefit. Why should this happen?

▶ *What about economically poor students? Loans are difficult to secure and expensive...*

We in India are accustomed to everything coming free. So when I charge a fee, you feel that you are being exploited. But at the same time no person should be denied higher education because of his economic status. I have a suggestion. Today the Union and State Governments together spend Rs.20,000 crores (roughly 1.4 per cent of the GDP) on higher education subsidies. Let this money be invested as capi-

al for, say, 10 years in a Human Resources Development Bank. This bank will then liberally offer loans to students who have secured seats on merit but cannot afford to pay.

▶ *You believe in self-financed higher education ...*

Yes. There is no point in the government subsidising higher education. It is not reaching the people it is meant to reach. Take the case of Upendra Nayak of Perkala, a village close to Manipal. The son of a betel-seller, he was a brilliant student at our school and college. He secured admission at the Regional Engineering College in Suratkal, but did not have the money to pay even the admission fees. So MAHE, then a capitation fee college, stepped in to give him a loan. When he finished the course, we said that if he joined our institution the entire loan would be written off. He was happy to do so. Later Upendra secured scholarships. First at the Indian Institute of Science, Bangalore, where he did his M.Tech and then at a college in the United States. He came back and became a Director at the Institute of Oceanography in Goa. In the so-called government setup, Upendra would not have gone beyond selling betel leaves or being an attender. But we felt he had the potential and nurtured it.

▶ *You spoke of the poor tax-payer paying for the education of the economically better-off student. What else can be done?*

Cross-subsidise higher education. Since India has a wealth of technically trained manpower, we will have no trouble attracting students from abroad. If a third of the seats are filled by foreign students, it will subsidise the education of the remaining two-thirds. So no Indian student need pay high fees. India will also earn foreign exchange and since most foreign students are of Indian origin, by providing quality education we will be helping them come up in their adopted countries. It will be a win-win situation.

▶ *The judgment in the Unnikrishnan case put many managements of private institutions in a quandary.*

One of the Judges told me after he retired that all institutions were not like ours. He confessed that though the Union and State governments, the University Grants Commission and the Medical Council of India had the powers to curb malpractice, they did not. "Many a time, these people (private managements) were hand-in-glove with the supervising agencies auctioning seats. Could we remain silent spectators?" the judge asked.

What has been conveniently forgotten is that the judges (in the Unnikrishnan case) had mentioned that the government should offer a viable solution even in the case of free and payment seats. But the bureaucrats haven't done anything. The Supreme Court said that you can look into it (admissions). It is not for the Supreme Court to fix policy; it only did so because the government did not apply its mind, and we wanted an interim policy. The court also directed the Reserve Bank of India to formulate a loan and scholarship scheme. This has not come through either. The government is just not interested.

▶ *Recently the Karnataka Government issued an order saying that it could admit students to your medical institutions even though your colleges do not come under its purview. Why?*

The government says one thing and does another. Every one of these politicians says that seats should be given only on merit, but then call up for seats.

▶ *How has the deemed university status helped MAHE ?*

Deemed university status has allowed me to get out of the clutches of politicians.

▶ *Your university will shortly open campuses in other parts of India and maybe overseas as well. Do you foresee problems?*

Only if local governments create problems. Take Malaysia. When the Unnikrishnan judgment came, one of the points pertained to foreign students. (Malaysian Prime Minister) Mahathir Mohammed was very practical. He knew that around 35 per cent of the foreign students studying in Manipal were from Malaysia. So he told his aides to invite Dr. Pai to Malaysia and give him all the facilities (to start a college). I did not want to start (a college) there because we wouldn't get much benefit.

▶ *Financially...*

Financially, our costs go up. If I pay a professor Rs.40,000 a month here, there I will have to pay three to four times as much. All costs go up. So I thought the best thing is to have a twinning programme. First two years here and the rest there. When Mahathir contacted us, we didn't know if we were permitted to do so. Therefore I contacted the PMO (Prime Minister's Office) and the External Affairs Ministry. They were excited and said "Go ahead, only give us a copy of whatever you are signing." Mahathir then said that a Memorandum of Understanding would be signed between us and the Malaysian party at a function in the Maurya Hotel in Delhi. And they informed the Government of India. P.V. Narasimha Rao (then Prime Minister) said that as per protocol let the agreement be signed in Hyderabad House, in the presence of the Prime Ministers of India and Malaysia. It was given wide publicity.

But when the government fell and a new Human Resource Development Minister took over, we were asked whether we had the jurisdiction to operate in Malaysia. I told the HRD Secretary that this was a question that should be asked by Malaysia. I asked: "Why are you bothered? When Malaysia is willing to accept my degree, you must be proud and not question me." On the other hand, when I mentioned this to the Malaysian Health Minister, he said: "We will give you university status here (in Malaysia) itself, come."

The new (BJP) government turned 360 degrees (in their approach). They said you must go to 150 countries...

▶ *Are you planning to start university campuses overseas?*

A group in Saudi Arabia has invited me. There is another group in Dubai... we have already signed up. Under the present policy of the Government, if a friendly country invites us, we can go and start a college and award a degree. We would like to continue our twinning programme with Malaysia.

▶ *Even while you accuse managements of educational institutions of being hand-in-glove with politicians, you also call for more autonomy. How do you keep a check ...*

If anyone does any wrong, appoint an administrator. If any wrong is done, punish(the guilty) but create conditions where the government is pro-active. Here (at MAHE) things have happened in spite of the government.

▶ *Finally, what are the group's future plans in education?*

Australia, New Zealand and America feel that India is a big market. Because of the bureaucracy here, a large number of people (students) seek higher education, but do not get it. Mainly because of reservations. At present we are trying to consolidate. For example, the Punjab Government has invited me (to start a campus in Jalandhar) but because of the elections, I have not gone ahead. But I was impressed with Prakash Singh Badal's straightforward offer. A couple of other States have also invited me. I am going slow.

Overseas I am trying to do a little more because there are parties who are willing to invest. We will only provide the expertise, such as sending our best teachers. ■

Promising avenues

RAVI SHARMA

PRIVATE managements which until recently had restricted themselves to mainstream courses such as engineering, medical, nursing or dental courses have now begun to diversify. And the trend is to offer courses in communications and management.

The arrival of a large number of television channels has resulted in many youngsters opting for a course in media and related areas. Sensing the need, the Manipal Group two years ago launched the Manipal Institute of Communications (MIC) at Manipal. The first batch of 20 students has just completed their post-graduate course in mass communications. The students bring out their own weekly eight-page colour tabloid called 'AM Plus', which is distributed on Saturdays along with *Morning News*, a local English daily. The students also have the advantage of hands-on training at the offices of *Udayavani*, the Kannada daily by the Manipal group. Besides areas such as audio-visual, print, sound and multimedia, the MIC syllabus includes market research and corporate communications.

According to Prof. Leela Rao, Director (Academic), MIC, the institute prefers its present low-key image until it streamlines its operations. While the MIC's operations in the print media are well established, audio visual operations are getting finishing touches. Leela Rao said: "We are in the process of streamlining. We should have our own television studio by January." MIC had an advantage over conventional universities in that it could spend more money on infrastructure.

Besides theory, MIC provides hands-on industry level training. Said Leela Rao: "We try to impart a broader view of how the media functions. The right mix of practical skills and theory is what we want to impart. Students should be sensitive to social issues as well."

The T.A. Pai Management Institute, Manipal, one of the first management training institutions in the country in the private sector to be granted recognition by the All India Council for Technical Education. (Below) At the sound recording studio of the Manipal Institute of Communications.

RUN by a 15-member governing council, the T.A. Pai Management Institute (TAPMI), Manipal, offers a two-year Post Graduate Programme similar to that offered by the Indian Institutes of Management (IIMs). One of the first management colleges recognised by the All India Council for Technical Education (in 1986), it is today one of the few autonomous institutes whose programme has been awarded equivalence with the Master of Business Administration (MBA) degree by the Association of Indian Universities.

Founded in 1983, the institute can accommodate 120 students. Admission is through a rigorous and objective selection process. According to Prof. D. Nagabrahmam, Director, the institute is different from others which offer similar

courses on three counts. He said: "First, we invest more on faculty development (there are 18 faculty members at the moment) than any other non-IIM institute. Secondly, we are continuously increasing – an average of two per year – the number of courses (90 at present), courses that are relevant to the market. For example, we were the first to have a compulsory paper in business ethics. Thirdly, there is a high degree of emphasis at TAPMI on investment in infrastructure such as library and information technology. Among management schools we have the biggest library in South India after IIM, Bangalore. Currently we invest Rs.20 lakhs a year on acquiring new publications for our library." Besides its MBA equivalent programmes and executive programmes, TAPMI undertakes research and consultancy. Said Nagabrahmam: "This not only helps the faculty to enhance their knowledge, it also motivates them to greater things."

Placement, according to the Director, has been excellent over the last five years, and outside the IIMs they have the best record. TAPMI will soon start a two-year Executive MBA programme in collaboration with the Essae Chandran Institute at Bangalore. Weekend classes will give working executives "the opportunity to develop their personal effectiveness, through a combination of group work, structured activities and faculty interaction." The Essae Chandran Institute, he said, was keen on expanding the existing tie-up to include a regular post-graduate programme. "That is how good our brand equity is."

A unique two-year Post Graduate Diploma in Management with an emphasis on family business is to be offered soon. Thirty seats will be reserved for students sponsored by family business houses. ■

RAVI SHARMA

Students at the T.A. Pai Management Institute.

To remain healthy and youthful for a lifetime is easy.

Just rely on the health science that's been tried and trusted for over 2000 years.

In a world degenerated by pollution and unhealthy lifestyle, the ancient Indian science of Ayurveda holds the key to good health Relying largely on the human body's inherent capacity for healing it offers a treatment system that is free from side effects

The S.D.M. Ayurveda Hospital, located at **Udupi** and **Hassan**, brings you the benefits of this time-tested system of medicine in a totally modern environment A 300-bed facility, it offers varied treatments prescribed by Ayurveda, such as **Pancha Karma, Kshara Soothra, Rasayana Chikitsa, Skin Treatment, Shalakya and treatment for Nervous and Mental disorders** along with alternate disciplines such as **Yoga** and **Physiotherapy**.

Natural healing with a modern touch:

- Scientific administration of Ayurvedic therapies in hygienic conditions supported by modern aseptic procedure
- Computer-aided patient profile, follow- up and treatment
- Well-equipped emergency facilities to handle casualty Modern clinical methods for diagnosis and evaluation of treatment
- Laboratory and diagnostic facilities like X-ray, ultra-sound and ECG with the latest equipment for investigation
- Full fledged operation theatre for general surgeries Maternity ward to handle deliveries and traditional post natal care
- Choice of deluxe suites and regular accommodation

The S.D.M. Nature Cure Hospital, a 150 bed facility located at Dharmasthala on the banks of the river Nethravathi, offers varied treatments such as Hydrotherapy, Steam Bath, Underwater Massage, Sauna Bath, Spinal Bath, Acupuncture and Magnetotherapy, on scientific lines

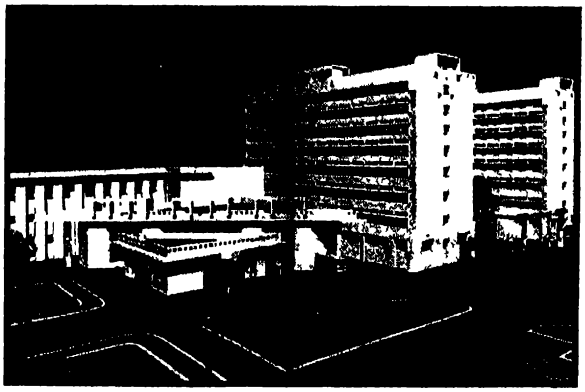
Technology and innovation in healthcare

RAVI SHARMA

CONTRARY to the widely held notion, Bangalore is yet to catch up, leave alone surpass, cities such as Mumbai, Chennai or Delhi in offering hi-tech medical facilities. Chennai is today the the Numero Uno in medical facilities, with Mumbai, once the leader, lagging behind.

Dr. Ajit Huilgol, a transplant surgeon and founder-member of the Karnataka Nephrology and Transplant Institute (KANTI), summed up Bangalore's status when he said: "We have not yet matched Chennai, Hyderabad or Mumbai. Bangalore started to offer super speciality services only in 1987." But that position is changing fast and gone are the days when patients with cardiac, cancer, orthopaedic or end-stage renal problems had to go to Chennai or Vellore. Treatment for such complicated medical problems is now available at hospitals both in the private and government sector in Bangalore. But problems exist.

As Dr. Philip Thomas, a transplant surgeon with the St. Johns Hospital, said: "It is not so much a problem of equipment. In fact, with liberalisation the market is flooded with equipment. The problem is lack of teamwork. There has been no effort to provide service as a team. For instance, in gastroenterology the facilities are very fractured. Patients still have to run around to secure the services of, say, a cardiac surgeon, radiologist, etc."



Doctors averred that in many areas such as critical care, medicine, haematalogy, liver transplant and emergency (trauma) care medicine, to name a few, Bangalore still lags behind. Said Thomas: "If your take critical care, not much is terms of quality work is being done at present. Specialised ICU trained doctors and nursing staff are too few. This is sad because when a person is on ventilation, his survival depends especially on the nurses who attend on him."

In Karnataka, the number of government medical institutions per lakh of the population fell marginally from 5.29 in 1960-61 to 5.13 in 1996-97. According to the Karnataka Human Development Report, 1999, "There has been some underfunding of hospitals at the secondary level, leading to deterioration in the quality of buildings and equipment, inadequate supply of drugs and gaps in staffing, especially in medical and skilled paramedical personnel. The overall quality of medical care requires improvement. Enhanced allocations to the health sector must be supported by reallocation of resources based on an assessment of the need and cost effectiveness of the different components of the health system."

At present the number of beds in government hospitals in Bangalore is 8,766 (43,868 in the whole of Karnataka), while

A State-of-the-art Heart Hospital

Sri Jayadeva Institute of Cardiology (SJIC), at Bangalore ranks amongst the largest heart hospitals in the country and over the years has earned a reputation of a reliable Cardiac Care Centre. **Over 8,00,000 out-patients and 1,00,000 inpatients have been treated here.** The Institute has an excellent team of doctors, nurses & paramedical staff, complemented by state-of-the-art equipment & facilities.

An exclusive Child Heart Care Centre has been established recently at the Institute, to combat the evergrowing incidences of Congenital Heart Diseases amongst Children.

SJIC has pioneered a policy which ensures that the poor and the needy have an access to expensive cardiac medical care and Cardiac surgery. In many cases, these expensive procedures & treatment have been made available at a very nominal cost or even free in deserving cases.

A new hospital complex of SJIC is being built on Bannerghatta Road, Bangalore. It will have state-of-the-art equipment and modern facilities and amenities. Five modern operation theatres, cath labs, diagnostic facilities, deluxe, semi-deluxe and general wards besides teaching and research facilities will form the nucleus of this new hospital Complex.

When completed, it will not only be a dream come true for us at this premier Institute, but also one of the largest Heart Hospital in the world.

SRI JAYADEVA INSTITUTE OF CARDIOLOGY
(Deptt. Autonomous Institute)

Victoria Hospital Complex, Bangalore - 560 002.
Phone : 080-6707575, Fax : 080-6705757.

in the private sector hospitals it is 15,988 (40,900 in the entire State).

According to doctors such Huilgol, patients from the south-[illegible] States come to Bangalore's speciality hospitals such as KANTI [illegible]ice services are cheaper here. A firm believer in the role of the [illegible]ivate sector in medical care, Huilgol said that patients were com-[illegible]g to his Institute not only from neighboring countries such as [illegible]ngladesh, Sri Lanka and Malaysia but also from countries as far [illegible]ay as Nigeria.

The medical team at KANTI, which includes nephrologist [illegible]r. S. Sundar and transplant surgeon Dr. S.G. Karunagaran, has [illegible]er a decade of experience in kidney transplants. It has so far conducted over 900 transplants (almost more than the total performed [illegible] all other centres in Karnataka). It boasts an impressive list of achievements: more multiple artery transplants than any other centre in Karnataka; the first in India to use the latest international formulation of Cyclosporine – NEORAL (the prime life-saving drug after kidney or other organ transplants), it has helped establish transplant centres at Jalandhar and Dhaka. The Nigerian Government recently invited KANTI to the country to help it establish a transplant centre in Lagos.

KANTI was also the first to perform a double kidney cadaver transplant in which both the kidneys were transplanted.

Cadaver transplant is an area where Bangalore has not done well. According to Sundar, the four-year old cadaver programme has not taken off because, "people care more for the dead than the living. It is difficult with a culture like ours. Even the record in cornea transplants is abysmal."

In the absence of a good cadaver transplant programme, unrelated donor transplants have taken precedence. Sundar, a proponent of related and unrelated kidney transplants, said: "The medicine is so good that unrelated transplants have a good chance of success."

AN area where Bangalore has very nearly caught up with the best is cardiac surgery. Hospitals such as the government-run Sri Jayadeva Institute of Cardiology (SJIC), the Manipal Heart Foundation and the Wockhardt Hospital and Heart Institute have done much to mitigate the suffering of cardiac patients.

SJIC has come as a boon to the economically weaker sections. Equipped with state-of-the-art facilities, it is comparable with the best private hospitals in providing heart care. Dr. N. Prabhudev, Director, SJIC, said: "We as a team are certainly better off than many of the private hospitals. We certainly are not in any way inferior to any of the best-run private hospitals." SJIC has started a Child Heart Care Centre, for children and new-born babies requiring neo-natal and paediatric cardiological intervention. It has entered into a tie-up with the U.S.-based Children Heartlink to treat rheumatic fever.

Between 1992 and March 1997, the Institute treated as many as 2,67,388 outpatients and 29,617 in patients. To help the economically needy, it has introduced innovative schemes such as Karuna Sindu, a voluntary donors' bank, and Hrudayavahini, a free vehicle service for discharged patients to be dropped at their homes.

Another beacon of hope on the Bangalore health scene is the 150-bed, multidisciplinary Mallya Hospital. Arguably Bangalore's best superspeciality hospital, it is an ISO 9002 company with the latest facilities in areas such as cardiology, 24 hour trauma care, nephrology, oncology, paediatrics, psychiatry, urology, andrology, dentistry and dermatology.

Said Commodore Indru Wadhwani (retd), president of Chaparral Health Services (which runs the hospital after taking it

Karnataka's answer to world-class health care.

Mallya Hospital - India's first multi-speciality, multi-disciplinary hospital to achieve ISO 9002 certification.

"Equipped to Care"

As a centrally located hospital, Mallya Hospital has on its panel, over 100 specialists and superspecialists trained in India & abroad and state-of-the-art medical equipment

The hospital is the first centre in South India and the third centre in India to possess the Intravascular Ultrasound - a highly advanced machine Its Cardiac Catheterisation Laboratory is in fact one of the best in Karnataka The Radiology department is well-equipped with a new Hi-tech Spiral CT, MRI, Ultrasound and Mammography machines The Internal Medicine, Orthopaedic, Vascular Surgery, Oncology and Paediatrics departments are full-fledged Plus we have a new Burns Unit, 24-hour Casualty and Trauma Care Centre - all set in a warm and friendly ambience

"Emergency Care - just a phone call away"

The hospital has imported three unique ambulances from California These "CCUs on Wheels", under the supervision of experienced medical and para-medical staff are linked by hi-tech telecommunication and help start the treatment at the patient's "doorstep"

Patient-friendly Rates (For General Ward Only)

Coronary Bypass Surgery: Rs.65,000/-

THE FUTURE IN DIGITAL HEALTH CARE

Available in over 120 major towns across India

o er from the UB Group in 1996): "We o fer state-of-the-art Spiral-CT, magnet- r resonance imaging, a dedicated neuro- urgery ICU, a full-fledged eight-bed cardiac care ICU, intra-vascular ultra- und and a complete cardiac care system a nong others." Wadhwani said that the i pression that his hospital was a corpo- ate hospital was a misconception. "Of our 150 beds, 37 beds are in the general w ard, where the rate is Rs.250 per room, and 53 of our beds are what we call 'semi private rooms', where rates vary between Rs.400 and Rs.500. We also provide free out-patient treatment and offer cardiac bypass operations at Rs.65,000 to the very poor. This in spite of the fact that a bypass operation costs more than Rs.77,000.'

The Mallya Hospital, Bangalore, a superspeciality hospital.

RAVI SHARMA

The Manipal Hospital, Bangalore.

ONE of the premier multi-diagnostic centres, Elbit Diagnostics, Bangalore, is a one-stop, cost-effective diagnostic centre which offers services such as magnetic resonance imaging, spiral CT, ultrasonography (with colour doppler), X-ray and image intensifier, echocardiography, stress test-tread mill, mammography with sterotactic biopsy, pathology, biochemistry and microbiology and Gamma camera lithotripsy.

Elbit Diagnostics recently added another state-of-the-art diagnostic modality – the DEXA high performance X-ray bone densitometry system, the first of its kind in Karnataka and the fourth in India. The system produces the most accurate results for evaluation of osteoporosis, a major bone disease afflicting women and the aged. According to M.P.Chary, chairman, Elbit Diagnostics, his centre is committed to bringing "the most advanced medical diagnostic equipment and services to Bangalore."

Elbit, which is a 50:50 venture between the Hyderabad based Concept Group which is chiefly in the food processing business and Elbit Medical Services of Israel, has within a short period made a name for itself though competition is tough. With Elbit Medical Services keen to pull out of the medical business (as part of its global restructuring), Concept Group is all set to take over the centre completely.

Aiding medical care are pharmaceutical companies such as Smithkline Beecham (SB). It recently shifted its offices to downtown Bangalore at a cost of Rs.18 crores, "just to be closer" to its customers. The company produces hepatitis A and hepatitis B vaccines, among a range of products. Paresh Chaudhry, Manager, corporate communications and marketing services, said: "We at SB operate under five key principles – customer care, innovation, integrity, people and performance. All our actions are underlined by these core issues. SB is a customer-driven company that produces products of superior value. Every minute 450 prescriptions are written for SB products worldwide and every hour $160,000 is spent by SB on research. And in the last ten years, 1.5 billion people have been protected from serious illnesses by SB vaccines."

SB is also equally committed to social issues. It recently tied up with the Spastics Society and founded the Creative Arts Centre.

While Bangalore has undoubtedly the best overall medical facilities, other towns in Karnataka also have well-equipped hospitals mostly run by the private sector. Their services are not limited to allopathy only. The SDM Ayurveda Hospital at Udipi is one such non-allopathy hospital. A unit of the Sri Dharmasthala Manjunatheshwara Educational Trust, the 40-year-old hospital is a widely acclaimed centre for natural healing.

The Hospital, which houses a 300-bed facility, offers treatment covering almost the entire range of ayurvedic remedies.

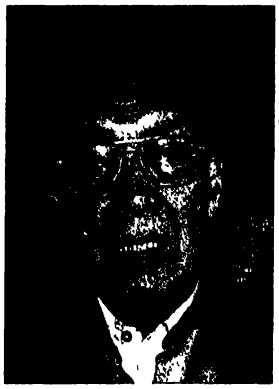
SELF-HELP healthcare products are today available off the shelf. The adage 'prevention is better than cure' seems to have motivated the production of the country's first indigenously designed digital blood sugar monitor, which is of international quality. Designed jointly by the National Physical Laboratories, the Centre for Biochemical Technology (laboratories under the Council for Scientific and Industrial Research) and the Department of Science and Technology, the monitor is manufactured and marketed by Pulsatum Health Care Pvt Ltd.

The monitor and the strips are economically priced, bringing them within the reach of patients. A company spokesman said, "Imported blood sugar monitors are expensive and there is quite often a shortage of strips." The Pulsatum Blood Gluco Monitor is available at 120 places across the country. ■

A different view of Kargil

While the Kargil issue is highlighted by politicians on both sides of the border, the average Pakistani thinks that it was merely part of the machinations by politicians to keep their own business going.

RASHEEDA BHAGAT
recently in Pakistan



PAKISTAN'S Foreign Minister Sartaj Aziz calls it an "over-reaction on India's part"; a retired Pakistani bureaucrat and a former consultant with the United Nations, Ghulam Khibria, calls it a "blunder on Pakistan's part"; a Karachi-based business executive, Akhtar K. Alavi, terms it an "election stunt". But the average citizen of Pakistan feels that the Kargil intrusion and India's response to it were something both the countries have been witnessing for years. My taxi driver in Islamabad said:"*Logo ko bewakoof banane ki baat hai* (The people on both sides are being taken for a ride). Neither your politicians nor ours, neither your army nor ours, is interested in finding a lasting solution to the Kashmir problem. *Unki tau dukan hi bandh ho jayegi* (It will put an end to their business)." .

The Foreign Minister denies that Kargil was a "planned operation" by Pakistan. His version is that following "some very aggressive patrolling by Indian troops along the empty space last October-November", the Pakistani troops moved closer to the Line of Control (LoC) to safeguard it. Taking advantage of this situation "the freedom fighters moved in and took up some positions". The LoC is never a quiet place, with firing taking place much of the time, but complaints from either side are normally sorted out.

This time too it would have been the same case but India suddenly "mobilised 50,000 troops, 70 to 80 planes, 20 gunships and large pieces of artillery to displace 500 people. It was plainly an over-reaction," Aziz said.

Even though Kargil has taken Indo-Pakistan relations to an all-time low, Aziz feels that some good might come out of it in the long run. Aziz added:"On both sides there is a realisation that we cannot go on. Look at the fragility and bitterness of our relationship. We shoot down a plane for no reason and tensions again go high. How can two such large countries, both nuclear powers, live in such tension and uncertainty? The relationship has to improve and it cannot improve unless we have negotiations and deal with Kashmir, which is a reality."

As usual there are diverse voices commenting on Indo-Pakistan relations. But one thing that strikes a visitor in Pakistan is the people's incredulity about the "mass hysteria whipped up by the Indian media" over Kargil. A senior diplomat in Pakistan's Foreign Office whom this correspondent met, said: "We were amazed to see the manner in which the Kargil issue was blown out of proportion in your media, especially the electronic media."

RASHEEDA BHAGAT

Sartaj Aziz, Foreign Minister of Pakistan.

Alleging that the Indian media seemed to have no space or time for anything other than "Pakistan-bashing all the time", he said: "To be honest with you, people in Pakistan started looking at Kargil only on June 21 after Pakistan had lost the World Cup (of cricket)." Certain that the "Hindutva government of India had influenced the media to write like that", he accused the Bharatiya Janata Party of creating "a new generation of enemies on either side of the border. We feel the whole hysteria is election-linked and it seems to have paid off too. We hear that pre-election surveys predict a comfortable victory for the BJP and its allies."

Conveying the same sentiment in softer tones, senior columnist Anees Jillani said: "Kargil was not looked upon as a war in Pakistan at all. It was only the Indian media which converted it into a war."

WHEN one tries to explain that not only the Government of India but also the people feel betrayed by Pakistan responding with Kargil to Prime Minister A.B. Vajpayee's outstretched hand of friendship in Lahore, the response is mixed.

Akhtar K. Alavi, the general manager of Adamjee Insurance, Pakistan's largest insurance conglomerate, strikes a hawkish note when he declares grandly: "We gave you a bloody nose in Kargil; that is why it rankles." After we had taken the argument back and forth for a little while about who really got a bloody nose in the end and who was forced to withdraw, he made a point, which set one thinking.

His argument is that every time Pakistan enters into a squabble with India and its politicians are forced to accept a solution, such as the withdrawal in Kargil, facilitated by the intervention of the United States, there is a backlash from the fundamentalist lobbies in Pakistan. "Such things breed fundamentalism, extremism and fanaticism. And you can see it all around you. You are a woman and a journalist who has been travelling in Pakistan. You must have seen it... women all wrapped up in *hijab* (veil). I am not saying there is anything wrong in it, but more than the manner of dressing, it is manifested in people's thinking and behaviour."

Maintaining that Islam had become the "new global enemy", particularly for the West which found it a convenient whipping boy after the collapse of communism, Alavi added: "If they keep hammering all the time '*Musalman ko marenge*' (we'll kill the Muslim) then he will become a reactionary. Those in Pakistan who are educated, liberal and open-minded are now being pushed and put on the defensive."

One thing is certain. Every time there is... call it war, call it battle or call it skirmish... with India, voices in favour of better Indo-Pakistan ties, economic, cultural and political, tend to get silent. President of the Sindh Industrial Trade Estate, Majyd Aziz, a votary of speedy improvement in Indo-Pakistan trade relations, admitted that events such as Kargil compelled people like him to "keep a low profile".

Maintaining that every Pakistani who rented out video cassette of a Hindi movie did a Rs.10 business with India, he said: Kargil or no Kargil, traders from both sides find a way for trading. But the role of facilitation, which can be provided by both sides, gets pushed back by a Kargil. A lot of goods go through Dubai from both sides; I would call this official smuggling which denies both governments revenue."

Aziz was scheduled to lead a 70-member delegation of industrialists from Pakistan to India in the last week of April 1999, under the auspices of the Federation of Indian Exporters Organisation (FIEO). But the fall of the Vajpayee government meant a postponement of the programme and the developments in Kargil put a quick end to it. Businessmen like him who see a huge market in India and potential for collaboration, especially in areas such as Information Technology, are waiting for a new government to take over in New Delhi before meaningful Indo-Pakistan trade relations can resume and the much-talked about touted Indo-Pakistan Chamber of Commerce really takes off.

A Karachi-based businessman who visited Delhi in August – and was a regular invitee to Delhi's golf club during his stay in the capital – was amazed at the warmth and hospitality he got from businessmen in Delhi. "At the Delhi Customs I was made to wait unnecessarily for five minutes and I was truly amazed when the officer came and profusely apologised to me. I have decided never to come to India via Mumbai because Mumbai Customs people are always hostile to Pakistani passport holders," he said.

BESET with problems, not the least the economic crisis and the heavy foreign-debt, the Nawaz Sharif Government, despite its brute majority in the National Assembly, finds itself on the defensive as the opposition parties are getting organised against his ruling Pakistan Muslim League.

The Kashmir bogey has become extremely useful to successive governments in Pakistan which wanted to divert attention from domestic problems. The post-Kargil situation is no different. The line that the Pakistan government has tried hard to sell to the people is that Kargil was after all a result of the aspiration of the mujahideen, or the "freedom fighters of Kashmir", to get "justice for their Muslim brethren in the valley".

Of late the Government has taken a lot of flak from human rights and gender rights activists within and outside the country for allowing a barbaric concept like 'honour killings' to thrive. The essence of this concept is that if a woman in your family has compromised the family's 'honour' by either entering into a marriage of her choice or seeking/getting a divorce, or worse, by getting raped, you can kill her and even the courts will wink at the crime, as 'family honour' is involved. Such killings are prevalent more in the tribal areas but the sanction and support they get sometimes from even the urban elite is surprising.

RASHEEDA BHAGAT

Ghulam Khibria, a retired bureaucrat and a former U.N. consultant.

RASHEEDA BHAGAT

Akhtar K. Alavi, general manager of Adamjee Insurance.

On the overall gender or human rights front too, Pakistan does not have good record. In this background, it is with a lot of glee that Pakistan holds up the mirror unto India when it comes to violation of human rights in the valley. Forever challenging India to a plebiscite in Kashmir, the average Pakistani asks: If the people of Kashmir really want to stay with India, why do you need such a massive concentration of troops in the valley to "control the Kashmiri Muslims"? Or, if Pakistan is really fomenting terrorism in Kashmir, as India claims, how come it is able to succeed only in Kashmir, and not Rajasthan?

GHULAM KHIBRIA is a strident critic of all Pakistani regimes and has written books in which he argues that the country has been destroyed by its "privileged classes". It is with a lot of bitterness that he talks about those "like Jawaharlal Nehru and Mohammed Ali Jinnah taking both India and Pakistan to the brink of disaster".

He bursts into tears as he says in a choked voice: "We should have been far, far ahead. Ahead of China, with the best among the developed nations of the world."

Attacking Nawaz Sharif as an "elected dictator" and accusing Vajpayee of "exploiting Kargil for electoral gains", he says that Pakistan committed a blunder in Kargil. "Because it is an amateur government they did the whole thing like amateurs. In Kargil they shouldn't have sent their own people. When there is guerilla warfare you shoot the enemy and run back. You went there and you were strangled. That was a bad military strategy."

Coming down heavily on the Sharif government for first being 'stupid' and then indulging in 'double talk', he wondered how any mature government, after saying our army is not involved, "honour its defence people over PTV for their involvement in Kargil? This shows they have no political foresight at all".

SURPRISINGLY enough, one found a lot of faith in Vajpayee in both Islamabad and Karachi. The Sangh Parivar would be stunned to know that many Pakistanis are praying for the return of a BJP government in India as they feel that a "Hindutva Prime Minister" will have better credentials back home to solve the Kashmir issue rather than a Congress Prime Minister who is bound to be slammed for "selling the country to Pakistan", in case of any deal over Kashmir.

However, Khibria has little faith in Vajpayee. "It will be very good if he displays any maturity. But even if he is mature, he is surrounded by very stupid people, just like Sharif. I was very happy when the Lahore Declaration was signed. But either directly or under some pressure, Sharif succumbed later."

While Khibria feels that Pakistan has all the right in the world to "go and assist the Kashmiri people fight for freedom if they don't want to stay with India", he is all for an early solution to the Kashmir issue. "Can't both India and Pakistan – one is 50 per cent illiterate and the second 90 per cent illiterate – realise how much of the taxpayer's money they are spending on defence?"

According to him, a workable solution on Kashmir would be to decide through dialogue that "Azad Kashmir in Pakistan and Azad Kashmir in India will be independent. Let them both form a confederation with both India and Pakistan looking after their foreign affairs and defence." ■

East Timor's agony

The disputed Indonesian province is rocked by violence before and after a referendum throws up an overwhelming popular mandate for total independence.

P.S. SURYANARAYANA
in Dili, East Timor

THE "popular consultation" in East Timor on August 30 under the auspices of the United Nations was nothing short of a unique exercise in constitutional engineering – a plebiscite in all but the name. It was aimed at determining the political future of a disputed province of a sovereign state and was carried out by the U.N. in conjunction with the security apparatus of the host country.

The U.N., in consultation with the Indonesian Government, provided the people of East Timor with an option to vote for total independence from Indonesia. Such a transition can take place only with the consent of the rest of Indonesia, and this implies challenges for both the U.N. and Jakarta.

As high as 78.5 per cent of the East Timorese electorate, numbering around 4.5 lakhs, voted for independence to their territory, a former colonial outpost of Portugal, which is now a province of Indonesia though not internationally recognised as one. The result was announced by U.N. Secretary-General Kofi Annan on September 4. However, in the following days, a cloud of uncertainty hung over the follow-up action to be taken by Indonesia – a state which is itself going through an indecisive phase of political transition – for the proper implementation of the mandate.

EXTENSIVE violence preceded the referendum. The United Nations Assistance Mission in East Timor (UNAMET) and the mostly-Western international observers blamed much of it on an armed pro-Indonesia militia. Unrest, bordering on a civil war, followed polling and escalated in the wake of the announcement of the result. (Only about 21 per cent of the East Timorese opted for wide-ranging autonomy under Indonesia's protective wings.)

However, the voting itself passed off in an atmosphere of near-perfect peace. But within hours of the closure of the polling, a local employee of UNAMET was murdered at an outlying spot, Atsabe in the Liquisa sector. UNAMET and international observers are of the opinion that it was the anti-independence militia that committed the crime. An investigation has been ordered into the killing.

DAVID LONGSTREATH/AP

A queue of voters outside a polling station in Dili. The referendum was largely an orderly exercise.

The peaceful conduct of polling was hailed by Jamsheed Marker, the U.N.'s Special Representative for East Timor (he was formerly Pakistan's Permanent Representative at the U.N.), as follows: "The eagle of liberty has spread its proud wings across East Timor." The perhaps unintended pun on the eagle, the all-American symbol, as also the imagery of Indonesia's emblem of Garuda, which belongs to the eagle family, was not lost on observers. No less substantive was Marker's studied commendation of the Indonesian military

PAULA BRONSTEIN/GAMMA LIAISON

A man killed in clashes between pro-government militia and pro-independence groups; faces of anger and aggression.

and civilian elite for ensuring peaceful voting.

A "positive report" submitted by Marker to the U.N. high command on the polling was, however, eclipsed by violence that followed it. On September 1, fires raged outside the UNAMET office in Dili as pro-Jakarta militiamen, suspected to be backed by the Indonesian Army, clashed with pro-independence fighters. At least two by-standers were killed in the incident. Even as UNAMET chief Ian Martin maintained that the outbreak of violence outside the U.N. compound in Dili on September 1 was not aimed at UNAMET, there was a flare-up of anti-U.N. sentiment.

This correspondent witnessed a clash between the pro-Indonesia militia and the pro-independence group outside the UNAMET premises. Journalists, including this correspondent, a U.N. military-security liaison officer and a few others were chased by the militia. On the eve of the polling, a militiaman riding a motorcycle reached for his weapon as soon as he was stopped for information. Sword-wielding pro-independence groups guarding street corners during nights was a common sight. Indonesian security forces constantly patrolled the streets. However, on the day of the clashes outside the UNAMET office, military personnel just watched the scene from inside their camp, which was nearby.

A roadside blockade of UNAMET personnel, including its international and local staff, at Atsabe on August 31 was lifted after joint intervention by a local Indonesian military commander and UNAMET's top security-liaison official, Ian Mills. However, soon after, attacks on UNAMET officials and pro-independence East Timorese intensified, with the announcement of the result on September 4 serving as a catalyst. UNAMET evacuated its staff from several centres outside Dili, while non-essential U.N. staff were airlifted outside East Timor by Australia, Indonesia's geopolitical neighbour, which has a strategic stake in this territory.

By September 6, independent estimates placed the number of persons killed since polling, including UNAMET's local staff, at between 25 and 150; scores are

MUCHTAR ZAKARIA/ AP

Indonesian President B.J. Habibie (left) with the Speaker of the House of Representatives, Harmoko.

believed to have been killed during the campaign period. According to independent estimates the number of East Timorese killed since Indonesia's annexation of that territory in the mid-1970s number between one and two lakhs.

THE post-referendum uncertainties in East Timor have assumed novel diplomatic proportions. Indonesian President B. J. Habibie, who said that his Government would accept the East Timorese verdict, called upon his fellow-citizens to do likewise and asked the powerful Indonesian military to ensure peace in East Timor during that territory's transition to independence.

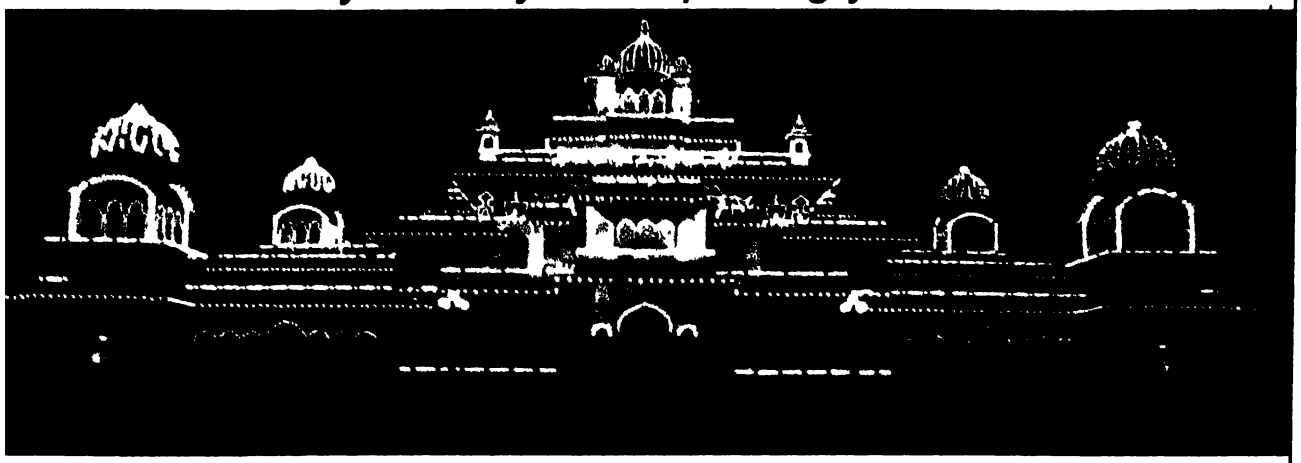
However, with Indonesia in a state of introspection following the East Timorese vote, especially in the context of suspicions among top political leaders and the military elite about UNAMET's "bias" towards the pro-independence sentiment in the province, the U.N. was forced, as on September 5, to promise that it would undertake a transparent exercise to prove that it was not being cavalier in dismissing allegations of irregularities in the polling process. In a sense, the U.N's move overshadowed the comment by U.S. President Bill Clinton that Indonesia should recognise that it had been beaten in a "fair and square" manner.

While Clinton, playing the role of global Santa Claus, commended the Habibie administration for having allowed the East Timor plebiscite to take place and for accepting the verdict, Habibie's critics in Indonesia believe that East Timor may well prove to be his Waterloo. (The country's presidential elections are scheduled for November.) Habibie's critics said that they were "aghast" at what they termed UNAMET's "bias" and at the possibility of a supposedly "independent" East Timor ending up as an "an annex" to some major power, perhaps Australia.

Australia's actions only served to strengthen their fears. Canberra suggested that a multilateral armed military force, comprising, among others, U.S. and Australian personnel, be stationed in East Timor as quickly as possible. This idea, however, flew in the face of Jakarta's insistence that its military would continue to bear the responsibility for security in East Timor until the Indonesian People's Consultative Assembly, which is still being constituted, could review the verdict sometime in November and decide on whether to allow the territory to secede or not. Jakarta's arguments are in line with the tripartite agreement it signed with the U.N. and Portugal on East Timor's future – the very accord that allowed UNAMET to hold the plebiscite.

DAVID LONGSTREATH/AP

Detained East Timorese leader Xanana Gusmao voting in Jakarta; election workers assigned by the U.N. count votes in Dili.



DAVID LONGSTREATH/AP

Some of the latest actions of the West have led Indonesia and other Third World countries to believe that the West may now be outlining a new concept – liberating those "suffering" from the alleged colonialism of those who have already been decolonised. In this context, the question of deploying a Western-led U.N peacekeeping force in the predominantly Roman Catholic East Timor, a disputed part of a Muslim-majority Indonesia, bristled with unprecedented complexities. It was also left to East Timorese leaders, including Xanana Gusmao, who is widely expected to be released from prison soon, Jose Ramos-Horta and Bishop Carlos Belo, to facilitate a smooth transition to independence by asserting their native roots and redefining their present image as allies of the West.

Two Indians were associated with the preparatory phase of the U.N's engagement in East Timor, although they did so in their personal capacities as experts and not as representatives of the Indian Government. Om Rathore, a police officer, was entrusted with the task of studying the deployment of international civilian police personnel and unarmed military consultants in East Timor for liaising with the Indonesian security forces during the mandate period of UNAMET. UNAMET's mandate has been extended until November-end. Also, Attorney-General Soli Sorabjee was commissioned by the U.N. agency to study the human rights situation ahead of the poll preparations, a task he accomplished to the satisfaction of the U.N. The overall presence of Indians or persons of Indian origin in UNAMET is limited. ■

Let history thank you for putting your name on it

Sponsor a monument of royal heritage like this one

Featured in the picture above is not a maharaja's palace, but the collection-wise delightful and architecturally brilliant Albert Hall Museum, in the sprawling Ram Niwas Garden of Jaipur. Designed by Sir Swinton Jacob in the Indo-Saracenic style, it was constructed 113 years ago. It houses a rare collection of ivory carvings, metalwork, cane & wooden articles, jewellery, pottery, paintings and a well-preserved mummy - a major attraction

Rajasthan Tourism invites corporate houses to sponsor monuments of royal heritage all over Rajasthan to ensure that their resplendent history remains alive through their upkeep.

Of course sponsoring any of these monuments would ensure that your corporate name becomes a part of history as well.

The Department of Tourism, Rajasthan will assist you to sponsor a heritage property in Rajasthan.

Write in or call for details.

GROWING UNEASE

Midway through the elections, the BJP seems to have lost its decisive edge and bravado as it faces the prospect of losing ground in the pivotal State of Uttar Pradesh.

AKHILESH KUMAR

SUKUMAR MURALIDHARAN
in Lucknow and Faizabad

SINCE 1991 when it won 120 seats in the Lok Sabha as the champion of an unalloyed form of political sectarianism, the Bharatiya Janata Party has set much store by the two States of Madhya Pradesh and Uttar Pradesh. These two States accounted for 63 of the 120 seats it won in the 1991 elections, 79 of its 161 seats in 1996, and 87 of its 182 seats in 1998. There has undoubtedly been a slow process of diversification of the sources of the BJP's power at the Centre. But the dependence on these two States, which between them account for 125 seats in the Lok Sabha, still remains heavy.

Against this background, the curious loss of momentum and initiative on the part of the BJP, just when the polling process has shifted to these two pivotal States, should occasion some surprise. What had been forecast in early opinion polls as a triumphal romp for the BJP and its allies now seems more closely to resemble a hard slog in the home stretch. What should have been the most comfortable electoral majority for any ruling formation in 15 years could now turn into a wafer-thin margin, susceptible to every manner of disruption from the fractious alliance that the BJP has led into electoral battle.

The inherent imperfections of the craft of poll forecasting were evidently not given sufficient attention in the early predictions of a sweeping triumph for the BJP. In a context that witnesses a diversity of configurations in the States – from bipolar to multi-cornered contests – there is no credible methodology for accurately converting the vote percentages obtained from opinion polls into a forecast of seats won. This debility is especially acute since all the forecasts were premised upon a broad choice of national voter samples and did not pay sufficient attention to the minutiae of the various States.

Aside from these imperfections, the pollsters evidently did not factor the dis-

AMIT BHARGAVA AP

orienting effects of the "Kargil inflation" into their calculations. Conducted for the most part before polling actually began in an unprecedentedly long election schedule, surveys of voting behaviour were easily beguiled by the pervasive aura of national well-being that the Kargil victory created. But just as the euphoria of military victory exerted an undue influence over the early rounds of polling, its impact on the later rounds tended towards a progressive dilution. It just so happens that the latter three rounds of polling take in all the constituencies in U.P., and 26 of the 40 constituencies in M.P.

Ultimately, it is on the outcome in U.P. that the fortunes of the BJP-led coalition will revolve. Since single-party dom-

A violent turn in the third phase

V. VENKATESAN

MORE than half the electorate has voted by the end of the third phase of polling in the five-phase Lok Sabha elections, scheduled to end on October 3. The second phase on September 11 and the third phase on September 18 recorded moderate polling, with some major incidents of violence.

An estimated 56.22 per cent of the 15.23 crore voters in Andhra Pradesh, Jammu and Kashmir, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Rajasthan and Tamil Nadu voted in the second phase, which covered 123 constituencies. Assembly elections in Maharashtra and Karnataka were also completed in this phase. The first phase on September 5 had recorded a voter turnout of 58.17 per cent.

In the trouble-torn regions of Jammu and Kashmir, Jammu registered 45 per cent polling, Udhampur 35 per cent and Srinagar 11.96 per cent. Cross-border firing did not deter a significant number of voters in the State. Maharashtra's Minister of State for Revenue Udayan Raje Bhosle, the Bharatiya Janata Party candidate for the Satara Assembly seat, was arrested in connection with the murder of a Nationalist Congress Party activist. The Election Commission (E.C.) ordered repolling in 80 booths (14 in Madhya Pradesh, two in Kerala, 22 in Andhra Pradesh, 19 in Tamil Nadu, three in Karnataka, and 20 in Rajasthan) after the second phase.

The BJP complained to the E.C. about "booth capturing" in Hyderabad, besides in Kota, Dausa and Jhalawar in Rajasthan. In the Siripur Assembly seat in Andhra Pradesh, polling was postponed after the Telugu Desam Party candidate, P. Purushottam Rao, was killed by suspected naxalites.

The third phase of polling covered 76 Lok Sabha seats in Andhra Pradesh, Bihar, Uttar Pradesh, Madhya Pradesh and Baramulla in Jammu and Kashmir. Polling also took place in 97 Assembly constituencies in Andhra Pradesh. Elections to the Hoshangabad and Vidisha Lok Sabha constituencies in Madhya Pradesh were postponed from September 18 to September 28 because of incessant rain and flooding.

The average voting in the third phase was 53 per cent. Electronic voting machines were used in four constituencies – Bhopal, Allahabad, Kanpur and Agra. Andhra Pradesh registered 61 per cent polling, followed by 57.5 per cent in Bihar, 51 per cent in Uttar Pradesh, 45 per cent in Madhya Pradesh. Baramullah recorded a voter turnout of 27 per cent.

Bihar and Uttar Pradesh joined the polling process only in the third phase. Bihar witnessed massive violence, engineered by naxalites (story on page 27). A Congress(I) leader was stabbed to death in Warangal district of Andhra Pradesh. Rastriya Rifles jawans killed two militants who had allegedly tried to intimidate voters in Baramullah.

The E.C. planned a month-long polling exercise in order to facilitate the movement of Central paramilitary forces from one State to another to ensure peaceful elections. However, critics said that the phased elections probably helped violent groups move from one place to another.

Chief Election Commissioner M.S. Gill, who had expressed satisfaction over the peaceful conduct of the first and second phases of polling, was at a loss to explain the violence that marked the third phase. He claimed that most deaths in Bihar were caused by landmine blasts and were linked to socio-ideological conflicts.

In response to a complaint from the BJP and the Samata Party that an excessive number of ballot papers had been printed

AIJAZ RAHI / AP

Relatives grieve over the body of Altaf Mir, who was allegedly shot dead by Army troops in Haigam village near Srinagar for refusing to vote on September 18.

inance of Indian democracy was shaken in 1967 and irretrievably shattered in 1989, several changes of regime have been witnessed in Delhi. In 1991, P.V. Narasimha Rao managed to put together a tenuous parliamentary majority – premised upon the goodwill of several parties that had greater reason to oppose the BJP than the Congress(I) – with only five seats from U.P. The United Front coalition that followed had a more substantial parliamentary representation of 19 from the State.

Except for these two interludes, U.P. has always been a decisive factor in any change of regime at the Centre. The transformation of the BJP from its role of Opposition in 1991, to short-lived power in 1996 and then a relatively more durable tenure in authority in 1998, has been underpinned by its ability to keep this pivotal State firmly in its corner.

Today, for the first time since it was famously thwarted by an alliance of the Samajwadi Party and the Bahujan Samaj Party in the 1993 Assembly elections, the BJP faces the prospect of actually losing ground in U.P. These expectations have acquired an unmistakable aura of menace for the party's plans to ride back to power. Emergency measures have been initiated to retrieve ground that rapidly threatens to slip out from under the party in the Lok Sabha constituencies that go to the polls on September 25 and October 3. These include raising the pitch of the campaign in all the constituencies by drafting a number of the BJP's more prominent central leaders.

SEVERAL factors have converged to generate this turbulence in the last phase of the BJP's triumphal march. First, the social coalitions crafted in the crucible of the campaign for the temple at Ayodhya have begun to come apart. Secondly, the incumbency disadvantage is doubly compounded in the case of U.P., since the BJP has been in power at both the Centre and State levels. Public perceptions of sloppy performance by elected representatives are unlikely to be submerged in contrived projections of national glory acquired under the leadership of Atal Behari Vajpayee.

The amalgam of upper castes and backward classes that the BJP put together during the Ayodhya movement was always an unstable political combine. It only took a relatively uninterrupted occupancy of power – just under two years in this case – for all the inherent contradictions to sharpen. Today, the BJP is in mortal danger of losing the entire constituency of Lodh Rajputs, a numerically significant presence in a vast tract of central U.P. Chief Minister Kalyan Singh, himself a Lodh, has conspicuously absented himself from an active campaign role. His rift with the Rajput-Brahmin-Bania combine, which has always contested his dominance of the party in the State, now appears to have reached a breaking point.

A number of constituency-specific initiatives have been worked out by the BJP to combat this particular threat. Uma Bharti, the saffron clad politician of backward class extraction, is being despatched to U.P. to stem the tide of defections from the ranks that Sakshi Maharaj, another politician in the robes of mendicancy, has been orchestrating. Kalyan Singh himself is being cajoled to take up the campaign in pockets where he would have no reason to object to the choice of the party's nominees.

The extra campaign effort also includes a planned four-day tour of the State by Vajpayee just before the last phase of polling on October 3, on which day polling is scheduled to take place in 31 constituencies in the State. How far these would turn the tide remains a matter for speculation. When ground realities turn adverse it often is futile to expect salvation from forces on-high. The BJP may additionally have reasons to worry about the outcome in M.P.

SINCE plumbing the depths with only 31 per cent of the popular vote in the 1996 Lok Sabha elections, the Congress(I) in M.P. has set itself on a steady path upwards. It obtained 39 per cent of the vote in 1998 and dramatically raised its share to the winning figure of 45 per cent in the November Assembly elections. Chief Minister Digvijay Singh has successfully placated all sources of dissension within the party and enjoys the kind of popular acceptance that could propel the party to a similarly strong showing. That would be a decisive setback to the BJP's ambitions of emerging with a clear-cut majority in Parliament.

The declarations of victory then were clearly premature. No longer are elections decided as a referendum on the personalities of contending political leaders. Nor indeed is the transient euphoria of military achievement an adequate substitute for the hard slog of providing a sense of direction to the task of administration at the Centre. Although it seems the most likely outcome of the 1999 elections is that the BJP and its allies would be given the first claim to the formation of a government at the Centre, few today would be prepared to swear that the second Vajpayee administration will be in any way more purposive or more durable than the first. ■

in Bihar, the E.C. despatched two special teams, one each to Calcutta and Patna, to verify allegations of large-scale printing and distribution of duplicate ballot papers. Quoting the Director of the Intelligence Bureau (I.B.), Samata Party president and Union Defence Minister George Fernandes alleged that 65,000 duplicate ballot papers meant for Barh and Nalanda (from where Samata Party leaders Nitish Kumar and George Fernandes were contesting) had been printed at the West Bengal government-owned Saraswathi Press in Calcutta. However, Fernandes' claim that the I.B. Director had confirmed his charges was denied by the Union Home Ministry. His indiscretion in dragging a senior official into the controversy for partisan ends was widely criticised.

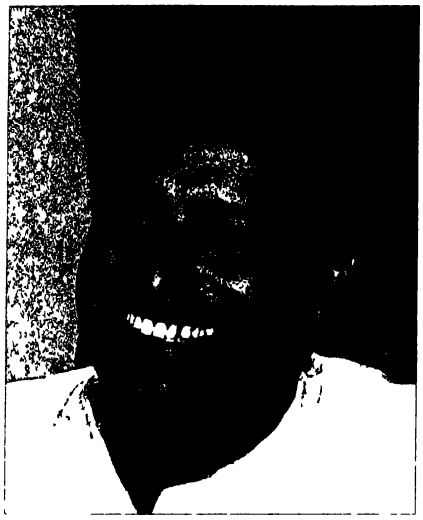
The acting Governor of Bihar, Justice B.M. Lal, asked the E.C. to transfer civilian and police officials whose actions were suspect and to deploy adequate forces in sensitive areas. The acting Governor reportedly blamed the E.C. for not taking adequate measures to prevent the large-scale violence that took place on September 18. He also expressed dissatisfaction over Election Commissioner G.V.G. Krishna-murthy's claim that there were no fake ballot boxes. Justice Lal is due to retire as the Chief Justice of the Patna High Court on October 6. Even Prime Minister Atal Behari Vajpayee cast doubts about the E.C.'s role in the "fake ballot boxes" controversy.

Meanwhile, the BJP had a difficult time fielding a candidate in Anantnag, Jammu and Kashmir. Dr. Abdul Rehman Sheikh was named the BJP candidate to replace Ghulam Haider Noorani, who was killed in a landmine blast on September 7. Barely 24 hours after he was nominated, Sheikh's son was kidnapped and he refused to contest. Sheikh paid a hefty ransom for his son's release. The BJP then announced Showkat Hussein Wani, who was allegedly linked to the kidnapping, as its candidate in Anantnag. Showkat filed his nomination papers. Anantnag will go to the polls on October 4. ■

Changing scene

The presence of four strong political formations in the fray, and the likely shift in the voting patterns of the castes and communities forming their support bases, have made the electoral outcome highly unpredictable in Uttar Pradesh.

SUKUMAR MURALIDHARAN



A CURIOUS air of detachment prevails in the Bharatiya Janata Party office in Faizabad, Uttar Pradesh. Party volunteers sprawl indolently on mattresses laid out on the floor, not really seeking public attention with the fervour customary of an election season. Vinay Katiyar, the battering ram of the BJP's Ayodhya mobilisation, is out campaigning to regain the seat he lost in 1998 after successive triumphs in 1991 and 1996. But his party workers are unaware of his location and itinerary.

Just days earlier, Vishwa Hindu Parishad chieftain Ashok Singhal had been to Faizabad to campaign for his embattled protege. At two rather sparsely attended public meetings, he never once raised the issue of the Ram temple at Ayodhya. In the discourse of the VHP, Ayodhya had obviously been supplanted by Kargil as a symbol of resurgent Indian nationalism.

The palpable sense of indifference in the BJP camp is curious. By any reckoning, the party stands a good chance of regaining Faizabad, a seat of symbolic importance ever since it became the focus of the ritualistic politics of the Ayodhya movement. On basic arithmetical logic, it faces an Opposition that is splintered three ways, rather than two ways as in 1998. In obvious ire at being denied the ticket, Mitrasen Yadav who won the seat for the Samajwadi Party in 1998, is contesting as an independent candidate. Having won twice from Faizabad – the first time as a Communist Party of India candidate in 1991 – Mitrasen has a presence in certain pockets of the constituency. Moreover, he is impossible to ignore because of the energy and zeal he brings to his campaign and the various debts of honour he is known to call in at election time.

The Samajwadi Party ticket this time around has been given to Heeralal Yadav, a zilla parishad-level politician of limited horizons and unthreatening mien – attributes that make him an appropriate standard-bearer for party supremo Mulayam Singh Yadav. Should the two Yadav candidates split the 250,000 votes that the Samajwadi Party obtained in 1998, then Katiyar, who lost by fewer than 8,000 votes, should have an easy time. The Bahujan Samaj Party is also in the fray and is not expected to suffer serious diminution in the 19 per cent vote share it recorded in 1998.

Katiyar's problems emanate from a rather unforeseen quarter. After having virtually sat out two elections, the Congress(I) has returned to the contest in Faizabad with a new energy. Gone is the lack of purpose and direction so evident in 1996, when the Congress(I) gave the ticket to a local college teacher best known for his manic advocacy of the temple project at Ayodhya. Absent too is the indifference of 1998, when the Congress(I) ceded the seat to Ajit Singh's party, which did not have even a token presence in the region.

SHANKER CHAKRAVARTY

Vinay Katiyar, the BJP candidate in Faizabad.

The Congress(I) this time has fielded Nirmal Khatri who came to prominence as the local legislator in 1980 and as the youngest member of the U.P. Ministry. He subsequently won the election to the Lok Sabha in 1984, but withdrew from active political engagement after a narrow loss in 1989 and an abject failure of initiative in his party over the BJP's pursuit of the Ayodhya project. A grand-nephew of Acharya Narendra Dev, Khatri brings the prestige of a respected political dynasty to the campaign. But he faces a long haul in pushing the Congress(I)'s tally of the popular vote up from the region of 2 per cent – where it has lingered in the last two general elections. As a member of a minuscule Khatri community, he cannot recruit caste loyalties to his cause. But his campaign managers expect a substantial number of votes to accrue on the strength of his aura and personality. The erosion of Katiyar's image and the deflation of the Ram temple as an issue are expected to contribute the rest. The energetic campaign mounted by the Congress(I) in Faizabad strongly conveys the impression of a party that senses a dramatic – and imminent – reversal of fortunes.

IN nearby Rae Bareli, the man who was partly responsible for initiating the Congress(I)'s fatal flirtation with Hindu communalism as Rajiv Gandhi's closest political confidant, affects an air of supreme confidence. Arun Nehru, Minister of State for Home Affairs in the Rajiv Gandhi administration and later a member of the V.P. Singh Cabinet, is today the standard-bearer for the BJP in a constituency he has won twice before for the Congress(I). He confronts Satish Sharma, a longtime Gandhi family intimate, fighting on the Congress(I) ticket. He is busy calling in old associations from the decade of the 1980s, when he represented Rae Bareli in Parliament.

Arun Nehru's confidence emanates from his reading that between 1980, when he first won with 68 per cent of the vote and 1998, when the Congress(I) logged 7 per cent, the party he once represented has suffered irreversible damage.

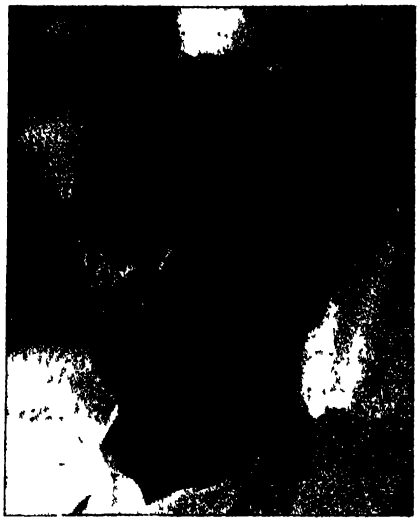
Ashok Singh, an old lieutenant of Arun Nehru's, had won Rae Bareli for the BJP in 1998. He switched loyalties to the Congress(I) when the current elections were called, in the evident belief that he would

be given the party ticket for the constituency. He has not taken well to Satish Sharma's late entry and is in a mood to wreak vengeance. In part, the implications can be seen in the conduct of his brother, Akhilesh Singh, a Congress(I) legislator from Rae Bareli known for his ferocious turf instinct.

On September 18, Arun Nehru notably conducted a successful election meeting at Amanwa. The village, 18 km from Rae Bareli, is known to be the operational base from which Akhilesh Singh launches all his intimidatory forays into adjoining areas to enforce compliance with his political diktat. In allowing Arun Nehru the relatively unfettered freedom to operate within his domain, he seemed to signal a more positive disposition towards the BJP.

The S.P. has put up Gajadhar Singh, a zilla parishad-level politician from the Rajput community. This offers the option of caste consolidation to Ashok Singh and his family of traditional feudal overlords. A shift of the Rajput vote to the S.P. could cause a serious upset. Fighting on the BJP ticket, Ashok Singh had in 1998 prevailed over his S.P. rival by just over 40,000 votes. This is evidently a margin that can easily be bridged, given the new configuration of caste loyalties.

Despite fielding a relatively high-profile candidate, the Congress(I) is not seen to be seriously in the race in Rae Bareli. Relative to Faizabad, the Congress(I) starts here with a lesser disadvantage. Its vote share in the last two elections has averaged about 8 per cent. But unlike the candidate in Faizabad, Satish Sharma has shown little inclination to go out and hustle up the votes. Though essentially seen as a contest between the BJP and the Congress(I), Rae Bareli could well be transformed into one between the S.P. and the BJP.



A CONGRESS(I) revival in U.P. – if such is indeed under way – is not going to be a spontaneous affair or one occasioned merely by dynastic charisma. In the western sector of the State, it is the strategic alliance with Ajit Singh's party that holds the key. And in other parts, it is premised on a credible effort to seek the votes, to bring back sections that have strayed away from their traditional allegiance to the party. Reassembling the Congress(I)'s traditional social coalitions also involves restoring the party's organisational network, bringing back the cadres who will keep the machinery working through the campaign and the polling process.

It is in these respects that Faizabad and Rae Bareli offer a study in contrasts. Aside from the town squares and main district roads, the Congress(I) seems to have little penetration in Rae Bareli. And its candidate is a person who is unfamiliar with the region and detached from its ethos and identity.

"There has been a disease within the Congress(I) over the last two decades," says Surendra Pratap Singh, member of the All India Congress(I) Committee and election agent for Nirmal Khatri in Faizabad. "Organisational work and cadre building," he says, "have come to a halt." The consequences have been apparent in the Congress(I)'s precipitate plunge from a dominant position in the 1980s to the parlous state of 1998. Dynastic charisma has never been a factor of significant moment in the State. Among all the States that went to the polls in two stages in 1991, U.P. manifested the smallest magnitude of a "sympathy vote" after the Rajiv Gandhi assassination. Each round of elections since then has brought the Congress(I) closer to extinction. Even a strategic alliance with the BSP in 1996 only brought it temporary succour. A large number of its elected legislators split to make common cause with the BJP early in 1998, in what seemed the death-blow to the party in the State.

Former Union Minister Arun Nehru, the BJP's standard-bearer in Rae Bareli.

SANDEEP SAXENA

Satish Sharma of the Congress(I), who is pitted against Arun Nehru.

In a sense, the 1998 elections marked the final denouement of the politics of convenience that the Congress(I) has always played in U.P. Failure to respond to the challenge of backward class mobility and political assertion in the 1960s was the first of the defaults. Inaugurating the politics of competitive communalism in the 1980s – opening the doors of the Babri Masjid to Hindu worship and overturning the ruling of the Supreme Court on maintenance for Muslim women – was the final and fatal error.

Uncertainty over which constituency to cultivate in U.P. was compounded by a sequence of disastrous alliances. Against the party's best interests, Rajiv Gandhi concluded a pact with Mulayam Singh Yadav in 1990. The consequence was the Congress(I)'s relegation to third position in the State in 1989 – behind the BJP and the still extant Janata Dal. It only took the complete conquest of the Janata Dal by Mulayam Singh to propel him to second position in U.P.'s political landscape. And the BSP meanwhile was whittling away the Congress(I)'s traditional base among Dalits, to emerge as the third really major player in the State by the 1993 Assembly elections.

Confronted with a challenge from the land-owning backward classes, Sampurnanand, one of the dominant faction leaders within the Congress(I) for much of the 1950s and 1960s, had forcefully endorsed "the continuation of the upper classes coalition in the Congress(I)". This, he argued, would ensure the party's "influence in rural areas".

The idea was clearly to cement the allegiance of Dalits and Muslims to this coalition of upper classes, to ensure continuing Congress(I) hegemony in the State. That strategy came a cropper when the Congress(I), in response to the demands of its upper caste constituencies, began stirring up the Ayodhya controversy in the mid-1980s. Muslims were progressively alienated and switched their loyalty to first V.P. Singh and then Mulayam Singh. Concurrently, Dalits were falling under the spell of the BSP, which promised them empowerment in a very direct way in local institutions, rather than the share in a sys-

tem of upper class patronage that the Congress(I) held out.

If the pattern of partisan loyalties that crystallised in the 1990s is to splinter in the Congress(I)'s favour, it would have to be at the expense of the S.P. In 1993, the S.P. had demonstrated, in alliance with the BSP, the ability to assemble sufficient numbers on the ground to overwhelm the BJP. But in subsequent years, it also demonstrated the manifest tendency to wreck this consolidation of forces in pursuit of its own narrow interests. The subsequent contests in 1996 and 1998 have shown that the S.P. is incapable of assembling the coalition of social forces that could actually empower the backward classes and Muslims. This provides an incentive to Muslims to turn to the Congress(I), which remains the only serious national alternative to the BJP.

This factor is offset by a fraying of the BJP's winning combination in U.P. – between the forward classes which traditionally provided the leadership cadres to the Congress(I) and the relatively less prosperous backward classes. An analysis of voting behaviour from the 1996 Assembly elections in U.P. reveals that the BJP won 76 per cent of the forward caste, 53 per cent of the "most backward caste" and 58 per cent of the Scheduled Tribe vote. The S.P. and its allies, in comparison, assembled their legislative strength on the basis of 67 per cent of the Muslim vote and 52 per cent of the "landed backward caste" vote. The alliance of the BSP and the Congress(I) won a significant share of the Muslim vote, but was essentially dependent for its sustenance on the Scheduled Castes, of whose vote it won no less than 73 per cent. Only 6.7 per cent of the forward castes voted for this alliance, which provides the basis for BSP leader Mayawati's assertion that her votes are transferable to the Congress(I), though not *vice versa*.

A marginal shift of the backward caste vote from the BJP to the S.P. could radically alter the balance of forces in U.P. But if this is accompanied by a shift of Muslim voters to the Congress(I), then the BJP's own strength may not be seriously impaired despite an erosion of its vote share. The possibilities are as diverse as the State of U.P. itself. The trend of the campaign shows that the Congress(I)'s gains will be patchy and contingent on a host of local circumstances. But the overarching probability of the BJP taking substantial losses in U.P., which provides almost a third of its parliamentary strength today, cannot be denied. ■

■ COVER STORY

Political paradoxes

In this election, the secular vote is more sharply divided in Uttar Pradesh than in previous elections, largely owing to the political resurgence of the Congress(I). Even so, the BJP appears likely to face an erosion in its support base and its tally of seats.

VENKITESH RAMAKRISHNAN
in Uttar Pradesh

THE electoral scene in the 85 Lok Sabha constituencies in Uttar Pradesh is somewhat paradoxical this time. In the two previous Lok Sabha elections, in 1996 and 1998, the split in the secular vote between the Samajwadi Party (S.P.) and the Bahujan Samaj Party (BSP) helped the Bharatiya Janata Party win a majority of the seats in the State. This time, the secular vote is bound to be more divided than before – particularly since a resurgent Congress(I) has forced a quadrangular contest in a sizable number of constituencies. Yet the BJP, which should ordinarily have benefited from such a division of the secular vote, may end up winning fewer seats than it did in 1998.

V SUDERSHAN

Chief Minister Kalyan Singh. The anti-incumbency mood towards the BJP-led coalition Government he heads in Uttar Pradesh is a crucial factor at play in this election.

This political situation, astonishing in many ways, has come about essentially on account of four factors. First, the strong anti-incumbency mood towards the Kalyan Singh-led BJP coalition Government in the State, which may prove to be the decisive factor in almost every constituency in Uttar Pradesh. Second, the shift in the votes of those belonging to the upper castes, particularly Brahmins, from the BJP to the Congress(I), and the growing support for the Congress(I) among Muslim minorities. Third, the denial of the ticket to former BJP MP Sakshi Maharaj and the resentment it has caused among large sections of the Lodh Rajput backward caste community, which traditionally supported the BJP. Fourth, the vote arithmetic factor that is bound to give an edge to the party that finished second in each constituency in the previous elections. Going by campaign trends, this will help either the S.P. or the BSP in at least 18 constituencies, and the BJP in seven constituencies.

The absence of a sense of euphoria over the "great Kargil victory", which the BJP appeared to be banking on, and the failure of the public to share in the BJP's appreciation of the "sterling leadership qualities" of Prime Minister Atal Behari Vajpayee, are two other factors that are certain to work against the BJP.

The party that is expected to make the biggest and most dramatic gains from all this is the Congress(I). A party that had fared as badly as it did in 1998 – it did not win a single seat – can, of course, only improve its performance this time. To what extent the other political forces in the State, such as the S.P. and the BSP, can benefit from a possible erosion in the BJP's strength is a trifle unclear. For in those constituencies where the two parties had won in 1998, they may be affected by the "anti-incumbency" sentiment directed at the sitting MP. The Congress(I)'s blank

'Congress(I)'s stand has regained acceptance'

Interview with Salman Khurshid.

Salman Khurshid was appointed president of the Uttar Pradesh unit of the Congress(I) a year and a half ago specifically to rejuvenate the party which had been virtually wiped out in the State. As the State Congress(I) faces its first election under his leadership, the impression within the party and outside is that he has achieved a fair amount of success in his mission. Indications from the campaign theatre are that the Congress(I)'s position has improved vastly in recent times: it is no longer the defunct and lustreless organisation it was during the previous elections. In fact, some observers rate the Congress(I) as the most active and dynamic party in the State today, and for this, Salman Khurshid deserves credit. **Venkitesh Ramakrishnan** caught up with Khurshid first at his hometown of Farukhabad and later at Moradabad in the midst of his hectic campaigning. Excerpts from the interview:

▶ *It is widely acknowledged that the Congress(I) has revived itself in Uttar Pradesh in the past one year, but then there is also the view that the revival needs to be quantified. It is not difficult to revive an organisation that won no seat at all in the previous elections. How do you respond to these views?*

I agree that the revival of the party needs to be quantified. But seats in Parliament and the Assembly are not the only criteria for this. The growth in party units, cadre and membership has all gone into it. That is what has made the party very active on the campaign field. For me, however, the most important thing is that the party's viewpoint, the anti-communal, anti-casteist, secular and development-oriented agenda of the party has once again found acceptance with the people of the State. More and more people are realising that true stability and good governance can be provided only by the Congress(I). This in itself is a development for in the two previous elections, this vital national agenda had got completely subsumed by communal and caste politics.

▶ *What has caused this change?*

Obviously, the failure of caste and communal politics as represented by the Bharatiya Janata Party and the Samajwadi Party. Both the parties drew sustenance from each other and in the process vitiated the social atmosphere in the State. These parties used the minorities and the backward classes as mere vote banks. All this is changing.

▶ *But even during the current campaign, the S.P. and the Bahujan Samaj Party have accused the Congress(I) of having been the first to practise communal and caste politics. According to them it was the Congress(I) that first treated the minorities and the backward classes as vote banks.*

SANDEEP SAXENA

"More and more people are realising that true stability and good governance can be provided only by the Congress(I)... In the two previous elections, this had got subsumed by communal and caste politics."

These arguments have no value in the present context as we see more and more people, including Dalits and minorities, freeing themselves from the clutches of these parties which have narrow political considerations. Even the upper castes have realised that the kind of Hindutva politics practised by the BJP is detrimental to the larger interests of the country. I am not saying that the Congress(I) has committed no mistake in the past. But in spite of everything, it is clear that only the Congress(I) can tread a truly secular, centrist path and provide stable governance. These parties' arguments have also to be seen in the background of their activities. Look at the S.P. It is no secret that the S.P. leadership has a tacit understanding with the BJP in this election. How else do you account for the fact that the BJP has fielded weak candidates in seats which are crucial for the S.P., such as Kannauj, Sambhal and Mainpuri, and the S.P's reciprocal action in some seats that are crucial for the BJP? As for the BSP, its record is not creditworthy: it has time and again joined hands with the BJP. Only the Congress(I) has steadfastly kept away from the communal forces.

▶ *Yet you tried to forge alliances with these parties*

We never wanted an alliance with the S P But we did try for an alliance with the BSP because we believe that this party, despite all its mistakes, can still play an important social role.

▶ *According to BJP leaders, all talk of the Congress(I)'s revival is baseless, and the most important issue that has influenced voters this time is whether to have a* swadeshi *or a* videshi *Prime Minister...*

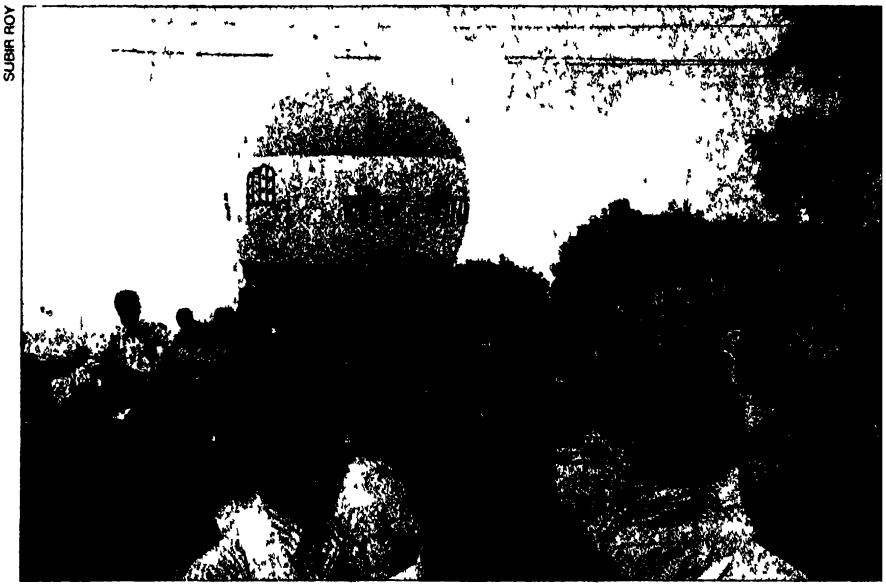
The BJP has been trying to rake up this issue for the last two years without much success. The elections will show what the people think of this frivolous piece of sloganeering.

▶ *Finally, what will the Congress(I)'s revival in U.P. mean in terms of the number of seats it will win?*

I would not like to hazard a guess on this. Suffice it to say that the State Congress(I) will make a significant contribution to the formation of a national government.

▶ *A national government of the Congress(I) or that of a coalition?*

Wait and see. ■



score-card in U.P. in 1998 means that it will face no such problem.

Undoubtedly, the Congress(I) is set to transform itself from the position of having been the only clear loser in the 1998 elections to being the only certain winner this time. In 1996 it won only five seats and secured 8.14 per cent of the popular vote in the State. In 1998, it lost all five seats, and its vote share slumped further to 6.02 per cent. In the view of political analysts, the Congress(I) in U.P. was the only major party to lose out on both counts. Both the BJP and the S.P. increased their seat and vote share; the BSP increased its vote share from 20.6 per cent to 20.9 per cent, although its seat share fell from six to four. Trends from across the State this time indicate that the Congress(I) is certain to increase its share of votes as well as seats.

The rejuvenation of the Congress(I) is evident most strikingly in the hill districts and parts of western and central Uttar Pradesh; the party is expected to do well in about 20 seats in these regions. The party is particularly well placed in the four constituencies in the hill districts. Led by veteran leader N.D. Tiwari, who is contesting from his traditional Nainital seat, the Congress(I) is putting up such a good show in the region that independent observers say that it may even make a clean sweep here.

In addition to the anti-incumbency mood against the State Government and the shift in the allegiance of Brahmins and other upper castes in favour of the Congress(I), two factors operate in this region. First, there is deep-rooted resentment against the Central Government for its failure to deliver on its promise to grant statehood to the hill districts. During the 1998 election campaign, the BJP had promised that a new state of Uttaranchal would be formed within 80 days of its assuming office. The people in the hill districts are incensed that this promise remains unfulfilled. The second factor that is likely to favour the Congress(I) is that its organisational base in the region is far superior to that of the S.P. and the BSP.

In Pratapgarh, former MP Ratna Singh, who is contesting for the third successive time, will benefit from the Congress(I)'s good organisational base. Similar is the situation in Shajahanpur, where former Congress(I) vice-president Jitendra Prasada is pitted against Union Minister Satyapal Singh Yadav of the BJP and Ram Murti Singh of the S.P. In Rampur, a strong grassroots-level support base coupled with the presence of a popular candidate – Begum Noorbhano, who finished second in 1998 – will work to the Congress(I)'s advantage. The BJP has fielded Mukthar Naqvi, Union Minister of State for Information and Broadcasting, but Noorbhano's charisma and the shift of the votes of Muslims are expected to see her through this time.

SUBIR ROY

At a Congress(I) election rally. The party is expected to make substantial gains in the State this time.

In at least five other constituences in central Uttar Pradesh, the Congress(I) is likely to benefit from the emotive appeal of the Nehru-Gandhi family. Amethi and Rae Bareli are considered the pocketborough of the family; this time Congress(I) president Sonia Gandhi is contesting from Amethi and Captain Satish Sharma from Rae Bareli. Similar political influences are at work in Sultanpur, Pratapgarh and Allahabad. The dynasty factor comes into play in Farukhabad too, where Louis Khurshid, grand daughter-in-law of former President Zakir Hussain and wife of State Congress(I) president Salman Khurshid, is in the fray.

Similarly, in six constituencies in western Uttar Pradesh, including the key seats of Meerut, Baghpat and Saharanpur, the Congress(I) is putting up a strong show in association with the Rashtriya Lok Dal (RLD) led by Ajit Singh. In this region, Muslim voters have almost completely deserted the S.P., which they had backed solidly until now. The reason for this desertion seems to be the perception that the S.P. may not be able to defeat the BJP owing to its inability to strengthen its support base among communities other than the minorities.

Scores of Muslims whom *Frontline* spoke to in various parts of western Uttar Pradesh underlined this point. A group of Muslims in the Shajahanpur region in Meerut said that only Muslims seemed to be voting for the S.P. and that this was not enough to fulfil their primary objective of defeating the BJP. Echoing these sentiments, Dr. Tariqat Ali, an Ayurvedic physician in Daula village in Baghpat constituency, said: "Our votes were going waste. We do not want that to happen again."

In contrast, the Congress(I) and the RLD, both of which are witnessing an improvement in their political fortunes over their abysmal performance in 1998, are drawing support from a section of the upper castes, Gujjars and Jats, in addition to that of Muslims – a formidable support base as they take on the BJP. However, the Congress(I) has not won such widespread support in central and eastern Uttar Pradesh, even in constituencies where it has won in the past. As a result, doubts about its winnability have prevented an *en masse* transfer of Muslim votes.

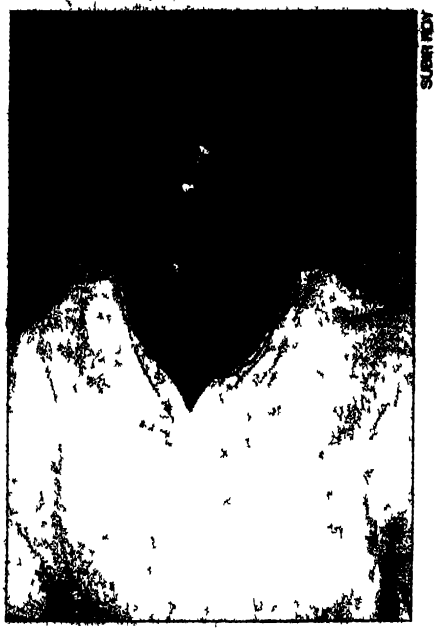
Resentment triggered by the choice of candidates and the lack of proper organisational machinery have accentuated this deficiency. In Farukhabad, a section of the party activists are upset by the "imposition" of political debutant Louis Khurshid; in Rae Bareli, the nomination of Satish Sharma has led to some heartburn. Former BJP MP from Rae Bareli Ashok Singh, who has a strong base among the upper-caste Thakur community and who resigned from the BJP two months ago, was hoping to get the Congress(I) ticket from here. The high command's move to bring in Sharma, an "outsider",

'There is a plot to discredit the BJP'

Interview with Rajnath Singh.

Rajnath Singh, president of the Uttar Pradesh unit of the Bharatiya Janata Party, brushes aside predictions that the party's tally in the State will come down in this election. In fact, he claims, the BJP and its allies will increase their strength and win at least the 60 seats it won in 1998. **Venkitesh Ramakrishnan** spoke to Rajnath Singh on the issues confronting the party in the elections. Excerpts:

▶ *There is a widespread impression that the BJP is losing ground in Uttar Pradesh.*



We have heard this repeatedly in the last three elections, but each time the party has improved its vote share as well as the number of seats. The same will be true this time as well. In fact, I am sure we will improve our position in areas where we were weak earlier.

▶ *But many observers believe that the anti-incumbency mood directed against the State Government led by Kalyan Singh is the most important factor at play in the State*

Look, any government that faces elections will experience the anti-incumbency factor. But it would be wrong to surmise that the anti-incumbency factor against the State Government is the most important factor in U.P. In my view, the one question that dominates the elections this time is: who should hold the Prime Minister's post - whether it should be in *swadeshi* hands or *videshi* hands? The question is agitating the people to a greater extent this time because this is the first election after India demonstrated its nuclear capability. A country that has the potential to produce atomic weapons cannot be ruled by people of foreign origin. It could have dangerous ramifications. The question is very sensitive and people realise its gravity. In this context, there is only one choice before the people of U.P., and that is Atal Behari Vajpayee, his party and the National Democratic Alliance (NDA) led by him. People have seen Vajpayeeji's track record of several decades and they have trust in it. The same cannot be said of his opponents.

▶ *Do you feel that the record of the Kalyan Singh Government will have no impact at all?*

I am not saying that. In any election, some questions related to the State gov-

SUSHIL KODY

ernment concerned do come up. But that is not the dominant issue. In any case, the present Lok Sabha elections cannot be treated as a referendum on the Kalyan Singh Government.

▶ *But many BJP MLAs feel that the State Government's record has jeopardised the party's chances to such an extent that it might end up with less than 40 seats. They feel that many internal problems, such as the deficiencies of governance as well as the dissident campaign against the Chief Minister, have not been addressed. There are reports that in many constituencies rival groups in the party are working to ensure the defeat of the party candidate belonging to the other group.*

Ours is a democratic party which allows freedom of expression. MLAs have expressed their opinion about their concerns. That does not mean they are working against the party. All party workers and leaders are united in their endeavour to garner the maximum number of seats in Uttar Pradesh and ensure that Vajpayeeji returns as Prime Minister.

▶ *It has been said that Chief Minister Kalyan Singh has not been campaigning too keenly for the party's candidates?*

He has campaigned actively and extensively.

▶ *But he did not go to Aligarh, his home constituency, as also to important constituencies such as Kannauj, where Samajwadi Party leader Mulayam Singh Yadav is contesting.*

It is clear that there is a conspiracy to discredit the BJP by highlighting non-existent internal problems. No leader can reach every nook and corner of the State. In any case, the Chief Minister knows that the party is strong in his home constituency.

▶ *There are also reports that the revolt of former party MP Sakshi Maharaj and his campaign favouring the S.P. were inspired by the Chief Minister, who belongs to the same community as the former MP.*

I cannot respond to rumours. In any case, the impact of the so-called revolt by Sakshi Maharaj is insignificant. It will have no negative effect on the party's prospects. ■

has angered Ashok Singh's supporters, who, by all indications, are backing the S.P. candidate, Gajendra Singh, a Thakur and a local politician.

Even in Allahabad, where the Congress(I)'s choice of candidate has not been questioned, the minorities are not quite ready to back the Congress(I) because the party is not seen as a winning prospect. The Congress(I) candidate, Rita Bahuguna, the city Mayor, has a good administrative track record, being the daughter of former Chief Minister H.N. Bahuguna, she has the support of sections of the upper castes. But her campaign is hampered by the absence of a Congress(I) organisational machinery, the campaign is being managed in large part by her mother Kamla Bahuguna, 75, who knows the constituency well

If Rita Bahuguna gets her act together, she can take credit for defeating two powerful candidates, Union Minister for Human Resource Development Murli Manohar Joshi of the BJP and former Deputy Chief Minister Reoti Raman Singh of the S.P But in order to be able

SUBIR ROY

A BJP rally in Lucknow on the day Vajpayee filed his nomination.

to do that, she needs to win over the support of the Muslims. Other seats where the party is putting up a good fight are Varanasi and Kanpur.

THE Congress(I)'s problem in areas other than western Uttar Pradesh and the hill districts is that the strong support it has among the minorities is not supplemented by a support base among other groups. And this is precisely the strength of the S.P. and the BSP in a large number of seats in Poorvanchal, Bundelkhand and Ruhelkhand. The S.P., which registered the biggest growth in terms of vote share in 1998 – it grew from 20.83 per cent in 1996 to 28.69 per cent in 1998 as compared to the BJP's increase from 33.43 per cent to 36 48 per cent – has constantly attracted new sections and communities to its fold.

Between 1996 and 1998 it added sizable sections of Thakurs to its traditional support base of Yadavs and Muslims. Party general secretary Amar Singh played on the feelings of resentment among this upper-caste community triggered by the short-lived BJP-BSP alliance of 1996-97. The party has fielded 19 Thakur candidates this time. The S.P. leadership further claims that it will benefit from the bitterness among Banias and a section of Brahmins against the State and Central governments. These claims are valid, at least in some areas of the State. In Kusmara and Kishni villages in Mainpuri district as well as in Etawah town, groups of Banias affirmed that they had shifted their loyalty from the BJP to the S.P. "Mulayam Singh Yadav keeps his word: he does not go back on his promise – as the BJP leaders do even after taking bribes," said Dinesh Chandra Aggarwal of Etawah.

According to senior S.P. leaders, seeing the party's ability to add to its support base, the Muslim community had felt encouraged to stay with the S.P., although a section of the minorities were unhappy over Mulayam Singh Yadav's failure to cooperate in the formation of an alternative government under Sonia Gandhi's leadership following the fall of the Vajpayee government. In Bahraich and Azamgarh constituencies, which were held by the BSP, it is believed that the accretion of support to the S.P. may persuade Muslims to back the S.P. this time. In constituencies such as Badaun, Mainpuri and Kannauj, where the Yadavs are the dominant community along with Muslims, the minorities will almost certainly support the S.P.

The S.P. suffered a series of jolts in the early stages of its campaign when 12 MLAs, including five belonging to the minority community, left the party. Many of them joined the Congress(I). The leadership claims to have made up for this loss by winning over leaders from other parties such as the BSP and the Congress(I) and by winning support from other caste groups. The S.P. has fielded six former BSP candidates, including Kamal Yusuf Malik, V.P. Nishad and Hari Prasad, who had in 1998 finished second in Domariaganj, Fatehpur and Robertsganj respectively. All three seats had been won by the BJP.

Despite resorting to such tactics, the S.P. will face a tough time retaining its seats in Jalesar, Mohanlalganj and Balrampur. The shifting of Muslim votes to either the Congress(I) or the BSP, and anti-incumbency sentiment at the constituency level, may pose problems. While the BSP is reportedly ahead in Jalesar, the BJP's chances seem to be bright in Mohanalalganj and Balrampur.

However, the S.P. hopes to benefit from the Sakshi Maharaj factor, which has effectively delivered to it the votes of a section of the backward castes – Lodh Rajputs. There is a significant presence of Lodh Rajputs in the 11 constituencies that lie between Mathura and Farukhabad; of these, the S.P. won only three in 1998. This time it hopes to wrest seven seats from the BJP. Whether these hopes will be realised is unclear, but it is evident that despite the loss of support of a section of Muslims to the Congress(I), the S.P. is still a force to reckon with in 35 to 40 constituencies. Even if it manages to win half of these, the party will be able to retain the 20 seats it won in 1998.

The BSP had in 1998 fielded a number of candidates from among the upper castes in order to gain the backing of these groups and add to its traditional support base among Dalits and Muslims. The enterprise did not succeed: the BSP's vote share increased only by 0.30 per cent, and the party's parliamentary strength came down by two seats. This time the party has decided to go it alone, hoping to secure the support of a substantial section of Muslim voters, who were believed to be deserting the S.P. The BSP has fielded 31 Muslim candidates, the most by any party. This strategy appears to be working in some constituencies such as Shahbad, Jalesar and Maharajganj, but not in others. In these three seats, the BSP candidates – Dawood Ahamed, Ramveer Upadhyaya and Talat Aziz – have taken the campaign scene by storm.

However, the BSP has always had a problem retaining seats. This time too the party faces a tough time in constituencies such as Bahraich and Azamgarh, where Arif Mohammed Khan and Akbar 'Dumpy' Ahmed respectively won in 1998.

Leaders of the BJP, including general secretary K.N. Govindacharya, say that in their estimation the BSP will finish second in the State, pushing the S.P. to the third place. The BJP had made a similar assessment in 1998 too.

The BSP hopes also to benefit from the "arithmetic factor" in at least 10 seats. Analysts estimate that this factor will come into play in seats where the S.P. or the BSP finished second behind the BJP in 1998 with a margin of less than 50,000 votes and the party that finished second (either the BSP or the S.P.) secured more than one lakh votes. These analysts believe that since both the parties draw their support from a similar voter-constituency (with the minorities playing a major role in their vote share), tactical voting by Muslims this time will help the party that finished second in 1998 to win this time. The BSP finished second in 13 such seats, and the S.P. in 10. Campaign trends in some of these seats, such as Shahbad, Aonla, Sitapur and Robertsganj, conform to this theory, but just how far it will be substantiated on a broader electoral plane remains to be seen.

Apart from all these factors, the BJP is handicapped by its cadres' lack of interest in electioneering, an entirely new experience for the saffron party. Leading the list of those whose sincerity in campaigning has been called into question is the Chief Minister, who has not toured Aligarh, his home constituency. Kalyan Singh, who is on record that the BJP high command has given a raw deal to the party workers from among the backward castes in the allocation of the party ticket in the State, is believed to be upset over the denial of the ticket to Sakshi Maharaj. (Kalyan Singh too belongs to the Lodh Rajput community.) BJP insiders alleged that the Chief Minister is tacitly supporting the S.P. in some seats and receiving reciprocal assistance in constituencies where candidates known to have his patronage are contesting.

Obviously, all this bodes ill for the BJP. According to Hariraj Singh Tyagi, a long-time associate of the late Socialist leader Ram Manohar Lohia, the churning within the BJP cadre shows that the rank and file is no longer ready to listen to the diktats of the leadership unquestioningly in the name of party discipline. He said: "The cadre wants its share in decision-making. That is the lesson the current campaign has given."

After the first round of polling on September 18, a section of the BJP leadership, including Govindacharya, had reportedly realised the difficulties in the party's campaign management and initiated measures to overcome potential setbacks. Just how far the BJP can succeed in checking the erosion in its support base and its seat tally will depend largely on the efficacy of these measures. ■

Mood for change

Some parts of Uttar Pradesh appear to articulate strongly in favour of Sonia Gandhi.

RASHEEDA BHAGAT
in Lucknow

> *"Jo bahu ko behen na maney, woh desh ko kya pehchane?"*
> (Those who don't regard a daughter-in-law as a sister, how will they understand the ethos of this country?)

BAHUA (daughter-in-law), *behen* (sister) and *beti* (daughter) are some of the terms of endearment used, referring to Congress(I) president Sonia Gandhi, in the villages of the Rae Bareli-Amethi belt of Uttar Pradesh in recent weeks. Posters, banners, arches (on the day she filed her nomination papers at the Sultanpur district Collectorate in the Amethi parliamentary constituency) and graffiti on walls hailed her as the *behen*, *bahu* and *beti* of India. That was how people in the region responded to the Bharatiya Janata Party's personalised attacks against her.

For the people of Amethi, Sonia Gandhi's return to her late husband Rajiv Gandhi's constituency was a significant event. But there were signals from other regions in the State also of a renewed interest in the Congress(I). The State did not elect any candidate from the party to the last Lok Sabha.

The anti-incumbency factor was expected to affect the BJP's prospects. Besides, Chief Minister Kalyan Singh presided over a dissidence-ridden party unit. The average Muslim feels betrayed that 'Moulana' Mulayam Singh, leader of the Samajwadi Party (S.P.), prevented the formation of a non-BJP government at the Centre after the fall of the Vajpayee government in April.

The battle between Atal Behari Vajpayee and Karan Singh of the Congress(I) in Lucknow has generated much interest. Ramnath Mishra, a casual labourer, said: "Now this contest will have

SUBIR ROY

Priyanka Vadhra's hands-on style of campaigning has had a tremendous impact in Amethi.

Amethi's pride

VENKITESH RAMAKRISHNAN

"WHEN the first family of Amethi returns, can we stick to recent loyalties?" Rajjan Lal's voice held an accusatory tone as he hurled this question at this correspondent, standing amidst a group of villagers in Jagadishpur in Amethi constituency.

What provoked this rhetorical comment on the permanence of some political loyalties was a question why Rajjan Lal had left Bharatiya Janata Party candidate Sanjay Singh's camp overnight after Congress(I) president Sonia Gandhi's candidature had been announced from Amethi. Rajjan Lal had campaigned for Sanjay Singh in the 1998 elections and was set to solicit votes for him this time too. But all that changed once it became clear that Sonia Gandhi would contest from Amethi.

Of course, Rajjan Lal and his family were a trifle upset that Sonia Gandhi had contested from Bellary in Karnataka too. To them, this was indicative of "a sense of distrust that madam had", a symptom of her doubts about the political loyalty of the constituency that had long been assiduously nursed by her husband and former Prime Minister Rajiv Gandhi. But far from holding it against her, Rajjan Lal and others said that they would work doubly hard to reassure Sonia Gandhi that their loyalty to the "first family of Amethi" was not fickle.

There are hundreds of Rajjan Lals across the length and breadth of Amethi these days – in Tiloi, Salon, Gauriganj or Jagadishpur. The very people who had rejected Captain Satish Sharma, the Congress(I) candidate, in 1998 are now flocking back to the Congress(I).

For Mukul Sharma of Tiloi, this had a ready explanation. Following the assassination of Rajiv Gandhi in 1991, Amethi fell on hard times. For a while, Captain Sharma nursed the constituency, but his political sights were fixed on far-away Delhi, and all development activity in Amethi stopped after a few years. "Amethi," said Mukul Sharma, "became a ghost of what it was during Rajiv Gandhi's time." Between 1995 and 1998, the people of Amethi virtually became "fed up" of politicians, he said. Looking for "a change", they switched their loyalty to Sanjay Singh, who in 1998 became the first Bharatiya Janata Party candidate to be elected from here.

Today, however, Mukul Sharma, like Rajjan Lal, has turned away from Sanjay Singh. "Not for any fault of Sanjay Singh's," says Mukul Sharma. In fact, he adds, Sanjay Singh did look after the constituency – "but nobody can match the Gandhi-Nehru family's contribution."

All that the people of Amethi seem to want at this moment is a darshan of Sonia Gandhi and her daughter

SUBIR ROY

With son Rahul beside her, Sonia Gandhi files her nomination in Amethi; Sanjay Singh, the BJP candidate, savours a moment of media attention.

SUBIR ROY

Priyanka, who virtually took over the campaign since September 15. Priyanka holds roadside meetings and stops by at wayside dhabas to have jalebis and chai with the local people. Her grace and the easy manner in which she interacts with them often leaves them beaming with joy.

The Congress(I)'s campaign is based principally on whipping up an atmosphere of nostalgia for Indira Gandhi and Rajiv Gandhi and their contributions to Amethi. Issues of national concern, which are raised in other constituencies, find no articulation here.

On his part, Sanjay Singh is fighting a hard battle, moving from village to village with his wife Amita and meeting village pradhans. At these meetings, Sanjay Singh tells them that he is aware that they had reposed great hopes in him last time, and that he had endeavoured to fulfil their aspirations. "I will continue to be the son of our soil, unlike those who come visiting you once in a year and who have showed that they do not have enough trust in you," Sanjay Singh says.

Occasionally, he invokes Atal Behari Vajpayee's name and sings paeans to the "able Prime Minister who saved the country from the grave dangers posed by the Kargil crisis". But the impact of this campaign is nowhere near as evocative as the response during the 1998 campaign when he raised the issue of the "apathy and corruption of Captain Satish Sharma".

Sanjay Singh won in 1998 by a margin of 23,000 votes; his campaign managers know that he faces a far more formidable opponent in Sonia Gandhi. In 1998, Mohammed Naim, the Bahujan Samaj Party candidate who finished third, had secured 1.50 lakh votes, partly on the strength of the party's support among Muslims. There has subsequently been a massive shift of support of Muslims from both the Samajwadi Party and the BSP towards the Congress(I), and Sonia Gandhi should find the going easy.

Also in the fray in Amethi are Mohammad Jamil of the S.P., a popular local leader, and Paras Nath Maurya of the BSP. Muslims account for 13 per cent of Amethi's population, and Dalits for 20 per cent; yet these two parties are not expected to [illegible]

some life. *Karan Singh tau Vajpayee se bhi bade Hindu hain* (he is a greater Hindu than even Vajpayee)."

In fact, Amethi had started to celebrate Sonia Gandhi's victory rather early. District Congress Committee chief Ravi Shanker said: "If there is no large-scale rigging by the BJP, she will win by a margin which will create a global record." Voters in Amethi have waited for Sonia Gandhi for several years, he said.

Erstwhile Congress(I) MP Captain Satish Sharma, who was elected from Amethi in 1996, was seen as having neglected the constituency. Sanjay Singh of the BJP was also perceived in a similar way. "Forget his doing anything at all to help the poor people of Amethi. The kind of sins Sanjay Singh has committed... cannot be forgiven by either God or the people of Amethi," said a farm labourer, Shiv Shankar. "*Aaj tak sahi Thakur unke ghar ka paani bhi nahi peetey* (till today the real Thakurs do not even drink water in his house)", he added with disdain.

Ram Aasrey Pande, a Congress(I) supporter, said: "*Janata ko maarna peetna aur bandh karwana* (getting people beaten up and thrown behind bars) was his speciality. Amethi needs a mother who can care for its battered people and Soniaji will definitely play this role. But we do hope she will retain this constituency and give up Bellary, which she will certainly win, because the margin here will be much, much higher."

The people of Amethi heaved a sigh of relief that the candidate they had defeated in the 1998 elections, Captain Satish Sharma, was not back there. An angry Amethi voter asked: "What did he do for Amethi as Petroleum Minister except give petrol agencies to some people?" In the neighbouring constituency of Rae Bareli, from where he contested this time, there was some unhappiness over his nomination but it was camouflaged because Sonia Gandhi's daughter Priyanka Vadhra was there to campaign for him.

Indira Gandhi's memory remains alive in Rae Bareli. Almost all people in their thirties and beyond fondly recalled the manner in which she had developed and nurtured her constituency. Even though people may not be euphoric about Satish Sharma's candidacy, they were furious with the BJP regime, and the anti-incumbency factor was the strongest there.

Dinesh Singh, a former machine operator in Modi Carpets in Kathwara, recalled the days of the Indira regime when several factories, including the one he has worked, were started in the constituency.

The real story. Every time

"But it is now sick and lying closed for more than seven years. No government is interested in reviving it. Now take the BJP candidate, Arun Nehru. Rae Bareli elected him to the Lok Sabha twice. I remember the times his daughter used to shake our hands and offer us *ghee mei tali hui badam* (almonds fried in ghee). But once he became an MP and we approached her with our problems, she asked us 'Who are you?'".

A group of people gathered at a tea shop in the village joined the discussion. Another resident of the village, Ajit Singh, said: "*Sarkar hamare paiye par ghoomti hei, magar hum shikayat nahi kar sakte. Zyada shikayat karney ki koshish kee to bandh kar detey hei, ya goli bhi maar detey hei* (The government survives on our might, but we cannot raise our problems with it. If we complain too much, we can be thrown behind bars or even shot dead)."

ALMOST everywhere in Uttar Pradesh, the mood is one of disenchantment with the political leadership. In the cluster of villages barely 35 km from Lucknow, water is the biggest problem. Dubbing the Kalyan Singh government "anti-farmer", Ram Lal, a small farmer in Brahmadaspur village in the Mohanlal Gunj constituency, was also angry with the previous MP from his constituency, Rina Chowdhary. He said: "She has done nothing for the constituency, nor has any other politician bothered about our plight. We have no water for our fields and you can see for yourself the dry canal which runs through these villages." To water their fields, they are at the mercy of the rich farmers, who charge Rs.40 an hour to hire out their pumpsets. He said: "For one acre, we require about six hours of usage every day."

A white-bearded Bhoola Lal seethed at the "hollow promises" made by politicians. He said: "Even today we have no electricity in our village. The electric poles came about eight years ago. Now even the poles have started disintegrating."

Even in the capital, Lucknow, people talk only of water shortages, damaged roads and battered drainage systems. "Now this is a VVIP constituency which has returned a Prime Minister to the Lok Sabha. If the ruling party can treat Lucknow, the State capital, so shabbily, imagine the fate of rural U.P." said Saleem, a taxi driver.

He was certain that Muslims in the State would not vote for the BJP. "They are unhappy with Mulayam Singh too, and are likely to vote for the Congress(I) in large numbers, but only in those constituencies where it has strong candidates who can defeat the BJP. Where the Congress(I) has weak candidates, they will vote for the Bahujan Samaj Party and even the S.P., but the criterion will be the ability to stop the BJP."

Nehaluddin Ahamed, president of the All India Muslims Forum, also believed that this was the likely scenario as far as Muslims were concerned. But he was unhappy that "*azadi ke pachaas saal ke baad bhi hum is party ya us party ko rokney ki hi baat kar rahey hain* (50 years after Independence, we are still talking about stopping this party or that from coming to power). The problem was that Muslims were a divided lot and hence being taken for a ride by all parties." His contention was that Muslims should "stop running away from politics" and aim for political power "which was necessary for educational and economic emancipation".

State Urban Development Minister Lalji Tandon dismissed the perception of an anti-incumbency factor. Infighting in the BJP State unit, he claimed, "exists only in the media". On the BJP's prospects in the State, he said: "We will do as well, if not better than last time."

Confident that Muslims would shift their allegiance from the S.P. to the Congress(I) or even the BSP, he said: "Let them go to the Congress(I). This will teach a politician like Mulayam Singh, who has spread so much communalism in U.P., that communalism is very short-lived."

"The BJP," he declared, "has never sought votes in the name of religion." When reminded that the party sought votes in the name of Ram, he said: "The issue of Ram is not communal. That is a cultural issue."

Lalji Tandon claimed that those Muslims who have broken free from the mindset of the Nehruvian era, which was replicated so successfully by the "so-called secular parties" that they were seen as the saviours of Indian Muslims, would support the BJP this time. His claim did not sound outrageous given that a Lucknow-based Muslim journalist said that politicians like Mulayam Singh have fooled Muslims in the State long enough and were ineffective in stopping the demolition of the Babri Masjid. He asked: "*Aap agar hamey zaalim se bacha nahi sakte to hum usi zaalim se hath mila lenge. Aakhir andhey ko do aankhen chahiye aur politicians ko vote.* (If you can't save us from our tormentors, we'll join hands with them. After all a blind man needs vision, and politicians need votes). So we will give our votes to them." ■

The battle in Lucknow

VENKITESH RAMAKRISHNAN

ON September 16, two days after Dr. Karan Singh filed his nomination as the Congress(I) candidate in Lucknow, where Prime Minister Atal Behari Vajpayee is contesting, the Bharatiya Janata Party effected a significant change in its campaign machinery for the constituency. Former Delhi Chief Minister Madan Lal Khurana was brought in place of senior State leader and Urban Development Minister Lalji Tandon as the chief campaign manager to the Prime Minister.

By no yardstick was this change motivated by an assessment that Karan Singh was posing a major challenge to Vajpayee. BJP general secretary K.N. Govindacharya said that his party's assessment of Karan Singh's candidature was that "but for the theatrics of matching Vajpayee *shloka* for *shloka* and *shair* for *shair*, the Congress(I) cannot hope to gain anything from this contest." However, the BJP leadership did have other things to worry about: complacency, and doubts about the sincerity of a section of party workers in campaigning for Vajpayee.

By all indications, Tandon was seen as one of those who might give room for overconfidence; the far more serious suspicion related, however, to leaders who were perceived to be close to Uttar Pradesh Chief Minister Kalyan Singh. The fact that Kalyan Singh was not seen to be taking an active part in the BJP's campaign in general had heightened these apprehensions.

In 1998, Vajpayee won from Lucknow by a majority of 2.16 lakh votes. According to Rajesh Pandey, Member of the Legislative Council and the media manager of Vajpayee's campaign in Lucknow, "the effort this time is to give him a bigger margin, one fit for a Prime Minister who had led the country bravely through troubled times."

The principal themes in the BJP's campaign rhetoric are: Kargil, Vajpayee's indispensability as an "able Prime Minister" at this juncture in India's history, and his political expert-

SUBIR ROY

SUBIR ROY

ence, posited against Congress(I) president Sonia Gandhi's inexperience.

The poor state of the "Prime Minister's constituency" has also become a campaign issue. The condition of roads and other civic amenities is appalling, and the state of the public health system is no better. These deficiencies have been highlighted, more so because a large portion of the allocation for the improvement of civic amenities, under one of funds earmarked for members of Parliament, was not utilised and has lapsed.

The two other Opposition parties, the Samajwadi Party (S.P.) and the Bahujan Samaj Party (BSP), too have seized on this Bhagawati Singh is the S.P. candidate and Ishar-ul-Haq, the BSP candidate.

The Congress(I), on its part, has taken on the BJP on every issue it has raised, including the one relating to Vajpayee's "experience" and Sonia Gandhi's "inexperience". Karan Singh claims that he himself is far more experienced than Vajpayee, having become a Union Minister at the age of 36. Refuting the BJP's claim that Sonia Gandhi was ill-equipped for governance, he asserts that Sonia Gandhi will govern wisely and well, and will have an able group of accomplished advisers from within the Congress(I) itself.

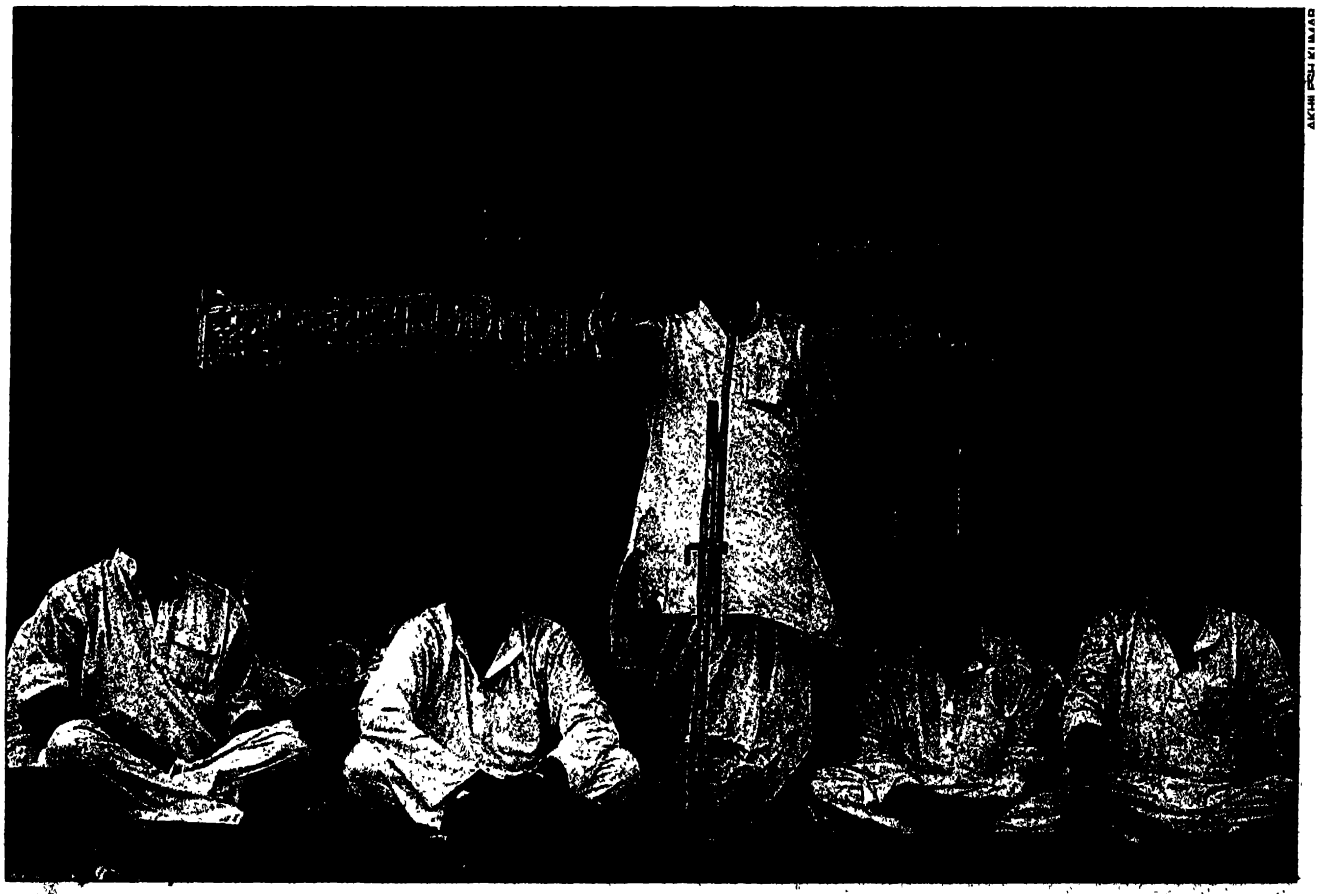
The intensity of the Congress(I)'s campaign has forced the BJP to rake up non-issues – Karan Singh's status as an "outsider" to the constituency. The BJP has also levelled allegations relating to his role in the reported moves to provide greater autonomy to Jammu and Kashmir. The S.P. and the BSP have raised the issue of Karan Singh's association with the Vishwa Hindu Parishad (VHP) as one of its founder-members. This campaign is not entirely without effect in a constituency where 24 per cent of the 16 lakh eligible voters are Muslims. Many leaders of Muslim organisations have demanded that Karan Singh clarify his position *vis-a-vis* the VHP; the Congress (I) candidate has denied any association with the Sangh Parivar organisation.

Undoubtedly, after Karan Singh entered the fray, the contest in Lucknow has become interesting; however, in the background of the Congress(I)'s performance in the 1998 election, it might not dramatically change the final outcome. The then Congress(I) candidate Ranjeet Singh finished fourth with 38,636 votes; illustratively, Vajpayee polled 4.31 lakh votes. The Congress(I) has miles to go, and Karan Singh's candidature by itself is insufficient to spring electoral miracles. ■

Failed alliances

By rejecting an electoral alliance, the S.P. and the BSP have lost a fine opportunity to augment their respective support bases to make a lasting political impact.

VENKITESH RAMAKRISHNAN



HAD an idea mooted by some friends of Samajwadi Party (S.P.) president Mulayam Singh Yadav and Bahujan Samaj Party (BSP) chief Kanshi Ram in June been accepted, the electoral fortunes of both the parties would have been strikingly different. It would have changed the very character of the 13th Lok Sabha with the S.P.-BSP combine emerging as the most formidable force from Uttar Pradesh, capable of tilting the balance of power.

The proposal was to revive the S.P.-BSP alliance of 1993 in Uttar Pradesh in order to form a combine of Dalits, Yadavs, Muslims, a section of Thakurs and Other Backward Classes. The combination would have easily polled 45 per cent of the total votes and won more than 70 of the 85 seats in the State, which has the maximum number of constituencies in the country.

Favouring the prospect, Kanshi Ram is reported to have said that "the result the combine would bring in would alter the face of the 13th Lok Sabha". For it was unlikely that any political formation would have formed a government without it. This would give a powerful boost to Mulayam Singh Yadav's oft-repeated theory that India is too pluralistic socially and politically to submit to the bipolar politics of the Congress(I) and the BJP variety. The expected impact of the alliance also matched Kanshi Ram's larger political design of creating instability in the country's political system. According to the BSP chief, "frequent elections and unstable governments suited the Bahujan Samaj Party as it has no value for stability that perpetuates the vested interests of the upper castes and classes."

Beyond the ideological perspective, the alliance suited the parties organisationally too. The S.P. and the BSP are largely confined to Uttar Pradesh, with pockets of influence in other States. Had the alliance been forged, its leaders could have concentrated their energies on one State and made a political impact at the national level.

More important, the alliance would have checked the scale of the shift in the BSP's Dalit vote base and the S.P.'s Muslim support base towards the

Samajwadi Party president Mulayam Singh Yadav addresses a meeting in Ghazipur.

Is your family well informed about your financial matters?

By a panel of experts

Suppose there suddenly comes a time when money is urgently needed at home - and you are not around. You could be abroad, away on tour or convalescing in hospital after winning over illness. Or, consider the inescapable finality that eventually catches up with all of us. Won't you like your family to receive with ease the fruits of your effort you have left behind for them?

If they are not able to do so, all your thoughtful planning for prudent investment will have come to nought. How can you prevent this? Simply by the systematic maintenance of records NOW. Invest some of your time and make notes of all the important aspects of your arrangements. It will make it easier for your family to access your money.

The details you must put together in a systematic manner in a "Record Book" are:

1. **The location of these important documents and records**
   Birth, domicile and marriage certificates; receipts of deposits for telephone, gas, electricity, etc.; bank account pass-book, slip book, cheque book, P.P.F. pass-book share/debenture/bond certificates, fixed deposits receipts of banks and companies, life, accident, Mediclaim and fire/theft/ burglary policies, car insurance policy; Municipal Tax and R.T.O. Tax book, Income/Gift/Wealth Tax files; legal papers; ownership flat and property deeds; your will and the keys of bank lockers.
2. **The names, addresses and telephone numbers of your advisors**
   Chartered accountant, lawyer, Life and General Insurance agents, N.S.C. and P.P.F. agents, sharebrokers, investment advisors, doctors and friends for emergencies and help.
3. **Instructions to your family**
   Indicate the provisions you have made, like Mortgage Redemption Policy to pay off the mortgage on your flat; what assets can be disposed of to meet emergency expenses, the verbal commitments that are to be honoured; the names of potential troublemakers and the need for caution; and any such or other relevant information.
4. **Your will**
   Get a copy of your will registered. Whether or not you want your family to be aware of the contents of your will now, registration ensures its future availability at a safe place.

1. **Bank Accounts**
   The name and address of the bank(s), the mode of operation (either/anyone or survivor/s)
2. **Fixed Deposits**
   The name and address of the bank/company holding the deposit(s), the amount, the Fixed Deposit Receipt number, the date of the deposit, the date of maturity and the date when withdrawn/renewed.

3. **Shares/Debentures/ Bonds and Units**
   The name of the company/ mutual fund (M.F.), the number of shares, debentures or units and the face value and folio number of each. Maintain a separate Investment Register with further information like the addresses of the companies (or M.F.) and their registrars/transfer agents, the certificate numbers and distinctive numbers of shares/units, the names of joint holders and nominees, the amounts of dividend & interest received etc.
4. **(A) Policies of Life Insurance**
   The policy numbers, the dates of issue, the sums assured, the premium amounts, the dates when payable, the Plans, the names of the nominees, the maturity dates and whether with or without accident and disability benefits.

(B) Policies of Mediclaim (hospitalization) Fire/ Theft/Burglary/Liability Insurance
The name of the insurance company, the policy number, the type of policy, the coverage amount, the issue date and the renewal date.

5. **Property**
   A brief description including the location, the survey number, the names of joint owners/nominees, the size/area, the date when acquired, the cost and the names and addresses of the seller and buyer.
6. **Personal Debtors/ Creditors**
   The names, addresses and telephone numbers of those who owe you money/those whom you owe money, the amounts lent/borrowed, the interest amounts receivable/payable and their due dates.
7. **Income Tax Summary**
   The assessment year, the Advance Tax amounts and the dates of the 1st, 2nd and 3rd instalments paid, the Self-Assessment Tax amount, the date the return is filed, the refund due, if any, and the date when the refund is received/the assessment is over.

You must review the information noted in the Record Book twice a year and update it as and when necessary. At each review, discuss your Record Book with your family so that they are equipped with all the relevant information, when time calls.

Congress(I). Dalits affiliated to the BSP, other than Chamars and Pasis, were shifting their loyalties to the Congress(I) in Uttar Pradesh though not on the same scale as in Madhya Pradesh, Punjab, Andhra Pradesh, Maharashtra and Rajasthan. The consolidation of Dalit and Muslim votes by the two parties would have, in turn, stopped the movement of Brahmins towards the Congress(I) from the BJP. As a result, the revival of the Congress(I) in the State would have slowed down. This would have then compelled the Congress(I) to depend on the combine to regain its political supremacy at the Centre.

The idea sounded politically prudent and the two strategists started working out the details. Mulayam Singh Yadav and Kanshi Ram communicated with each other through intermediaries. The exercise continued until early July and then fizzled out. The reason was that former Chief Minister and BSP vice-president, Mayawati, was against any association with the S.P. leadership.

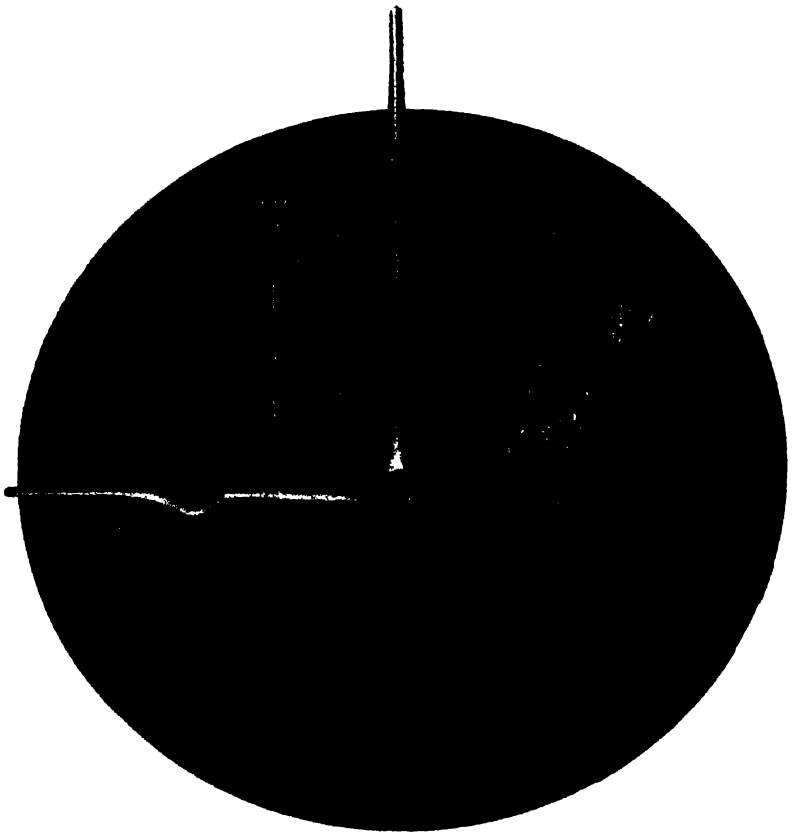
Informed sources in the BSP say that Mayawati has not forgiven the S.P. for the assault on her by its activists at a State guest house in June 1995. She cited the episode as the most humiliating experience in her life. Further, she argued that the present elections provided the BSP with the best opportunity to fortify its Muslim vote base and emerge as the champion of the forces of social justice in the State. Her contention was that Muslim voters, already disillusioned with the S.P., perceived the BSP as the party with the potential to defeat the BJP. Hence, it could improve its tally on its own. It was on the basis of the same premise that Mayawati ruled out an electoral understanding with the Congress(I) at a later stage.

Although Kanshi Ram was reportedly not pleased with Mayawati's stand, he submitted to her line of argument as she virtually controls the party machinery on account of her special status as a two-time Chief Minister.

Both the parties withdrew from the effort and began to search for alternatives. Having fallen out with its former allies, such as the Communist Party of India, the Communist Party of India (Marxist) and the Rashtriya Janata Dal (RJD) on the question of supporting a minority Congress(I) government following the fall of the Vajpayee Ministry, the S.P. tried to form a new third front consisting of the Nationalist Congress Party (NCP), the Republican Party of India (RPI), the Forward Bloc and the Revolutionary Socialist Party. This effort also failed. The alliance with the NCP and the RPI was confined to Maharashtra, where the S.P. has been allotted two Lok Sabha seats and 15 Assembly seats. The S.P. was ready to allot three seats to the NCP in Uttar Pradesh, two of them in the hill districts where the S.P. has no mass base. The offer of a third seat, Varanasi, was withdrawn after the S.P. rejected the choice of the candidate. The S.P. wanted the NCP general secretary, Devendra Dwivedi, to contest, as the candidature of its secretary Vijay Dubey was not acceptable. As Dwivedi refused to comply, the whole seat-sharing exercise was called off.

IT is debatable whether the failure to forge such an understanding will affect the S.P.'s future in U.P. politics. In its hurry to add new castes and communities to its vote bank and thus stay buoyant in the caste-oriented politics of the State, the S.P. seems to have struck a mind-boggling understanding with a section of the backward caste group in the State BJP, led by none other than Chief Minister Kalyan Singh. Although Mulayam Singh Yadav and Kalyan Singh have officially denied any such an understanding, campaign trends from at least 15 constituencies in the State point in this direction.

This understanding stemmed from the humiliation suffered by Kalyan Singh at the hands of the BJP national leadership, particularly Vajpayee, during the selection of candidates. Kalyan Singh wanted many of his nominees, including his son Rajveer Singh and close associate Urmila Rajput, to be given the ticket. Not only were the names not considered, the national leadership denied the ticket to the sitting MP from Farukhabad, Sakshi Maharaj, who belongs to the Lodh Rajput caste. It is this rebuff (Kalyan Singh is also a Lodh Rajput) that seems to have triggered the covert understanding with the S.P.



Manifestations of this adjustment were visible in Sakshi Maharaj's extensive campaign for the S.P. candidates in the Lodh Rajput belt of Mathura and Farukhabad (this area accounts for 11 parliamentary seats and includes Kalyan Singh's home town of Aligarh) and in Kalyan Singh's refusal to canvass in the region for the BJP candidates. Sakshi Maharaj has been campaigning under the banner of the Lodh Swabhiman Sabha. Interestingly, this organisation has attracted members of the community attached to other political parties, including the Congress(I) and the BSP.

The refrain from members of a crowd that was waiting to hear Sakshi Maharaj for more than three hours at Thariya village in Fatehpur district was that both Kalyan

BSP leaders Kanshi Ram and Mayawati at an election rally in Ambedkarnagar.

Sundays 9 pm

STAR News Sunday

Now only on STAR Plus.

Singh and Mulayam Singh Yadav were their leaders. Rajnath Singh, one of the vocal members of the pro-Kalyan Singh group, told *Frontline* that the backward caste-upper caste struggle in the party that intensified in 1989 was far from over. "The upper castes in the BJP and the Congress(I) are trying to undercut backward caste politicians. The denial of the ticket to Sakshi Maharaj is an indication of this. The backward castes cannot allow this to happen."

This sentiment was evident in scores of Lodh Rajput villages that this correspondent visited in the Mathura-Farukhabad belt. Two days before campaigning closed for the September 18 elections in the Lodh-dominated Pashnipura village, a group of BJP workers had abandoned electioneering and started playing cards even as the party candidate, Ram Baksh Verma, tried to catch their attention. Explaining their indifference, Malhan Singh a local BJP office-bearer, said that they were committed to Sakshi Maharaj. Discounting the fact that the replaced candidate was also a Lodh, Malhan Singh branded him a "*kaagaz ke phool*" (paper flower).

According to BJP insiders belonging to the anti-Kalyan Singh group, the Chief Minister and Sakshi Maharaj are helping the S.P. in most of the seats the party is contesting. In a *quid pro quo*, the S.P. has fielded weak candidates in seats such as Faizabad and Hamirpur, from where Kalyan Singh loyalists, such as Vinay Katiyar and Gangacharan Rajput, are contesting. In Faizabad, the S.P. has replaced its sitting MP, Mitrasen Yadav, with Heeralal Yadav, who is an unknown entity.

While the support of Sakshi Maharaj and his associates does seem to boost the backward caste base of the S.P., there is also the danger that this might alienate Muslim voters from the party, particularly because leaders such as Sakshi Maharaj have been identified with the Ayodhya Ram Mandir movement. However, the S.P. leadership tries to present the revolt of Sakshi Maharaj as proof of trouble within the Sangh Parivar that would ultimately benefit the secular forces as it would lead to a split in the State BJP. What turn events will take is not clear, but it is evident that Mulayam Singh Yadav, the "great gambler of the Gangetic plains", is once again gambling with his political career. Outwardly, he exudes confidence and claims that the S.P. will win at least 50 seats.

A SIMILAR air of confidence is evident in the BSP camp despite the absence of any creative alliances. The party's best performance was in 1996 when it won six seats and polled 20.6 per cent of the total votes. Among the national parties, the BSP, with 4.8 per cent of the votes, occupies the fourth place in terms of vote share, behind the BJP, the Congress(I) and the CPI(M). Kanshi Ram told *Frontline* that he aimed at a five-fold increase in the seats tally and an increase in the vote share in order to move up to the third place. "This would enable the launch of the BSP in future battles," he said.

Sections of the BSP and the S.P. believe that both the leaders will have to work out some kind of an understanding after the elections, particularly in the context of the backward caste churning within the BJP as well as the resurgence of the Congress(I), which is an equal threat to both the parties.

Sections of the BSP are of the view that but for Mayawati's refusal to form alliances, the party could have performed better. Party insiders say that the differences over the question of seat-sharing between Kanshi Ram and Mayawati had surfaced in April itself when the Vajpayee government faced a vote of confidence. Arguing that the BJP was a bigger danger to the BSP, Kanshi Ram showed keenness to enter into a short-term alliance with the Congress(I) or the S.P. His manoeuvres relating to the vote of confidence, which ultimately led to the fall of the government, point to this move.

On the other hand, Mayawati's priority was to save the BJP government, either by voting for it or by abstaining from voting. Her proximity to Uttar Pradesh BJP leader Lalji Tandon, who is in turn close to Vajpayee, is said to have inspired this position. However, she had to conform to Kanshi Ram's line and lead the five-member BSP group in the Lok Sabha to vote against the government. The BSP chief had then successfully initiated a discussion to strike a deal with Congress(I) president Sonia Gandhi. Kanshi Ram, along with Sharad Pawar, then Leader of the Congress (I) in the Lok Sabha, worked out a deal that involved pulling down the Kalyan Singh Government and making Mayawati the Chief Minister with the support of the Congress(I) and the S.P.

Congress(I) leaders and Kanshi Ram apparently saw the "Uttar Pradesh operation" as the forerunner to the formation of a national alliance. However, the situation changed within a few days. The Congress(I) refused to accept the idea of a coalition government at the Centre and Mulayam Singh Yadav asserted that he would not allow a "foreigner" to become Prime Minister. In the process, the possibility of toppling Kalyan Singh receded. Mayawati has struck back by ruling out any alliance.

Kanshi Ram's persistence with the idea of a coalition with the Congress(I) came in the background of the collapse of both the "Uttar Pradesh operation" and the proposed alliance with the S.P. He tried to revive the deal that involves making Mayawati the Chief Minister and made it clear that he would part with only 25 seats in Uttar Pradesh. The Congress(I), which had initially made tall claims, steadily altered its demands and was even ready to accept what was offered by the BSP.

What finally brought the negotiations to an end was a rider that the Congress(I) attached any agreement. This was that the alliance should not be confined to Uttar Pradesh but should include Madhya Pradesh. Clearly, the Congress(I) wanted to make maximum gains from the potential of the BSP leadership to transfer its votes in any direction it deemed fit.

This proposal, however, was not acceptable to the BSP, partly because its Madhya Pradesh unit felt betrayed by the Congress(I) in the November Assembly elections. The BSP had supported the Congress(I) in more than half the seats on the basis of an understanding that a leader from a Scheduled Caste or a Scheduled Tribe would be considered for the position of either Chief Minister or Deputy Chief Minister. After the elections, the Congress(I) failed to keep its promise.

Kanshi Ram has chosen a moderate path compared to Mulayam Singh Yadav's almost adventurist course. Sections of the BSP and the S.P. believe that both the leaders will have to work out some kind of an understanding after the elections, particularly in the context of the backward caste churning within the BJP as well as the resurgence of the Congress(I), which is an equal threat to both the parties. ■

KALYAN CHAUDHURI

UNLIKE in 1998, the major political parties in Bihar are polarised into two alliances in the 13th Lok Sabha elections.

The Rashtriya Janata Dal (RJD) led by Laloo Prasad Yadav, and the Bharatiya Janata Party and its allies, are locked in straight contests in all the 54 seats.

Prominent features of the 1998 elections in Bihar were fractured alliances and multi-cornered contests. The United Front led by the Janata Dal, and the Left parties broke up over seat-sharing. The Janata Dal contested 36 constituencies as it could not resolve its differences with the Samajwadi Party and the Left parties. The Left parties deserted Laloo Prasad for his involvement in the fodder scam. But this move, instead of harming the RJD, caused setbacks to the Communist Party of India (CPI) and the Communist Party of India (Marxist). The Congress(I) and the Jharkhand Mukti Morcha (Soren) made a mockery of their alliance with the ruling RJD. While a defiant Congress(I) contested 21 seats after Laloo Prasad unilaterally allotted it eight seats, seat-sharing talks with the JMM(S) collapsed. The Jharkhand parties – the JMM(S) and the Jharkhand People's Party – have merged on the eve of the elections. The JMM(S) is to contest all the 14 seats in south Bihar.

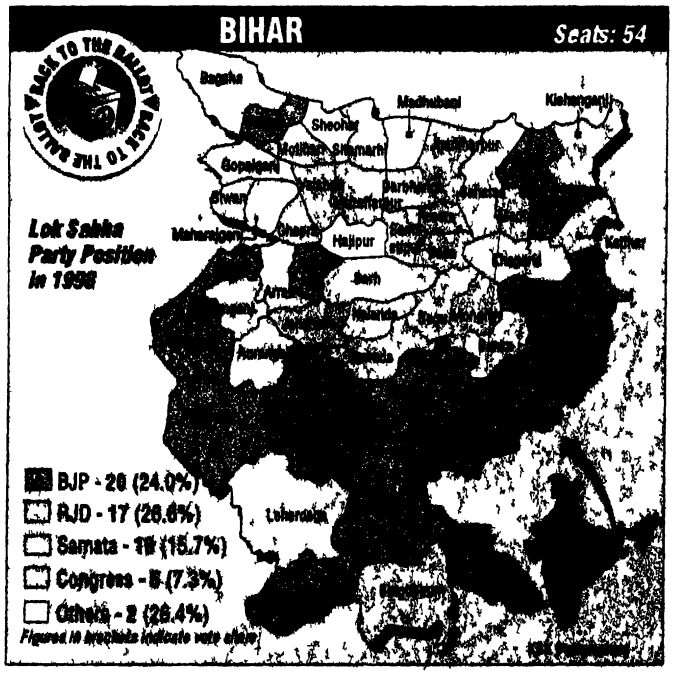
Bihar is the only State in the country other than Uttar Pradesh where the elections are being conducted in three phases, on September 18 and 25 and October 3. The Election Commission (E.C.) had taken precautions to prevent a breakdown of law and order, but the first phase of polling on September 18 in 19 constituencies witnessed a wave of violence (see box).

The prominent candidates include Laloo Prasad Yadav and Sharad Yadav in Madhepura, Ram Vilas Paswan in Hajipur, Nitish Kumar in Arah, George Fernandes in Nalanda, Babulal Marandi in Dumka and Kanti Singh in Bikramganj.

The banned ultra-Left organisation, the Marxist Communist Centre (MCC), which is engaged in an armed struggle in central Bihar and parts of south Bihar, had called upon voters to boycott the elections, describing all political parties as "'fountainheads of exploiters". The MCC decided to resist the election wherever it was strong. Landmine blasts and shoot-outs triggered by the MCC and the Communist Party of India-Marxist-Leninist (Party Unity), now known as the People's War Group, in order to enforce a similar call during the last elections, took

RJD chief Laloo Prasad Yadav addressing a gathering. (Below) Samata Party leaders Nitish Kumar and George Fernandes and Janata Dal (United) leaders Sharad Yadav and Ram Vilas Paswan during electioneering in Bihar.

a heavy toll Thirty-seven people, including 17 policemen, were then killed in central and south Bihar



VIKRAM KUMAR/ AP

Voters belonging to lower castes raise a protest on being prevented from voting in Gaya on September 18.

THE act of the Janata Dal (United) led by Sharad Yadav in joining forces with the Samata Party and enter the BJP-led National Democratic Alliance (NDA) has clearly upset Laloo Prasad Yadav s vote bank the most and lent a new dimension to electoral politics in the State A pall of gloom descended on the RJD camp when in early August the Janata Dal(U)-Samata Party-Lok Shakti merger was formalised The RJD leaders had expected Sharad Yadav to support Laloo Prasad, but Ram Vilas Paswan and Nitish Kumar, founder of the Samata Party in Bihar, pulled off a coup in persuading Sharad Yadav to join the unity bandwagon

The Janata Dal(U)-Samata Party alliance could alter caste-based electoral equations, particularly in north Bihar, which is considered Laloo Prasad's fortress The RJD-Congress(I)-Rashtriya Janata Party combine won 23 of the 54 seats in 1998 primarily because of a division of votes between the Janata Dal and the BJP-Samata Party combine In 14 of the 23 constituencies, the RJD-Congress(I) alliance would have lost had the BJP-Samata Party group and the Janata Dal fielded candidates together The defeat of Sharad Yadav in Madhepur by Laloo Prasad by more than 52,000 votes was as a result of split in votes The Samata Party candidate garnered 60,000 votes, and the anti-Laloo Prasad votes went to the Samata Party Other seats that the Congress(I)-RJD combine won owing to a split in the anti-Laloo Prasad votes included Vaishali, Samastipur, Katihar, Sitamarhi, Darbhanga, Muzaffarpur, Munger and Saharsa The BJP-Samata Party team broke the RJD chief's stranglehold over south and central Bihar, winning 30 seats This time the RJP chief, Ananda Mohan Singh, has himself allied with the BJP

Laloo Prasad Yadav received a jolt when his efforts to pull off a total alliance with the Left parties failed Unhappy with the RJD's decision to allot only three seats to it, the CPI raised the banner of revolt and decided to contest six more seats The Congress(I), with which the RJD entered into a pact in 1998, was initially unhappy, but the RJD managed to keep it happy by conceding to it 14 seats, one more than the number promised Reacting to the CPI's decision to contest nine constituencies, the RJD supremo declared that his party would put up candidates in the three seats earmarked for the CPI The RJD's agreement with the CPI(M) is complete with the latter expressing satisfaction with the two seats allotted to it The Marxist Coordination Committee of Arun Roy is also happy with the offer of one seat to it However, with the exit of the CPI from the alliance, Laloo Prasad has lost a potential ally and his last-ditch attempt to win over the CPI(M-L) failed

The seat-sharing agreement between the BJP and Janata Dal(U) is complete, The BJP has decided to contest 29 seats, three less than in the previous elections, and the Janata Dal(U) will contest 25. In 1998, the BJP contested 32 seats and the Samata Party 22. The BJP has conceded Sitamarhi, Siwan and Balia to the Janata Dal(U).

The NDA claims to be on a good wicket. Its constituents claim that they will increase their tally from 30 to 40 seats. They hope to secure the additional 10 seats in north Bihar. The BJP, which has so far drawn its strength from the Jharkhand area of south Bihar, has taken its bat-

A wave of extremist violence

KALYAN CHAUDHURI

Violent elections and invariably there is bloodshed in certain parts of the country. Despite the Election Commission's cautious decision to hold elections in three phases in Bihar in order to avert violence, extremist organisations struck in several parts of south and central Bihar on September 18, when the first phase of polling took place in 191 Lok Sabha constituencies. In landmine blasts and shootouts triggered by naxalites to enforce their call to boycott the elections, 38 persons were killed and 60 injured seriously. The dead included 31 members of the Central Reserve Police Force (CRPF) and the Bihar Military Police (BMP), other policemen, two magistrates and two poll officials. Violence is expected also in 20 of the 35 constituencies in northern and central Bihar which will go to the polls on September 25 and October 3. The State registered 57.5 per cent voting on September 18.

The banned naxalite outfits, mainly the Maoist Communist Centre (MCC) and the Communist Party of India (Marxist-Leninist) Party Unity, now known as the People's War Group, turned virtually half of south Bihar into a treacherous minefield: landmines had been planted in most of the routes leading to the polling booths in the four south Bihar districts of Rohtas, Hazaribagh, Chatra and Palamau. The rapidity with which the blasts occurred unnerved the State administration. The Government said that the violence was due to stepped up naxalite activities, especially in the forests of Palamau and Hazaribagh. "We anticipated trouble, but not on the scale and the difficult to detect," said Home Secretary Laxman Parseya [illegible]

1996 in several south Bihar. Thirty-seven persons including 17 policemen, were killed in bomb explosions and shootouts. The extremists also targeted campaign vehicles and those of the security personnel, destroying 24 of them.

Chief Election Commissioner M.S. Gill said: "The [illegible] in Bihar become active on the eve of every election. This time they seem to have made a serious effort. There has been a great deal of violence in Bihar owing to social and ideological factors. Its polling in the

Victims of election-related violence in Johanabad on September 18.

South would depend on the details of the damage from the affected polling areas."

This is the first time that the MCC and the PWG have used powerful landmines to disrupt the poll process. Ten security personnel, including eight CRPF jawans, one assistant sub-inspector and a constable were killed when landmines planted by the extremists in the south Bihar district, tore apart their vehicles. Fourteen CRPF jawans and policemen were shot dead by MCC [illegible] Chando Anchal in Palamau [illegible] were returning after [illegible] who were hid- [illegible] forest of Chando, [illegible] carrying the per- [illegible] followed by a [illegible] in Hazaribagh. [illegible] men were killed. [illegible] Minister Yashwant [illegible] from this con- [illegible] Sinha is on the [illegible]

another person [illegible] in a blast at Barid, while two [illegible], including a policeman, were killed in a blast at Chainpa in Sasaram in central Bihar. Cadres were also reported from Jehanabad and Aurangabad in central Bihar. In a spirit of defiance that stretched from dawn to dusk, [illegible] incidents took place in Hazaribagh.

The violence was not totally unexpected. The MCC and the PWG have been distributing handbills over since the election dates were announced, threatening the voters with "dire consequences" if they participated in the process. The PWG, in a press release issued recently to Patna-based newspapers, claimed that it had raised "guerilla squads" for deployment in various places to enforce the boycott call. The ultra-Left organisations are reported to have asked their zonal committees "to unmask the double face" of the political parties and their leaders. On September 1, the MCC attacked the Nawadih block in Giridih parliamentary constituency and looted five rifles from the security men posted there.

There has been an upswing [illegible] in extremist-related incidents in south and central Bihar since 1994. According to official records, the police registered three cases of violence by the naxalites on police stations in 1994. The number of such cases rose to 15 in 1995. Twelve cases were reported in 1995, while 11 police stations were attacked in 1996. A total of 191 raids by the extremists have been officially registered between 1994 and 1996. In which 424 persons have [illegible]

tle into north Bihar, where the RJD's Muslim-Yadav formula has kept Laloo Prasad in the saddle. The BJP hopes that with Ram Vilas Paswan and Sharad Yadav on its side, it would be able to consolidate the support of the backward classes as well as the Koeris and Kurmis who favoured the Samata Party in the last elections. Incidentally, Nitish Kumar is a Kurmi.

The Janata Dal (U) is optimistic about a decisive result in its favour in north Bihar, which would alter the fate of the six persons who were members of the 12th Lok Sabha from the region. In 1998, the combined votes of the Janata Dal and the Samata Party here was more than the number of votes polled by the RJD.

However, it is unlikely that Dalits will back the BJP and its allies this time. The other backward classes are likely to dump the Janata Dal. In 1998, the Janata Dal won one seat and the RJD 17, indicating a clear shift in the pattern of support from the Janata Dal to the RJD.

DESPITE having spent time in jail in connection with the Rs.954-crore fodder scam and two attempts by the Centre to dismiss the Rabri Devi Government, Laloo Prasad has survived politically. This is primarily because of his support base comprising Muslims and Yadavs. They constitute about 27 per cent of Bihar's voters. The support of this section and that of OBCs and Dalits made Laloo Prasad formidable in the State where the caste factor plays a decisive role. However, in the current elections, the RJD could face an adverse turn, for, the Janata Dal(U), which has several Yadav leaders such as Sharad Yadav, Devendra Yadav, Nawal Kishore Rai and Dinesh Chandra Yadav, has allied itself with the NDA.

IN Bihar, which is polarised between pro- and anti-Laloo Prasad forces, the third front is of little significance. The third force here is made up of former Congress(I) Chief Minister Jagannath Mishra's Bharatiya Jan Congress, the Nationalist Congress Party of Sharad Pawar and BJP rebel Tarakant Jha's Bihar Vikash Party. This group has fielded 32 candidates across the State. However, it is not likely to make any impact except in Mithilanchal, where both Mishra and Jha wield some influence.

With neither the Yadav nor the minority voters expected to behave differently from the last elections, the Dalit vote is crucial and the two alliances have gone all out to [illegible] this section of the voters. ■

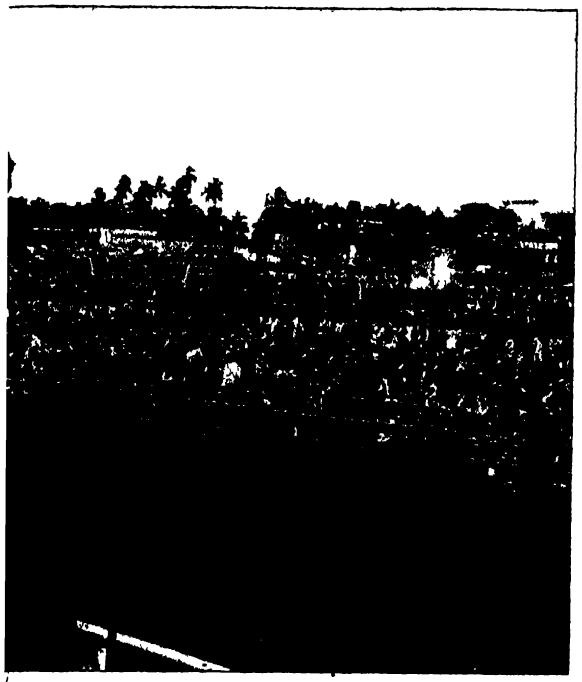
KALYAN CHAUDHURI

WEST BENGAL will witness three-cornered contests in all the 42 Lok Sabha constituencies that go to the polls on October 3. The three main political formations are the Communist Party of India (Marxist)-led ruling Left Front, the Trinamul Congress-Bharatiya Janata Party combine and the Congress(I). With the sole aim of cutting into the Congress(I)'s vote share, the Nationalist Congress Party (NCP) has fielded six candidates. It does not hope to win any seat, though.

For over two decades, the Left Front reigned supreme in State politics, but the situation changed somewhat following the emergence of the Trinamul Congress-BJP combine. The current election may well see some close finishes and interesting twists. By now the Left Front has realised perhaps better than any other party – as a political opponent, the Trinamul Congress-BJP combine is not to be equated with the Congress(I), which it has consistently beaten. The beleaguered Congress(I) has been unable to throw a stiff challenge to the Marxists since the latter assumed power, especially in Lok Sabha elections – except in 1984. That year, riding a sympathy wave following the assassination of Indira Gandhi, the Congress(I) won 16 seats, the highest since 1977.

The 1998 elections saw the marginalisation of the Congress(I) yet again, but the Trinamul Congress and the BJP together won eight seats – the former seven and the latter one. The Congress(I) won Malda, where A.B.A. Ghani Khan Chowdhury retained the seat for the third time in a row. Meanwhile, the Left Front repeated its 1996 performance by sending 33 MPs to the Lok Sabha. While the CPI(M) won 24 seats, the Revolutionary Socialist Party (RSP) won four, the CPI three and the Forward Bloc (F.B.) two.

The CPI(M) remains the frontrunner and is all set to walk away with a bigger chunk of seats this time. Its chief advantage is its wide organisational network, particularly in the rural areas, and a vast cadre force. Being the leading ruling party in the State is also a matter of advantage for it: no anti-incumbency factor is at play here.



Chief Minister Jyoti Basu addressing an election rally at Lalbagh near Behrampur in Murshidabad district.

But the mighty CPI(M) is not without its share of problems. Factionalism has crept into the ranks. Though the party leadership managed to bring about some sort of a unity ahead of the elections, the malaise has sunk deep enough to cause discomfort to the leadership. Chief Minister Jyoti Basu, addressing a meeting of party workers on the occasion of the birth anniversary of Muzaffar Ahmed, one of the founders of the Communist Party of India, criticised comrades who encouraged factionalism. "It is unfortunate that a section of our comrades are indulging in groupism after being defeated in organisational elections. One should keep in mind that those who lose in the party's organisational elections are not our enemies. They are very much in the party," he said.

Another problem is posed by the differences among the Left Front's constituents. The F.B. and the RSP have defied the CPI(M) and the CPI to chart out independent political lines at the national level, the crux of which is equidistance from both the Congress(I) and the BJP. The F.B. and the RSP have recently moderated their stance in this regard slightly, but their basic differences with the CPI(M) and the CPI on the issue persist.

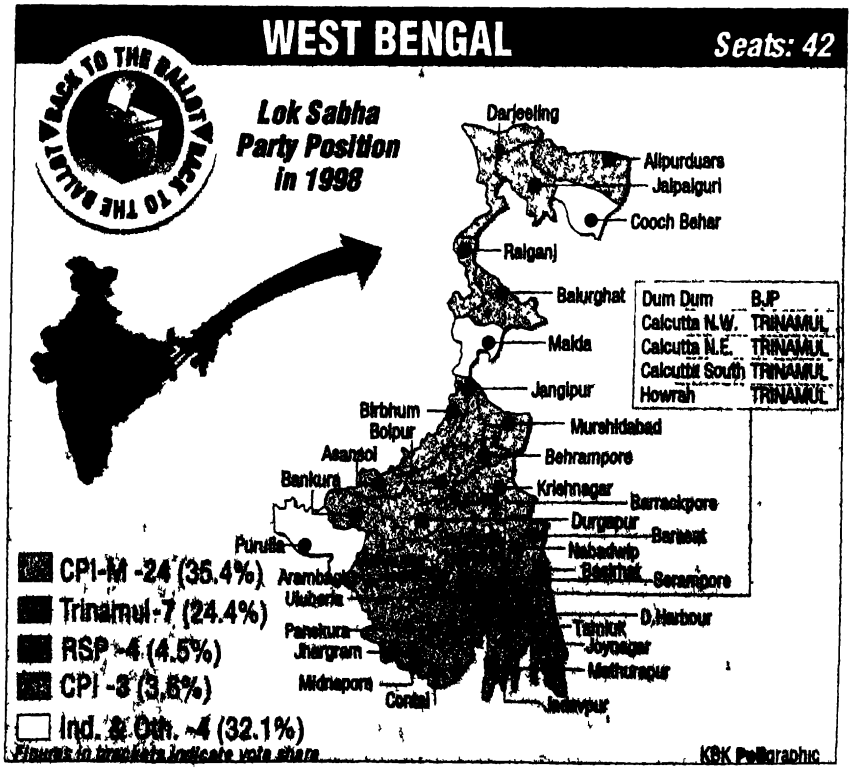
HOWEVER, the CPI(M) seems to be way ahead of its main political rivals mainly because of its well-oiled poll

SUSHANTO PATRONOBISH

machinery and its prudent management of the electoral scene. In 1998, the Left Front suffered a setback in Calcutta and its surrounding areas although it kept its votes together in the rural heartland, which accounts for a major chunk of seats.

The CPI(M) launched its campaign as soon as the election dates were announced. Although some senior members of the previous Lok Sabha were replaced, there was no wrangling over nominations. The CPI(M) is contesting 33 seats, the same number as in 1998. The RSP is contesting four seats, the CPI three and the F.B. two.

The Left Front has dropped nine candidates who contested last time. Two of those whose names have not been included this time – Ananda Pathak and Ajay Mukherjee, both belonging to the CPI(M) – won the Darjeeling and Krishnagar seats respectively. Left Front candidates who were defeated in the previous elections have been denied the ticket. The CPI(M) has fielded new faces in Jadavpur, Dum Dum and Malda, and in three Calcutta constituencies. In South Calcutta, CPI(M) candidate Subhankar Chakroborti, Vice-Chancellor of the Rabindra Bharati University, is facing Mamata Banerjee, who defeated Prasanta Sur of the CPI(M) by a huge margin in 1998. In Jadavpur, Kanti Ganguli, the CPI(M)'s Mayor-in-Council, has replaced Malini Bhattacharya, who was defeated by the Trinamul Congress' Krishna Bose in 1998.



Octogenarian Marxist leader Jyoti Basu is the Left Front's main campaigner. After addressing a huge rally in Calcutta on September 5, he undertook a tour of the districts. As per the Election Commission's directive, he travelled by train or by car.

On the role of his party in Indian politics, Basu told *Frontline* that the Left parties were trying to instal a secular government at the Centre. That is why the CPI(M) wished to strengthen its base particularly in West Bengal, Kerala and Tripura. Basu said that from the reports he received from the first round of elections, a hung Parliament was in prospect. Hence the Left parties will have to pick and choose its options.

STICKING to its electoral understanding, the Trinamul Congress is contesting 29 seats, leaving 13 seats to the BJP. A number of new names, including retired bureaucrats, figure in the Trinamul Congress' list. The BJP has renominated most of its candidates from the 1998 round. They include State party president Tapan Sikdar and vice-president Muzaffar Khan. Sikdar, the party's lone winner last time, defeated CPI(M) veteran Nirmal Chatterjee in Dum Dum.

For Mamata Banerjee, the biggest challenge lies in translating the apparent popular support for her into votes. She has had little time to hone the fledgling party into an effective organisational force that can challenge the CPI(M) comprehensively. The Trinamul Congress was the first party to announce its full list of candidates. But its wrangling with the BJP over the Bankura seat remains unresolved. The BJP nominated its veteran leader Sukumar Banerjee here, but Mamata Banerjee announced her unconditional support to the CPI(M) rebel Natabar Bagdi, MLA, in the constituency. Bagdi is contesting as an independent candidate. Thereupon, the BJP leadership approached Atal Behari Vajpayee and L.K. Advani with a request to dissuade her from supporting the CPI(M) rebel. But neither Vajpayee nor Advani would intervene. The BJP then withdrew the candidature of Sukumar Banerjee shortly after Mamata Banerjee announced that she would join the Vajpayee Cabinet if the BJP and its allies win the elections.

Despite her acknowledged crowd-pulling ability, this round of elections will prove to be a big test for Mamata Banerjee. For it will determine whether her reach goes beyond the urban areas to the countryside. Of the seven seats the Trinamul

SUSHANTO PATRONOBISH

Trinamul Congress leader Mamata Banerjee at a campaign stop. She is contesting from Calcutta South.

Congress won in 1998, four are in Calcutta. Mamata Banerjee's problem is that she has to carry the burden of her own party's campaign and also aid the BJP. The BJP would seem to have fewer worries here as a party, but its real challenge lies in its acceptance by the masses.

It is the faction-ridden Congress(I), which was enfeebled by Mamata Banerjee's revolt in 1998, that has come out the weakest in terms of poll preparedness, and it remains too demoralised to offer any effective challenge. The steady exodus of senior Congress(I) leaders and MLAs such as Pankaj Banerjee and Sadhan Pandey, former Member of Parliament Debi Pal, State president of the Indian National Trade Union Congress and former Congress(I) Minister Subrata Mukherjee to the Trinamul Congress, has further weakened the organisation.

The Congress(I), which won 36.2 and 40.09 per cent of the total votes polled in 1991 and 1996 respectively, cut a sorry figure in 1998 when it secured only about 15.2 per cent. This time, its voting percentage is expected to drop further. In 1998, elections, the Trinamul Congress and the BJP polled 24.43 and 10.19 per cent of the votes respectively. The Left Front got 46.83 per cent, nearly three percentage points less than in 1996.

An analysis of the previous results indicates that the Trinamul Congress had done well in the urban and industrial belts, but not in rural Bengal. In the urban constituencies, covering about 64 Assembly segments, it got about 46.39 per cent votes as against 39.34 per cent polled by the Left Front. In the industrial belt, covering about 80 Assembly segments, the Trinamul Congress and the Left Front polled 40.49 and 43.18 per cent respectively. In the rural belt, covering nearly 200 Assembly segments, the Left Front was far ahead. It secured about 49.42 per cent of the votes, while its main opponent polled about 30.62 per cent.

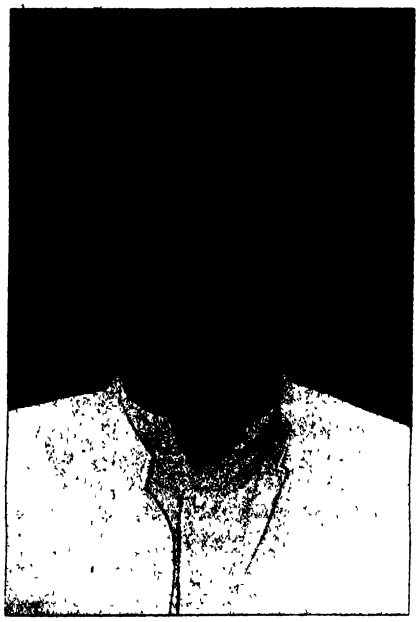
Nearly 15 per cent of the votes are seemingly still in the Congress(I) kitty, and any fresh gains by the Trinamul Congress could only mean a further division of anti-Left votes. The Left Front may gain from this division in right bloc votes to maintain its upper hand. ■

KALYAN CHAUDHURI

THE Biju Janata Dal-Bharatiya Janata Party alliance appears to be in a comfortable position in Orissa, where elections to the 21 Lok Sabha seats will be held on September 25 (10 seats) and October 3. With the Janata Dal (United) deciding to stay out of the contest following an exodus by its leaders and legislators to the BJD, it is a straight fight between the BJD-BJP alliance and the Congress(I). The State unit of the Janata Dal(U), which was on the verge of being disbanded almost as soon as it was formed, has, however, resolved to participate in the Assembly elections which are due in the next few months.

In the 1998 elections, between the allies, the BJD won nine out of the 12 seats it contested, and the BJP seven out of nine. The BJP won mostly from the tribal-dominated western and northern Orissa. The two parties are contesting the same number of seats this time. Among the 10 constituencies in which the Congress(I) and the combine were in a straight contest, the Congress(I) won only in two.

In its 22-point election manifesto, the BJD agreed with the National Agenda for Governance announced by the BJP-led National Democratic Alliance (NDA) at the national level. The manifesto promises special category status for the State. BJD president Naveen Patnaik and senior BJP leader Prashant Nanda said that they had no difficulty in reaching an accord as their common objective was to defeat the Congress(I). The leaders also announced that they would fight the Assembly polls jointly.



Naveen Patnaik said that the people had realised that the alliance was the only alternative to the "corrupt" Congress(I). Alleging that the ruling party's failure on all fronts had resulted in total lawlessness and a heavy financial burden on the exchequer, he pointed out that the Congress(I) did not keep its promise to provide 20 lakh jobs to the youth.

THE Congress(I), which won 17 parliamentary seats in 1996, suffered in March 1998 as a result of an anti-incumbency wave and won just five seats. Only twice in the past had the party fared badly in the State: in 1977 when it won four seats and in 1989 when it won three. The downfall of the Congress(I) began with the formation of the BJD four months before the 1998 elections as a consequence of a split in the Janata Dal. Several pollsters had then predicted a virtual sweep by the Congress(I) in the elections, arguing that the Congress(I) would benefit from a split in the Opposition vote. The Congress(I) leaders were at a loss to explain the reversal they experienced.

The Janata Dal, enfeebled by the split in the party, suffered one of its worst electoral debacles in 1998; it did not win a single seat in the State. The party's star candidate, former Union Minister

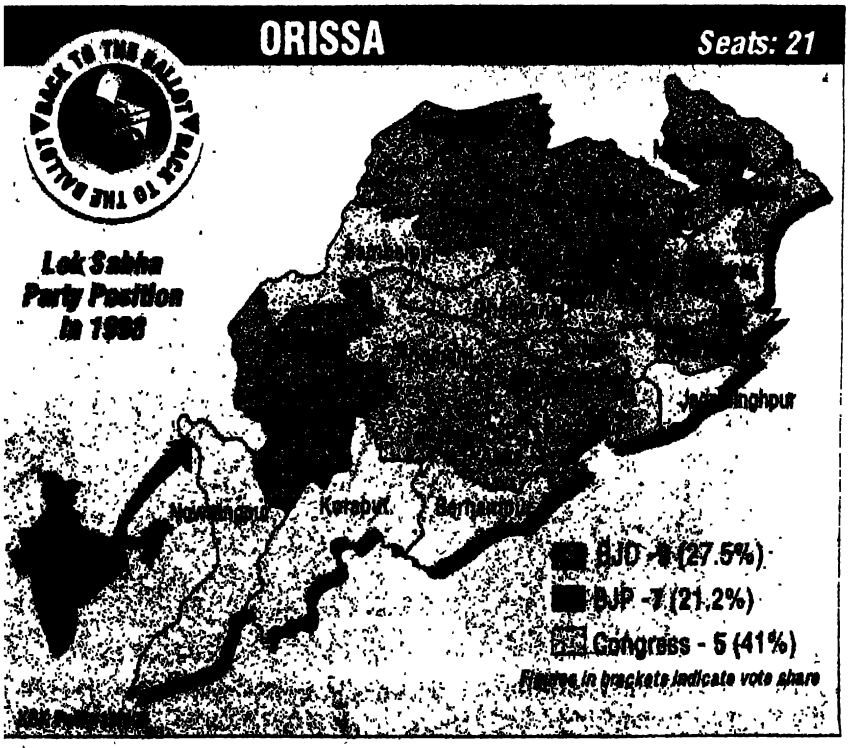
Jayanti Patnaik, Congress(I) candidate.

Naveen Patnaik, BJD leader.

SHANKER CHAKRAVARTY

Srikant Jena, finished third in Kendrapara. This key coastal constituency has been considered to be a safe seat for the Janata Dal.

Fearing dissidence, the BJD chief decided to play it safe by renominating all the nine members of the previous Lok Sabha and even three others who were defeated in the elections. At one point, Naveen Patnaik toyed with the idea of denying the ticket to candidates loyal to the rebel faction led by Bijoy Mahapatra. There was speculation that he would not renominate Prabhat Samantaray and Tathagat Satpathy who had been elected from Kendrapara and Dhenkanal respectively. Patnaik had suspended Samantaray and Satpathy, but had later reinstated them when the rebels challenged his leadership last year.



At the meeting of the party's political affairs committee called to finalise the list of candidates, Bijoy Mahapatra, chairman of the committee, staged a walk-out protesting against objections raised to the nomination of some of the former MPs. Mahapatra refused to chair the meeting and authorised the party president to finalise the list. Pressure from the rebel group forced Naveen Patnaik to renominate Samantaray and Satpathy. Naveen Patnaik had reportedly promised to allot two seats to the Janata Dal (U), a partner of the NDA, but could not keep his commitment.

The Congress(I) is contesting 20 constituencies. The party has fielded four women candidates and changed its nominees in four constituencies. It has extended support to the Communist Party of India nominee, Dutikrushna Panda, in Aska where Naveen Patnaik is contesting.

Prominent Congress(I) candidates include former Union Minister K.P. Singh Deo in Dhenkanal, Hemanand Biswal in Deogarh, Bhakta Charan Das in Kalahandi and Chief Minister Giridhar Gamang's wife, Hema Gamang, in Koraput. State Congress(I) president Biswal, who had a short stint as Chief Minister, is contesting parliamentary elections for the first time. Hema Gamang is also a first-time nominee. Two new Congress(I) candidates are Chandrashekhar Majhi for Nawrangpur and Yashwant Singh Laguri for Keonjhar. Majhi replaced Khagapati Pradhani, who declined to contest on health grounds. Pradhani was elected from Nawrangpur for eight consecutive terms. The BJP has fielded Union Minister of State for Surface Transport, Debendra Pradhan, in Deogarh.

The contest in Dhenkanal is attracting interest owing to the presence of Rudra Narayan Pani, a BJP rebel, in the fray. Political observers feel that Pani's presence is likely to help the Congress(I) candidate, Singh Deo, who was defeated by Tathagat Satpathy in 1998.

The Communist Party of India (Marxist), which has won the Bhubaneswar seat three times, is not contesting this time. CPI(M) State secretary Janardan Pati told *Frontline* that the decision was taken after consulting its allies, the Janata Dal (Secular) and the CPI. Pati admitted that his party had lost ground in Bhubaneswar. The veteran CPI(M) leader, Sivaji Patnaik, who was elected from Bhubaneswar in three previous elections, was defeated in 1998. Although the CPI, the CPI(M) and the Janata Dal (S) have not announced any understanding with the Congress(I), it is reported that they may well work for the Congress(I) in order to defeat the BJD-BJP combine. ■

Polls and opinions

A Constitution Bench of the Supreme Court forces the Election Commission to withdraw its ban on the publication in the media of the results of opinion polls and exit polls during a specified time-frame during the election process.

SUKUMAR MURALIDHARAN
V. VENKATESAN
in New Delhi

SHORTLY after withdrawing the "guidelines" that it had issued banning the publication of opinion polls and exit polls in the media while the country went through its month-long electoral exercise, the Election Commission issued a statement indicating that the questions it had raised still awaited a final resolution. "The substantive issue of opinion and exit polls in a poor and half-literate society, having multi-party democracy," said the Commission, "still remains to be debated by the country and by the new Parliament, in a calm, post-election atmosphere."

The statement, issued on September 14, was a virtual admission that the power of "superintendence, direction and control" that Article 324 of the Constitution confers on the Election Commission provides it only a limited jurisdiction. Its precise scope remains to be defined and codified through legislation. But in a situation of ambiguity, the Commission is not at liberty to take pre-emptive action that may enlarge the scope of its powers.

The Commission's statement seems to suggest an intention to bring these matters to the attention of the newly constituted Parliament for appropriate legislation. That would, if it happens, mark a long-overdue initiative. The "guidelines" issued by the Commission on August 20, just two weeks prior to the opening of the polls in an unprecedentedly long election schedule, were a reiteration of a set of principles that it spelt out in January 1998. They had elicited a legal challenge then, principally from the Editor of *Frontline*, N. Ram, which remained unsettled. In moving a writ petition before the Supreme Court on September 10, 1999, the Commission sought judicial sustenance for its view that the guidelines it had successively issued were tenable under the law. In a context of undefined executive powers, the intention was to hold non-compliance with the Commission's directives equivalent to contempt of court.

Since 1998, the Election Commission has tended to view the exercise of opinion polls and exit polls with considerable scepticism and misgiving. "The dissemination of such results of opinion polls receives wide publicity and coverage in the print and electronic media and such dissemination, particularly on the eve of polls, has the potential to influence the electors when they are in the mental process of making up of their minds to vote or not to vote for a certain political party or a candidate," the Commission had reasoned in its guidelines.

On exit polls, the Commission claimed that "publication of (the) result of any exit poll, in the intervening period when the poll in any of the States or Union Territories or constituencies is yet to be taken, is likely to affect the unbiased exercise of franchise by the elector, one way or the other." The Commission referred to restrictions on the dissemination of such poll results, particularly in Canada, France and Italy, where such controls have legal backing. In citing these analogies, the Commission did not seem quite willing to grapple with the manifest absence of a legal basis under Indian law for its guidelines.

What made the guidelines especially irksome from the point of view of the media was the prolonged period of their application. The publication of opinion and exit poll results in the print or electronic media was to be banned from 48 hours prior to the closing of polls in the first round of voting (September 5) till

RAJEEV BHATT

Chief Election Commissioner Dr. M.S. Gill with Election Commissioner G.V.G. Krishnamurthy.

half an hour after the closing of polls in the last round (October 3).

Expectedly, certain media organisations proved less than mindful of the Commission's directives. This prompted the writ petition of September 10, which the Supreme Court bench consisting of Chief Justice A.S. Anand, Justice K.T. Thomas and Justice M. Srinivasan chose to refer to a Constitution Bench. In making this reference, Chief Justice Anand also ordered that papers pertaining to all the related petitions be circulated before the Constitution Bench. This brought to the foreground of judicial attention a set of petitions that had been filed in 1998. These included petitions filed by *Frontline* and its Editor, N. Ram, and the Tamil weekly *Nakkeeran* and its Editor, R. Rajagopal, apart from a petition filed by S.N. Tiwari, an individual from Rajasthan.

The Commission's petition specifically mentioned the Union Government, *The Times of India* and Jain TV as respondents. But the Commission suffered an early setback when the Union Government made clear its inability to implement the guidelines.

A Constitution Bench comprising Justices S.P. Bharucha, B.N. Kripal, V.N. Khare, S.M.H. Quadri and D.P. Mohapatra took up the matter on September 14. In the course of a four-hour hearing, the bench repeatedly asked the Commission's counsel, Harish Salve, to explain the grounds on which he expected the Supreme Court to help enforce its guidelines. The bench also sought to know how the government could possibly enforce the guidelines in question. Among other things, the bench wanted to know whether the Commission had the power to issue such guidelines and enforce them. Asking other agencies to implement them is no remedy, the bench said, especially since the judiciary could not play an executive role. Power to enforce a guideline is inherent in the power to issue it, the bench suggested.

A second point posed by the bench related to the judicial power to issue a writ of mandamus against individuals and organisations in the media. This power, it observed, was only invoked in cases involving the violation of fundamental rights. Individuals and organisations could seek such a writ against the state. But for the Commission to seek such a direction in its aid amounted to an inversion of constitutional principles.

The Commission, through its counsel, expressed the opinion that the defiance of its guidelines by some newspapers and television channels implied a challenge to the rule of law. As an authority empowered by the Constitution to take all measures to ensure free and fair elections, it enjoyed the requisite power to issue guidelines, Salve claimed.

At one stage, the bench wondered whether there was any point at all in challenging a set of guidelines that had no teeth. The court did not take up the issue of freedom of expression, guaranteed under Article 19 of the Constitution, since it was tilting towards the view that the guidelines themselves had no legal basis.

Shanti Bhushan, counsel for *Frontline*, as also for Jain TV, argued that Article 324 confers only administrative powers on the Commission. In other words, the Commission can direct and control all officials engaged in election duty and apply certain norms to candidates and political parties. These powers did not, however, extend to the media, which stand outside the election process, he argued. The Commission enjoys extraordinary powers only with regard to cancellation or postponement of elections, if the situation warrants. It can warn political parties and candidates about the likely consequences of violation of election law, Bhushan pointed out. The publication of opinion and exit poll results did not amount to any such violation. On the contrary, argued Bhushan, they could be useful inputs for voters to decide which party to endorse, which could contribute to political stability.

At one stage, the bench wondered whether there was any point at all in challenging a set of guidelines that had no teeth. The court did not take up the issue of freedom of expression, guaranteed under Article 19 of the Constitution. Although this was one of the grounds listed in *Frontline*'s petition seeking the quashing of the Commission's guidelines, the bench did not take up the question since it was tilting towards the view that the guidelines themselves had no legal basis.

The bench was not convinced by Salve's claim that the guidelines were the result of a near-consensus among the political parties, and that even the Press Council of India had recommended restrictions to be placed on the dissemination of the results of opinion and exit polls.

The Constitution Bench dismissed the Commission's writ petition at the admission stage itself saying that the petition had no merits. It rejected the Commission's plea that the bench should issue appropriate directions, or at least make a declaration that the guidelines are enforceable and legal. After dismissing the writ petition, the bench went on to examine the scope of Article 324 by hearing arguments on whether the Commission had the requisite powers to issue such guidelines.

When the E.C.'s counsel justified the Commission's powers under Article 324, Justice Bharucha told Salve that the bench had had enough of arguments, and asked whether the Commission expected the bench to write a judgment basing itself on Article 324, which would show that the Commission had far less powers than it claimed it had. The bench asked him whether the guidelines could be enforced on CNN or the BBC, international satellite television channels, or even on the Internet, if at all the Commission enjoyed the requisite power under Article 324. At this stage, Salve agreed with the bench, and requested a brief adjournment in order to get in touch with the Commission to find out whether it was willing to recall its guidelines.

After consultations he informed the court that the guidelines would be withdrawn. The course of prudence seemed appropriate in the light of a gentle admonition from the court, that at the "end of the day" the Commission may be left wielding a greatly diminished power for the supervision of elections.

Although the Commission has since indicated that it intends to keep the issue alive, there is little question that it has in overstretching itself, undermined even the residual sense of respect that sections of the media had shown towards its directives. The Supreme Court did not turn its attention to an examination of the desirability or otherwise of the restrictions proposed by the Commission. It merely examined the limited question of the Election Commission's powers and the existing legal underpinning for these. The hearing before the Constitution Bench clearly indicated that Article 324 could

not be stretched so far as to restrain the freedom of expression. A fuller exposition of this point was not given since the Election Commission sought to pre-empt a larger challenge to its authority by discreetly withdrawing its guidelines. The debate on the role of opinion and exit polls, and its impact on the voters will presumably continue.

An early contribution to the discourse on the subject came from N. Bhaskar Rao, chairman of the Delhi-based Centre for Media Studies. The public debate, he said, had served a salutary purpose, in making larger numbers of people aware of the potentialities and limitations of opinion polls. The veteran election analyst concedes that there is a growing tendency to abuse opinion polls to induce a certain pattern of voting behaviour. "But you cannot prohibit," he affirms. "The best course is to sensitise the voting public about the intricacies of these polls."

Bhaskar Rao's own research points towards a certain measurable influence of opinion polls on voting behaviour. "The impact varies according to the actual situation," he says. As a broad generalisation, he has found that the impact tends to be greater where a constituency is witnessing an exceptionally keen contest, or where a large number of voters remain undecided till late in the campaign. While the Commission may have a case, a total ban, says Bhaskar Rao, may not be the best way to pursue it.

The political reactions traversed a wide spectrum. Bharatiya Janata Party spokesman Arun Jaitley sought to interpret the Commission's capitulation as a triumph for the freedom of the media. Congress(I) spokesman Kapil Sibal reaffirmed his party's commitment to the law as interpreted by the highest court, though he did criticise the BJP for trying to portray its vested interests in Jain TV as a matter of high principle. Other parties, such as the Janata Dal (United) and the Samata Party, endorsed the notion of restraint by the media, but saw little merit in draconian administrative action to enforce it.

IN a related development, a Division Bench of the Andhra Pradesh High Court had on September 7 quashed an order of the Election Commission prohibiting the broadcast of advertisements by political parties and candidates on private television channels during the elections. The judgment came on a writ petition filed by Gemini TV, a Telugu language channel, challenging an August 26 order of the Commission. ■

■ EDITORIAL

Polls, the media and elections

THE Supreme Court's dismissal of the Election Commission's petition seeking a 'declaration' to enforce a 'ban' on the publication by the Indian news media of the findings of pre-election public opinion polls and exit polls for a full month (September 3 to October 3, 1999) covering the general election process is an important practical triumph for the freedom of speech and expression. At another level, it is a setback to the authority of the Election Commission (E.C.), a constitutionally high body that has made a tireless effort in recent years to expand its realm of jurisdiction in the system and bring new players and subjects under its effective regulation if not control. Given the adverse turn in the case, when it could not show any legal basis for having its banning 'guidelines' of January 21, 1998 and August 20, 1999 enforced against the media and the pollsters, the Election Commission was obliged to withdraw the controversial guidelines whose language was constructed in the style of an order and make the best of the situation by asserting, in a press note, that the "substantive" and "complex" issue of opinion and exit polls "in a poor and half-literate society, having multi-party democracy" needed to be debated by the country and the new Parliament "in a calm, post-election atmosphere".

Interestingly, the apex court chose not to go into the principal basis of the legal challenge to the E.C.'s banning guidelines – that they violated the "fundamental right of free speech and expression guaranteed by Article 19(1)(a) of the Constitution" (to quote from the original petition filed in the Delhi High Court in January 1998 by *Frontline* and its Editor against the Election Commission). Going into this issue in depth and coming up with a new benchmark on Article 19(1)(a) weighed against other considerations would have required intensive and prolonged hearings, but there can be little doubt that had the apex court elected to take the strenuous course and determine this issue definitively, the banning guidelines would have stood zero chance against the force of Article 19. After all, the Supreme Court of India has, over decades and with remarkable consistency, upheld freedom of the press as an integral part of freedom of speech and expression – putting it virtually on a par with the unassailable First Amendment guarantee of freedom of the press in the Constitution of the United States. Article 19(2) of the Indian Constitution permits the imposition of "reasonable restrictions" on the fundamental right of free speech and expression on eight specified grounds and for no other reason. The eight grounds are: the sovereignty and integrity of India; the security of the State; friendly relations with foreign States; public order; decency or morality; contempt of Court; defamation; and incitement to an offence. No justification for the banning guidelines cited in the E.C.'s case could have remotely approached the definition and test of a "reasonable restriction" on free speech and expression under these specified heads. It can be added that in the highly unlikely event of Parliament legislating the substance of the E.C.'s guidelines into a statute, that also will stand no chance against Article 19.

Unsurprisingly, the E.C.'s case in the Supreme Court faded away when it failed to rebut the objection that the guidelines were legally unsustainable "because there is no power or authority with the Election Commission to gag the media in this manner" (to quote again from the *Frontline* petition). To make up for the weakness of its case, the E.C. attempted to take the high ground, arguing essentially that its empowerment by Article 324 of the Constitution for the "superintendence, direction and control

of elections" gave it wide powers that were more than adequate to issue these banning guidelines. The Constitution Bench that heard the matter made light of the contentions in favour of enforceability of the guidelines, calling attention to the absence of "any teeth" or legal basis for enforcement against "third parties" such as the media and the public (as distinct from political parties, candidates and state authorities involved in the conduct of elections). More interestingly, the Bench orally observed for the benefit of the E.C.: "At the end of the day, you may go with a perception that you have far less powers than the public perception."

ALL this should not detract from the excellence of the work done by the three-member Election Commission, which after all is conducting one of the wonders of the world, an Indian general election involving some 605 million eligible voters across wonderfully vast, diverse, varied and volatile circumstances. After the excesses of the Seshan era, the multi-member E.C. has not merely come to stay. Under the leadership of Dr. M.S. Gill, the Chief Election Commissioner, it has played an objective, fair, secular and eminently sensible role in the superintendence, direction and control of elections. It has intervened deftly and in time where warranted; guarded its independence and jurisdiction without making a song and dance about this; resisted improper attempted encroachments (by those like the acting Governor of Bihar, who has seemed in need of lessons in elementary constitutional functioning *vis-a-vis* both the E.C. and the elected State government) without inviting public confrontations; shown courage (as in deciding Bal Thackeray's disenfranchisement for a period on transparently just grounds) but avoided grandstanding; functioned as a team presiding over an election-conducting army of civilians that is without parallel anywhere else in the world; and served as a force for public education in the values and modalities of elective democracy.

However, the sweeping attempt to give opinion and exit polls a bad name and to suggest that such exercises detract from the freedom of choice by citizens and the democratic process itself, especially given the mix of mass poverty, huge illiteracy and multi-party democracy, cannot be upheld. Opinion and exit polls and psephology, the fairly young discipline that attempts to study electoral behaviour scientifically, have over the past 15 years made a qualitatively impressive contribution to an understanding of the Indian political process. In general, they have raised the level of public awareness of the opinions and views of various sections of society on political parties, candidates and issues. At their best, when they are conducted honestly, transparently and on the basis of the principles of statistical science and a rigorous scientific methodology, polls can serve as an antidote to partisan propaganda and baseless claims made on various sides. The carefully qualified, nuanced and understated presentation and analysis of the results of a series of State-wise opinion polls by Dr. Prannoy Roy, a pioneer of Indian psephology, over several days on Star News prior to this thirteenth general election is an example of the insight-providing and educative role of scientific polling.

Dr. Gill and the E.C. are doing an important service to democracy when they criticise and object to the recent trend of abuse of opinion and exit polls for partisan political ends. A notable example of manipulative use of polling over the manipulated media is Doordarshan's suspiciously timed telecast of the results of a shoddily done exit poll; the telecast was a crude attempt to influence the electorate in favour of the BJP-led combine. Would government-controlled Doordarshan have telecast, in mid-general election, the findings of an exit poll predicting victory for the Opposition? On the other hand, there is no need to exaggerate the direct impact of opinion and exit polls on mass voting behaviour. If there is a 'bandwagon' effect, there can also be a 'swimming-against-the-current' effect that energises those swimming against the political current to bring out their supporters in larger numbers and put up a more determined fight. In any case, under Indian conditions, the publication of opinion and exit polls cannot make anything more than a small, if not marginal, difference to how the masses vote.

NEVERTHELESS, the time has come to challenge the authenticity, transparency and competence of several polls commissioned and presented by the non-official and official media in India. Most of these polls fail to provide the reader with the minimum disclosure of technical and methodological information required by the code of conduct supposed to apply both to polling agencies and the news publications using their services. (Going by the record available in print and on television, a number of poll analysts and learned commentators do not care, or seem unable, to distinguish between *per cent* and *percentage points* while discussing shares of the popular vote, swings, and comparative electoral performance.) Then there is a distinctive problem posed by a first-past-the-post system under conditions of tremendous electoral diversity, unevenness and complexity – the problem of converting shares of the popular vote into seats while making predictions. Most seat predictions made by pollsters for Indian elections have nothing to do with statistical science and represent only plausible guesswork at best; with tall claims made and the methodology and formulae of share-of-the-vote to seat conversion unacceptably sought to be passed off as trade secret, such exercises often degenerate into pseudo-academic sharp practice.

What is required is a balanced and progressive attitude to polling and psephology, which is able to see the advantages they offer in providing relevant public information and raising public awareness in a democracy and also their limitations and the potential for abuse. The E.C. has erred in forming a one-sided, almost dogmatic opinion on the role of opinion and exit polls, seeing mainly the potential for, and the recent trends of, misuse; it has also tended to go beyond its jurisdiction and attempt drastic 'corrective' action that, on the one hand, conflicts with the constitutionally protected freedom of the media and, on the other, virtually abolishes close-to-the-election polling in India. If the E.C. changes its approach and converts its wholesale hostility to opinion and exit polling into a concretised moral campaign among the public against the manipulative and dishonest use of polling and against professional and media malpractice, it is likely to get a lot of intellectual and popular support. ■

CTBT contretemps

The entry-into-force deadline is here, but the Comprehensive Test Ban Treaty clearly will not make it.

R. RAMACHANDRAN

ON September 24, 1996, the Comprehensive Test Ban Treaty (CTBT), opened for signatures after it was approved by the United Nations General Assembly (UNGA). This year, that date, will mark the passage of the three-year deadline set by the Treaty's provisions to enable the CTBT to come into force. The Treaty can come into effect only if 44 specified countries ratify it and submit the instruments of ratification to the U.N. Secretary-General.

Article XIV of the Treaty lays down the requirements for its entry into force (EIF) (see box). The list of 44 states – Annex 2 of the Treaty – comprises the states that formally participated in the 1996 session of the Conference on Disarmament (C.D.).

The EIF clause, that mandates upon the 44 states to ratify the treaty, was a device evolved as a result of backroom manoeuvres to ensure that the (then) threshold states such as India, Pakistan, Israel and North Korea were forced to become party to the Treaty. (Para 2 of Article XIV is poorly worded resulting in ambiguity with regard to the actual deadline though the Preparatory Commission of the CTBT Organisation (CTBTO-PrepCom) or the signatories to the Treaty do not seem to be overly concerned about it. It speaks of "three years after the date of the anniversary of its opening for signature". The ambiguity is essentially in the use of the word "anniversary" as it lends to the interpretation that the deadline is September 24, 2000. The accepted interpretation, however, seems to be September 24, 1999, although it is not clear how a court of law will view it.)

Paragraphs 2-3 of Article XIV, which allow annual conferences to enable the entry into force, was the result of the suggestion by the Canadian negotiators as they felt that a strict EIF provision would make it difficult to bring the Treaty into force promptly. It requires that a majority of the states that have deposited their instruments of ratification request a special conference "to consider and decide by consensus what measures consistent with international law may be undertaken to accelerate the ratification process in order to facilitate the early entry into force."

As of September 15, 1999, exactly 152 countries had signed the Treaty and 44 countries ratified it. Of these 44 states, only 21 are from the specified list of 44. Of the seven countries which have exploded nuclear devices, only France and the United Kingdom have ratified the Treaty. Israel and North Korea are the key threshold states that have not signed the ratification.

The U.N. Secretary-General has convened a Special EIF Facilitation Conference during October 6-8, 1999, after the Vienna-based ambassadors of a majority of the ratifying states made a request on May 11 as required under Article XIV.

The Nuclear Non-Proliferation Treaty (NPT) Preparatory Committee meeting held in May in New York had provided the forum for an informal discussion among the ratifiers on the convening of the EIF Conference. The U.K. has been in the forefront of getting the EIF conference convened. The informal exercise of arriving at a proper agenda, procedures of the meeting and the measures to be proposed has been on since May 18 with Britain's Ambassador to Austria, John Freeman, serving as the "Consultative Chair".

The EIF clause stipulates that only ratifiers can vote at the conference. Signatories can attend only as "observers". It appears that even non-signatories and non-governmental organisations have been granted an "observer" status. Accordingly, India – a non-signatory – too has been invited. According to sources in the Ministry of External Affairs (MEA), India is not likely to attend the meeting. The reasoning could be that since it cannot participate in the discussions, there is no point in attending the meeting.

External Affairs Minister Jaswant Singh clearly stated the Indian position on CTBT in the post-Pokhran-II phase (see *Foreign Affairs Journal*, September-October 1998): "After the tests, India stated that it will henceforth observe a voluntary moratorium and refrain from conducting underground nuclear test explosions. It has also indicated a willingness to move toward a *de jure* formalisation of this declaration. The basic obligation of the CTBT is thus met: to undertake no more nuclear tests. *Since India already subscribes to the substance of the test ban treaty, all that remains is its actual signature.*" (emphasis added).

Pakistan, having declared a moratorium on nuclear tests, has adopted a somewhat similar position. In his UNGA address last year, Prime Minister Nawaz Sharif said that Pakistan was ready to adhere to the CTBT "in an atmosphere free from coercion and pressure". He reiterated this in his National Defence College address on May 20. Some recent pronouncements have linked the signing of the CTBT to the lifting of sanctions, giving meaning to the phrase "atmosphere free from coercion and pressure". However, perhaps to save the embarrassment of being confronted with the question of signing the Treaty, having given some assurances at the last UNGA, Sharif has decided not to attend the session this year.

TOPPING the list of states whose ratification is essential for the Treaty making headway is the United States. The U.S., which holds the largest nuclear arsenal, has conducted 1,030 nuclear tests and has put in place the gold plated multi-billion dollar Stockpile Stewardship Programme (SSP) with the objective of being in readiness to resume nuclear testing if it becomes necessary for reasons of national security and "supreme national interests of the country". Ratification by other countries, particularly by China and Russia, would be predicated upon the U.S. ratifying it first. The issue of U.S. ratification has, however, been politically stalemated since President Bill Clinton transmitted it to the Senate on September 22, 1997 for its "advice and consent". The Senate Foreign Relations Committee, chaired by Republican Senator Jesse Helms, has not held a single hearing on the Treaty. He is holding the CTBT hostage in order to get his political pound

The Asian Institute of Management

Manila

Master in Business Management

(July 2000-May 2002)

Asian Institute of Management, Manila, is a leading International graduate school of management Over the last three decades, more than 24,000 graduates from over 40 countries have left its portals to reach top management posts all over the globe

International Pay Packages Today graduates from AIM get offers of as much as Rs 4,00,000 p a in India to USD $ 1,00,000 p a and more in global jobs

The Masters in Business Management is a unique 2 year general management program that prepares you to lead and manage organisations in any culture, anywhere in the world

Exchange program: Select students participate in a one-semester International Exchange Program with top business schools in America, Europe, and Asia These include Wharton, UCLA, Columbia, University of Southern California, McGill, Rotterdam School of Management, Melbourne Business School and Keio University

Scholarships: Several scholarships are available on merit-cum-need basis They include

- Japan-ADB Scholarship Tuition, board and stipend
- 2 Dean's Scholarships of 100% tuition grant valued at $ 9,980 each
- 3 Dean's Scholarships of 50% tuition grant valued at $ 4,990 each
- Grant-in aid Tuition support equivalent to $1200 per annum
- Several AIM Alumni Assoc Scholarships and grants are available

For Scholarship details write below.

Train To Be A Global Manager

Eligibility: 22 years or above (as of 30 06 2000) Bachelor's Degree, 2 years of work experience required Priority for admission, grants and scholarships is given to applicants who have more than the minimum requirement of work experience

Admission Test & Interviews: Applicants can take any of the following exams CAT, held by the IIMs on December 12, 1999 GMAT as per schedule, AIMAT written test held on the 5th of December If short-listed, you will be called to Mumbai for a Group Discussion and Personal Interview in February, 2000

NOW ! ADMISSION TO AIM IS THROUGH CAT, GMAT OR AIMAT

For the CAT bulletin, please refer to the IIM advertisements on August 19th in all leading national dailies. Last date for sale of CAT forms is Sept. 27, 1999, from select branches of SBI.

Note AIM uses CAT for shortlisting candidates for its post graduate program in Business Management IIMs have no role in either the selection procedure or in the conduct of the AIM programs

Important dates:

Issue of forms commences	05 09 1999	Date of GMAT	As per schedule
Last date for issuing forms	10 12 1999	Date of AIMAT	05 12 1999
Last date for receipt of filled forms	15 12 1999	Interviews and Gds	February 2000
Date of CAT	12 12 1999	Session begins	17 07 2000

Annual tuitions + misc. expenses USD $ 12,000 per annum. (Cost of living extra)

For a copy of the application form and brochure, please send a non refundable payment of Rs. 2500 (Two Thousand Five Hundred) by demand draft, drawn in favour of "The AIM Alumni Association (India)" payable at Mumbai, to the address given below

AIM Alumni Assoc (India), C/o. 520 Maker Chamber V, Nariman Point, Mumbai 400 021

of flesh. Senate rules give the Foreign Relations Committee jurisdiction over treaties. While in principle it is possible that the Senate could give its consent after a single hearing, it is most unlikely to take up the Treaty for consideration as the topic is not listed for hearings.

With the deadline nearing, there is much evidence of pressure being mounted on Helms. On June 28, five Republican Senators wrote to Helms urging him to hold hearings. Armed with findings of a poll – which shows that 80 per cent of Republicans and 86 per cent of the Democrats, on the one hand, and 82 per cent of the general public, on the other, want the CTBT approved – Clinton and a group of nine bipartisan Senators issued a joint statement on July 20 calling for prompt action on the Treaty. On the same day, all the 45 Democratic Senators wrote to Helms calling for Senate hearings.

In a letter dated August 2 and addressed to Senator Trent Lott, the Senate majority leader (whose unstinted support Helms seems to enjoy), nine eminent scientists, including Dr. Hans Bethe, who headed an important division of the Manhattan Project, Dr. Freeman Dyson, Dr. Herbert York, founding director of the weapons facility, Lawrence Livermore National Laboratory, nuclear weapons specialist Dr. Richard Garwin, and some important former intelligence and military officials, called for prompt ratification. They pointed out that in the context of reports of Chinese nuclear espionage in the U.S., ratification of the CTBT was an essential and key step towards protecting the U.S. against weaponisation of stolen nuclear secrets.

On August 9, Clinton, in his address on the occasion of the 50th Anniversary of the Chairman of the Joint Chiefs of Staff, stated that the current Chair, General Shulton, and four former Chairs had issued a statement endorsing the CTBT and urged Helms to hold hearings during this fall season. The most dramatic, however, is the statement on September 8 by Democratic Senator Byron Dorgan. Stating that the October conference should not proceed without the U.S. providing a leadership role, he has threatened to obstruct all Senate proceedings unless the CTBT is taken up for debate. Senator Helms appears unmoved.

The underlying issues are complex. While in U.S. domestic terms they are political, in global terms they have to do with issues of nuclear disarmament in general. The reasons for the other two Nuclear Weapon States (NWSs), Russia and China, having not ratified the Treaty stem from these considerations. The ratification in the U.S. has got linked to the 1972 Anti-Ballistic Missile (ABM) Treaty, the proposed defence postures of the U.S., the Strategic Arms Reduction Treaty (START-II), the alleged Chinese nuclear espionage and the nuclear tests by India and Pakistan. India's opposition to the Treaty at the C.D. was primarily on the grounds that the Treaty, as adopted, had failed to address broader nuclear disarmament issues.

Ironically, after Pokhran-II, the BJP government's position on CTBT.... is being dictated by what one may call the "railway compartment mentality". The present government is all for signing the Treaty for some imagined *quid pro quo* from the U.S. administration, such as the transfer of dual-use technologies.

Ironically, after Pokhran-II, the BJP government's position on CTBT, aided by the arguments of the hawkish defence analysts and strategists, is being dictated by what one may call the "railway compartment mentality". Arguments related to disarmament have been thrown to the winds and the present government is all for signing the Treaty for some imagined *quid pro quo* from the U.S. administration, such as the transfer of dual-use technologies. Indeed, it would have gone ahead and signed the Treaty but for the fact that the government itself fell and the hold-out states now includes the U.S. as well.

The crux of the problem in the U.S. imbroglio is the proposed revision of the ABM Treaty which the U.S. is negotiating with Russia. Helms' contention is that the ABM Protocols and the Kyoto Protocol to the U.N. Convention on Climate Change have not been sent to the Foreign Relations Committee as required and, unless that is done, he will not take up the CTBT which is very low in his priority. A key issue in the proposed ABM Protocols pertains to the demarcation of Theatre Missile Defence (TMD) and ABM, the development and deployment of the latter being prohibited under the ABM Treaty. The objective of the revised protocols is to enable the development and deployment of the proposed National Missile Defence (NMD) system for which Clinton has sought a $10.5-billion funding between now and 2005.

On the one hand, Russia perceives the NMD to be violative of the ABM Treaty and will not move on START-II, which is awaiting ratification by the Duma, until ABM Treaty Protocols are renegotiated to its satisfaction and NMD is not pursued. Indeed, ratification has perhaps become even more remote in the light of the recent developments in Yugoslavia. On the other hand, the U.S. administration wants the immediate deployment of a robust NMD (which could include space-based weapons) for national security against the perceived emerging ballistic missile threats from North Korea, China and India, and views the proposed revision of the ABM Treaty to be restrictive. In fact, the hawkish Helms wants the ABM Treaty, which according to him is defunct after the collapse of the Soviet Union, scrapped so that the NMD can be established. "The Clinton administration wants to negotiate permission from Russia over whether the U.S. can protect itself from ballistic missile attack by North Korea. This is unacceptable," says Helms. Fearing that the new protocols will not get two-thirds majority in the Senate, and without the benefit of START-II ratification by Russia, the Clinton administration is unlikely to send it to the Senate.

ALTHOUGH unrelated to the CTBT or other arms control issues, the Clinton Administration does not want the Kyoto Protocol, which puts binding obligations on the U.S., accepted until there is stronger commitment from developing countries for greenhouse gas reduction. Clinton feels that it is premature to send the Kyoto Protocol to the Senate. But Clinton had, according to Helms, given a legally binding commitment to send the two treaties to the Senate. When this did not happen, Helms set June 1 as the deadline for a debate on the CTBT. June 1 has passed and Helms is steadfast in his refusal to consider the CTBT as the situation remains unchanged. Helms has also used the Indian nuclear tests as arguments for opposing the CTBT saying that

"the Indian tests, from a non-proliferation standpoint, have demonstrated that CTBT is scarcely more than a sham."

North Korea's August 1998 launch of the Taepo Dong-I missile, and reports of increased deployment of Chinese M-11 missiles opposite Taiwan, have had their ramifications in the U.S. debate on TMD in East Asia (proposed to be deployed in conjunction with Japan and Taiwan) and the NMD itself. This has increased the already tense Sino-U.S. relations after the Cox Report on nuclear espionage and the attack on the Chinese Embassy in Belgrade. Beijing has argued that the development of an East Asian TMD would be inconsistent with U.S. commitments on the ABM Treaty. Chinese officials have warned that U.S. missile defences could force China to increase its offensive forces, or, due to the technology involved, lead to an arms race in space.

In his March 26 address at the C.D., Chinese President Jiang Zemin, even as he announced that the CTBT would soon be submitted to the National People's Congress for ratification, said: "Disarmament should not become a tool for stronger nations to exert control over weaker ones, still less should it be an instrument for a handful of countries to optimise their armament to seek unilateral security superiority. To reduce the armament of others while keeping ones own intact, to reduce the obsolete while developing the state-of-the-art, or even to sacrifice the security of others for one's own security and to require other countries to scrupulously abide by treaties while giving oneself the freedom of action by placing domestic laws above international law, all these are acts of double standards. They are a mockery of international disarmament efforts and run counter to the fundamental purposes and objectives of disarmament."

IN the light of all this, the likely scenario after September 24 is that the October EIF conference is unlikely to have these key countries as voting participants.

The status of 44 states

Status of the 44 states whose ratification is required for the Comprehensive Test Ban Treaty to Enter into Force (Article XIV) as of September 16.

State	Date of signature	Date of ratification
Algeria	October 15, 1996	—
Argentina	September 24, 1996	December 4, 1998
Australia	September 24, 1996	July 9, 1998

Vietnam	September 24, 1996	—

[illegible] 44; signatories: 41; ratifications: 26.

With the U.S. absent, the conference is unlikely to take any significant decisions. Also, as MEA sources point out, since the UNGA will be held at the same time, nothing significant is likely to happen at the EIF meeting. So the question is: what would or what can the Conference do in terms of "measures to accelerate ratification"? Indeed, it would be interesting to speculate what kind of measures the remaining ratifiers will envisage to accelerate the process in the U.S.

What the EIF conference definitely cannot achieve is to waive the requirement of the 44 ratifying states to bring the Treaty into force. It also cannot make amendments to the Treaty. Indeed, during the C.D. negotiations, it was ensured that such a "waiver conference" is not permitted. However, John Holum, the U.S. Under Secretary of State for Arms Control and Politico-Military Affairs, at a special briefing on April 7, 1998, after the U.K. and France ratified the Treaty, said: "They could adopt on their own a test ban treaty that would have all the same provisions but a different EIF provision. That's a theoretical possibility. Or they could decide on provisional application. I think any of those kinds of options would be very difficult to pursue because the EIF provisions were the product of very intense negotiations and... certainly, the two who have ratified last week have strong views on that question."

In all likelihood, the October conference will open with the opening remarks of all the ratifying states and conclude with a pious declaration with regard to the importance of the CTBT with a resolution calling upon the rest of the 44 states to ratify the Treaty at the earliest. The conference may also adopt a resolution to step up diplomatic efforts for the conclusion of the Treaty and a decision to convene another special EIF conference in 2000, if the CTBT is not in force by then. It is becoming increasingly clear that, unless nuclear disarmament is addressed in its entirety, the CTBT could remain a non-starter. ■

Pakistan's compulsions

AMIT BARUAH
in Islamabad

PAKISTAN'S decision not to sign the Comprehensive Test Ban Treaty (CTBT) at this stage comes as no surprise. Linked to this decision is the formal announcement that Prime Minister Nawaz Sharif will not visit New York to attend the ongoing United Nations General Assembly session. However, the issue reportedly figured in the discussion between Sharif's younger brother and Punjab Chief Minister Shahbaz Sharif, and U.S. Deputy Secretary of State Strobe Talbott in Washington on September 15.

Foreign Minister Sartaj Aziz told *Dawn* on September 12: "We will not consider the signing of the CTBT till the time the sanctions imposed against Pakistan by the United States are removed." Aziz also told the newspaper that Pakistan had committed itself to signing it by September 1999 only if a coercion-free atmosphere was created. "Our condition has not yet been met so there is no question of signing the CTBT at this stage." The Foreign Minister said that the recent enunciation of a draft nuclear doctrine by India would have nothing to do with Pakistan's decision in this regard.

Addressing the U.N. General Assembly on September 23, 1998, Nawaz Sharif said: "We have declared a moratorium on nuclear testing; so has India. There is no reason why the two countries cannot adhere to the CTBT. In a nuclearised South Asia, the CTBT would have relevance if Pakistan and India are both parties to the Treaty."

Sharif said then that Pakistan would be ready to sign up in September 1999 in conditions "free from coercion or pressure". If India resumed testing while Pakistan adhered to the CTBT, Islamabad would invoke the "supreme interests clause" as provided under Article 9 of the Treaty, he said.

Earlier, speaking to the foreign media on May 23, 1998, prior to the Pakistani nuclear tests, the Prime Minister had questioned the relevance of the CTBT and the Nuclear Non-Proliferation Treaty (NPT). Sharif said: "Apart from threatening Pakistan, India is now blackmailing the world by offers of bargain on the CTBT. We believe that the Indian actions (tests) have rendered the non-proliferation regime and instruments such as the NPT and the CTBT irrelevant. The Indian tests have posed new challenges and dilemmas in the field of non-proliferation. Fresh thinking is now needed on these issues."

Clearly, between May and September 1998, Pakistan's thinking on the "relevance" of the CTBT had undergone a major change. From a position of considering the Treaty irrelevant, Pakistan shifted to a position of adhering to the CTBT in conditions free from coercion and pressure.

Whatever be the U.S. decision on lifting the Pressler sanctions on Pakistan, Islamabad will still link its decision on the CTBT to what India does. It would appear that Pakistan's decision not to link its stand to that of India on the CTBT stands reversed.

Similarly, while the Foreign Minister in his comments to *Dawn* on September 12 denied any linkage between India's nuclear doctrine and Pakistan's position on the CTBT, Foreign Secretary Shamshad Ahmad gave a different opinion in a lecture delivered at the Institute of Strategic Studies (ISS) in Islamabad on September 7. He said: "If this (nuclear) doctrine is to be implemented, India will require nuclear warheads to be placed on its short, medium and longer-range missiles. It would want to match the other nuclear powers by developing thermonuclear weapons. Unless India has received nuclear weapons designs from clandestine sources, it will need further nuclear tests to achieve the advanced deployment capabilities it desires... the very possibility that India may conduct further nuclear tests creates doubts in Pakistan regarding the advisability of our early adherence to the CTBT. If India conducts further nuclear tests, this will, once again, oblige Pakistan to respond."

Shamshad Ahmad added: "Further nuclear tests by India will completely subvert the CTBT. The first priority for the world must be, therefore, to press India – and not Pakistan – to sign and ratify the CTBT and to reverse the preparations it has made for further nuclear tests."

Pakistan is keen that the U.S. should withdraw the Pressler Amendment, which imposed a ban on arms sales to Pakistan. Pakistan also wants to link its decision on the CTBT to what India does – at this moment Nawaz Sharif can ill-afford to be attacked by the Opposition for yet another "pro-U.S." action.

The Sharif Government had come in for considerable criticism for its July 4 accord with the United States to end the Kargil misadventure. With the Opposition mounting a challenge through street demonstrations, the Prime Minister would be loath to sign the CTBT at this stage. Hence the decision not to go to New York at this juncture.

Had India been in a position to adhere to the CTBT, Pakistan could have taken a decision on signing the Treaty with relative ease. However, the fall of the Vajpayee government complicated the situation for Pakistan. It also stalled the parallel U.S.-Pakistan and U.S.-India dialogue on nuclear non-proliferation.

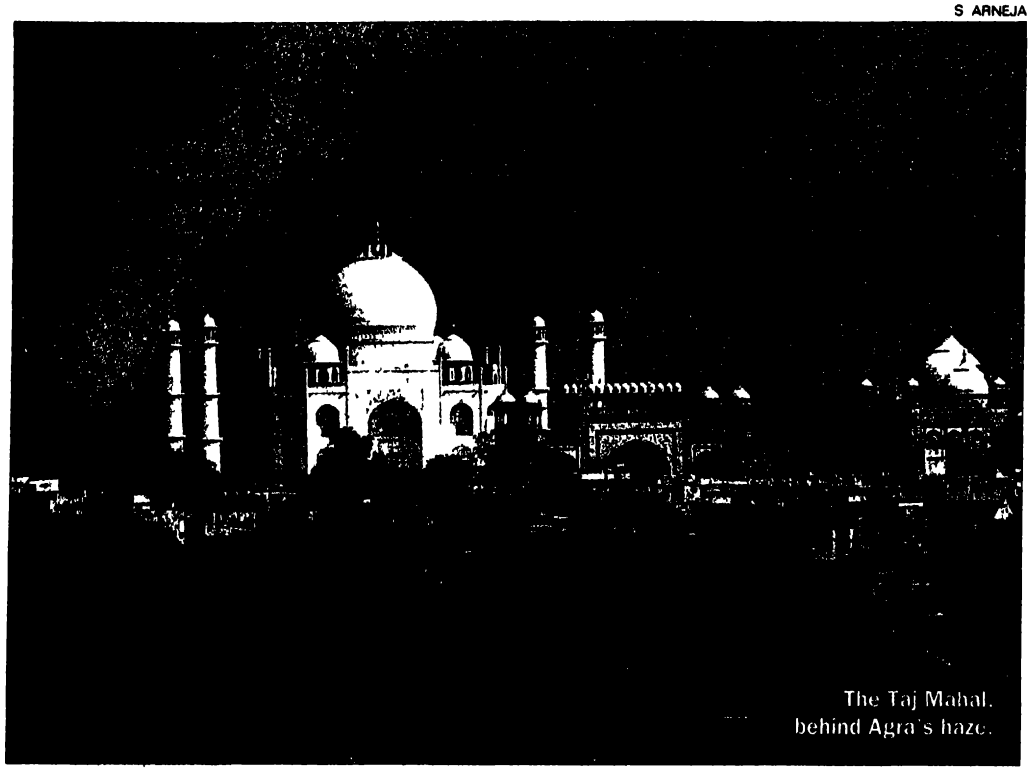
In his September 7 lecture, Shamshad Ahmad also proposed that until the CTBT came into force, Pakistan and India "could formalise their unilateral moratoriums into a binding bilateral arrangement".

Whatever be the U.S. decision on lifting the Pressler sanctions on Pakistan, Islamabad will still link its decision on the CTBT to what India does. It would appear that Pakistan's decision not to link its stand to that of India on the CTBT stands reversed.

The Sharif Government also faces flak from right-wing Islamic elements which see any decision to sign the CTBT as a "sell-out of the Ummah". It is clear that for Pakistan, the economic dimension is crucial in any decision regarding the Treaty.

Telco
A TATA ENTERPRISE

Introducing the Tata Sumo SE.
The only thing that's not tough about it is buying it.



The new Tata Sumo SE costs just Rs. 3,53,580*. Now that makes buying one really, really easy.
(Call or visit any of our dealers for more details.)

OPM 7950

* Ex-factory price - Local taxes extra.
Tata Sumo conforms to India 2000 (Euro I) emission norms. And carries an 18 month, unlimited kms. warranty.

TATA SUMO
THE TOUGH ONE

S ARNEJA

The Taj Mahal, behind Agra's haze.

T.K. RAJALAKSHMI
in Agra

AN August 31 order of the Supreme Court directing the closure of 168 iron foundries in Agra has upset foundry owners, workers, trade unions and the rest of the town's small-scale industry. The order constitutes the latest in a series of interventions by the court based on a writ petition filed by Supreme Court lawyer M.C. Mehta in 1984 that first drew attention to damage caused to the Taj Mahal, the marble monument, by the polluting foundries and other industries located in an area known as the Taj Trapezium Zone (TTZ). Agra in Uttar Pradesh is one of five centres which have a cluster of foundries. The others are Rajkot in Gujarat, Batala in Punjab, Coimbatore in Tamil Nadu and Howrah in West Bengal.

The order directed the closure of 53 units immediately on the ground that they had not acted to contain their pollution level. The remaining units had either switched to or were looking for technical alternatives. Eight units had switched to natural gas as a substitute fuel and 107 units (78 of them cupola-based and 29 non-cupola-based – a cupola is a furnace for melting metals) had applied for natural gas connections. However, the court set a September 15 deadline for these 107 units to start using the new fuel. They had to suspend operations as the supply of coke and coal to them was stopped after the deadline.

Coke and coal used as fuel by the units were identified as the leading causes of pollution in the belt. An order passed by the apex court on December 30, 1996 had directed that those units which had not found an alternative plot in an industrial area or had not applied for a natural gas connection, should stop functioning from April 30, 1997. It wanted the Gas Authority of India Limited (GAIL) to start supplying natural gas to these industries by June 30, 1997. And thereupon, the supply of coke and coal to them should be stopped.

GAIL informed the court that until December 1998 only 115 units had sought the supply of natural gas. By September 1998 GAIL completed the pipeline network to these units. However, according to GAIL, 79 cupola-based foundries did not come forward to complete the process. On April 4 this year, the court issued notices to the 79 units, asking them to show cause why they had not availed themselves of the facility from GAIL. They were also asked to state why their units should not be shut down.

On behalf of the 79 units, the Agra Iron Foundries' Association (AIFA) submitted that they were awaiting new technology from the National Metallurgical Laboratory (NML) and the Tata-Korf to upgrade their units. In a counter-affidavit filed on April 5, AIFA stated that the foundries had taken *bona fide* steps to upgrade technology that would enable the foundries to use natural gas instead of coal. It added that the upgradation process was not complete in 78 units (one unit was not cupola-based) and that as soon as the NML developed the technology and Tata-Korf manufactured new cupolas, the units would switch over to natural gas.

According to AIFA, the NML had conducted 10 trials of its new technology and these tests were not successful initially. It said that the foundries had paid GAIL Rs.2 lakhs as security deposit and Rs.6 lakhs as guarantee and Rs.32 lakhs to Tata-Korf towards consultancy and equipment cost.

According to the counter-affidavit, Tata-Korf had informed AIFA on April 26 that the cupola would be commissioned and stabilised by July and if it was working in a satisfactory fashion, the orders could be placed the same month. Tata-Korf had also mentioned that the demonstration unit would be ready only by late September.

However, AIFA members told *Frontline* that the initial trials were not successful and until the technology was foolproof, it would not be prudent for the foundries to switch to natural gas. Besides, Tata-Korf would complete supplying all the cupolas only by July 2001, by which time all the 78 units would shift to natural gas. The foundry owners were expecting to switch to natural gas only after September.

Prosecution counsel, however, argued that the 78 units were delaying the process of shifting to natural gas. Though GAIL was ready to supply gas to 115 units in December 1998, the units were not ready to convert, counsel said.

The court ordered that the 53 units which had not entered into an agreement with GAIL should stop operations immediately or move out. If they did not shift,

then it would be considered a breach of the December 1996 judgment. September 15 was the deadline for the 29 non-cupola industries – eight of which had already switched to gas – to convert to natural gas, failing which their supplies of coke or coal would stop.

Given that the conversion of the 78 cupola-based units would not be completed by July 2001, the court held that it will be a matter of grave concern if the atmospheric pollution (as noted in various reports) was allowed to continue. The court said: "The question is not strictly whether the 78 industries have or not acted *bona fide* in making some efforts for conversion to natural gas but assuming that they have taken some steps, the question is whether the danger to the environment does not require urgent action. The data already collected shows high levels of pollution in Agra in this area affecting the environment in the TTZ area."

According to a senior personnel manager of Sterling Machine Tools, the biggest industrial unit in Agra, the unit had taken a gas connection from GAIL and planned to start operations immediately. He said that production would suffer initially. SMT also shifted one of its coke-based cupolas to Dholpur in Rajasthan. "The gas furnace costs around Rs. 50 lakhs. While we have the money, small units do not," he said.

A leader of the Centre of Indian Trade Unions (CITU) said that the foundry industry was very exploitative and the working conditions hazardous in several ways. The majority of workers were on contract, even though they had put in a number of years at the same unit.

Some workers at G.T. Iron Industries, a casting unit that would be closed down following the non-supply of coke, told *Frontline* that they had heard of the court order and were unsure about where they would go if the unit closed down. All trade unions have opposed the closure order, as foundries are a major source of employment. But they also realise that the economy of Agra depends on preserving the Taj Mahal.

S.P Kashyap, former Principal of R.B.S College in Agra, said it was unfortunate that the focus was on pollution, and the closure of units and not on the workforce. Foundry owners relied on cheap and abundant labour. The prevalent economic insecurity had dealt a blow to workers' interests.

Dwelling on the crisis the industry would face, Pramod Garg, a representative of the National Chamber of Industry, Uttar Pradesh, said that the entire engineering trade depended on casting, which was one of the basic functions of the foundries here. He argued that the new technology would make furnaces more costly than the ones in use. On September 8, Garg, along with representatives of AIFA and Laghu Udyog Bharati, met Union Industry Minister Sikander Bakht to convey their apprehensions in the wake of the court order. They claimed that nearly 3,000 cottage and engineering units were dependent on the foundries and about three lakh workers were directly or indirectly employed. Pollution control systems were already installed in 168 units as per guidelines laid down by the Central and State Pollution Control Boards.

They said that there was no proven and feasible cokeless cupola technology available anywhere for small-scale foundries. Seeking to shift the responsibility for the pollution away from the foundries, they said that the increase in sulphur dioxide levels in the city was due to vehicular pollution and the running of 30,000 generator sets in the city. They asked the government to intervene by pleading to the apex court for more time for the foundries to change over to new technology. They also requested it to subsidise the technology transfer.

A review petition has been filed on behalf of AIFA. Unions, on their part, have decided to resort to an agitation after the elections. No political party has raised the closure of the units as an election issue. ■

Targeting Dalit voters

The consolidation of Dalits and the fear that they may turn out in large numbers on polling day, leads to sporadic incidents in a constituency in Tamil Nadu.

S. VISWANATHAN
in Cuddalore

WHEN a Dalit panchayat president and five of his Dalit associates were massacred in Madurai district in July 1997, Tamil Nadu Chief Minister M. Karunanidhi criticised caste Hindu intolerance of the political empowerment of Dalits (*Frontline*, July 25, 1997). Two years later, a large number of Dalits were prevented from exercising their franchise and those who dared to vote were beaten up and their houses set afire. Strangely, this happened in Chidambaram (Reserved) parliamentary constituency, one of the seven constituencies reserved for the Scheduled Castes in Tamil Nadu on September 5.

A significant feature of the 1999 Lok Sabha elections in the State is the consolidation of Dalits and attempts by some of their organisations, which fight for their empowerment, to join the political mainstream. Branded variously as "terrorists", "disruptive forces" or "anti-social elements" by parties which depend on caste-based political mobilisation, these organisations seem to have realised the futility of fighting in isolation and have started showing greater interest in electoral politics. Most of them perceive the Dravidian parties as "not friendly" towards Dalits, and the Bharatiya Janata Party as a party of oppressive forces. The decision of the Tamil Maanila Congress (TMC) to steer clear of both the fronts in the State, one led by the ruling Dravida Munnetra Kazhagam (DMK) and the other by the All India Anna Dravida Munnetra Kazhagam (AIADMK), gave these organisations the political space they needed.

The death of 11 Dalits (along with six others) in a police action against a procession of striking tea estate workers at Tirunelveli on July 22 united the Dalit organisations and paved the way for their entry into the front led by the TMC. With a minimum of 15 to 20 per cent Dalit presence in almost all the constituencies in the State, the move was seen as having the potential to tilt the electoral balance (*Frontline*, August 27).

As expected, the development caused resentment among some of the mainstream parties, which depend on the support of certain castes, which are seen by Dalits as being inimical to them.

The resentment over Dalit consolidation appeared to be more pronounced in areas which have a substantial Dalit presence and which have witnessed frequent caste-related violence. With a 35 per cent Dalit share in the electorate, Chidambaram (R) constituency is one such vulnerable area. In this constituency, the Vanniya caste forms a substantial chunk of the population. Vanniyas, who figure in the "most backward caste" (MBC) list, occupy a position slightly above Dalits in the social ladder; the economic lot of a majority of Vanniyas is no better than that of Dalits.

The two sections had been fighting each other until a few years ago. The founder of the Pattali Makkal Katchi (PMK), Dr. S. Ramadoss, built bridges between the two when he converted his Vanniyar Sangam into a political party in 1989. Although there were sporadic incidents, peace prevailed even when the southern districts were rocked by caste-related violence. This unity, which helped Ramadoss build his political base in about six parliamentary constituencies, was shaken a year ago when differences surfaced over the functioning of the PMK general secretary and former Union Minister for Social Welfare, Dalit Ezhilmalai. Ezhilmalai left the party and joined the AIADMK on the eve of the elections, when he was denied the party ticket to seek re-election from Chidambaram.

G SUKUMARAN

The belongings of a Dalit villager in Thathankuppam reduced to ashes. Intimidatory tactics were used to prevent Dalits from voting in the Lok Sabha elections.

Under these circumstances, the elections in Chidambaram assumed significance. It was a high-stakes contest for the PMK as its candidate, P. Ponnusamy, was to take on the Dalit Panthers convener, R. Thirumavalavan, who is popular among Dalits. Dalit Panthers is a member of the TMC-led front. The situation became tense right from the day of filing of nominations. Leaders from both sides reportedly made provocative speeches.

The hectic campaign was expected to draw an unprece-

In Annaiyampettai, a Vanniya village, houses burnt following a clash.

dented Dalit turn-out on polling day. Vanniyas appeared equally determined to face the challenge. It is not, therefore, surprising that the no-holds-barred electioneering culminated in large-scale violence on election day. Dalits said that they were prevented from voting and when they resisted, violence was unleashed on them. Their houses were burnt and property damaged. They alleged that impersonation and bogus voting were widespread in a number of polling stations. In areas which have a higher concentration of Dalits, Vanniyas complained that they were prevented by Dalits from voting. Their houses were allegedly torched by Dalits.

SINCE Dalits, who are mostly agricultural workers, could not turn up during the morning hours, non-Dalits came in large numbers to vote. The polling agents of Thirumavalavan were terrorised, beaten and driven out. Dalit voters standing in the queues were intimidated. In the absence of polling agents it became easier for miscreants to manipulate the polling. In certain areas, Vanniyas trooped into the booths, jumped the queues and voted. The pattern was similar in about 50 villages. Even in an urban booth in Neyveli township, a polling agent complained of malpractices. He said the time-consuming process of challenging a vote deterred the agents from lodging complaints.

In a statement issued on September 6, the TMC accused the DMK and the PMK of keeping the administration and the election machinery under their command, taking full control of the booths and preventing Dalits from exercising their franchise. The DMK-PMK combine made a mockery of parliamentary democracy by "imprisoning" Dalits in their homes, the TMC said, and urged the Election Commission to order repoll in 50 booths under the supervision of its observers.

Chief Electoral Officer Naresh Gupta turned down the demand. "We do not find any *prima facie* case," he said. According to him, the District Collector and the Returning Officer had reported to him that there were some caste-related clashes in the constituency but that these did not affect the electoral process. On September 6, polling day, there were more incidents of violence involving Dalits and Vanniyas in many areas of the constituency. Over 100 houses were reportedly burnt. The police fired in the air to disperse clashing groups at Ambalpuram, near Bhuvanagiri.

On September 12, Thirumavalavan went on a fast in Chennai to press for a repoll in certain booths; he wound it up in the evening, responding to an appeal from Moopanar. Moopanar expressed his solidarity with the Dalit leader and said that malpractices did take place in Chidambaram.

Thirumavalavan told *Frontline* that they would also demand that the E.C. send investigators to identify the polling stations where repoll would have to be ordered and arrange for the despatch of Central police forces at the time of counting. He said that the authorities had not acted on a petition he gave on September 2 listing about 125 booths where he feared possible malpractices and violence. He also demanded speedy relief measures in the affected areas.

A week after the incidents, the affected areas were still tense. Lenin Nagar colony in Thiagavalli, where almost all the houses had been burnt, looked forsaken. Only one resident was found there along with two policemen. The people who fled for life stay in a Dalit colony across the river that borders the village. At Anukkampattu, the dazed people declined to speak. A youth who served as a polling agent refused to talk as policemen were around. At another Dalit village, only the women remained: the men had to seek shelter elsewhere. People in the affected areas said the cash relief of Rs.1,000 was inadequate to take care of their immediate needs. At Alampakkam and Anaiyampettai, Vanniyas said that they were prevented by the majority Dalits from voting. A number of Vanniya families have lost property in arson. Apart from houses, about 2,000 ducks were scorched in Anaiyampettai. Although the police and the district administration failed to take preventive measures, they could contain the trouble. Police patrols were seen in several places and fire service vehicles were kept in readiness. Of the 504 persons arrested in connection with the incidents, 400 are Dalits. Nearly 60 Dalits and Vanniyas who were injured in the clashes were admitted to the Cuddalore General Hospital.

A. Devanathan, member of the PMK Politburo, agreed with the Collector's perception that repoll was unwarranted. Fact-finding teams sent by People's Watch, a Madurai-based human rights organisation, and the Tamil Nadu and Pondicherry units of the People's Union of Civil Liberties (PUCL), however, concluded that Dalits were prevented from voting in more than 25 villages and wanted the E.C. to ensure their right to vote. K. Balakrishnan, member, State Secretariat of the Communist Party of India (Marxist), who headed a study team that visited the areas, said that in a large number of villages, Dalits were prevented from voting and there was large-scale rigging. Dalits who defied the threats were attacked. Pondicherry PUCL president D. Ravikumar said that if Dalits could not exercise their right to vote even in a reserved constituency there was the danger of these hapless people losing faith in the political system itself. ■

Making the caller pay

The Telecom Regulatory Authority of India's proposal to make the calling party pay for calls to mobile phone subscribers reflects a peculiar concern for protecting the interests of the elite segment at the expense of basic service subscribers.

SUDHA MAHALINGAM
in New Delhi

SHANKER CHAKRAVARTY

If the TRAI's 'Calling Party Pays' proposal is implemented, basic service operators and subscribers will end up subsidising cellular phone services.

WHO should pay for telephone calls made by a fixed line subscriber to a cellular phone subscriber? Up until now, it is the latter who has had to pay for the privilege of being able to receive calls even when he or she is on the move (after screening incoming calls using a caller-identification facility) However, a recent proposal put forward by the Telecom Regulatory Authority of India (TRAI), which is likely to be notified soon, seeks to shift the cost of calling to the fixed line subscriber Further, tariff on such calls will be higher than that for calls from one fixed line to another What is more, the basic service provider is required to share the revenue from such calls with the cellular licensee in whose network the call terminates, in a ratio that leaves one-third to the former and two-thirds to the latter

In putting forward the 'Calling Party Pays' (CPP) proposal, the TRAI has parroted the private cellular licensee's claim that charging cellular phone subscribers for incoming calls has had a dampening effect on cellular phone usage and that doing away with incoming call charges for cellular phone subscribers would improve usage The effect of this proposal, however, will be that a fixed line subscriber (utilising what may be called an essential service) who calls a cellular phone subscriber will end up subsidising the latter's premium service

A TRAI consultation paper dated August 31, which discusses the CPP proposal, says that calls from fixed lines to cellular telephones are "premium calls" to access persons whom it may not be possible to access through fixed line telephony Seeking to offer a rationale for the higher tariff on such calls, the paper states that "the higher charge will reduce the asymmetry in the charge for calls from basic service to cellular mobile and *vice-*

The History of Science and Engineering in IAS

There was a time when the IAS was the exclusive territory of Law and Humanities students. When preparing for the Civil Services Exam meant running from one library to another in search of relevant reading matter. When the coaching available was for a few 'traditional' IAS subjects like History, Political Science and Philosophy.

Times have certainly changed Today, more and more graduates from the Science, Engineering, Management and other streams are making their way into the IAS. That's because firstly, they are able to select an optional subject they're familiar with, and secondly, they can now be sure of receiving top quality preparatory assistance – whatever their chosen subject.

The latter advantage is due largely to Brilliant Tutorials. Because Brilliant offers coaching for every optional subject in the IAS Exam, except Medicine. Whatever your optionals – Accountancy or Animal Husbandry, Physics or Philosophy, Economics or Electrical Engineering – Brilliant will be with you all the way.

A committed team of highly qualified and experienced professors, researchers and support staff help you in 3 distinct areas of preparation for the IAS – equipping you with relevant knowledge of your optional subjects, providing you with a wide coverage of general studies and a constant update on current affairs and finally coaching you for the most gruelling of interviews

Brilliant's Postal Course for the Civil Services Exam is a comprehensive package dedicated to helping you achieve your goal Proof of its power lies in the number of Brilliant's students who get into the IAS year after year.

Write for free prospectus.

versa." This, it says, would reduce the likelihood of the cellular phone network coming under "undue pressure" which would "adversely affect" the quality of service.

The paper further states that a portion of the increase in the charge for calls from fixed lines to cellular phones should go to the cellular service operator in order to provide an "incentive" to the latter to maintain the network for incoming calls.

The TRAI has, therefore, proposed that a fixed line subscriber calling a mobile cellular phone subscriber will now pay between Rs.2.40 and Rs.3.60 for a two-minute call (depending upon his or her usage bracket). As stated, two-thirds of this revenue will go to the cellular operator. (The regulatory body had originally proposed a tariff of Rs.3.90 a minute on such calls, with 85 per cent of the revenue going to the cellular operator. Subsequently, it modified the tariff to Rs.1.20 per metered call unit and the share to 50 per cent. This was subsequently modified as now proposed.)

TRAI member N.S. Ramachandran told *Frontline* that the cellular network set up by licensees at considerable cost was being underutilised and that the CPP proposal would improve its usage. However, the point is whether cellular phone usage needs to be improved in the first place: many cellular phone subscribers state that cellular networks are often more congested than fixed line networks.

A TRAI member claimed that the "incentive" that the TRAI seeks to confer upon cellular subscribers through the CPP regime and the substantial lowering of rental and call charges consequent on the migration to a revenue-sharing regime (*Frontline*, August 27) are likely to make cellular phone services affordable even in the rural areas where the basic telephone network itself has a limited reach. That claim, however, sounds hollow in view of the tariff differential between the two services.

THE TRAI's consultation paper on the implications of the CPP regime came in for discussion at an Open House in New Delhi in early September. Here, cellular licensees' representatives argued that the tariff proposed (Rs.1.20 per metered call unit) was too low and that the revenue sharing formula (50 per cent) was not good enough. Consequently, the TRAI arbitrarily and without any serious consideration of the economics of the ratio and its likely impact on either the fixed line subscriber or the basic service provider, hiked the tariff and the cellular licensees' share under the CPP regime, it was stated.

Currently, basic service providers receive a revenue of between 80 paise to Rs.1.20 per call on calls made to cellular phones. Under the CPP regime, despite the higher tariff on such calls, the basic service provider will make a net loss on some calls, after providing two-thirds of such revenue to cellular phone licensees. Senior officials in the Department of Telecommunications (DoT) told *Frontline* that DoT revenues would drop by about Rs.100 crores a year under the effect of the CPP regime.

The TRAI's consultation paper presents various cost-computation scenarios, but the basis of the computations is far from clear. What is clear, however, is that the implementation of the CPP regime will boost the revenues of the cellular licensees at the expense of the basic service subscribers and providers.

It would not be unreasonable to say that cellular phone subscribers are the elite segment among phone users; quite a few of them have their bills picked up by their businesses. Yet, the TRAI proposal suggests that the fixed line subscribers (who do not constitute the elite segment) should, in effect, subsidise the elite segment.

Curiously, the TRAI had pulled up Usha Martin Telecom, a cellular licensee, for offering free incoming call facility to its subscribers. (Usha Martin Telecom had announced that it would absorb the additional costs.) The TRAI's CPP proposal will now have the effect of allowing all cellular phone licensees (most of whom were not willing to absorb the cost) to offer the free incoming call facility to their subscribers by shifting the costs to fixed line subscribers.

As a justification for the CPP proposal, the TRAI cites the prevalence of the CPP regime in many other countries. The comparison, however, is anomalous, given the very low teledensity in India and the fact that in India, rentals on fixed lines (which were increased only recently) and charges for calls from one fixed to another are still very high as compared to many other countries. Illustratively, even in the United States, where cellular telephone subscribers are no longer considered an elite segment, a CPP regime has not been implemented.

The CPP regime which is to take effect in India from November 1 clearly goes against the basic tenets of the New Telecom Policy, one of the aims of which is to provide telephone services to the common person at affordable rates.

THE TRAI proposal on the CPP regime is of a piece with many of its earlier rulings reflecting the regulator's views on the objectives of the privatisation of telecom services.

Last year, a TRAI ruling sought to limit competition in cellular telephony by questioning the eligibility of the public sector Mahanagar Telephone Nigam Limited (MTNL) to offer the service. Even after the New Telecom Policy unequivocally set at rest any such doubts and the Delhi High Court endorsed the position, the TRAI has once again questioned MTNL's remit to provide mobile phones of Code Division Multiple Access (CDMA) technology, under the terms of its licence. The TRAI's exercise is likely to delay MTNL's entry.

Earlier, with misplaced and rather exaggerated concern over its own jurisdiction and authority, the TRAI had invalidated the government's Internet policy; the ruling delayed by a year the entry of private Internet Service Providers, to the detriment of subscribers' interests.

In the past, some of the TRAI's rulings have reflected a peculiar concern for the interests of private licensees *vis-a-vis* the state, and for the more affluent subscribers *vis-a-vis* the less affluent ones. For instance, last year, it stopped the DoT from encashing bank guarantees furnished by licensees who had defaulted on their dues.

Nowhere was the TRAI's misplaced priorities more manifest than in its controversial tariff proposal announced on March 9 (*Frontline*, April 9). The proposal sought to raise rentals and call charges for basic service subscribers who used their phones sparingly (as a domestic utility rather than for commercial purposes) and simultaneously sought to lower long-distance call rates. The TRAI had then offered the specious argument that the subscriber who used his or her telephone more intensively should be rewarded with lower tariffs, and that those who used the utility sparingly should be made to bear a proportionately higher burden of the cost of provision of such services. Following a public debate of the proposals, the more controversial aspects of the proposal were jettisoned, but not before an ugly confrontation between the government and the regulator had vitiated the atmosphere. ■

ROBERT NICKLESBERG/GAMMA

■ INDIA AND THE U.S.

The view from Washington

A U.S. State Department report on religious freedom in India criticises the BJP and other "Hindu organisations" for their campaigns against Christians, administering a shock to the BJP-led government which has been seeking to move closer to Washington.

JOHN CHERIAN

THE Bharatiya Janata Party-led government has often claimed that India's relations with the United States improved qualitatively since it assumed power at the Centre. Top BJP functionaries point to the Clinton administration's tilt towards India during the Kargil crisis as an indication of this change. The BJP-led government left no stone unturned to get on the anti-terrorism bandwagon of the U.S. For the Clinton administration and the BJP regime, terrorism was another word for radical Islam. In early September, two senior Indian officials went to Washington to discuss with their counterparts in the U.S. State Department the problem terrorism in Afghanistan.

Given this background, the Central Government was perhaps taken aback by the U.S. State Department's Annual Report on International Religious Freedom for 1999, which sharply criticised the BJP, the Rashtriya Swayamsevak Sangh (RSS) and "other Hindu organisations" for their attitude towards religious conversion and non-Hindus. The report was released on September 9 in Washington. Media reports from Washington said that the Clinton administration's special representative for international religious freedom, Robert Seiple, will visit India for a first-hand look at the situation. "There are a lot of things that happened last year that are troubling," Seiple told mediapersons in Washington.

The State Department report on religious freedom is lengthy and covers 194 countries and territories. While acknowledging that the Constitution of India guarantees religious freedom, it specifically mentions that in 1998 and 1999 "there was an unusual and serious outbreak of societal violence against Christians", apparently sparked by rumours of "forced conversions". The report adds that "efforts to prevent such incidents from occurring and to prosecute those responsible at the state and local levels were inadequate."

To bolster its arguments, the State Department report quotes from United Nation documents, including the report of the U.N. Special Rapporteur for all Forms of Intolerance and Discrimination Based on Religion. The U.N. official's report had cited "traumatic situations" in Jammu and Kashmir and Punjab as well as inter-communal incidents in other

parts of the country. The report also says that Indian human rights organisations have reported more than 90 incidents of attacks on Christian communities and institutions in 1998.

The report gives various other examples of the present government's culpability in spreading the communal virus. One, Union Human Resource Development Minister Murli Manohar Joshi's plan to "Indianise and spiritualise" government school curriculums all over India and to make the study of Sanskrit compulsory from Class III to Class X. The report describes the BJP as one of the "off-shoots of the RSS, an organisation that espouses a return to Hindu values and cultural norms". While the BJP at the national level has downplayed its Hindu nationalist agenda, Christian groups have noted the coincidence of its coming to power and an increase in complaints of discrimination against minority religious communities, it says.

According to the document, Washington has conveyed to senior Indian leaders and government officials its "deep concern" over the attacks on Christians in 1998 and early 1999 that were carried out by groups loosely affiliated with the BJP. In this connection, the U.S. Ambassador to India, Richard Celeste, met Union Home Minister L.K. Advani and BJP president Khushabhau Thakre in late 1998. In January 1999, Karl Inderfurth, U.S. Assistant Secretary of State for South Asian Affairs, met the Indian Ambassador to the U.S., Naresh Chandra, to express concern about "the prosecution" of Christians in India. There have been half a dozen high-level meetings between the U.S. and Indian officials in 1999, including one between Robert Seiple and Naresh Chandra in Washington in February 1999.

THE BJP-led government has given the Clinton administration plenty of excuses to meddle in the affairs of the country. When the Clinton administration first raised the issue, the Indian government had no courage to tell Washington to mind its own business. Instead, the government expended its energies to convince Washington to put Pakistan on the list of "terrorist states". With great pomp and ceremony, the State Department brings out a list every year of countries which it deems as "terrorist". The State Department has asserted that the 1999 Report on International Religious Freedom will "be used as a resource for shaping policy, conducting diplomacy and making resource allocations." The International Religious Freedom (IRF) Act of 1998 will be used by the U.S. to determine which countries have engaged in or tolerated "particularly severe violations" of religious freedom.

The External Affairs Ministry issued a statement in the second week of September stating that it has "no plans or intentions" to invite any U.S. official or engage in a discussion with any foreign government or agency on matters concerning religious freedom. The government has conveniently forgotten that it was engaged in talks on the same issues with U.S. government officials at top levels.

THE Communist Party of India (CPI) described the developments as alarming. CPI national secretary D. Raja said: "The U.S. is trying to assume the role of the global policeman. It has no authority to pass judgment on domestic issues. But there is a need for introspection because such attacks increased after the BJP came to power and the constituents of the Sangh Parivar are directly involved." The Vajpayee government had given room for such interference, he added. "After Pokhran-II, Vajpayee wrote to U.S. President Bill Clinton and during the Kargil crisis, the government kept saying that it had the U.S.' backing."

The U.S. State Department has asserted that the 1999 Report on International Religious Freedom will "be used as a resource for shaping policy, conducting diplomacy and making resource allocations."

Congress(I) spokesperson Kapil Sibal also echoed similar views. He said that while interference in the country's internal affairs was unacceptable, the BJP-led government, by "protecting" those responsible for atrocities on minorities, was responsible for inviting U.S. concern. He said that the recent sequence of events had shown that the government was protecting a person like Dara Singh, who is believed to be behind the murder of the Australian missionary Graham Staines and his two sons in Orissa on January 22. L.K. Advani whom the U.S. Ambassador to India met to discuss issues relating to atrocities on minorities was the first one to give the Bajrang Dal a clean certificate, saying that the organisation was not involved in the Staines murder.

The BJP-led government is trying to project the developments as a minor hiccup. In the third week of September, Michael A. Sheehan, U.S. coordinator for counter-terrorism, was in Delhi. Sheehan, who has the rank of Assistant Secretary, reports directly to Secretary of State Madeleine Albright. The present government wants to further intensify cooperation with Washington in the fight against "narco-terrorism". Even on Afghanistan, New Delhi seems to be toeing the U.S. line. All previous governments had kept some lines of communications open with Kabul. The BJP-led government is intent on snapping all links.

The stoppage of Ariana Airways (the Afghan national airline) flights from Amritsar to Kabul is an illustration of the government's keenness to curry favour with Washington in the so-called crusade against fundamentalist forces. However, there are strong indications that the U.S. does not have any serious differences with the Taliban. Relations between the two countries are expected to be back to normal if and when the government in Kabul hands over Osama bin Laden to the Clinton administration.

Indian officials play up the fact that Islamabad does not figure in Sheehan's tour itinerary. The BJP-led government is also enthused by Washington's plan to form an exclusive "community of democracies". At the recent Association of South- East Asian Nations (ASEAN) summit in Singapore, Albright invited India to join up. Pakistan is not being considered for membership as Washington has not given it the required "certificate". The BJP-led government is trying to pass these developments as positive indications of a new relationship with Washington. All the more reason why Delhi is shocked by the contents of the State Department report. The strongest reaction has come from the RSS, which has dismissed the report as "cheap propaganda" aimed at "frightening away Christians and Muslims from voting for the BJP." ■

A summit of side-shows

The Auckland summit of the forum of Asia-Pacific Economic Cooperation was overshadowed and defined by a multilateral consensus on military action in East Timor.

P.S. SURYANARAYANA
in Auckland

DAVID GUTTENFELDER/ AP

APEC leaders at the Auckland summit, (from left) President of the Philippines Jose Estrada, Russian Prime Minister Vladmir Putin, Taiwanese representative Chiang Pin-Kung, U.S. President Bill Clinton, Singapore Prime Minister Goh Chok Tong, Malaysian Deputy Prime Minister Abdullah Ahmad Badawi, Vietnamese Prime Minister Phan Van Khai and Thai Prime Minister Chuan Leekpai.

SUBSTANTIVE diplomacy was the buzzword at the Auckland summit of the forum for Asia-Pacific Economic Cooperation (APEC). As in Kuala Lumpur last year, the September 9-13 meeting of the "economic leaders" of APEC, as the political heads of the member-states and non-state entities are known for this purpose, turned out to be a summit of side-shows. If the Kuala Lumpur conference was eclipsed by a frontal diplomatic assault on the host, Malaysian Prime Minister Mahathir Mohamad, by United States Vice-President Al Gore, the Auckland meeting was not only overshadowed but almost defined by a multilateral "consensus" on forcing Jakarta to invite a United Nations peace keeping force to East Timor (see separate story), the disputed Indonesian province which is not recognised by the U.N. as being part of the most prominent South-East Asian country.

In the event, the summit hostess, New Zealand Prime Minister Jenny Shipley, won bouquets, not brickbats. True to his style, Mahathir, a high-profile maverick, stayed away and only sent his heir-apparent, Abdullah Badawi, to Auckland. In Kuala Lumpur he had stood his ground despite Gore's articulation of Bill Clinton's agenda for "globalising democracy". A Minister deputised for the besieged Indonesian President B.J. Habibie. That turned the special ministerial meeting of the APEC forum on East Timor into a commentary on Indonesia's controversial actions in that territory, with the Minister from Jakarta (as also an official from Malaysia) choosing to participate in the crisis talks on East Timor as observers, not interlocutors.

Malaysia conveyed to the forum leaders that it was willing to participate in a U.N.-led peace initiative in East Timor but not in a multinational military brigade even if it had U.N. sanction. However, during the deliberations on the final day of the summit, the main question was whether or not a global military action should be launched in East Timor with the blessings but not the financial support of the U.N. For Indonesia, which had agreed to "invite" a U.N. peace force hours before the summit concluded, it was no longer a question of of diplomacy. The issue got transformed into a realpolitik move by a new coalition of countries armed with an informal APEC "consensus". Naturally, all leaders except the absentee Indonesian President were pleased.

IF the summit's side-show led to more action at the U.N. headquarters, the much-heralded summit within a summit, the one between President Bill Clinton and his Chinese counterpart Jiang Zemin on September 11, helped put relations between the U.S. and China "back on track", American spin doctors feel. The Chinese interlocutors were transparently less upbeat, but they too conceded that the meeting, held at Clinton's initiative, helped ease the chill that had set in following the recent U.S. bombing of Beijing's embassy in Belgrade at the height of the North Atlantic Treaty Organisation (NATO)-sponsored strikes on Kosovo.

The direct outcome of the Jiang-Clinton summit was that the two countries resumed their dialogue, which had been stalled since the U.S. missile attack, on the sensitive question of the admission of the world's most populous nation into the World Trade Organisation (WTO). China has made it abundantly clear now that it can and will join the WTO as a developing country with the privilege of balancing its rights and obligations as a potential member. The U.S.-China debate on the issue of "rights and obligations" is the "sticking point", according to Chinese Foreign Minister Tang Jiaxuan.

Much as China valued the resumption of talks – the issue of its WTO membership has been on hold for almost 13 years, according to Beijing – the Jiang-Clinton summit was more significant in other ways as viewed by both sides. While Clinton reaffirmed Washington's one-China policy and indicated a preference

WIN McNAMEE/ AP

U.S. President Bill Clinton with Chinese President Jiang Zemin.

for a resolution of the dispute between China and Taiwan through peaceful means and through dialogue, Jiang minced no words in asserting that China would not renounce the right to use force to settle the Taiwan question if Taipei did not retract its latest pronouncements calling for state-to-state relations between the two sides. China regards Taiwan as a recalcitrant province that should be reunited with the mainland. Jiang insisted during his talks with Clinton that any move by Taiwan to annul its own call for a *de facto* creation of two Chinas must be credible, too, with no trace of doubt about the finality of such an about turn.

Beyond these trade and territorial issues of direct concern to China, Clinton proposed to Jiang that they resume their parleys, suspended since the Belgrade incident, on the whole gamut of the "arms control agenda". This, according to Clinton, would cover the Comprehensive Test Ban Treaty, which the U.S. would like China to sign.

For the U.S., China's explicit adherence to the Chemical Weapons Convention, which it had already acceded to, would be of no less concern. Accepting China as a sovereign equal if not a political peer, Clinton suggested to Jiang that the two countries resume talks on the South Asian arms race too. Jiang, according to a U.S. spokesman, mentioned South Asia as an area of Chinese concern in the international arms control domain.

The U.S. National Security Adviser, Sam el Berger, annotated Clinton's con[illegible] over South Asia to mean that W[illegible]ngton's policy reference was to engage in talks with Beijing and to "get them to cut off nuclear (arms) cooperation with Pakistan." By design or oversight, Tang, while answering a question by this correspondent on the South Asian dimension of the U.S.-China arms control agenda, did not make any mention of this aspect of Clinton's exchanges with Jiang. Tang said that Jiang was categoric that China adopted a principled stand that restraint by India and Pakistan would be conducive to peace and stability in South Asia. He said China's position was that peaceful means should be adopted by India and Pakistan to resolve the Kashmir dispute.

South Asian arms control, especially the nuclear dimension, is a relatively new aspect of the U.S.-China dialogue within the larger topic of international armament restraint. Given the recent power shift in regional politics, China's participation in a dialogue with the U.S. on global arms control issues including the India-Pakistan question may be indicative of some sort of a super-league discussions between the two.

However, the relevance of a planned new Sino-Indian strategic dialogue remains unaffected if a comment by a spokeswoman of the Chinese Foreign Ministry is any guide. She confirmed in Auckland that China and India had agreed in June on the need for mutual consultations on "security" issues.

IF the Clinton-Jiang summit sparked considerable diplomatic interest, the tripartite summit between Clinton, Japanese Prime Minister Keizo Obuchi and the South Korean leader, Kim Dae-Jung, on North Korea's suspected preparations for the test flight of a long-range ballistic missile did not evoke the same kind of interest in Auckland, although the subject was considered important. In fact, the Japanese leader, who had matched American diplomacy at the previous summit, did not announce any new plans in Auckland, which his American critics would have dismissed as another manifestation of textbook diplomacy.

While the conventional wisdom was that the Auckland meet would be remembered as the summit on East Timor, Clinton, who was at his customary best in admiring New Zealand's unique welcome ceremonies featuring the culture of the land's indigenous people and not that of its white settlers, did not leave an impression, especially because he would not commit American troops for a U.N. deployment in East Timor. "Globalisation of Democracy" was a theme he elaborated upon, but the rhetoric sounded somewhat surrealistic like a variant of George Kennan's "containment" phraseology in relation to Communism – this time, it was a containment of bad regimes.

ON the economic front, the APEC forum pledged to press for a three-year new round of multilateral negotiations under the auspices of the WTO for the purpose of evolving a "single package" of measures. Accounting for 45 per cent of the total globalised trade and composed of such economic superpowers as the U.S. and Japan besides notable activists such as Canada as also emerging economies such as China, APEC gave a collective call for the elimination of agricultural export subsidies through WTO-sponsored negotiations.

Also celebrating a decade of "unprecedented cooperation" in the Asia-Pacific region in pursuit of a "vision of stability, security and prosperity", the leaders of the forum's 21 sovereign countries as also non-sovereign entities such as Taiwan and Hong Kong renewed their common commitment towards strengthening their respective markets and toning up the financial markets.

The most important expression of a collective resolve was the "reconfirmation" of the "commitment to achieve the Bogor Goals of free and open trade and investment by 2010/2020 A.D." To underscore this, the "economic leaders" outlined principles to enhance competition and regulatory reform. Trade facilitation was also a new refrain at the summit. ■

A plea to the LTTE

In an unprecedented step, Amnesty International urges the Liberation Tigers of Tamil Eelam to spare the lives of those who may be on the terrorist organisation's hit-list.

D.B.S. JEYARAJ

AMNESTY International, the London-based human rights organisation, issued in August a direct appeal to the Liberation Tigers of Tamil Eelam (LTTE), that has acquired over the years a reputation of being one of the most ruthless guerilla organisations in the world. The appeal was extraordinary in three respects.

First, it was unusual for Amnesty to direct such an appeal to an organisation that has no legal basis to be considered a *de jure* entity. Usually Amnesty's appeals pertain to alleged human rights violations by sovereign states and their duly constituted governments. Basically a guerilla outfit, the LTTE is at best a sort of non-governmental organisation that is entitled to certain "belligerent rights" as a consequence of its protracted military campaign, during the course of which it established territorial control over certain parts of Sri Lanka.

Secondly, the appeal was in essence a pre-emptive move against the LTTE. It was not a case of Amnesty merely reacting to a past event; the appeal was based on a prognosis for the future. The Amnesty communique highlighted the civilian status of certain Tamil politicians, mentioning them by name, and of other unnamed persons falling under that category, and appealed to the Tigers not to assassinate them. Taking into account the record, Amnesty is clearly trying to prevent further such incidents – again an unusual move.

Thirdly, Amnesty expanded the scope of its appeal by not restricting it to just the LTTE's international secretariat based in Britain but extending it to several other branch and front offices of the Tigers – in France, Canada, Denmark, Switzerland, Norway, Australia, Germany and the Netherlands. Amnesty issued the appeal as a proactive venture and as a means to exert pressure on the LTTE on as many fronts as possible. Since the Tiger hierarchy in the Northern mainland of the Wanni was neither visible nor accountable for incidents, pressure was being exerted on the more vulnerable Tiger agencies in the west.

AS is the consequence of most such appeals issued by Amnesty, the LTTE addresses mentioned are receiving a flood of letters from members of the Amnesty's network living in many parts of the world. This is perhaps the first time that the overseas branches of the LTTE are being subjected to humanitarian pressure inspired by Amnesty. Usually, Tiger propagandists use Amnesty appeals concerning human rights violations by the Sri Lankan state and its organs for their own purposes.

Whenever charged with human rights violations, it has been a routine ruse for the LTTE to condone itself on the grounds that it was a government in the making and that having to conduct a liberation struggle against overwhelming odds, it was not always possible to adhere to human rights tenets. While disclaiming any responsibility to adhere to the principles of human rights on those grounds, the Tigers, on the other hand, insist that they and they alone should be recognised as the sole representatives of Tamils and that Tamil Eelam was already a *de facto* reality. The killing of perceived opponents and dissidents from the Sri Lankan Tamil community is a brutal manifestation of this objective. The LTTE has for quite some time gotten away with such dual conduct, and the Amnesty appeal in a way attempts to check that. The LTTE is forced to accept the reality that there are some universal rights it must recognise if it wants the civilised world to accept its *bona fides*.

V. Prabakaran, the LTTE supremo.

That the overseas branches of the LTTE are feeling the pressure inspired by the Amnesty seems evident from the reaction of some of its minions. The Tiger weekly *Eela Murasu* and fortnightly *Ulagathamilar*, published from Paris and Toronto respectively, have written editorials criticising the Amnesty appeal. A website maintained by N. Satyendra in Britain has launched a frontal assault on Amnesty International. Satyendra was the Tamil Eelam Liberation Organisation (TELO) representative at the Thimphu talks of 1985. His abrasive behaviour at the talks contributed greatly to its collapse, and later Satyendra was issued a deportation order by New Delhi. But he had left India before it could be served on him. Now he is an LTTE supporter, and in a bid perhaps to outlive his TELO past, Satyendra at times is more strident than LTTE supremo V. Prabakaran himself.

The Amnesty appeal to the LTTE is based on the premise that owing to their civilian status most of the Tamil non-LTTE political leaders are entitled to full protection under international human rights laws. Of its own volition, the LTTE had agreed to adhere to the Geneva Convention, which among other things has set down rules regarding the treatment of civilians in troubled situations. Although the LTTE runs neither a *de jure* nor a *de facto* government, it had in February 1988 unilaterally announced and given guarantees to relevant institutions that it would abide by the provisions of the Geneva Convention, as also its optional protocols one and two. The LTTE engaged in this manoeuvre during the height of its confrontation with the Indian Peace Keeping Force for reasons unknown. Nevertheless, it is now bound to that commitment in the international perception.

Even as Amnesty condemned the executions and is now trying to

prevent further killings, it is clear that this stance is based upon its principled opposition to the death penalty, whether officially or unofficially imposed. When death sentences were passed on five soldiers convicted for the rape and murder of the 19-year-old Jaffna schoolgirl, Krishanthy Kumaraswamy, and the killing of her mother, brother and neighbour, Amnesty promptly issued an appeal against the death sentence. Since the penalty itself was reintroduced in Sri Lanka, Amnesty also lodged a public appeal urging that it be repealed. Amnesty secretary-general Pierre Sane wrote directly to Chandrika Kumaratunga, imploring her to revise the position. Sane also pointed out that it was not possible "for a government to respect human rights and execute prisoners at the same time."

THE Amnesty appeal is based on Article 3 of the Geneva Convention, 1940, that enshrines the protective principles of individuals in a conflict situation. Article 3 forbids governments and armed opposition groups from indulging in torture or killing of civilians not taking part in hostilities. It is in this context that Amnesty has mentioned the names of certain individual Tamil politicians and Tamil political leaders in general as perceived targets of the LTTE. It has also made clear that its initiative should in no way be interpreted as an endorsement of them or their parties. Amnesty believes that the LTTE's attacks are in clear violation of international human rights laws against killing anyone not directly involved in hostilities.

In the Sri Lankan context, there are certain difficulties in trying to define who a "civilian" is. For instance, President Chandrika Kumaratunga as head of the armed forces or other ministers participating in National Security Council meetings may not participate in active combat but are they strictly "civilians"? Also some Tamil political party members also double up as paramilitary or auxiliary soldiers. Some politicians are former guerillas and carry personal weapons. Many have armed bodyguards. Defining these "civilians" is an intricate exercise.

Yet, the fact that some elected officials or office-bearers of political parties carry arms or possess bodyguards is not a criterion for negating civilian status, Amnesty feels. A clear distinction, however has to be drawn between "combatant leaders" such as Manickathasan of the People's Liberation Organisation of Tamil Eelam (PLOTE) and Razeek of the Eelam People's Revolutionary Liberation Front (EPRLF) as opposed to the patently non-violent Tamil United Liberation Front (TULF) and other "non-combatant", political wing leaders such as Siddharthan of the PLOTE and Suresh Premachandran of the EPRLF. In any event, Amnesty has gone ahead with its proactive initiative because it discerns a clear pattern in the LTTE's killings that show no signs of stopping and because it feels it is imperative to prevent them rather than issue condemnatory statements.

The recommended action is to send telegrams, telex and fax messages and express and airmail letters to the LTTE offices abroad. Amnesty has proposed that certain provisions be included in the recommended missives. They are:

(a) Explaining that Amnesty's action on behalf of the persons allegedly under LTTE threat conforms to obligations under international humanitarian law;

(b) Condemning the deliberate and arbitrary killing of political leaders;

(c) Expressing concern for the lives of N. Raviraj of the TULF (Acting Mayor of Jaffna), R. Sambandan (the TULF MP for Trincomalee), Y. Balachandran (the PLOTE MP for Wanni), K. Sivajilingam (the TELO chairman for the Velvettithurai Urban Council), V. Anandasangari (acting president of the TULF) and other politicians reportedly under LTTE threat;

(d) Urging the LTTE leadership to issue a clear statement condemning the deliberate and arbitrary killings of all civilians including politicians not taking part in the hostilities;

(e) Appealing to the LTTE for an immediate halt to attacks on people taking no direct part in hostilities by the LTTE or by forces under the LTTE control. The latter clause has been necessitated by the fact that in many cases the LTTE claims non-involvement in an attack while the foul play is conducted by satellite outfits such as Sangilian, Ellalan and Pandara Vanniyan "*Padaigal*". It is well known that these names are bandied about by the LTTE in a puerile attempt to absolve itself of any blame.

A relentless campaign

D.B.S. JEYARAJ

AMNESTY International has been conducting an intensive campaign to get the death sentence awarded to four persons – S. Nalini (33) and Perarivalan (24) (Indian nationals) and Nalini's husband Murugan (28) and Santhan (28) (Sri Lankans) – in the Rajiv Gandhi assassination case commuted to life imprisonment. This campaign is based on the organisation's principled opposition to the death penalty and its aim to redress certain perceived flaws in the judicial process in the matter.

Amnesty has opposed the death penalty and in all cases in all countries on the ground that it is a violation of the right to life and the right not to be subjected to cruel, inhuman or degrading treatment or punishment. The organisation has time and again tried to mobilise the global collective conscience to express unconditional opposition to the death penalty as a violation of the right to life, emphasising that the punishment is never known to have acted as a deterrent or to have established retributive justice.

Amnesty has given special attention to the Rajiv Gandhi murder trial ever since the due process of law was initiated. It has issued press releases and communiques calling for international action whenever the need arose in its perception. Its latest and most comprehensive report and connected appeal was issued on August 12 (AI Index ASA 20/32/99). In the seven-page report, the organisation has traced the progress of the Rajiv Gandhi trial, the trial court convictions, the Supreme Court appeal and the subsequent verdict. While being attentive to the perceived flaws in the judicial process, Amnesty has, however, focussed more attention on getting the death sentences commuted.

It has expressed concern that while Nalini, Murugan, Perarivalan and Santhan were acquitted by the Supreme Court of offences under the Terrorist and Disruptive Activities (Prevention) Act (TADA), the Supreme Court failed to consider the incompatibility of certain provisions of TADA with international standards for fair trial when it held that their trial under those provisions should not be called into question.

"To confirm sentences of death imposed after a trial held under provi-

sions of a law which has now lapsed following widespread criticism from national and international human rights bodies that it denied the right to a fair trial, is manifestly unsound," Amnesty has stated.

While reiterating that capital punishment is based on a misguided perception that the death penalty is an appropriate means of deterrence or retribution, Amnesty has also pointed out that though the Supreme Court has ruled that the death penalty could be applied only in the "rarest of the rarest cases", at least a dozen executions are carried out in India every year. It also draws attention to the United Nations Commission on Human Rights urging governments to impose a moratorium on executions, and has requested India to abolish the death penalty.

Even as Amnesty spearheads a campaign to get the death sentences commuted, the stay on the death sentence on the four convicts has been extended as a consequence of periodic appeals.

Amnesty hopes the Supreme Court will review the petition in the light of the concerns raised, and it has called upon the President of India to exercise his powers to commute the death sentences in case the petition is rejected. ■

Ingrid Massage, the Amnesty International official in charge of the Sri Lanka desk in London, when contacted said: "There is a grave concern in the international community about the continuing, deliberate and targeted attacks on civilians like Dr. Neelan Tiruchelvam or the local councillors in Jaffna. There is no way that the LTTE can commit such killings and at the same time maintain that it abides by the Geneva Convention."

AMNESTY'S immediate concern for the lives of certain Tamil politicians has been necessitated by the prevailing circumstances. The LTTE has been issuing notices calling on these politicians to resign or face the consequences. Many of them have received threatening letters and telephone calls in the name of the LTTE or its fellow travellers. Neelan Tiruchelvam, who was killed on July 29, was under a threat too. Amnesty appears to be building up pressure on the LTTE in order to deter possible plans to exterminate these people.

Although many prominent political leaders, including Chandrika Kumaratunga and Foreign Minister Lakshman Kadirgamar, are under continuous threat, the current political situation makes lesser politicians, mainly Tamils, imminent targets. According to political analysts, the LTTE is perhaps in its most virulent phase. The brunt of their violence would seem to be directed at fellow Tamils rather than the so-called main enemy, the Sinhala state.

The LTTE finds that in spite of years of fighting and innumerable losses, it is nowhere in sight of its political objective. What is more, it finds itself increasingly alienated from international opinion. The territory controlled by it in Sri Lanka has shrunk considerably. Although by no means a spent force, the LTTE is certain that the process of decline has begun. Furthermore, there is a possibility that the devolution package may be implemented bypassing the Tigers. Under these circumstances, the resulting political frustration seeks to target perceived scapegoats for this state of affairs. The tradition in Tamil politics has been to blame forces or individuals among the community or the internal enemy as the source of all troubles. Therefore, the LTTE has apparently turned its wrath on Tamils who are a hindrance to their goal. After all, Prabakaran had his baptism of fire by gunning down former Jaffna Mayor Alfred Duraiappah on July 27, 1975. Tamil killings have continued for nearly two decades.

The LTTE has its own motives for targeting Tamil political parties. According to the Editor of *Lanka Guardian*, Dayan Jayatilleke, "the LTTE's plan is to monopolise the Tamil nationalistic space and present the Colombo-Delhi-Washington axis with a *fait accompli* and force the latter to arrive at a *modus vivendi* with it. The LTTE's goal goes beyond the limited objective of monopolising the Tamil political space ahead of any talks with the Sri Lankan Government."

Jayatilleke, in a newspaper interview, went on to say: "The killings are a signal to Colombo to stop propping up the TULF, the EPDP, the EPRLF, the PLOTE and the TELO as alternative Tamil formations to work its devolution and other political plans for the Tamils in the face of the LTTE's hostility. As regards New Delhi, the LTTE thinks that the BJP-led government is friendly, but South Block's powerful bureaucracy is highly suspect in its eyes. It is to Indian officialdom that the LTTE attributes the routine extension of the ban on it. The LTTE is trying to make India see the futility of propping up groups like the TULF and the EPRLF. To the U.S., the assassinations are a signal to suggest that the LTTE cannot be rejected and ignored but has to be constructively engaged."

If the prognosis about the LTTE's current hostility is correct then some more killings can be expected. In that context, Amnesty's appeal is a desperate measure enacted under desperate circumstances to mobilise international opinion against the LTTE and prevent a bloodbath of Tamil innocents. What is further needed is for the Amnesty initiative to be supported by other human rights and non-governmental organisations too. Only a world wide campaign of great proportions can possibly contain the bloody strategy. Though some would say that the neo-fascist LTTE would not respect even international opinion, it does seem worthwhile to make such an attempt, however quixotic it may appear.

There are two other issues in this regard. One, the Sri Lankan government must wake up to the imminent danger most Tamil politicians are in and provide them adequate security. The TULF with its "unarmed democracy" policy is particularly vulnerable. The second issue relates to developments in India, notably Tamil Nadu. The Tamil Nationalist Movement led by P. Nedumaran, a long-time supporter of the Tamil Eelam and LTTE cause, is currently engaged in a campaign to get the death sentences imposed on four persons convicted in the Rajiv Gandhi assassination stopped. As part of this campaign, Nedumaran and other like-minded persons have been arguing strongly against the concept of capital punishment. In that process, some eloquent and emotional points have been made regarding the sanctity of human life, how no one has the right to deprive a person of life and how killing someone does not deter the cause and so on. Now, the life and death question before these people is whether the same yardstick does not apply to the LTTE. If death sentences imposed after due process are a matter of objection, then what is to be done in the case of Tiger killings that are arbitrarily executed? If the supporters of the LTTE who are clamouring for eradication of capital punishment in India can prevail upon the LTTE too to implement a moratorium on civilian killings, then it would provide a reprieve for many beleaguered persons on the brink of death in Sri Lanka and elsewhere. ■

A no-win situation

Bringing peace to the northeastern region of Sri Lanka requires more than a smart military operation. Lack of progress on the political front has created a no-win situation here.

V.S. SAMBANDAN
in Colombo

NORTHEASTERN Sri Lanka is going through a painful phase, marked by an impasse, in both political and military terms. With the country set to face national and presidential elections in the year ahead, it is possible that positions will harden among both the separatist Liberation Tigers of Tamil Eelam (LTTE) and the Government. The Opposition United National Party (UNP), whose endorsement of the policy decisions taken by the ruling People's Alliance (P.A.) is crucial to resolving the crisis, is also expected to adopt a tough stand.

Exactly a year ago, following a fierce battle between government troops and the separatists, Killinochchi and Mankulam changed hands. While Killinochchi came under the control of the LTTE, the government regained Mankulam.

SRIYANTHA WALPOLA

President Chandrika Kumaratunga.

Since then nothing much has happened to alter the situation. But the security forces have scored a string of successes in the Wanni area, regaining chunks of territory from the Tigers. The crucial gain was the retaking of Madhu, a pilgrim centre in Mannar district.

In the second week of September, the security forces started a fifth round of Rana Gosa (Battle Cry) operations in the Wanni area comprising four northern districts. The previous such operation had been conducted with remarkable ease. Going by reports coming from the northeastern area, Rana Gosa V has not made much gains as the LTTE has put up stiff resistance.

(Reportage on military operations is largely confined to information based on secondary sources as journalists are not permitted to enter the areas until after the completion of a military operation. Moreover, censorship of news related to military operations has been in place since June 1999.)

The Defence Ministry said that the troops "advanced from general areas north and east of Welimarandamadu Tank and general areas east of Periyamadu tank". Indications are that the total number of casualties on both sides could well be above 150.

Heavy casualties have been reported from the northern Mannar district, where a fresh offensive was launched on September 12. The operation has strategic significance in that it seeks to cover areas which would, if successfully penetrated, lead to the opening of a much-needed main supply route to the northern Jaffna peninsula.

The operation launched in September 1998 implied a rethinking on the part of the government with regard to its plans to open a main supply route to Jaffna through a series of offensives called Operation Jaya Sikuru (Sure Victory). After Operation Jaya Sikuru was given up, the western offensive was launched, and it has been widely perceived as one aimed at opening a main supply route along the western coast.

Operation Rana Gosa also marks a shift in military strategy after the Killinochchi operations in that an earlier approach to open a main supply route along the Kandy-Jaffna road, which runs through the Tiger heartland, was abandoned in favour of a more practical western route.

Bringing peace to the troubled northeastern region would require more than a smart and successful military operation. While the military advance is crucial, equally important would be the progress made on a resolution of the political issues. Unfortunately, nothing has happened on this front as the goals of both the government and the LTTE have remained unachievable.

For its part, the government is keen on a solution within a framework that envisages a united but non-unitary nation, while the Tigers remain committed to their separatist agenda. And so the attrition continues.

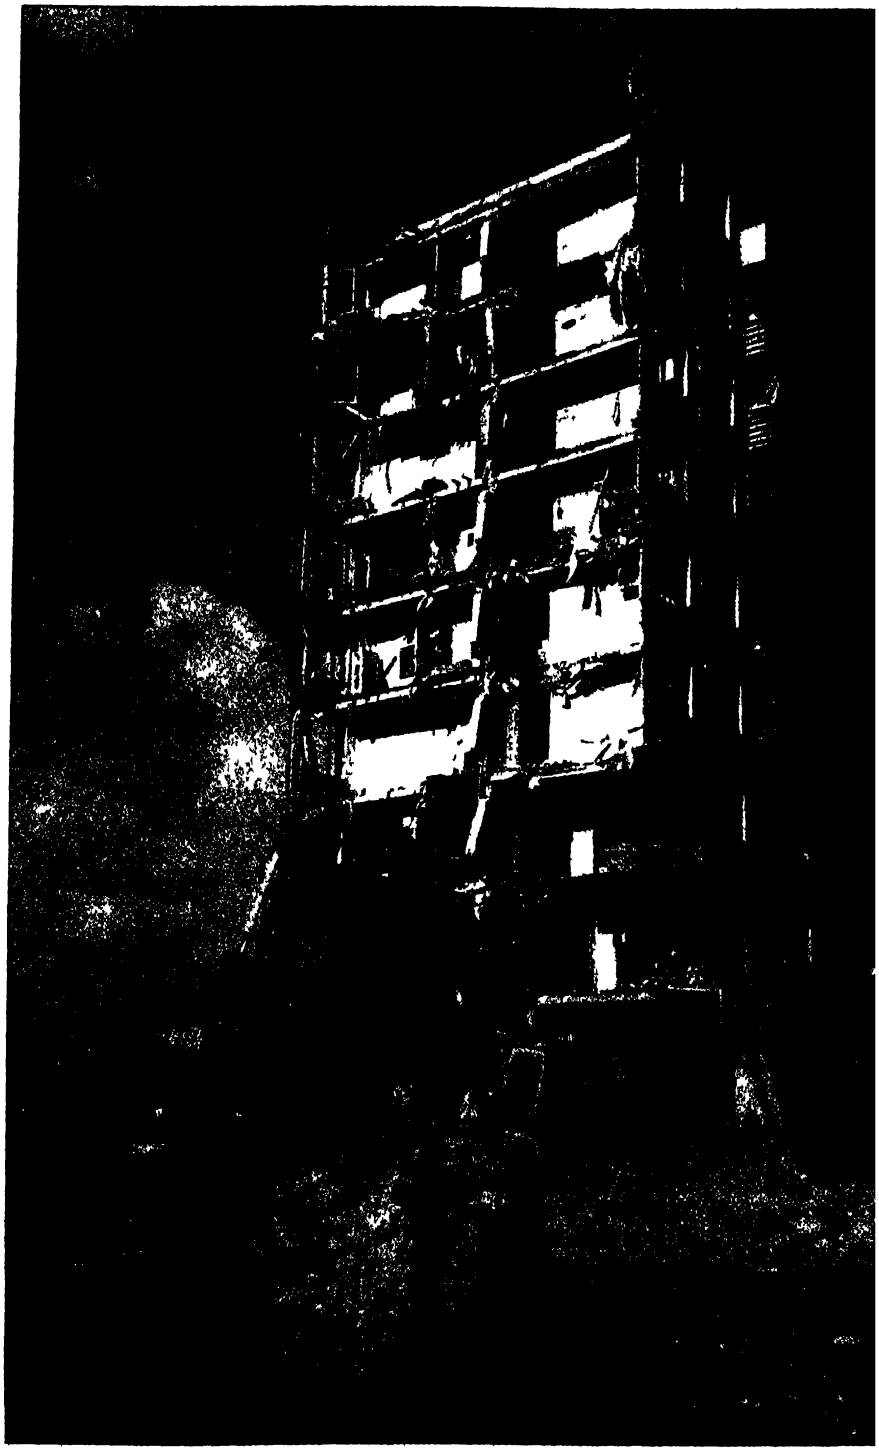
So it is imperative for the government to address the ground realities in the northeastern region, especially the situation faced by civilians living under the LTTE's sway. Regulations on fishing, and movement between the government-held and LTTE-held areas, lack of proper transportation facilities between Jaffna and the rest of the island and mounting pressures on the food delivery system are but early manifestations of more trouble ahead.

The advantage now lies with the military, successive operations having eroded the territorial base of the LTTE. With the ongoing military thrust, the efficacy of the civil administration, already handicapped as a result of the government having to run basic affairs in an essentially enemy-held area, has been further affected. The prevailing no-win situation, according to Tamil politicians, could help the LTTE to try to prove that it has a presence all over the northeast. This could impel it to launch attacks on economic installations and security personnel, as was seen in a recent attack on a police station in Trincomalee.

By systematically dismembering the other militant groups, the LTTE is better placed to claim the status of the "sole representative of the Tamils". The assassination of Dr. Neelan Tiruchelvam, senior leader of the Tamil United Liberation Front (TULF), and those of Razeek of the Eelam People's Revolutionary Liberation Front and Manickathasan of the People's Liberation Organisation of Tamil Eelam are indicators of the LTTE's unwillingness to accommodate an alternative leadership for Tamils, either politically or militarily.

However, the present delicate balance and uncertainty could change dramatically if the LTTE were to strike at any Army camp. Military strategists are in no doubt about the LTTE's capabilities. The question now is when and where it will strike. ■

An Islamist agenda for Dagestan



The recent spate of explosions in Russia is believed to be the handiwork of Islamist fundamentalists intent on liberating the province of Dagestan and creating an Islamic state in the north Caucasus region.

JOHN CHERIAN

RUSSIA'S ongoing battle against Islamist separatist forces in the southern province of Dagestan is assuming dangerous dimensions. In the second week of September, two multi-storeyed apartment buildings were destroyed by bombs, killing more than 150 innocent civilians. In August, a bomb had destroyed an apartment building in southern Russia. In the first week of September, a bomb exploded in an upmarket shopping complex near the Kremlin. These attacks have all occurred after Russia intensified its war against the Islamist militants who had crossed into Dagestan from Chechnya.

Russian Prime Minister Vladimir Putin has said that the bombings were "a clear terrorist attack". President Boris Yeltsin said on television that Russia was dealing with "wild, criminal terrorists" and has ordered the Interior Ministry to set up a special team to protect nuclear power stations, railway stations, oil pipelines and other strategic installations. Panic seems to have set over Moscow, after the recent explosions. A few days before the blast on September 13, Khattab, a Jordanian-born militant of Chechen origin and a leader of the separatists, had warned that the fight was no longer confined to Russian military targets. The Russian media quoted Khattab as saying: "Let Russia await our explosions blasting through their cities."

However, the rebels have issued a statement denying their hand in the terror campaign in Moscow and other Russian cities but the bombings, from all indications, are the handiwork of the fundamentalists who want to ignite a secessionist war in northern Caucasus. Russian authorities claim that the insurrection is spearheaded by "Wahhabites". The "Wahhabi" school of Islam has its origin in Saudi Arabia and its interpretation of Islam is the most "rigid". Although the Saudi Government also swears by Wahhabism, many Saudis feel

MISHA JAPARIDZE/AP

An apartment building in Moscow that was rocked by an explosion on September 10.

that their government is not adhering to a pure form of Islam. In fact, some radical proponents of Wahhabism, like Osama bin Laden, are sworn enemies of the royal family in Saudi Arabia.

ITAR TASS/AP

President Boris Yeltsin. Some people in Moscow think that Yeltsin is using Dagestan as a diversionary ploy, in view of the exigencies of domestic politics.

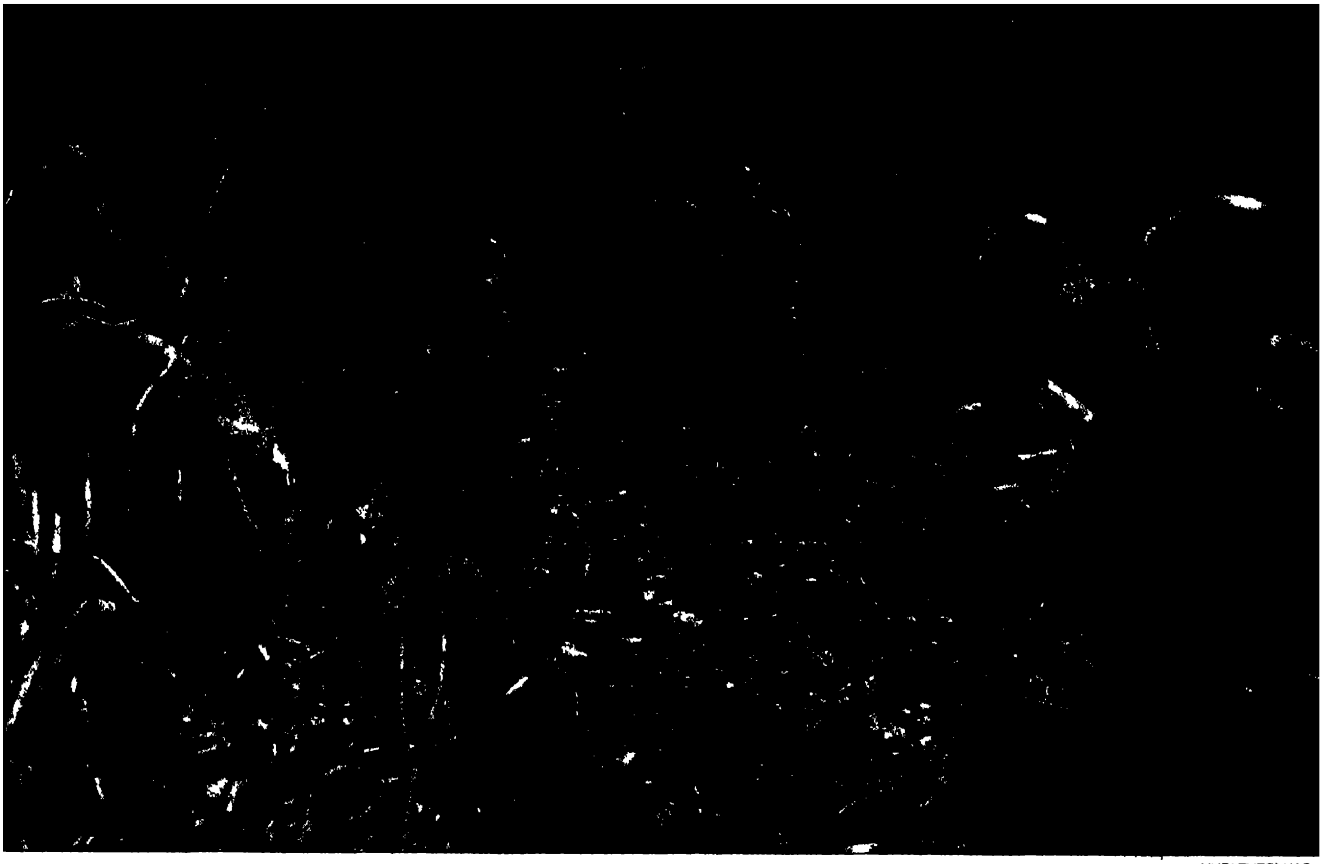
THE trouble in Dagestan started in early August, when several villages in Botlikh district were raided by 1,500-2,000 heavily armed fighters from Chechnya. Reports say that the invaders were mainly hardened Chechen fighters owing allegiance to a Chechen warlord, Shamil Basayev. According to Russian officials, there are some Arab fighters also. Their aim is to create an "independent Republic of Dagestan".

Dispersed by the Russian federal forces, the fighters retreated to the Dagestani settlements of Karamakhi, Chabanmakhi and Kadar. According to the Russian media, these areas are "the bulwark of Wahhabism" in the northern Caucasus. Sharia law is already in place here. In fact, many Russian commentators point out that Moscow had been too complacent about the activities of the Wahhabites. A senior official in the Interior Ministry said that 43 million roubles were stolen from the pension fund of Dagestan and used to finance the formation of a detachment of 50 rebels who were to fight in Botlikh district.

NATALYA MEDVEDEVA/AP

Chechen President Aslan Maskhadov. He is considered to be a moderate in the politics of the region.

When the local administration was thrown out in Karamakhi and Chabanmakhi two years ago and the Islamist announced the formation of "an independent Islamic territory", Moscow was not too concerned. But after the recent large-scale incursions from Chechnya, the Wahhabites in Dagestan started openly supporting the call for the creation of an Islamic republic. Documents seized from the insurgents show that the ultimate aim of the rebels is to create an Islamic state comprising the entire north Caucasus.



It was only in August that the Russian authorities realised the gravity of the situation and decided to clear the rebels from the "independent Islamic territory". Russian federal authorities used helicopters and missile artillery guns to attack rebel positions in Karamakhi and Chabanmakhi.

Ramazan Abdulatipov, chairman of the Council of the Assembly of the People of Russia, said that the Islamists in the Caucasus are generously supported by foreign fundamentalist organisations in Pakistan, Saudi Arabia, the United Arab Emirates, United States, Britain and Germany. "Their leaders support these extremists, knowing very well that he who rules Dagestan rules the north Caucasus. Their goal is to destabilise the region," he said.

In August, Russia sent letters to the Group of Seven Countries, the European Union and the Organisation of Islamic Conference, asserting that the rebels in Dagestan were backed by Islamic states. The letter claimed "that irrefutable evidence attest that the terrorists are receiving financial, material and other assistance from outside". During the Chechen uprising, countries like Turkey were known to have provided assistance to the rebels there. The letter also conveys Russia's desire to portray itself as a bulwark against rampaging Islamic militancy in Europe.

In Moscow, questions are being asked about the serious security lapse which first allowed the rebels to sneak in from Chechnya across the heavily fortified borders. Yeltsin has criticised the "carelessness of the military" but some in Moscow are of the opinion that due to the exigencies in domestic politics, the Kremlin may have tried to use Dagestan as a diversionary ploy. Yeltsin seems to have grossly miscalculated.

THE Dagestan conflict is also deeply enmeshed with the problem in Chechnya. The "*de facto*" independent republic of Chechnya is now an important player in the volatile politics of the region. Although no coun-

YURI TUTOV/AP

Russian paratroopers prepare to storm the Dagestani village of Karamakhi on September 12.

try has accorded it recognition, its very existence as an Islamic entity has been a source of encouragement for the other "republics" in the region. The violent politics of Chechnya has also spilled over to neighbouring territories. Dagestan suffered a lot in the course of the bloody war in Chechnya. After the war, Russian authorities did not bother to allocate additional funds to Dagestan, which is one of the poorest regions in the country.

The Chechen President, Aslan Mashkadov, is considered a moderate in the context of the politics of the region. His main rival is Basayev. Basayev's real aim is to overthrow Mashkadov and he is using the publicity generated by his adventures in Dagestan to further his political goals in Chechnya.

Maskhadov is known to be against "Wahhabism" becoming the dominant trend in the northern Caucasus and could be persuaded to play a more active role in curtailing it if he gets certain tangible assurances from Moscow. It is rumoured that Mashkadov is not averse to a deal with Moscow, whereby his state is given quasi independence and allowed to run its domestic affairs. Basayev, on the other hand, talks of an Islamic state stretching from the Chechen capital Grozny to the Caspian sea. Some of President Yeltsin's advisers like Presidential Council member Emil Pain, are already talking loudly about allowing Chechnya to "politically secede". Pain also believes that Russia must also come to terms with the Wahhabites and should try its best "to incorporate them into civilised society".

RUSLAN MUSAYEV/AP

Chechen rebel Khattab. He has threatened Russia with "explosions blasting through their cities".

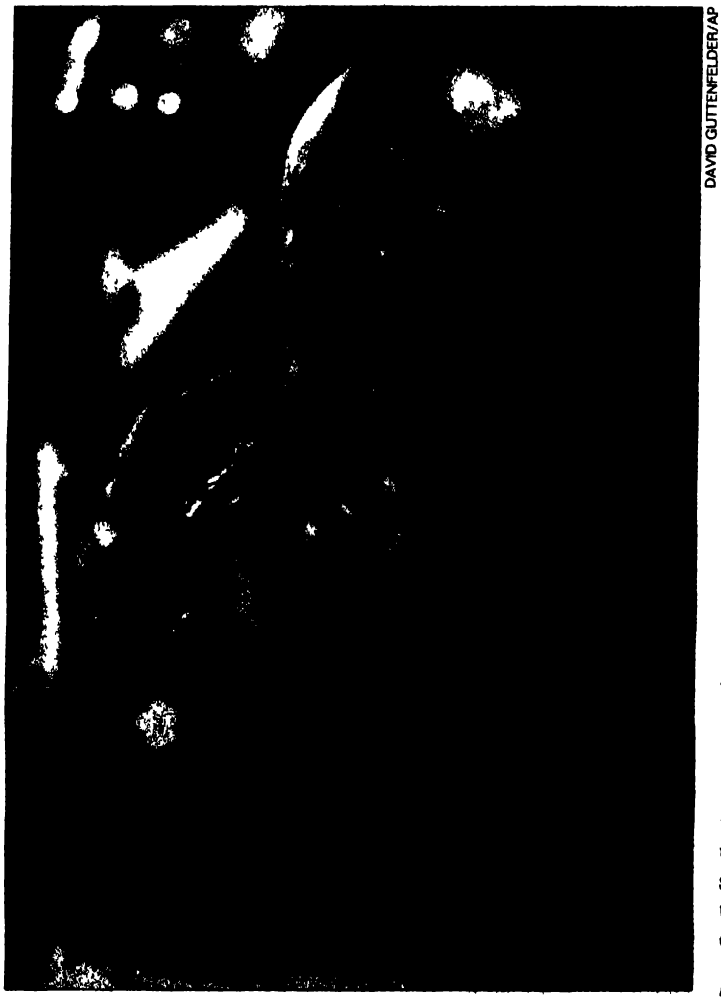
For some time, radical Islamists have been dreaming of creating a "great imamate from sea to shining sea". A senior Russian military analyst, Vladimir Lutovinov, has described the events in Dagestan as the "first attempt" to spread neo-globalist ideas of orthodox Islam to Russia via Chechnya. Their main goal is to "liberate" the divided and resettled ethnic groups from "the colonial pressure" of Russia and to create a united Islamic state in Chechnya and Dagestan, and subsequently expand its borders by incorporating other north Caucasian states.

The Dagestan adventure of the Wahhabites may have failed this time, but as the heinous terrorist activities have shown, the battle will continue in other forms. The rebels are trying to force the federal troops to spread along the border with Chechnya and involve them in a long-drawn-out fight against a large number of small groups. ■

A simmering civil war

The split in the ranks of the rebels fighting President Laurent Kabila and the rift between their supporters across the borders have made peace elusive in the Congo despite a ceasefire accord.

JOHN CHERIAN



AFTER months of painstaking diplomacy, all the rebel groups in the Democratic Republic of the Congo (DRC) signed a ceasefire accord in Lusaka, the Zambian capital, in the first week of September. The countries openly involved in the war – Rwanda, Uganda, Zimbabwe, Angola, Namibia along with the Congo – had signed a separate ceasefire accord in July but fighting continued owing to the reluctance of the rebels, backed by Uganda and Rwanda, to fall in line (*Frontline*, July 30).

The civil war erupted in the Congo a year ago, when the rebel forces launched a full-scale military offensive to overthrow the government of Laurent Kabila who was installed in power after a similar rebellion in 1997. The rebels then overthrew the corrupt and dictatorial regime of Mobutu Sese Seko.

Observers feel that the current ceasefire is a fragile one largely because the rebels who tried to overthrow Kabila are now hopelessly divided. The Rally for Democracy (RCD), the main rebel movement, split and its leader, Wamba dia Wamba, was ousted by another faction. To complicate matters, Uganda and Rwanda, which had propped up the RCD, have developed serious differences of opinion. The depth of their rift was highlighted by the fight between their armies to take control of Kisangani, Congo's third biggest city, in the second week of August. At least 200 people were reportedly killed in the fight. Kisangani is one of the main centres from which illegally-mined diamonds and gold are exported. It is well known that many people close to the governments involved in the Congolese civil war have profited from this illegal trade in precious metals and stones.

Tensions between Uganda and Rwanda surfaced when President Yoweri Museveni of Uganda started supporting the Congolese Liberation Movement (MLC), a new rebel group, led by Jean Pierre-Bemba in northern Congo. Large-scale fighting broke out when South African Foreign Minister Nkosazana Zuma visited Kisangani to finalise the name of the rebel leader who would sign the ceasefire agreement.

After the split in the RCD, Uganda continued to support Wamba dia Wamba, while Rwanda, which apparently played an important role in Wamba's ouster, had propped up Emile Ilunga, a medical practitioner from Kabila's home province of Katanga. Uganda helped Wamba set up a new headquarters in Kisangani. However, Yoweri Museveni and Paul Kagame, the Rwandan strongman, seem to have sorted out their differences for the time being. Museveni and Kagame were old friends and comrades-in-arms. Kagame was Museveni's security chief when he was fighting in the bush to overthrow the Ugandan government in the 1980s.

DAVID GUTTENFELDER/AP

President Laurent Kabila.

A majority of the rebel leaders are at the moment with the faction led by Ilunga, whose headquarters are in the rebel-held eastern city of Goma. Of the 50 original founders of the RCD, 41 support Ilunga. Under the accord, the rebel groups are entitled to one seat each in the proposed military council that will be empowered to administer and monitor the peace in the troubled region. However, they have demanded more and the demand has been rejected by the countries that had signed the ceasefire agreement. In Lusaka, the African leaders had to allow all the founding leaders of the RCD to sign the ceasefire accord to break the deadlock. There is very little chance of the rebel factions ever agreeing to sponsor one candidate to the powerful military council.

THE rebels were never too popular with the

people of the Congo. The RCD, which until a couple of months ago was in control of more than half of the country, is viewed as a mere appendage of the Tutsi-dominated government of Rwanda. People believe that Rwanda, because of its own domestic compulsions, precipitated the second round of civil war in the territory of its bigger neighbour.

Kabila, who rode to power on the strength of the predominantly Tutsi army, was financed and backed by Rwanda and Uganda in 1997. The Rwandan government did not expect Kabila to turn his back on his benefactors in less than a year. It was the continuing presence of the Hutu extremist groups near the border with Rwanda and Kabila's determination to be his own man that prompted Rwanda to launch its ill-conceived attempt to unseat Kabila. In 1993, to escape retribution from the Tutsi-dominated Rwandan army, 300,000 Hutus had fled to eastern Zaire. Many of them later joined the Interahamwe, the dreaded Hutu militia, during the 1994 genocide against the Tutsis. Rwanda's goal was to prevent a repeat of the horrific events. Kabila, on the other hand, wanted to break free from the shackles imposed by Rwanda. Immediately after he got rid of his Tutsi advisers a year ago, Kabila's popularity soared.

Rwanda's attempt to overthrow Kabila in the summer of 1998 had prompted five African states – in an unprecedented show of solidarity – to send troops to help him. The five countries that have been officially or unofficially supporting Kabila were Zimbabwe, Angola, Namibia, Chad and Sudan. When the rebels swept across the Congo in 1997 in their successful attempt to overthrow Mobutu, there was comparatively little bloodshed. But the current war has resulted in immense bloodshed. Many atrocities, committed by both sides, have been documented. After distancing himself from his Rwandan mentors, Kabila had started demonising the Tutsis. Hundreds of Tutsis were massacred in Kinshasa and Lubumbashi in August 1998. One thousand civilians were massacred by the southern Kivu by Rwandan and rebel forces. Ethnic cleansing in Makobolo in January 1999 claimed more than 500 lives.

THE military stalemate combined with the growing desire of the intervening countries to extricate themselves from the quagmire, has led to the signing of the latest ceasefire agreement. The countries also seem to have realised the futility of finding a military solution to the problems of Central Africa. There was also the ever increasing danger of the war engulfing the entire region.

As it is, Angola's intervention in the war has encouraged the renegade Unita forces to derail the 1994 Lusaka Peace Accords. Unita launched a full-scale military offensive earlier in the year. With most of Angola's elite troops fighting in the Congo, Unita opened up new fronts and is once again in control of about half of Angola. Faced with serious reverses, the Angolan Government has recalled the bulk of Angolan troops in the Congo. Unita's allies in neighbouring Republic of Congo (Brazaville) have also been encouraged to re-ignite the civil war. Brazaville, the capital, was attacked by pro-Unita militias identified with former President Pascal Lissouba, who was ousted with Angola's help.

In Zimbabwe, domestic opinion has not been favourable to military intervention in the Congo. Even the hitherto pro-government Zimbabwe Congress of Trade Unions has become critical of President Robert Mugabe's policies. There were also serious but unsubstantiated allegations that people close to Mugabe and the military establishment are profiting from the war in the Congo.

In Uganda, the war has considerably dented Museveni's stature. The Western media allege that people close to Museveni, including his brother, had profited enormously from the war. With Ugandan troops heavily deployed inside the Congo, rebels opposed to Museveni have increased the frequency of their attacks inside Uganda. The rebels in Namibia, encouraged by Unita, tried to seize the Caprivi strip, which is wedged between the borders of Angola, Botswana and Zambia, in the last week of August. Peace in the Congo was getting to be an attractive option for all the major players concerned. There was also a growing domestic pressure in the Congo for a negotiated solution.

But a durable peace may be elusive. For Rwanda and Uganda, the war has brought enormous profits, mainly through the illegal smuggling of gold and diamonds. Rwanda will only be satisfied after the Interahamwe is subdued. The proposed multilateral peacekeeping force will find it extremely difficult to disarm the extremist Hutus and the other guerilla groups such as the Mai-Mai, fighting on the side of Kabila; and the Banyamulenge (Tutsis long settled in the Congo) and the dissident Congo Armed Forces, which had broken away from the Congolese army after the fall of Mobutu. ■

THEMBA HADEBE/AP

Rebel leader Ernest Wamba dia Wamba signs the ceasefire agreement in Lusaka.

A long and winding road

In Guatemala, which has come a long way from the days of a military dictatorship to a barely functioning democracy, the outcome of a nationwide referendum and the scuttling of peace accords slow down further progress towards peace and democracy.

SIDDHARTHA BAVISKAR

JULY 1999, Santa Anita estate, Colomba Costa Cuca, Quezaltenango, Guatemala: Looking at Aura Vicente as she cradles an infant inside a damp and dirty building, it is hard to imagine that she was once the first female captain in the Revolutionary Organisation of the People in Arms (ORPA). "When the army kidnapped and murdered my father, I had no choice but to flee to the mountains near San Marcos," she says softly. It was there that Vicente, then known only by her alias, "Juana", joined the Left-wing insurgency that erupted in the mid-1960s. She spent the following 10 years on the run before escaping to Mexico. It was only in 1997, following the signing of the United Nations-sponsored peace accords, that she could return home. Camps scattered across the verdant landscape provide some 1,50,000 former Guatemalan refugees and demobilised Left-wing combatants a chance to lead normal lives once again.

In December 1996, the Government of Guatemala and the Guatemalan National Revolutionary Unity (URNG) signed the last of a series of peace accords, one that promised to bring a "firm and lasting peace" to a country that had been torn apart by a 36-year-long civil war. Some 2,00,000 persons were killed or "disappeared" during the bloody conflict; hundreds of thousands sought refuge abroad or in other parts of the country.

The scope of the accords is impressive. It ranges from a Comprehensive Agreement on Human Rights to an Agreement on the Identity and Rights of Indigenous Peoples, to another on the Strengthening of Civilian Power and on the Role of the Armed Forces in a Democratic Society. Indeed, there is scarcely an area of national life that they leave untouched. Such comprehensiveness would seem to augur well for the future of Guatemala. It would, for instance, imply that the harsh discrimination that marks this divided society will soon be reduced if not eliminated, and that its armed forces will have greater respect for democratic norms.

Unfortunately, recent events point to a less sanguine outlook. Although Guatemala figures among middle-income countries in terms of per capita income, there is a gross maldistribution of land and income. Such inequalities are exacerbated by the cleavage between ladinos (Spanish-speaking whites or mestizos) and (predominantly Mayan) indigenous peoples, and the rural-urban divide.

Three-fourths of Guatemala's 11 million citizens live below the poverty line; of the 58 per cent of the population that lives in extreme poverty, over four-fifths is Mayan. The top 10 per cent of the population receives 46.4 per cent of the national income while the two lowest quintiles combined get only 7.9 per cent. As little as 0.15 per cent of the rural population (a little more than 10,000 people), engaged in commercial agriculture, controls as much as 70 per cent of agricultural land.

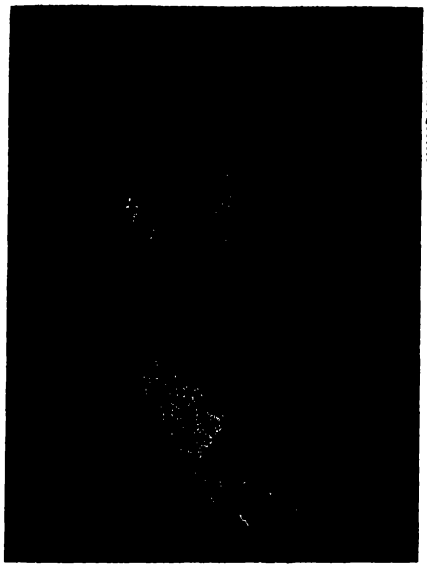
A 1997 assessment by the Danish International Development Agency (DANIDA) describes Guatemala as one of the most "archaically repressive, unjust and racist societies in the western hemisphere." Agricultural production has focussed on exports, leading to a critical level of food insecurity. Infant mortality rates, illiteracy and malnutrition continue to be unacceptably high.

Thus, poverty afflicts the peasant more than it does the city-dweller; it hurts the indigenous majority much more than it does the ladino minority. The state has done little to improve things. Its spending on education and health is one of the lowest in the region; its capacity to tax, redistribute wealth and provide basic services to the needy, frighteningly low.

The unequal distribution of resources which, in turn, has led to the concentration of power in the hands of a small private sector and military elite, was one of the main reasons for the rise of the Marxist-led, Cuban-supported insurgency (broadly represented by the URNG) in the country. The fact that toward the second half of the 1980s the insurgency was largely a spent force may be attributed largely to the brutal and widespread repression unleashed by the Army and right-wing paramilitary groups. Their justification? Defence of national sovereignty and, later, also of the constitutional order against an internationally-supported Communist insurgency.

In the Cold War context, these counter-insurgency efforts, which included grave human rights violations, were actively supported by the United States as part of its foreign policy – a fact noted by the Commission for Historical Clarification (CEH) established in June 1994 as part of the peace agreements. Observers note that, unlike the peace process in neighboring El Salvador where guerillas of the Farabundo Marti National Liberation Front (FMLN) were firmly maintaining the offensive against the beleaguered Salvadoran military when they came to the negotiating table, in Guatemala the URNG guerillas had become more of a nuisance than a threat to the state even before the talks began.

Having gained the upper hand over its opponents, why did the Guatemalan military agree to support the peace initiative formally? One plausible reason is the presence of a moderate faction within the military high command. According to Colonel Benito Raggio, Military Adviser to the U.N. Mission for the Verification of Human Rights and of Compliance with the Commitments of the Comprehensive Agreement on Human Rights in Guatemala (MINUGUA), "the Guatemalan military is a professional institution. There are moderate 'visionaries' in the military high command who realised that, although the insurgency had been defeated militarily,



an ideological and political victory was not possible. Also, Guatemala's image in the international community had deteriorated and, with the end of the Cold War, international pressure on the government had mounted."

In Raggio's view, the Army's strength and resistance to civilian control stemmed from the fact that the Guatemalan state was weak and had abdicated its basic responsibilities to the military. "It was the Army that largely dealt with the crisis that Hurricane Mitch (November 1998) left in the wake. Only it could deal with the soaring crime in the country." This opinion, however, ignores the important contribution of local non-governmental organisations and international agencies to relief operations, and towards strengthening and improving key political institutions such as the judiciary and the police.

A second factor, besides the Army's pragmatism, is that the military has not found the terms of the peace agreements to be punitive. While the armed forces seem to be fulfilling some of the commitments demanded by the peace agreements (some of these even preceded the accords as, for instance, reducing manpower by a third) it is far from clear whether their basic autonomy with respect to the state has been eroded thus far. During the conflict, the military acted with impunity against any perceived opposition. It kidnapped, tortured and killed scores of guerillas as well as innocent civilians.

The reports of both the CEH and the Catholic Church-sponsored Project on Recovery of Historical Memory (REMHI) provide chilling testimony to its flagrant violations of human rights. The CEH report, "Guatemala: Memory of Silence", concludes that the state-perpetrated genocide (including over 600 massacres) against the Mayan community between 1981 and 1983 and that, together with paramilitary groups, it was responsible for over 90 per cent of the human rights violations committed. The report calls for bringing the perpetrators to justice and compensating the victims. Unfortunately, its recommendations are not legally binding.

Another clear sign of military independence is that those responsible for the brutal assassination of Bishop Juan Gerardi – the Army is widely suspected to be behind it – in April 1996 are still at large. The military has been unwilling to cooperate with the investigation, which has dragged on fruitlessly. Bishop Gerardi, a staunch defender of human rights and the leader of the REMHI project, was killed barely two days after he presented the project report titled "Guatemala. Never Again".

WANG YUAN-MAO/AP

President Alvaro Arzz. Little progress with regard to the accords can be expected during his lame-duck government in an election year.

Military resistance to control by the state is perhaps understandable given that it has governed the nation for much of this century, including an uninterrupted three-decade rule after the U.S.-led overthrow of the democratically elected Jacobo Arbenz Government in 1954. It had also influenced the framing of the last Constitution (in 1986) which does not permit a civilian to hold the position of Minister of Defence.

Raggio attributes military autonomy to deeper problems. He says: "If the military can act with impunity, it is ultimately due to a political, structural problem; one that is related to the poverty, corruption and illiteracy in this country." The causes of military supremacy may be many, but one thing remains clear: the military vehemently opposes any effort to make it answer for its crimes.

Recent startling revelations, however, may force it to be more cooperative in this regard. A military logbook that records in frightening detail the fate of 183 Guatemalans at the hands of the security forces during the mid-1980s – and U.S. complicity in the anti-insurgency campaign – surfaced last May in the U.S. What makes the document unique is that it was smuggled out of the Guatemalan Army's own archives. Although the military has denied the report, its publication may well build up sufficient pressure on a reluctant Alvaro Arzz Government to take the military to task.

OBSERVERS note that two serious inherent weaknesses undermine the accords. First, to what extent do the signatories to the agreements represent the aspirations of Guatemalan society as a whole? The URNG is an umbrella organisation formed in 1982 by various politico-military organisations such as the Guerilla Army of the Poor (EGP); the Organisation of the People in Arms (ORPA); and the Revolutionary Armed Forces (FAR). It claims to speak for a broad spectrum of disaffected Guatemalan citizens, in particular the Mayan majority.

However, while the revolutionaries were involved in promoting social movements in support of the indigenous cause from the mid-1970s, the relationship between the Mayans and those who claimed to fight on their behalf has often been marked by suspicion, hostility or outright rejection.

Finally, although diverse civic organisations were consulted during the negotiations, clear support to the agreements, and to the broader process that they represent, has not been forthcoming from important right-wing groups, in particular the Guatemalan Revolutionary Front (FRG). The FRG is one of the two right-wing parties – the other being the ruling National Advancement Party (PAN) that dominate national politics. As Edelberto Torres-Rivas, a Guatemalan sociologist and adviser to the United Nations Development Programme (UNDP), puts it, "for the FRG, the URNG is just a gang of criminals; therefore it views the promises made at the negotiating table by the PAN government not as moral commitments of the Guatemalan state but only obligations undertaken by the current Government."

The second drawback of the accords has to do with implementation. The agreements are full of ambitious objectives and stirring phrases. Yet their wording is so ambiguous and they involve so many agencies that verifying them and holding someone responsible for their implementation will be a slippery task.

The Government has already fallen short of its scheduled commitments on most issues. It has dragged its feet on vital components of the reform process, for instance, those affecting the tax system. Guatemala's effective rate of taxation is dismayingly low: only 8 per cent, a little over half the average rate for Latin America and way below the 30 per cent

average in western Europe. This has prompted even the fiscally conservative International Monetary Fund (IMF) and the World Bank to ask for a significant increase in tax rates. It should not be surprising, then, that the state is financially strapped.

Land reform is another issue on which critics charge the government with having done very little, and made largely cosmetic, changes. As a source from the international community, who wished to remain anonymous emphasises, any attempt at a genuine land reform will confront stern resistance from the landed elite. The source said: "The mechanisms established by the government are so inadequate that it will take as many as a hundred years for the half a million peasants estimated to be potential beneficiaries of the reform actually to receive such benefits. There is not going to be any redistribution of land here. There are two topics that are taboo in this country: land and the military. They have not changed; nor are they going to."

Looming elections (presidential, congressional and municipal scheduled for November 1999) have distracted the governing party from accord implementation and further debilitated an already flagging political will. Indeed, observers note that were it not for the persistence of a raft of international agencies and occasional prodding from generous international donors who are pouring money into the country, even the progress shown thus far would not have been achieved. If the FRG wins the November elections, as is being speculated, the fate of the agreements will be even more uncertain.

UNDOUBTEDLY the most severe setback to the process of peace and democratisation in Guatemala was the mandate against the constitutional reform in a nationwide referendum held in May 1999. The reforms were designed to provide fundamental legal and constitutional authority for key elements in the peace agreements, particularly those relating to indigenous rights, the role of the armed forces, and the reform of the justice system. The nation's rejection of the reform package means, for example, that it refuses to acknowledge the rights of its indigenous community by failing to grant official recognition to its 23 languages. It also implies that the role of the Army in Guatemalan society and its position with respect to civilian authority continues to be ambiguous. Torres-Rivas points out that centuries of oppression and systematic exploitation, first at the hands of the Spanish conquistadors and the creole elite and later by the predominantly ladino elite, has meant that today the Mayan communities live in appalling conditions of poverty, ethnic discrimination and exploitation. "They are second-class citizens", he sums up.

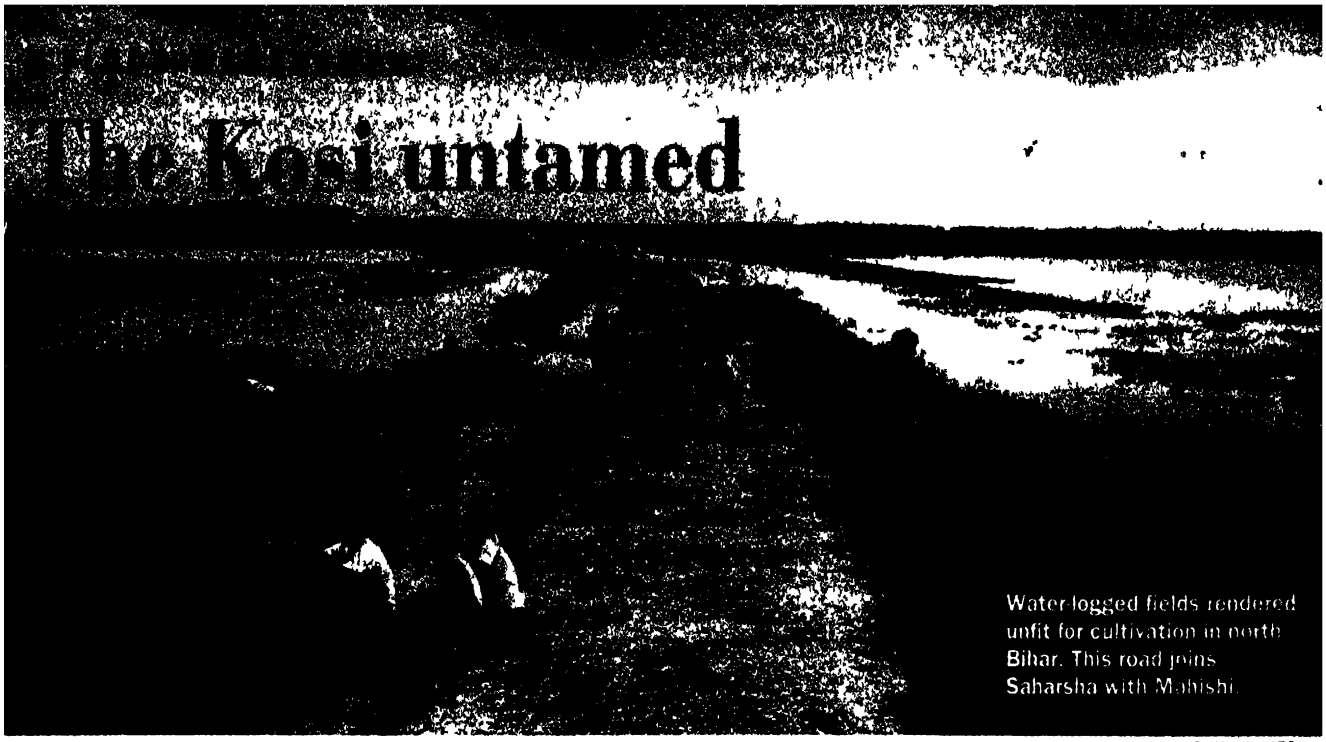
However, what is perhaps more troubling is that less than a fifth of the registered voters bothered to go to the Consulta Popular (as the referendum was called) at all. Indeed, Guatemala has had one of the lowest rates of voter turn-out in Latin America. For many poor, illiterate Guatemalans, voting is a time-consuming and expensive ritual, the outcome of which offers little hope for change. Many others regard it with cynicism. Given these circumstances, their apparent indifference to a referendum that was promoted more by a host of international agencies than by their government itself is perhaps understandable.

Several explanations are offered as to why people turned down the proposed changes. Foremost among them are that Guatemalan society is deeply racist and conservative; that promoters of the reform were unduly complacent; and that the government lacked the will to "sell" the reform. According to Torres-Rivas, a lack of political will and the hostile attitude of the influential evangelical Church guaranteed a negative response.

The reforms had taken a long time to get through the Guatemalan Congress and had expanded from 12 to 50 items in their coverage. "Congress wilfully scuttled the reform initiative. It overburdened the reform package in order that its complexity would confound voters, ultimately leading most of them to reject it," Torres-Rivas said. The injunction of the powerful and conservative evangelical Church to its followers to vote against the reform if they did not understand the contents of the reform package had further stood against its success.

The rejection of the proposal means that a new government, whether formed by the FRG or the PAN, will be even less enthusiastic about reforms than the present one. What makes things worse is that the young Left-wing coalition party, the New Nation Alliance (ANN), and other Left-wing groups have been unable to rally popular support for the accords.

THE return of peace and democracy to Latin America has been hailed widely. Elections are held; votes are cast. Guatemala, too, has shed its authoritarian legacy. Today the possibility of another military coup is remote because the military knows that in the present international context, it will prove costly if it strays beyond the boundaries of constitutional legality. However, if Guatemala has to be something more than a barely functioning democracy it needs to surmount daunting structural obstacles, among them, widespread poverty and severe inequality and discrimination. So far, the push for reform has come from without, mainly at the urging of the international community. But for any change to be successful in the long term, it has to come from within.



This is happening, albeit at what seems an agonisingly slow pace. The result of the referendum was discouraging and little progress on the accords can be expected from a lame-duck Arzz Government in an election year. Yet at the same time, Mayan organisations, human rights groups and a host of other non-governmental organisations representing civil society are gradually coming to the fore. Only when Guatemalans themselves understand and are convinced of the need for change will far-reaching reforms be proposed, accepted and implemented.

Such a process will take time but so long as it is carried out through the ballot box and not through the barrel of a gun, there is hope yet. Dinorah Azpuru, a researcher at the Association for Research and Social Studies in Guatemala City, is optimistic about the possibilities of a more peaceful and democratic nation. "I think that we are advancing on both fronts; democracy continues to be strengthened, and though the peace process has met with obstacles, it has not stalled. If we consider the current situation in the context of Guatemala's political history, recent changes have been transcendental."

From seamstress to guerilla leader to vegetable seller and, now, to a community creche worker, Aura Vicente has come a long way. "Now I have to attend to problems faced by the community and to the education of my children. The peace was signed; but it is only a signature. It stopped the war and the massacres... that's good. But things haven't really changed. Poverty and ill-treatment still exist. Now we have to take up a political struggle." ■

Siddhartha Bavishar is a research scholar at the University of Pittsburgh in the U.S., working towards a doctorate in Latin American politics.

The Kosi untamed

Water-logged fields rendered unfit for cultivation in north Bihar. This road joins Saharsha with Mahishi.

KANCHAN MAHATO

The flood -prone Kosi is 'Bihar's sorrow', a nightmare in flood management. Efforts to contain the river's annual season of fury by building embankments have not succeeded. A trip along the Kosi, in the thickly-populated and desperately poor northern Bihar, that revealed tales of woe.

R. KRISHNAKUMAR
recently in north Bihar

FOR the third time after sunset, Ganga Prasad Yadav had predicted "landfall" in two hours, when the boat rammed yet again into silt. As his fellow boatmen jumped into knee-deep water in the middle of nowhere in the Kosi, Ganga Prasad remained motionless – a silhouette on the wooden ridge, but for the early-night glow off his silver teeth. Rescuing a wooden boat from the Kosi's silt was an everyday chore that would be done in good time. He therefore peered eagerly at the small crowd inside the boat in the hope that someone would play the tape-recorder once again. Rarely had Ganga Prasad listened to himself singing the Ramayana, squatting on the edge of the boat, for night travellers crossing the endless river.

Time has no meaning on the Kosi, as is the case in most parts of north Bihar, where urban priorities are often made to stand on their heads. It was six hours since Ganga Prasad and his friends had raised their oars and started the return journey with the visitors to Ghonghepur village on the edge of the western embankment of the Kosi. For the team of journalists, who had made their onward-crossing downstream in five hours, the string of villages so full of life within the river were the least of the day's surprises.

From the mainland village of Baluaha to the east, the Kosi was but a broad expanse and the villages long green beads in its middle. The western embankment was a distant mist. The boat had struck the bottom right in the heart of the Kosi, when the river unveiled ever-changing, ever-recharged channels of muddy water and silt, small trees, paddy fields, cattle and huts. For every serpentine channel that the Kosi made within itself, it clogged and choked another under silt. Navigation on the Kosi's bosom was therefore a necessary discovery on foot for the boatmen who took turns to pull the boat with nylon ropes through freshly deposited mud, through tall grass and shrubs, sometimes along the crumbling edges of island-villages.

The Kosi was full of freshness: playful river dolphins, spotlessly white cattle dotting rows of jute-and-bamboo huts, handpumps on the riverbanks, rising above flooded tubewells, women in canoes that were full of fodder, a friendly hoot, silence that made music out of the sinking footfalls of boatmen. Momentarily at least, the Kosi seemed like a different world.

But remove the lens, as it were, and the larger setting is as muddy and depressing as the Kosi silt. Northern Bihar, through which the Kosi and all other major tributaries of the Ganga flow, is among the poorest and the most backward regions of India In many parts of the 21 northern districts of the State, which are among the least urbanised parts of the country, flood-mauled gutters masquerade as highways. Nights underline the absence of electricity There are virtually no transport and communication facilities The first link to settled society down south, a bridge (at Mokameh) across the Ganga which flows west to east dividing the State, is only three decades old. The pervading lawlessness in north Bihar had so far been encouraged mostly by isolation – not by an organised awareness of caste or by social and political consciousness, unlike in the case of the South. However, that is changing – for the worse.

North Bihar's worst curse is not lawlessness or even the lack of developmental infrastructure – it is geography. Geography, paradoxically, is its blessing too. The plains of Bihar, adjoining Nepal, are drained by a number of rivers that have their catchment in the steep and geologically nascent Himalayas. For centuries, torrential rains in the Nepal Himalayas have made these rivers – including the Ghaghra, the Gandak, the

Water in a protected village in the foreground, with the embankment in the background. Embankments have largely proved counter-productive in the war against floods here; (below) people living on an embankment meant to protect the village. Sometimes it is the only dry stretch of land available.

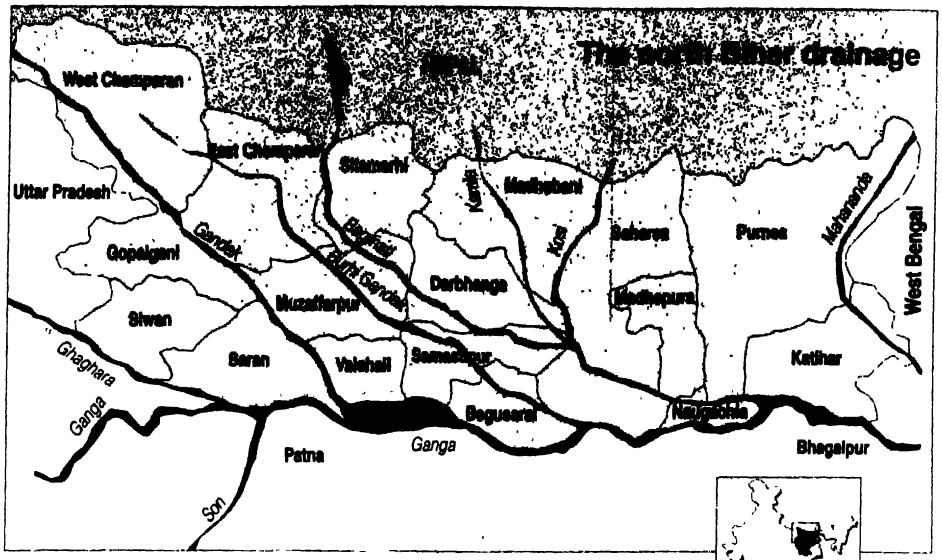
Buhri Gandak, the Bagmati, the Bhutahi Balan, the Kamala, the Kosi and the Mahananda – carry a very high sediment load down to the plains North Bihar's plains are hence one of the most fertile regions in the country, and settlement began here as early as the 7th century B C Many locations in the region are associated with legends, including those in the Ramayana and the Mahabharata Several of these were centres of the first kingdoms of India, such as Magadha, the first empire of the Mauryas, had its capital in the North Bihar plains

Once the rivers enter the plains much of the silt begins to settle, raising the beds of the rivers, shrinking their channels, blocking their flow Come the rainy season and the rivers cut fresh paths through the sediment Most rivers of north Bihar have done this extensively, the Kosi being the most notorious example The interlacing channels of the Kosi, which confuse Ganga Prasad and other boatmen in Saharsha district, in a way symbolise the scourge that is endemic to north Bihar rivers

The silt yield of the Kosi, one of the largest tributaries of the Ganga, has been estimated to be about 19 cubic metres per hectare per annum, which is among the highest in the world, according to a report of the Centre for Science and Environment The river is better known today as "Bihar's sorrow", for the devastating floods that it causes and, more particularly, for its disastrous shifting of course It has been variously estimated that in the last 250 years the Kosi has moved westwards by an astounding 210

A transplanted village

R. KRISHNAKUMAR
at Ghonghepur



THE river dictates lifestyle in Ghonghepur, a speck on the edge, a victim of the Kosi's western embankment. The small village will have a place in any flood map of north Bihar, and its claim to fame is the stagnant waters of the Kosi and the Kamala that engulf it for most of the year.

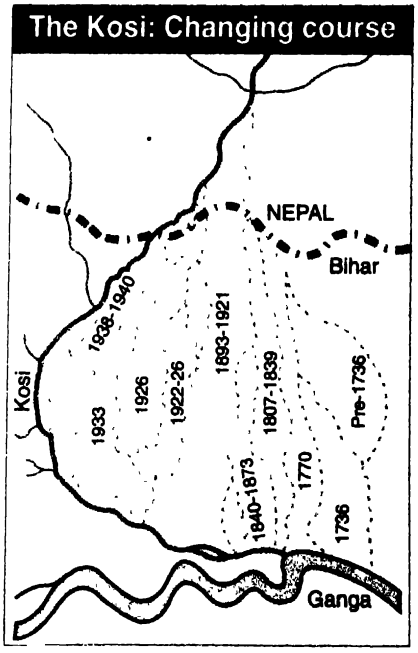
The embankment that was meant to protect the village is, according to residents, sometimes the only dry stretch of land available. Most households have built makeshift homes there, some five [illegible] rags and hay, in between temporary shops. A village transplanted on to the embankment.

Even as the Kosi erodes an area, it builds up land elsewhere. Large tracts suddenly become available for cultivation, but crops rise for harvest go under. The unpredictability makes farming or any other investment a risky venture, and young men leave early as labourers in search of employment, mostly to Punjab and Haryana. Women and children and the old remain on the edge of poverty. They are at the mercy of moneylenders and [illegible] orders that take them in unfamiliar destination. [illegible]

source of income, but milk must reach the cities the same day. For most part of the year, hours in a boat is the only way to reach civilisation. There is no land worth working on.

The local school exists only on paper; the Kosi claimed it long ago. The teacher seldom comes, thanks to the flood. Children catch fish, cut fodder or herd cattle, and pin their hopes on becoming labourers in the cities. Sometimes they are lucky to the carpet weaving industry in [illegible]

Source: Centre for Science and Environment, New Delhi



km, that in 200 years it has shifted its course by about 130 km, and so on. As satellite pictures indicate, the river, which flowed east of Purnea (in the 18th century, according to some people) has moved, through more than 12 distinct channels, to its present course, on the east of Saharsha. The root cause of such shifting of course by the Kosi is the steepness and fragility of the Himalayas where it originates: the river carries five times the sediment load of any other river in Bihar.

Now, a silent revolution is on in north Bihar. Organisations have been sprouting in every other locality against what has been independent India's solution to the waywardness of the Himalayan rivers – trying to contain them within sand-and-mud embankments on either side. For example, as the length of the embankments along the Kosi has increased, the string of activist organisations representing what is termed as "Kosi sufferers" too have grown. The people indeed "suffer" because of the Kosi; however, engineering solutions initiated by successive governments have made its lethal mood swings inevitable.

"It is like tying a snake into knots to keep it in good humour," says Dinesh Kumar Mishra, an engineer-turned-activist-researcher and convener of the Barh Mukti Abhiyan (BMA), who is in the forefront of north Bihar's campaign against man-made flood disasters and putting the blame for them on the rivers. "By building embankments on either side of a river and trying to confine it to its channel, its heavy silt and sand load is made to settle within the embanked area itself, raising the river bed and the flood water level. The embankments too are therefore raised progressively until a limit is reached when it is no longer possible to do so. The population of the surrounding areas is then at the mercy of an unstable river with a dangerous flood water level, which could any day flow over or make a disastrous breach."

At Shatwar in Mahishi block of Saharsha district, villagers Ramakanth Mukya and Rajendra Jha say that their land, though outside the Kosi's eastern embankment, has been under stagnating water for months. Manik Chandra Jha, a teacher of the local school for 30 years, said that the village was low-lying *vis-a-vis* the Kosi, and, that in addition to the eastern embankment a road had been constructed parallel to it, blocking the natural drainage into the river. Rainwater stagnates on land that was used for cultivation. So do the waters of th small streams that used to flov into the Kosi. Mosquitoes, no fish, breed in the stagnant, oxy gen-starved water.

"This is a ubiquitous sight ir north Bihar," says Mishra "Rainwater collects outside the embankments and the rise in the water level within causes seepage through the embankments to the "protected" areas. A more serious problem arises when the embankments on the main river prevent the entry of a tributary. Sluice gates are constructed, but they have to be kept closed during the rainy season, as the flood waters of the main river would otherwise force their way through the tributary into the protected areas. But closed sluice gates during the rains also mean that the tributary would submerge the protected areas. So the tributaries also have been embanked, and rain and flood water stagnates between the embankment of the main river and that of the tributary. It has to be pumped out, or people have to wait endlessly, sometimes for

Periodic changes in course mark a feature of rivers in north Bihar. The Kosi, for example, has moved westwards cumulatively by 210 km in the past 250 years, taking more than 12 distinct routes during the period. The river, which used to flow near Purnea in the 18th century, now flows east of Saharsha.

Vastralaya, the textile shop, right there on the embankment, where the wooden shelf has more of tonics and tablets and emergency medicines than clothes. The owner, Mahendra Prasad Sah, is the village "medicine man". Mahendra Prasad has a medicine for every known disease in the village and ostensibly has the licence to sell them. "The really sick (if they are lucky) go to the public health centre 12 km away by boat, paying Rs. 25 per head," he said.

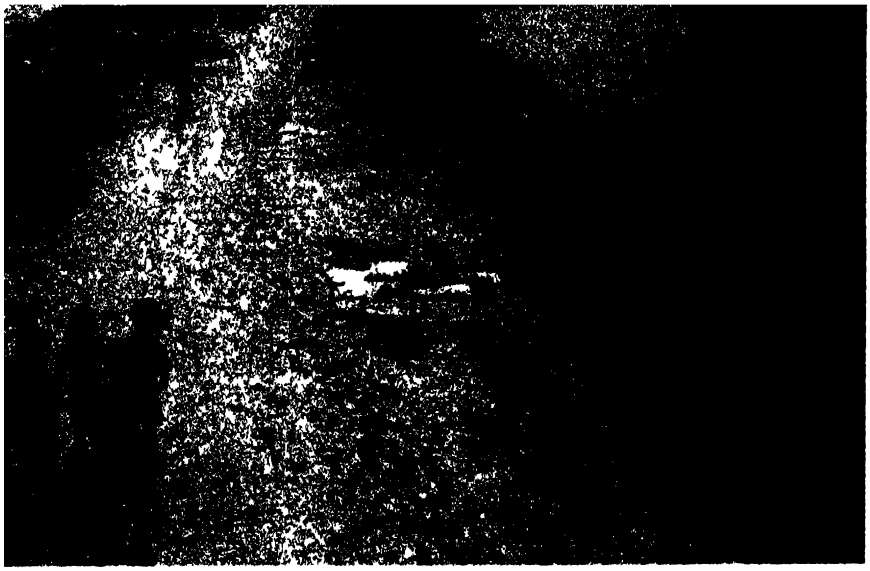
KANCHAN MAHATO

KANCHAN MAHATO

more than a year, for the water to evaporate."

The case of Ghonghepur village (see box), at the southern tip of the western Kosi embankment, is typical. According to the original plan, the embankment was to have ended 4 km upstream. However, as misfortune would have it, it was extended up to Ghonghepur. It now runs 126 km down the river, to the west, from Nepal and ends abruptly at Ghonghepur. Beyond this point the Kosi started spilling back into the village, submerging areas that were until then free from floods, according to Mishra.

Politicians and government officials came to the village again. Another embankment was constructed at right angles to the western embankment, to prevent the Kosi from entering the village. But during the next monsoon, floodwaters of the nearby Kamala river were blocked by the new 'T-spur embankment'. The village today is under water for nearly six to eight months a year, according to its residents.



At Belwara, on the eastern Kosi embankment, Vidyanand Janand, who introduced himself as a "lecturer", said that before the embankments were built the river would swell only gradually giving the people sufficient warning to move to safe places. Moreover, he said, the farmers used to welcome the annual floods, which would certainly recede after replenishing the soil with fertile silt. "Today it is hazardous to live near the embankments. Waterlogging has left valuable land unfit for cultivation. Productivity has come down drastically. Yet people live there with a false sense of security."

According to one estimate, there is permanent water-logging in over 1,82,000 ha of land outside the eastern Kosi embankment alone. The State Government claims that it had drained out water from 65,000 ha but villagers living near the embankment and activists of the BMA point out that it has been of no use because the major sluices at Basua and Belwara are as good as closed permanently, cancelling any effect of drainage.

Ever since embankment-building started on the Kosi, the other north Bihar rivers – the Gandak, the Mahananda, the Burhi Gandak, the Ghaghra, the Kamala-Balan, the Bhutahi Balan and the Bagmati, in addition to the Ganga – too have been embanked systematically, producing the same problems. The length of embankments along the Bihar rivers grew from 160 km in 1954 to 3,465 km in 1998 (at a cost of Rs.746 crores). Simultaneously, a network of roads and railway lines were built east to west, cutting across the natural drainage system in the plains where all the rivers flow from north to south. Thus, embankments that were meant to control floods have resulted in the flood-prone area in north Bihar going up from 2.5 million ha in 1952 to 6.89 million ha in 1994.

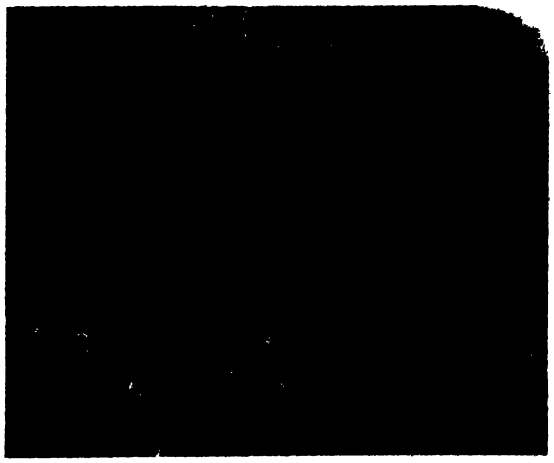
The social and environmental costs of this have been heavy. But the benefits to the well-entrenched network of politicians, engineers and contractors from the construction of embankments (and roads), the repairs to them, and the flood relief work have been enormous.

Bihar is India's most flood-prone State, with 76 per cent of the population in the north living under the recurring threat of devastation. This year monsoon floods started early in several districts of north Bihar. The very first spell of rain

(Above left) A village used to exist here. Even as the Kosi devours an area, it yields land elsewhere. (Above) Life on the Kosi's western embankment. To left is the Kosi, and to right the Kamla Balan. The rivers flow parallel to each other for a long distance and the embankment acts as a wall in between. (Left) Waiting for ferry boats on the eastern embankment of the Kosi. Floods often force them to leave their villages, but later they return.

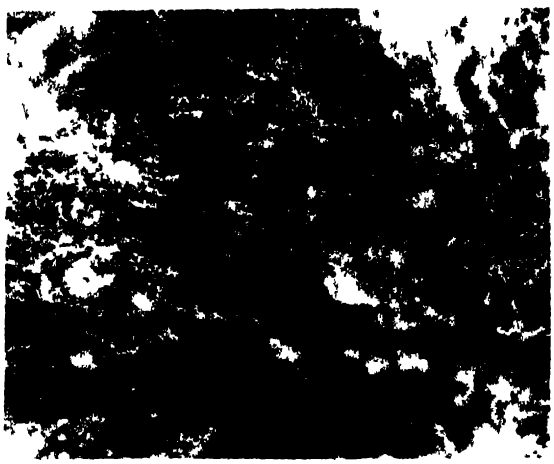
breached three embankments, flooded 550 villages in eight districts, and displaced more than a million people. At least 12 people were killed in the first week of August; by September 6, the toll mounted to 282, with all the major rivers, including the Kosi, the Bagmati, the Gandak, the Mahananda and the Ganga flowing above the danger mark and threatening to breach their embankments.

On August 5 itself, the annual ritual of shifting the blame to the Centre was performed in the Legislative Council by Chief Minister Rabri Devi and State Water Resources Minister Jagdanand Singh. Rabri Devi told the Council that it was beyond the State's means to check the annual floods. The onus, she said, was on the Centre. Replying to a special debate, Jagdanand Singh said: "It is impossible for us to save north Bihar from floods without the cooperation of Nepal. It is for the Union Government to take up this issue with that country."



The State Government skirted the issue of embankments and referred to a 50-year-old proposal to construct a high dam across the Kosi at Barahkshetra in Nepal. Such a dam has been widely projected (but rarely believed) as the true solution to the problem of floods in north Bihar. Year after year the flood-hit population has been fed on this mirage of the dam in Nepal, which would store the Kosi's monsoon deluge and release it during the summer months to help irrigation and the production of electricity.

But the Government has had no clear answers to questions about the safety of such a dam in a highly seismic zone, about the heavy siltation that could fill it too early, about the enormous quantity of water that would continue to flow down the Kosi because it has a huge catchment below the proposed dam. Nor does it say anything about the huge construction cost that would put the price of power and water from the dam above the reach of the ordinary people, or about the opposition in Nepal to such a project.



The effect of the dream is beginning to wear thin. At a meeting organised in Belwara to discuss the issue of embankments, the residents of the villages were sharply divided though many were unaware of the factors that spell disaster from the high dam: "We have been doctored into believing that when there is a lot of water, it is because the Nepal Government releases it to India. Can't Nepal take water to its own land?" one of them asked. Another said: "If the water flows naturally as it did in our villages before these embankments were built, a flood would spread slowly and affect us less. But add to these embankments a big dam in Nepal. What will happen if it bursts, as the embankments do now?"

Along all the northern rivers, breaches in the embankments, both natural and man-made, are becoming more frequent.

The State Government describes those who cut the embankments to save their own lives as "anti-social elements". Vijaya Kumar, an activist of the BMA, says: "In many villages, people are assisted in such endeavours by local government officials. Clearly, an enraged river has no respect for authority."

The curse of the Kosi

R. KRISHNAKUMAR
at Belwara

BELWARA, a small village on the eastern embankment of the Kosi, has been eroded in large stretches by the river at least 11 times in the past three decades, according to the villagers. The sluice gates that were built on the embankment, to allow the Satras Dhar, a tributary, to enter the Kosi, is now in a state of disrepair, smashed by the deluge in 1984, and clogged, as the Kosi's bed is at a higher level. The tributary is now a dead stream on a new route along the embankment, submerging areas originally protected by the eastern embankment.

When the embankment was being built in the late 1950s, villagers who lived in areas within, such as the family of Brajendra Singh, were sold on the dream of "land for land, house for house, employment for one" and "permanent salvation from floods". But the promises seldom materialised, and even if they did, the results were not as rosy as they were made out to be.

The alternative land offered was soon permanently waterlogged and thus unproductive. The construction of some houses was abandoned half-way through as the loan disbursements did not come. No employment was offered. Only a few were "rehabilitated". So Brajendra Singh has continued to live within the embankment whenever the Kosi shrunk its flow, and has no place to go when the river engulfs his land annually. "It had always been the river of sorrow for us. We cannot control it. The embankment must come down," he said.

At the time of construction, the two embankments of the Kosi had 304 villages between them and the river. In the last 40 years, the Kosi has never failed to inundate these villages and life has been quite unsettling.

Those who fought to stay immediately outside the embankments, by demanding at the time of construction that the space between the embankments be kept to a minimum, are no better off today. Satyanarayan Sahai, who lives outside the embankment on "protected land", too wants it to be dismantled. "By the end of October, the flood waters within the embankment drain out, but the so-called protected land where I live is permanently waterlogged," he explained.

Says Prabhu Narain Javad of the local Jyan Vigyan Samiti, which is spearheading a post-literacy movement in the village (the literacy rate here is 10 to 15 per cent): "We have shifted our homes 11 times from the village. There were floods during the time of our forefathers too. But the intensity was bearable. The silt that the Kosi spread on our lands was good for our crops. Now everything has changed. The embankment has spelt our doom. The river got us... for trying to control it." ■

KEDER SHARMA

The sluice gates that were built on the eastern embankment of the Kosi to let the Satras Dhar into the river, smashed by a deluge in 1984.

Social and environmental groups are joining hands to conduct awareness camps in the island villages in the Kosi heartland. There is a clamour for "the total liberation of the Kosi", "the total abrogation of the Kosi project", "letting the river have its original space right down to the Ganga". More practical suggestions include "controlled flooding through carefully managed breaches". There are really absurd ones too, such as "building embankments parallel to the existing ones".

Elsewhere, occasionally, prominent individuals like Bihar's Inspector-General of Police Ramchandra Khan catch the imagination of the people by leading villagers to the Kosi to read poetry to the river and to pray to and plead with it: "Come back to us!" Non-governmental organisations (NGOs) like the BMA have decided to move the National Human Rights Commission against the Government's neglect of more than 10 lakh "Kosi sufferers".

In the past three to four decades, the population has grown rapidly and human occupation of the flood plains of the river has reached alarming proportions. The embankments have become so well-entrenched in north Bihar's populous landscape that when there are people who welcome their dismantling (for example, people living within the Kosi embankments) there will be others who want them to continue, until the threats to their own interests end. It has become a personal issue rather than a social problem for many. Was there not the clamour for taming the Kosi in pre-Independence days? And if embankments are dismantled completely, as the demand goes, who would account for the resultant immediate havoc? Therefore, the Government and its engineers conveniently ask: what exactly is the solution, if it is not the dam in Nepal? The answers are as unclear as the idea of the dam in Nepal.

The embankments have made north Bihar's human and environmental tragedy a formidable jigsaw puzzle. There are too many pieces, too many gaps. A lot of pieces convey images of poverty and ignorance, apathy and mismanagement, corruption and fatalism, which are so characteristic of rural Bihar society. ■

This feature is based on a study tour of flood-ravaged north Bihar organised in early August by Panos South Asia for a team of South Asian journalists. The Kathmandu-based media support organisation sponsored the tour, one of a series of such tours, as part of its efforts towards enhancing information flows on water management issues in South Asia.

Remains of the day

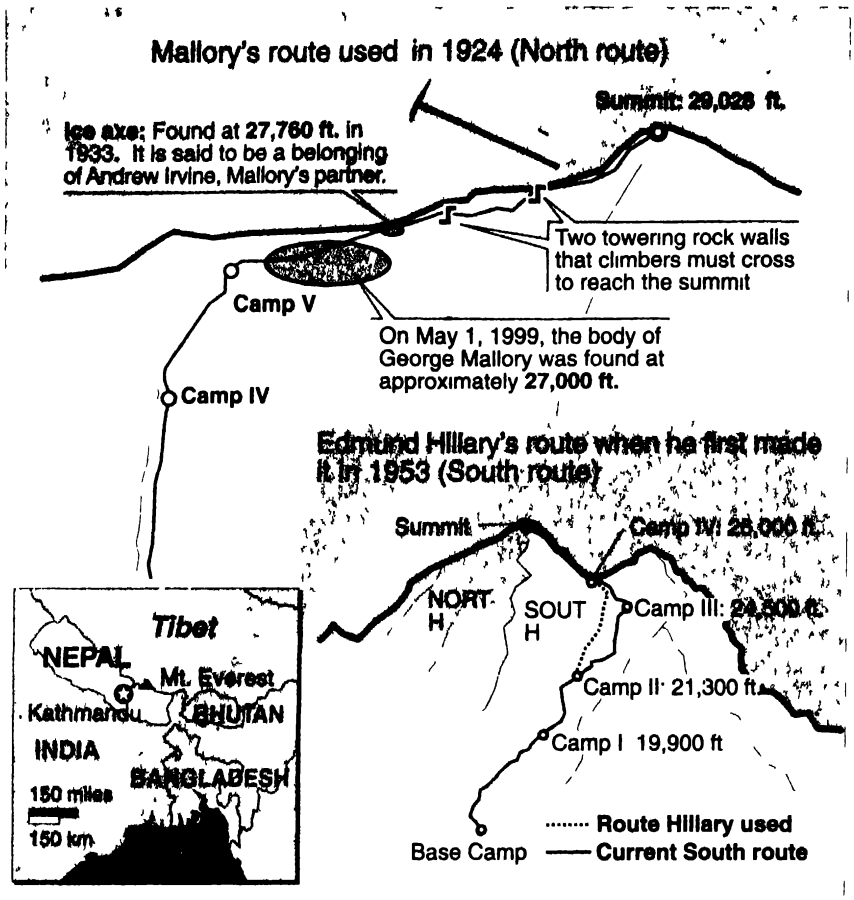
A set of recently-released photographs of the remains of George Mallory, found in an amazing state of preservation 75 years after his disappearance, adds to the mystique surrounding the legendary climber of Mount Everest.

PRAVEEN SWAMI

Of the two alternates, to turn back a third time or to die, the latter was for Mallory probably the easier. The agony of the first would be more than he as a man, as a mountaineer and as an artist, could endure.

– Francis Younghusband in *The Epic of Mount Everest*, 1926

JAKE NORTON/GAMMA



ON June 7, 1924, George Mallory sent down his last message from Camp VI on Everest to his partner Noel Odell, down at Camp V. "We'll probably start early tomorrow in order to have clear weather. It won't be too early to start looking for us either crossing the rock band or going up skyline at 8 a.m." Thereafter, no one knows what really happened to Mallory and his climbing partner Andrew Irvine before they disappeared into mountaineering legend.

The discovery of Mallory's body near the First Step on Everest in May 1999 (*Frontline*, June 18, 1999) was important not for the reason that it contributed in any meaningful way to a reappraisal of the climbing history of the majestic mountain. The fact that the body was found at the site, still roped, suggesting that Irvine fell with his partner, only affirm the case for scepticism about claims that the two could have made it to the top of the world's highest peak long before Edmund Hillary and Tenzing Norgay did so in 1953.

These accounts largely rest on the early testimony of Odell, who himself later came to question those impressions. The mass of compelling evidence that Mallory and Irvine almost certainly died far from the summit has been painstakingly recounted in Walt Unsworth's seminal book, *Everest*.

Nor was Mallory an unqualified hero. His unsavoury racism, for one, has been largely censored out of media accounts. "Never mind Everest and its unfriendly glories," he wrote to his friend David Pye after the first ever expedition to Everest, sent out in 1921 to reconnaise the route through Tibet to the mountain. "I'm tired of travelling and travellers, far countries and uncouth people, trains and ships and shimmering mausoleums, foreign ports, dark-skinned faces and a garish sun."

The remains of George Mallory, found 75 years after his death, lying near the First Step on Everest.

THE real significance of the discovery of Mallory's body, and the scraps of paper, clothing and equipment found along with it, lies in the fact that these are monuments to the sheer human courage and perseverance of early mountaineers on Everest. With little equipment and even less of scientific or anecdotal data to depend on, Edward Norton reached a confirmed 28,126 feet during a 1924 expedition, a record that stood for three decades. In the similarly unsuccessful 1922 expedition, of which Mallory was a part, George Finch and Geoffrey Bruce made it to 27,000 feet. Bruce's achievement remains the only time a climber has set a new world altitude record on his or her very first attempt.

These achievements transcend the question of whether Mallory and Irvine reached the top of Everest or not: their achievement was that they set out to do so in the face of odds that now seem impossible.

The history of Everest climbing has been organically linked with imperialism, with ugly nationalism and uglier commercialism. The climbers of expeditions conducted during the period of 1921-1924, those who died and those who survived, redeem that history.

The 1924 expedition was, as in the case of previous expeditions, not only a battle against a mountain. As observers have pointed out, the real enemy was the absence of useful data. Although this was the third successive expedition to Everest, there had been precious little progress in the matter of the climbing kit. Modern mountaineers would consider it nothing short of suicidal to attempt an ascent with such equipment.

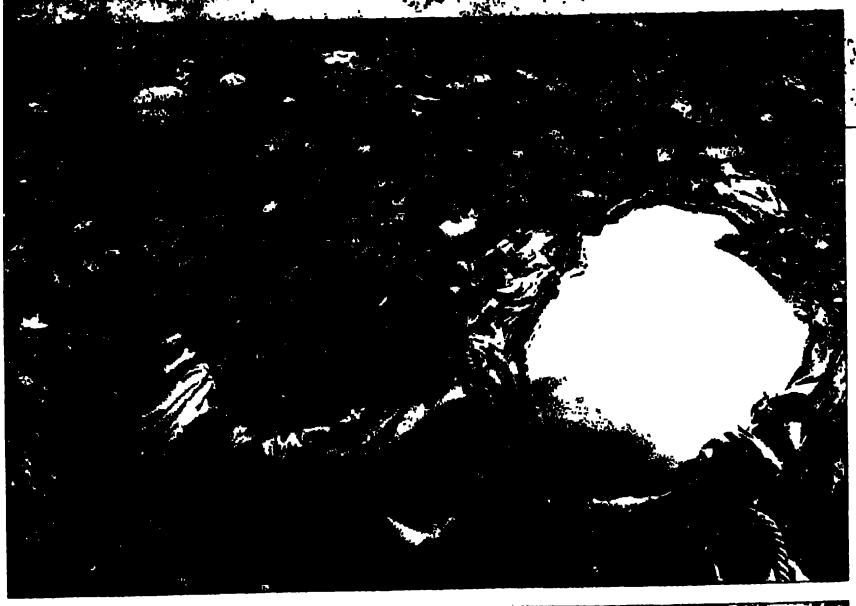
Modern expeditions have access to every form of technological support. Photographs can be put on the Internet almost instantaneously from Everest, sophisticated communication equipment allows for easy rescue, and hand-held global positioning system (GPS) equipment allows mountaineers to know precisely where they are even in the worst weather. All that Mallory had was a simple penknife and a wind-up watch. His compass had been left behind at Camp IV by accident.

Each climber on the 1924 expedition was given £50 for his climbing kit. Typically, the men wore woollen vests and drawers and thick flannel shirts and sweaters, covered by a light, flannel-lined knickerbocker suit. Gaberdine mittens covered wool gloves, and the socks were similarly improvised, offering hardly any real protection against frostbite. The sole real innovation was the use of the Burberry-manufactured Shackleton outfit, a lightweight suit made of gaberdine which helped keep the wind out but did little to conserve precious body heat.

Shoes were no different from those used for considerably less demanding Alpine climbs of a very different nature. They were of felt bound and soled with leather, with nothing but a few nails for grip. Crampons, footwear to increase grip on ice, were made of dural. Leather motor-cycling hoods designed to keep off speedy winds served as headgear, and crude motoring goggles strapped on with a simple elastic band protected climbers' eyes against snow blindness.

Interestingly, at least some climbers had more advanced ideas at the time. Australian-born Alpinist George Finch had already devised an early form of the modern insulated jacket, but such innovations were rejected, perhaps because of the mountaineering establishment's personal problems with the scientist-climber.

TUCKED away in Mallory's pockets were notes recording the quantities of food stocked at camps up Everest. The lists of regular rations are interspersed with those of delicacies: salmon, tongue, cafe au lait, and an array of sweets and cakes.



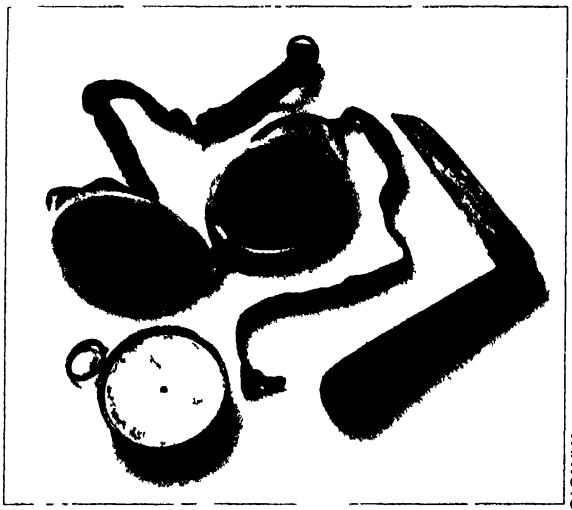
The 1921 Everest expedition, sent out to discover the route through Tibet to the mountain, suffered horribly attempting to live off the land. An unrelenting diet of yak meat, potatoes and tsampa became monotonous, and as climbers went off their food, sickness and plummeting morale rapidly followed. When the 1922 expedition went out, it was clear that a few delicacies among the diet would do no harm, a principle modern climbers understand well even as they frown at the indulgences of the grand pre-War expeditions. Meat lozenges, sweets and acid drops were supplied for climbers to suck on, soothing parched throats and tired bodies.

But, unaware of the science of what mountaineers need to eat at high altitudes and what should be avoided, planners took their stocking of delicacies to what their successors would see as absurd extremes. In 1924, sixty tins of quail in foie gras made their way to Everest, along with four dozen bottles of Montebello 1915 champagne. When E.F. Norton and Howard Somerville returned battered from an abortive summit attempt just before Mallory's fateful climb, they

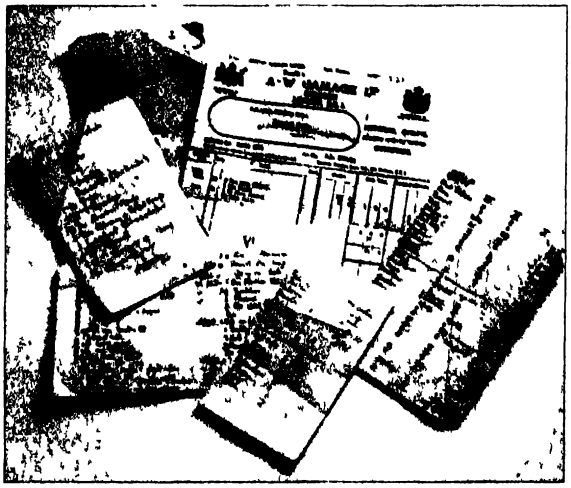
ERIC SIMONSON/GAMMA

An ice axe, of a type that was standard issue for the 1924 expedition, found beside other remains. An identical axe, found in 1933 some 250 metres below the First Step, was the earliest remnant discovered of Mallory's climb. (Left) Much of the body was little decomposed, only degraded by glacial scraping of ice and rock; the climbing shoes of the time, which were felt-bound and had leather soles with just a few nails to provide grip.

were very clear about just what they wanted. "We don't want the damned oxygen," Norton is believed to have shouted out to the support party, "We want drink."



Mallory's perfectly preserved matchbox is redolent with stories about these pioneering Everest climbs. In May 1922, when climbers first arrived at North Col, at 23,000 feet, then the highest point humans had ever reached, they discovered that it had been a terrible mistake to bring slow-burning alcohol-fuelled burners instead of the smelly but more efficient Primus stoves. Making tea was near impossible since water boiled even at tepid temperatures. And tinned food, the climbers learned, had to share their sleeping bags in order to ensure that it did not



JIM FAGIOLO/ GAMMA

Matches, meat lozenges, sweets and acid drops that were supplied to climbers, found along with the remains; (right) motoring goggles, a pen knife and a wind-up watch that formed part of Mallory's climbing kit; notes recording the quantities of food stocked at camps along the way that were found in Mallory's pockets.

JIM FAGIOLO/ GAMMA

freeze. Perhaps the matches were also used to light cigarettes, for the brilliant but unorthodox Finch had a theory that smoking made breathing easier at high altitudes.

An ice axe found in 1933 by climber Wyn Harris some 250 metres below the First Step on Everest was the earliest physical remnant discovered of Mallory's climb. Engraved with its manufacturer's name, Jos. Willisch of Taesch-Zermatt, the axe was of a model which was standard issue for the 1924 expedition. The discovery of an identical ice axe along with Mallory's body appears to suggest that the axe seen in 1933 belonged to Irvine. Both may have died close to one another, although Irvine's body has not been sighted.

ONE major mystery about Mallory's climb, and one important to the history of mountaineering, has not been settled by the recovery of his body – little decomposed but degraded by the glacial scraping of ice and rock. No oxygen cylinders appear to have been found near the body, leaving open the question whether Mallory and Irvine took oxygen cylinders with them. Mallory had earlier sent down messages saying that he would be carrying two cylinders, but there has been some debate on whether he and Irvine in fact did so.

The 1922 expedition had proved beyond dispute the benefit of carrying oxygen, but many on the 1924 climb continued to object to its use as a matter of principle. Mallory's romantic beliefs had long led him to oppose the use of oxygen in climbing mountains, on Everest or elsewhere. Irvine, despite being an oxygen expert, had said that he would rather reach the foot of Everest's final pyramid without oxygen, than the summit with it.

Odell, their partner on the 1924 expedition and the sole witness to their fateful summit assault, found several cylinder parts scattered around Camp VI. He first believed that these were just signs of Irvine's incessant mechanical tinkering, but came to doubt whether oxygen was indeed used on that day. It is also possible that some mechanical defect prevented their use.

Siebe-Gorman provided units for the expedition, but a series improvements made over the 1922 version added to the weight of the oxygen sets, accentuating anti-technology positions. More serious was the fact that when the sets arrived in Calcutta, almost all were found to be defective in terms of workmanship and material. Irvine eventually set right most of the problems, and improvised a version lighter than the equipment originally put together by Siebe-Gorman. Irvine's degree of familiarity with the sets was one reason he was chosen as Mallory's climbing partner, although he was in ill-health.

The pioneering use of oxygen in 1922 and 1924 lay the foundations for subsequent Everest ascents. Decades later, however, improvements in climbing techniques and equipment allowed the challenge of climbing at such altitudes without oxygen to become a realistic test of physical endurance and mountaineering skill. On May 8, 1978, Reinhold Messner and Peter Habeler realised Mallory's dreams by reaching the summit of Everest without artificial oxygen. Several climbers have since repeated the feat, notably Nepal's Ang Rita Sherpa (*Frontline* Cover Story, September 6, 1996) who has completed ten ascents of Everest without oxygen. ■

Of real security

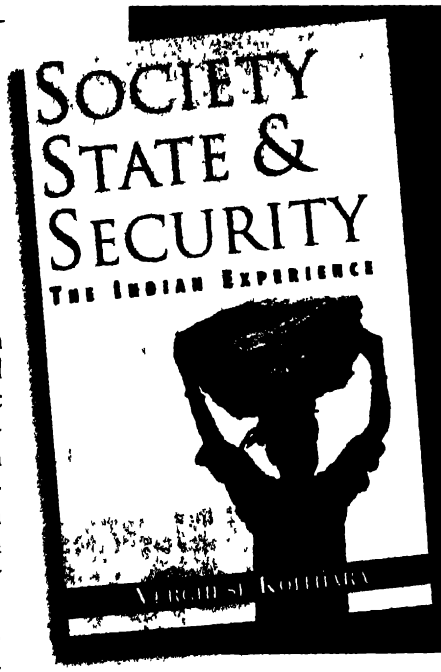
L. RAMDAS

Society, State and Security: The Indian Experience by Verghese Koithara; Sage Publications, New Delhi; pages 414, Rs. 550.

Real Swaraj will come not by acquisition of authority by a few but by the acquisition of the capacity by all to resist authority when it is abused

– Mahatma Gandhi, in *Young India*, 1925.

THESE pearls of wisdom came from the Father of the Nation almost three quarters of a century ago. It focussed on the empowerment of the people as the most important aspect of 'swaraj', or freedom. Unfortunately the state of the nation today is far removed from the vision that he had of India. Over half a century has passed since Independence and the Human Development Report 1999 brought out by the United Nations Development Programme tells it all. On the basis of the Human Development Index, India ranks 132nd among 174 countries listed in the report. Countries such as Botswana and Gabon rank above India. In short, the national leadership has failed its people. Basic needs such as drinking water, health, primary education and shelter have been continuously neglected. These and related aspects of 'human security' have been kept in sharp focus by Verghese Koithara while analysing India's national security concerns in this maiden work of his.



Having chosen an all-embracing title, it was inevitable that the author would end up saying something about everything. The master craftsman that he is, Koithara has arranged his 'collage' in an interesting and logical manner. The book comprises three distinct parts. Part I is titled "The Fifty Years, 1947-1997", Part II "The Coming Decade 2000-2010", and Part III "Security Assurance, 2000-2010". Each of these parts has six chapters and various aspects are treated under numerous sub-headings. This does at times tend to interfere with the smooth flow of the arguments being made. Perhaps the number of the sub-headings could have been reduced so that the text flowed more easily.

Matters affecting 'human security' feature throughout this monumental work. Unlike many analysts of 'national security' who neglected 'human security', Koithara feels that both these issues need to be addressed concurrently. In his view the leadership needs to take immediate corrective action in both these areas if India is to meet the aspirations of its people. Part I deals with the evolution of the modern Indian state, the social and economic changes and the management of external and internal security issues. In the opening chapter on the 'evolution of the modern Indian state', the author states: "Security has always been twinned with status in the minds of the Indian elite who have from the time of Independence harboured aspirations of the country becoming a great power." In the final piece called 'Looking Ahead' at the end of Part III, Koithara reinforces this Indian concept with yet another reference: "Jawaharlal Nehru fifty years ago had identified future great powers as the USA, USSR, China and India. The U.K., France, Germany and Japan did not feature in his list. If after fifty years the latter continue to remain ahead of India, in terms of both power and influence, there is need for introspection."

This obsession for power has not left us even today. Every conceivable trick is being played on the country's masses by eulogising 'militarism' and flexing the 'nuclear muscle' even as the core sectors concerning human security continue to be neglected. Discussing the economic performance of the country, Koithara concludes: "The gross failure in developing its human potential, through better health and education, has notably contributed to the modest economic results."

Lastly, there is an interesting chapter comparing India's achievements with those of China and Indonesia. The author gives his reasons for selecting these countries for the comparison as in his view these two came closest to the situations obtaining in India. The overall picture sketched by Koithara in the closing paragraphs of this chapter clearly brings out that although all three countries started roughly at the same levels in 1948/49, both China and Indonesia are way ahead in their achievements. Be it gross domestic product or the levels of poverty or literacy, India brings up the rear. The only area in which we seem to have a slight edge is the 'human rights spectrum', which involves protection from the state itself – *at least on paper*. It is no surprise, therefore, that we emerge as the third among the three even in matters concerning national security!

Part II is an attempt by the author to play the 'futurologist'. It is a well-rea-

Matters affecting 'human security' feature throughout this work. Unlike many analysts of 'national security' who neglected 'human security', Koithara feels that both these issues need to be addressed concurrently.

soned analysis of the likely trajectories most countries and regions are expected to follow in the coming decade. In the chapter on the 'emerging international system', Koithara sketches the future stance and posture of the main players as he sees it – the United States, the North Atlantic Treaty Organisation, the European Union, China, Russia, Japan, South Asia, South Asia Periphery, and Islam! It would appear very odd to most readers that a discussion on Islam has been included in this section. The author has justified its inclusion by mentioning that it is the only politico-religious multinational grouping wielding considerable influence on the world scene today. One can also sense the impact of Huntingon's work *The Clash of Civilizations and Remaking of the World Order* in Koithara's examination of the "global power matrix" in this section. It is a very interesting analysis of a question which may in the author's view have far-reaching implications for India in the coming decade.

In the chapters concerning 'latent dangers and manifest threats', there is a detailed examination of the latent dangers in terms of an enfeebled people, society, economic and technological mismanagement and environmental degradation. The analysis of manifest threats includes an examination of the Chinese and Pakistani threats, as also the maritime and nuclear threats. The author concludes that there is very little if any chance of either China or Pakistan starting a full blown war with India in the coming decade. Pakistan may, however, continue with its low intensity engagement if the outstanding disputes are not settled by then.

In the discussions on weapons of mass destruction, the author subscribes to the traditional view that nuclear weapons have both a political and a military role.

IN the discussions on weapons of mass destruction, Koithara subscribes to the traditional view that nuclear weapons have both a political and a military role. He has also highlighted the new twist given by the U.S. of downplaying the role of nuclear weapons and favouring the use of sub-nuclear high technologies.

While the author comes through in some parts as a proponent and supporter of nuclear weapons and their political and military usefulness, he does accept the fact that "the decision to find military usefulness in nuclear weapons against Pakistan and China has clearly created problems" – an understatement if ever there was one! He concludes Part II thus: "In the foreseeable future there is no conceivable cause for China or Pakistan to start a conventional, much less a nuclear, war against India." It would have been appropriate if the author had also analysed in this section the possibilities of India – under a given set of circumstances – starting a conventional or nuclear war with either of these two adversaries in the same time-frame.

Part III concerns itself with chalking out a strategy for security assurance in the coming decade. I would like to call this the 'foundation and stabilising strategy', because that is what it is. It consists of empowering people, good governance, resource mobilisation, force structure and force architecture. This section also includes a discussion of the role of nuclear weapons, the defence industry and security management. Most of the subjects treated here have featured in some form or the other in the earlier parts and therefore seem to fall into place easily. It contains a series of recommendations stating "what needs to be done" in the various sectors mentioned. Unfortunately the "how" part seems to elude us. This is an infirmity in an otherwise outstanding analytical work. Indians are past masters at making rules and regulations, laws, agreements, reports, commissions of inquiry, speeches, advice. In short, we are genuine 'paper tigers'. Never short of ideas but apathetic and too heavily bureaucratised to implement anything. Is there something that we can do to correct this? Maybe Koithara has already a title for his next book.

On the whole this is a masterly work, duly supported by references and statistics. It is a courageous, powerful and an in-depth analysis of a very complex subject. It is incisive and informative. Reading it, one feels the impact of an economist, scholar, political analyst and sailor – all of which Vice-Admiral Verghese Koithara represents in abundant measure. A must for every library and all those interested in South Asian affairs in general and India in particular. ■

Admiral L. Ramdas (retired) is a former Chief of the Naval Staff.

C. T. KURIEN

The Dynamics of South Asia – Regional Cooperation and SAARC by Eric Gonsalves and Nancy Jetly (Eds); Sage, New Delhi, 1999; pages 277, Rs. 375.

EVEN as the two large countries of South Asia recover from the effects of a war-like encounter, it is good to recall that they, along with five other countries of the region, are members of a formal association for cooperation – the South Asian Association for Regional Cooperation (SAARC). Formed in 1985, it is almost a decade and a half old. According to one of the authors who have contributed to the collection of essays that is under review, "SAARC is... a manifestation of the determination of the peoples of South Asia to cooperate regionally, to work together towards finding solutions to their common problems in a spirit of friendship, trust and understanding, and to create an order based on mutual respect, equity and shared benefits." The volume, consisting of 13 contributed papers and an introduction, is based on papers specifically prepared in connection with the 10th anniversary of SAARC.

Organisations for regional cooperation seem to be flourishing in spite of rapidly spreading globalisation. In Asia the most prestigious among them is the Association of South East Asian Nations (ASEAN). It is not just an Asian phenomenon either. The United States, Canada and Mexico have formed the North American Free Trade Area (NAFTA). The European Union (E.U.) is another example. These organisations are not all alike. But economic cooperation is of primary concern to all of them.

When SAARC was formally launched in 1985, after nearly five years of preliminary discussions and negotiations in which Bangladesh played a prominent role, its seven constituents – India, Pakistan, Bangladesh, Bhutan, the Maldives, Nepal and Sri Lanka – agreed to take up nine fields of nation-building activities for cooperation. Subsequently three fields were added to the list. The 12 areas thus chosen were agriculture; rural development; meteorology; telecommunications; postal services; transport; science and technology; health and population; sports; arts and

Conflict or cooperation?

culture; prevention of drug trafficking; women in development; and education. However, while inter-country cooperation was being sought, the approach was cautious. Vital economic areas such as trade, industry, manufacture and finance did not figure in the agenda initially. There were reasons for this. The first was the economic similarities of the members, especially the big three among them. Trade among the members has been extremely low, constituting around 3 per cent of world trade, compared to 16 per cent among the member-countries of ASEAN. The second reason was the dominant position of India, which accounted for 75 per cent of both the population and the gross national product (GNP) of the region, 54 per cent of its exports and 53 per cent of its trade. Apart from the economic strength of India, other countries have tended to view India and Indian "designs" with suspicion. Thus, while India is eager to keep the region free from the influence of outside powers, the smaller countries fear Indian domination and are, therefore, not totally opposed to the involvement in the region of other powers. And, of course, there is the long-standing hostility between India and Pakistan.

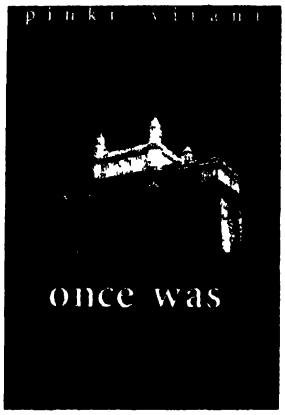
Under such conditions, it is indeed satisfying that the seven countries have not only come together for cooperation but continued to meet regularly and that the areas of cooperation have enlarged. Of late, these have included trade agreements as well. Under the SAARC Preferential Trading Agreement (SAPTA), India has agreed to show special concessions to other members, especially the small ones.

The volume under review makes a critical assessment of the working of SAARC during the first decade. It is pointed out that SAARC must be viewed not as an objective that has been achieved but as an ongoing process. Its basis is the deep-seated poverty, rapid growth of population, high levels of unemployment and unsatisfactory human development of the region on the one hand and, on the other, the conviction that unless poor countries cooperate among themselves they will not be able to make progress in a world dominated by the rich and the powerful. But while these economic considerations are conducive to cooperation, there are political, ethnic and military factors that tilt towards conflictual relations. The dynamics of South Asia and of SAARC arise from these opposing tendencies. It must be remembered that each member of SAARC has its own share of internal tensions and conflicts. The region, therefore, is one characterised by a sense of insecurity, internal and intra-regional.

The volume under review makes a critical assessment of the working of SAARC during the first decade. It is pointed out that SAARC must be viewed not as an objective that has been achieved but as an ongoing process.

Viewed against this background, the achievements of SAARC have been quite substantial. Several programmes of inter-country cooperation became a reality almost immediately after the inception of SAARC – the Audio-Visual Exchange Programme, the Documentation Centre, the Scheme for Promotion of Organised Tourism, the Youth Volunteers Programme, the Scholarship Programme, to mention some of the more prominent ones. Several SAARC institutions have also been set up, the Agricultural Information Centre in Dhaka; the Tuberculosis Centre in Kathmandu; the Documentation Centre in New Delhi; the Meteorological Research Centre in Dhaka. Further, a Food Security Reserve for the region has been set up. A Regional Convention on Suppression of Terrorism has been ratified as also a convention on Narcotic Drugs and Psychotropic substances. Modalities of cooperation by non-governmental organisations have been worked out. A proposal, "SAARC 2000: A Basic Needs Perspective" to promote national development activity through long-term action-oriented schemes, has also been accepted.

With the SAPTA agreed upon in 1995 and coming into force subsequently, SAARC has come to have a new dimension. Under the Agreement, India offered to other members soft custom duty rates on 106 items, Pakistan 35, Sri Lanka 31, the Maldives 17, Nepal 14, Bangladesh 12 and Bhutan seven. It may be claimed that SAARC has begun to take seriously the function of economic cooperation. It is to be hoped that SAPTA will lead not only to a diversion of trade but also to the creation of trade and an increase in production and employment in the region.



An important question considered in the volume is whether SAARC should deal with bilateral issues. At present bilateral and contentious issues are excluded from the deliberations of SAARC, and there is a provision that the decisions arrived at must be unanimous. In view of the prevailing suspicions and hostilities among the members, this is understandable. At the same time, SAARC, especially its summit meetings, provide an opportunity for the leaders of member-countries to meet and hold informal discussions on contentious issues and even bilateral ones. SAARC, therefore, works as a confidence-building and moderating agency. If this aspect can be strengthened, there is hope that conflicts can be reduced and cooperation strengthened in the region. Better understanding of the problems and positions of neighbouring countries by citizens of the member-nations is important in this regard. The volume makes a useful contribution in that direction. ■

From Bombay to Mumbai

PRAVEEN SWAMI

Once Was Bombay by Pinki Virani; Penguin Books India, 1999; xix + 284 pages; Rs.350.

PINKI VIRANI'S intensely personal account of the collapse of a city rests on the notion of a paradise lost, the giving way of cosmopolitan, secular and modern Bombay to a criminalised sprawl of urban waste, Mumbai. Its cast is diverse: the aging Mazagon glass merchant Babliseth, unable to come to terms with the transfigured Mumbai of the 1990s; the angry mafioso, Pakya; Chhaggan Bhujbal, the Shiv Sena apparatchik-turned secular politician; the rich and famous of the film industry.

Yet, there is a hole in the middle the story, one that says not a little about why the city's curious form of upper class liberalism collapsed in the face of Hindu fundamentalist assault.

Builder Manish Shah forms the first block in Pinki Virani's story of Bombay's degeneration into Mumbai. Manish Shah, freshly returned from the United States, attempts to play the Mumbai construction world by the legal rules of engagement. He refuses to cave in to extortion demands from the underworld and pays the inevitable price. His death and that of his company, Dhruva Builders, is the medium through which the author introduces us to the world of Arun Gawli and Dawood Ibrahim and of organised crime and the Mumbai Police. There is a passing reference to the landscape which propelled the rise of organised crime, the collapse of the economic powerhouses which built modern Mumbai and its mills. "The young sons of these mill workers," the author concedes, "took to the streets, not willing to go back to their villages in Maharashtra, Madhya (Pradesh) or Uttar Pradesh, uneducated and filled with resentment; a fertile breeding ground for crime and future footmen for unscrupulous politicians."

But there is no sense anywhere in the book that the reason these young people could not return to their villages was the persistence of the very poverty that drove them to Mumbai, or that they could no more be expected to "go home" than its middle class inhabitants. We find no reference at all to the theory that the murder of the mills was a project executed with the endorsement of Mumbai's rich, and that criminality and extortion directed at the city's poor is ignored, if not approved, by its elite.

Manish Shah's death leads us to the story of Babliseth, who struggles to cope with both his daughters and a changing world. Babliseth's story is among the finest, exploring a world that is recognisably not the one he spent a lifetime inhabiting. The rise of the Shiv Sena expresses itself in Babliseth's everyday life. After the 1992 riots, clients refuse to pay their dues; this aggression disappears after the retaliatory serial bombings of 1993. Babliseth finally heeds the demands of his daughters and moves out of decaying Mazagon to the suburbs.

But the world of the suburbs is a world Mumbai's poor cannot escape into: they live in slums, as the city's rich secede from the real world into high-rise apartments. Their story is censored out of Pinki Virani's Mumbai, where they instead become the problem.

We are informed that 41,000 slum homes "hold to ransom 59,00,000 of Bombay's commuters on the suburban lines". "New local trains," Pinki Virani says, "cannot be introduced because the old ones are choking track capacity because 'poor people' cannot be moved from the tracks.... and the women must look away from the seats in the compartments meant for them and hold their collective breath because early every morning the track-livers get on to the parked train and shit all over the women's seats."

Even leaving aside the hyper-real elements, Pinki Virani's account is offensive: Mumbai's poor exist and stay poor because the middle class she valorises needs them to serve as underpaid servants and workers, who have among the lowest standards of living in the world despite apparently high cash wages. Bhujbal, approvingly cited through the book, provides the political framework for such attacks on the poor. He complains bitterly that "several public personalities have been going to the court, as have the slum dwellers themselves", to prevent demolitions. "Too much kindness," Bhujbal asserts, "can also kill a city."

Too much kindness to whom and by whom? Mumbai's urban poor, who face infant mortality rates that compare with 19th century London, non-existent access to clean water and sanitation and abysmal absence of educational facilities, reflect by no stretch of the imagination the supposed generosity of Mumbai's elite. Rather, the relationships between the growth of urban poverty and the interests of the middle class, in whom Pinki Virani vests so much hope, are organic.

In her preface to *Once Was Bombay*, the author puts her political convictions up front. Her world is that inhabited by "us, the middle class", who brought to Mumbai "with our behaviour the inherent decency of a Madras and the day-to-day intellectualism of a Calcutta". The failures of this class to confront communalism and corruption, in her narrative, have led to Mumbai's degeneration.

Sadly for this class, "the vote of the literate among the middle class can only be equivalent to that of the illiterate". Nonetheless, Pinki Virani calls on it to engage in the political process to bring to power leaders who are "city-born and middle class", rather than "small-town hicks who go berserk at the first sight of power and glamour, not feudalists and rapists, murderers, rioteers (sic.), extortionists and chain-snatchers".

This curious loathing for the world outside the genteel confines of middle class Mumbai raises more than a few questions: feudals and rapists, along with murderers and rioters, are not virus-like impositions on the city that are swept in by wind and water. The book only serves to illustrate the sundering of Mumbai's middle class from its working poor. Those workers, while the mills survived, battled the Shiv Sena's elite-sponsored communalism and anti-poor agenda.

Mumbai's secularism cannot be protected by its rich. If middle class liberals indeed wish to beat back the assault of the Hindu Right, severing an anti-communal agenda from the economic empowerment of the city's poor is the worst possible way to begin. ■

The rapids of modern life

BARBARA EHRENREICH

Faster: The Acceleration of Just About Everything by James Gleick; Pantheon Books, New York, 1999; pages 324, $24.

YOU don't have time to read the book so you read the review. If you're a publishing honcho, you probably don't even have time to read the review; you pay some underling to skim it for quotable adjectives and phrases to insert in the ad copy. So let's save all these busy people a few minutes of their precious time and cut straight to the useful stuff: James Gleick's *Faster The Acceleration of Just About Everything* is nimble, smart, often funny, and – best of all – fast. Imagine a lite, carbonated, caffeine-containing beverage with just a slightly tart edge, suitable for imbibing while Stairmastering, faxing or otherwise multi-tasking your way through the day's to-do list.

Gleick, the author of *Chaos* and a biography of Richard Feynman, has stuffed his new book with tasty factoids about our fast, fast times. He reveals, for example, that those "close door" buttons in elevators are often just placebos, with no other function than to make us feel we have speeded up our trip. When we call 411 and ask for "Uh, Domino's", a computer edits out the "uh" so it won't waste some operator's time. It turns out that the Old English "spede", as in "God-spede", originally meant good fortune. And here is the ultimate in fast food: there's a restaurant in Tokyo that charges by the minute, not the amount consumed, and at lunchtime people actually wait in line to get in.

BUT we are not just talking sound bites here. *Faster* reverberates with huge, weighty questions, such as whether we are doomed to run up against a biological speed limit set by our sluggish old carbon-based bodies and brains. We get jet lag when we travel too far too fast, carpal tunnel syndrome when we type too much. You cannot make compost in a week or use a microwave to hurry a soufflé along, and, for the same sorts of reasons, no one has figured out how to sleep fast. Another mega-question has to do with what kind of monstrous new "organism" (my metaphor, not Gleick's) we are inadvertently creating as we all get interconnected through our high-speed communications technologies. It is kind of thrilling to get a fax from Hong Kong at the same time that a call comes in from London and a few gigabytes of data arrive by modem. We are social animals, or, as Gleick says, "We like the connectedness." It induces a pleasant giddiness, a feeling of "mania", he suggests. But weird things happen as the speed and number of connections increase. "In the day-trading rooms," he writes, "hair-trigger connectivity turns momentary whims into mob obsessions." In our news media too, "the multiplication of information pathways leads to positive feedback effects in the nature of frenzies." We glom on to Diana or O.J. or John Jr. like a lemming herd in full stampede. Against all expectations, the collective brain that emerges from our ever-richer connectedness is turning out to be kind of dumb.

So are we getting smarter or just more out of control? Expect no answers from *Faster*; there isn't time for them. In fact, you don't have to be a slacker to get the feeling of being a bit jerked around, starting with the first two sentences: "You are in the Directorate of Time. Naturally you are running late." Well, why "naturally"? I have time to read a book, don't I?

But pretty soon you are wondering what this visit to the home of the Defence Department's "Master Clock" has to do with our speedy way of life anyway, other than the author's conceit that we're "running late". You do not need to know about nanoseconds to be overextended; and, for most of us, it takes a certain amount of leisure to care about quasar clocks.

In another confusing juxtaposition, Gleick's riff on the development of high-speed photography in the 1870s, using race horses as models, leads to the observation that "only in an age of speed could we stop time". But horses have not sped up significantly in centuries, and you do not have to be a speed freak to want to deconstruct the equine gait.

Nor does Gleick let himself get slowed down by any of the sticky patches that have arisen on the autobahn of modern life. He acknowledges that some things are not accelerating at all, such as cars in traffic. Or try to get a question answered by Microsoft or Citibank: all those technologically sophisticated telephone menus and queues may be money savers for the corporation, but they are time sinks for the rest of us. It would have helped if Gleick had paused, even for a millisecond, to consider the commercial forces determining how fast things go. If the customers' needs came first, banks would clear our checks in seconds instead of days or weeks. And if mass transit were profitable, everyone would zip to work at warp speed and probably gain an hour's sleep.

So is it a good thing – this multiple-interfacing, hyper-wired, globalised, caffeine-driven, profit-maximising, millions-of-bits-per-second whatever that we are caught up in? Over all, Gleick thinks yes, though this means gliding right past questions like what has become of our attention spans or whether we are really better off with 500 channels of incoming information if they are all about Monica.

The only truculent note in the book is his attack on the Harvard economist Juliet Schor, whose 1992 book, *The Overworked American*, suggested that much of this giddy busyness is not freely chosen but imposed by employers, and that it takes a real toll on our health and families. Citing a University of Maryland study that found we are working shorter hours than ever, Gleick argues that much of the sense of frantic busyness comes from tempting new pastimes, like computer games, workouts and gambling. And he rejects, on apparently ideological grounds, any view of "workers as victims – victims of something big and systemic and inhuman". Yet intentionally or not he gives us that impression himself, when he tells us that Americans are increasingly sleep-deprived – or is that just another enjoyable part of the continuing "mania"?

Implicitly, though, *Faster* contains a darker judgment. What we lose, as "just about everything" accelerates, is the chance to reflect, to analyse and, ultimately, to come up with moral judgments. Unfortunately, deep concentrated thought is not as fast as an electron tunneling through silicon or even a nerve impulse ambling down an axon. Like composting, it takes time – for the patterns of neural firing to shift, connect and interact to form whole new patterns in our minds. Try to shorten that time and you move very quickly from diverting to distracted, from clever to glib. Faster is fun, but slower might have got us a whole lot further along. ■

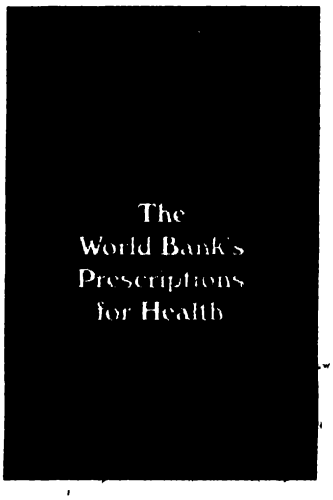
New York Times Service

World Bank and healthcare

T. K. RAJALAKSHMI

Disinvesting in Health: The World Bank's Prescriptions for Health, edited by Mohan Rao; Sage Publications, July 1999; Rs. 345 (cloth), Rs. 225 (paperback).

EMPIRICAL evidence has always challenged the technological determinism and methodological individualism that are characteristic of the behavioural approach to public health, states the introduction to this enlightening compendium of papers that were presented at a seminar in 1994. The proceedings of the seminar, organised by the Centre for Social Medicine and Community Health, Jawaharlal Nehru University (JNU), metamorphosed into a book this year. Despite the time-lag, the book is no less relevant today, since the issues still remain the same.



Putting public health in a new perspective, the authors say that the World Health Organisation-United Nations Children Fund (WHO-UNICEF) initiative on "Health for All through Primary Health Care" at Alma Ata has been watered down and replaced by the rallying cry of globalisation, marketisation and privatisation. It is in this evolving context, especially in view of the changes in India's economic policy, that 14 of the experts who participated in the seminar analysed the World Bank's World Development Report (WDR) 1993, titled "Investing in health and its implications for public health" as well as the very definition of what construed public health. The papers presented by them are undoubtedly the first, albeit tentative, in-depth analyses and academic critique from India of the World Bank's perspective on health.

The WDR prescribes what public and community health experts have always objected to – the magic bullet approach to health. It overemphasises the curative aspects of healthcare so as to leave healthcare to the discretion of the private sector while governments are advised to concentrate on certain essential clinical services. In his paper titled "The Political Economy of Structural Adjustment", Prabhat Patnaik argues that it is not just the ideology of liberalisation that has become important; he says there is an actual drive, most notably in underdeveloped countries, to "privatise", "liberalise", and "roll back" the state from the productive arena and to curtail social expenditure. He details the methodological flaws inherent in the WDR's prescription for health. According to him, the basic reduction in the range of services available to the people is sought to be camouflaged by a dubious "scientism", the limitations of which are obvious. He says that the health plan, which seems to be attractive at first sight (for example, using all the money to prevent infant mortality), is an effort to make the structural adjustment package, often criticised on the grounds of its adverse effects on health and other social sectors, appear palatable.

Niraja Gopal Jayal from the Centre for Political Studies, JNU, posits in her paper "The Gentle Leviathan: Welfare and the Indian State" that the moral aspect has been absent in the the neo-liberal critique of the Indian "welfare" state. She says that there has always been a disjunction between the concepts of welfare and rights of the nation. According to her, the poverty-alleviating strategies are essentially negative in character. Besides, the retreat of the government from the welfare sector has meant not so much a turn to the market as to non-governmental organisations. The shift, she points out, is evident in the differences in the language used in the Second Five-Year Plan and the Eighth Five-Year Plan. While the Second Five-Year Plan held that the state had to take on "heavy responsibilities as the principal agency speaking for and acting on behalf of the community as a whole", the Approach Paper to the Eighth Plan candidly admits that the objectives of providing primary education, preventive and curative healthcare and food security cannot be left entirely to state-sponsored organisations. That little has changed in the Ninth Five-Year Plan is probably an indicator that the shift has been more or less legitimised. According to her, even the very limited welfare orientation of the state stands to be challenged by the World Bank, the International Monetary Fund (IMF) and the technocratic developmentalists and marketisation enthusiasts. These forces do not question the morality of welfarism but the factual efficiency and efficacy of these welfarist institutions.

Imrana Qadeer from the Centre for Social Medicine and Community Health (CSMCH), JNU, in her paper titled "WDR 1993: The Brave New World of Primary Healthcare", states that even cost-effective, state-run public health programmes are sought to be undermined by WDR 1993. The possibility of expanding the scope of basic health services was being denied under the innocuous title of "essential" public health and clinical services. While population control and AIDS (Acquired Immune Deficiency Syndrome) control occupy key positions under essential services, other than the control of tuberculosis, no mention is made of existing communicable diseases, the much recognised coordinates of malnutrition. The classical definition of public health incorporates the combined practice of promotive, preventive, curative and rehabilitative services. Used judiciously, these various levels provide the basis for public health programmes. But the WDR ignores these tenets to divorce curative services from public health by setting them apart as "essential clinical" services.

Imrana Qadeer critises the WDR for its attempts to "educate" poor households to cope with poverty by building capacities to use existing services and redistribute household budgets in favour of the vulnerable. This, she remarks, is to say that with rising macro-economic pressures, solutions are provided by changing the micro-environment of the household.

Nata Duvvury, who has studied the tobacco industry, presents several plausible and hypothetical implications of the WDR's prescriptions for women. In her paper titled "Gender Implications

of New Economic Policies", she looks at agricultural reforms and what they could mean for women employed in the agriculture sector. She predicts that with increased emphasis on export earnings, there is a strong likelihood of the cropping pattern changing in favour of export crops. Increases in cash crop prices will put pressure on women to increase their labour contribution; this, however, will not necessarily lead to greater control of incomes, thus resulting in a negative human resource impact, she argues.

Mohan Rao from the CSMCH, JNU, in his paper titled "SAP (Structural Adjustment Policies) and WDR 1993: Implications for Family Planning in India", argues that the solution to family planning does not lie in contraceptive technology but in attempts to deal with the problems of ill-health and disease, the heavy load of infant mortality, the lack of changes in the structures of employment, the pervasive lack of health and educational facilities and so on. He says that, these are the very factors that have been adversely affected by the SAP in other countries: he quotes from studies to show how the SAP has affected health and nutrition in countries such as Chile, Peru, Brazil and Ghana. He says that in India, with the exception of Andhra Pradesh and West Bengal, the rate of decline of infant mortality has decelerated since the onset of the SAP. The chapter offers a rich historical insight into the changing definition of family planning programmes, including its most recent *avatar* – that of hormonal contraceptives – and situates the WDR's concerns for family planning services as being a part of a "minimum clinical package", in the larger context.

A.K. Shiva Kumar, a consultant with the UNICEF, in his paper titled "The Formulation of India's Health Policy: A Note on Equity", argues that if the healthcare facilities are left to the private sectors, where the ability to pay and profitability strongly influence investment decisions, one cannot expect equal facilities to develop all over the country. He cites the extraordinary urban bias, which suggests that political and other considerations dominate simple equity considerations.

K. Seeta Prabhu from the Department of Economics, Mumbai University, points out, among other things, the glaring inequalities in health expenditure which, she states, is a consequence of extreme income inequalities. According to her, the former is even higher than the differences in consumption expenditure. She says that since the mid-1980s, many Indian States have reduced the share of the health sector in total revenue expenditure, which in turn is bound to undermine the role of the public sector in providing health services.

Rama V. Baru, also from the CSMCH, JNU, in her paper, gives an inter-State analysis of the structure and utilisation of health services. She says that in most States, government hospitals are the major providers of health services. Stagnation in the growth of public expenditure has, however, led to the growth of institutions in the private sector. Baru says that despite the WDR and a confidential country report of the World Bank prescribing a user fee in public institutions as well as a cutback on curative service expenditure by the state, in most States, it is the public sector which provides curative services.

Amit Sen Gupta, who is with the Delhi Science Forum, criticises WDR 1993 for its paternalistic attitude towards the development of indigenous pharmaceuticals by developing countries. He says the foreign companies have never brought in new technology and will not do so in the future. According to Sen Gupta, the New Drug Policy announced in September 1994 was a result of the demands of the pharmaceutical industry and pressures from the World Bank for lesser controls. His paper "Infrastructure Development in Health Care and the Pharmaceutical Industry", critically analyses the Drug Policy, besides tracing the demands of multinationals since the early 1980s for decreased controls.

K.R. Nayar, from the CSMCH, JNU, in his paper discusses the consequences of globalisation on environmental health owing to not only "garbage imperialism" and consumerism, but also overall shifts in resource utilisation.

Arti Sawhney, a doctor-cum-activist, outlines the Women's Development Programme in Rajasthan as well as the role played by *saathins* as health workers, among other things.

Other valuable contributors include the late T.N. Krishnan, former Director, Centre for Development Studies, Thiruvananthapuram; N.H. Antia, founder-director of the Foundation for Research in Community Health, Mumbai; and K.V. Narayana of the Centre for Economic and Social Studies, Hyderabad. For the discerning reader, "Disinvesting in Health" is a window to a new world order. ■

Signpost 2: Issues that Matter

The Kargil War

CHRONICLE OF A WAR FORETOLD

by Praveen Swami

In the summer of 1999, India fought off the Pakistani intrusion in Kargil. However, the end of the war does not mean the beginning of peace for people on either side of the border. Indeed, the war is just one phase of a predictable escalation of tensions after the Pokhran nuclear tests of May 1998.

- How did the Kargil war come about?
- Were warnings of a conflict ignored?
- Was the war an unqualified military triumph?
- Was Prime Minister Vajpayee 'betrayed' by Pakistan, or was he in fact blind to ground realities?
- What are the connections between the Pokhran nuclear tests and the war?
- How was the U S brought in as a mediator in the conflict?
- Did the BJP-led government succeed in bringing peace to Jammu and Kashmir?
- What political consequences will violence in Jammu and Kashmir have for the rest of India?
- What were Pakistan's objectives in sparking off the war in Kargil — and has it really failed?

Praveen Swami of *Frontline* magazine, who reported on the Kargil war, unearths vital data and draws on several years of experience of covering Jammu and Kashmir to answer these questions.

Of development and deprivation

The struggle against the Sardar Sarovar Dam has brought into focus the perils of a growth path that means only deprivation for the toiling millions.

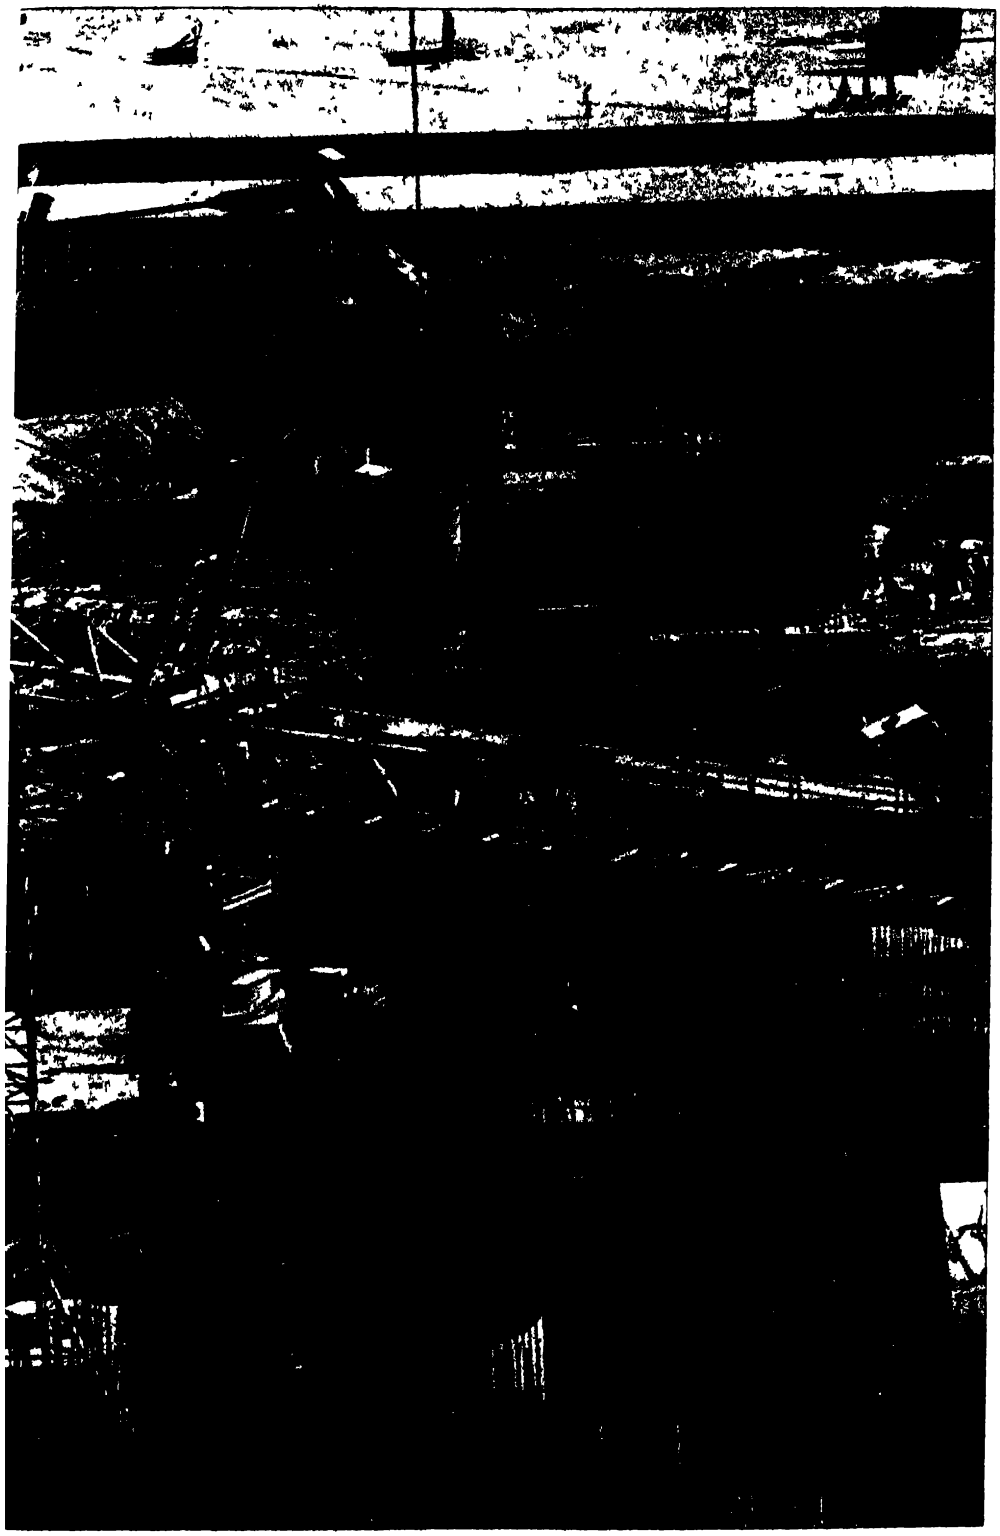
H.M. DESARDA

ON the threshold of the 21st century, humankind stands at a crossroads. The 20th century has been the most violent century in human history. Undoubtedly, the two World Wars saw the most ghastly and heinous kind of violence and genocide, but no less serious is the violence against nature and the other living species that has been driven by unbridled consumerism and production to propitiate creature comforts.

The hallmark of the present century is the phenomenal technological advance in the realm of commodity production and in the transport and communication sectors and services. The dominant ideology of the past 50 years can be summed up thus: growth, unlimited. By and large it is a creed of undifferentiated and undirected growth. The fierce and fervent intellectual, ideological and pedagogical debate through this century was not about the content and character of growth. It was driven by a desire for a humane way of organising society, economy and the polity. But, somewhere along the way, growth became the sacred cow, the unquestionable goal. Growth *per se* was development.

In less than 50 years, this growthmania has pushed the world to the brink of disaster. As resources deplete at an alarming rate, the ecological toll has become very heavy and is exceeding all limits. Indeed, the security of the planet and its people is seriously threatened by the global forces of growth.

In less than 50 years, growthmania has pushed the world to the brink of disaster. As resources deplete at an alarming rate, the ecological toll has become very heavy and is exceeding all limits.



The ruling elite in the Third World argue vehemently that ecological considerations should not be entertained in the pursuit of growth. The "grow as fast as you can" model of modern Western industrialism is pursued in the name of national development. The global growth experience is replete with examples of stupendous cost and the consequences of consumerist growthmanship, and yet our ruling elite is blatantly aping the resource squandering growth path. Mega-irrigation and power projects form the kingpin of this strategy.

Water and energy are undeniably the primary prerequisites of human development, but it is erroneous to equate them with mega-projects. Age-old and time-tested sources of energy and methods of tapping them are replaced by centralised grids (for electricity) and large reservoirs (for water). Mighty power grids purvey energy over huge distances. This is precisely what we have been doing in the past 50 years in the name of planning for national development *a la* Jawaharlal Nehru. The irrigation network and the power grid have been enough to creed to satiate consumerist greed.

Regrettably, the pattern of growth that we have had has not helped usher in an egalitarian social order. According to Mahatma Gandhi, the objective of the freedom struggle was "to wipe every tear from every eye." The question after 50 years is: how far has India succeeded in this task? By any reckoning, the problems of poverty, unemployment, malnutrition, ill-health and lack of shelter have become more acute and widespread than earlier. Plans and projects involving outlays of thousands of millions of rupees have not helped the toiling millions. On the contrary, the so-called development projects have affected them adversely and accentuated their daily suffering. In plain terms, for the vast majority of the people, development means deprivation, displacement and destruction of their precious life support system. Through project after project, plan after plan, the story is the same. Denied human rights and information, the displaced and deprived sections of the population are mute spectators of the power-game which perpetrates destruction in the name of national development.

During the 1970s and the 1980s, people began to resist and raise their voices in protest. They questioned the cost-benefit calculus and exposed the statistical bluff. The futility of building big, bigger and the biggest became more and more manifest. The Chipko movement in the Garhwal region and the movement against the Silent Valley power project in Kerala attracted worldwide attention. The success of these movements paved the way for the campaigns against the Sardar Sarovar Project, the Tehri dam, the nuclear power plant at Kaiga and so on. The Narmada and Tehri projects became the agenda of so-called national development for the rulers. Resistance to and refusal to agree to the growth path and pattern of development favoured by the ruling elite became the focal point of movements of the toiling people such as those of adivasis, Dalits, farmers, fisherfolk and women. Crusaders like Sunderlal Bahuguna and Medha Patkar became the symbol of people's hopes and aspirations. They exposed the hollowness of official statistics and rekindled the spirit of satyagraha and mobilised the people to stand up against the might and machinations of the state. Their struggle was against the state efforts towards the displacement and disintegration of people and communities.

The adverse impact of the resource squandering growth, process is becoming clearer by the day. The Indian as well as the global experience amply prove that the mega-projects for irrigation and power are antithetical to the interests of the common people. They do not promote equity and they are not suitable. In fact, because of the high costs involved, they provide at best temporary solutions to the permanent problems of water and

Construction work at the Sardar Sarovar Dam site, a file picture.

energy.

As of now there is a clear conflict and contradiction between the two approaches to development. One is concerned with engineering and the other with ecology. The engineering-dominated technocratic growth-path believes in building huge structures and making grids for water and electricity. The crucial factor in this approach is centralised control. It totally alienates the people who have harnessed these resources through the centuries with great ingenuity and ensured their sustainability. They are disempowered and displaced and there is no end to their suffering. Planners and policy-makers sermonise to them about suffering for the nation. Asking such questions as who constitutes the nation and for whom development is meant are considered diversionary by the ruling elite, which wants to go ahead with the displacement and is prepared to drown its opponents in the Narmada Valley, who are at this very moment rallying resolutely and bravely in the valley.

THE struggle against the Sardar Sarovar Project has been pushed into a very critical phase by the powers-that-be. The Supreme Court has lifted a stay on the dam construction work (*Frontline*, August 27) and permitted an increase in the dam's height by 5 metres. This would result in the submergence of a vast number of villages. The inhabitants of these villages have refused to move because they are aware of the tardy state of rehabilitation so far. Notwithstanding the claims and affidavits of the State governments that are parties to this project there is simply not enough land available to be provided to all the displaced people. Besides, the State governments do not have the political will to enforce this. As such, the design to submerge the area by raising the dam height is heinous. The people in the Narmada Valley have resolved not to leave their homes and hamlets, come what may. The situation is indeed critical. Will civil society and the ruling elite care to consider the gravity of the situation and realise, at least at this late hour, the consequences of such disastrous projects? Will someone listen to the cry of the soul of the people of the valley?

It is a call to the conscience of the nation. One can only hope that in this land of Gandhi there is still some spirit and sensitivity left for what is just and humane. ■

H.M. Desarda, an economist, is a former member of the Maharashtra State Planning Board.

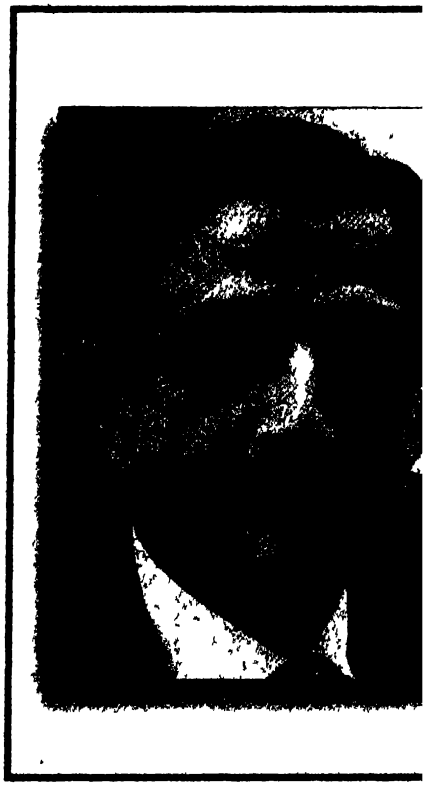
A pioneering scientist

Vikram A. Sarabhai gave a new direction to India's space science and atomic energy programmes. Many of the goals he set are likely to be achieved in 1999, the 80th year of his birth.

PARESH R. VAIDYA

FOR India, 1999 has been a year of important landmarks in the field of space science. The Indian Space Research Organisation (ISRO) placed three satellites in orbit using a single spacecraft – two of them launched for other countries on commercial terms. Towards the end of the year, an Indian-built satellite of the Indian National Satellite (INSAT) system will be launched using the most powerful Indian rocket, the Geostationary Satellite Launch Vehicle (GSLV). In this context, it will not be misplaced to remember the pioneer of the Indian space programme, Dr. Vikram A. Sarabhai. August 12, 1999 was his 80th birth anniversary.

Although work in India in space-related subjects was started by Dr. Homi J. Bhabha in the Department of Atomic Energy (DAE), it was Sarabhai who established growth centres in space science. Bhabha handed over charge of such work to Sarabhai, who as a scientist had already been contributing to the subject from his Physics Research Laboratory (PRL) in Ahmedabad.



Sarabhai's professional career began in 1947 after he returned to Ahmedabad following a second stint at Cambridge. Earlier, he was at Cambridge in 1937 for his Tripos in physics and mathematics. He worked under Sir C.V. Raman on cosmic rays at the Indian Institute of Science, Bangalore, before going back to Cambridge.

The eldest son of the industrialist Sheth Ambalal Sarabhai, he had to plunge into the family's textile business on returning from England. He nurtured the business empire with a scientific approach, before moving to Mumbai. In order to solve the technical problems the textile industry faced, he founded in 1947 a textile research centre, the Ahmedabad Textile Research Association (ATIRA), which is active even today. He expanded the family business by establishing Sarabhai Glass Co. and Suhrid Geigy and Co., a pharmaceutical company. He was chairman and managing director of Sarabhai Chemicals Ltd., took over the Swastik Oil Mills of Mumbai and established Sarabhai Merck Ltd. and Operations Research Group, Vadodara (Baroda).

Yet his interest in science did not diminish. He started the PRL with financial help from the Karmakshetra Foundation, a trust launched by his father, and the Ahmedabad Education Society (AES). This laboratory became the centre for research in cosmic rays and atmospheric sciences. Sarabhai's work was mainly on diurnal variation in cosmic ray intensity. The PRL became an autonomous research institution in 1961 under the management of the DAE, the Gujarat Government and the AES, in an arrangement similar to that in the case of the Tata Institute of Fundamental Research. Basic experiments in space science were taken up with Sarabhai himself guiding the students.

SARABHAI came on to the national scene when Bhabha invited him in 1963 to chair the Indian National Committee for Space Research (INCOSPAR) under the auspices of the DAE. He was given a free hand to chart the course of India's space programme, which was in its nascent stage. The former Soviet Union and the United States had already placed tiny satellites in orbits around the earth three to five years earlier. The thrust of their research then was on romantic space travel, photographing the earth and the moon from the space, planning for moon-walk and so on. The pragmatist in Sarabhai addressed those areas of space research that would benefit society, leaving aside astronomy-related subjects.

In order to use satellites for telecommunications, three basic capabilities, namely, rocketry, satellite-building and a telecommunications system, and a telecommand system to control satellites, needed to be developed. The Thumba Equatorial Rocket Launching Station (TERLS) and the Space Science and Technology Centre (SSTC), where rocket propellants were developed, were established in 1963 near Thiruvananthapuram. In 1967, an experimental Satellite Communication Earth Centre was started in Ahmedabad with funds from the United Nations Development Programme (UNDP). This later helped launch a full-fledged centre at Arvi near Pune, which serves the purpose of international communication via satellite. Satellite-building capability was developed in Bangalore, a city which later became the headquarters of ISRO.

AS space research was part of a DAE programme, Sarabhai was appointed member of the Atomic Energy Commission (AEC). When Bhabha died in 1966, the Government had no difficulty in finding a successor. Prime Minister Indira Gandhi made Sarabhai not only Chairman of the AEC but also

Secretary to the Government of India. Sarabhai accepted the dual responsibility at the cost of his family business; however, he did not give up his scientific contacts with the PRL or the Massachusetts Institute of Technology, U.S., where he went as a senior visiting scientist to guide research in cosmic rays.

In the five years as AEC Chairman, Sarabhai laid out a wide canvas of activities, which left an imprint on work to be done in the future in space science and atomic energy. An acknowledged institution-builder, he organised all uranium-mining activities under an independent corporation, Uranium Corporation of India Ltd (UCIL), with its headquarters at Jaduguda in Bihar (*Frontline*, September 10). J.R.D. Tata once said that he and others associated with the AEC had thought that it was impossible to find a man who could adequately carry on Bhabha's work but Vikram Sarabhai rose brilliantly to the occasion.

Sarabhai gave a new direction to space science and atomic energy; his plans for applications of science and technology had the masses at their centre...his contribution to industry and management is as extensive as his involvement in the scientific field.

The importance of electronics in space science and atomic energy was not lost on Bhabha or Sarabhai. An electronics committee was set up by Bhabha, with Sarabhai as Chairman. Sarabhai was able to shape the Committee's report only after he became AEC Chairman. He established the Electronics Corporation of India Limited (ECIL) in Hyderabad and also prepared the ground for an Electronics Commission. Although ECIL has only a limited market share today, it should not be forgotten that it was the pioneer of the electronics industry that is the country's major strength today.

Sarabhai gave a new direction to space science and atomic energy; his plans for applications of science and technology had the masses at their centre. The year 1969 was the year of man's landing on the moon, which inspired the idea of a journey to Mars. But Sarabhai conceived the INSAT system, the satellites of which would be put in geostationary orbits to serve in the forecast of weather and in telecommunications. Even today, INSAT is the only multi-purpose satellite series in the world.

Sarabhai also toyed with the idea of reaching the villages through a television network for developmental education. For this, ISRO signed an agreement with the National Aeronautics and Space Administration (NASA) of the U.S. to place a U.S. satellite (ATS-6) over India. (In 1969, all space-related activities were put under a single umbrella, ISRO. Later it became independent of the DAE.) Fourteen districts in six States enjoyed the privilege of educational telecasts much before many State capitals had a Doordarshan Kendra. The popularity of the Satellite Instructional Television Experiment (SITE) in the target villages was tremendous.

Sarabhai even came up with a plan to build agro-industrial complexes around nuclear reactors, which would use electricity, heat and steam from the reactors. Two such complexes were proposed – in the Ganga basin and in the Kutch-Saurashtra region. Owing to financial difficulties, the plan did not get off the ground.

In 1970, Sarabhai gave the nation a document titled "Profile of Decade (1970-80) for Space and Atomic Energy Research Programmes." This showed him to be a man in a hurry. At a time, when the concept of the geostationary orbit had been barely tested, he predicted that India would launch an INSAT satellite in 1975 using an indigenous Geostationary Satellite Launch Vehicle. Similarly, he expected the country to have an installed capacity of 2,700 MWe of nuclear power by the turn of that decade. Both these goals proved too high to achieve, partly because of technological embargoes. Sarabhai died in 1971 near Thiruvananthapuram. The goals may be achieved this year.

Sarabhai ably represented the country on the international scene. During his tenure as the head of the atomic energy programme, the vexed issue of the Nuclear Non-Proliferation Treaty (NPT) came up. He met the heads of government of the nuclear powers to discuss the possibility of non-nuclear countries being provided with a nuclear umbrella when they are under threat from a nuclear-weapon state. The talks brought no results, and India did not sign the NPT; the stand remains unchanged even after 30 years.

In 1967, Sarabhai was elected Scientific Chairman of the U.N. conference on exploration and peaceful uses of outer space, and in 1971 president of the 14th General Conference of the International Atomic Energy Agency. For five years he was Chairman of the COSPAR consultative group on the harmful effects of experiments in space. He submitted a report to the U.N. on the usefulness of space programmes to developing nations.

Sarabhai's contribution to industry and management is as extensive as his involvement in the scientific field. He was instrumental in establishing the Indian Institute of Management, at Ahmedabad, in 1962. He convinced the Harvard Business School to provide its expertise and persuaded the Ford Foundation to extend financial grants to the institution.

His interest in education endorses the fact that he was truly a multi-faceted person. There was a small group at the PRL working to improve science education in schools. This slowly grew into the Community Science Centre, which gave hands-on experience to students and the public. Today, the centre is a standing memorial to Sarabhai, with the new name of Vikram Sarabhai Community Centre.

Sarabhai never lost the qualities of being kind and cordial. The best proof of this is the fact that he agreed to become the president of the textile technicians association in Ahmedabad, a unique case of an industrialist becoming a union leader. This was at a time when he simultaneously headed several high-value institutions.

Sarabhai's approaches and choices showed his upbringing. He once told a British Broadcasting Corporation interviewer: "The influence of (Mahatma) Gandhi on my family was very strong indeed, so that all through my childhood I was brought up doing what one felt right rather than what necessarily society thought was appropriate." ■

Nuclear power and safety issues

Engineers at the Bhabha Atomic Research Centre are involved in an ongoing effort to redesign nuclear reactors, incorporate improved safety features and conduct extensive tests, all with the aim of ensuring total safety in the country's nuclear power generation system.

T.S. SUBRAMANIAN
in Trombay

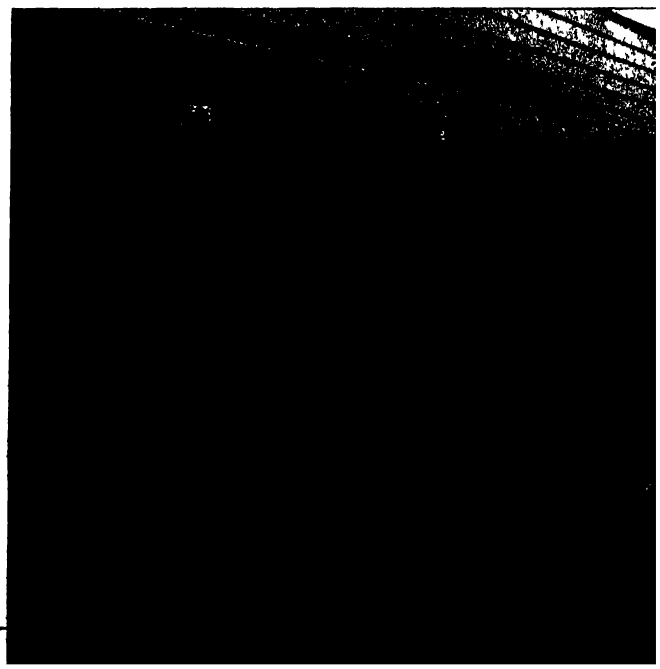
FROM the outside, Engineering Hall 7 at the Bhabha Atomic Research Centre (BARC), Trombay, near Mumbai, looks fairly nondescript. But inside, the cavernous hall is the centre of advanced research and development (R&D) in both engineering and safety in nuclear electricity generation. This R&D applies not only to the extant Pressurised Heavy Water Reactors (PHWRs) in the country but the planned Advanced Heavy Water Reactors. Inside Hall 7, experiments are conducted in laboratories and tests done on scaled-up models to ensure the safety of PHWRs.

There are eight PHWRs in the country – two each at the Rajasthan Atomic Power Station (RAPS), the Madras Atomic Power Station (MAPS), the Narora Atomic Power Station (NAPS) and the Kakrapar Atomic Power Station (KAPS). The second unit (220 MW) at Kaiga in Karnataka will join the list soon.

The design of PHWRs, which use natural uranium as fuel and heavy water as both moderator and coolant, has evolved over the years; there has also been a steady improvement in the technology itself. Among the improvements incorporated are double containment of the reactor building, changes in end-shields of reactors, introduction of a new concept of suppression tanks, the filling of the calandria vault with 400 tonnes of light water (ordinary water) and the use of zirconium niobium alloy in the manufacture of pressure tubes.

Dr. V. Venkat Raj, Associate Director, Reactor Design and Development Group, BARC, said, "PHWRs are uniquely placed. We have multiple echelons of safety provisions to take care of severe accidents. Even if the emergency core cooling system fails in a loss of coolant accident (LOCA), fuel will not melt. We have a lot of systems and instruments to detect any such accident."

According to Dr. Anil Kakodkar, Director, BARC, "Reactor safety requires analysis of the behaviour of the full plant. We must have all protective mechanisms in place, and we must make several postulates and identify possible conditions for abnormal behaviour (of the reactor)." Kakodkar is the architect of the Advanced Heavy Water Reactor (AHWR) that will use uranium-233 as fuel and thorium as blanket.

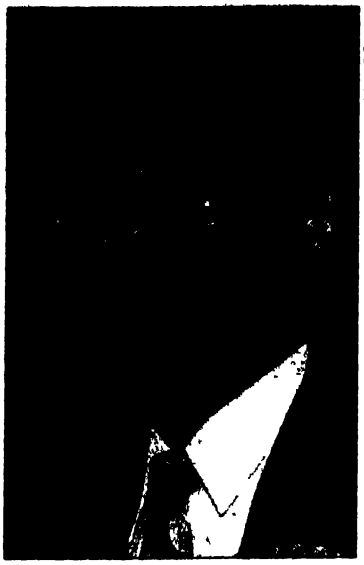


Kakodkar said that the Department of Atomic Energy (DAE) had a comprehensive programme to deal with waste safety, and had studied the physical and chemical transformations that take place in waste, its dispersal, and so on. "They have become specialised branches of science," the BARC Director said. Kakodkar added: "We have done a lot of work on radiobiology – how radiation interacts with living matter."

Y.S.R. Prasad, Chairman, Nuclear Power Corporation of India Limited (NPC), which operates all the nuclear power stations in the country, said that safety depended on those who designed, operated and maintained the reactors. Apart from engineered safety features and a variety of systems to minimise chances of accidents, the NPC had a training and retraining programme for its plant personnel.

THE crux of reactor safety is the cooling of the fuel core. All safety systems are aimed to prevent the eventuality of the core losing its cooling, the fuel melting down and losing its shape, and a fire breaking out. The emergency core cooling system (ECCS) is one of the safety systems that aims to ward off a LOCA. It was a LOCA that occurred at Chernobyl and Three Mile Island; in the latter case there was no release of radioactivity into the atmosphere.

During the operation of a reactor, hydrogen embrittlement, that is, micro-cracks, may sometimes develop in the coolant (pressure) tubes that house the uranium fuel bundles. If these cracks cut across the thickness of the coolant tubes, they may sag and touch the calandria tube, around which is the coolant heavy water. This can lead to a loss of coolant from the primary system, and inadequate cooling of the fuel in the core.



According to top NPC officials, three stages of ECCS were provided in the reactors. There were instruments and systems to sense a rupture in the primary circuit and a fall in pressure. Heavy water would be immediately injected over the core by opening valves. The second stage involved the use of ordinary water from the storage tanks. These would take care of the initial LOCA. In the third stage several hundred tonnes of water would be available in the basement of the reactor building for

suppression cooling.

Venkat Raj explained the changes and improvements in design that had been incorporated over the years. The first unit at RAPS was built by Canada, and the second unit by the DAE. The RAPS units had a dousing tank on top of the reactor building, with a large quantity of light water to condense the steam in the primary coolant circuit. Since the primary coolant was under high pressure, pressure in the containment (the concrete dome over the reactor building that is intended to prevent radioactivity from escaping into the atmosphere) would go up. But the RAPS reactor building was not designed to withstand high pressure.

In the event of a LOCA, water from the dousing tank would cascade and douse the steam. But if there was a spurious signal, water would come down needlessly. To avert such eventualities, said Venkat Raj, from MAPS onwards, the dousing tank was removed from the top of the building and the water was stored in a suppression tank in the basement of the reactor.

M MOORTHY

Dr. Anil Kakodkar, Director of the Bhabha Atomic Research Centre, Trombay.

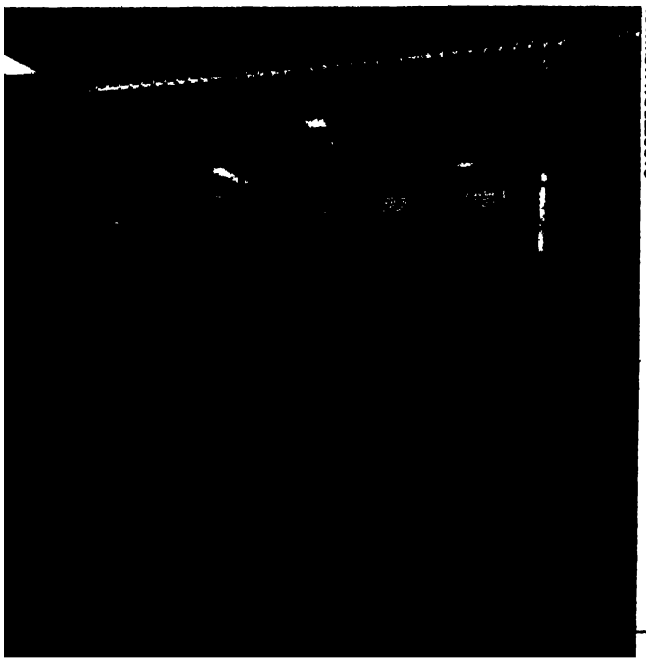
In the dousing tank, valves had to be opened to let the water down, and this needed time. The suppression tank did not require the opening of any valves. "This is an improvement we made," said Venkat Raj. Further, in the event of a LOCA, using the suppression tank poses no threat to containment integrity.

ANOTHER improvement incorporated in the design was the building of double containment from Narora onwards. Kalpakkam had partial double containment – the cylindrical portion of the reactor building had two walls but the dome on top had a single wall. From Narora, all reactors were provided with double containment, including the dome.

The inner (primary) containment was designed to withstand high pressure in the event of a LOCA. The large space between the inner containment and the outer (secondary) containment, called annular space, was maintained at below atmospheric pressure. During normal operations, the space in the inner containment was kept at a pressure even lower than that in the annular space in order to prevent any radioactivity from escaping into the atmosphere. If an accident occurred, the inner containment would get pressurised, but whatever radioactivity reached the annular space would not escape because of the higher atmospheric pressure outside.

Changes were also introduced in the calandria vault and the end-shields. The calandria is a huge cylindrical stainless steel vessel with massive steel plates called end-shields on either side. The calandria has 306 coolant tubes housing the fuel bundles, surrounded by high-pressure, high-temperature heavy water which is the coolant. The calandria tube is surrounded by low-pressure, low-temperature heavy water which is the moderator.

From Narora onwards, the calandria vault was filled with about 400 tonnes of ordinary water (earlier, it was only air); this has an important bearing on safety. This is in addition to about 150 tonnes of heavy water, the moderator, in the calandria, as in all other reactors. From the second unit at Kakrapar, the pressure tubes were made of zirconium niobium, which is less prone to hydrogen embrittlement effect unlike zircaloy, which was used earlier. The existing zircaloy tubes in all reactors in the country are now monitored periodically and are being replaced with tubes made of zirconium niobium.



Up to Kalpakkam, low-pressure moderator injection was used for ECCS. From Narora, this was improved to high-pressure, heavy water injection followed by medium-pressure light water injection and long-term circulation by pumps.

Computerised control systems have also been introduced to strengthen the safety aspects. For the two reactors at Kaiga, there are now two control rooms, situated side by side but totally independent of each other. This was consequent to a fire incident in the first unit at Narora, which led to a black-out. Venkat Raj said: "We learnt our lessons from Narora. If the ventilation system is common, smoke entering one control room will invade the other room."

BARC engineers also simulated a LOCA. First they worked out a theoretical analysis, and to make sure that this was right, they did experiments with 1:10 scale models. Venkat Raj said, "These experiments validated both the theoretical analysis and the computer code used for the calculation of the containment pressure rise."

Although an operating PHWR station has many systems and instruments to detect a LOCA, there is always the lurking fear that the instruments might fail. BARC therefore set up a test system called LOCA Environment Simulation Facility. The cables carrying electricity and signals, which might also fail, could be tested in this facility.

BARC had designed computer codes to analyse accidents such as LOCA. To validate these codes BARC built test facilities at a cost of crores of rupees to simulate the working of reac-

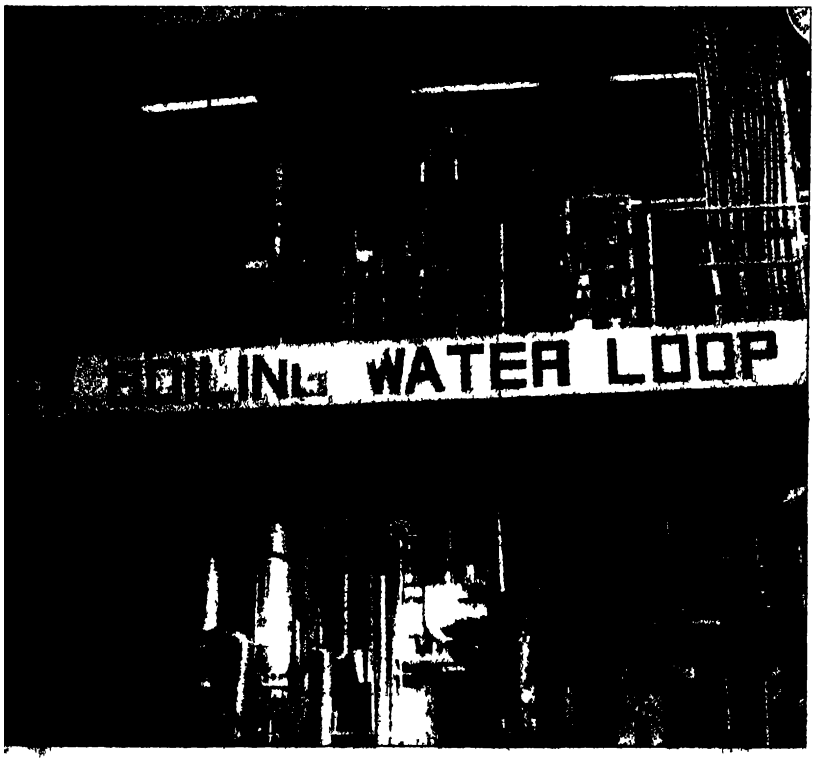
SAGGERE RAMASWAMY

The computerised control rooms for the two reactors of the Kaiga Atomic Power Project in Karnataka. The control rooms operate independent of each other, a provision intended to ensure greater safety.

Questions, and some answers

T.S. SUBRAMANIAN

QUESTIONS of safety relating to nuclear installations in the country have come up time and again, and those who raise them put the blame on lack of transparency on the part of the nuclear energy establishment. They say that the Department of Atomic Energy (DAE) has not made public data about the levels of radioactivity released by nuclear stations and facilities, or about the cumulative exposure of each employee at the various nuclear power stations, the uranium mines in Bihar or the Nuclear Fuel Complex in Hyderabad. These sections state that if the natural radiation levels recorded at a site by the Environmental Survey Laboratory (ESL) before work begins on a nuclear power project are made public, it will help measure any increase in radiation levels after the plant is commissioned.



Sceptics say that in cases where heavy water leak from a Pressurised Heavy Water Reactor (PHWR) occurred, no information was given out on whether it was the coolant heavy water or the moderator heavy water that leaked. (The radioactivity release from moderator heavy water would be much higher than that from coolant heavy water.)

Issues relating to the decommissioning of ageing nuclear reactors are a cause for concern among environmentalists. In normal circumstances, a reactor is decommissioned 30 to 35 years after it attains criticality. On this criterion, two units of the Tarapur Atomic Power Station (TAPS) are candidates for decommissioning as they started generating electricity in 1969. Further, the high cost of decommissioning is not factored into calculations of the total cost.

There are also fears about waste management. Nuclear waste may be vitrified, encased in metal cans and stored in underground repositories, but there is a risk that in the event of an earthquake, they may seep into the soil and water.

Whenever a nuclear power project is planned, it arouses fears among the local communities. This is especially so when the site is in a seismic zone (as is the case with the Narora Atomic Power Station) or in a densely forested area (the Kaiga Atomic Power Project) or on a coastal site (Kudangulam Atomic Power Project). In the case of Kudangulam, local fishermen were concerned that the coolant water let into the sea from the reactors might affect marine life. Besides, the local population feared that the drawal of water from the Pechipara dam for the requirements of the plant and the township would deplete the availability of water for their irrigation and drinking water needs.

DAE officials, however, dismiss all fears. Top officials of the Health, Safety and Environment Group at the Bhabha Atomic Research Centre (BARC) say that Environmental Survey Laboratories (ESL) are open to the public and the data they collect are in the public domain. The officials say that when heavy water leaked into the reactor vault of the second unit at the Madras Atomic Power Station (MAPS), Kalpakkam, on March 26, 1999 (Frontline, April 23) details about the amount of heavy water that had leaked (and the fact that it was coolant heavy water that had leaked), the extent of

COURTESY BARC

he 3 MW Boiling Water Loop machine at the Reactor Engineering Division at BARC. It was designed for heat transfer and safety-related experiments under conditions of reactor coolant flow, temperature and pressure.

tors and coolant systems The predictions were first projected, subsequently the exercises were done The test results were compared with the predictions to see whether the computer codes had been validated Many cycles might be gone through in updating the computer codes

Early this year, the Reactor Design and Development Group built a Facility for Integral System Behaviour Experiments (FISBE). This simulated PHWR coolant systems in a scaled manner. A feature of FISBE is that it simulated the full elevation – 40 metres – of the equipment as in a reactor.

Engineering Hall 7 also has a huge 3 MW Boiling Water Loop machine. Venkat Raj designed and constructed this about 15 years ago for heat transfer and safety-related experiments under conditions of reactor coolant flow, temperature and pressure. (Venkat Raj has now taken charge as Director, Health, Safety and Environment Group, BARC, in place of Dr. Umesh C. Mishra.)

LOCA simulation experiments demand acquisition of data very fast, every 100 microseconds. The fast data acquisition machine in the hall can scan 10,000 parameters every second. An Indian company developed the machine about ten years ago and it is still going strong.

tritium released and the number of workers affected were made available to the press.

As for the issue of decommissioning, DAE officials said that the department had "broadbased experience" in this area. A dedicated group had studied the decommissioning prerequisites and made detailed plans for Indian plants. According to these officials, decommissioning costs account for less than two per cent of the project cost and they were factored into the tariff.

Man-rem exposures were less than 0.1 per cent of those caused by natural background radiation.

The DAE, the officials said, had expertise in both liquid and solid waste management. High-level solid waste would be stored in deep repositories in locations where it would not come into contact with ground water. It would be vitrified in the form of glass, and any leaching of plutonium from glass would be negligible even over thousands of years.

At Kaiga, the reactor plant, the buildings and other facilities occupied only about 25 hectares of a total of 120 ha of forest land that was acquired. Compensatory afforestation was undertaken, and when academics from Mangalore University, who set up a nursery at Kaiga, studied the flora and fauna of the area, they discovered some rare species of plants, which the DAE was preserving.

At Kudangulam, the DAE officials said, the entire area acquired was uninhabited. The local fishermen were given assurances that no radioactive substance would be let into the sea, and that the coolant water let into the sea would not affect fish life there. Only 120 mcft of water a year would be drawn from the Pechipara dam: this would form only about 0.6 per cent of its annual yield of 14,500 mcft, and according to the officials, this will not affect local irrigation interests in any way. ■

PHWRs which operate in the country have several safety systems to withstand earthquakes For each nuclear power station site, the levels of earthquake are defined depending on the seismicity of the area Two levels of earthquake are defined: the operating basis earthquake, and the safe shutdown earthquake. In the first level, all operating systems in a nuclear reactor are designed to withstand the seismic shocks, and the reactor will continue to operate. The level of a safe shutdown earthquake is higher than that of an operating basis earthquake, but the probability of its occurrence is lower. At this level, safety systems such as the ECCS, containment and reactor shutdown systems are so designed that the reactor can be shut down safely and the cooling maintained to remove heat from the fuel. In the event of an accident, any reactor should meet three important safety functions – it should shut down safely; there should be provision for continued core cooling to remove decay heat; and containment integrity should be maintained. So long as these requirements are met, radioactivity will not escape into the atmosphere.

BARC engineers and scientists have undertaken complicated analyses to determine how earthquake shocks impacted on reactor equipment. Venkat Raj said, "We developed theoretical models. To confirm them with experiments, there are special test facilities abroad called shake tables, which would shake the equipment as an earthquake would." The engineers also mount the equipment on a diesel engine and run it on railway tracks; this has the same vibration effect as would be experienced in an earthquake. ■

The first article in a two-part series on issues of nuclear safety.

Helps digest life better

Life is a roller coaster ride
Sometimes too fast, sometimes too demanding, sometimes too exhausting
That's why, there's Restora
An ayurvedic restorative that restores you at the end of a tiring day It is made with the finest quality grapes, golden honey and 17 time tested herbs A few sips of Restora every day also help fight fatigue, build appetite, aid sleep and maintain all round health

Dabur
RESTORA
The natural way to healthy living

Some monkey business

Experiments and testing procedures involving animals in laboratories across the country come to a standstill in the wake of protests by some organisations.

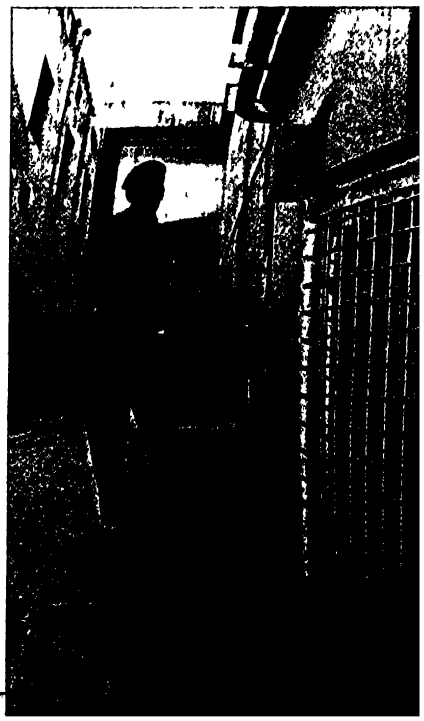
R.RAMACHANDRAN

ACTIVISM by animal lovers in the country is assuming militant and controversial dimensions, and facing the brunt of this upsurge are the scientists of national laboratories and the pharmaceutical industry involved in biomedical research and in the development of drugs and vaccines. Unfortunately, the stand of Minister of State for Social Justice and Empowerment Maneka Gandhi on the subject is seen to provide a certain official stamp to the doings of the animal rights organisations.

The issue of a gazette notification, the Breeding of and Experiments on Animals (Control and Supervision) Rules, 1998, ignoring the views within the Committee for the Purpose of Control and Supervision of Experiments on Animals (CPCSEA) and objections from the research community, led to an outcry among scientists (*Frontline*, November 6, 1998). Maneka Gandhi was the chairperson of the 17-member CPCSEA, which was tasked with the framing of the regulations. The CPCSEA, which was originally under the Ministry of Environment and Forests (MoEF), was brought under the Ministry of Social Justice and Empowerment (MSJE) when Maneka Gandhi moved there.

Representations to the Minister of Science and Technology and the Prime Minister led to the constitution of a committee under Dr. P.K. Dave of the All India Institute of Medical Sciences (AIIMS). However, some of the recommendations of the Dave Committee were not incorporated in the final notification, and the scientific community is trying to get the final notification amended and the other recommendations incorporated in it. Meanwhile, Maneka Gandhi carries on with her anti-vivisectionist agenda with the support of animal activists and organisations such as the Blue Cross and the Society for the Prevention of Cruelty to Animals (SPCA).

The forced release of 52 monkeys from the animal house of the Hyderabad-based National Institute of Nutrition (NIN), which comes under the Indian Council of Medical Research (ICMR), into the Kagaznagar forest by activists led by Blue Cross functionary Amala Akkineni on August 9 brought the controversy to a head. This incident has held up animal testing of the new genetically engineered 'alpha-interferon' drug developed by the Hyderabad-based Shantha Biotechnics Ltd. The testing was being conducted on 34 rhesus monkeys at the NIN facility as a requirement for the grant of marketing approval by the Drug Controller of India.



A meeting was held at the Indian National Science Academy (INSA) on September 1 in the context of the controversy to take a fresh look at the Academy's "Guidelines for Care and Use of Animals in Scientific Research" issued in 1992 which has essentially served as the ethical basis for animal testing in Indian institutions. At another level, a representation was made to the Prime Minister and the Prime Minister's Office constituted yet another committee, under Prof. P.N. Tandon, neurosurgeon at the AIIMS, with the Department of Biotechnology (DBT) as the nodal agency, to go into the matter.

Experiments on animals have come to a halt all over the country because the NIN, the main supplier of animals to laboratories, stopped supplies after A.P. Singh, MSJE official and member-secretary of the CPCSEA, directed the NIN to release all the animals, saying that the NIN had failed to register itself with the CPCSEA as required. However, the NIN insists that it had sought a registration although the bureaucratic machinery was slow to act.

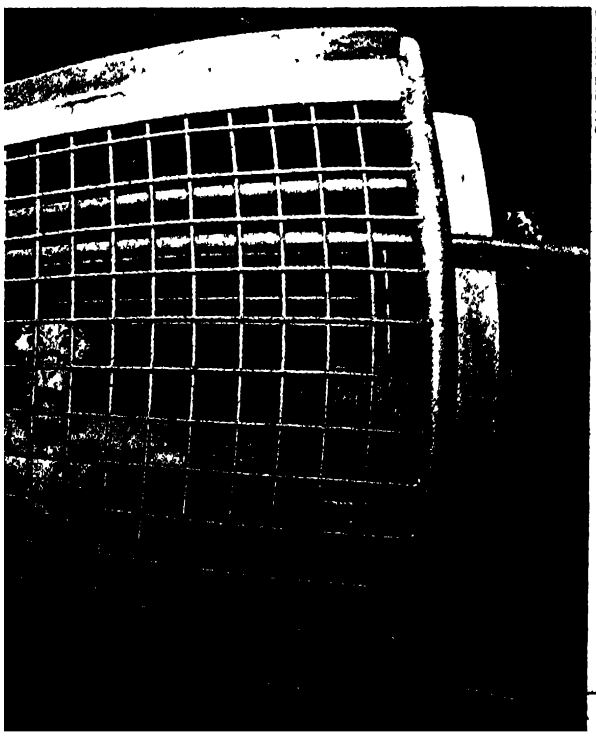
According to Dr. Kamala Krishnaswamy, NIN Director, the supply of 780 BALB/C mice, 670 Swiss mice, 100 nude mice, 50 C57BL/6J mice, 750 W.NIN mice, 75 SD rats, 63 hamsters, 375 guinea pigs and 41 rabbits to 20 different institutions and pharmaceutical concerns had been held up. However, she said that breeding as well as regular supply of animals were being resumed.

The mandate of the Tandon Committee, which met on September 2, was to recommend amendments to the BEA Rules within two weeks, for the implementation of which no guidelines have been issued. No meeting of the CPCSEA has been called by the chairperson since November 1998. Meanwhile, the CPCSEA secretariat has resorted to punitive measures such as taking away monkeys from the NIN.

According to a source in the PMO, when the Prime Minister referred the matter to Maneka Gandhi, her reply was misleading. For example, one of the statements made, according to the source, is that the NIN is not a scientific institution but one that makes most of its money selling animals to laboratories. The NIN, of course, is a major research institution, and maintaining an animal house and supplying animals is only one of its many functions. Indeed, the NIN facility is a Centrally funded national facility called the National Centre for Laboratory Animal Sciences (NACLAS). NACLAS' annual budget is Rs.2 crores today while its external earnings during the last 42

years adds up to Rs.1 crore.

A senior ICMR official said: "If you shut down the NIN animal house, which supplies animals to over 180 laboratories in the country, you put an end to all biomedical research in the country. While this might suit animal activists, it also clearly suits the multinationals. The country can hardly afford to resort to this sort of fundamentalism when the demand of the day in the wake of Trade Related Aspects of the Intellectual Property Rights (TRIPs) and the World Trade Organisation (WTO) is to strengthen our drug development and pharmaceutical industry."



THE NIN developments date back to July 1997 when Maneka Gandhi got the Committee to authorise the visit of teams from non-governmental organisations (NGOs) to laboratories that conducted animal experiments. The first visit to the NIN facility by an NGO took place in February 1998 but the NIN or even the scientist-members of the CPCSEA are yet to see any report of this visit. A report by Dr. Iqbal Mallik, primatologist and founder of an NGO called Vatavaran, apparently commissioned by the CPCSEA, was published last year, but it has not been given to the scientist-members to evaluate.

On April 7, 1998, the NIN sought permission from the MoEF (under which the CPCSEA was then) to import Zucker (fat) rats from the United States to carry out some obesity studies. Since the draft rules that were being framed then, which called for the registration of the facility as well as permission to carry out the experiment, the Ministry asked for the submission of registration forms, along with the request for import. These were forwarded through the ICMR on July 16, 1998, and then again on August 9, 1998. According to the NIN, there has been no response to this from the CPCSEA. Meanwhile, the CPCSEA moved from the MoEF to the MSJE.

A similar request, to import three pairs of black and white mice from New Zealand in order to test a DNA vaccine developed by the Indian Institute of Science, Bangalore, was made on January 21. Again, the NIN has received no permission from the CPCSEA. Although in the interim the BEA Rules were issued, the ICMR and the NIN received copies of the notification only in February 1999. Since this called for fresh registration, the NIN sent to the ICMR a new set of registration forms on March 23.

Meanwhile, the NIN signed a memorandum of understanding with Shantha Biotech, and interferon testing on 34 monkeys started in June. A.P. Singh sent a fax to the NIN on June 24 accusing it of violating the BEA Rules and asking it to release the animals, which numbered over 30,000. It also said that Amala Akkineni of the Hyderabad Blue Cross had been asked to submit a compliance report to the CPCSEA.

When he was told that the application for registration had been sent nearly a year earlier, A.P. Singh said that new forms would be required after the BEA Rules came into force. The NIN then filed new forms and explained the impracticability of releasing 30,000 animals which have been bred and domesticated for several generations and cannot survive in the natural environment.

P V SHIVAKUMAR

One of the monkeys that was taken away by a group of animal activists from the animal house of the National Institute of Nutrition on August 9.

On his part, the Director-General of the ICMR, Dr. N.K. Ganguly, constituted a committee of experts comprising directors of four Hyderabad-based institutes – the Indian Institute of Chemical Technology (IICT), the Centre for Cellular and Molecular Biology (CCMB), the Centre for DNA Fingerprinting and Diagnostics, and the Owaisi Hospital and Research Centre – to inspect the NACLAS and submit a report. The Committee, contrary to the earlier NGO report which said the animals in the NACLAS were poorly housed and badly treated, gave a clean chit to the facility.

As directed by A.P. Singh, Amala Akkineni visited the NACLAS facility along with two SPCA officials on July 1 and submitted her report on July 3 in which she said that "the animals were maintained in good condition but for a sad cause." On July 6, A.P. Singh visited the facility along with Amala Akkineni and other animal rights activists, Vasantha Vadi, Krishna Vadi and Dr. Laxmi from the Blue Cross. The team was critical of the primate colony which housed the 52 monkeys, of which 12 had been there for four to eight years and a batch of 36 monkeys were caught recently for the testing needs of Shantha Biotech. The team felt that the size of the cages was inadequate and suggested that the monkeys be kept in cages for only three weeks and that after tests they be rehabilitated and released into the forest. The team said that the procurement of monkeys from the wild is illegal.

The Blue Cross maintains that the size of the cages used in the NIN is 60 cm x 60 cm x 82 cm, which is not in accordance with INSA guidelines of 4,000-6,000 sq cm floor area for monkeys with an average weight of 10 to 12 kg. But according to the NIN, the size is about 65 cm x 65 cm x 82 cm – implying a floor area of about 4,200 sq cm. The NIN also points out that the average weight of the monkeys is about 7 kg and, in fact, the newly caught 34 monkeys that were being used for interferon testing were only about 4 kg each.

The NIN concedes that what is perhaps inadequate is "monkey runs", larger space for movement into which the monkeys are let out periodically; a resource crunch has prevented the NIN from building such a facility. Following a recommendation of the ICMR committee, monkey runs of 6 sq cm per monkey are being created at a cost of Rs.34 lakhs, as against the international norm of 1.75 sq metres.

"Why three weeks?" asks Dr. D. Balasubramanian of the L.V. Prasad Eye Institute, with reference to the team's suggestion. "Animal testing can go on for

The National Institute of Nutrition in Hyderabad.

over a year, particularly for something like interferon," says Dr. Satyajit Rath of the National Institute of Immunology (NII), New Delhi. Then, rehabilitation and release into the wild are problematic because once caught for experiments the monkeys are on an entirely different kind of diet and acclamatisation and would be unable to survive in the wild. Indeed, some of the monkeys released by the Blue Cross on August 4 into the Kagaznagar forest are reported to have died. Catching monkeys from the wild is not illegal, and it is done by licensed trappers.

After his visit, A.P. Singh reiterated the demand for the release of the monkeys. Alternatively, he wanted the NIN to improve the facility by creating monkey runs and evolve a programme for rehabilitation. He also wanted the registration forms to be sent again. This was done again on July 9.

A.P. Singh sent another fax message to the NIN on July 16 demanding the release of all the animals. On August 4, Dr. Reddy of Shantha Biotech was informed by Amala Akkineni that she would inform the CPCSEA and Maneka Gandhi about continuing tests on monkeys for the interferon drug. Then came the final assault. Animal activists headed by Amala Akkineni and Vasanthi Vadi, armed with an order from the CPCSEA (which has no authority to do so), and with the help of the Circle Inspector of Osmania University Police Station, went to the NACLAS premises and took away in trucks all the monkeys housed there. According to Dr. Reddy, all this happened while he was having discussions with the CPCSEA in Delhi.

This forced Shantha Biotech to file a case against the government in the Andhra Pradesh High Court on August 23 seeking to restore the animal toxicology tests of the drug under the memorandum of understanding (MoU) and the contract at the NIN or any other similar facility, and Rs.1,000 crores in damages. The court heard the petition the next day and ordered a stay and directed the NIN to facilitate the toxicological tests of interferon. It also directed the CPCSEA, Amala Akkineni and the police not to interfere with the conduct of the tests on monkeys.

The NIN and the ICMR now face serious problems. The damage has been done. Shantha Biotech will lose about one year – because monkeys have to be made completely free of any infections, they have to be acclimatised to the controlled conditions necessary for testing and brought to appropriate nutritional status – there are no monkeys available for the asking, according to Dr. N.K. Ganguly of the ICMR. The NIN is on a countrywide hunt to procure 30-odd monkeys. This could take three to four months, besides the cost (of anywhere between Rs.15,000 and Rs.40,000 a monkey), Dr. Ganguly says.

It is not clear how and when the Tandon Committee's recommendations will be considered and the BEA Rules amended. While Dr. Sharma sounds hopeful that actions would be taken, scientists such as Dr. Sandip Basu, Director, NII, are highly sceptical.

One of the key issues of concern for scientists is that the rules have become a major impediment to the import of animals for experiments. A Ministry of Commerce notification of October 29, 1998 – which was re-issued at the urging of Maneka Gandhi even before the final Rules were enacted – has equated experimental animals with those meant for zoos and circuses and put their imports under its negative list.

MANEKA GANDHI has also sought to take a series of steps that could further hinder animal-based biomedical research. She has forwarded a set of amendments to the Prevention of Cruelty to Animals Act, 1960, to the Cabinet. These seek to equate voluntary organisations such as the SPCA with government bodies and vest them with extraordinary powers. For the supervision of experiments involving animals, it calls for the formation of a committee giving representation to scientific bodies. The Ministry of Science and Technology is now formulating its objections to the proposed amendments.

At another level, the MSJE issued an advertisement on June 17 for the appointment on contract of three expert consultants who "will be required to examine the applications of breeders and establishments for registration as well as for carrying out experiments using animals". They will also represent the CPCSEA on institutional ethics committees which will periodically inspect laboratories and animal facilities. But what are the qualifications? A master's degree in medicine or life sciences and "at least three years of relevant experience and a known concern for animal welfare".

The scientific community's objections are that master's degree holders are hardly exposed to animal-based research and are, therefore, not competent to judge its needs. The phrase "known concern for animal welfare" gives room for the regulatory authority to be usurped to pursue the personal agenda of animal rights activists. In fact, already letters have begun to be forwarded by some of these contractual expert consultants on MSJE letterheads to animal facilities. The NIN has received one such letter from a Chennai-based activist. The NIN is in a quandary as to whether it should take cognisance of this letter when members of the CPCSEA have not been informed of such appointees.

"All these are part of a theology of animal liberation, with no understanding of scientific needs whatsoever, least of all scientific research meant for human welfare, not to mention animal welfare itself, by testing vaccines for animals," says Dr. Rath. ■

Rooted in realism

The cinema of the Kaurismaki brothers is minimalist cinema at its best, but at the same time rooted in Finnish realism of the times.

R. RAMACHANDRAN

"WHY should people go out and pay money to see bad films when they can stay at home and see bad television for nothing?" That remark really sums up the attitude of the Finnish film-making duo, the Kaurismaki brothers – Mika and Aki Kaurismaki – and good cinema is what they will offer come hell or high water. "I am just a medium-class director," Aki Kaurismaki once told the British film journal, *Sight and Sound*. "I may never make a masterpiece but if I make many good films, together they are something." The opening remark is also a dig at the state of cinema and the state of the medium of television in this electronic age.

The sample of six Kaurismaki films – five by Aki (the younger of the two) – shown as a "Retrospective of Films by the Kaurismaki Brothers" by the Embassy of Finland in New Delhi in August provided ample evidence of their oeuvre, but only a fraction of their prolific output of 38 films in the span of 18 years – 18 by Mika, 20 by Aki and one jointly directed. The films on view were: *Calamari Union* (1985), *The Match Factory Girl* (1989), *Leningrad Cowboys Go America* (1989), *Zombie and the Ghost Train* (Mika; 1991), *La Vie de Boheme* (1992) and *Drifting Clouds* (1996). Four of these have been seen at various festivals in the country besides *Ariel* (1988), *Leningrad Cowboys Meet Moses* (1994) and *Tatjana* (1994).

The two started collaborating in 1981 – they invariably collaborate on the script – dividing their work according to a carefully observed schedule. To save scarce funds and optimise the use of time, equipment and crew, they alternate as directors, one starting a project as soon as the other is through. Even though Mika began making films earlier (1981) and Aki's first independent directorial venture was in 1983, the latter's films seem to be exhibited more often. One wished that the package included a better representation of Mika's work. The current package has since been shown in Agartala and Calcutta and will travel to Hyderabad where it will be seen during September 23-25.

FINNISH cinema? Never heard of it. The Kaurismakis? Who are they? These are likely to be the responses of nine out of ten people in India, or anywhere for that matter. For most Indians, Finland is a country somewhere up there and, with its total population being half that of Delhi, it is, in some sense, a wonder that films get made there at all – about a dozen every year – and some of them, like the Kaurismaki films, win critical acclaim. Over the years they have grown in popularity both at home and abroad and have put Finland on the international film map. In fact, some of Aki's films have acquired a cult following in the West. The only Finnish film makers who had made a mark in international cinema were Mauritz Stiller during the silent era and Jorn Donner much later in the 1960s and 1970s. But both of them worked from Sweden. In these parts, however, the Kaurismakis are still not as well known even in the art-film, film society and film critic circuits.

Aki Kaurismaki and (right) Mika Kaurismaki.

Indeed, some years back Mika Kaurismaki was present at an International Film Festival of India held in New Delhi, with his film *Tigrero*, a remarkable film set in the Amazon which attempted to retrace Samuel Fuller's unfinished project (for a film of the same name) and was at the time a tribute to Fuller's cinema as it were. But Mika was spotted just wandering around the Siri Fort Auditorium because the media spotlight was on the big names. The Directorate of Film Festivals (DFF) – given its perception of cinema – had not thought it fit to give him proper publicity and prominence. The directorate had not even bothered to introduce him – a customary practice – before the screening of his film, not to speak of having a press conference arranged after the screening.

"This is what happens if the organisers do not have any passion for cinema," Mika had wryly remarked then. (The passion of the Kaurismakis for cinema is so great that they actually run special film theatres in Helsinki to screen quality cinema from all over the world.) In his characteristic irreverence to the establishment and its bureaucratised invitation to him, Mika had spent his time imbibing Delhi's atmosphere and watching Hindi films. Even this time, the DFF, co-sponsors of the event, called it a Festival of Films from Finland rather than highlight the fact they were films by the Kaurismakis.

Given the fact that Finnish cinema is almost non-existent and that the Kaurismakis are not exactly the most-sought-after directors, the quote at the beginning of this article might appear a bit audacious. Indeed, audacity is evident in all the films of the Kaurismaki brothers – Aki's *Leningrad Cowboys Go America* is, in fact, audacity all the way through. Their films cock a snook at the big budget multi-starrers and the established industry. Even as their approach, partic-

ularly Aki's irreverent cinematic style, gives the feeling that they are just having us on, you suddenly realise the realism that the films are rooted in

The Kaurismaki films are about ordinary Finns, ordinary stories of survival, simply and directly told but in a detached manner, understated and without frills, without pretensions and fuss. And the depiction is as cold as the Finnish climate. The near absence of people in the streets of Finland heightens the depression and the longing for human contact runs as an undercurrent in most films – the lack of audience for rock bands (*Leningrad Cowboys*) or the rock band which is never seen to be playing (*Zombie Ghost Train*) carry that metaphor. The cold and detached depiction (there are hardly any close-ups, for example) and the static style might seem as pitiless as the society that the films portray. But the compassion for the characters that the directors have comes through strongly – through the use of careful compositions, closed spaces, subdued lighting and colours with an emphasis on blue.

A scene from *The Match Factory Girl*.

For example, in the film *The Match Factory Girl*, the only emotion reflected by the camera, which is otherwise static throughout, is when the protaganist Iris learns that she is pregnant. The camera zooms in just a little. Of course, Aki, whose films seem to be more irreverent, says that he prefers static shots because "it is a nuisance when you have a hangover, and camera movements tend to be shaky". Their cinema is minimalist cinema at its best, but at the same time rooted in Finnish realism of the times, a stylisation that seems appropriate for the bleak and grey Finnish landscape.

In an interview Aki once said: "I have no esteem for films in which people are slaughtered with guns and this is called entertainment. A film is always drawn into a certain scale. If one starts to shoot about and play with explosives, then nothing will be enough. If the film is tuned on a minimalist level, even the sound of a cough is dramatic. If the main character slips and falls into a gutter, the viewer is already worried about what is going to happen to her or him, even though in other films people are dropped from aeroplanes and they survive without single scratch." The starkness in *The Match Factory Girl* is extreme, of which Aki, in characteristic vein, remarked: "I decided to make a film that would make Robert Bresson seem like a director of epic motion pictures."

There are no pretty faces or carefully chosen dresses either. The decor is tacky. The person-on-the-street-looking actors, perhaps in their daily wear (Matti Pellonpaa, one of the Kaurismaki regulars, apparently usually did this), may well themselves be the characters they are acting out. Despite the distancing style, this ascetic approach enables – paradoxically, it would seem – identification with the characters. This may be particularly true in the Indian context as Finland's problems during the recession seem to echo today's Indian situation. And there is this undercurrent of droll and wry humour, which is almost black, that compliments the realism.

Take *Drifting Clouds* for example. Lauri loses his job in the transport department after a lottery draw for retrenchment! The out-of-job chef in the same film says: "I am on my journey to the end of vodka" – his world has been reduced to the bottle he carries in his pocket. Or *The Match Factory Girl*, in which Iris after getting rid of her tormentors by poisoning them, casually poisons a stranger in the bar.

The above two films are clearly the pick of the current package. Both continue with a recurrent theme of Aki's films: the problems of the working class. *Shadows in Paradise* (1986) and *Ariel* (1988) had explored the theme earlier. *Calamari Union* (1985) is the earliest film being shown in the package. Though it may appear a bit dated today, it is a kind of moral fable (and a kind of joke as well) about a group of 17 young men in a Helsinki workers' quarter (all called Frank!) who set out on an odyssey towards Eira (the posh suburb of Helsinki), none of whom makes it. This was Aki's version – in the road movie mould – of the Finnish El Dorado of longing which becomes yet another central theme of Aki's films.

Both the theme and the motif – the El Dorado and the road movie – recur in a different form in *Leningrad Cowboys*.

Devoid of gigs and audiences, the "worst rock band in the world" from the Tundra sets out for the United States, which Aki calls "the country where everything is for sale". *Leningrad* works at various levels. Besides being the ultimate road movie at its simplest, it is also, on the one hand, against authoritarianism – allusions to the totalitarian state and rebellion are there – and, on the other, an absurd spoof on the kinds of music that get produced in the name of pop and rock by some groups in the West.

Rock band itself would seem to be a recurrent motif in Kaurismaki films, so much so that reality and cinema have got mixed up after *Leningrad Cowboys*. The lead performers of the band in the film were part of a rock band called Sleepy Sleepers in the 1970s who had brought out an album called Leningrad Cowboys from which the title of the film was borrowed. But with the success of the film, the rock band's name itself was changed from Sleepy Sleepers to Leningrad Cowboys.

It is not surprising that the artist-as-bohemian motif figures frequently in the films of the Kaurismaki brothers who are themselves known to be leading bohemian lives. *Zombie and the Ghost Train* (1991) and *La Vie de Boheme* (1992) are examples. The latter was made in French (in black and white). After its success, the two have begun to work abroad more often with multinational funding and casting. The latest on the anvil is a Russian-Finnish co-production on Lenin with Karl Maria Brandauer in the lead. In most Kaurismaki films, the "bohemian" was personified by Matti Pellonpaa, who himself had apparently lived a good part of his life in that manner (sleeping on restaurant benches, for example), and *Drifting Clouds* pays tribute to him (through his childhood photograph in the film) because he died in 1995 just two weeks before its shooting began. ■

Questions of contempt

The subject of the application of contempt powers by courts has re-emerged as a matter for public debate. A look at the international position with regard to the issue.

ZAHID F. EBRAHIM

In entertaining possible contempt of court punitive action against the writer Arundhati Roy for her essay, "The Greater Common Good" (published as the Cover Essay in *Frontline*, June 4, 1999), and against the Narmada Bachao Andolan (NBA), the Supreme Court of India is on slippery ground. With obsolete approaches to the purported offence of 'scandalising the court' and 'eroding public confidence in the judiciary' and unsound and unsustainable efforts to shield judges from criticism, both sharp and moderate, the matrix of freedom of expression, which is strongly protected in Article 19 of the Indian Constitution, could come under pressure and threat. **Zahid F. Ebrahim**, a Pakistani lawyer and legal scholar, presents an unusually insightful and clear-headed analysis of the international position on matters of contempt of court in this article contributed at the invitation of *Frontline*.

– Editor, *Frontline*.

IN 1937, Justice Cardozo of the United States Supreme Court described freedom of expression as "the matrix, the indispensable condition, of nearly every other form of freedom." Accurate as it is powerful, Justice Cardozo's matrix theory lies at the heart of all defences of the right of freedom of expression. Yet, in many countries, the courts of law, the ultimate guarantors of free expression, have found it difficult to come to terms with free speech critically directed at the courts themselves.

The laws of contempt are primarily designed to balance the freedom of expression with the judiciary's quest to maintain its authority and safeguard public order. Broadly speaking, contempt of court falls into three general areas: (i) violation of an order of a court, (ii) interference in the judicial process, and (iii) criticism of a judge, his or her judgment, or the institution of the judiciary.

The contemporary law of contempt, which seeks to prohibit the criticism of the judge, his or her judgment or the institution of the judiciary, now re-emerged as a matter for public debate with the Supreme Court of India's ire being directed at the Booker Prize winning author of *The God of Small Things*. The matrix is under threat.

The offence of 'scandalising the court'

The criticism of a judicial officer, his or her judgment or the institution of the judiciary is generally recognised in the Commonwealth countries as the offence of scandalising the court. Contemporary scholars, such as Geoffrey Robertson and Andrew Nicol, view the offence of scandalising the court in England as "...an anachronistic relic of 18th century struggles between partisan judges and their vitriolic critics". Echoing such views, Eric Barendt suggests that the offence of scandalising the court is "now so unimportant in practice that it may appear fruitless to spend much space in debating its justification."

However, across the world, 'scandalising the court' continues to pose significant challenges to the rights of free expression guaranteed by national constitutions and international covenants. Even in such hostile environment, credible defences have evolved, and at times have even been adopted by the courts.

The 'courtesy and good faith' defence is one such defence. In the words of the Queen's Bench in England, "no criticism of a judgment, whatsoever vigorous, can amount to contempt of court, providing it keeps within the limits of courtesy and good faith." In many jurisdictions, the courtesy and good faith defence has allowed scholars and legal practitioners the ability to launch significant criticism and gain new ground for free expression.

The letter from a Kenyan lawyer, Feroze Nawrojee, which became the cause of a contempt action against Nawrojee, is a good example of how courtesy and good faith may be artfully woven in with powerful critique. Frustrated by a judge's delay in deciding a motion to stay proceedings in a traffic offence case in which a prominent critic of the Kenyan government had been killed, Nawrojee wrote in protest: "It is unusual that in the meantime the same learned judge has dealt with several hundred matters as duty judge and left this one matter as yet uncompleted. Such delay amounts in law to a refusal to adjudicate...These departures from the usual, the indefinite delay, despite reminders and the willingness to specify a fixed date, may create the impression that the ruling is being tailored...I convey my anxiety at the unusual treatment of this or any applicant to our courts, and the belief that trust in our judges is a major contributor to the security of that trust. The events taking place in this case tend to the erosion of that trust."

The aggrieved judge attempted to prosecute Nawrojee for the offence of scandalising the court. However, the Kenyan High Court determined that "courts could not use their contempt power to suppress mere criticism of a judge or to vindicate the judge in his personal capacity, but rather could use it only to punish scurrilous abuse of a judge when necessary in the interests of justice." The High Court stressed that "a judge must scrupulously balance the need to maintain his or her authority with the right to freedom of speech," and refused to find Nawrojee in contempt.

The public confidence in the judiciary argument

Courts have vigorously punished offensive speech directed at the judiciary on the grounds that intemperate criticism of the court leads to erosion of public confidence in the judiciary. Throughout history, courts have concluded that public confidence in the judiciary is both vital and fragile and therefore requires special protection from offending free expression. As David Pannick explains, "The grandiloquent fear that criticism of the courts may endanger civilisation has, in the 20th century, continued to lead to the punishment of persons who have insulted members of the judiciary or impugned

their impartiality."

Does immunity strengthen the judiciary?

But the very basis of the public confidence has been laid bare by David Pannick as he argues that "public confidence in the judiciary is not strengthened by the deterrence of criticism." After all, Lord Atkin in the Privy Council case of *Ambard v. Attorney-General for Trinidad and Tobago*, had ruled that "the path of criticism is a public way: the wrong-headed are permitted to err therein: provided that members of the public abstain from imputing improper motives to those taking part in the administration of justice, and are genuinely exercising a right of criticism, and not acting in malice or attempting to impair the administration of justice, they are immune. Justice is not a cloistered virtue: she must be allowed to suffer the scrutiny and respectful, even though outspoken, comments of ordinary men."

Questioning the presumption that judges are beyond bias

The threat to public confidence argument is predicated on the assumption that the judiciary is incapable of bowing to outside influences and immune from bias or prejudice. Courts are loath to admit that they may be susceptible to political, economic and moral prejudices that hold favour in a society.

When the Chief Minister of Kerala publicly proclaimed that "Marx and Engels considered the judiciary as an instrument of oppression and even today...it continues to be so," he was charged with contempt of court in the case reported as *E.M.S Namboodiripad v. T.N. Nambiar*, AIR 1970 Supreme Court 2015.

The Chief Minister had also alleged that "judges are guided and dominated by class hatred, class interests and class prejudices and where the evidence is balanced between a well-dressed, pot-bellied rich man and a poor, ill-dressed and illiterate person, the judge instinctively favours the former."

Reasoning that "the likely effects of his words must be seen and they have clearly the effect of lowering the prestige of judges and courts in the eyes of the people...," the Supreme Court of India ruled that "...there is not a semblance of doubt in our minds that the appellant was guilty of contempt of court." The possibility that the Chief Minister's charge had any grain of truth did not receive consideration by the court, since truth is not a defence when proceeded against for contempt.

Judicial independence

Some jurisdictions have had to contend with the dangerous area of bias within the judiciary where the judiciary finds itself chastened by government efforts to cajole and browbeat it into falling in line with state-diktat. Consider, for instance, the case of Tanzania, where according to M.K.B. Wambali and C.M. Peter, "the government and the party play a vital, if not a decisive, role in determining who will man various positions in the judiciary. This in a way has a bearing on the work of this important institution." Although the "Constitution also provides safeguards to the judges (to maintain their independence)...experience has shown that these safeguards are formal enactments and are not all that water-tight. Judges have been transferred from the judiciary and given other responsibilities in government service. The very fact that the executive makes appointments has at times tended to make members of the judiciary subservient to the executive and the party."

Tanzania is no solitary example, and in other countries too newspapers and journalists who expose and protest against efforts to make the judiciary subservient to the executive have found themselves muzzled by strident prosecution under contempt laws. As Robertson and Nicol note, "in certain Commonwealth countries there does exist an unhealthy relationship between the judges and the government that appoint them..." When the Belize *Times Press* published an article entitled "Predicament of Change", stating that "the courts have been reshaped. Both the Chief Justice and the sole Puisne Judge had been replaced. The courts which represent the seat of justice and fair play, the institution where arbitrariness and tyranny may be checked and controlled, had been transformed by the new administration," it faced a successful action for the offence of scandalising the court. It is a moot point whether this was, in fact, a statement in support of judicial independence.

The Malaysian Supreme Court has gone even further and cast its vote against even temperate criticism. In *Attorney General and Others v. Lee* (1987) LRC (Crim) 580 Mal SC, it has gone as far as to hold: "For the present, except possibly – and we say this with great reservation – for the limited purpose of proving it in actual court proceedings, any allegation of injustice or bias, however couched in respectful words and even if expressed in temperate language, cannot be tolerated, particularly when such allegation is made for the purpose of influencing or exerting pressure upon the court in the exercise of its judicial functions."

With this, the Malaysian Supreme Court not only determined that even temperate criticisms are not protected if these are motivated by intent to influence the court, but, more dangerously, ruled that intent can be found by reading into what the court referred to as "implicit threats". Development of jurisprudence where implicit threats are read into the written word, and even temperate criticism is outlawed on that basis, confirm that the offence of scandalising the court continues to gain hazardous new ground.

Beyond 'public confidence', the quest for deference

In a startling decision, the Indian Supreme Court in *Sanjiv Datta & Ors*, (1995) 3 SCR, not only relied on the erosion of public confidence in the judiciary argument to justify restricting free speech but also argued that the deference in which the judiciary is held must be equally safeguarded. In the Sanjiv Datta case, contempt proceedings were initiated against Sanjiv Datta, Deputy Secretary in the Ministry of Information and Broadcasting (MIB) of the Government of India, for filing an affidavit critical of the court's interlocutory order in a case where the Supreme Court had permitted a multinational broadcasting corporation to broadcast a cricket match by generating its own signals. Although the decision of the Supreme Court was complied with in letter and spirit by the MIB, Datta filed an affidavit expressing grievance at the court's decision to allow a foreign broadcasting company to generate its own signals in India. Datta's affidavit protested that the Supreme Court had "...erred in law by entertaining this petition and thereafter passing interim orders with undue haste... thereby causing irreparable damage to the respondents (MIB) by making a mockery of the established policy of the Government of India by permitting a foreign corporation to undertake broadcasting from India against the national interest and thereby undermining the sovereignty of the (nation)..." The Supreme Court promptly initiated contempt proceedings against Datta and he was served with a show cause notice asking him to explain why he should not be proceeded against for con-

tempt. In reply, Datta pleaded that he was "truly and sincerely sorry" and tendered an unconditional apology for such utterances.

The Supreme Court, however, was not forgiving. It reasoned that Datta's statements were "...a malicious attempt to cast aspersions on and attribute motives to the court." According to the court's deductive reasoning, "if such trends as are displayed in these proceedings by the contemner are allowed to go scot-free, there is a danger of the erosion of the deference to and confidence in the judicial system... and an invitation to anarchy." Datta was found guilty of contempt and was sentenced to pay a fine of Rs.2,000 and, in default, to undergo simple imprisonment for one week.

Although Datta's criticism is vigorous, the "invitation to anarchy" discovered by the Supreme Court in Datta's affidavit is beyond comprehension. Equally important, and here is perhaps the more troubling aspect, the court claimed that Datta's statements were eroding the "deference" in which the court is held. Thus the Supreme Court edged towards yet another standard under which freedom of expression would be chastened.

An unequivocal challenge to contempt

A more powerful challenge to the public confidence argument was advanced by Justice Amua Sekyi of the Supreme Court of Ghana who wrote the dissenting judgment in the *Republic v. Mensa Bonsu* case. In *Republic v. Mensa Bonsu*, a newspaper columnist, an editor and the printer/publisher were prosecuted for contempt of court for publishing a letter which accused a judge of making wrong attributions and changing orders that had earlier been dictated in open court. The majority of the Supreme Court of Ghana reasoned that "imputation of lack of impartiality by the judge and statements describing him as a liar and one guilty of criminal behaviour amounted to scurrilous abuse imputing improper motive...It was therefore contempt of the Supreme Court when scurrilous abuse was directed even at one member."

In contrast, Justice Sekyi of the Supreme Court of Ghana argued in his dissenting judgment in the *Mensa Bonsu* case that "courts must have regard to the right of every person to express himself freely and openly on all matters of public concern whether pertaining to the actions of the executive, the legislature or the judiciary. The ordinary laws of libel were the only check on any abuse of the right of free speech in circumstances such as these."

Joined by two judges, Justice Sekyi made three important points: first, that the judiciary should not demand immunity that is not accorded to the legislature or the executive; second, that any aggrieved judge has access to the ordinary laws of libel to prosecute defamatory speech, if the criticism is malicious and unjustified; third, that robust debate on matters of public interest must not be interpreted as efforts to obstruct the course of justice.

Cultural relativism holds back challenge to contempt

Unfortunately, even minority voices such as that of Justice Sekyi continue to be pushed back by judgments advancing anachronistic arguments of cultural relativism. In 1899, the Privy Council ruled in the case of *McLeod v. St Aubyn* that "committals for contempt of court by scandalising the court itself have become obsolete in this country. Courts are satisfied to leave to public opinion attacks or comments derogatory or scandalous to them. But it must be considered that in small colonies, consisting principally of coloured populations, the enforcement in proper cases of committal for contempt of court for attacks on the court may be absolutely necessary to preserve in such a community the dignity of and respect for the court."

Almost a hundred years later, in 1998, the Privy Council reiterated this opinion in its judgment in *Gilbert Ahnee v. D.P.P.*, in an appeal from the Supreme Court of Mauritius. After gingerly iterating that the offence of scandalising the court exists 'in principle' to maintain the public confidence in the judiciary, the Privy Council went on to consider whether such offence is reasonably justifiable in a democratic society. The Law Lords reasoned that "in England such proceedings are rare and none have been successfully brought for more than 60 years. But it is permissible to take into account that on a small island such as Mauritius the administration of justice is more vulnerable than in the United Kingdom. The need for the offence of scandalising the court is greater on a small island."

Advancing the 'public confidence' rationale to curb critical speech

The European Court of Human Rights, in a narrow 5-4 decision in the *Prager & Oberschlick* case, adopted the public confidence argument while upholding the charge of contempt. In 1997, however, the European Court re-adjusted the balance in favour of freedom of expression in the case of *De Haes & Gijsels v. Belgium*. In this case, De Haes and Gijsels had published articles accusing four Belgian judges of bias and had been prosecuted for contempt in Belgian courts. In this case the European Court ruled that "although Mr. De Haes' and Mr. Gijsels' comments were without doubt severely critical, they nevertheless appeared to be proportionate to the stir and indignation caused by the matters alleged in their articles. As to the journalists' polemical and even aggressive tone, which the court should not be taken to approve, it must be remembered that Article 10 protects not only the substance of the ideas or information expressed but also the form in which they are conveyed."

Why the Supreme Court must rethink Contempt while trying Roy

It is imperative that the *raison d'etre* for retaining the offence of scandalising the court be re-examined. It may be necessary to review how public confidence in the judiciary has fared outside the Commonwealth and in Europe. The U.S., where courts long abandoned traditional caveats to free speech, is a strong candidate for such comparative appraisal. The U.S. Supreme Court's views are eloquently expressed in the words of Justice Black who wrote for the majority in 1941: "The assumption that respect for the judiciary can be won by shielding judges from published criticism wrongly appraises the character of American public opinion. For it is a prized American privilege to speak one's mind, although not always with perfect good taste, on all public institutions. And an enforced silence, however limited solely in the name of preserving the dignity of the bench, would probably engender resentment, suspicion and contempt much more than it would enhance respect."

History has proved Justice Black right. Also, the way forward may well lie within the words of Justice Amua Sekyi who reasoned that "the courts must have regard to the right of every person to express himself freely and openly on all matters of public concern whether pertaining to the actions of the executive, the legislature or the judiciary." ■

■ COLUMN

A discredited Home Minister

L. K. Advani's record as Union Home Minister is studded not with achievements but with famous quotes.

A. G. NOORANI

DURING the course of the ongoing high-pitched election campaigning, one major factor that has been overlooked is the abysmal failure in governance on the part of the Bharatiya Janata Party. All its key figures in government have proved to be utterly incompetent. In effect, there have been two Ministers for External Affairs, one *de jure* and the other *de facto* – Jaswant Singh and Brajesh Mishra respectively. The latter is more powerful. Minister for Education (now called Human Resource Development) Murli Manohar Joshi detests liberal education. The egregious Kargil bungle apart, George Fernandes has singlehandedly impaired the morale of the defence forces and politicised a few of their leading officers. Prime Minister Atal Behari Vajpayee is personally responsible for the misgovernance.

He is, however, not morally culpable – though he is constitutionally responsible – for the ignominious fall of his erstwhile rival, Lal Kishan Advani, Union Home Minister. Even those who despised Advani's communal outlook and immoral Ayodhya campaign fondly imagined that he would, at least, be a competent administrator. They did not know his record of incompetence as Minister for Information and Broadcasting during the period 1977-1979.

It used to be said that a press interview is an encounter in which the interviewer exploited the garrulousness of the politician and the politician took advantage of the ignorance of his interlocutor. Hardly anything is written on an encounter of graver consequence fraught with mutual deception. Every politician of moderate literacy, sociability and accessibility gathers around him an admiring crowd comprising journalists, academics, other professionals and even some who pass as "intellectuals". They delude him into believing that he is capable of great deeds. But, not before he has entrapped them into believing that he has the capacity and equipment for such tasks. Advani was both victim and perpetrator in this beguiling exercise from which both sides have emerged looking ridiculous.

The last hectic 18 months since he became Home Minister on March 19, 1998, provided him ample opportunity for proving his mettle and for demonstrating that he can perform better than the Home Ministers he had been attacking for the last three decades. But he lies before us a discredited figure; dreams shattered, incompetence exposed. He had told us repeatedly (December 3, 1989; February 24, 1991; June 18, 1991 and July 1992) that the BJP (that is, under his presidentship) owed its meteoric rise "from two seats in Parliament in 1985" to its Ayodhya campaign. Where lies that campaign today? The BJP is compelled to redouble its deception: assure the RSS, the VHP and the Bajrang Dal that it has not abandoned the Ram temple, and assure its allies and the nation at large that it has (see the writer's "BJP's real agenda", *Frontline*, September 24, 1999).

On September 12, 1998, shortly after he had endorsed the National Agenda for Governance on March 18, he told party workers in New Delhi: "We have taken up those components that are acceptable to all the allies. We will wait for the remaining components to be accepted... those who taunt us by saying that we have dropped the core issues, introducing a uniform civil code, abrogating Article 370 and Ayodhya, are *obviously* wrong." And, this from one who believes that "for a coalition to function and to endure, then there has to be a *dominant* partner in the coalition." (*Sunday*, November 2, 1997). None more pitiable than those willing to be deceived.

In the coalition Advani aspired to be the overbearing understudy to his Prime Minister, the one who ran the show. Having waded through blood on the route of the rath yatra in 1990, strewn with corpses of victims of the communal riots it caused, and secured the demolition of the Babri mosque in 1992, he discovered that the "achievement" robbed him of his only plank. At the Mumbai session of the BJP National Executive in November 1995 he accepted the obvious – his lack of acceptability and credibility. So Vajpayee, he declared, will be Prime Minister, not he. Understandably, he expected reciprocity. Astute as he is, Vajpayee knew he did not owe his presumptuous benefactor much.

Now Advani as Home Minister is neither the driving force behind the Vajpayee government nor a respected Home Minister. On every count he has proved a failure – controlling the militancy in Kashmir, curbing the Inter-Services Intelligence (ISI), handling non-BJP States, and, of course, the communal situation. Like the ineffectual, loud-mouthed John Foster Dulles, Advani's record as Home Minister is

C. RATHEESH KUMAR

studded not with achievements but with famous quotes.

Remember the one after Pokhran-II? It caused no end of trouble. But it reflected his utter ignorance of foreign affairs. India's status as a nuclear weapons state, he said in New Delhi on May 18, 1998, had brought about "a qualitative new stage in Indo-Pakistan relations, particularly in finding a lasting solution to the Kashmir problem." This was based on the assessment that Pakistan would acquiesce in the new situation. Instead, it retaliated with its own bangs at Chagai, and the international community listed Kashmir among the demands it made of India.

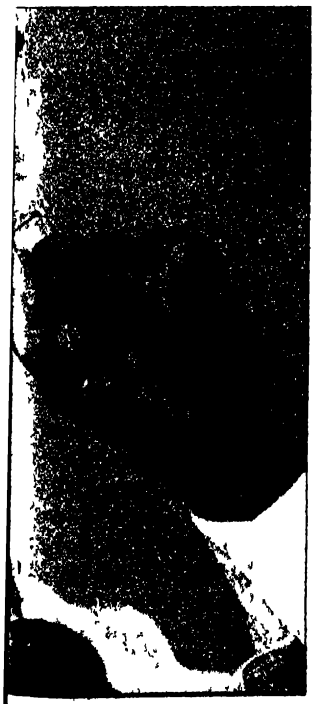
Advani also made a pledge: "Our policy has to be pro-active, and we cannot restrict ourselves to reactive measures" against the militants in Kashmir. He did not rule out the possibility that the pro-active steps would include their "hot pursuit" by Indian forces across the Line of Control. An action plan was to be formulated by a task force, he said. The result? The situation there is far worse today than it was before he became Home Minister.

Advani was evidently given a tutorial about the realities. For shortly thereafter, he *ruled out* hot pursuit (*The Indian Express*; July 1, 1996) Amazingly, he asserted that "over the past two years the situation has been improving."

On November 16, 1998 he made a precise pledge: Pakistan's "ISI has spread its tentacles throughout the country but the previous governments did not do anything at all. We will now present a White Paper on the ISI during the winter session of Parliament". Ten months have elapsed; the White Paper is nowhere in sight.

ADVANI dilated at length on a case that aroused national concern. He said he had asked the Central Bureau of Investigation (CBI) to conduct a thorough probe into the links Romesh Sharma had with politicians, bureaucrats and police officers. "The previous governments knew about Romesh Sharma's activities but he was not prosecuted even once. Earlier Romesh Sharma used to think that nobody would touch him because he had links *with those who governed the country*. He forgot that Atal Behari Vajpayee's Government was not like the previous ones." Advani was in full spate. He added: "Everybody was aware of his (Romesh Sharma's) links with Dawood Ibrahim who triggered off bomb blasts in India sitting in Dubai, but no action was taken against him."

The country is no wiser today about those links than it was earlier. Romesh Sharma's arrest and imprisonment were not due to any vigilance on the part of the government but, fortuitously, to a person who claimed to have been wronged. Where is the exposure of his links?



There was around that time another case that competed with this for the headlines. It concerned a senior official of Reliance Industries Limited, V. Balasubramaniam, against whom a case of violation of the Official Secrets Act had been registered by the CBI. He was not arrested, though. Replying to criticism, Advani said: "In these matters, it is the officials actually dealing with the issue who decide what is the best course of action." (In earlier such cases arrests *had* been made.)

By then the veneer had peeled off. The best expose came from Harish Khare in *The Hindu* (November 27, 1998). It bears quotation in extenso:

"Did the Vajpayee Government bite more than it could chew when raids were conducted on November 19 on the offices of the Reliance Industries Limited 'in connection with a case registered under the Official Secrets Act in Delhi against a company official, Mr. Balasubramaniam?' It would appear so, judging by the inexplicable eagerness of both the Prime Minister and the Union Home Minister to give a clean chit to the Reliance Industries. Admittedly no government – and certainly not a beleaguered regime even if it includes self-proclaimed '*deshbakhta*' – can easily afford to annoy a powerful corporate group.

"Yesterday in Lucknow, the Prime Minister chose to comment on a case which is under investigation. Mr. Vajpayee was reported to have declared: 'no incriminating documents were found in the CBI raid'. The Home Minister, who fancies himself as Sardar Patel and wants to restore the efficacy of the Indian state, has gone to the extent of suggesting that the entire Official Secrets Act needs to be scrapped. He also pooh-poohed the excitement over the possibility of corporate criminality; he insisted on camera that 'it was a routine inquiry'. Was he trying to send a public message to the investigator to lay off?"

It is nearly a year since Advani said, on October 4, 1998, that some progress has been made in identifying those who had received kickbacks in the Bofors case. The last tranche of the papers is expected shortly, but there is little sign of investigations in India itself.

On every count the Home Minister has proved a failure – controlling the militancy in Kashmir, curbing the Inter-Services Intelligence, handling non-BJP States, and, of course, the communal situation.

LIKE the other accused, Advani is within his rights in asserting that the charges against him in the hawala case were not proved. It is, however, only fair to recall the remark made by his party colleague and lawyer, Arun Jaitley, in Calcutta on September 16, 1998, during *The Statesman*'s annual debate. "The accused in the Jain Hawala Case were let off not by the judiciary but by the investigative agencies which did not do a good job" (*The Statesman*, September 17, 1998).

What was the first task that Advani took up after he became Home Minister? It was to make good his pledge to the All-India Anna Dravida Munnetra Kazhagam (AIADMK) leader, Jayalalitha. He had personally forged the BJP-AIADMK pact with her in Chennai on December 17, 1997. Only two days earlier on December 15, 1997, Justice Y. Venkatachalam of the Madras High Court had passed severe strictures against her in the case relating to the disinvestment of shares of the Tamil Nadu

C RATHEESH KUMAR

Advani's crass incompetence as an administrator is coupled with a brazenly communal attitude... He has consistently turned a blind eye to the misdeeds of his Parivar in the States.

Industrial Development Corporation (TIDCO) in the Southern Petrochemical Industries Corporation (SPIC). The Judge found "clear abuse of office" as Chief Minister.

Jayalalitha's intense wrath against Advani personally is explicable only if he had promised then to oust the Dravida Munnetra Kazhagam (DMK) Government and ratted on it. The pledge *was* made; undoubtedly and immorally. Contrary to her perception, an effort was also made, undoubtedly and immorally, to fulfil it. The Supreme Court's judgment in the *Bommai* case, the national mood and the adroitness of the Chief Minister, M. Karunanidhi, foiled it. But Advani *did* try, less than a month after he became the Home Minister. A team of Union Home Ministry officials came down to Chennai. Their leader, Special Secretary Ashok Kumar, found the law and order situation to be satisfactory and said as much. He earned Advani's "displeasure" (*The Hindu*, April 18, 1998). Till they split, the BJP did everything to help her escape accountability to the courts of law. It stooped low to depths unfathomed even during the Indira Gandhi era.

A similar attempt was made in Bihar. In April 1998, S. S. Bhandari, a BJP stalwart, was appointed Governor of a non-BJP ruled State, flouting the recommendations of the Sarkaria Commission Report. His task was obvious – topple the Rabri Devi Government. He freely gave interviews denouncing it. On September 22, 1998, the BJP Government advised K. R. Narayanan to impose President's Rule in Bihar, under Article 356 of the Constitution. The President asked it on September 25 to reconsider the advice. The advice was renewed five months later, unconstitutionally. The President signed the Proclamation on February 12, 1999. It had to be withdrawn because there was no hope of its endorsement by the Rajya Sabha. Small wonder that at the Inter-State Council meeting, on January 22, 1999, Advani spoke the way Indira Gandhi's Home Ministers did on the States' autonomy. But there was a sequel to it. Without waiting to see how his move fared in the Rajya Sabha, Advani shot his mouth off. He said publicly on February 16, 1999 that Bihar needed "a non-political dispensation backed by merit and experience". This was worse than a gross indiscretion. It was graceful to use another man to do a dirty job for him and discard him once the job was over. No man with a modicum of the culture of administration, let alone decency, would have behaved thus. He would have waited and transferred the Governor gracefully.

SUCH crass incompetence as an administrator is coupled with a brazenly communal attitude. On January 16, 1999 Advani went out of his way to assert that more than 70 per cent of private foreign donations in the previous three months were for Christian missionaries. There was no occasion for this off-the-cuff remark to presspersons at the Varanasi airport. Given the outrages that had been perpetrated against Christians since the BJP came to power, it was an incendiary remark. On January 20, he got the Home Ministry to issue a formal statement in his support.

On February 14, the Chairman of the National Commission for Minorities, Tahir Mahmood, recalled: "It is common knowledge that the VHP is getting billions of rupees from outside." It became known in March that on January 4, 1999 the Rules under the Foreign Contribution Regulation Act, 1976, had been quietly amended to make it obligatory for religious bodies accepting foreign funds to state their religious identity (Seema Mustafa in *The Asian Age*, March 13). The Act is implemented by the Home Ministry.

Advani has consistently turned a blind eye to the misdeeds of his Parivar in the States. On August 2, 1998, he asserted in Baroda that "there is no law and order problem in Gujarat". Three days later, Director-General of Police C. P. Singh said that there was. On October 8, the DGP said that VHP and Bajrang Dal activists "were taking the law into their own hands, which posed a serious danger to peace in Gujarat."

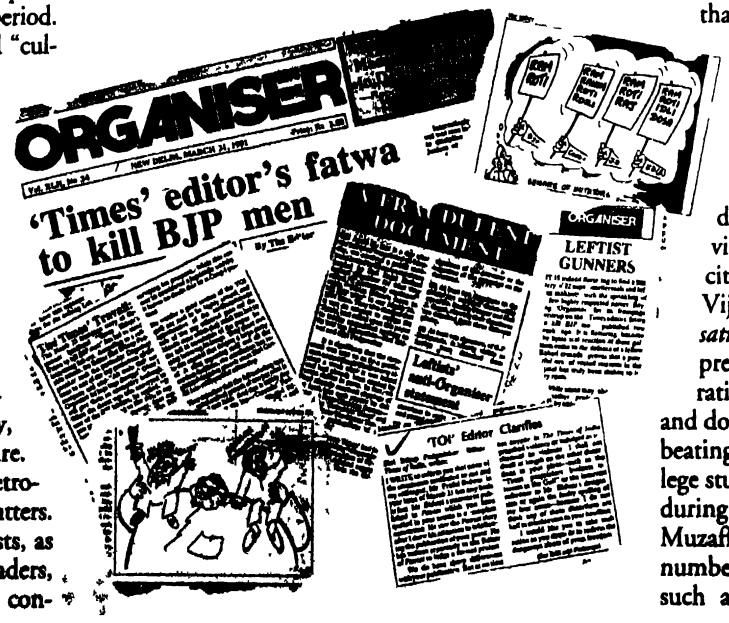
Advani upheld the "prerogative" of the Maharashtra Government to reject the Srikrishna Commission Report on the Mumbai riots (August 9, 1998). He had not read it though (September 20, 1998). On December 16 he said that the film *Fire* did not "suit our culture", adding, "I have *not* seen the film. I wonder why those films are made." There is no dearth of "intellectuals" who enthusiastically certify to the man's breadth of outlook, wide reading and urbane culture.

The Archbishop of Delhi, Alan de Lastic, said on November 22, 1998 that attacks on Christians had increased "ever since this government came to power at the Centre". For this the Home Minister is primarily responsible. Advani has exposed the country to international opprobrium as no Home Minister ever did before. Witness the U.S. State Department's Report on religious intolerance in India (see separate story). He went down to Mumbai on January 22, 1999 to buy peace ("for this year only") with Bal Thackeray, the Shiv Sena boss, incredibly with a joint statement after the summit. Why? So that the Sena goons did not disrupt cricket tournaments. Advani's clean chit to the Bajrang Dal on the Staines murders on January 25 was not vindicated by the Wadhwa Report. The evidence cited in that document discredits both the Report and the Commission as well as Advani. His remark, "I have known these organisations for a long time and they do not have criminal elements", will haunt him for the rest of his career. Its decline has set in unmistakably, inexorably. ■

The Sangh School of Falsification

Whenever the Sangh Parivar is criticised for its sectarian intolerance and bigotry on the basis of facts, it resorts to slander and personal attack. Its treatment of *Communalism Combat* is the latest example.

■
BEYOND THE OBVIOUS



PRAFUL BIDWAI
■

HOWEVER one assesses Atal Behari Vajpayee's record – and this column admittedly takes a dim view – it is undeniable that the Bharatiya Janata Party is pursuing a much larger agenda than what is contained in the National Democratic Alliance's (NDA) shoddily drafted, slogan-oriented, manifesto, "For a Proud, Prosperous India". As its own leaders have unabashedly said, the BJP is guided by a certain vision of India, which goes far, far beyond this or that policy or programme, this or that tactic or manoeuvre. This vision encompasses more than the mandir-Article 370-uniform civil code "trishul", which the BJP says it has for the time being put in abeyance, but which it also keeps raking up. Rashtriya Swayamsevak Sangh (RSS) chieftain Rajendra Singh is the latest to revive the nasty demand that Muslims should hand over the Ayodhya, Mathura and Kashi "temples" to Hindus. Parivar leaders have been raising these issues throughout the past month.

The RSS-BJP vision, with its unique coherence, is that of a primarily Hindu India, resurgent after centuries of "foreign domination", an India fiercely nationalistic, strong, in keeping with a tradition going back, according to its upholders, all the way to the vedic period. Whether this vision is called "cultural nationalism", civilisational patriotism, or plain Hindutva, it radically differs from our liberal, secular, pluralist Constitution. Its emphasis on hierarchical Hinduism, and on a puritanical interpretation of its texts, provokes understandable fears about Hindutva attitudes to issues relating to Dalits, adivasis, women, family, education, morality, knowledge, science and culture. After all, *sanatanism* has retrograde positions on all these matters.

No wonder social activists, as distinct from political leaders, have voiced such fears and concerns and often warned the larger public of the Hindutva menace and associated politics. The latest example of such a civil society or non-governmental initiative is the public education campaign launched by *Communalism Combat*, a Mumbai-based magazine, in the form of a series of 10 newspaper advertisements. These make a scathing critique of the BJP's claim to being "normal", tolerant or democratic. The campaign systematically demolishes a number of myths about Vajpayee, the RSS and the BJP. It cites unimpeachable facts – mostly their own quotes – to back its contentions. It ruthlessly exposes the BJP to be a party of bigots, male supremacists, rabid casteists, who are against non-Hindus, indeed against Hindus at the lower rungs of the social hierarchy. The BJP emerges as a party that is so cynical in pursuing power that it can communalise the armed forces. It lavishes undeserved concessions upon its cronies and is supremely indifferent to the masses. It is a threat to all that is healthy and valuable in Indian society.

The *Combat* campaign has been effective at least partly because it fights the BJP on the favourable terrain of the mainstream national media, with its predilection (for the most part) for soft Hindutva, and its fear of attacking the BJP, especially after it has bestowed such favours as FM radio channels upon it, and used questionable methods to pressure it. *Combat* does not hide the fact that the space bought is "sponsored", presumably by anti-BJP political and business interests. Such sponsorship may not be to everybody's taste: many non-governmental organisations would hesitate to accept it. But few would deny that the campaign has bite: Rajendra Singh could not have relished being reminded that he called Gandhi-assassin Godse's intentions "good", and "motivated by the idea of Akhand Bharat". Nor can Vajpayee deny that he said "the Sangh is my soul" and that he wrote to the colonial government denying that he played an active role in the 1942 Quit India Movement.

Combat is especially devastating on the Sangh's vile anti-women attitudes. It cites BJP vice-president Vijayaraje Scindia's defence of *sati* (1987), Mahila Morcha president Mridula Sinha's rationalisation of wife-beating and dowry (1983), and the recent beating up of an 18-year-old college student for raising a question during a Vajpayee rally in Muzaffarnagar. *Combat* involved a number of women's organisations, such as the Forum against the

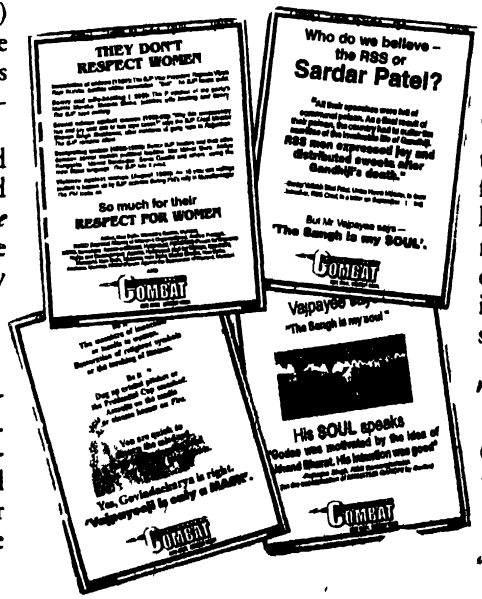
Oppression of Women, Manushi, Kali for Women, Ankur and Women's Centre's (Bombay) in this campaign.

The *Combat* advertisements have stung the Parivar hard. But rather than factually disprove its well-substantiated charges, the Parivar has, characteristically, launched a personal, *ad hominem* attack on *Combat Communalism*'s editors and Admiral Vishnu Bhagwat who, it claims, is on the board of directors of the magazine. The RSS mouthpiece, *Panchajanya*, (September 12) carries vividly captioned "interviews" with, or quotations from, senior journalists like *The Indian Express*' Shekhar Gupta, and *The Times of India*'s Dileep Padgaonkar, to create the semblance that they agree with the Sangh Parivar's tendentious charges against *Combat*. On close examination, it turns out that unlike hardline *sanghis*, for example, Chandan Mitra, Kanchan Gupta, and N.K. Trikha, these journalists have refused to comment on the advertisements.

Panchajanya fails to answer even one of *Combat*'s 20-odd charges in its two-page feature, but instead maliciously says that the magazine is financed by shady interests. It questions *Combats*' credentials: an organisation "without address", and so on. But this is hardly more relevant than the provenance of the Parivar's own finances, some of which remain mired either in mystery or in North America. *Panchajanya*'s profile of *Communalism Combat* and its parent, Sabrang Communications, is that they are dark, semi-secret, "anti-Hindu" and "anti-national" organisations devoted to destroying communal harmony, and hence deserving of attack. (Such profiles have been used in the past to provoke Parivar fanatics into attack or abuse.) Remarkably, it is joined in this by the Samata Party's Jaya Jaitley, who adds her own anti-Bhagwat angle to the slander.

Now, *Combat* editors Javed Anand and Teesta Setalvad are both seasoned journalists. Anand was a staffer with *The Observer* group, and Setalvad broke one infamous story about the Bombay police's partisan role during the January 1993 riots, publishing transcripts of a conversation in which an officer asks his men not to rescue Muslims from a devastating fire started by the Shiv Sena. According to them, the *Panchajanya* feature is substantially wrong. Admiral Bhagwat is not a director of *Combat* or Sabrang. And the *Combat* motto is "Hate Hurts, Harmony Works".

VILIFICATION of secularists, based on wilful falsification, is an old, well-rehearsed, parivar tactic. It has repeatedly used it in its desperate attempts to muzzle and malign individuals. I speak from personal experience too. *Organiser* and *Panchajanya* have repeatedly attacked me. An example of this Sangh School of Falsification is their campaign in 1991, at the height of the Ram Janmabhoomi movement, when I was a Senior Editor with *The Times of India*. On February 9 that year, I participated in a panel discussion organised by a small cultural organisation, Jana Sanskriti, in New Delhi, along with Professor K.N. Panikkar, Gyanendra Pandey and C.P. Bhambri, and Justice P. Subramaniam Poti.



I sharply criticised the anti-Babri mosque campaign as majoritarian, hate-driven and against the very foundations of India's secular-democratic-constitutional order. I said its leaders must be dealt with firmly in accordance with the law and prevented from spreading hatred. Several newspapers reported my remarks. *Patriot* distorted them, its reporter adding his own twist that Parivar leaders must be "disciplined to the point of being killed". *Organiser* seized on this, and, without checking with me or Jana Sanskriti, flashed the front-page headline: "*Times* editor's *fatwa* to kill BJP men."

The story falsely linked the then *Times* editor Dileep Padgaonkar (alleging he too had "railed against" the *Organiser* on television) to the panel discussion and baselessly alleged that this was part of a larger plot: "Observers wonder whether the messianic zeal of the *Times* men is goaded... by their... proprietors' business interests in the Gulf countries and Pakistan..." It accused me of having "taken to public forums to preach murder against BJP 'obscurantists'...(and demanding) that BJP should be prevented from contesting elections..." This was a pure fabrication. The *Organiser* also equated secularists with "Islamic fundamentalists".

I was appalled. I published a clarification in *Patriot* on April 3, carried without comment or rebuttal. Padgaonkar sent a letter to *Organiser* refuting the malicious allegations against himself and me, which the journal published with a vile editorial "Leftist Gunners", which further compounded its error. It refused to publish a clarification from Prof. Panikkar and Justice Poti. Meanwhile, a number of scholars and writers launched a signature drive. It said the *Organiser*'s attacks are "irresponsible and odious", and reminiscent of "witchhunts and campaigns of character assassination" aimed at muzzling "critical voices". "Distressingly, Mr. Bidwai and others have received several physical threats and abusive calls too. No one who claims to believe in democracy and freedom of expression can condone such intimidation," it said.

The letter was signed by eminent persons, including Romila Thapar, Rajni Kothari, S. Gopal, Bipan Chandra, Prabhat Patnaik, L.C. Jain, Justice V.R. Krishna Iyer, Swami Agnivesh, and Bhisham Sahni, Anil Agarwal, Lotika Sarkar, Madhu Kishwar, Habib Tanveer, Vivan Sundaram, and several other teachers and citizens. Instead of publishing it and apologising, *Organiser* maliciously claimed that the letter was "a fraudulent document" and a "forgery" – merely because the copy sent to it had some overlapping signatures, common in repeatedly photocopied circular letters.

This was exasperating. A manufactured story was published to malign someone. When 22 people of eminence protest against it, the letter is declared a "forgery". This would put to shame even the likes of Goebbels. Against such falsification, there is no defence – barring perhaps a prolonged criminal case. Such methods bear testimony to the fanaticism of the Parivar, and its paranoia about independently minded mediapersons and secular scholars.

THERE is a special edge to the calumny being hurled at *Communalism Combat* today. The BJP is no longer sure that it can pull off a victory in the elections. Its twin tactic of exploiting Kargil and attacking Sonia Gandhi on the issue of "foreign origins" has not worked. The party

is only left with the rather shop-worn appeal of Vajpayee's "image" which is confined to the upper middle class, which does not count much for numbers. Campaigns like *Combat*'s undermine even that appeal. They carry special weight because they are not directly launched by the BJP's party-political opponents.

The BJP has a huge stake in the present election. If it performs worse than it did last year, with say 20 to 40 seats less, its claim to lead the NDA decisively and hegemonically will be weakened. It is no good if the NDA does better than in 1998. To call the shots, the BJP itself has to do better. Anything less would give it the image of a declining force – no longer unstoppable in its decade-long "forward march". Parties like the BJP need the upbeat image for the "bandwagon" effect: many people vote for extreme right-wing forces because they are in the ascendant. If this changes, the BJP stands to lose more than just seats.

No wonder the BJP's campaign is a full-throttle, maximalist, no-holds-barred one. It is leaving nothing to chance. Unlike the Congress, which for a while fumbled, and made many tactical mistakes, the BJP has conducted itself in a planned, organised, purposive, manner. It can accept failure – indeed anything other than a big victory – only with the greatest of difficulty and with the least grace. What is on test is not only the party's appeal, but its will to power.

That is precisely why the BJP has polarised the political situation, packing educational institutions, breaching electoral norms, shamelessly trying to politicise the armed forces, and resorting to slander. In some respects, it has followed a political scorched-earth policy, doing many things on the assumption that it might not return to power. The BJP's legacy translates into a terrible choice for its successor, which will be called upon to dismantle the damage that the communalists have done – in ways that (wrongly) look like replicating the same methods. This culture of confrontation is not exactly what India needs, but there may be no alternative to it if Hindutva's soldiers battle on in their utterly unscrupulous ways.

The choice that confronts the Indian voter is in some ways simple, even stark: either a politics based on paranoia, calumny, half-truths and lies – necessary to sustain a hateful exclusivism – , or an inclusive, pluralist, secular and democratic politics that believes in healing social rifts, in caring and sharing, in building a humane future for our people. ■

Women in Indian politics

Women are as ever underrepresented in the election fray and in party structures, but in many ways, most of them qualitative, they have never been as important as they are today.

■ PREOCCUPATIONS

JAYATI GHOSH

■

IT is scarcely news that women are underrepresented in Indian politics. The issue has come sharply into focus for some years now, partly because of the thwarted moves towards providing one-third reservation for women in legislative bodies including Parliament, along with the more successful moves to enforce such reservation in elections to rural panchayats. Of course such an issue naturally becomes more apparent during a period of elections as well.

What has emerged quite clearly in the current very long drawn out election process is how little has changed at one level since Independence. The candidates fielded by the various political parties are still dominantly male: women account for only five to ten per cent of all candidates across parties and regions. This is the same broad pattern that has been observed in virtually the 12 previous general elections in the country.

This is the case despite the hullabaloo made over the Constitution (84th Amendment) Bill relating to women's reservation even last year. The very parties that were most explicitly in favour of pushing for such reservation have put up the same proportion of women as always, and certainly not more than other parties that had opposed the Bill. The Congress party, led by a woman and supposedly pushing for reservation for women, has only 10 per cent of women among the candidates announced so far. For the BJP the proportion of women candidates is even lower at 7 per cent. Even in the case of the Communist Party of India (Marxist), only 7 per cent of the candidates are women.

What may be more significant in terms of political power than the proportion of women fighting the Lok Sabha polls is the importance of women in inner party structures. Here women are by and large even less represented, in all parties. Only in the All India Anna Dravida Munnetra Kazhagam (AIADMK) has there been a conscious move to bring many more women into decision-making levels and posts within the party.

In most parties, the women members are by and large thin on the ground if not invisible in the actual decision-making bodies and rarely influence the more significant party policies. Most often, indeed, they are relegated to the "women's wing" of the party, and made to concentrate on what are seen as specifically "women's issues" such as dowry and rape cases, and occasionally on more general concerns like price rise which are seen to

THE GENDER BIAS

The evolution of Indian democracy over the twelve Lok Sabha elections has witnessed a very slow improvement in the proportion of women representatives in Parliament.

General Election	Year	Total no. of seats	
First	1952	499	
Second	1957	500	
Third	1962	503	
Fourth	1967	523	
Fifth	1971	521	
Sixth	1977	544	19
Seventh	1980	544	28
Eighth	1984	544	44
Ninth	1989	517	27
Tenth	1991	544	39
Eleventh	1996	544	40*
Twelfth	1998	543	43

affect especially "housewives".

Despite all this, only the foolhardy would suggest that women are unimportant in Indian politics today. In many ways, most of them qualitative, they have never been as important as they are today. This is most evident in the proliferation of women leaders and in the fact that, even though some of them may head parties that are relatively small in the national context, they simply cannot be ignored.

THE GENDER ADVANTAGE

BACK TO THE BALLOT

Though the number of women candidates in the Parliamentary fray has risen very impressively, their success rate (% of contestants getting elected) has always been higher than that of the male aspirants.

Year	No. of seats available	Total no. of contestants	Male			Female		
			Contested	Elected	% winning	Contested	Elected	% winning
1952	489	1,874	--	--	--	--	--	--
1957	494	1,518	1,473	467	31.7	45	27	60.0
1962	494	1,985	1,915	459	24.0	70	35	50.0
1967	520	2,369	2,302	490	21.3	67	30	44.8
1971	520	2,784	2,698	499	18.5	86	21	24.4
1977	542	2,439	2,369	523	22.1	70	19	27.1
1980	542	4,620	4,478	514	11.5	142	28	19.7
1984	542	5,574	5,406	500	9.2	164	42	25.6

KBK Pellgraphics

WHAT is even more significant is that in many cases these women leaders have not emerged through the familiar South Asian paradigm of dynastic advantage. Sonia Gandhi, obviously, is a clear example of a dynastic leader, with an almost iconic relevance, but in fact in this respect she is in the minority among women leaders today. Thus, Jayalalitha and Mayawati may have originally based their rise in politics on their proximity to particular male leaders, but they are clearly now significant leaders in their own right, who can influence not only the decisions of their own parties but even the course of national politics. Mamata Banerjee, despite or indeed because of her controversial nature, is the leader of a party who can claim to have got where she is on her own, without male assistance in any of the more obvious ways.

Of course, one myth that is easily exploded by the role played by such women leaders is that political leadership by women is dramatically different from that by men. Nor is it necessarily more colourful, as some of the more extravagant male politicians like Laloo Prasad Yadav can establish.

Indeed, the truth is that most of our women political leaders are no better or worse than men, and in fact a bit of reflection would indicate that this is only to be expected. In fact, nor have women leaders been typically anxious to give greater representation to other women within their own organisations or in the political process generally. Of course, the most prominent woman to have been in post-Independence politics – Indira Gandhi – was an especially clear example of this.

Barring striking exceptions where dynastic charisma is seen to matter more than anything else – most women politicians have found it difficult to rise within party hierarchies, and have managed to achieve clear leadership only when they have effectively broken out and set up parties on their own.

BUT there is one interesting question that is thrown up by this relatively new development in Indian politics. What is it that makes the political system receptive to the emergence and even dominance of certain women leaders, even as it continues to suppress the voices of ordinary women as party workers and citizens? Why is it that in terms of qualitative impact and media prominence women leaders are suddenly up front as never before? Clearly, the answer is not to be found in any dilution of the male chauvinism which runs deep in Indian politics. If anything, the campaign process so far has indicated a resurgence of patriarchy which has been exploited by those arguing both in favour of and against particular women candidates. Thus, for example, men have castigated women candidates (and one in particular) for being no more than housewives and doing no more for the country than bearing children. Such remarks are breathtaking both in their ignorance of the many complex demands of household management, child-bearing and child-rearing, and in their implicit assumption that male public activities necessarily do a lot "for the country". But several women candidates have just as eagerly presented themselves as "*bahus*" or "*betis*", therefore relying quite as much on traditional patriarchal notions of femininity and what criteria make women fit for political life.

What does seem to be the case is that – barring striking exceptions where dynastic charisma is seen to matter more than anything else – most women politicians have found it difficult to rise within party hierarchies, and have managed to achieve clear leadership only when they have effectively broken out and set up parties on their own. Jayalalitha and Mamata Banerjee are clear examples of this, but there are other less well-known instances as well. Yet once these women become established as leaders, another peculiarly Indian characteristic seems to dominate – that is the unquestioning acceptance by the (largely male) party rank and file of the leader's decisions.

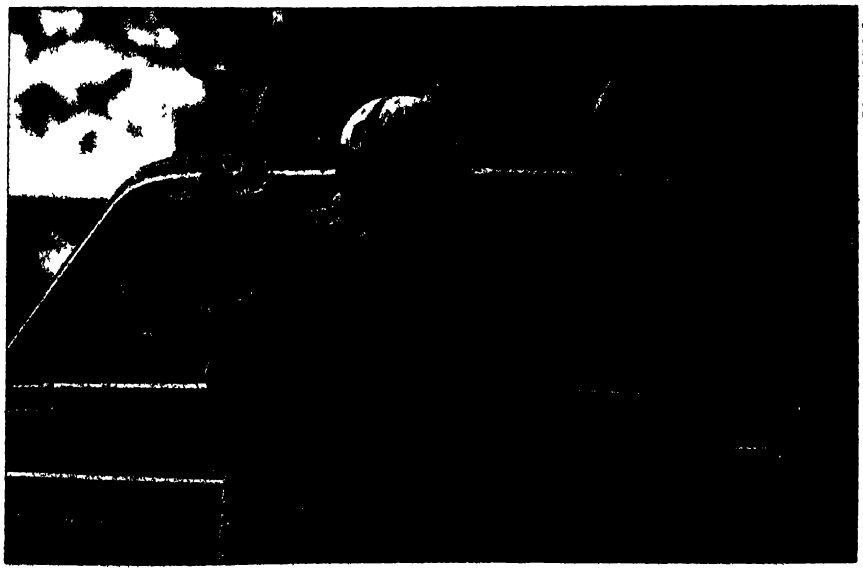
What all this suggests, therefore, is that the political empowerment of women not only still has a long way to go, but finally may not have all that much to do with the periodic carnivals of Indian electoral democracy. This is not to say that the electoral representation of women is unimportant, but rather that it needs to be both deeper and wider than its current manifestation in the form of the prominence of a few conspicuous women leaders. ■

Recording media trends

The 1999 National Readership Survey, which has made a foray into rural areas, offers insights into media-audience relations along class, linguistic and regional lines.

PRAVEEN SWAMI
in Mumbai

THE release of the 1999 National Readership Survey (NRS 99) has provided new insights into the changing character of India's media landscape. Based on surveys in 818 urban centres and 2,058 villages, NRS 99 provides a comprehensive account of the state of India's media. It is particularly significant for being the first comprehensive survey of rural newspaper readership and television audience size in the rural areas. Each week, NRS 99 says, the print media reaches 242 million Indians, television 329 million and radio 174 million. These enormous numbers, the survey suggests, represent a chain of growth, driven both by expanding literacy and improved living standards.



Broadly, NRS 99 shows that Indian newspapers and magazines have continued to grow in both urban and rural areas. Since 1997, when the last NRS report came out, the percentage of adults in India who read newspapers and magazines grew by four percentage points, from 45 to 49. Assuming a population of 620 million adults over the age of 15, as NRS 99 does, that means well over 25 million people have begun to read some newspaper or magazine for the first time in these two years. However, since NRS 97 based its readership figures entirely on urban residents, the real growth of print media audiences could in fact be larger than the data at first suggest. While 62 per cent of the 183 million Indians in urban areas read newspapers or magazines each week, NRS 99 records, only 29 per cent of the 437 million rural residents do so. This lower rural reach was not factored into NRS 97.

The number of adults who read a daily newspaper overall grew by one percentage point from 1997, reaching 42 per cent of all adults or some 260 million people. By contrast, evening papers, popular in urban centres, showed a decline in circulation. But the real growth in the print media was marked by magazines; many adult Indians took to reading a magazine for the first time. Magazine readers as a percentage of all adults rose from 25 per cent in 1997 to 28 per cent, which in absolute terms means there are some 174 million magazine readers today. The growth in magazine audiences was driven by news, general interest and subject-specific publications, while business magazines performed relatively poorly.

The largest publications in the country, true to the findings of earlier NRS surveys, are regional language publications, not their more high-profile English counterparts. Not a single English newspaper figures in the top 10 Indian newspapers (see table). The *Daily Thanthi* in Tamil comes out at the top of the NRS 99 list, followed closely by the *Dainik Jagaran* in Hindi, *Malayala Manorama* in Malayalam and the *Eenadu* in Telugu and the *Mathrubhumi* in Malayalam. The preponderance of publications from the south in the list illustrates the fact that high literacy rates drive circulation. Despite their huge potential audience, just three newspapers from the north figure in the top ten.

Exposure to television also grew more sharply through the period between NRS 97 and NRS 99. Some 69 million Indian homes, NRS 99 says, now have access to television and 276 million adults watch broadcasts in a typical week. In some senses, television has become the principal source of information and entertainment in most Indian homes. On a Sunday morning, an average Indian spends most of the three hours she or he has available for all kinds of media, watching television. NRS 99 data suggest that typically an average person spends 130 minutes watching television, 20 minutes reading newspapers and 30 minutes on magazines. Weekday figures are similar – 119 minutes a day for television, 23 minutes for newspapers, and 32 minutes for magazines.

Radio is the only major medium to have seen an erosion of its audience since 1997. Radio reached 29 per cent of adults in an average week in 1997. NRS 99 records that that figure has come down to 26 per cent. Given the growth of population, however, the audience size of 161 million may not represent a significant fall in absolute terms. The decline could possibly be linked to the growth of television in rural areas, with sections of the agrari-

PAUL NORONHA

A newspaper vendor at work. NRS 99 once again underlines the theory that growth in newspaper circulation has a close relationship with literacy levels.

an rich switching their allegiance to the new medium.

CINEMA, too, showed less than riveting results, despite some media hype about a renewed wave of blockbuster films. NRS 99 recorded that just 3 per cent of the adult population, both rural and urban, went to a cinema in an average week. Audience figures for cinema showed no increase from 1997. Internet usage has grown, but as yet only 1.4 million adults have access to it and they are concentrated mainly in the eight principal cities.

Did the large growth in television come at the expense of the print media? NRS 99 offers some interesting answers to this question. For one, it again underlines the argument that growth in newspaper and magazine circulations has a close relationship with literacy levels. In Kerala, a State with near-total literacy, 71 per cent read at least one newspaper or magazine. In Bihar, a State with just 45 per cent literacy, only 15 per cent of the population read newspapers or magazines. In urban Kerala, where 96 per cent of the adult population is literate, 80 per cent read publications, while in urban Maharashtra and Goa, where 84 per cent are literate, 53 per cent of the population read at least one newspaper or magazine. Growing literacy has clearly fuelled the growth of the print media.

But the presence of television makes the media picture more complex than it perhaps was a decade ago. Conventional wisdom has it that television caters to audiences in States where literacy levels are relatively low. But NRS 99 makes clear that that isn't the case. In Bihar, just 29 per cent of the adult population watches television. In Punjab, Haryana and Himachal Pradesh, where 67 per cent of adults are literate, just 27 per cent access a newspaper or magazine, just above the national average, while 69 per cent watch television, a good 16 percentage points above the national average. In Assam and other north-eastern States as also in West Bengal, higher than average literacy rates again do not translate into high reach for the print media.

In some States and areas, both high television viewership and print-media reach go together. In Tamil Nadu, an average family spends some 3.3 hours each day watching television, while in Uttar Pradesh, such a family does so for two hours. But Tamil Nadu's figures for the percentage of adults forming the newspaper and magazine reading public are almost twice those of Uttar Pradesh. NRS 99 suggests that States like Tamil Nadu, which have seen a proliferation of satellite television channels, have seen a less sharp growth in newspaper circulation than those like Uttar Pradesh, where the spread of satellite television has been less marked. But the mere proliferation of television choices clearly does not explain the growth of certain media platforms – or the absence of it.

NRS 99 thus makes at least two major points clear. The first is that the growth of television has been the most marked in the relatively affluent States, not in those with the lowest levels of literacy. In one sense, therefore, if the growth of the print media is literacy-driven, that of television is affluence-driven. This tells us not a little about the breakdown of India's public service broadcasting paradigm, where the creation of state television was legitimised on the basis of the claim that it would make the medium available to the illiterate rural poor. The second point is that television has not in any meaningful way emerged as a substitute for print media, in the sense that the proliferation of channels and increase in television audiences has not led to a reduction in the number of people reading newspapers and magazines.

The broad brush strokes of NRS 99 are made up of an enormous mosaic of local-level data, offering insights into the relationship of the media with audiences sharply differentiated along class, linguistic and regional lines.

The Top 10 Indian Newspapers.

Gujarat Samachar	4,875,000

Source: 1999 National Readership Survey

A wealth of further analysis based on the NRS 99 findings is certain to follow. As important as its findings, the report suggests that serious research on the structure of the Indian media is finally finding its feet. N. Murali, Chairman of the National Readership Studies Council, the parent body of the NRS, pointed out at the NRS 99 release in Mumbai on September 17 that such research has been painfully thin. Until the Advertising Agencies Association of India, the Audit Bureau of Circulation (ABC) and the Indian Newspaper Society revamped the NRS in 1994, there was little reliable data on who read newspapers or how many readers there were. "Research was seen as an expense", says ABC's Gautam Rakshit, "not as an investment."

NRS 95 and NRS 97 laid the foundations for this year's empirical treasure-trove. NRS 99 has several new features, among them sheer scale, spanning 192 newspapers and 265 magazines. Then, the survey has now gone six-monthly, with the next phase of NRS 99 being due by the end of this year. Two further NRS reports will be available by February 2001, enabling better trend analysis. The methodology used in the survey was also more rigorous than in the past, with three agencies, TN Sofre Mode, Indian Market Research Bureau (IMRB), and AC Nielsen cross-checking each other's fieldwork. NRS 99 is available on floppies and CD ROMs, and search engines have been developed to enable researchers to disaggregate easily media audiences by their economic status, for example, or their purchasing habits.

It is important that such research be carried out by serious students of the media, and not just agencies whose primary interests lie in the commercial realm. The broad brush strokes of NRS 99 are made up of an enormous mosaic of local-level data, offering insights into the relationship of the media with audiences sharply differentiated along class, linguistic and regional lines. "It's almost as if there are several countries within the country," says the head of NRS 99's Technical Committee, Ketaki Gupte. "The variations are enormous." NRS 99 contains a vast amount of information on just where the Indian mass media is headed. With its signal inclusion of data on the media's rural reach and character, the poverty of empirical material that researchers on the Indian media have long felt is at last starting to be addressed. ■

To beat the Y2K bug

Governments, corporates and small businesses the world over are scrambling to beat a millennial deadline and overcome the Year 2000 problem relating to computer systems. What is the state of preparedness of public sector undertakings in India?

ANUPAMA KATAKAM
in Bangalore

ITS timing is predictable right down to the microsecond, but the precise consequences of the 'millennium bug', the computer glitch that may cause non-compliant computers and networks worldwide to malfunction on January 1, 2000, are as yet hard to fathom. Paranoid prophesies about an apocalyptic end to the world and rather more real fears of financial meltdowns and a collapse of public utilities have forced governments and corporations the world over to scramble to fix the Year 2000 problem – or the Y2K bug, as it is known.

In India, the Department of Electronics is spearheading a "Good Morning 2000" campaign targeted at Indian corporates, public sector undertakings, small businesses and the self-employed and with the aim of making India "Y2K OK". The campaign warns that failure to fix the bug could cause "serious business disruptions" and offers a "Y2K infopack" and help in getting businesses Y2K compliant.

But with only some three months to go for the crunch date, what is the state of Y2K preparedness of Indian corporates, public sector undertakings and other businesses?

A few international Y2K rating agencies have sounded a warning about India's lack of Y2K preparedness; some of them have categorised India, China and Russia as "risk-prone areas". However, Union Electronics Secretary Ravindra Gupta dismissed such fears and claimed that India's preparedness was "almost complete". Gupta said that the Gartner Group, an internationally recognised Y2K certifying authority that has drawn up a five-level scale to measure Y2K preparedness (see box), had acknowledged that India had reached the fourth level.

A study by *Frontline* of the state of preparedness of a few large public sector undertakings (PSUs) in Bangalore shows that while all the companies studied are aware of the problem and have taken on projects with the aim of beating the millennial deadline and having systems in place to avert the anticipated glitches, awareness about the magnitude of the Y2K problem has not quite sunk in.

Most of the companies plan to have their Y2K-compliant systems in place by end-September or, at the latest, by end-October. This does not give them much time to verify the systems, but in the race to meet the deadline and save themselves from a meltdown, optimism reigns. The companies do not foresee any major catastrophe, and officials who are in charge of Y2K projects say that all computer-based systems will definitely be up and running even after December 31. But as D-day approaches, many of those fingers that have been tapping away lightly at keyboards in these undertakings are increasingly being kept crossed. Hope hopes to triumph over Y2K hype.

THE Y2K problem is expected to affect any computer or network which works with programs that have date-related functions. It arose because decades ago, when "digital real estate" was scarce and computer memory expensive, programmers who wished to save space on the punch cards that served as data-storage systems used just six digits to denote the date: two for the day, two for the month and two for the year. Thus, 1969 was denoted as "69". Unless these programs are altered to provide for four-digit dates, the year 2000 will be denoted as "00"; to a machine reading the data, therefore, 2000 is indistinguishable from 1900. Today, a computer that calculates the age of someone born in 1950 would subtract 50 from '99 and arrive at 49. In 2000 it would subtract 50 from '00 and arrive at

COURTESY ISRO

At the Master Control Facility of the Indian Space Research Organisation, near Hassan. ISRO declared Y2K compliance of all its computer-related systems on August 15, 1999. Not all public sector undertakings in Bangalore, however, have met the targeted deadlines for total compliance.

-50 – and assume that the person is not born yet!

Even a small problem in the system because of the date change could cause the whole computer system to crash or machines to malfunction. Apart from large networks, such as those used in the banking sector, which use dates for all transactions, date-related chips can be found embedded anywhere – in elevators, modems, fax machines and home personal computers. However, not every microprocessor or embedded device will be bitten by the Y2K bug. For example, Motorola processors use four digits to denote the year, and will therefore be untouched by the problem; the same is the case with Macintosh-based operating systems.

In India, several PSUs rely on computerised networks for their daily activities, and date-related applications are used in almost every section – manufacturing, maintenance, inventory control, supplies, payroll and personnel records. Be it banking, aviation, heavy machinery or sophisticated electronics, the public sector plays an important role and touches the lives of tens of thousands of people every day. "PSUs are the nervous system of India: if they collapse we will be paralysed," says Dewang Mehta, president, National Association of Software and Service Companies (NASSCOM), in a Y2K preparedness and status report published by the association recently. NASSCOM's report states that government departments and several public sector undertakings are still lacking in Y2K compliance preparations. However, Planning Commission member Montek Singh Ahluwalia, who heads a government-appointed, high-level Task Force that is reviewing the Y2K preparedness of several sectors, told newspersons recently that PSUs were better prepared than the private sector. The Task Force, which recently conducted a first round of in-depth reviews of 11 critical infrastructure sectors, reported that 90 per cent of the banking and financial sector was Y2K compliant.

At a national conference on "Preparing India to face Y2K", organised by the Confederation of Indian Industry (CII), it was announced that Y2K compliance would be attained by end-September in seven of the 11 infrastructure sectors identified by the government – space, aviation, banking and finance, railways, atomic energy, petroleum and insurance. The remaining sectors, including power, defence, ports and telecom, will be ready by October.

Information technology professionals who are working to remedy the Y2K problem in the PSUs that *Frontline* surveyed say that verification of the debugging process requires several months of laborious testing of computer code. In some cases the code is so old that the companies which programmed it may no longer exist, so software engineers have first to understand the program before testing it.

The inability to predict exactly what might go wrong has added to the concern triggered by the unseen, unpredictable "enemy". The most critical areas within the companies, these professionals say, have been able to rid themselves of the millennium bug; even so, most people will not know – until the dawn of the new millennium or perhaps even months into the new year – whether the Year 2000 problem will affect them or not.

Clearly, however, the PSUs are not taking any chances. Armed with contingency and back-up plans, the companies say they are better prepared than they were, say, three months ago. Yet there is the lurking fear that they have perhaps left things a little too late or that they have failed to account for all contingencies.

NASSCOM believes that lack of enough information on and complacency about the millennium bug are the major reasons for slow progress on the Y2K front; others say that paucity of funds and a shortage of human resources have made the task of compliance considerably more difficult.

Estimates for the cost of fixing the Y2K bug at the global level range from $50 billion to $600 billion. The National Informatics Centre (NIC), based in New Delhi, has projected that India will need a minimum of Rs.2,000 crores to combat the problem. NIC has asked government departments to direct PSUs to set apart at least 1-3 per cent of their budgets to find Y2K solutions and for contingency plans.

"It's not just the money we need; it's also the manpower," says Dr. S. Rangarajan, director of the INSAT Master Control Facility at the Indian Space Research Organisation (ISRO). "We have used almost 300 people for two months exclusively on our Year 2000 conversion projects."

ISRO, Bharat Electronics Limited (BEL), Hindustan Aeronautics Limited (HAL), ITI and Canara Bank were among the entities in Bangalore that *Frontline* surveyed. According to them, they are well prepared to face any eventuality that the millennium problem might bring. However, in the opinion of Prof. N. Balakrishna, director, SuperComputer Research Centre at the Indian Institute of Science, Bangalore, such a view reflects complacency and a failure to grasp the enormity of the problem.

"I don't think we realise the magnitude of the problem," says Balakrishna. He, however, concedes that because a large number of industries and institutions in India are not completely reliant on computers, the millennium bug might not affect them much. All the same, Rangarajan notes, "if we do not solve the problem completely, several big comput-

S. THANTHONI

At a branch of a nationalised bank in Chennai. Computer systems in banks use numerous date-related functions, and fears of an enormous crisis if the Year 2000 problem is not addressed have propelled the banking sector to make rapid progress in Y2K compliance.

er networks in the country could shut down and we could be facing a huge crisis."

ISRO has developed India's completely viable and self-reliant space programme. Having designed, built and launched satellites, ISRO has established the INSAT system, one of the largest domestic satellite systems in the world today. The National Stock Exchange, telecom networks, satellite television broadcasters, banks and corporate houses, meteorologists and disaster management systems are among those that depend on ISRO satellites on a daily basis.

Unlike many companies which woke up a trifle late to the problem and are struggling to meet the deadline, ISRO began its "campaign", as Rangarajan calls it, almost two years ago. "We took on the project on a war-footing," Rangarajan says. An apex body comprising a senior-level committee and review teams set guidelines, cleared a budget and enlisted technical support.

ISRO's network has almost 5,000 personal computers, 800 workstations and 300 embedded devices working with satellites, ground controls and launch vehicles, all of which could be affected. The critical areas which needed immediate attention, Rangarajan explains, were satellites, ground controls and launch vehicles. "We need to be able to send a command at the right time on a particular date and the satellite must be able to recognise it." Telephones and banking are among the critical services which may be affected if a satellite has a problem. ISRO went through the long and tedious process of checking operating systems, "walking through" lines and lines of source code and then taking an inventory of all machines that needed upgrading.

The machines used by the National Remote Sensing Agency (NRSA), systems at the Sriharikota launch-pad and all the networks across the country and in bases in Mauritius and Indonesia have been also extensively tested, Rangarajan says. Even now it may not be possible to predict what may happen, he adds, but each and every critical device and computer-based equipment has been tested, re-tested and certified Year 2000 compliant. By declaring compliancy on August 15, 1999, ISRO has met all its targeted deadlines.

IF ITI does not accelerate the pace of its Y2K compliance, a variety of utilities and services – from complicated telephone networks to systems that prepare regular bimonthly phone bills – could go haywire, if the bug is as bad as is made out to be. Earlier this year, an NIC report stated that the telecom industry was lagging behind on the Y2K front. ITI began bracing itself against the bug only early this year. It has as yet not completed the verification process, but officials say that the systems will be ready on time.

With a turnover of Rs.1,300 crores, ITI has contributed to the setting up of about 70 per cent of India's telecom infrastructure. Founded as a telecom manufacturing and research entity, ITI supplies digital switching systems, transmission equipment and microwave fibre optics, among other equipment, to the telecom industry. Out of India's total installed switching capacity of 2.60 crore lines, ITI has so far provided 1.91 crore lines. It also provides a variety of telecommunication services, including VSAT (Very Small Aperture Terminal) services, video conferencing and satellite communications.

According to ITI information systems executive director K.A. Seshu, the Department of Telecommunications (DoT) gave clear directives to achieve a level of compliancy. "Although we do not expect a catastrophe, we cannot leave anything to chance," Seshu says. "Several telecom networks across the country are dependent entirely on us for daily transmission. Besides, our own billing and accounting system is in jeopardy if we do not become compliant." He estimates that ITI has spent about Rs.1.5 crores in upgrading machines and carrying out internal and external audits.

ITI uses more than 1,000 personal computers, of which about 290 have been identified as being those involved in critical functions Some IBM mainframe and data processing computers are among the equipment that are yet to be made compliant, says Seshu. As part of the upgradation efforts, the OCB 283 exchange and the Alcatel E10B exchange were revamped, and mock runs (which were successful) were conducted, says Seshu.

Even though ITI appears to be dragging its feet over completing the Y2K-

The levels of preparedness

ANUPAMA KATAKAM

THE United States-based Gartner Group, an internationally recognised Y2K certifying authority, researches, analyses and conducts surveys for governments, enterprises and other organisations on the level of Year 2000 preparedness of their computer-related systems.

In a recently published world report that was presented to the U.S. Congress, the Gartner Group states that India has made significant progress in becoming Y2K compliant.

The Gartner scale, called COMPARE (COMpliance Progress And Readiness), is used in some areas in India to quantify the level of Y2K preparedness of industries.

The COMPARE scale has five levels of [illegible]

Level 1: Awareness – Enterprises begin [illegible] the necessity of deciding how [illegible]

[illegible] will have been [illegible] technology and [illegible] and determined [illegible]

[illegible]

resources committed – At this level, mission-critical systems will have been identified, remedial strategies will have been drawn up and needed resources committed.

Level 4: Operational sustainability – At this level, mission-critical technology has been remediated from Year 2000 risks.

Level 5: Fully compliant: At this level, all technology within the enterprise and within the business partners will have been made complaint.

According to the Gartner Group, not one industry at the global level has reached Level 5. Banking, telecommunications, insurance, aviation are among those sectors that have attained Level 4 compliance.

In India, the NASSCOM has adopted a similar rating scale. According to it, Level 2 indicates that extent of Y2K preparation is good, but that challenges remain. Level 3 indicates sufficient awareness, but which risk of business [illegible] Levels 1, 4 and 5 on [illegible] rating are similar to Gartner's.

According to Gartner, India is at Level 2 along with Israel, Japan and Singapore.

compliance verification process, contingency plans are in place. Under one such plan, ITI, along with Alcatel Modi Networks Ltd, will monitor an exchange each in Delhi, Bangalore, Mumbai and Calcutta for 72 hours beginning noon on December 31, 1999. Since Indian time is nearly four and a half hours ahead of French time, Alcatel of France will benefit from ITI's experiences of what happens when the date changes.

Such sharing of information is not uncommon. In fact, technology suppliers are expected to provide fixes for the products they have sold. They are legally bound to share with their customers solutions that they have found.

WITH the clock ticking away, officials at BEL are giving top priority to getting their systems Y2K ready. "It's very important that we become compliant because our machines are used in critical operations such as aviation," says H. Ramakrishna, chief scientist, Central Research Laboratory, BEL.

With an annual turnover of approximately Rs.1,400 crores, BEL is India's only manufacturer of radars, sensors, sonars and antennae equipment for defence surveillance requirements. The company also makes communication, lasers and display devices, and optical and night-vision devices for defence. Approximately 90 per cent of the equipment required by Doordarshan and All India Radio is made by BEL.

To combat the Y2K problem, an impact analysis was conducted, inventories were taken and equipment were classified on the basis of the degree of compliance. An external audit will be completed in September. According to Ramakrishna, contingency plans have also been prepared to meet the Y2K problem.

ACCORDING to the NIC report, the aviation sector is in the lead in testing its machines, components and systems for Y2K compliance. HAL is also targeting completion in September.

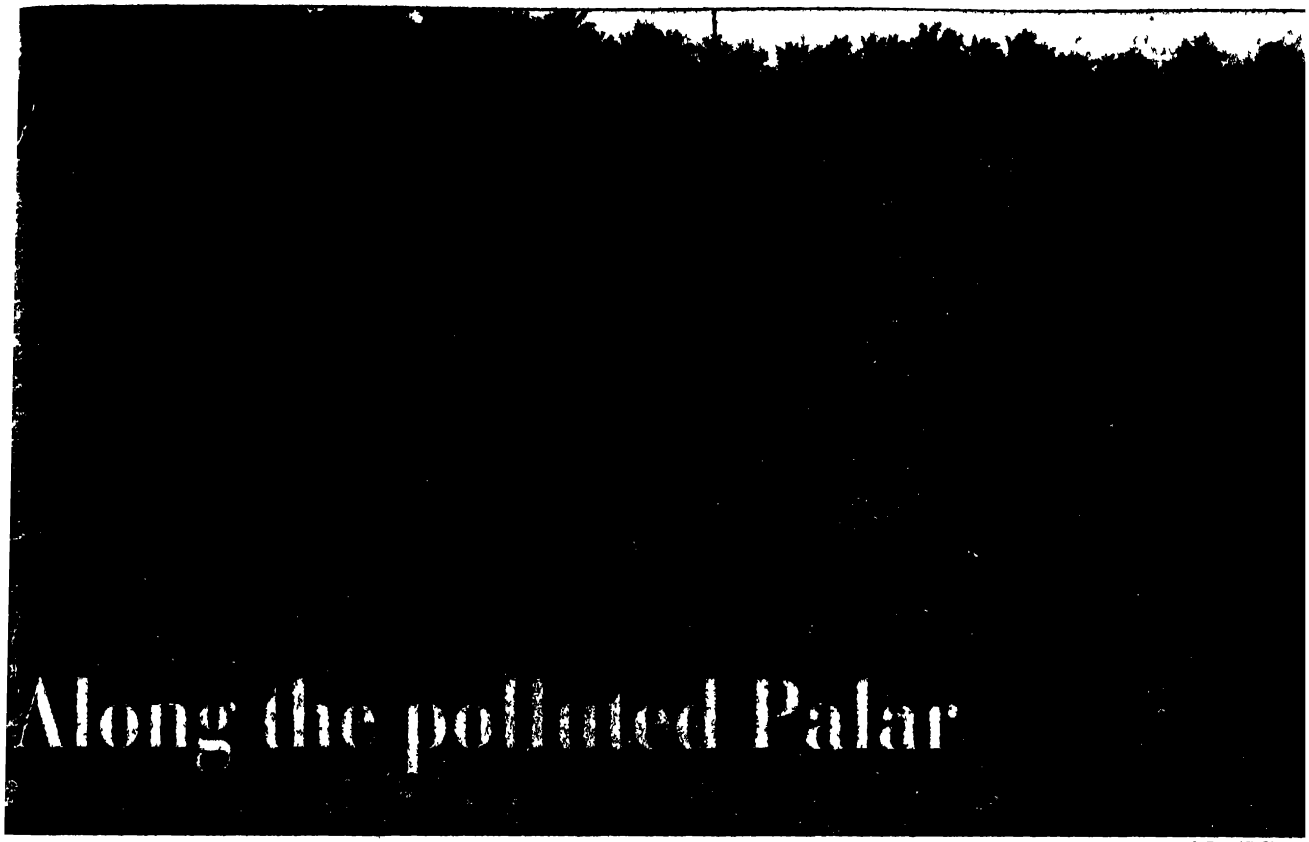
A Rs.2,000-crore company, HAL is the country's premier defence aerospace manufacturer. The company designs, builds and maintains light combat, advance fighter and combat aircraft, helicopters, commercial aircraft, jet engines, aircraft systems, equipment and avionics; it also manufactures ground control equipment for defence and commercial use.

HAL has an extensive computer network. officials say that the critical machinery are compliant but that some of the application software in other equipment and computer networks are yet to be verified. The delay, they claim, is owing to the fact that some equipment and machinery procured by the company has not been certified by the vendors. HAL has conducted an impact analysis, inventory collection and computer code walkthroughs.

STRICT directives from the Reserve Bank of India (RBI) and fears over the enormity of the situation have propelled the banking sector to make rapid progress in Y2K compliance. The NASSCOM report stated that as on July 31, about 92 per cent of the public sector banks in India were Y2K compliant; this number was expected to rise to 97 per cent by September 30.

Canara Bank, one of the larger public banks with a deposit base of Rs.42,000 crores and a total income of Rs.5,000 crores, claims that it is fully prepared for the millennial changeover. Deputy general manager, information systems, R. Muralikrishna, says that the state of readiness has improved dramatically in recent months. "We had sleepless nights four months ago, but with our systems now in place the tension has eased," he says. Software engineers had to work over weekends after banking hours. "We couldn't shut down the bank to become compliant." As a large part of banking transactions are date-related, it took endless hours to go through computer codes. "We think we are safe, but we can never say what may happen," he cautions. In a worst-case scenario, records of savings accounts may be wiped out, loans or mortgages to be paid may show negative figures. However, bank officials are confident that nothing so catastrophic will occur.

Even so, contingency plans have been drawn up. Extra cash will be kept ready to deal with unusually large withdrawals on December 31. Print-outs will be taken and back-ups made of all transactions from December 28, 1999 to January 1, 2000. Procedures of manual operations are being brushed up, and Y2K workshops for employees are being held. Bank officials will work through the night of December 31, 1999, and security will be stepped up. Towards the end of the year, mock drills will be carried out routinely.



Muralikrishna feels that if the RBI wants all systems to be fully ready at the earliest, it must declare January 1, 2000, a Saturday, a bank holiday in order to enable banks to correct systems if there are problems. However, the RBI has announced that January 1 will be a full working day so that systems could be tested and all problems rectified by Monday, January 3.

(The draft of a Year 2000 Ordinance formulated by the Y2K Task Force headed by Montek Singh Ahluwalia, states that the offices of all user organisations, whether in the government, public or private sector, must remain open on January 1 and 2 (Saturday and Sunday) and that all Information Technology products should be tested for Y2K compliance.)

AT least a few of the PSUs have not exactly been fast off the block in responding to the situation. Nitin Wagh of Merant Solutions Private Limited, a Year 2000 verification and validation company says: "Many public sector companies are only now coming to us for quotations." Even those companies that had completed testing their critical machines and equipment, says Wagh, had not quite tested their accounting, payroll, supply and provident fund data bases. In his view, none of the companies can be said to be fully compliant. "In fact," he says, "there is no such thing as 100 per cent eradication. Anything can go wrong anywhere." Furthermore, only after securing outside vendor certification can a company claim to have become "fully compliant".

In addition to identifying, analysing and fixing the applications which need to become compliant, Merant provides a detailed record and audit trail of the compliance effort. "It is not difficult to become Y2K compliant," Wagh says. "Testing tools are now highly efficient and unless one opts for date expansion (that is, changing the date from '99 to 1999 in the entire operation program), not much manpower is required." To heighten awareness about the magnitude of the crisis, Merant has volunteered to conduct a verification of 25,000 lines of code for free.

THE countdown is on, but no one knows precisely what will happen at the appointed time. Countless cities are planning millennial bashes for the occasion, but not everyone is in the party mode: in some industrialised countries of the West, there are reports that entire communities and families are preparing for digital apocalypse – to dig caves and bunker themselves underground with stockpiles of foodstuffs. Clearly, some of those responses are alarmist, but if at least some of the panic has prompted governments and corporations to get their systems in order in time, some good will have come of it. ■

Along the polluted Palar

S THANTHONI

Despite the 1996 Supreme Court order which restrained polluting tanneries, related problems continue to haunt North Arcot district in Tamil Nadu.

ASHA KRISHNAKUMAR
in Vellore

FOR the 50 lakh people living along the banks of the Palar in Tamil Nadu's North Arcot district, their lives and livelihood devastated by pollution from the hundreds of tanneries that line the river, a 1996 Supreme Court order brought hopes of a better quality of life. But those hopes are unlikely to be realised in the foreseeable future.

The apex court had slapped a stiff fine on the polluting tanneries and closed many of them, but hardly anything has changed on the ground yet. Hundreds of hectares of farmland still remain unfit for cultivation and the groundwater used by lakhs of people is not potable. The people suffer from diseases. On the other hand, the closure of many of the tanneries has caused unemployment and slowed down the local economy.

Processing more than 700 tonnes of leather every day, tanneries in the Vaniyambadi-Ambur-Pernambut-Ranipet belt of North Arcot district accounted for 40 per cent of the country's and 80 per cent of Tamil Nadu's leather exports, and earned over Rs. 2,000 crores in foreign exchange annually.

There are conflicting claims on the number of tanneries. The South Indian Tanners and Dealers Association claims that there are 553 units in the district, the Tamil Nadu Pollution Control Board (TNPCB) says there are 573 units and the Vellore Citizens Welfare Forum honorary secretary P.S. Subramanian asserts that there are nearly 2,000 units.

The industry came to the region 100 years ago, and warnings about the pollution hazards it posed came as early as 1939. However, it witnessed a phenomenal growth in the 1970s as the demand for leather increased, especially abroad, and the Centre introduced a pro-export policy. In order to meet the demand, tanners switched to a chromium-based process from an eco-friendly process that used tree bark and vegetable extracts. The new process, which used 176 chemicals, reduced the time and space required for tanning, but generated highly toxic effluents, especially the extremely harmful hexavalent chromium. Only about 40 per cent of the chemicals used was absorbed by the material being processed. The rest of it – a high concentration of sodium chloride, sulphides and chromium compounds – was letout into the open in a raw state.

(Top) A wilted paddyfield in North Arcot, a district devastated by pollution from hundreds of tanneries.

The industry required water in huge quantities – converting 1 kg of raw hide into finished leather consumes 40 litres of water. Tanneries were set up along the Palar. This served two purposes: water could be taken from and the effluents dumped into the river.

According to the TNPCB, 25 tonnes of solid wastes and over 30 million litres of effluents are generated every day by the tanneries in the district; this amounts to three-fourths of the tannery effluents discharged in the State. The standards set for treated effluents by the TNPCB do not come anywhere near the norms drinking

water set by the World Health Organisation (WHO). For instance, the total dissolved salt (TDS) limit allowed by the TNPCB for treated tannery effluent is 2,100 mg/l, while the WHO norm for drinking water is 1,000 mg/l; hexavalent chromium 2 mg/l (TNPCB) and 0.5 mg/l (WHO); chlorides and sulphates 1,000 mg/l and 250 mg/l for both; and arsenic 0.2 mg/l and 0.1 mg/l.

Although there has been no study on the subject since 1982, when a Tamil Nadu Agricultural University team found that 14,164 hectares of farmland had become unfit for cultivation, the district's Deputy Director for Agriculture S. Ganesan thinks that the extent of affected farmland may have gone up to 20,000 ha even by modest estimates.

According to A.G. Krishnamurthy, a farmer in Solur village, 20 years ago, sugarcane yield was 99 tonnes/ha but now it is not more than 24 tonnes/ha. He shifted to rainfed cotton, whose yield has also been deteriorating and he has been incurring heavy losses in the last four years.

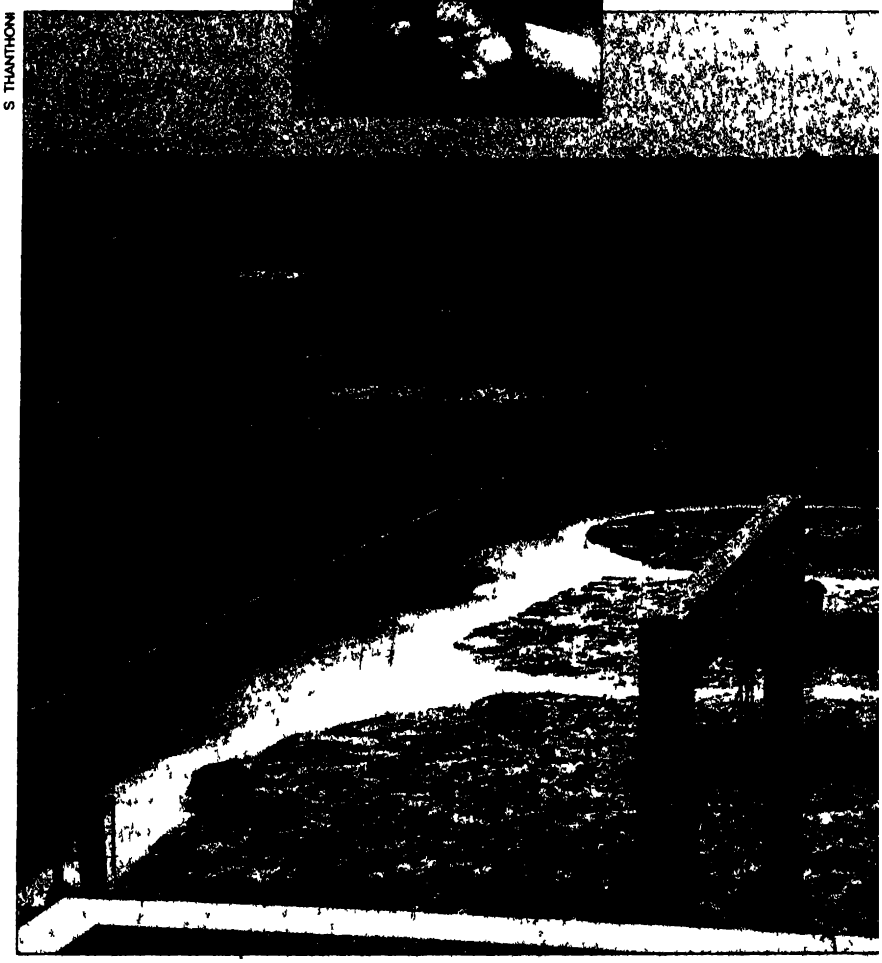
In Karvazhi village, two crops of paddy used to be grown annually until 1970. After that, deteriorating yields and losses forced farmers to shift to dry crops such as cotton or coconut or to sell their land. Ambur Farmers' Agricultural Association president R. Narayanaswamy Naidu, who until 1970 had 18 ha that produced not less than 6 tonnes/ha of paddy every year, is a devastated man today. As his losses mounted, he sold 16 ha in 1986 at a throwaway price. He is unable to sell the remaining land, which is unfit for cultivation.

According to Ambur Farmers' Agricultural Association vice-president C.A. Vadivelu, paddy yield declined from 6 tonnes/ha in the 1970s to 3.7 tonne/ha in the 1980s; it is less than 2.5 tonne/ha now. Such is his anguish and frustration that he says: "I hope the problems continue for the next 2-3 years so that we are all wiped out. Then at least I hope that the government will sit up and do something about retrieving this district from decay and death."

A recent study by the Christian Medical College (CMC), Vellore, found that the level of chromium, which causes respiratory and liver problems, in the treated effluents to be 40 times the limit set for drinking water, and the pH levels to be very low, leading to high alkalinity and causing eye and skin problems. According to a doctor at Ambur, cases of gastroenteritis, annoeclaisis, giardiasis and other water-borne diseases, besides lower respiratory tract infection, asthma and eyelid ulceration are common in the area. Continued exposure to chromium can cause lung cancer.

According to Ambur municipal councillor G. Yeganathan, as most wells in the villages along the 10-km Palar basin are unfit for use, the municipality provides drinking water to every village from the upper reaches of the river. In these villages water flows in municipal taps only for one hour every morning. The government's top priority is to provide potable water to the area. Ganesan says that there is a plan to bring water from Hogenakkal, 500 km away in Dharmapuri district.

THE only silver lining is that the tanners have begun to realise the need to clean up the mess that they have created. They are willing to invest for effluent treatment and to conform to the TDS limits set for farming and drinking.

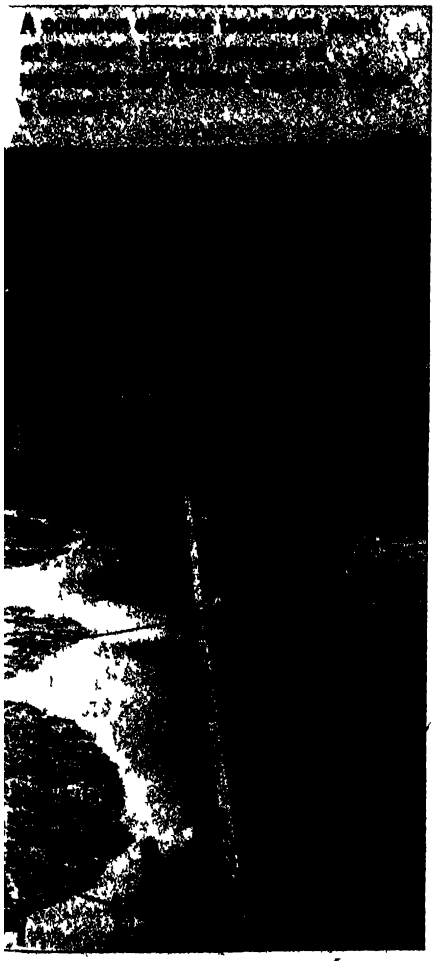


After the Supreme Court order, some tanneries shifted to Andhra Pradesh or Karnataka. Some that were ordered closed are confining themselves to dry leather processes after obtaining the TNPCB's consent. According to Taurus Leather managing director A. Thangaraj, the tanneries are coping with the situation, although profit margins have come down.

Ganesan says that the impact on employment has been low as only the small units were closed. Some areas such as Vaniyambadi, which had a large number of small units, have been hit hard. According to North Arcot District Tannery Workers Union president K. William, at least 1,500 workers have lost their jobs after the Supreme Court order. While many have migrated to adjacent districts and States as construction workers, some work for other tanneries and the rest are doing odd jobs.

Some tanneries have their own independent effluent treatment plants (IETPs) and are doing their best to reduce the TDS content in the effluents to about 4,000 mg/l. This, according to Shafeeq Ahmed & Co managing director N. Mohammed Sayed, is possible because they get fresh

S. THANTHONI



S. THANTHONI

water for tanning from the higher reaches of the Palar.

Ganesan says that the number and intensity of the problems have increased after the Supreme Court judgment Earlier the effluents were let out just outside the tannery and it was a local problem Now the treated effluents (which still contain the highly toxic inorganic wastes) are let into the Palar with the sanction of law as the Supreme Court allows the tanners to drain the treated effluents into the river This seeps into tanks and drinking water sources in the area, further harming the people and their livelihood

Besides, the 118 closed tanneries are small units and so the quantity of effluents let out has not decreased significantly Owing to poor rainfall in recent years, the Palar does not flush out the effluents and the groundwater recharge in the basin is poor, while the tanneries draw 70 million litres every day According to A Thangaraj, it is only because the riverbed sand is 20 m deep (which allows the retention of large amounts of rainfall) that the people are sustaining themselves

And, fourth, without enough staff and without sufficient powers, the TNPCB is not able to monitor the treatment plants TNPCB officials make 'surprise visits' to each unit once in two months They take samples of the treated effluents and send them to the Board's headquarters in Chennai, and wait for orders

There are complaints in Somalapuram, Solur and Chanankuppam villages that some tanneries and common effluent treatment plants (CETPs) let out untreated effluents at night and that some tanneries operate even when the CETP stops working during load-shedding But the TNPCB assistant engineer in Vaniyambadi, M. Murugan says it is not easy to let out untreated effluents at night

South India Tanners and Dealers Association secretary C M Zafarullah says: "In the past two decades the government concentrated on exports, not bothering about creating the infrastructure the industry needs" This view is shared by the other industry associations.

According to soil scientist G Theekaraman, the TDS levels can be brought down only by bringing in large quantities of fresh water from the upper reaches of the river This will be expensive and time consuming Ganesan says that the government has identified some land to dispose of the sludge and is also considering various alternatives, such as the reverse osmosis process, high rate transpiration systems for crop use and disposing in the sea treated effluents that do not conform to drinking water standards

Of these, taking the treated effluents to the sea through a closed channel is considered the most appropriate method But P S Subramanian, on whose writ petition the apex court took up the case, opposes this scheme saying it would pose great danger to the marine environment

The Ecology Authority set up a year ago by the State government is expected to submit by October its report on the payment of compensation for the affected people ■

Positive intervention

ASHA KRISHNAKUMAR

ON May 1, 1995, the Supreme Court, on a public interest petition filed in 1991 by P.S. Subrahmanian, advocate and secretary of the Vellore Citizens' Welfare Forum, ordered the closure of 57 tanneries in North Arcot district which had no system of effluent treatment in place. The court gave another 496 tanneries three months to set up a treatment facility.

On September 8, 1995, the apex court ordered the closure of 162 tanneries which had made no progress in the construction of a treatment facility, and gave three months notice to 299 tanneries to complete the process. On April 9, 1996, it closed 34 tanneries which had set up independent effluent treatment plants (IETPs) but whose treated effluents did not conform to the norms.

In its final judgment on August 28, 1996, the apex court transferred the case to the Madras High Court, and directed it to constitute a Green Bench to handle all issues relating to the environment and pollution in the State, and also set up an Ecology Authority to assess the loss to the environment in the affected areas, identifying individuals, families and farms affected by tannery pollution.

The Green Bench was set up on September 13, 1996. The Ecology Authority was notified on September 30, 1996, but was set up two years later, on September 23, 1998.

The sweep and severity of the Supreme Court judgment not only sent the industry into a tailspin, but forced the government and the Tamil Nadu Pollution Control Board (TNPCB), to act. The TNPCB closed units that neither had an IETP nor were connected to a common effluent treatment plant (CETP). Of the 19 CETPs in the district, only eight are working, and of the 573 tanneries only 455 have an IETP or are connected to a CETP.

Following the Supreme Court judgment, the Central and State governments decided to remove the ceiling on the grant of subsidy for the setting up of CETPs and each decided to give 25 per cent of the cost. (Earlier, it was 25 per cent of the cost or Rs. 50 lakhs, whichever was lower.) The tanners made their contribution for the CETPs or set up IETPs. All these steps have helped check the level of pollution to a great extent. But the region has to go a long way to recoup its environmental health. ■

Slander campaign

The ongoing electioneering is the most abusive and vulgar in the electoral history of independent India ("Slander campaign", September 24). Populism and political expediency now form the bedrock of electoral politics.

In a parliamentary democracy, electioneering provides an opportunity to the political parties to tell voters about their socio-economic and political agenda and motivate them to participate in the task of combating the problems of the country. But politicians are using this opportunity only to denigrate individual leaders and thus set a bad precedent for the future. The erosion in the political culture is the result of many political parties giving up their ideological commitment. For them, nothing matters except the vote.

Sanjai Kumar

Hazaribagh, Bihar

Nuclear issues

The articles on nuclear issues (September 10 and September 24) are critical or at least highly sceptical of the draft Indian Nuclear Doctrine. Once a country becomes overtly nuclear and decides to target real or potential adversaries, it is assumed that there is a policy that will make it clear under what conditions nuclear weapons will be used. The five nuclear states have readymade pleas to use their weapons.

In "Questions about capabilities" (September 24), you carried a quote from the Chinese about the danger posed to South Asia's stability by India's nuclear doctrine. In what way does the huge Chinese arsenal contribute to peace and stability in East Asia or the world? How did the Chinese formulate their own nuclear doctrine and in what way is their policy more enlightened and thorough than that of India? The very fact that China tested and produced so many bombs is an indication that it has an intention of using them in certain situations.

Varun Shekhar

Islington, Canada

India and Israel

The article "India, Israel and Arab fears" (September 24) was thought-provoking. It is not surprising that the government run by the Sangh Parivar, which is guided by an anti-Islamic ideology, extended the hand of friendship to Israel. Policymakers of the day are taking the country closer to Israel, even though India has traditionally supported the Palestinian cause. Seeking Israeli military help will have dreadful consequences for the Indian subcontinent.

Some people may cite the fact of Arab countries having diplomatic relations with Israel to justify India's ties with Israel. But it is undeniable that people in Arab countries are against their governments' policies in this regard. It is also true that most Arab nations support India's position on Kashmir. External Affairs Minister Jaswant Singh has himself commended the role of Saudi Arabia in helping solve the Kargil crisis.

Mehaboob Ali Balganur

Sindgi, Karnataka

Power and politics

This refers to the article on the Dabhol power project ("Dear power," September 10). One of the election promises made by the Shiv Sena-BJP alliance four years ago was that it would throw the project into the Arabian Sea. But its coalition government gave the go-ahead to the Dabhol Power Company to set up shop "in the interest of the people of Maharashtra".

The argument floated in favour of the construction of 55 flyovers within a span of two years (a world record, perhaps) in Mumbai city was that the flyovers would help streamline vehicular traffic and thus save over Rs.1,000 crores on fuel. A far-sighted plan indeed! But this gain will be offset by the annual loss the Maharashtra Government is expected to incur in the purchase of power from the DPC at a cost of Rs. 5.50 a unit against the agreed cost of Rs. 2.40.

Uranium production

In "Villages and woes" (September 10) it is mentioned that the Uranium Corporation of India Limited (UCIL) has made arrangements to control radon emission, a radioactive gas that is emitted in the process of mining uranium. It has been demonstrated the world over that without protective clothing and appropriate masks, which of course are beyond the scope of Indian industry in general, miners are exposed to small quantities of radiation that in course of time will irradiate lung cells. It is estimated that this results in the death of 50 per cent of people exposed to such radiation. According to Dr. Helen Caldicott, an Australian paediatrician and well-known nuclear activist, this may not happen immediately but after 15 years of the actual period of exposure.

Technicians who operate x-ray machines wear a lead-lined apron and stand behind a lead screen in order to avoid exposure to radiation. Although the amount of radiation is small in this case, the cumulative effect of regular exposure is harmful and may lead to cancer in the long run. Doctors from the Bhabha Atomic Research Centre surely know this, but then we are dealing with mere tribal people who are voiceless and are considered expendable. These poor citizens of India who live near the tailing ponds are exposed every day to small doses of radiation. No wonder they suffer from cancer, blindness, sterility and a host of other diseases that are difficult to treat.

The only way to tackle the problem is to bury the wastes in selected areas, using appropriate methods. But, of course, it is expensive and will cut into the profits of UCIL. A much cheaper option is to relocate the tribal people from their homelands, their sacred groves, their burial sites and their habitat. To rephrase Mark Twain, all life is sacred in India, except human life.

Islam and journalists

There is a dearth of basic knowledge of Islamic beliefs, Islamic terms and Islamic organisations within the general journalistic community. Journalists tend to use the words *jihad*, *ulema* and Shariah as derogatory terms. Their information on Islamic organisations is still worse. Even *Frontline* is not totally immune to it.

In "Arrest of an ISI gang" (September 10) Tabligh-i-Jamaat has been described as a revanchist organisation, implying that it is a politically motivated extremist organisation. The facts are totally the opposite. (This writer is not a member of Tabligh-i-Jamaat.)

Tabligh-i-Jamaat is a non-political organisation aiming to improve the character and spirituality of Muslims through a six-point programme. Those six points are – renewal of the basic creed of Islam, five-times daily prayers, religious knowledge, sincerity, respect of other Muslims and spending money/time/life in the way of Allah.

As is clear from this, the agenda of the Tabligh-i-Jamaat consist of the spiritual improvement of Muslims. It is not a polit-

ical organisation. It even draws criticism from some other Muslim organisations which think that it is too moderate and that it is not doing missionary work among non-Muslims. It is an open organisation and has organised large annual international gatherings, many of them in India. The temporary association of some lumpen elements should not be used as an excuse to tarnish its image.

Ban on smoking

The judgment of the Kerala High Court directing the State Government to enforce Section 278 of the Indian Penal Code to prevent smoking in public places is commendable ("Smokers under siege," September 10). The level of social awareness of the people of Kerala has prevented them from resorting to any agitation against this because prevention of smoking will affect the beedi and cigarette industries.

Pakistan's claim

Pakistan's demand for compensation for the loss of its maritime surveillance aircraft, which was shot down by a MiG-21 aircraft of the Indian Air Force last month ("A confrontation in the Kutch," September 10) cannot be accepted. The Pakistani plane intruded into Indian air space. If India is to pay compensation for it, then Pakistan will have to compensate India for the losses incurred owing to acts of terrorism abetted by it in Jammu and Kashmir.

Dowry deaths

Parvathi Menon's report "Dowry deaths in Bangalore" (August 27) speak volumes of the neglect of women in this country. It reflects a gradual erosion of our values. This attitude to women also runs counter to the objective of empowering women. Despite legal safeguards, violence against women has assumed alarming proportions. The question is where exactly we have gone wrong and what must be done to root out this evil.

It is agonising to note that even educated women are victims of this trend. The apathy of the government, the inability of the judiciary to deal firmly with the criminals and the hypocrisy of the police force – all have contributed to the worsening of the situation.

The situation demands a dispassionate analysis. A mass movement is needed to combat the problem.

Plantation workers

This has reference to the article "A bitter harvest" (August 27).

It appears that unfortunately, communication was not established between the author and our management and therefore the article missed the point of view of the management. We would, therefore, wish to focus on the following facts so that your readers can get a just and balanced perspective:

1. The various allegations made by J. Hemachandran, president, CITU, Tamil Nadu, against us are totally false. All along, he has not only been an active party in wage negotiations between the Planters' Association of Tamilnadu and various industry unions, but was also a signatory to all the settlements. Having agreed on the wages, he cannot now question the fairness of the wages.

2. In all its 134 years of existence, the Bombay Burmah Trading Corporation Ltd. has strictly adhered to the provisions of legislative acts including the Plantation Labour Act, 1951. Our workforce is provided with housing, perquisites, retirement benefits, holidays, free medical care, creches with free food for children, conservancy and sanitation, etc., in conformity with the Act.

3. The photograph published with the article depicts an illegal attachment to the existing housing provided and is not officially allowed. This is why it appears shabby. The management did not remove this illegal extension even though it should have, purely on humanitarian considerations.

4. The accusation that workload has increased over the years is baseless. All the daily tasks or specified output are determined by mutual consent on lines similar to other estates.

5. The call for a three-fold increase in wages is unreasonable, unaffordable and uneconomical. Factors such as global competitiveness, free markets and the possible onslaught of low-cost imports from Sri Lanka and Kenya do not allow any further increase in wages. India's plantation industry is one of the most manpower-intensive ones. It will face a bleak future if economics is mixed with politics. The wage levels and welfare benefits provided to plantation workers in Tamil Nadu are superior to those in the rest of the country and amongst the highest in the world.

6. The estate colonies are essentially private housing colonies and not public places. Thus they are bound by rules and regulations of employment and prevailing standing orders. The workers' benefits accrue according to contractual obligations. Under the Plantation Labour Act, there is no provision for making available kitchen gardens and cattle rearing facilities.

7. The annual production of the Singampatti Group is 2 million kg and not 8 million kg as indicated. Likewise, the annual coffee production of this group is between 15,000 and 20,000 kg and not 1 million kg.

Kargil

It is a shame that former Army Commanders such as Lt.-Gen. Moti Dar should be speaking against the very establishment that nurtured them, while glorifying their own era in the service ("The Army leadership has been politicised", August 27).

Will someone please remind the former Vice-Chief of the Army Staff of the intrusion of "Dalunag" when he was a Brigade Major at Kargil (1967-71)? Commanders like him are very much to blame for the state of the Army today. While at the helm, they never took any steps to improve the forces. Owing to the self-gratifying life-styles of some senior officers, junior officers lost respect for their seniors. These are the reasons behind the fall in the morale of the armed forces.

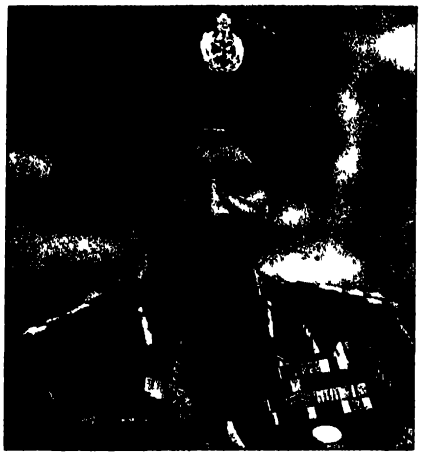
It is ridiculous to compare the situation in the valley in 1983 to the present-day situation. There was hardly any insurgency then. The role of the Army has changed in many ways since then. Moti Dar should look back and ask himself: how much of all this did his generation anticipate? And if it did, what did it do about it?

Col. Kadan (retd.)
New Delhi

Correction: In the article "Chandra, the most advanced", part of the feature on the orbiting X-ray observatory (September 24), the apparent diameter of the moon was erroneously mentioned as 31 feet; it is 31 arc-minute (31'). Similarly, the imager part of the device, High Resolution Camera-I, is a single array 9 cm x 9 cm with a 31'x31' field of view, and not as published.

Pointing fingers

Whatever the outcome of the inquiries into the Kargil conflict, it is increasingly evident that military officials make easier scapegoats than politicians.



PRAVEEN SWAMI

THE summer war on the Kargil heights has come to an end, but the forces it unleashed are still unspent. The growing mass of evidence emerging before the official Committee of Inquiry investigating the war, the proceedings of a military inquiry in Leh into the leakage of official documents detailing military failures, and fresh media disclosures on the Union Government's failures in strategic management are starting to snowball. Should this gather mass, more than a few who have claimed credit for a glorious victory in Kargil could find themselves buried under its political debris.

Brigadier Surinder Singh, the commander of the Kargil brigade who authored a series of warnings on possible Pakistani intrusion through the area, continues to be at the centre of the controversy (*Frontline*, September 4). He is facing an inquiry ordered by 3 Infantry Division Commander Major-General V.N. Budhwar into his alleged role in the leakage of official documents to the media. The military inquiry, conducted by 3 Infantry Division's Deputy-General Officer Commanding, Ashok Duggal, along with Brigadiers C.M. Nayar and Devinder Singh, has been conducting hearings almost each day over the last fortnight.

Sources told *Frontline* that the bulk of the questioning so far has revolved around Surinder Singh's links with Congress(I) spokesperson and lawyer Kapil Sibal. Surinder Singh told the military inquiry that he had indeed met Sibal to discuss a legal challenge against a series of transfers. This challenge was eventually moved in late August, though not through Sibal. Surinder Singh refused flatly to disclose the content of his discussions with Sibal, arguing that these were privileged, covered by the special confidentiality codes governing conversations between lawyers and their clients. He, however, made it clear that no documents were made available to Sibal. Sibal was the first to make public news of Surinder Singh's warnings, although the file numbers he cited proved incorrect.

A second line of questioning directed at Surinder Singh has been on leaks of correspondence to the media. Surinder Singh admitted to the military inquiry that he met *Outlook* magazine's Nitin Gokhale at Secunderabad, but pointed out that all conversation took place in the company of a Colonel-rank witness. Surinder Singh said that he offered Gokhale a soft drink,

PANKAJ RISHI KUMAR

Brigadier Surinder Singh.

but refused to discuss the Kargil issue. Gokhale, the inquiry was told, subsequently left, saying that he had only come to cross-check information already in his possession. Brigadier Surinder Singh had earlier told the court that since the Kargil documents were also in the possession of the Chief of the Army Staff General V.P. Malik and other top officials, they could just as easily have been leaked from there. His demands that Malik and other officials therefore also be examined, however, has met with no response.

Major-General Budhwar, for his part, appears to have decided that Surinder Singh in fact leaked material to the press, and that his subordinate officer is being used by the Congress(I). In an interview to *India Today*, Budhwar claimed Surinder Singh "perhaps does not know he is being used by vested political interests". He also claimed Surinder Singh was "fabricating letters in the army records or someone else is doing it on his behalf". "He is quoting letters", Budhwar concluded, "which do not exist." If that is indeed the case, Budhwar's decision to order an inquiry into the leakage of non existent documents can only be described as mystifying. More interesting, since Budhwar is the immediate superior of those conducting the Leh military inquiry, its impartiality is now in more than a little doubt.

Just why the military inquiry at Leh is focussing on Sibal is not difficult to comprehend. The government's own committee of inquiry into the Kargil controversy made up of K. Subrahmanyam, B.G Verghese, Lieutenant-General (retired) K.K. Hazari and the head of the National Security Council's secretariat, Satish Chandra, now has a fairly good picture of the large number of intelligence warnings that preceded Pakistan's intrusion. Officials of the Intelligence Bureau (I.B.) and the Research and Analysis Wing (RAW) both in Leh and Srinagar, along with other senior administration and police figures, were examined by the Kargil committee in August and September. Surinder Singh was examined at length on the basis of his June 19 letter to Malik, marked 29734/SS/Confd., which traces the entire sequence of events.

Sources told *Frontline* that Surinder Singh's deposition before the committee lasted an entire day. Among the documents the committee was particularly interested in was a letter dated January 5, 1999, marked 102 GS Ops Recce, despatched to the 3 Infantry Division Headquarters by Captain Vikram Vohra, then officiating for the 121 Brigade's Brigade Major. The letter asked that at least one helicopter "be positioned permanently at Kargil" for surveillance operations, and that a decision to downgrade air reconnaissance over the Mushkoh Valley be reviewed "in view of the No of int(elligence) reports sent by your HQ listing out militant activity" in this area. The letter asked for "sanction of (one) WASO (surveillance flight) per week for vigil over Mashkoh Nala, Mumar Shung and Tololing Nala."

These were precisely the areas through

which infiltration eventually took place. In the event, no additional flights were sanctioned, and the helicopter at Leh, as one senior official put it, "was used as a taxi for joyrides". Vohra's letter also pointed to troop withdrawals leaving the Yaldor area open to attack. "There have been int reports indicating militants using routes in (the) area east of Batalik which led to the d(e)pl(o)y(ment) of a Co(mpan)y plus str(ength) in Yaldor A in (an) anti-infilt(ration) role", paragraph five pointed out. "After the t(roo)ps ex 9 MAHAR (Regiment) are deinducted, these Nalas become vulnerable as infilt(ration) routes. To keep and check, there is a req(uire)m(en)t of weekly WASO over Yaldor, Garkhun and Hanuthang Nalas also."

Unsurprisingly, there appears to be more than a little apprehension among a small circle of officials that the Kargil committee could end up pointing fingers. Should that happen, any future government, in particular a Bharatiya Janata Party-led formation, would be under pressure to punish those who may be indicted. It would be easier to make scapegoats of military officials, for obvious reasons, than politicians. The Union Government, hit hard by former Pakistan Foreign Secretary Niaz Naik's revelation that it was engaged in engineering a covert deal on Jammu and Kashmir, has been conspicuously silent on the Surinder Singh affair. It has maintained a studious silence on this and other evidence that some Army officials first ignored and then sought to conceal evidence of Pakistan's aggression in Kargil.

Among the major consequences of the growing panic has been the emergence of a fissure between the Union Government and sections of the Army. On September 15, *The Tribune* of Chandigarh broke news of an unsigned background paper, evidently produced by public relations officials at Army Headquarters in New Delhi, demanding that Prime Minister A.B. Vajpayee defend the organisation against attack. Most important of the paper's alleged charges was the argument that Vajpayee chose to ignore possible RAW and I.B. warnings "in the context of (the) Lahore bus ride". The Union Government, the paper continued, "must ensure that the Army is not maligned as is being done. This may destroy its apolitical culture and ethos. The PM must make a statement to this effect."

Vajpayee personally intervened to bring an end to the rift between the BJP and the Army establishment that was signalled by the report. An official press release clarified that "the entire news report is baseless". The press release continued: "It is unfortunate at a time when the people of this country have recognised the efficiency with which the Kargil operations were conducted and when the cohesion of different government agencies has resulted in a significant victory for the country, some people continue to try to divide different segments of the government... The Prime Minister leaves it to the professionalism and good sense of the press to see the larger interests of the country and not to undertake these attempts at creating dissension within the country."

Army Headquarters, however, made available a more intriguing response. *The Tribune*'s article, it said, was "presented with a view to tarnish the apolitical image of the army." No effort to explain this somewhat opaque reference was made, but the denial continued to suggest that the article

PANKAJ RISHI KUMAR

Major-General V.N. Budhwar.

was "sponsored/published by an aggrieved party for self-motivated reasons best known to the individual sponsor." Again denying that any paper of the kind existed, the Army claimed all documentation it processed was marked with file references. But the operative portion of its statement reiterated the position pushed by the Leh military inquiry: that the Surinder Singh episode was part of a political campaign manufactured by the Congress(I), and his efforts to defend himself against charges of incompetence were bereft of legitimacy.

The angry rebuttals provoked by *The Tribune* have done little to put the controversy to rest. The fact remains that several top officials have begun to realise that the BJP is unlikely to put its political credibility at stake by defending those indicted by the Kargil committee. Whether or not the Army Headquarters paper exists as a formal document, *The Tribune*'s defence correspondent in New Delhi is unlikely to have manufactured its contents.

More important, *The Tribune* report mirrors voices in the Army that the ultimate responsibility for Kargil may now be placed at Malik's door, ignoring the BJP's disastrous post-Pokhran-II failures of strategic judgment which underpinned secondary military errors. If warnings like those issued by Surinder Singh were ignored, it was because the BJP had lulled the Army into a false sense of security.

Why that sense of security had come about has been put in stark relief by Naik's revelations, made to the Pakistan newspaper *Jang* last fortnight, on a covert India-Pakistan deal on Jammu and Kashmir. Naik told the newspaper that the Pakistan Army had acted to scupper an almost-completed deal, presumably to defend vested interests, including its own and those of the Inter Services Intelligence. Naik's charges provoked a furore in India and Pakistan. Although the former Pakistan Foreign Secretary later denied having made any allegations in the first place, his retraction carried little credibility. What the contours of such dialogue may have been is unclear, but several proposals, including wide autonomy bordering on independence to the Muslim-majority areas of Jammu and Kashmir, have been energetically pushed by the United States.

The whole truth about Kargil is yet to become clear. Documents that have become available during the war, and after its end, make clear that intelligence warnings were ignored. The reasons for this apathy were rooted in international pressures brought to bear on India in the wake of the Pokhran-II nuclear tests. Desperate to deflect such pressure, the BJP launched its bus diplomacy. In the event, it was taken for a ride by right-wingers in Pakistan. But its bomb-sized self-delusion on what continues to be described as the Lahore Process led the Army to lower its guard. Now, it appears, the Lahore Process may have involved some larger, and wholly unscrupulous, deal on Jammu and Kashmir.

In the months after the Kargil war, General Malik and the circle of officers around him, energetically, and controversially, joined in the BJP's defence against charges of incompetence and dishonesty. Now, with the Kargil committee proceeding apace, they could discover the real meaning of the maxim that warns against putting faith in princes. ■

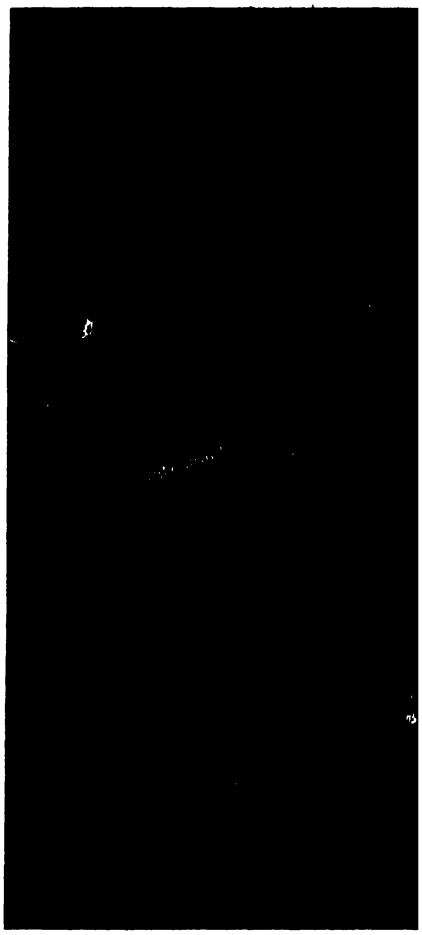
Correction: "Warnings in vain" (September 24) mentioned the rank of the General Officer Commanding, 3 Infantry Division, as Lieutenant-General. V.N. Budhwar is a Major-General.

Tetchy exchanges

In the post-Kargil phase, India and Pakistan have been bogged down in petty tussles over exercises that should have been resolved without complications, such as the exchange of prisoners of war.

JOHN CHERIAN

TWO Indian soldiers who were captured inside Pakistani territory on the night of August 29-30 in the Shyok-Turtok sector in Jammu and Kashmir and were in Pakistani custody for 17 days were finally released on September 16. Lance Naik Ram Singh and Sepoy Bajinder Singh were handed over to Indian High Commission officials in Islamabad by the International Committee of the Red Cross (ICRC). Pakistan had earlier threatened to delay the release of the two soldiers after New Delhi objected to Pakistan's violation of internationally accepted norms relating to the handover. In order to gain propaganda mileage from the incident, Pakistan wanted the soldiers to be released in the presence of media-persons. India insisted that the soldiers be returned with "dignity" and without converting the event into a "public spectacle".



Pakistan claims that the two soldiers were captured when 400 Indian soldiers launched an attack in the sector opposite Turtok in order to capture the dominating heights in the area. According to Pakistan, India has been trying to capture high ground so as to open fire on Pakistani positions. India has said that a six-member patrol team was reported missing in the Turtok sector on the night of August 29-30, but Islamabad dismisses this claim as a "fabricated" one.

The Indian Director-General of Military Operations (DGMO) officially asked his Pakistani counterpart on August 31 to return the members of the patrol team if they had inadvertently strayed into Pakistani territory. According to the Indian authorities, the patrol team consisted of an officer and five jawans of 3 Rajput Battalion. Pakistan has admitted to the capture of only two jawans; the fate of the other soldiers is unknown.

The Indian Army attaches great strategic importance to the Turtok sector because of its proximity to the southern Siachen Glacier. For India, military control of the area is essential in order to protect the supply lines by road to the southern Siachen Glacier. In the wake of the Kargil conflict, India and Pakistan have been increasing their military presence along the Line of Control (LoC). Each has accused the other of making abortive attempts to capture tactically important patrol positions with the aim of altering the alignment of the LoC. There have been frequent reports of soldiers on both sides being killed in skirmishes and shelling along the LoC. Before the winter snows come, the Pakistani side is also keen to push in as many infiltrators as possible into the valley.

In the aftermath of Kargil, what should ordinarily have been uncomplicated exercises such as the exchange of prisoners of war (PoWs) are getting bogged down in petty, time-consuming tussles. Islamabad was livid when New Delhi alleged that the bodies of one army officer and six jawans that were handed over on June 9, at the height of the Kargil conflict, bore evidence of torture. These allegations were seized upon by political and media commentators in India to portray the Pakistan Army as a "barbaric" one and to raise patriotic fervour in India to a fever pitch. International agencies involved as intermediaries in the exchange of prisoners are of the view that if torture had indeed been inflicted on the Indian soldiers and their bodies mutilated, the Pakistani Army would have disposed of their bodies quietly within Pakistani territory and kept the news of their death a secret. Reports about the alleged "mutilation" have since died down.

According to international agencies working in the field, New Delhi's initial response on the PoW issue was a little confused. Initially it declared the Kargil conflict as being the consequence of an act of "aggression" by Pakistan; then it characterised the situation as "war-like". New Delhi did not foresee a situation in which an Indian soldier would be taken a PoW, but when Flight Lt. K. Nachiketa, an Indian Air Force pilot, was captured by Pakistani troops after his plane was shot down in May, New Delhi changed its stance. The ICRC was given the green signal to secure his release, and the Pakistani side handed him over.

Lance Naik Ram Singh (left) and Sepoy Bajinder Singh of the Indian Army, who were captured by Pakistani troops inside Pakistani territory on the night of August 29-30 and were handed over to Indian High Commission officials in Islamabad on September 16.

Pakistan Prime Minister Nawaz Sharif's telephonic conversation with Indian Prime Minister Atal Behari Vajpayee on June 13 seemed to re-introduce a measure of civility to the exchanges between the governments on the issue of swapping of PoWs. On July 4, the Indian Government announced that it had captured a Pakistani soldier. Under international conventions, the ICRC must be informed about PoWs as soon as they are captured. According to sources, both India and Pakistan find this universally accepted convention expendable. Both countries seem inclined to get the maximum political mileage from exercises relating to the release of PoWs.

TANVEER MUQALI/AP

The tendency appears to be to keep PoWs as bargaining chips, even though a surrendered soldier is not to be treated as an enemy. After the 1971 war, about 90,000 Pakistani PoWs were in India for more than three years; this led many to speculate that they were being used to gain additional leverage at the Shimla talks.

Islamabad, on its part, refused to accept the bodies of two soldiers which India tried to hand over on July 17. There is speculation that this was because the bodies were of soldiers who belonged not to the regular Pakistan Army but to the Northern Light Infantry, which comprises non-Punjabi fighters from tribal areas. At the same time, on August 27, the Pakistan Government accepted the return of eight Pakistan PoWs without much of a fuss. These bodies were handed over to Pakistan High Commission officials in New Delhi; mediapersons were not present at the handover.

Islamabad implied that its insistence that mediapersons be present during the release of the two Indian soldiers in September was motivated by the fact that the media would be witness to the physical and mental well-being of the released PoWs. Evidently, India's allegations about the "mutilation" of the bodies of Indian soldiers still rankles. The ICRC doctor who examined the two captured soldiers found them to be in an "acceptable" state of health. The two PoWs reached India by road from Islamabad a day after they were released.

MEANWHILE, New Delhi denied in the third week of September that it had finalised any "secret deal" with Islamabad under which the Kashmir issue would be resolved within a "fixed time-frame". Pakistan Foreign Minister Sartaj Aziz had said in the course of a debate in the Pakistan Senate on September 16 that both countries had agreed to resolve the Kashmir issue within a time-frame of between nine and 12 months. Aziz attributed this "breakthrough" to the "back-channel" diplomacy between the two countries.

Since Vajpayee's visit to Lahore early this year, back-channel diplomacy seems to have supplanted the more formal diplomatic channels. Among the informal diplomatic forays that have become public knowledge are the visit to Delhi of former Pakistan Foreign Secretary Niaz Naik and the top-secret trip to Islamabad of Indian journalist R.K. Mishra, at the height of the Kargil conflict. Naik was reported by the *Jang* newspaper as saying that India and Pakistan were heading for a settlement on Kashmir when Kargil intervened. Naik's comments whipped up controversies in both India and Pakistan. In India, the government came in for criticism for negotiating a "secret deal" on Kashmir; and in Pakistan, there were reports that the military establishment had taken exception to Naik's remarks. Naik subsequently denied some of the remarks attributed to him.

The Indian External Affairs Ministry spokesman denied Aziz's "fanciful" assertion that the two countries had envisaged a time-frame for the resolution of the Kashmir dispute.

In a related development, Pakistan's Minister for Railways informed the Upper House of Parliament that Pakistani sugar was being exported to India until May 18. If that is true, it means that India was importing sugar from Pakistan even when the Kargil conflict was on. On the campaign trail, Vajpayee has repeatedly stated that "not a grain of sugar was imported during the Kargil crisis". The Congress(I) and other parties have alleged that the Vajpayee government had continued to import sugar primarily to favour sugar mills in which Sharif's family have an interest. ■

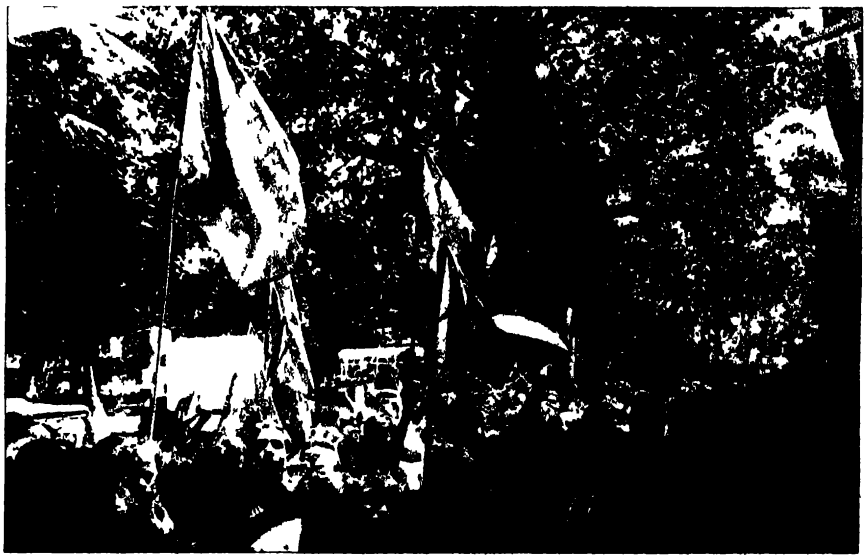
Relive the sensation

ON THE CAMPAIGN TRAIL

KALYAN CHAUDHURI

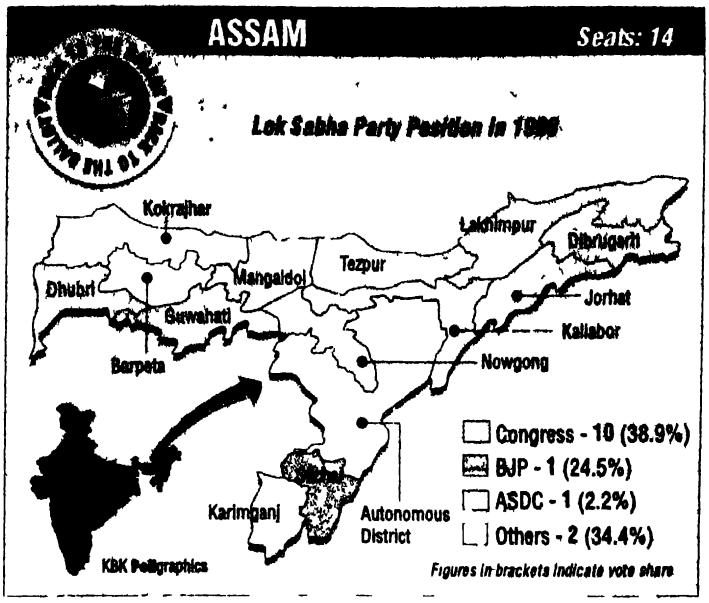
THREE northeastern States – Assam, Tripura and Arunachal Pradesh – are going to the polls on October 3. While Assam will elect 14 Lok Sabha representatives, the other two States will choose two members each. Arunachal Pradesh witnesses simultaneous elections to its 60-member Assembly.



The contest in Assam will be chiefly between the Congress (I) and the Bharatiya Janata Party. The Congress(I) is contesting all the 14 seats, the BJP 12, the Nationalist Congress Party 10 and the Asom Gana Parishad eight. As a part of an electoral understanding, the AGP has allotted two seats to the Communist Party of India (Marxist) and one each to the Communist Party of India and the United People's Party of Assam.

State Congress(I) president Tarun Gogoi told *Frontline* that the BJP had emerged as its chief rival in view of the non-performance of the AGP Government. In 1998, the Congress(I) won 11 seats. The BJP won one, but finished second in eight constituencies. The AGP was totally defeated and the party has since not improved its position. Gogoi is confident that the Congress(I) will not only maintain its strength but improve its performance. The only setback the party suffered in 1998 was the defeat of its heavyweight, former Union Minister Santosh Mohan Deb, by the BJP's Kabindra Purkayastha in Silchar. This time, Santosh Mohan Deb is locked in a three-cornered contest with Purkayastha and his own brother, Subhash Mohan Deb, who is contesting on the Nationalist Congress Party (NCP) ticket. Senior politician Golam Osmani, who joined the Congress(I) along with a breakaway group of the United Minorities Front, will contest from Barpeta.

The NCP leader, P.A. Sangma, has failed to consolidate his party's position in the northeastern States despite a hectic campaign tour and month-long parleys with various regional parties. Political observers feel that the NCP will not pose a challenge to the Congress(I) or the other parties. The NCP's candidates include Pradip Gogoi, former AGP Minister, and Bolin Kuli, former Congress MP, from Lakhimpur.



A peace rally by AGP supporters. The party's election symbol is "elephant".

BJP supporters at an election rally in Guwahati.

THE BJP has supported the candidature of Elwin Teron of the All-Party Forum for the Autonomous District (Scheduled Tribe) seat, and that of Samsuma Khungur Bwiswmuthiary, who has the backing of the All-Bodo Students Union, in Kokrajhar (S.T.). The party's State unit president, Narayan Chandra Borkotoky, said that this decision was taken in order to protect the interests of the tribal people of the hill districts of Karbi Anglong and North Cachar and to avert the "divisive policies" of the Congress(I) and the Left parties that had led to socio-political tensions. The BJP, in order to be acceptable to the people of the Brahmaputra Valley, has opened its doors to disparate political elements; Shiv

P.K. Mahanta campaigning for AGP candidate Durgadas Bodo (right), who is contesting from Guwahati.

Shambhu Ojha, who was a Minister in the Hiteswar Saikia government, has been nominated in Dibrugarh, while former AGP MP, Bijoya Chakraborti, has been fielded in Guwahati. The two leaders joined the BJP recently. Ojha was perhaps selected because he wields considerable influence among the electorate in the Upper Assam districts of Tinsukia and Dibrugarh. He is likely to give a tough fight to the sitting Congress(I) MP, Pawan Singh Ghatowar.

Assam Congress(I) chief Tarun Gogoi.

With nothing to lose, the AGP appears set to make a marginal gain despite the anti-incumbency factor. The party has fielded All-Assam Students Union (AASU) adviser Sarbananda Sonowal, in North Lakhimpur. Aware of the tough battle ahead, the party's poll managers have exercised caution in the selection of candidates. Former Union Minister Birendra Prasad Baishya has been nominated in Mangaldoi. The AGP and its allies have not put up any candidate in Kokrajhar and Diphu. Chief Minister P.K. Mahanta's wife, Jayasree Mahanta, who was defeated in 1998, has been denied the ticket to contest from Nagaon, Mahanta's home constituency. The Chief Minister had faced criticism from party leaders for nominating his wife last time. Jayasree Mahanta was elected to the Rajya Sabha recently.

The AGP decided to go to the people with the slogan of peace, prosperity and development. It has concentrated on a door-to-door campaign as the fear of the banned militant organisations has disappeared to a large extent and the United Liberation Front Asom (ULFA) is losing its influence. Mahanta told *Frontline* that in 1998, the Congress(I) had the backing of ULFA, and this had resulted in the rout of the AGP.

Sources said that the ULFA has already issued instructions to its units to assist the Congress(I) by encouraging pro-Congress(I) voters to vote and by intimidating the others, mainly AGP supporters. In 1998, the ULFA cadres forced some AGP functionaries to resign and abducted or killed AGP workers in the districts of Nagaon, Morigaon, Darrang and Nalbari. ■

TRIPURA

AT election time, a spectre of violence looms large over the tiny hill State of Tripura. For the sole purpose of disrupting the elections, militant organisations have stepped up their offensive, killing non-tribal people and political activists, ambushing security forces and abducting government employees, particularly those overseeing the electoral process. Since September 1, 17 people have been killed and 24 kidnapped.

Militants belonging to the outlawed National Liberation Front of Tripura (NLFT) abducted 16 government employees attached to the office of the Block Development Officer (BDO) at Manu in Dhalai district of North Tripura on September 6. Armed NLFT extremists stormed the office when a meeting was in progress, and forced the employees, who included 10 panchayat secretaries, to follow them at gun point. Before taking away the hostages, they fired indiscriminately. The following day, the militants shot dead two passengers in a State transport bus, both Communist Party of India (Marxist) activists, at Taichhama in South district. On September 2, they gunned down two employees at the Chalikhola panchayat office in Bishalgarh subdivision of West Tripura. On September 7, the extremists ambushed a jeep in which six Central Reserve Police Force (CRPF) personnel were travelling at Rankang area near Amarpur subdivision. Two CRPF men were injured.

THE CPI(M)-led Left Front, which won a massive victory in the panchayat polls in July, is confident of repeating its performance in the parliamentary elections. The party has renominated Samar Choudhuri and Bajuban Reang in West and East Tripura respectively. But political analysts expect the CPI(M) candidates to face a few hurdles in their efforts to retain the seats.

The Congress(I) appears to have given up its battle in Tripura as its ally, the Tripura Upajati Juba Samity (TUJS), has snapped its ties with the party and attached itself to the Trinamul Congress. The Congress(I) has no electoral base in

RITU RAJ KONWAR

RITU RAJ KONWAR

the tribal-dominated areas of West Tripura and had been depending on the TUJS since 1982 to muster tribal votes, which constitute 30 per cent of the total. Informed sources in the Congress(I) expressed grave concern over the emergence of the Trinamul Congress-BJP-TUJS alliance, as it appears to have cast a shadow over the party's future in the State. The Congress(I) nominee for West Tripura, Pijush Biswas, at one stage decided not to contest. However, he changed his mind on instructions from the party high command. The Congress(I) has fielded Khasiram Reang in East Tripura. The formation of the Nationalist Congress Party (NCP) unit in the State has also dealt a blow to the Congress(I).

Although the NCP is unlikely to make an impact in State politics, it has fielded Birballav Saha in West Tripura.

THE Trinamul Congress has fielded former Congress(I) Chief Minister Sudhir Ranjan Mazumdar in West Tripura. Before launching new State unit, its leader Mamata Banerjee said in Agartala that her party was spreading its wings across the States ruled by the Left Front.

The BJP State unit was unwilling to earmark the West Tripura seat for the Trinamul Congress. But the party's central leadership intervened to get the seat allotted to its ally. The BJP's State unit vice-president, Jishnu Deb Barma, is contesting in East Tripura.

After Mamata Banerjee's campaign tour of Tripura in the second week of September, the Left Front identified the Trinamul Congress, rather than the Congress(I), as its arch rival. A large number of Congress(I) leaders and eight Youth Congress(I) block committees pledged their support to Mamata Banerjee. The Youth Congress(I) split, and a tribal people's conference called by the Congress(I)'s tribal cell, turned out to be a farce. Youth Congress(I) president Billal Mia blamed Pradesh Congress(I) president Gopal Ray and Leader of the Congress(I) in the Assembly, Samir Ranjan Barman, for the revolt of the tribal leaders. The response to the Trinamul Congress was such that in several places Congress(I) signboards were removed and its offices were converted into Trinamul Congress offices.

Meanwhile, the Delhi High Court has asked the Election Commission to set up special booths along the Mizoram-Tripura border to help Mizoram's 40,000 Reang refugees, living in camps in Tripura, to vote. The court responded to a petition filed by S.N. Saxena, chairman of the Akhil Bharatiya Vanvasi Kalyan Ashram. Saxena alleged that the Reangs, displaced from their homes since ethnic clashes broke out in 1996, were not allowed to vote during the last two Lok Sabha elections and in the Mizoram Assembly elections in November 1998. ■

ARUNACHAL PRADESH

IN Arunachal Pradesh, the ruling Congress(I) is well placed. Already four Congress(I) candidates, including Chief Minister Mukut Mithi, have been elected unopposed to the 60-member State Assembly. In all, 197 candidates are in the fray for the Assembly elections. The contest here is mainly between the Congress(I) and the Arunachal Congress of Gegong Apang.

Apang, who had served as Chief Minister for 19 years until Mukut Mithi assumed power on January 19, was opposed to the holding of Assembly elections along with the Lok Sabha elections. The Assembly was dissolved by the Governor, Lt. General (retd) S.K. Sinha, on July 27, on the advice of the Mukut Mithi Government, six months before its term was to expire. State Information and Public Relations Minister G.C. Teli said that the holding of Assembly elections separately in March, would have added to the financial burden on the State.

Apang opposed the holding of simultaneous elections saying that the situation was not conducive for free and fair elections. He suggested that the State be put under President's Rule until the time was ripe for Assembly elections. Apang said that the National Socialist Council of Nagaland (Khaplang faction), active in the Tirap and Changlang districts bordering Nagaland, had declared that only the Congress(I) would be allowed to contest the elections.

Apang accused Nagaland Chief Minister S.C. Jamir of fomenting trouble in Arunachal Pradesh with the help of the NSCN(K). He alleged that the Mithi Government, which came to power "as part of that conspiracy", had divided society along ethnic and communal lines. The Congress(I) was hand-in-glove with the rebels, he alleged. He pointed out that a recent meeting of the Union Territory Demand Committee of Tirap and Changlang districts, convened under the chairmanship of a State Congress(I) leader, had declared that the Arunachal Congress and the BJP would not be allowed to contest the elections under any

circumstance. These districts have 12 Assembly seats, one-fifth of the total strength of the House.

Arunachal Pradesh is traditionally a Congress(I) stronghold. In the 1995 Assembly elections, the Congress(I) won an overwhelming majority and formed a government with Gegong Apang as Chief Minister. Apang left the party following differences with Prime Minister P.V. Narasimha Rao and formed the Arunachal Congress in September 1996 with the support of 54 MLAs. In the 1998 Lok Sabha elections, the Arunachal Congress allied itself with the BJP. Apang's son, Omak Apang, was elected from Arunachal West constituency and was later inducted into the A.B. Vajpayee government.

RITU RAJ KONWAR

Mukut Mithi, Chief Minister of Arunachal Pradesh.

RITU RAJ KONWAR

Arunachal Congress(I) chief Gegong Apang.

Several leaders of the party, even Apang's close associates, were not happy with the way he pushed for his son's entry into the Ministry, depriving senior party leader Rajkumar Wangcha, two-time winner from Arunachal East, of a chance to become a Minister. Rajkumar was angry and a revolt ensued. Five Ministers, including Mukut Mithi, who stood by Rajkumar, were dropped from the State Cabinet. Shortly thereafter, the dissidents, under the leadership of Mukut Mithi, formed the Arunachal Congress (Mithi) with 40 MLAs on their side. Subsequently, Mithi was installed as Chief Minister in January. In April, Arunachal Congress (Mithi) merged with the Congress(I), which had only four MLAs, and formed the Congress(I) Government. S.C. Jamir and NCP leader P.A. Sangma are said to have played an important role in bringing about the merger of the Arunachal Congress (Mithi) and the Congress(I).

Political observers say that an erosion of the Apang camp had been taking place since he was thrown out of power. Deserted by his trusted colleagues and associates at the organisational level, Apang is now not in a position to regain his political triumph.

The Congress(I) is contesting both the seats. It has fielded Jarbom Gamlin in Arunachal West and Rajkumar Wangcha in Arunachal East. The Arunachal Congress, a constituent of the BJP-led National Democratic Alliance (NDA), has renominated Omak Apang in Arunachal West and the BJP candidate, Tapir Gao, is contesting from Arunachal East. The NCP named Toko Kach for the Arunachal West seat.

THE Arunachal Congress and the BJP have not arrived at a clear understanding on the sharing of seats for the Assembly elections. The Arunachal Congress has nominated 42 candidates and the BJP 28. A spokesman of the Arunachal Congress said that a friendly contest would take place in 10 seats. Thirteen Arunachal Congress members of the dissolved Assembly, including nine Ministers of the Apang Ministry, have been renominated. Gegong Apang is contesting from his home constituency, Tuting Tingkiang, in upper Siang district. The NCP has fielded 18 candidates.

The Congress(I) is contesting all the 60 seats. The main advantage for the ruling party is that the anti-incumbency factor will not be in play as it came to power less than a year ago. ■

KALYAN CHAUDHURI

THE ethnic issue is dominating the election scene in Sikkim yet again. The tiny State with an electorate of 2.5 lakhs, will witness simultaneous polls on October 3 for 32 Assembly seats and one Lok Sabha seat. Twelve Assembly seats are reserved for the Bhutia and Lepcha communities, two for the Scheduled Castes (S.C.) and one for the Sangha (monasteries). The remaining seats fall in the general category.

The majority Sikkim Nepalese population has traditionally had a monopoly over almost all the general seats and the two constituencies reserved for the Scheduled Castes. The Nepalese outnumber the Bhutias and Lepchas even in the constituencies that are dominated by tribal people. The three major political parties – the ruling Sikkim Democratic Front (SDF), the Sikkim Sangram Parishad (SSP) and the Congress(I) – are seeking to cash in on this complex divide. Chief Minister Pawan Kumar Chamling has made several requests to Prime Minister Atal Behari Vajpayee, whose government the SDF supports, to restore in the Assembly the 'Nepali seats' that were scrapped in 1979. In a memorandum to the Centre, he demanded that 16 seats be reserved for the Sikkim Nepalis. Reservation of seats is the SDF's main campaign issue. The Opposition SSP and the Congress(I) have also sought reservation of 'Nepali seats'. The parties are also seeking reservation of seats for Tsongs (Limboos), a Nepali tribe.

Another major election issue is the reopening of cross-border trade between Sikkim and Tibet. Border trade was stopped following the Sino-Indian conflict in 1962. The political parties are in favour of the restoration of border trade. Chamling has been mounting pressure on Delhi to resume trade with Tibet through the strategic Nathu La Pass.

AS the campaigning gains momentum following the release of the lists of contestants, it is clear that the major political parties are locked in a triangular fight for the Lok Sabha seat and for most of the Assembly seats. The main fight, of course, will be between the SDF and the SSP. The Congress(I), although it is only a third-ranking force, is not ready to give up without a fight. For the Lok Sabha seat, the SDF has renominated Bhim Dahal. The SSP has fielded Satish Chandra Rai, a new face in the State's political scene, and the Congress(I) has nominated Somenath Poudyal. Two independent candidates are also in the fray.

The Congress(I) and the SSP are contesting all the 32 Assembly seats. The SDF has fielded 31 candidates, leaving one reserved seat for the Sangha, not wishing to bring politics into the affairs of the

SUSHANTO PATRONOBISH

Sikkim Chief Minister Pawan Kumar Chamling.

MALABIKA BHATTACHARYA

Sikkim Sangram Parishad leader Nar Bahadur Bhandari.

monasteries.

The SDF is relying on the performance of the Chamling Government to regain power. The SSP, on the other hand, is counting on the anti-incumbency factor. Judging by the personalised attacks by Chamling and the SSP president and former Chief Minister, Nar Bahadur Bhandari, against each other, it is evident that a bitter battle is ahead.

The State Congress(I) leadership is aware of the fact that the party will not be able to win a good number of Assembly seats. The Congress(I) wants to win at least five or six seats, so that it can strike a deal with the SDF or the SSP if the margin of victory narrows down. In the current Assembly, the SDF has 25 seats, the SSP three and the Congress(I) four. In 1994, the SDF won 19 seats, the SSP 10 and the Congress(I) three. The SDF's strength came down to 18, when one of its MLAs, P.T. Lucksom, was suspended from the party. Lucksom joined the Congress(I). The Congress(I)'s strength increased to five when K.N. Upreti of the SSP joined it after being suspended from the SSP. Later, six SSP MLAs and one Congress(I) MLA defected to the SDF, increasing its strength to 25.

The State Congress(I) president and Rajya Sabha member Karma Topden told *Frontline* that his party was certain to increase its strength. With the hope of capturing the tribal vote bank in the rural areas, the Congress(I) kicked off its poll campaign immediately after the announcement of poll dates by holding a rally in Gangtok, which was addressed by the Congress(I) president Sonia Gandhi. Sonia Gandhi promised to accord reservation of seats in the Assembly for the Nepalis and various ethnic groups. "If the Congress(I) comes to power at the Centre, it will include the Tamangs, the Gurungs and the Rais in the tribal list, while the Bhutias and Lepchas will be given their own identities," she said.

The Congress(I) ruled the State for five years from 1974, when Sikkim merged with India. It started losing strength after the 1979 elections. Nar Bahadur Bhandari quit the Congress(I) and formed the SSP, which was elected to power in 1979. Bhandari ruled for three terms, barring a brief break in 1984 when the State was under President's Rule. In the 1985 elections, the SSP won 29 of the 32 seats. Its performance was astounding in the 1989 elections, when it got all the 32 seats. It was in 1993, a year before another round of Assembly elections, that Pawan Kumar Chamling, a Cabinet Minister in the Nar Bahadur Bhandari government, broke away from the SSP to form another regional party, the Sikkim Democratic Front. The SDF won an absolute majority in the 1994 elections.

For almost four years after his defeat, Bhandari, against whom a Central Bureau of Investigation (CBI) probe is on, has kept a low profile. Lately, he has come out of hibernation in a flurry of political activities. The SSP chief told *Frontline* that his party units in every corner of the State had been revitalised during the last one year. "I have myself toured 31 constituencies and found that the people of Sikkim are disillusioned with the performance of the Chamling government. For the last five years, the State has made no progress on any front. Moreover, the people are unhappy with the SDF's support to the BJD-led coalition at the Centre," Bhandari said.

At every election meeting, Chamling has launched a frontal attack on Bhandari saying that the latter has no moral right to contest elections as he faces a CBI chargesheet. The CBI cases against Bhandari, relating to the amassing of assets disproportionate to his known sources of income and misappropriation of public funds, have entered a crucial phase in the special court set up for the purpose. Amid attacks and counter-attacks, analysts notice one significant achievement of the SDF Government – lasting its full term proving wrong all predictions of its early end.

Political observers believe that the SDF's support base in the rural areas have remained intact. In a bid to win over the minority Buddhist Bhutia-Lepcha tribal community, who are likely to play a significant role in the elections, the party has demanded that one more seat be reserved for Sikkim in both Houses of Parliament. The SDF also demanded that Newars, Bahuns, Chhetris, or NBCs and Jogis, Sanyasis and Thamis be included in the list of other backward castes. If this is done, the SDF expects to get the support of a sizable section of the upper caste Nepalese in addition to that of the poor and those belonging to the backward communities. The fact that Chamling himself belongs to the OBC category, which constitutes the largest chunk of the electorate, is likely to prove to be an advantage to the SDF.

Nar Bahadur Bhandari is contesting from two constituencies – his home constituency of Soreng in West Sikkim for a fifth time and the Nepalese upper caste-dominated Rhenock in East Sikkim. Chamling is contesting from his home constituency, Damthang, for the fourth time in a row. ■

V. VENKATESAN

THE crowd that had gathered at Maharajpur's vast playground kept looking to the sky. Hours went by, but the expected helicopter was nowhere in sight. A group of Bharatiya Janata Party work-

ers lit a bonfire at a corner of the makeshift helipad to enable the pilot to identify and land near the venue with his star passengers, Vinod Khanna and Hema Malini. Some distance away, the security personnel controlled the surging crowd, and people vied to occupy the little space available on the roof of a school building to have glimpse of their stars.

A jeep fitted with a mike and a cut-out of Atal Behari Vajpayee was readied to transport the film personalities to the venue of the public meeting. As the arrival of the copter was delayed, the crowd lost its patience and interest. A group of people began debating the outcome of Doordarshan's exit poll. One of them remarked that he would not be surprised if the Congress(I) repeated its November 1998 performance in the State, which was possible owing to the Chief Minister's "effective management of the elections", wryly indicating the possible role of the official machinery in the victory. Another expressed confidence in the accuracy of the exit poll: the NDA may get a majority after all, he said.

The BJP MLA for Maharajpur, Ramdayal Ahirwar, was waiting with his followers. A drizzle turned into by a downpour. The film stars may not arrive, moaned a local BJP leader. The crowd dispersed. Rains had confined the stars to their hotel rooms in Bhopal.

MAHARAJPUR, an Assembly segment in the Khajuraho Lok Sabha constituency, was one of the many venues chosen to close the campaigning for the 14 constituencies in Madhya Pradesh that went to the polls on September 18.

The BJP's choice of Maharajpur in the Vindhya Pradesh region for the star blitz was curious. Maharajpur's main business is cultivation of betel leaves. Pan is exported to other countries from here, after meeting the domestic demand. The Chaurasia community (a Scheduled Caste), which is involved in pan-making, is traditionally known to have provided a fertile ground for the growth of the Rashtriya Swayamsevak Sangh and the rest of the Sangh Parivar. The local BJP MLA was elected for the fourth successive time last year from here. No wonder, the BJP considers this constituency a safe bet.

However, caste dynamics appear to have swallowed the Atal *lehar* (wave) here, as in the rest of the Vindhya Pradesh region, bordering Uttar Pradesh. The BJP is waging an uphill battle to retain the Khajuraho seat, last held by the firebrand

ANJ PUSHKARNA

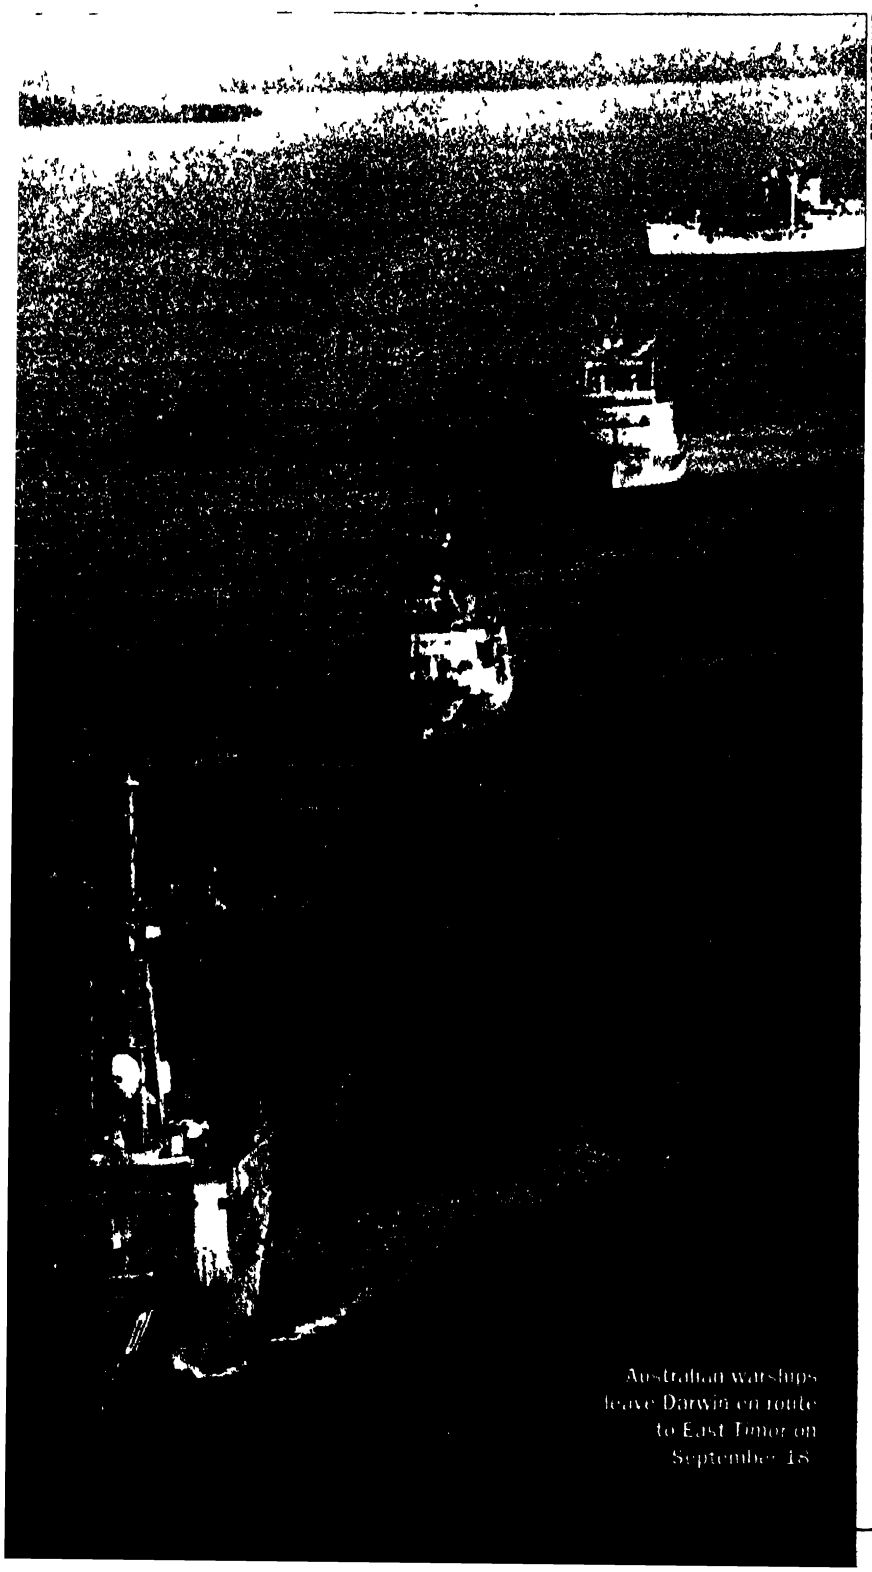
Uma Bharti, BJP candidate for Bhopal.

leader and Union Minister of State, Uma Bharti. Bharti's decision to contest from Bhopal this time has seemingly disappointed the Khajuraho voters. Although she had said that she would not be able to bear the physical strain of campaigning in the predominantly rural constituency, her followers and critics suspect that she might have sensed defeat in Khajuraho, in spite of the BJP's remarkable victory in five out of eight Assembly constituencies in the November 1998 elections. The Congress(I) won two seats and the Samajwadi Party won one Assembly seat. Uma Bharti's disillusioned followers and many voters blame her for not visiting the constituency after winning the seat last year.

Uma Bharti's brother Swamiprasad Lodhi, the MLA from Malehara, has much clout within the local party unit. Through Bharti, Lodhi sought to sideline those who opposed him in the party. One such person was Baby Raja alias Surendra Pratap Singh, who resisted Lodhi's growing influence in the region. Baby Raja wanted to contest the Assembly elections last year, but Uma Bharti and Lodhi influenced the party leadership to deny him the ticket. In the 1998 Lok Sabha elections, Uma Bharti pacified Baby Raja and offered truce by promising him the ticket to fight the Assembly elections. That Baby Raja has since left the party and joined the Samajwadi Party is cause for worry to Uma Bharti. Baby Raja, who was a key member of the Sunderlal Patwa faction in the BJP, filed his nomination papers for Khajuraho on the Samajwadi Party ticket.

Indeed, Khajuraho offers an interesting spectacle of how parties other than the Congress(I) have embraced and rewarded defectors. Uma Bharti has been replaced by Akhand Pratap Singh Yadav, who has alienated several of Uma Bharti's followers. He was originally in the Janata Dal. Within a span of one year, he joined the Congress(I) and later the Bahujan Samaj Party, only to move on to the BJP. Akhand Pratap Yadav was a Minister in the Digvijay Singh Government during his first term in office. He is banking on the support of the Yadavs in the constituency, although the S.P. and the BSP candidate, Umesh Yadav, have also targeted the same vote bank. Umesh Yadav was the S.P.'s candidate in 1998. He quit the party as he was not renominated.

The Congress(I) candidate, Vinod alias Satyavrat Chaturvedi, is contesting the Lok Sabha elections for the first time. Besides enjoying the support of the minority communities and the Scheduled Castes, Chaturvedi is likely to secure the votes of the numerically second-biggest Brahmin community. The absence of faction fights in the party with all the groups working for his victory, is another advantage. Chaturvedi's mother, Vidyavati Chaturvedi, was elected to the constituency in 1980 and 1984. She lost it to Uma Bharti in 1989. Satyavrat's campaign was aggressive, with the Congress(I) putting up several posters and banners. The BJP candidate's posters, by contrast, were hardly visible. While Akhand Pratap Yadav's supporters attribute this to his eagerness not to exceed the ceiling on expenditure fixed by the Election Commission, his critics accuse him of hoping to win on an 'Atal wave' and save the money.



Satyavrat was a Minister in the Arjun Singh Government in the 1980s. His Cabinet Minister was Digvijay Singh. Satyavrat failed to get a berth in the subsequent Digvijay Singh Ministry despite being elected from Chandla in 1993. He resigned his Assembly seat in 1997 in protest against Digvijay Singh's failure to implement his proposals to develop the constituency.

Digvijay Singh reportedly persuaded Satyavrat to contest the Lok Sabha elections, promising to consider his proposals.

In the neighbouring constituency of Damoh, the chances of the BJP candidate, Dr. Ramkrishna Kusmaria, who has been winning the seat since 1989, are rated high compared to the Congress(I)'s new face, Tilak Singh Lodhi. ■

A slow march to freedom

Under the protective wings of a U.N.-approved multinational force, East Timor prepares to savour freedom from Indonesian rule.

BRIAN CASSEY/AP

Australian warships leave Darwin en route to East Timor on September 18

P. S. SURYANARAYANA
in Singapore

IT looked like a snapshot of a voyage of high hopes to enfranchise a people yearning for freedom in a desolate spot of the earth. It was a smooth-sailing flotilla, which bore much of the world's intentions to establish peace as also the material means to achieve that goal through a fight if need be. And, by dawn on September 19, it was heading from Darwin in northern Australia to the shores of East Timor, the world's latest independent state-to-be.

Aboard the missile-guided frigates and vessels carrying landing craft were the members of an 8,000-strong multinational military force. The expeditionary force, led by Australia, had been mandated by the United Nations Security Council to restore peace in East Timor, the tiny Indonesian province which voted overwhelmingly for a transition towards independence in a U.N.-sponsored "popular consultation" on August 30.

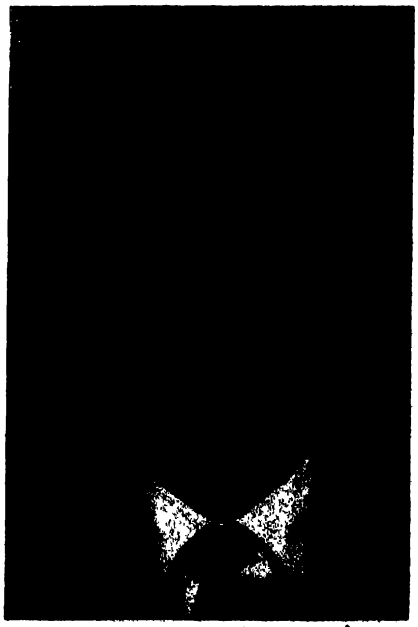
Chapter 7 of the U.N. Charter provides for a credible use of all necessary military measures to restore peace in a given place and thereby maintain international order. Hence, when the vessels set sail from Darwin on September 18, the mission had a stamp of legitimacy.

On September 19, the Australian commander of the multinational force, Major-General Peter Cosgrove, held a preliminary meeting with the Indonesian military commander in East Timor, Major-General Kiki Syahnakri, in Dili, the capital of East Timor. The subjects discussed were the modalities for inducting the U.N.-authorised force (which is technically not the same as a U.N. brigade of "blue berets") and a parallel or even a rapid pull-out of the Indonesian military units from the territory. Speaking of the meeting, Cosgrove hailed the "cooperative spirit" in which he and his delegation were received by Syahnakri and the "first class cooperation" from the Indonesian side. Syahnakri said that Jakarta would hand over its military command over East Timor to the multilateral force in a phased

DAVID GUTTENFELDER/AP

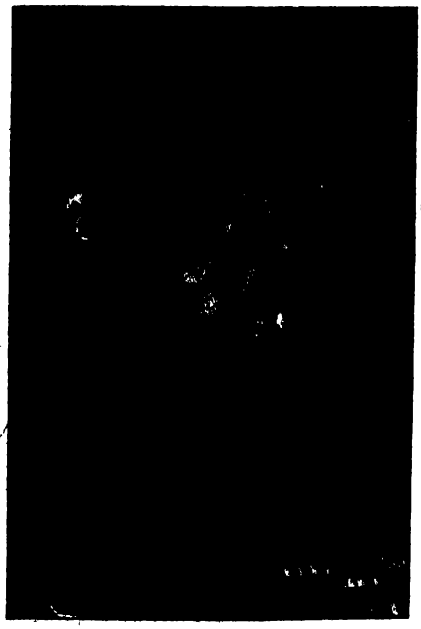
Australian troops, part of the multinational peacekeeping force, deployed around Dili airport on September 20.

manner from September 20. It was an acknowledgment of some kind that Jakarta would no longer lay claim to East Timor.



Although Australian Prime Minister John Howard has warned his compatriots about the dangers lurking in the way of the U.N. mission, in view of the threats from pro-Indonesia militiamen in East Timor, the mission is expected to last until the territory can be put on the course of independence.

THE launch of the military expedition was preceded by a "pie-in-the-sky" mercy mission for starving East Timorese refugees who had fled their homes following extensive violence that was unleashed by suspected elements in the Indonesian military and their friends in the pro-Jakarta militias of East Timor after the August 30 vote. Cargo planes, operating under the aegis of the multinational command, air-dropped food and other essential supplies in areas identified as having large concentrations of displaced people. A silver lining was that the first mercy flights were not thwarted either by the suspected "rogue" elements of the Indonesian military or the anti-Independence militias.



Precise figures of the number of East Timorese killed or displaced or forcibly "re-located" across the border in West Timor will be known only after the multilateral force overcomes resistance from those unwilling to see the territory slip out of Indonesia's grasp. Indications are that a military coalition of at least 23 nations will be deployed in East Timor in a calibrated fashion, beginning September 20.

At least one in every five of the 4.5-lakh eligible voters of East Timor had opted for continued association with Indonesia, albeit with enhanced provincial autonomy, while nearly 80 per cent of them voted for nothing less than total sovereignty.

But East Timor's march to freedom will be a measured one, if the U.N. does not suddenly swerve from the path it had sketched out, ahead of the August 30 referendum, in conjunction with Indonesia and Portugal – the former colonial masters of East Timor which beat a hasty retreat from that half-island in the Indonesian archipelago in the mid-1970s. Encouraged by the Portuguese action and flaunting an anti-Communist flag, which the United States-led West (excluding Portugal) took note of, Indonesia had invaded and later annexed East Timor. It

The Kashmir non-context

P.S. SURYANARAYANA

THE consequences of the United Nations' unique experiment in constitutional engineering in East Timor – both the "popular consultation" or the vote for self-determination on August 30, and the latest authorisation by the Security Council for a multinational military force under Chapter 7 of the U.N. Charter – can pose a challenge to India's diplomatic ingenuity in its quest for a final settlement of the Kashmir issue.

India obviously knows how to fend off any bid by Pakistan to invoke East Timor as a millennium-eve example. Despite the India-Pakistan Shimla Accord of 1972 and the Lahore Declaration of 1999, neither Islamabad's reflex action of seeking to keep Kashmir in U.N. focus nor the resultant challenge to New Delhi is a matter of surprise.

For a start, the Clinton administration's categorical refusal to equate Kashmir with East Timor is a huge plus point for India in facing any innovative campaign that Pakistan may launch on the international stage. In the prismatic worldview of U.S. President Bill Clinton, there obviously is a refractive difference between East Timor and Kashmir, and for good reasons of fact and policy.

Prima facie, the singular difference between East Timor, a former colony of Portugal, and Kashmir is that the former's annexation by Indonesia was never recognised by the U.N., whereas the latter's union with India was part of a British-approved transfer of power formula.

From a Pakistani perspective, a simple but profound question now is whether the latest developments in East Timor will have a resonance in Kashmir, and if so, whether New Delhi can at all be "encouraged" by the international community, which suffers from a certain degree of Kashmir-fatigue, to allow U.N. mediation in the matter. Significant in this context is a comment by Indonesia's Foreign Minister, Ali Alatas, in an interview to this correspondent, that there is no similarity between East Timor and Kashmir, given the differing historical backgrounds of the two issues. He, however, added that Indonesia as well as India had come in for international criticism for their alleged human rights violations in their respective disputed territories.

Reacting to a question on East Timor's relevance to Kashmir, Jamsheed Marker, U.N. Special Representative to East Timor and formerly Pakistan's Permanent Representative to the U.N., remarked that Kashmir was not within his mandate. Marker, who was in Dili on the polling day, expressed the hope that the Kashmir issue would be resolved amicably.

It seemed an irony, at a different but related level, that two Indians were associated with the pre-poll phase at the U.N.'s behest, and not as the designated representatives of India. Om Rathore, a top civilian police official, was entrusted with the task of studying the deployment of international civilian police personnel and other unarmed military consultants who were to liaise with the Indonesian security forces for the pre-poll arrangements.

Attorney-General Soli Sorabjee was commissioned by a U.N. agency to study the human rights situation in East Timor ahead of the poll preparations there, and he accomplished that task to the satisfaction of the U.N.

The confusion in certain circles in India in equating the U.N.'s East Timor assignments with the world body's track record of conducting democratic polls in Cambodia, for instance, is misplaced. An election held under U.N. supervision for a political transition in a country like Cambodia, without the result in any way intended to affect the territorial integrity and sovereignty of that state, is entirely different from the present U.N. operation in East Timor.

The Clinton administration's refusal to equate Kashmir with East Timor is a huge plus point for India in facing any innovative campaign that Pakistan may launch on the international stage.

It was not in Jakarta's strategic self-interest to allow a (potentially) free East Timor in the midst of the Indonesian archipelago. It also had in mind the economic rewards of retaining the territory. In the process, Indonesia's military leaders and foot soldiers – power-brokers under a system in which the armed forces had a decisive say in domestic politics – antagonised the vast majority of East Timorese. At the same time they secured a strong pro-Jakarta constituency in the territory.

But the Indonesian Government is in a dilemma, especially because many ordinary Indonesians in this most populous South-East Asian country with a population of over 210 million, aspiring for a quick resurgence of democracy in their country, are not particularly worried about the "defeat" of their Army in East Timor. They instead hope that the military establishment, long used to ruling the roost in Jakarta but now chastened by the East Timor experience, will respect their democratic rights. This is expected of the top Army officials even as they exert energies to restore their wounded pride by seeking to sustain the territorial integrity and sovereignty of Indonesia through suitable, perhaps more "humane" measures, in other pockets of separatism.

To say that Jakarta is now up against its nemesis in East Timor is to miss the larger international picture of related power games. For four days from September 9, international political leaders wrestled with the East Timor crisis at the Asia Pacific Economic Cooperation (APEC) summit in Auckland, New Zealand. The delicate exercise, catalysed by New Zealand, Australia and Canada, was moderated by the United States. The resultant diplomatic denouement – the U.N.'s authorisation of a multinational expeditionary force to restore law and order in East Timor in a transparent open-ended operation – bears the stamp of the world-view of U.S. President Bill Clinton.

The history of Jakarta's links with East Timor and the hopes and aspirations of Indonesians for democracy were, in one sense, recognised by Clinton. In taking a measured view of the possible consequences of isolating the world's largest Islamic country (as he described Indonesia, despite its wish to portray itself as a Muslim-majority state with a secular society), Clinton recognised the need to "protect" the "integrity of democracy" everywhere, including the Indonesian heartland. With the Indonesians now facing the psychological moment of truth regarding a revival of democracy in their

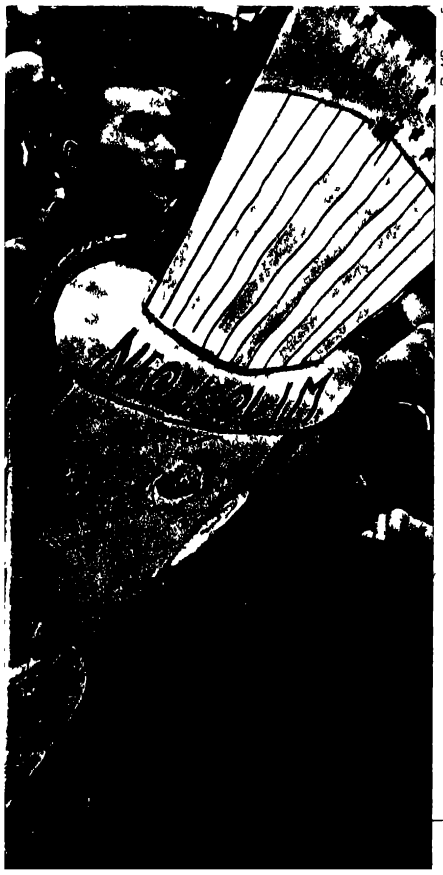
East Timorese leaders (from left) Xanana Gusmao, Bishop Carlos Belo and Jose Ramos-Horta. The onus of bringing about a peaceful resolution of the crisis now lies with them.

country, in the wake of their powerful Army's sense of loss in East Timor, Clinton did not opt for a Kosovo-like operation in East Timor. Instead he put forward a strategy that aimed at "pressuring" Indonesia to "invite" an international military force into East Timor, albeit under U.N. auspices.

In chalking out this strategy and carrying his allies such as Australia and New Zealand with him, despite their geostrategic stakes in East Timor, Clinton obviously left the option open for other means if Indonesia were to fail to "invite" the U.N. At the same time the U.S. remained in constant touch with the Indonesian military chief, General Wiranto, who eventually consented to such an "invitation" from the beleaguered Habibie administration.

Jenny Shipley, New Zealand Prime Minister and the APEC summit hostess, indicated, in reply to a question from this correspondent, that no ultimatum was issued to the Habibie Government about the possible use of military force outside the U.N. auspices.

Jakarta responded quite positively to the modified Clinton doctrine for the globalisation of democracy. Clinton made it a point to convey on September 12, while in Auckland, that even "as the eyes of the world are on that tiny place (East Timor) today", the international community would have "a strong interest in seeing an Indonesia that is stable, prosperous and democratic". For many agitated Indonesians, though, Clinton's concern for democracy in Indonesia *per se* was not the prime issue. The question was whether a new Constitution for East Timor would be drafted by external forces. They were incensed over the manner in which Australia, which had accorded recognition for Indonesia's annexation of East Timor in 1975, had now taken a U-turn to lead the multinational force. Violent protests on the streets of Jakarta followed the passage of the U.N. Security Council resolution. The demonstrators



Students protest against foreign intervention in East Timor in front of a U.N. office building in Jakarta on September 4. One of them holds a cut-out of President Clinton with a hat inscribed "neo-colonialism".

were no less angry with the United Kingdom, which had given diplomatic sanctuary to the charismatic leader of the East Timorese independence movement, Xanana Gusmao, as soon as he was released from prison by the Indonesian authorities after the August 30 referendum. Gusmao, who is eager to work for reconciliation among the warring factions within East Timor as also between that territory and Indonesia, later left the British embassy in Jakarta for an undisclosed destination.

Some extremist Islamist elements in Indonesia have even pledged to wage a holy war against the multinational forces. Therefore, the onus of a peaceful denouement in East Timor lies with Gusmao and other East Timorese leaders like Jose Ramos-Horta and Bishop Carlos Belo, besides the U.N. and the multinational force.

The multinational force is led by and consists of troops mainly from Australia (over 4,500 out of the initially planned total of between 7,000 and 8,000). Besides New Zealand, Canada and Britain, the coalition consists of some South-East Asian nations as well. While the U.S. association is confined to non-combat logistics of a sophisticated kind, several other countries, such as Pakistan, Bangladesh, Fiji, Argentina and Brazil, have offered to send troops to augment the original core group. ■

The role of the West

The Western nations, with whose tacit support East Timor was subjugated by Indonesia, have changed their tune.

JOHN CHERIAN

THE long-suffering people of East Timor finally have some reasons to be optimistic. On September 20, the first unit of a multinational peacekeeping force landed in the strife-torn territory with a mandate to crush a campaign of terror unleashed when East Timor voted for independence from Indonesia three weeks earlier. Meanwhile, the Indonesian Government started a gradual pull-out of its troops. The commander of the Indonesian troops in East Timor had said that the pull-out could take less than a week, but there are also reports from Jakarta which indicate that influential sections of the Indonesian establishment not yet reconciled to the dramatic turn of events want a military presence in East Timor for some more time. A quick pull-out would further inflame domestic public opinion, which has generally viewed the recent events as a breach of the country's sovereignty. Even more galling for the Indonesians is the fact that the United Nations-approved peacekeeping force is to be headed by Australia.

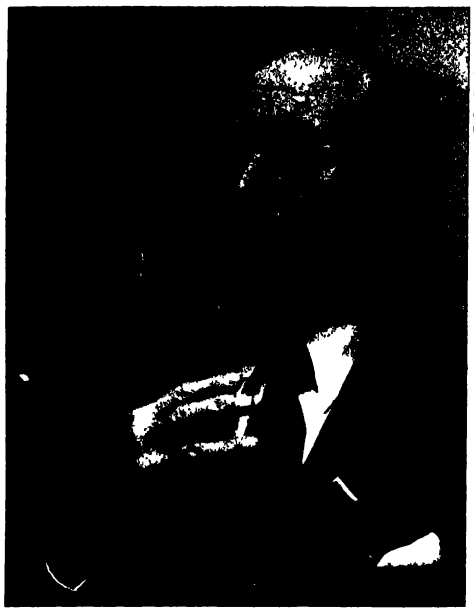
The bulk of the force will comprise Australian troops. The few Asian countries that have reluctantly pledged to contribute are sending only a token number. The Indonesian Government had wanted a predominantly Asian peacekeeping force. But the rapid pace of events in early September, coupled with the reluctance of many of Indonesia's Asian neighbours to take the initiative, left Jakarta with very few alternatives. And in the ultimate analysis, the ham-handed and brutal way in which the Indonesian Government handled the Timor issue has left it with few sympathisers in the international community. The U.N. Security Council chided Indonesia in early September for failing "to stem the uncontrolled violence" after East Timor overwhelmingly voted for independence.

But what is highly suspicious is the key role assigned to Australia in the peacekeeping force and the blueprint that the West has for the region. Australia had been painstakingly preparing for such a role in East Timor. By the end of August, 5,000 troops were already in place in the city of Darwin, only an hour and a half flying time to Dili, the East Timorese capital. The Australian effort to get into East Timor at the earliest was evident from the very outset.

Australia, like other leading proponents of speedy military intervention today, has been deeply involved with Indonesia ever since the Suharto regime sent in its Army in 1975 to subdue brutally the Timorese people when they were on the verge of *de jure* independence. The Central Intelligence Agency (CIA) and other Western intelligence agencies were fully aware of the Indonesian Army's moves. The top Australian Defence Signals Directorate (DSD) base near Darwin had intercepted Indonesia's military and intelligence communications and passed it on to the CIA and MI6 (the

SUSAN WALSH AP

President Bill Clinton. The U.S. is posing as a champion of human rights and decolonisation in the region.



British Intelligence agency) under treaty arrangements. The Australian Government was in fact aware of Suharto's invasion plans four months before the Indonesian troops marched into Dili. Gough Whitlam, the Australian Prime Minister, had told Suharto in 1974 itself when the Portuguese were on the verge of leaving their colony, that East Timor should be part of Indonesia as it did not have the economic resources to be a viable, independent state.

The Australian High Commissioner to Indonesia at that time, Richard Woolcott, had sent a message to his government four months before the invasion arguing the Indonesian point of view and the need for Australian public opinion to be "assisted" and urging that the Government show Indonesia "private" understanding with regard to "their problems". "We do not want to become apologists for Indonesia. I know I am recommending a pragmatic rather than a principled stand but that is what national interest and foreign policy is all about...", he went on to add.

The Timorese were expendable in 1975 when Indonesia was under the brutal and corrupt dictatorship of Gen. Suharto. Australia's major objective then was to ensure that its neighbourhood remained stable so that Australian mining companies could start exploiting the rich gas and oil reserves in the Indonesian archipelago. In 1979, Australia went ahead and gave *de jure* recognition to the Indonesian annexation of East Timor, the first and only country to break international ranks. Indonesia and Australia finalised the Timor Gap Treaty in 1989, splitting the mineral reserves between themselves.

The then British Ambassador to Indonesia was even more forthright. In his cable to his superiors in London in 1975, he stressed that it was in Britain's interests that Indonesia "absorb the territory as soon and unobtrusively as possible". The British Government under Margaret Thatcher signed a series of lucrative arms deals with the Suharto regime. One of the beneficiaries of the deals was Thatcher's son. According to Western journalists who covered East Timor in the 1980s, British-made Hawk fighter jets which were sold to the Suharto regime were used with devastating accuracy against Fretelin guerilla targets by the Indonesian Air Force, causing hundreds of casualties among civilians.

The U.S. Secretary of State, Henry Kissinger, also signalled to Jakarta that the United States would not object to an Indonesian invasion of Timor. In fact, two days before the invasion, President Gerald Ford and Kissinger were the guests of Suharto, despite having been fully aware of the impending invasion. Kissinger rationalised that an independent East Timorese state with a Communist government in the Indonesian archipelago, was unthinkable. (Deep sea trenches near the Timor coast are used by U.S. nuclear submarines travelling between the Pacific and the Indian oceans and the U.S. was not ready to risk their control falling into the hands of a potentially Communist country.)

RICK RYCROFT/AP

Australian Prime Minister John Howard. His country's agenda on East Timor is suspect.

The leadership of the guerilla organisation Fretilin, which spearheaded the liberation struggle against the Portuguese, had a left orientation, like the People's Liberation Movement of Angola (MPLA) in Angola and the Mozambique Liberation Front (FRELIMO) in Mozambique, which were also engaged in overthrowing the yoke of Portuguese colonialism. While invading East Timor, the Indonesian generals had also sought to justify their actions by describing the popular Fretelin interim administration as "Communist". When the Indonesian Army went on a killing spree in East Timor, the U.S. Government increased its supply of arms to Indonesia despite the U.N. General Assembly passing a resolution "strongly deploring" Indonesia'a aggression and asking it to withdraw its troops "without delay". The U.N. Security Council had also demanded of "all states to respect the territorial integrity of East Timor". But the U.S. State Department was busy sabotaging the will of the international community. The U.S. Ambassador to the U.N. at that time, Daniel Patrick Moynihan, wrote: "The Department of State desired that the U.N. prove utterly ineffective. This task was given to me and I carried it forward with no inconsiderable success".

It was the tacit support of the Western nations that allowed Indonesia to invade East Timor in the first place. Now that there is no fear of East Timor becoming another Cuba, the U.S. and its main surrogate in the region, Australia, are posing as champions of human rights and decolonisation.

The peacekeeping force under Australian command is expected to number 7,000 in the initial stages. President Bill Clinton has announced that the U.S. would send 200 soldiers and heavy equipment. The British are sending 250 Gurkhas to the peace enforcement contingent that is authorised by the U.N. Security Council to "use all necessary means" to restore law and order. A total of 23 countries have so far given their commitment to participate in the force. Some countries such as India have not yet made up their minds. India has always viewed the issue of East Timor as an issue of "decolonisation" but some in the corridors of power feel that the events in East Timor could be viewed as a precedent for intervention in the domestic affairs of a country. The U.S. State Department spokesman went out of his way to allay New Delhi's fears by saying that there cannot be any comparison between Kashmir and East Timor.

THERE is a nationalist surge in Indonesia as illustrated by the popularity of Megawati Sukarnoputri, who is tipped to be the next President. The loss of East Timor has not gone down well with her supporters. She herself has refused to endorse the decision of the Habibie Government to recognise the reality. The people hold the powerful Indonesian Army responsible for the dramatic turn of events. They fear that the restive provinces of Aceh and Irian Jaya may be next in line for secession. More and more provinces are demanding autonomy from Indonesia. The gamble of Suharto and the military in 1975 has now backfired and the present retreat is an admission that the invasion was not a success. The domestic backlash in the coming months is likely to affect the Army's ability to influence the country's internal affairs. ■

Arrest of a terrorist

THE Coimbatore police arrested in Madurai on September 7 Zahir Hussain, one of the 180 persons charge-sheeted in connection with the blasts in Coimbatore between February 14 and February 17, 1998. Coimbatore City Police Commissioner K. Radhakrishnan said that Zahir Hussain (30) was the brain behind the activities of Al-Umma, a banned terrorist organisation, which has been blamed for the blasts that killed 58 persons. Also arrested with Zahir Hussain was Siddiq Ali (23), another accused in the case. While Zahir Hussain alias Abdul Anuz belongs to Kollengode in Kerala, Siddiq Ali alias Sultan belongs to Melappalayam in Tirunelveli. Zahir Hussain carried a reward of Rs.2 lakhs on his head.

Nineteen explosions shook Coimbatore during the run-up to the 1998 Lok Sabha elections. The first of them took place February 14, near the venue of an election meeting which was to be addressed by Bharatiya Janata Party leader L.K. Advani. Seven human bombs, all members of Al-Umma, were to target Advani.

Radhakrishnan said that Zahir Hussain was an expert bomb-maker and that it was under his guidance that 40 box-bombs and about 100 pipe-bombs used in the explosions were made. He had personally made many bombs. Top police officials said he had obtained the PEK (Plastic Explosives, Kirkee) from Abdul Naser Mahdani, chairman, People's Democratic Party of Kerala, which were to be used by human bombs that were to target Advani. Zahir Hussain had been associated with Al-Umma from 1990 and enjoyed the confidence of its founder-president S.A. Basha, who has been named the first accused in the blasts case. He had links with fundamentalist organisations in Tamil Nadu, Kerala, Karnataka, Andhra Pradesh and Maharashtra.

Police officials said that he was involved in a series of murders and explosions. The incidents included the stabbing to death of Hindu Munnani activist Veera Siva in Coimbatore on August 29, 1989, the murder of P. Rajagopalan, Hindu Munnani State president in Madurai on October 10, 1994, the blast in the Hindu Munnani office at Chennai in 1995, the stabbing to death of a Hindu Munnani activist, Ramji, near Chennai in 1996 and the murder of Dr. V. Sridhar, president of the Tiruchi unit of the BJP on February 2, 1999. Zahir Hussain was also linked to a huge stockpile of bombs and weapons found in a house at Kodungaiyur in Chennai in 1996.

Police officials said that Zahir Hussain planted bombs near police establishments in Tiruchi, Coimbatore and Chennai in the last week of May 1999. These bombs were made by him in Madurai and despatched to the three cities, according to the police.

Siddiq Ali, a confidant of Zahir Hussain, was allegedly involved in the murder of Arumugham at Tirunelveli, the triple murder of Dr. Selvakumar, flower vendor Kannappan and tailor Sankar in August 1997 at Melappalayam and the murder of Dr. Sridhar at Tiruchi. Radhakrishnan said that the arrest of these two persons "has broken the back of Al-Umma". ■

T.S. Subramanian

Beedi fad

WARNING of a worrisome new trend in youth smoking, Massachusetts health officials recently released the United State's first official study on the prevalence among teenagers of smoking skinny, sweet-flavoured and highly potent cigarettes called beedis that are hand-rolled in India and faddishly popular among young Americans.

The study, whose results are rather approximate because they were not based on a rigorously random sample, found that of the 642 teenagers in the Boston inner city surveyed, 40 per cent had tried a beedi, nearly 16 per cent smoked beedis currently and nearly 8 per cent were "heavy users" who had smoked more than 100. "These are very disturbing findings that I believe have national importance," said Massachusetts Public Health Commissioner Howard Koh.

The State Department of Public Health also announced that a separate study it undertook on the content of beedis found that, contrary to the seeming natural innocence of their leaf-wrapped looks, beedis could contain five times the tar and three times the nicotine of conventional cigarettes.

The beedi fad particularly concerns health officials and opponents of smoking because they say beedis seem tailor-made to attract young smokers. Beedis are often cheaper than conventional cigarettes, and they are available in more than a dozen flavours, including mint and strawberry.

The trouble is not only the appeal of the flavours, Alyonik Hrushow, director of the Tobacco Free Project of the San Francisco Public Health Department, said, but also the misapprehensions of many young people about the cigarettes themselves. "A lot of youth are not aware that beedis actually contain more nicotine than regular cigarettes," she said. "Because they're wrapped in a leaf and sort of sold as being natural, they think that it's somehow safer, and it's almost like a little underground sort of behaviour." Because beedis resemble marijuana joints, some young smokers enjoy an extra air of rebellion when they puff them in public; beedis also tend to go out frequently because the leaf they are rolled in does not burn well, requiring frequent re-lighting and deep inhaling that add to what some see as an impressive ritual.

A survey of stores, done in 1998 by teenagers at the Tobacco Free Project, found that beedis were significantly easier for under-age smokers to buy than conventional cigarettes and that most packs failed to carry the usual warning label of the dangers of tobacco. The teenagers have complained to the Federal Trade Commission and the U.S. Customs Service, Hrushow said.

Health officials said that the Boston survey was only a beginning, statistically, because it was carried out on a "convenient" sample of youth – teenagers who were willing to speak when approached in inner-city Boston neighbourhoods – rather than a carfully random sample. "These results will have to be supported in follow-up studies," Koh said.

Two young anti-smokinng advocates who helped perform the Boston survey, Jwuannita Core and Jennifer Veerasammy, said that when they asked teenagers why they smoked beedis, the answers often included a fondness for the head-rush the potent cigarettes produced. The replies , Core said, also included "they taste better"; "they were cheaper"; they were safer and easier to buy than cigarettes." And some said, "I like the flavour." ■

New York Times Service

Carnage in eastern Sri Lanka

AS September 18 dawned in eastern Sri Lanka, a total of 50 Sinhalese villagers, men, women and children, lay dead. The innocent villagers, residing in a nebulous zone in a linguistically polarised island-nation, were hacked to death in their sleep, reportedly by members of the Liberation Tigers of Tamil Eelam (LTTE). An otherwise silent night was shattered by the killing-spree.

Gonagala division of Ampara district, bordering Batticaloa district, bore the brunt of the attack by the LTTE. The hacked remains of 14 persons in Chilaw Bund village were a sad sight. Butchered and chopped, the remains spoke of the intensity of the attack by the cadres of the LTTE.

A dissected palm in front of a pulverised skull was the final act of protection a middle-aged man had desperately sought before he was butchered. In the same room, barely a few feet away lay an overturned cot, under which one could see the body of a boy, perhaps not yet into his teens, 'sleeping' in a pool of blood. Next to him was a severely hacked body of a teenager. Both appeared to have been sleeping on the cot when they were butchered.

GEMUNU AMARASINGHE/AP

A Sinhalese woman grieves the death of her family members on September 18.

Herath Premasiri was the lone survivor of his family. The living room of his house was a veritable morgue. Walking across the blood-splattered floor one came across mutilated and hacked bodies. Twelve hours after the cold-blooded murders the remains awaited the arrival of judicial authorities with body-tags written out in paper and strapped around their wrists.

Of the 50 villagers hacked to death, 46 hailed from Gonagala. Of these, 14 were children. A total of 31 men and 15 women were done to death. No firearms were reportedly used by the killers as they "preferred the silence of the night" to operate. Two villagers each were killed from two other hamlets.

While no information is available on the number of attackers, details provided by some of the villagers indicated the presence of women cadres as well. Defence authorities estimate that the number of attackers could have been about 10, going by the magnitude of the deaths. The attackers had apparently arrived from nearby Batticaloa district, parts of which were under LTTE control. Going by previous incidents and the cold-blooded trail left behind, the hand of the Tigers in the killing does not appear to be in doubt.

The immediate provocation for this attack appeared to be an aerial bombing on September 15 by the Sri Lanka Air Force of Puthukudiyiruppu, a Tamil village, killing 22 Tamil people. While the incident was reported by the LTTE and confirmed by the International Committee of the Red Cross (ICRC), the Sri Lankan defence authorities had denied it. They continue to maintain that the Puthukudiyiruppu bombings were "on selected and positively identified LTTE targets" and say that the ICRC was known to have made mistakes in the past.

President Chandrika Kumaratunga, expressing "shock at the massacre", said that the act, committed at a time when the "Government is doing all possible efforts to solve the two-decade-long ethnic crisis in the island, was not acceptable to any civilised society." Assuring the Government's "assistance to the families of the victims," she "called upon political and civil authorities to take all measures to restore normalcy and provide protection for the affected areas."

Deputy Defence Minister Gen. Anuruddha Ratwatte, who visited the affected areas along with the Army Commander and the Chief of the Air Force, condemned the act as "dastardly" and "carried out by a set of cowards." He said the LTTE was "acting in desperation" and was "taking revenge" for military setbacks in the Vanni area.

Reacting to the massacre, the Parliamentary leader of the Tamil United Liberation Front (TULF), Joseph Pararajasingham, did not fail to mention the bombing of Puthukudiyiruppu. While "condemning the murder of innocent civilians" in Ampara, Pararajasingham in a letter to the President said, "When your Excellency's air force bombed the Puthukudiyiruppu village in Mullaitivu last Wednesday, killing 22 innocent Tamils, your Excellency neither expressed grief nor conveyed your sorrow." This "contrasting behaviour" he said "has gone to reinforce in the minds of the Tamil people that your Excellency too have decided to follow the same communal path of your predecessors."

While much blood has been shed in the decades-long separatist strife, this month's killings were the extreme manifestations of deeper maladies which come in the way of well-intentioned peace-makers and liberal political leaders. ■
